There is considerable disagreement about whether the justices should concentrate on the literal words of the text in contrast to the “spirit” and structure of the Constitution. These two views are often labeled “strict constructionism” and “broad constructionism.” A related question is the extent to which the justices base their interpretations on the “original intent” of framers of the Constitution. Critics of this approach prefer to look at the contemporary meanings of the words, which is the idea of a “living Constitution.” Still another distinction relates to whether constitutional interpretations should be informed by philosophical conceptions of justice and natural law.

Because continued application of the Court’s previous decisions gives stability and predictability to the laws, the justices are hesitant to overturn the Court’s own precedents, especially those that are longstanding. However, the justices have different views about the extent to which they should follow the common-law practice of *stare decisis* (literally “let the decision continue”). While some justices tend to minimize the importance of precedents, others believe they should defer to them except when the arguments to do otherwise are extremely compelling. Likewise, the justices differ in the extent to which they defer to judgments of Congress and the state legislatures.

The polemical term “judicial activism” is commonly used to refer to justices who make expansive interpretations, ignore the intent of the Constitution’s framers, emphasize philosophical concepts of justice, and do not give much deference to Court precedents and legislative judgments. The contrasting label, “judicial self-restraint,” refers to the alternative approaches to jurisprudence. Around the turn of the twenty-first century, liberal justices were tending to be somewhat more activist than conservative justices, but clearly the latter were not consistently practicing self-restraint themselves.

Supreme Court justice selection

DEFINITION: Processes by means of which Supreme Court justices are chosen

TYPE OF ETHICS: Legal and judicial ethics

SIGNIFICANCE: The U.S. Supreme Court is meant to be an apolitical and impartial body entirely populated by political appointees. As a result, selecting justices to sit on the bench is a complex and politically charged process. The Supreme Court attempts to resolve many of the most important and controversial issues in the United States, and in doing so, it shapes government policy in areas as diverse as civil rights and environmental protection. Generally, conservative presidents appoint conservative justices and liberal presidents appoint liberal justices, but because those terms have substantially different meanings in the context of constitutional scholarship than they do in the context of legislative politics, justices frequently act in unpredictable ways once they reach the Court.

Article II, Section 2, of the U.S. Constitution states that the president of the United States shall have the power, with the advice and consent of the Senate, to nominate and appoint justices of the Supreme Court of the United States. Supreme Court justices are appointed for life by the president of the United States and confirmed by the Senate. The nomination process has become very publicized in recent years because the decision making of the Court has had an increasing effect on the lives of all American citizens and has become an important factor in presidential politics. People are more aware now more than ever that an elected president will nominate Supreme Court justices who generally (though not always) support his political views and will make their decisions based on these views, often for a long period of time after the president has left office. Although most judges make their decisions based on facts as opposed to ideological precepts, they often use their own ideological precepts to guide them in interpreting facts.

The selection of judges to the U.S. Supreme Court is one of the most important responsibilities of the republic. Their decisions are very rarely, if ever, overturned, and the policies that are set by them have a profound effect on the entire nation, collectively and individually.

There are no set qualifications to be a judge or justice on the federal bench. The courts were set up by the Constitution as the third branch of the government in order to ensure the separation of powers. They were to be an independent, impartial branch of government that would serve, as Alexander Hamilton wrote in *The Federalist* “as bulwarks of a limited Constitution, as an intermediate body between the people and the legislature, in order, among other things, to keep the latter within the limits assigned to their authority.” This principle was embraced by Chief Justice John Marshall, who established the power of judicial review in the 1803 case *Marbury v. Madison*, giving the Supreme Court the power to declare legislative acts and laws unconstitutional.

JUDICIAL INDEPENDENCE

Although the Court is an impartial judicial branch, each of its members has been nominated by a president who is a political figure. Any president will try to select Supreme Court justices who share his outlook. To demand minute particulars, however, would make impossible the president’s real task: to find men and women of learning, character, and wisdom. The most important factor shaping the Court’s policies at any given time is the identity of its members, which is why the nomination process so clearly reflects the potential justice’s views on the direction that the laws need to take in order to reflect the values and priorities of the society that he or she serves.

The Supreme Court makes policy through the interpretation of the law, but the way in which this goal is achieved raises an ethical dilemma. Issues of public policy come to the Court through legal questions that the court is asked to resolve. Two parties bring a dispute before the Court and ask the Court to review it. The Court reviews it and makes a judgment about the specific dispute brought to it, gives an interpretation of the legal issues involved in that dispute, and takes a position on the policy questions that are connected to the legal issues. Although the function of the Supreme Court is not that of a legislative body, should the Court be free to overturn and thwart legislatures because of what the justices perceive to be unjust or unfair results of a case as applied to the existing laws and precedents? That is the main question that is posed in discussions of the ethics of selecting Supreme Court justices.

The extent to which judges should be bound by

statutes and case precedents as against their own ethical ideas and concepts of social, political, and economic policy involves the question of which should prevail when justice and the law appear to the judges to be out of alignment with one another. Some judicial lawmaking is inevitable, but to what extent? Should the ideological agenda of a judge or a group of people be imposed through judicial decree rather than through directly elected officials? Should the Senate and the president of the United States ask a particular nominee how he or she would rule on a controversial issue of law, such as abortion, prior to appointment and should his or her answer be grounds for disqualification? Should judges be more concerned with granting new civil liberties that they perceive to be fair or with interpreting the Constitution? Does interpreting the Constitution mean relying upon the original intent of the Founders for guidance, or does the Constitution change as society changes and becomes more open and permissive? Is the job of the judge to adhere to the law or to do justice? If there is an injustice in society and Congress and the states have failed to act, should the Supreme Court fill the void? What is the main source of societal change: judges or the people? How far should the Supreme Court go in using its substantial power of the citizens?

These are all questions that are answered many different ways by many different judicial nominees, based on their philosophy of law and their experiences. Although there is no denying that judicial nominees to the Supreme Court must adhere to the highest standards of personal conduct, there are vast differences in judicial philosophy and interpretations of the role of the Court that present ethical dilemmas that will always be with the United States in the nomination of justices to the highest Court in the land.

Surrogate motherhood

DEFINITION: Bearing of a child by one person for another person

DATE: Term coined in 1976

TYPE OF ETHICS: Bioethics

SIGNIFICANCE: Also known as surrogacy, surrogate motherhood touches on many moral and ethical issues, ranging from adultery; exploitation of infertile couples, surrogate mothers, and children by baby brokers; to buying and selling of babies; dehumanization of reproduction; privacy rights; and custody and identity problems.

Infertile couples and others may seek the services of surrogate mothers if other reproductive procedures, such as artificial insemination, in vitro fertilization, or adoption, are not options for them. Two forms of surrogacy are in common use. The first method involves using artificial insemination of the surrogate mother with sperm provided by the prospective father. This technique is called traditional surrogacy.

The second method depends on in vitro fertilization (IVF). In this procedure, sperm and eggs provided by the intended parents or third-party donors, are used to produce embryos that are implanted into the surrogate mothers. This method, which is known as gestational surrogacy, is the more common of the two, and it produces what have been dubbed "test-tube babies."

Surrogate Motherhood Time Line

- 1975 First publicized artificial insemination of a surrogate under contract performed by California physician Harris F. Simonds.
- 1981 In *Doe v. Kelly*, Michigan's appellate court rules that surrogate motherhood is legal but that a state statute prohibits monetary compensation for such purposes.
- 1986 In *Surrogate Parenting Associates, Inc. v. Kentucky*, Kentucky's supreme court rules that its state attorney general cannot revoke the corporate charter of the defendant because the state legislature has not yet addressed the legality of surrogate motherhood contracts.
- 1987 Louisiana passes the first state law prohibiting surrogacy. Over the following five years, eighteen additional states pass similar legislation.
- 1987 The Roman Catholic Church condemns surrogacy arrangements.
- 1988 In *Mary Beth Whitehead v. William and Elizabeth Stern* (the "Baby M" case), New Jersey's supreme court rules that surrogate contracts are invalid and against public policy when payments are involved and when surrogate mothers are required to give up their babies.
- 1988 Florida, Indiana, Kentucky, Michigan, and Nebraska pass laws regulating surrogacy contracts.
- 1993 In *Anna L. Johnson v. Mark and Crispina Calvert*, California's supreme court becomes the first state judicial body to validate a gestational surrogacy agreement in a case in which the surrogate mother refuses to surrender a test tube-conceived baby. The California court places a high value on the preconception intents of individuals entering into surrogacy contracts, that is, the women who intend to bring about the birth and raise the children are considered to be the natural mothers, not the surrogates.
- 2001 Helen Beasley from Britain sues a California couple, Charles Wheeler and Martha Berman, in order to terminate their parental rights so that she can allow the twins she is carrying to be adopted. Wheeler and Berman become dissatisfied when Beasley does not abort one of the twins.
- 2002 *Redbook Magazine* reports that surrogate motherhood is quietly booming.

ARGUMENTS FOR AND AGAINST

Traditional surrogacy is ethically objectionable to some people on the grounds that it removes procreation from marriage, replaces natural processes with artificial ones, and introduces third parties—the surrogate mothers—whose presence can create potentially damaging personal relationships within both the adopting families and the surrogates' own families.

Some critics also question whether surrogate motherhood is a form of adultery. Moreover, one might question whether it is ethical for a surrogate mother to conceive a child whom she has no intention of raising. When the surrogates provide the eggs used to create embryos, new complications often arise when the surrogates develop strong emotional attachments to their fetuses.

By contrast, supporters of surrogate motherhood argue that artificial processes are often medical necessities for those who are infertile. Moreover, the individual's right to self-determination includes freedom to reproduce by unconventional means.

Similar ethical arguments can be made for and against the gestational surrogacy, which involves *in vitro* fertilization and embryo transfer. In these cases, the surrogates are carriers, or incubators, and do not contribute genetic material to the embryos; they therefore are less likely to develop possessive feelings toward the resulting children.

Those who object to this form of surrogate motherhood say that the procedure removes the act of reproduction from marriage by using artificial means and enlists the services of a third-party surrogate.

In addition, the *in vitro* technique requires that the embryos be cultured and evaluated for periods of time. Defective embryos are discarded, some may be frozen for future use, and others are implanted into the hosts. If more than one embryo implants, or an implanted embryo has defects, selective reduction techniques—namely, abortion—may be used to remove the unwanted embryos from the surrogates' uteruses.

Opponents say that gestational surrogacy places human life in peril and allows medical professionals to make God-like decisions concerning life and death. Those who support this type of surrogacy say that the parents' natural desire to have children outweighs the ethical arguments against it and that progress in medical science will eventually free humans from all the constraints of infertility.

LEGAL CONSIDERATIONS

In 2003, it was estimated that more than fifteen thousand surrogate births had taken place in the United States alone since the first recorded case in 1976. During that period, more than twenty U.S. states passed laws dealing with surrogacy. The legalization and widespread use of surrogacy raises other ethical, legal, and social questions. One concern is the right to privacy as interpreted by the U.S. Supreme Court in cases involving reproduction and abortion. For example, do the intended parents and the surrogates have the right to be free from governmental interference when they enter into a contract involving reproduction? Several states have laws regulating such contracts, and many prohibit compensation for surrogate mothers and brokers. Another matter is the right to privacy when a contract keeps the intended parents or the surrogates anonymous, thus leaving them open to potential harm later if their identity is revealed.

Another concern is allocation of responsibility. Who is responsible for medical costs during the pregnancy? What about the behavior of the surrogate during pregnancy? Do the intended parents have the right to meet and choose the surrogate and monitor her behavior? Will the surrogate be allowed to drink alcohol, smoke, or engage in other activities that may harm the baby? The intended parents might justifiably insist such behaviors be curtailed during the contract period with the surrogate.

If the children of surrogate mothers are deter-

mined not to be the biological offspring of their intended fathers in traditional surrogacies, or if they have birth defects, can the intended parents refuse to take responsibility for them? Are biological fathers financially responsible for the children of surrogates, even when the surrogates elect to keep the children themselves?

Baby M

An unforeseen problem in surrogate motherhood that has come to the forefront is custody. Surrogate mothers sometimes become so emotionally attached to the babies they carry that they refuse to surrender them to the couples with whom they have contractual relationships.

The best-known case is that of "Baby M.," who was born in New Jersey in 1986. A year earlier, William and Elizabeth Stern contacted with Mary Beth Whitehead to bear a child for them using William Stern's semen by means of artificial insemination. After a girl they named Melissa was born, a custody battle developed between Whitehead and the Sterns. A New Jersey court eventually ruled that Whitehead had no parental rights, but it granted her visitation rights.

WOMEN'S ISSUES

Will the popularization of surrogacy lead to the exploitation of women? Opponents argue that surrogacy might become another low-paying, high-risk job for underprivileged women, and that it degrades women by commercializing pregnancy and childbirth. Opponents also say that surrogacy subjects women to social and economic exploitation because the surrogate mothers are essentially under the control of the brokers and the sperm donors during their pregnancies. Advocates argue that women of various socioeconomic backgrounds become surrogates of their own will and often do so without compensation out of a sense of sympathy for the infertile couple.

Will the surrogate be able to cope with the emotional and medical stresses of surrogate motherhood?

Will the surrogate mother suffer from psychological or physical harm due to the pregnancy and parting with the child at birth? Potential surrogates often go through both psychological and medical screening to help ensure successful and positive outcomes. Controversial components of such screening are efforts to determine if the women being considered as surrogates will easily detach themselves psychologically from the children they carry in their wombs and readily give up visitation rights after the children are born.

WHOM SHOULD SURROGATE MOTHERHOOD SERVE?

Will surrogacy be regulated so that only those in dire need of the procedure have access to it, or should any couple who can afford it, whether they are infertile or not, be allowed to use it? Should surrogacy be deemed appropriate in some situations but not others? What about the interests of the children? The children may end up having various psychological and social problems, such as lack of identity and self-worth and mistrust in adults.

Some critics have argued that hiring a surrogate can be equated to purchasing a baby. They say that the legalization of surrogacy will encourage the development of an industry of baby brokering. Those opposed to surrogacy say that treating human babies as commodities to be bought and sold constitutes a type of dehumanization that is similar to slavery.

Are reproductive medical services, sperm, eggs, embryos, and surrogate mothers becoming commodities that can be bought and sold? Many think these procedures and natural products need to be regulated in a manner similar to organs for transplantation. Advocates say that surrogacy should be viewed in the same light as foster care or adoption and that cash payments to surrogate mothers are merely compensation for the lost time and inconvenience of the surrogates and are not payments for the children themselves.

Identity is another serious issue in surrogate motherhood. Who is the child's legal mother—its gestational mother, its genetic mother, or its caregiving mother? This confusion creates identity problems similar to those experienced by adopted children.

Sustainability of resources

DEFINITION: Ability of natural environments to maintain constant levels of resources in the face of human exploitation

TYPE OF ETHICS: Environmental ethics

SIGNIFICANCE: There is no scientific consensus on how many human beings Earth's natural resources can support because the intensity of resource use varies across societies and regions. Developing ethical principles to guide human interactions with the environment is important to ensure the sustainability of resources and environmental quality across national and cultural boundaries.

Modern societies create enduring tensions between development and conservation. Development is often considered as the means to improve economic

growth with the ultimate goal of improving human welfare and quality of life. As populations grow and demands for higher quality of life increase, society's demands for natural resources increase, leading inevitably to further exploration and exploitation of environments that may otherwise be preserved. Moreover, there is substantial evidence that current practices to obtain and redistribute natural resources are adversely affecting the environment, potentially resulting in the depletion of certain essential resources, extinctions of biological species, and the pollution of air, water, and soil to extents that are detrimental to the welfare of human societies. The application of environmental ethics to sustainability science aims to discover globally acceptable standards and practices for balancing development with the conservation of natural resources.

ETHICAL ISSUES IN RESOURCE CONSERVATION

How many natural resources should the average human being consume? Should societies provide for each individual at the risk of depleting natural resources? The answers to such questions may play a role in determining the fate of human societies on Earth. Innovative scientific approaches to these questions are being developed, but convincing answers will most likely transcend disciplinary science, as ethical issues play greater roles in providing robust guidance.

Nutritional foods, clean water, and clean air are all essential for the growth and development of both individual human beings and human societies. Keeping these most basic resources available requires the expenditure of energy, which was still dominated by combustion of such fossil fuels as coal, petroleum, and natural gas at the beginning of the twenty-first century. Supplies of these resources are finite, and their distribution is uneven across national boundaries. Toxic waste products from industrial development that relies on these sources of energy also threaten communities worldwide, but their impacts are also unevenly distributed, with poor communities and nations suffering more than affluent ones. These problems have raised the profile of equity as a dominant topic of debate among environmental ethicists. Equity issues in resource conservation transcend geographical, generational, and phylogenetic boundaries.

GEOGRAPHICAL AND GENERATIONAL DIVIDES

Concerns over global climate change, including its causes, impacts, and mitigation strategies are fundamentally different between industrialized countries of the Northern Hemisphere and the less developed countries of the Southern Hemisphere. Therefore, questions of ethics, fairness, equity, and environmental justice have often stalled agreements at international summits aiming to design long-term solutions to problems associated with global environmental change.

The likelihood that certain natural resources may be depleted in one or two generations and the storage of radioactive waste materials with long half-lives have raised the questions about trans-generational ethics and equity. How should humans living today protect and reserve natural resources and conserve good environmental quality for those who will live tomorrow? Whereas most people will agree that societies should reserve the benefits of abundant natural resources and clean environments for future generations, there is wide disagreement on how much sacrifice individuals and societies must make in the present to ensure satisfactory levels of resources in the future.

Most contributions made by ethicists on these questions have been theoretical, but the time has arrived for practical applications of solutions that have emerged from ethical debates. Indeed, at the beginning of the twenty-first century, some of those applications were being proposed in international conventions on the environment.

THE PHYLOGENETIC DIVIDE

Perhaps the most difficult of the numerous ethical questions in resource conservation and global sustainability arises from the phylogenetic divide that forces humans to set monetary values on other organisms. What values should humans place on biological diversity and the extinction of species? Non-human organisms rely on humans to make their case for conservation. Therefore, there is an inherent bias in protection and conservation practices that favor organisms that humans find useful or appealing for aesthetic reasons. Given that most of the biological diversity on Earth remains to be classified, while rates of urbanization, desertification, and deforestation are increasing, there is clearly an urgent need for a coherent system of resource conservation that is based on sound ethical principles.

There is a global challenge to resolve the difficult issues surrounding the concept of sustainable development. Is economic development possible without compromising the sustainability of natural resources and a clean environment? The relatively new disciplines of industrial ecology and sustainability science have highlighted the path to possible solutions, but it is imperative for these discussions to include innovations in the study of ethics and human character—if the recommended scientific solutions are expected to be widely accepted and sustainable.

T

Tabloid journalism

IDENTIFICATION: Popular form of news reporting in weekly newspapers and television programs

DATE: First emerged during the 1920's

TYPE OF ETHICS: Media ethics

SIGNIFICANCE: Tabloid journalism provides readers with news in condensed and highly sensationalized forms that often sacrifice journalistic integrity for marketability.

The term “tabloid” originally referred to the physical size of tabloid newspaper pages, which were smaller than the standard twelve-by-twenty-four-inch pages of broadsheet papers. During the 1920's, when tabloid newspapers first arose to significance, the term “tabloid” expanded to include the content of the newspapers as well as their size, especially referring to the papers' preference for stories involving crime, scandals, and sexual escapades of celebrities. Among the most famous and influential of the early tabloid newspapers were the *New York Daily News*, the *Daily Graphic*, and the *Daily Mirror*—all of which were published in New York City. During a well-publicized “war of the tabs” those three newspapers established the tabloid format and style that have continued into the twenty-first century.

Although the tabloids never entirely disappeared—indeed, the *New York Daily News* enjoyed one of the largest circulations in the nation—they faded in importance during the 1950's and 1960's. Then, toward the end of the 1960's, tabloids began to re-emerge, this time in a weekly format with greater attention given to celebrities, such as television and movie

stars, and an emphasis on the private lives of their subjects. The tabloids also generally included highly sensationalized stories about alleged alien abductions, births of monstrous babies, prophecies of coming disasters, and similar items. Buoyed by such content and filled with often lurid photographs, individual tabloids such as the *Star* and the *National Enquirer* achieved enormous circulation figures through their national sales, often at the checkout lines of supermarkets.

Image not available

Tabloid newspapers trade on a mixture of familiar celebrity names and sensational revelations about the celebrities' misbehavior. (AP/Wide World Photos)

A spin-off phenomenon was known as “tabloid television,” or shows which featured stories about celebrities, especially their more scandalous activities. Highly visible and publicized crimes, such as the murder of O. J. Simpson’s former wife, were also key elements of television tabloid journalism. Like their newspaper tabloid counterparts, these television programs featured stories that were short, sensational, long on illustrations, and short on reliable factual information.

The ethical standards of both print and televised tabloids have been low. Representatives of both forms have been remarkably unconcerned with the actual truth of the stories on which they report, as they freely report rumor and innuendo as fact. Both forms have traditions of paying large amounts for “inside” information, often obtained from relatives and friends of the lead characters in their stories. Photographs and film of intimate moments, including the aftermath of shocking crimes, are highly prized and have included such dubious achievements as the *National Enquirer*’s printing photographs of the dead body of Elvis Presley in a Memphis morgue.

No matter how low the standards of tabloid journalism, however, there is a pervasive fear among media watchers that, because of their high circulation and ratings, the tabloids’ methods and outlook may in time be copied by the more mainstream media.

Taboos

DEFINITION: Practices proscribed by the moral or religious codes of a community

TYPE OF ETHICS: Beliefs and practices

SIGNIFICANCE: Taboos are often the foundation stones of ethical systems and moral codes that are built on proscriptive principles of tradition or religious belief, as opposed to rational inquiry.

There are two senses, two related concepts, that are signified by the term “taboo.” The older sense, derived from the Polynesian *tapu* and its applied meaning, refers to that which is paradoxically both sacred but also potentially harmful, and pure but subject to defilement. In the second, more generic and familiar sense, a taboo is a practice or behavior that is forbidden by the mores of a particular culture.

TWO SENSES OF TABOO

In the first sense, “taboo” is used, for example, to refer to the former untouchables of the Hindu caste system. It can also be used to refer to religious or quasi-religious objects with alleged magical powers, such as the Holy Grail of medieval legend, or sacred places, such as tribal burial grounds.

In general, the term applies to objects of primal power that have an ambiguous potential to harm or destroy and to heal or empower, and therefore refers to things both feared and venerated. The concept thus relates to the dual religious potential both to injure and heal, punish and reward.

In the second sense, most directly relating to applied ethics codified as law, the term is applied to any practice beyond a society’s moral pale. In this sense, common taboos are incest and cannibalism, which are nearly universal examples; thus, the term relates more to an act than an object or place.

There is an inherent relationship between the two meanings derived from the attitude toward taboos in primitive cultures. In the Polynesian culture, a taboo object was so powerful that it was sacrosanct and could be approached only by a priest or shaman. If the taboo were violated—touched by an uninitiated intruder, for example—it could require purification through a ritual that could include the death of the offender.

In many primitive cultures, taboos are revealed as part of a rite of passage through significant stages of

life, such as birth, marriage, and death, and are recorded on a tribal or clan totem as formulas or symbols, frequently depicted as animals or plants. Thus, the term “totem” is often linked to “taboo” and is sometimes used to refer to folk customs, such as rules of courtship and mourning, as opposed to taboos or moral prohibitions of a specific culture.

Some taboo objects in primitive societies were anathema, or cursed and therefore feared, which relates to the revulsion experienced in the violation of a taboo in the second meaning of the word. In many cultures, moral repugnancy is associated with such acts as cannibalism or incest, or even with violations of strict dietary laws or sexual practices.

ETHICAL IMPLICATIONS

Many taboos are so deeply and strongly rooted in the beliefs and practices of a folk as to be a priori foundation stones that preclude the need for their iteration in ethical coda, a prime example being the Judaic-Christian Decalogue, which carries no prohibitions against either cannibalism or incest, both of which are fundamental taboos in Western culture.

Canonical, civil, and criminal laws have all addressed taboo issues, often in vague terms such as “crimes against nature” that reflect a historical unwillingness to be explicit in legal formulations dealing with them, in part because the graphic language necessary for describing taboo acts may itself be taboo. Statutes written in indefinite language have increasingly come under judicial review and have been revised, particularly in those cases in which human behavior has denuded a taboo of its inhibitive power.

Although some taboos, such as those against cannibalism and incest, have in many cultures been rigidly observed for centuries, others, such as those against sodomy and miscegenation, have been modified if not completely abandoned. Law, of course, is always slow to reflect changing mores; therefore, much condoned social behavior remains technically condemned by law.

In societies where personal freedom has evolved and the right to privacy has been ensured, many taboos have been gradually depleted of their force. Even the most permissive societies, however, have some taboos and impose legal or social penalties for their violation. Moreover, scientific and technological advances have greatly muddied the ethical waters by introducing new imponderables that must be re-

solved in philosophical thought before being distilled into practical legal codes. For example, scientific evidence revealing that sexual preference is a matter not of choice but of inherited, genetic makeup has had profound ethical implications and has forced the liberalization of laws against sodomy based on principles of scriptural sanctions, moral choice, or “natural” behavior.

The modification or abandonment of a traditional taboo may result from a war that is waged on a moral battleground between forces deeply committed to inherited values, often based in religious convictions, and those embracing new attitudes supported by modern science and medicine. Two notable examples are the practices of abortion and euthanasia, which were almost universally condemned in the past but now have been condoned by many people as both appropriate and ethical in at least some instances.

Tagore, Rabindranath

IDENTIFICATION: Indian writer and philosopher

BORN: May 7, 1861, Calcutta, India

DIED: August 7, 1941, Calcutta, India

TYPE OF ETHICS: Modern history

SIGNIFICANCE: One of the most famous Indian (Bengali) poets of the twentieth century and recipient of the Nobel Prize in Literature in 1913, Tagore worked to promote mutual understanding between India and the West and founded Vishvabharati University in Shantiniketan, India. *Gitanjali* (song offerings, 1910) is his best-known work in the West.

Tagore began to write poetry as a child. His first book was published when he was seventeen years old. After returning to India from a trip to England in 1878 to study law, he became the most popular author of the colonial era. Through the short stories, novels, and plays that he wrote, he conveyed his belief that truth lies in seeing the harmony of apparently contrary forces. He was not interested in building a philosophical system; instead he wanted to deepen mutual Indian and Western cultural understanding.

Tagore was very much influenced by the Upaniṣads but interpreted them theistically. His artistic nature made him more of a follower of the way of *bhakti*, or “devotion,” than of the way of *jñāna*, or “knowledge,” of Advaita Vedānta. Because he believed in the harmony of complementary forces, however, he did not reject the Advaita, or monistic, view of Vedānta. In Tagore’s view, both the one and the many are real. The doctrine of *māyā*, or illusion, points to the false belief that the world is independently real. God, humanity, and the world are interrelated. Tagore viewed life in a positive way, as the discovery of the divine nature of humanity.

Talmud

IDENTIFICATION: Holy scripture of Judaism

DATE: Written between the early second century

B.C.E. and c. 500 C.E.

TYPE OF ETHICS: Religious ethics

SIGNIFICANCE: The Talmud is a repository of ideas and wisdom reflecting Jewish religious and cultural activity as interpreted by centuries of sages who lived in Eretz Israel and Babylonia (today part of Iraq) from before the common era to the beginning of the Middle Ages. As the primary source for post-biblical Jewish law and lore, the Talmud is second only to the Bible in religious and moral authority.

If the Hebrew Bible, or Tanak, is the cornerstone of Judaism, then the Talmud is its magnificent edifice. Its bricks and mortar are shaped by the revelation of the written Torah as represented, understood, and lived by the sages who molded Israel’s salvific apparatus from the ruins of the Second Temple (destroyed by the Romans in 70 C.E.) until the beginning of the Middle Ages. Their accomplishment, the Mishnah, and its commentary, the Gemarah, which together form the Talmud, became the dominant structure of Judaism.

The Talmud is not easily classified in any literary genre. This is because of its encyclopedic range of topics, including law, legend, philosophy, science, and some history; its pragmatic treatment of everyday life issues alongside flights into abstract and ethereal problems; its multiple and varied methodologies, equally logical and fanciful; its terse writing style, which is reminiscent of note taking; and the meticulous final editing of pedantic redactions, themselves based on free-flowing ideas composed centuries earlier.

More a library than a single book, the Talmud is an anthology of national expression responding to the Roman catastrophe of the first and second centuries, and it is more meaningful when it is learned and studied than it is when it is read. The association between one idea and another, a rabbi in Galilee and another in Babylon, the first century and the fifth century, is tenuous at first, but persistent study connects the diverse pieces of knowledge in a way that is reminiscent of the links of a chain—the chain of tradition. The thought of the sages is like a winding stream of

consciousness that flows into the “sea of the Talmud” and nurtures the religious and national life of a people. Accordingly, though not surprising, forces hostile to Israel as “a light unto the nations” have maligned the Talmud, prohibited its study, and consigned its pages to flames countless times during the Middle Ages, in *fin de siècle* Europe, and during the Nazi era. From such horrendous acts, a *talmud* (in a limited sense, the word means “instruction”) has been revealed: Strip the Talmud from the “people of the Book,” and chances for Israel’s spiritual and, ultimately, physical survival are almost nonexistent.

MISHNAH

The Mishnah is the core document of the rabbinic system of philosophy and legalism traditionally called *Torah shehbe’al peh* (oral Torah). The quintessential “tradition of the elders,” it represents a Pharisean application of the written Torah in the life of the people. Inevitably, as a living interpretation, reflecting changing times and events, it added, subtracted, and modified the written teaching of God. Humility (many teachings are given anonymously), respect for sanctity of the teaching of Moses, and concern that the rabbinic spirit might replace the letter of the Torah in the eyes of the people (for example, *mamon tahat ayin* [monetary compensation for bodily injury] in place of *ayin tahat ayin* [an eye for an eye]; near abolition of the death penalty; introduction of a court administered *prosbul* to overcome the cancellation of debts during the year of release) inhibited individual schools of rabbis from writing down their decisions.

Ultimately, successful dissension within greater Judaism (for example, Jewish Christianity) and greater Roman oppressiveness in response to ill-fated Jewish wars led to conditions of exile and set the stage for the redaction of the Mishnah. Rabbi Judah the Prince collated the unwritten rules, customs, interpretations, and traditions of multiple masters, pre-70 and post-70, into a written guide. The Mishnah (“repetition” or “recapitulation” of the revelation at Sinai) claimed an authoritative affinity to Sinai (“everything which a sage will ask in the fu-

ture is already known to Moses at Sinai”) and also claimed to be its living successor (“We teach more Torah [than] received at Sinai”). Therefore, the Mishnah designates the transition from Israelite religion to the system now called Judaism in the same manner that the New Testament points the way from Israelite religion to Christianity.

The Mishnah is divided into six orders (*sedarim*), which are subdivided into sixty-three topical sections (*massekhtot*), with each *massekhet* containing multiple chapters (*perakim*). The Mishnah, also known as *SHaS*, an acronym for the six orders (*shishah*

Six Orders of the Mishnah

- | | |
|----------------------------------------------|--------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| 1. “Seeds”
(<i>Zeraim</i>) | Agricultural rulings (gleanings, tithes, the Sabbatical year, and so forth), though the first <i>massekhet</i> is a discussion on “Benedictions” (<i>Berakhot</i>). |
| 2. “Appointed Festivals”
(<i>Mo’ed</i>) | Regulations governing holy time, such as the Sabbath, the holidays, and their respective festival offerings. |
| 3. “Women”
(<i>Nashim</i>) | Ordinances on marriage, divorce, and vows, and related exceptional cases, such as Levirate marriage, suspected adulteresses, and the Nazirite vow. |
| 4. “Damages”
(<i>Nezikim</i>) | Civil and criminal decrees, and the conduct of and conduct before an ecclesiastical court of law. Includes the tractate <i>Avot</i> (“Founders”), a selection of maxims and ethical statements given in the names of sixty <i>tannaim</i> (Aramaic for “repeaters,” or teachers) of the oral Torah; its five chapters (and a sixth one, added centuries later) are traditionally studied on the six Sabbath afternoons between Passover and Pentecost. |
| 5. “Sacred Things”
(<i>Kodashim</i>) | Holy things of the Temple, pertaining mainly to animal, fowl, and meal offerings. |
| 6. “Purifications”
(<i>Tohorot</i>) | Conduct dealing with cultic and domestic purity and defilement. |

sedarim), covers a range of Pentateuchal legislative topics.

The Mishnah is an enigmatic corpus. It claims the authority of revelation but it was not admitted by the rabbis into the canon of Holy Scriptures. Written in Hebrew, it departs from the style and syntax of biblical Hebrew. It does not speak of an eschatological future (stable material in the holy writings of world religions), and it fuses a cultic past (the Temple), regarding which it has no direct access, into a present that is dubious and fanciful. Its many *halakhot* (laws) regulate an “existing” priesthood, Jewish government, and courts, totally oblivious to the ruin of these institutions during the first and second centuries. Other *halakhot* relate to religious practices that have no bearing on the Judaism of the day. It purports to be a code of law, but it is actually a compilation of unre-

solved legal disputations together with biblical exegesis (*midrash*) and nonlegal material (*aggadot*). Despite these facts, however, the Mishnah’s paradoxical complexity is justified by its objective: the restoration of the peoplehood of Israel when all signs, internal and external, pointed to its disintegration. In the end, the Mishnah represents a beginning: the initiation of a salvation grounded more in polity survival than in personal salvation.

GEMARAH

In the generation following its appearance, the Mishnah proved to be the focus of increasingly involved discussions by groups of rabbis and their students. The first generation (early third century) clarified obscure passages, and the succeeding generations developed and expanded principles and rules

of conduct from the extant mishnaic material as they applied to situations arising in their own societal setting. In due time, new tributaries of oral Torah called *gemarrah* (“completion,” “learning tradition”) in Aramaic and *talmud* (“learning”) in Hebrew gushed forth from academies in Galilee and in Babylonia.

Decades of *gemarrah* expansion became a virtual reservoir of oral Torah, and the need arose to legitimate the process by editing inconsistencies, curtailing new interpretations, and showing coherent linkage between *gemarrah* and Mishnah. In addition, the abrupt Roman closure of Galilean schools of learning during the mid-fourth century and the exile of Jewish communities from Babylonia hastened the pace of selection and collation. The informed result was the creation of two Talmuds, each named after the place of redaction: Yerushalmi (a product of the land of Israel, not Jerusalem, as the name would suggest), circa 400 C.E., and Bavli (Babylonia), circa 500 C.E.

The Talmuds share the same Mishnah (for the most part), but their *gemarrah* are written in different dialects of Aramaic (Yerushalmi in Western Aramaic, with a considerable mixture of Greek words; Bavli in Eastern Aramaic, with many Hebrew loan words). They differ in length (Bavli is about twice the length of Yerushalmi), style, syntax, and methodological principles. Their diverse emphasis and *halakhot* may be explained by their places of composition. For example, the Yerushalmi, serving Palestinian Jewry, has *gemarrah* for all tractates dealing with agriculture in the Order *Zeraim*, but this is lacking in the Bavli, a product of diaspora *amoraim* (Aramaic for “interpreters” of the Mishnah). Similarly, the Bavli records that the fourth century Amora, Mar Samuel of Nehardea, laid down the principle *Dina deMalkhuta Dina*, which holds that, in civil matters, the law of the land (Jews were a minority in Babylonia) is as binding on Jews as are the commandments of the written Torah.

A dwindling Jewish community in Eretz Israel, stunted in its growth in oral Torah, and a growing diaspora Jewry, which drew succor and moral support from the Babylonian sages, combined to make the Bavli the Talmud of authority during the past 1,500 years of Jewish life and learning, and conceivably for the future as well. For all practical purposes, the Yerushalmi has become a closed book; its many ob-

scure passages have become the objects of antiquarian research. The reclamation of the Temple Mount by the Israelis in the Six-Day War (June, 1967), however, has renewed interest in the Yerushalmi by groups of religious nationalists, who believe that the Talmud of the land of Israel holds the key for the rebuilding of the Third Temple and proper worship therein.

Temple building and its complementary idea, Israel’s messiah, however, were conceived by the framers of the Talmud in an ahistorical framework. The main purpose of the oral Torah is to emphasize the holiness of everyday acts and thoughts, which are the way to achieve individual and group happiness and survival. The Talmud successfully preserved the teachings of earlier generations so that later generations could continue them. Its directive “Go forth and study!” is heard to this day.

Taxes

DEFINITION: Compulsory payments levied for support of government

TYPE OF ETHICS: Politico-economic ethics

SIGNIFICANCE: Taxes can have a major impact on the profitability of businesses and the disposable incomes of millions of people, and every discussion of tax-rate changes raises ethical questions about fairness.

To individual citizens, most taxes appear to be coerced payments. The benefits that individual taxpayers receive from government services are seldom proportional to the tax payments that the individuals make, and taxpayer are sometimes tempted to be “free-riders” by trying to minimize their tax liability, often by crying “unfair.” There are many possible ways to determine the fairness of taxes, and they sometimes contradict one another.

TAX STRUCTURES AND FUNCTIONS

Most people agree that taxes should be fair, but the taxes should also be functional. The ostensible purpose of taxes is to raise funds to finance government expenditures. However, governments do not really need to collect money, which they can print cheaply. What governments need are goods and services that they purchase from the private sectors of the economy. Taxes serve to reduce the amount of goods and services used by the private sectors and thus make them more available for government uses.

The willingness of citizens to pay taxes is a measure of the citizens’ willingness to permit resources to be used by the government rather than the private sectors. However, some taxpayers may think that they experience injustice when government conducts programs against which they have strong objections—most notably wars. By this view, taxes imposed to support immoral governments, such as those of Adolf Hitler, Joseph Stalin, or Saddam Hussein, are inherently immoral.

Libertarians who believe that government is too large favor taxes that are painful, so that the public will favor smaller government. In this view, “taxation without tyranny is misrepresentation,” and high taxes are intrinsically unfair. When U.S. president Ronald Reagan successfully pressed for reductions in federal income tax rates during the early 1980’s, part of his

argument was that this was a method of restraining growth in federal expenditures—“starving the beast,” in the jargon of the times.

Many observers would also raise moral objections against situations in which most tax revenues are taken from a small minority of citizens and used for programs that benefit other people who do not pay taxes. During the eighteenth and nineteenth centuries, this concern was often raised as an argument against the establishment of majoritarian democracy. Modern democratic governments rely on tax systems that are complex and require high degrees of voluntary compliance. If a large portion of taxpayers believe that a tax system is unfair, voluntary compliance may not occur. In extreme cases, individuals and business firms may relocate to more favorable tax environments.

The feasibility of specific types of tax depends on the structure of the economic system. Modern industrial countries rely on taxes on incomes and on corporate profits. These systems require extensive formal financial record-keeping and are not suitable for countries in which most people are self-employed farmers or shopkeepers. Before 1900, the revenue of the U.S. federal government was based primarily on import tariffs, commodity excise taxes, and property taxes.

Property taxes are a major financial support of local governments, as they are location-specific taxes. Such taxes create a special problem of fairness when property tax revenues are used to finance local schools. Rural areas generally have less tax potential per resident than urban areas, which contain expensive commercial and industrial real estate. As a result, many state governments face pressures from their rural areas to provide financial supplements to property tax revenues.

ASSESSING FAIRNESS

Assessing the fairness of taxes is complicated by difficulty in identifying who are ultimate payers of the taxes and by the possibility that the burden of tax may differ from the distribution of revenue raised by the government. One of the most substantial federal taxes in the United States is the wage tax that finances Social Security. In 2003, the rate was 7.25 percent of each wage earner’s taxable income assessed against the wage earner and 7.25 percent of the same income assessed against the employer. Although one part of that tax is taken out of the wage earners’ take-home

pay, employers view both parts of the tax as effectively a part of their payroll costs, a fact that reduces their demand for labor. Part of that tax falls on workers, but the cost of the tax is also reflected in higher product prices paid by consumers. Similarly, economists believe much of the tax on corporate profits is shifted to consumers in the form of higher prices, or to workers as lower wages. However, the burden of personal income taxes falls primarily on the individual taxpayers who pay them.

Taxes on fixed assets have additional complications. For example, increasing a tax on a rental property will lower the property's net income, causing its price to fall. The owner of the property may, in effect, bear the entire future burden of the tax. Similar effects can befall corporate stockholders if profits taxes are increased, lowering the prices of their stock. This impact on asset prices is called capitalization.

Economists apply the term "excess burden" to situations occurring when a tax places a burden on public income that is greater than the amount it increases government revenue. An example is an import tariff that is so high that it yields little revenue, while contributing to an inefficient pattern of resource use that reduces national output. A common source of excess burden involves compliance costs. The federal income tax system is so complex that more than half of American taxpayers engage professional tax preparers to do their taxes for them. In 2002, the four largest tax-preparation firms alone collected seven billion dollars for performing tax services. All the money that goes to tax-preparation services is a burden on taxpayers that contributes nothing to government revenues.

ABILITY TO PAY

One traditional standard of fairness in taxation is the idea that families with more income and wealth should pay more taxes—and even pay higher percentages of their incomes—than poorer people. The concept of higher tax rates for higher incomes is called progressive taxation. The federal income tax in the United States is a progressive tax because higher incomes are taxed at higher rates. The progressive rate structure is reflected in the fact that in the year 2000, the top 25 percent of personal income receivers—those with incomes of \$55,000 or more—provided 84 percent of the federal income tax revenues.

Some economists favor progressive income taxes because they act as "automatic stabilizers" against business fluctuations. During economic recessions, declining incomes cause income tax collections to decline, and this in turn helps cushion the decline in incomes.

Persons who favor progressive taxation are also likely to favor taxing inherited property. Not only do inheritances provide the means to pay the taxes, but inheritance revenue also may be considered as unearned by its recipients. Moreover, only a small portion of the population is wealthy enough to bequeath substantial estates. President George W. Bush pressed Congress to eliminate or reduce the federal inheritance tax. A major objection to such taxes is that they can create major problems for family-owned business firms and farms, which may have to be dissolved to meet inheritance-tax liabilities.

Nobel laureate Milton Friedman recommended that the federal government provide a "negative income tax," one under which families whose exemptions and deductions exceed their incomes would receive cash payments. That proposal was, in fact, enacted in the earned income credit law, which provides cash benefits for low-income wage earners.

One of the corollaries of taxing on the principle of ability to pay is that persons in substantially equal financial conditions should be taxed equally. However, the complex federal personal income tax clearly fails that standard.

Avoidable Taxes

Some taxes may be considered voluntary because people can avoid them simply by not purchasing the goods or services on which the taxes are assessed. Taxes on cigarettes and alcohol are notable examples. Indeed, part of the rationale for such taxes is to discourage people from consuming harmful products. The amounts that individuals pay into such taxes can be considerable. For example, smokers in New York City paid three dollars a pack in taxes for cigarettes (half goes to the city, half to the state) in 2004. Two-pack-a-day smokers thus paid six dollars a day, or nearly \$2,200 a year, in taxes that non-smokers did not have to pay.

PROTECTING INCENTIVES

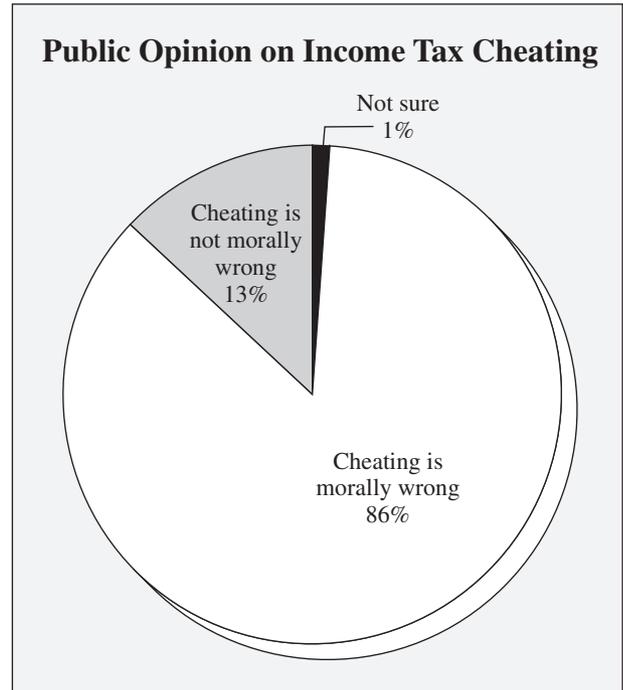

A major objection to progressive taxation of incomes and wealth is that high incomes are considered rewards for high productivity and are thus considered by many people to be fair. Most incomes are payments for personal services, and high personal incomes tend to go to managers of business firms and professional persons such as doctors and lawyers. Imposing high tax rates on high incomes may impair the incentives for persons to enter these occupations, since professional education requires much time and expense. Indeed, newly qualified physicians often begin their professional careers with heavy burdens of student loans to pay off.

High tax rates on wealth, or on incomes generated by wealth, may also impair savings and investments. If the national economy is to grow and create more and better jobs and more and better goods and services, people must be willing to save and invest in new equipment and technology. Most saving and investment is done by persons in the highest income brackets. Persons concerned with economic growth sometimes argue that tax burdens should rest more on consumption and can be heavier on low-income persons and still be fair because over time economic growth will help raise wages and reduce poverty. Examples of taxes on consumption are the value-added taxes (VAT) levied by many European countries. A value-added tax is a kind of sales tax, structured so that it does not become excessive when collected at various stages in production and distribution.

Supporters of progressive taxation argue that high incomes are often products of unfair advantages gained by persons who are born into high-income families or who are born with special physical gifts or talents—such as those possessed by professional athletes and entertainers. However, there is not much evidence that high tax rates on high-income persons have substantially impaired the flow of persons into high-income professions.

OTHER ASPECTS OF TAXATION

Some taxes can advantageously be linked with specific government programs. One example is the wage tax that finances Social Security. Although the benefit to any individual is not closely linked to the

Source: Roper Center for Public Opinion Research, University of Connecticut. *Time* magazine survey, January, 1987. Figures based on interviews with 1,014 adult Americans.

amount of tax paid, taxpayers believe there is a connection. This reduces the risk that politicians will enact further large increases in benefits. Another “benefit tax” is the gasoline tax, revenues from which are generally used for highway programs, which are of clear advantage to users of gasoline. When increased highway use leads to increases in gasoline tax revenues, legislators generally conclude that new highway expenditures are appropriate.

As concern for the environment has increased, many tax programs and proposals have been developed to encourage environmental protection. For example, taxes on pollution can be used to deter polluters. A common recommendation is to impose excise taxes on fossil fuels such as coal and gasoline, which are major sources of carbon dioxide and particulates. This could produce a gasoline tax much higher than needed for highway financing.

A MORAL OBLIGATION?

U.S. Supreme Court justice Oliver Wendell Holmes once remarked that “taxes are what we pay for civilized society.” On the other hand, Chief Jus-

tice John Marshall earlier pointed out that “the power to tax involves the power to destroy.” The many different criteria for determining tax fairness illustrate why there are many opportunities for conflicts of goals. Such conflicts were much in evidence in 2003, when President Bush persuaded Congress to reduce tax rates even though the federal government was already running a deficit, spending more than it took in. Bush wanted to stimulate the economy by giving consumers more disposable income during a recession that had resulted from weak growth in spending for goods and services. He succeeded in reducing taxes on dividend incomes. However, critics of his tax cuts noted that the benefits went predominantly to high-income people and that consumer spending was not likely to be stimulated much by such cuts. Bush evidently saw the tax reduction as a long-run change that would eventually encourage more saving and investment. Meanwhile many Americans believed they had a moral obligation to support American troops then fighting in the Middle East by making large tax payments to the government.

In paying taxes, as in other aspects of life, honesty is generally understood to be the best policy. However, the distinguished federal judge Learned Hand once sagely observed that “Nobody owes any public duty to pay more than the law demands: taxes are enforced exactions, not voluntary contributions.”

Technology

DEFINITION: Practical application of scientific knowledge

TYPE OF ETHICS: Scientific ethics

SIGNIFICANCE: The ethics of modern technology involved reconsiderations of personal and social values to ensure the wise use of technology and to prevent dehumanization and environmental destruction.

Through technology, humans have developed the means to transcend certain physical and mental limitations of their bodies. In the process, they have modified materials and their environment to better satisfy their needs and wants. Technological change has, however, resulted in an expanded range of choices and new ethical dilemmas that necessitate a reconsideration of personal and social values. Ethical analysis of technology involves reviewing whether the social and personal impact, economic costs, environmental damage, and potential risks associated with technology are worth its benefits. Such analysis is used in combination with scientific knowledge to formulate goals and policies to help ensure the responsible development and utilization of technology.

HISTORICAL CONTEXT

Despite its profound influences on humanity and the environment, technology became a subject of eth-

ical inquiry only relatively recently. A review of how the cultural context of science and technology has changed with time is useful in understanding why technology did not come under the scrutiny of ethical analysis earlier.

Technology is generally considered to be the application of scientific knowledge; however, technology actually preceded science. The first human use of tools and the development of agriculture were early forms of technology. The word “technology” originates from the Greek *technè*, which means “art,” “craft,” or “skill.” In ancient times, science was equated with the search for truth and understanding of the world and of human life. The Greek philosophers were the first to formulate ideas about matter, although they never experimentally tested their ideas. Their discourse focused on determining what was real and unique about humans relative to other forms of matter.

A relationship between science and technology began in the Middle Ages with the practice of alchemy—a sort of mystical chemistry practiced by people with an interest in human health and the quality of life. Alchemists prepared elixirs in efforts to remedy ailments as well as to confer immortality. It was Francis Bacon, however, who first perpetuated the belief that knowledge obtained through science could be utilized to enrich human life through new inventions.

Bacon lived in an age when people first used instruments to collect information about nature and the universe but also considered the influence of the stars upon their destinies and believed in witchcraft. As an alternative, Bacon outlined what was to become the modern scientific method—a process characterized by induction, experiment, and the empirical study of data.

Over the next hundred years, René Descartes, Thomas Hobbes, Robert Boyle, and Sir Isaac Newton further contributed to the philosophical basis of the scientific revolution. Science was viewed as one of humanity’s noblest enterprises and one of the best means for gaining an understanding of nature. Of relevance to ethics was the fact that this new image of science differed from previous philosophical thought on at least two major points. First, classical ethics assumed that there were limits on humanity’s power over natural phenomena; nature and the future were controlled by fate, chance, or some divine power.

According to Bacon, however, the power obtained through knowledge would enable humans to control nature and their own destiny.

Scientific knowledge was also considered objective and tangible. Scientific judgments could be tested by observation of facts and logical analysis; one could provide clear evidence of truth. In contrast, moral judgments were seen as subjective, abstract, and incapable of being empirically tested. Ethical analyses reflected attitudes of the persons involved and were based on values held by an individual or society—all of which have a tendency to be relative to a particular culture and time. Such relativism was not thought to apply to scientific data.

Bacon could not have fully imagined the extent to which his predictions about the enhancement of human life would come true as a result of technological innovations beginning with the Industrial Revolution. By the mid-twentieth century, numerous dreaded diseases had been virtually eliminated with the discovery of antibiotics and vaccines. Fertilizers, pesticides, and animal breeding had increased and enriched the world’s food supply. New materials such as plastics and fibers had brought new products into homes, industrial automation had increased leisure time, advances in transportation and communications had linked remote regions of the world, and humanity had begun to look toward outer space as a new frontier.

The public was content to leave details of scientific concepts to a perceived elite group of experts. What seemed important was that technology, the practical result of this work, was the means to improve the quality of life for the average person both by providing conveniences to simplify tasks and ease the burden of work and by offering new luxuries and expanded time for leisure. Advancements in new weaponry and synthetic pesticides that dramatically impacted the course of World War II served to further the public’s positive view of technology.

CHANGING ATTITUDES

Despite the perceived benefits of technology, several events during the twentieth century contributed to changing attitudes about science and technology. The development of the assembly line in 1913, initially hailed as a means of providing affordable products for everyone, was blamed for the loss of jobs during the Great Depression. Around this same time,

philosophical concerns about technological impact on humans were voiced by individuals like William F. Ogburn, Leslie White, Lewis Mumford, and C. P. Snow. They all questioned whether the machine was an amplifier of human power that challenged human productive abilities or something that placed humans into a new serfdom. Despite this, mechanization propagated as the industrial robot and other forms of automation were introduced.

The United States' use of the atom bomb during World War II raised the level of consciousness of responsibility among scientists. Afterward, they protested against nuclear weapons testing, development of antiballistic missiles, and military research being done within university settings. Additionally, scientists (most notably Rachel Carson) pointed out that science and technology had the potential to destroy the world by the irreversible damage to the environment caused by industrial pollution and the rampant use of pesticides. Such testimony by scientists and other experts led to an increased social awareness of environmental hazards resulting from technology, and for the first time, the general public began to question the value of technology.

Philosophers of the technological age, such as Herbert Marcuse, Jacques Ellul, Victor Ferkiss, and Jacob Bronowski, began to formulate the foundations of a new ethic. New methods of analysis emerged. One example was Norbert Wiener's notion of communication and feedback control processes in animals and machines that he introduced in his book *Cybernetics* (1948); it became a discipline of study in the 1960's. Several other books emerged during the middle of the twentieth century in which the authors openly questioned the value of technology. Rachel Carson's *Silent Spring* (1962) was pivotal in this respect. The evils of technology were often emphasized, and it was pointed out that technology had altered the image of humankind. Science-fiction writers portrayed the horrors of technology gone awry; for example, Kurt Vonnegut's *Player Piano* (1952) detailed the impact of technological change on the human psyche.

Public concerns about science and technology rose dramatically toward the end of the twentieth century. Nuclear energy, resource availability, biomedical and reproductive technologies, genetic engineering, animal welfare, the value of "big science"—such as space exploration, strategic defense

initiatives, superconductors, and the Human Genome Project—and the economic and environmental impact of technology were all among the topics of concern. A growing reliance on computers, the Internet, and new electronic modes of communication were changing models of conducting business, accessibility to information, and perceptions of time and distances around the globe. New ethical concerns were being raised about the artificial extension of the human mind and the changing forms of human interactions. Life science research and biotechnology methodologies led to gene therapy, genetically modified foods, cloning of mammals, and the use of stem cells for research—all of which have raised to unprecedented levels public awareness of the new ethical dilemmas.

TECHNOLOGY AND PUBLIC POLICY

Despite a move in the United States to isolate scientific research from political control, the opposite situation occurred. Scientists and engineers were consulted by the government for advice on technology—especially, originally, on issues related to atomic energy. Federal government involvement in science expanded during the 1950's and early 1960's, with the formation of funding agencies such as the National Science Foundation and the National Institutes of Health.

Changing economic and political situations in the 1960's, however, led to decreased federal appropriations for research, and there was a new emphasis on accountability. Scientists were expected to be productive, and research was expected to lead to practical applications. Phrases such as "applied science" and "publish or perish" became popular, blurring the distinction between science and technology. The increased involvement of government in research and technology and the increased dependence of science on public funding severely challenged the previously held ideal that these were ethically neutral areas. Value judgments, social attitudes, and political and economic pressures were clearly influencing the national science agenda, research priorities, and public opinions of technology.

After the 1960's, the level of federal funding for science in the United States increased significantly; a large percentage of scientists rely on federal research support. Entrepreneurial partnerships between universities and business have become common, serving

to further emphasize applied research and profit-making—sometimes at the expense of the traditional academic missions of education and basic research. Social priorities define where research funds are directed; this is evident in the large amounts of funding available for research related to cancer, acquired immunodeficiency syndrome (AIDS), and, in the early twenty-first century, national security—especially in the wake of the events of September 11, 2001.

During the 1970's, private institutes such as the Hastings Center in New York and government advisory groups such as the Office of Technology Assessment and the National Academy of Sciences were established to initiate discussions and studies of ethical issues in technology. Emphasis was on the personal and social impact of technology, regulatory issues, and finding ways to better inform the public about technology. International gatherings of scientists (most notably the meeting on recombinant DNA technology held at Asilomar, California, in 1975) focused on ethical dilemmas related to the safe application of new and controversial technology in scientific research, industry, and agriculture.

The national dialogue about technology and ethics expanded as professional scientific societies began to routinely include sessions on ethics at their annual national meetings. Ethics has become a required component of the curriculum of many science graduate school programs, and researchers often must address ethical issues when submitting grant proposals for federal research funds. Centers of ethics related to technology have been developed at a number of universities; the Center for Bioethics at the University of Pennsylvania and the Markkula Center for Applied Ethics at Santa Clara University in California are prominent examples.

Calls to place limits on, or even ban, certain types of research were beginning to be voiced. Initially these came largely from environmentalists and animal rights activists, but they later expanded to groups concerned about genetically modified foods and reproductive technologies, including cloning. A National Bioethics Advisory Commission was established by executive order during President Bill Clinton's initial term in office. This advisory committee examined issues related to human subjects' protection in research. Growing public concerns about human cloning and embryonic stem cell research led President George W. Bush to establish a

new President's Council on Bioethics that met for the first time in January, 2002.

Ethical dilemmas related to the distribution of wealth and knowledge and environmental damage resulting from technology have become a major focus of foreign policy. This is evident in provisions of international agreements such as the Montreal and Kyoto Protocols (which focus on environmental concerns), unilateral agreements on weapons and nuclear power, and discussions about the distribution of AIDS drugs to developing nations where the disease is most prevalent. In October, 2003, the president of France, Jacques Chirac, called for an international convention to address ethics raised by advances in genetic engineering and biotechnology.

ETHICAL PRINCIPLES

Traditional ethics were anthropocentric; the fundamental nature of the human entity was presumed to be constant. Classical theories such as Immanuel Kant's theory on moral law focused on similarities between kinds of situations and people. Questions of good or evil actions toward fellow humans were confined to the foreseeable future and to individuals to whom a person was either related or was close in the sense of time or physical location. Actions toward nonhuman objects were considered to be outside the realm of ethical consideration.

Modern technology has altered these premises of classical ethics by changing the nature and the realm of human actions. Individualism and uniqueness, rather than similarities, are valued; society is pluralistic. Innovations in communication and transportation have altered perceptions of time and space, as well as changing the very nature of how humans interact with each other. Humans must think globally in terms of their actions, since they can affect not only living relatives and neighbors but also unknown people living thousands of miles away or someone who might be born several generations in the future.

Modern technology is informed by a much deeper understanding of natural phenomena, yet nature is critically vulnerable to technological intervention. Because of this, the realm of moral consideration has been expanded to include nonhuman living organisms, or even all components of the planet. This has led to the animal rights movement and the development of the field of environmental ethics. Despite this new awareness, humans continue to use technol-

ogy to construct new environments and alter existing elements of nature—described by some as humans’ attempt to re-create Eden.

Contemporary ethics, which emerged in the twentieth century, is usually divided into three components. Through descriptive ethics, one seeks an accurate, objective account of moral behavior or beliefs. Metaethics involves examining the meanings and uses of moral terms such as “good” or “right” and studying moral reasoning and foundations for moral judgments. In normative ethics, moral arguments about what types of conduct are right or wrong, or good or bad, are analyzed. Normative ethics is also concerned with how human beings might best lead their lives and which states of affairs ought to be furthered in society. It is this latter branch of contemporary ethics on which discussions about technology focus.

Most ethical considerations of technology are issue- or case-oriented (applied ethics) and often focus on specific areas such as bioethics or computer ethics. Ethical assessments draw on traditional ethical theory and principles when possible, but also rely on scientific evidence and psychological, political, economic, and historical factors. Traditional ethical reasoning involves consideration of utility, right, justice, common good, and virtue, and use of such standards would lead to questions such as the following when assessing technology: What are the benefits and harms of a particular technology? Who will be impacted and do individuals have free choice in determining whether they will use or be impacted, by technology? Are individuals protected from technology being used in ways they do not want? Will there be a fair distribution of the direct benefits and wealth technology brings? However, given the pace at which new information is obtained and put into application, and the inability to foresee all the consequences of technology, it is difficult to conduct such a thorough assessment.

The fundamental ethical question of whether science and its applications through technology are good or evil is frequently debated. Since goodness is a function of both personal and societal sets of values, there is no absolute set of standards from either classical or contemporary ethics that can be used in this area. Such analysis is further complicated by divided views as to whether technology is mechanical or autonomous. In the mechanical view, or instru-

mental theory, technology is seen as a tool with which to accomplish a humanly defined goal. As such, it has instrumental value depending on its usefulness to humans, and ethical judgments can be made only regarding the goals for which the tools are used. In the autonomous view, or substantive theory, technology has a life of its own and may no longer be under human control. Ethical concerns center both on whether to control or restrict technology and on the moral impact of technology on individuals and society.

NEW ETHICAL ISSUES

Fears that technology might someday begin controlling humans have long been a major ethical concern. Some people believe this to be reality. During the 1980’s and 1990’s, Neil Postman and Langdon Winner both described how technology had redefined social relationships, culture, ideas of space and time, individual habits, moral boundaries, and political and economic structures. Ironically, technology, which originally led to increased leisure time, has now created a mind-set in business (at least in the United States) that prioritizes efficiency and productivity and promotes a “24-7” mentality. Without free time to pursue friendships, people ironically now turn to their computers for human interaction. Some have noted that the ever-accelerating pace of new knowledge acquisition and implementation of new technologies correlates with fast-paced modern society that is characterized by temporary relationships (consider the high divorce rate, the increasing trend of frequent career changes, and the routine buyouts and mergers in business).

Many have described the seductive power of technology and society’s increasing reliance on it. Ruth Conway refers to the “flick of a switch” syndrome where individuals use technology but are unaware of the workings of the machine or the environmental impact of the product and are completely disconnected from the science and creativity that went into the design. She sees this as a debilitating power of technology that can lead to a sense of powerlessness and incompetence. (Consider some people’s dependence on remote controls or the common perception that younger generations can no longer do mathematical calculations without the aid of a calculator.) As technology advances, the scientific literacy of the general public lags farther behind. Given the expand-

ing information gap between the experts and the public, who should make decisions about acceptable risks of technology, determine public policy on scientific research, or set limits on technology that threatens to cross some unacceptable moral boundary?

Humans have never before dealt with the types of ethical implications to which modern technology has given birth. Genetic engineering is a good example of a modern technology that leads to a range of new ethical dilemmas including decisions about whether humans should genetically modify themselves or other animals and uncertainties associated with scientists tinkering with evolution and natural selection. However, besides these, there are questions of whom, if anybody should profit from this technology.

In *Diamond v. Chakrabarty* (1980), the U.S. Supreme Court ruled that oil-eating bacteria produced by genetic engineering were living inventions and thus were patentable. This decision further sparked debate over whether life-forms should be engineered, much less patented, and has intensified as a result of the various genome sequencing projects and the patenting of specific DNA sequences isolated from living organisms. A scientist can patent not only a gene responsible for some desirable trait in a crop plant but also a potentially interesting abnormal gene isolated from tissue of a patient with some disease (without the patient's knowledge). Previously unimaginable businesses such as gene prospecting (from humans and other species) and trade in indigenous DNA have emerged.

Computer and communication technologies have also led to new ethical dilemmas—typically in the areas of privacy and intellectual property rights. While some parents may appreciate the ability to check in on their children electronically at a day care center, they might strongly object to the same technology being used in their workplace to monitor their own work. Global positioning systems enable products such as OnStar, which can be used to help a stranded motorist, but also allows companies to track the driving patterns and location of automobile owners without their explicit consent. The Internet and electronic mail communication have many benefits, but they also expand the availability of potential victims, as evidenced by the increase of new breeds of criminals including hackers and online sexual predators.

INTERNATIONAL ISSUES

Most countries realize that their welfare is dependent in part on their national scientific and technological capacity. In the past, the poor (including those in technological countries) have benefited least from technology. How is it possible to distribute justly the benefits of technology? Should everyone enjoy some equitable level of quality of life before further technological advances are permitted? Does the inequality in wealth and technology that exists between industrial and developing nations lead to undesirable practices such as black markets for weapons or substances such as chlorofluorocarbons (CFCs)—which were later banned by the provisions of the Montreal Protocols? Should technologically advanced countries continue to use resources obtained from less-developed countries? If so, what constitutes a fair compensation?

The British philosopher David Hume stated that a system of justice was necessary because of human passions, selfishness, and limits of resources. Ethical discussions of technology often refer to the tragedy of the commons. The commons are those provisions of the earth that humans must share; the tragedy is that human nature compels people continually to increase their well-being—often at the expense of fellow humans. Can a spirit of cooperation prevail if competition is instinctual?

Countries may be obligated to share not only the benefits of technology but also certain kinds of knowledge, such as that related to the eradication of disease. For poor countries, the information may be useless unless financial assistance for implementation is also provided. Who becomes responsible for such financial support? Other technical information, such as that linked to national security, may require protection. Who decides which information is to be shared?

New technology raises questions of priorities, especially when resources are limited. Should ending world hunger be of higher priority than having humans explore outer space? Proponents argue that technology stimulates human intellect, national prestige, and pride. Of what value are these? When a nation has a large national debt, how much technology is needed for security (whether to serve as a deterrent or for defense)? What would be the social price of not using technology?

Technology is often blamed for the depletion of

many natural resources. Can limited resources be shared or conserved? If technology cannot provide alternatives to scarce resources, what valued material goods and comforts would humans be willing to sacrifice? What alternative energy sources are acceptable substitutes when traditional ones are depleted? Innovations in agriculture enhanced the world's food supply, but overpopulation threatens the planet. Should birth control (via technological products) be mandated to bring the population back into balance with what the earth can support?

Other new ethical questions relate to responsibilities toward future generations. What impact will continued technological development have on the future of humanity and Earth's ecosystem? Are these even within the realm of human responsibility? The technology accepted in the twenty-first century or any decisions made to set limits on research and evolving technologies will likely have far-reaching consequences for many generations to come.

HAS TECHNOLOGY ALTERED HUMANS?

Early ethical considerations of technology asked whether it was a threat to the dignity of humans and whether humans were becoming slaves to machines. In contrast, others argue that the machine has freed humans from demoralizing and tedious physical labor, allowing them to more fully develop their intellectual capacities. Modern technological advances have the potential to further blur the boundary between human and machine, including artificial intelligence, neurotechnology—which involves implantable microcomputer chips connected to prosthetic devices—and nanotechnology.

Advances in computing and communication technology allow individuals to access information and regions of the world previously unattainable for the majority of people. To achieve this global connectivity, what has been lost in terms of fundamental human values of family and community? Despite the capability to access almost infinite amounts of information, computers and artificial intelligence are blamed for diminished communication skills and a loss of imagination. Are impersonal interactions and loss of privacy worth the ability to augment intellectual power?

Through technology, scientists have revealed the "secret of life" (DNA structure), and it is theoretically possible to modify humans through genetic en-

gineering. Scientists are identifying the chemical reactions that are responsible for learning, memory, behavior, and the perceptions of pleasure and pain. It has become possible to predict some future health problems, the ability to learn, or an individual's potential for criminal conduct or displaying an addictive behavior—in some cases, before a person is even born. How will such information be used, and by whom? Chemical or genetic modification of behavior, in combination with computers and artificial intelligence, will further enable the expansion of the mental capacities of humans. Researchers have the technology and most of the genetic details to redesign humans should they so choose. What impact does such knowledge have on humanity and spirituality?

Individual value systems are influenced by a person's experiences and environment. Both one's sense of self and decision-making abilities are determined by these values. What happens to human values when the factors that influence them are in constant flux? Values are known to change more slowly than the reality of human experience; what sort of crisis does this present? Humans are confronted with more choices than ever. With shifting values and no set of common societal values, how can decisions be made?

TECHNOLOGICAL RISK AND RESPONSIBILITY

Although technology provides numerous benefits to society, it also entails risks. Oftentimes, not all potential dangers resulting from technology can be foreseen, since predictive knowledge falls behind the technical knowledge and humankind's power to act. Because of this, risk-benefit analysis (a utilitarian approach) is not relevant in all cases, nor is it always possible to logically determine acceptable levels of risk. Choices must be made regarding things that humans have not yet experienced.

How should people address risk in a way that accommodates the perceptions and values of those who bear it when perceptions of the nature, magnitude, and acceptability of the risk differ tremendously among people? Is it possible to identify common values and consider objectives for technology that different cultures within a society or across international boundaries can accept?

Highly trained science experts have difficulty keeping up with developments in their own special-

ized areas. Couple this with the view that the general public is relatively scientifically illiterate, and how, in a democratic society, can citizens participate in wise decision making relative to technology? What responsibility do people have to educate themselves about science and technology? How does the public gain access to the relevant information? What are the obligations of scientists and technologists in disseminating complex information to the public? How do scientists and technologists balance loyalties to their employers, their profession, and the public in calling attention to potential risks arising from their work? Is it the role of journalists to provide an adequate set of facts to the public?

Even when intelligent decisions are made, errors can occur. Who becomes responsible for unexpected applications or undesirable consequences of technology? Who could have predicted that terrorists would use jets as weapons of mass destruction or samples from biomedical research for bioterrorism? The unpredictable nature of humans and the complexity of political and economic factors make it impossible to foresee all consequences. How can people know the truth about the future conditions of humankind and the earth? How can people know what might possibly be at stake? How important does trust become when regulating the power that humankind obtains through technology?

If technological change is inevitable, consideration must be given to how it should be controlled and assessed and how progress should be defined. Is continued evidence of technological progress a sufficient measure of the healthful state of modern culture? Ironically, modern decision making is dependent on the collection and analysis of data and the use of technological devices for this process; technology is used to assess and make decisions about technology. Where does ethical analysis fit into the process? Are there some areas of research and technology that simply should not be pursued? Who should determine the legitimate goals of science and technology, and who will be responsible for setting limits on scientific freedom and bans on certain technologies?

Although difficult, attempts are continually being made to evaluate technological outcomes. Modern pluralistic societies cannot agree on what ends should be served or how conflicting values should be prioritized. There is a general consensus that technology should be regulated, but the development of public

policy has been hampered by the unanswered question of who should decide what the moral boundaries should be. Values of freedom (respect for autonomy) and of individual choice conflict with ideas on what is right for society as a whole (the utilitarian perspective). Such conflict between self-interest and profit on one side and the sense of obligation for the common good on the other is typical of Western philosophy. A series of profound questions remain unanswered. What are the foundations of an ethic that is applicable to this new technological age? How should the new image of humans be defined in a technological age? How can the survival of humanity, which many people claim is permanently threatened by automation, computers, and genetic engineering, be ensured?

Telemarketing

- DEFINITION:** Fast-growing international industry that reaches customers through direct telephone calls
- TYPE OF ETHICS:** Business and labor ethics
- SIGNIFICANCE:** Although it is recognized that telemarketing provides useful services to consumers, the industry is known for ethically questionable practices that annoy uninterested persons and undermine consumer trust and faith in the marketplace generally.

Telemarketing can be an efficient method of selling products, services, and philanthropic opportunities. It can also disseminate useful information to interested consumers. However, telemarketers are notori-

ous for harming vulnerable consumers and businesses, providing misinformation, annoying people with unsolicited calls, and creating animosities and suspicions that limit the benefits of telemarketing itself. During the first years of the twenty-first century, it was estimated that the American public was losing an estimated forty billion dollars per year to fraudulent telemarketers.

Voluntary telemarketing codes of conduct and state and national criminal codes require that telemarketers make disclosures to consumers, prohibit lies, regulate hours of operation and sales tactics, and allow call recipients to request placement on do-not-call lists. Ethical issues arise when the marketing tactics are unfair, intrusive, or excessively forceful; the sellers, solicitors, buyers, or donors engage in deception or fraud; the marketing targets are vulnerable or exploited; or the products or benefits are exaggerated or misrepresented.

UNETHICAL PRACTICES

Such telemarketing tactics as after-hours or repeated calls, calls to private homes during private hours, calls that clog business telephones and message centers, and sales pitches implying negative consequences for resisting sales calls are considered both unethical and unfair. Some anti-telemarketing tactics are considered unethical. These include fraudulently accepting sales agreements or charitable pledges, injuring telemarketers' ears with loud whistles or horns, insincere and repeated requests for callbacks and written materials, and providing telemarketers with false or misleading information.

Both telemarketing callers and the people who take their calls are unknown to each other, making enforcement of applicable laws difficult to enforce. Some telemarketing companies practice what are known as fly-by-night tactics: After their unfair practices are detected and targeted for investigation, they close their operations, hide their assets, and reopen their businesses under new names with new corporate identities. Companies operating out of foreign countries may be beyond the enforcement reach of U.S. national and state authorities. At the same time, some buyers engage in equally fraudulent behavior by taking delivery of products or services for which they have no intention to pay.

Telemarketing sales pitches that target the elderly, persons with disabilities, geographically and socially

The National Do Not Call Registry

In September, 2003, the Federal Trade Commission (FTC) responded to complaints about telemarketers by establishing the National Do Not Call Registry. Its goal was to give citizens more control over their private telephones by enlisting government help to stop unsolicited commercial calls. New federal legislation made it a criminal offense for telemarketers to call any numbers on the registry and laid down guidelines for acceptable and unacceptable telephone solicitations and penalties for violations of the new law.

Meanwhile the FTC invited members of the public to register, at no charge, their telephone numbers. In late March of 2004 the FTC reported that 58.4 million phone numbers were registered and that “most telemarketers have been diligent” in complying with the law. According to an independent public opinion survey conducted by the Harris Poll in February, 2004, about 57 percent of all adults in America had registered phone numbers with the Do Not Call Registry. Moreover, more than 90 percent of those who had registered reported receiving fewer or no telemarketing calls since registering.

To sign up on the Do Not Call Registry or to get more information, visit the FTC Web site at www.ftc.gov/donotcall/.

isolated persons, or persons with limited financial resources are considered especially unfair. Pitches exploiting the victims’ greed, avarice, ego, or emotional sensitivities are also unfair but are often viewed less harshly by the public.

The Federal Trade Commission (FTC) and other enforcement agencies have been lenient in allowing puffery, exaggeration, and hyperbole in marketing. The marketing companies themselves may provide honest and forthright scripts for their callers to read to potential customers; however, they may also encourage their callers to deviate from their scripts to make sales. It is difficult to bring legal charges on oral sales pitches that are delivered by anonymous salespersons. In some cases the product, services, or charities do not even exist. Some telemarketing is a cover for credit card or identity theft, or is used to

gather financial and consumer information used by other telemarketers at later dates.

Teleological ethics

DEFINITION: Moral theories asserting that the purpose or end of an action determines the moral quality of that action, or that a moral obligation exists to fulfill one’s inherent purposes or ends

TYPE OF ETHICS: Theory of ethics

SIGNIFICANCE: As a general category, teleological ethics—or ethics focused on intent or on consequences, rather than duty—constitutes one of the two major types of ethics; the other is deontological ethics. A more specific school of teleological ethics is founded upon the assumption that *teloses*, or ends, exist objectively in the world, that is, that things and people have inherent purposes the fulfillment of which should guide human action. For the narrower school, therefore, one has an ethical duty to discover and accomplish one’s purpose in the world.

The term “teleological” is derived in part from the Greek word *telos*, which means end or goal. Teleological ethics refers to ethical theories that base the rightness of actions or the moral value of character traits on the ends or goals that they promote or bring about. A teleological perspective was typical in an-

cient and medieval ethical thought. Its classic expression is found in Aristotle's *Nicomachean Ethics*, particularly in the opening lines of chapter 2 of book 1:

Now if there is an end which as moral agents we seek for its own sake, and which is the cause of our seeking all the other ends . . . it is clear that this must be the good, that is the absolutely good. May we not then argue from this that a knowledge of the good is a great advantage to us in the conduct of our lives?

Aristotle, like most ancient and medieval thinkers, used ends and goals to justify virtues and other character traits as well as actions. Until the recent revival of virtue-based ethics, most modern teleological ethical theorists were concerned with theories of obligation; that is, of right and wrong action.

English philosopher C. D. Broad, writing during the early part of the twentieth century, was the first to use the term "teleological" more narrowly to refer to theories of obligation. According to Broad, teleological theories hold that the "rightness or wrongness of an action is always determined by its tendency to produce certain consequences which are intrinsically good or bad."

TEOLOGY VS. DEONTOLOGY

In Broad's classification scheme, which has become standard, teleological theories are contrasted with deontological theories. The latter judge at least some actions to be right in certain circumstances, regardless of what their consequences might be. Leading deontological ethical theorists include Immanuel Kant, W. D. Ross, and John Rawls. No standard or standards of right action are agreed on by all deontologists; instead, what is common to such theorists is a denial of the teleologists' claim that the goodness of consequences is the sole right-making feature of actions or rules of action. For example, Ross insisted that some acts, such as keeping a promise, are right even if doing something else would result in a slight gain in the value of the total consequences. Ross's criticism is of a familiar type directed specifically at the aspect of teleological theories that is sometimes referred to as their "consequentialism"; that is, their requirement that right actions are those having the best consequences. The English philosopher G. E. M. Anscombe first used the term "con-

sequentialism" in a 1958 paper to classify moral theories of obligation. She objected to such theories because of their moral laxity, in that they justified violating rules if the consequences of observing the rules were sufficiently bad.

Another way of expressing the contrast between teleological theories and deontological theories is that suggested by William Frankena and John Rawls. This approach begins with the idea that the two basic moral concepts are the right (the rightness or obligatoriness of actions) and the good (the intrinsic goodness or value of things or states of affairs). Teleological theories give priority to the good over the right in that they define the good independently of the right and then define the right as that which maximizes the good. It is possible to identify what is good or has value independent of any idea of what is right. By contrast, deontological theories define the right independently of what is good, thus allowing that a right action may not necessarily maximize the good.

Looked at this way, one of the questions that teleological theories must address is: "What is good in itself, or has intrinsic value?" The theory of value that is adopted by a teleologist may judge a single kind of thing, such as pleasure, to be good, or it may hold a plurality of things to be good. Jeremy Bentham, the famous English utilitarian, was a defender of the former view, called "hedonism," while the early twentieth century English philosopher G. E. Moore subscribed to the latter, pluralist view. Another conception of value is a "perfectionist" one, according to which some ideal of human excellence is seen as valuable and worthy of pursuit. Aristotle maintained that the human good consisted of the active exercise of the distinctively human faculty of reason.

WHOSE GOOD SHOULD BE PROMOTED?

Teleological theories also provide different answers to the question of whose good it is that should be promoted. Egoistic theories contend that the relevant good is the good of the agent, the person acting, while universalistic theories hold that agents must consider the good of all those who are affected by an action. The best-known of all teleological theories is the universalistic one: utilitarianism. Developed by Jeremy Bentham during the early nineteenth century, utilitarianism has been one of the dominant ethical theories and social philosophies in the English-speaking world.

Classical utilitarians such as Bentham, John Stuart Mill, and Henry Sidgwick were hedonistic utilitarians who asserted that actions, policies, and institutions are to be judged on the basis of the amount of pleasure (as opposed to pain) they produce, considering all those affected. Other utilitarians have departed from the classical view in several ways: Some “ideal” utilitarians, such as G. E. Moore, took the position that things other than pleasure were intrinsically good, while other “rule-utilitarians” stated that rules, not actions, should be judged on the basis of goodness of consequences. While utilitarianism in its various forms remains an important system of moral thought, its once dominant position was eclipsed during the late twentieth century by other types of teleological theories—especially by deontological theories, which have regarded utilitarianism as being open to the charge of insufficiently respecting the value of individuals and allowing too easily the sacrifice of one individual for the greater good of others.

Televangelists

DEFINITION: Ministers of the Christian Gospel who conduct services and raise money on television

TYPE OF ETHICS: Religious ethics

SIGNIFICANCE: The emergence of televangelism as a cultural phenomenon in the latter half of the twentieth century raised numerous ethical issues regarding the relationship between mass media and religion.

Televangelism is a product of the evangelical movement in modern Christianity that emphasizes a strict interpretation of biblical authority and a personal commitment to Jesus Christ reinforced by specific conversion experiences. It is the conversion experience itself that televangelists seek to impart in their audiences in accordance with their evangelical mandate to spread the Christian Gospel.

Evangelical Christians were among the first religious groups to recognize and utilize the power of mass media, beginning with the advent of commercial radio during the 1920's. However, regulatory policies that encouraged noncontroversial and ecumenical religious broadcasting served to marginalize the conservative Protestant messages of evangelical broadcasters, forcing them to purchase their own airtime on mainstream media outlets and develop their own media apparatuses to spread their messages. This environment shaped the development of televised evangelist ministries during the 1950's as Billy Graham, Rex Humbard, and other early televangelists worked to create their own organizations for syndication and distribution of programming.

The growth of the television industry during the 1950's and 1960's and the emergence of cable television in the 1970's provided new opportunities for televangelists to reach their target audiences. By the 1980's, televangelism was a multimillion-dollar industry with a worldwide audience of more than twenty million viewers, but subsequent revelations of financial and sexual misconduct by Jim Bakker and Jimmy Swaggart and the failed presidential campaign of Pat Robertson led to a decline in the popularity of televangelists, prompting many Christian broadcasters to turn to family-oriented secular programming to boost their audiences. Nevertheless, the core of televangelism, with its emphasis on sermons, salvation, and solicitation of funds, remained.

RELIGIOUS ISSUES

The popularity of televangelists has raised many ethical issues within the realm of organized religion. Religious leaders of various faiths have expressed concerns about the success of televangelists in advancing Fundamentalist Christian doctrine. For example, moderate evangelical Christians have charged that the prominent role of televangelism in popular religion distorts public perceptions by creating the impression that all evangelical Christians embrace Fundamentalism. However, the prevalence of televangelists in religious broadcasting is the result of long-standing regulatory policies that many of these critics have benefited from and are loathe to alter. Many religious leaders see the growing audiences of televangelists as evidence of the increasing influence of Fundamentalism in modern religious thought. Some, however, question the success of televangelists in converting believers, arguing that they have been more successful in reinforcing the beliefs of those already converted than in winning new initiates.

Critics of televangelists often take issue with their perceived vanity, their reliance upon entertainment to capture their audiences, and the celebrity status that many of them attain. Many mainstream Christians believe that these traits are antithetical to Christian scriptures and traditions that place strong emphasis upon humility and the rejection of materialism, especially with regard to members of the clergy.

Some critics also question the tendency of prominent televangelists to use their airtime, spiritual authority, and celebrity status to advance political agendas, a practice that is arguably contrary to the teachings of Jesus Christ, whom the Christian Gospels depict as a purely spiritual leader who repeatedly refused to take positions on political issues. In response to these charges, defenders of televangelists often argue that their political stances are consistent with religious doctrine and their concern for the welfare of their communities, and that their acquisition of power and influence through celebrity serves the utilitarian purpose of winning converts.

COMMUNITY VS. INDIVIDUAL

A common criticism of televangelism is that it undermines the sense of community that is crucial not only to conventional religious worship but also to the welfare of the secular community. Since televangel-

ists by nature preach to multiple audiences of individual television viewers, rather than to assembled groups of worshippers, many critics charge that televangelism changes the focus of worshippers from community to self by circumventing the fellowship and peer support that the communal worship experience provides to worshippers. Some suggest that this focus on self reinforces the emotional and cultural isolation of consumers of televangelism, placing emphasis on individual salvation and personal gain over the good of the community. By contrast, televangelists often point to the sizes of their audiences and the scopes of their ministries as evidence that they are fulfilling needs neglected by industry regulators and otherwise unrepresented in the free market by ministering to those in need of religious experience, many of whom are unable to attend conventional worship services. The validity of each of these arguments is dependent in part upon how many consumers of televangelism would be willing and able to attend conventional church services if religious broadcasts were not available to them, an indicator for which reliable data are difficult to obtain.

THE MONEY FACTOR

Perhaps the strongest and most enduring ethical criticisms of televangelists involve the solicitation and utilization of money in their ministries. Televangelist ministries, like conventional ministries, are dependent upon private donations to support their operations. Televangelists' use of the airwaves to solicit donations can thus be compared to the passing of collection plates in conventional churches. However, televangelists are often criticized for using "hard-sell" techniques to extract contributions from their viewers, many of whom are emotionally and financially vulnerable. Revelations of the financial improprieties of Jim and Tammy Faye Bakker in the 1980's coupled with the antics of Oral Roberts—who claimed that God had promised to take his life if his ministry did not meet its financial goals—lent credence to these accusations and reinforced the conventional stereotype of the vain, unethical televangelist. However, supporters of televangelism continued to argue that most televangelists do not engage in corrupt practices, and that televangelist ministries continue to provide a valuable service despite their reputations for corruption.

Temperance

DEFINITION: Moderation or self-restraint, particularly in abstaining from consuming alcohol

DATE: U.S. movement flourished between the 1820's and the 1920's

TYPE OF ETHICS: Personal and social ethics

SIGNIFICANCE: The American temperance movement, culminating in the institution of Prohibition, is generally understood as an attempt to legislate morality. In other words, it advocated outlawing actions whose moral or immoral character was a matter of debate. The destructive results and repeal of Prohibition are often used by social theorists to support arguments that morality cannot be successfully legislated—that is, that social consensus about moral values and appropriate behavior cannot be imposed by rule of law.

The term “temperance” is used to refer to moderation in all activities, especially those of eating and drinking. Aristotle advised that “moderation in all things is a virtue.” Temperance can also refer to the practice of not drinking alcohol at all, and that is how the term will be used in this article.

In the United States, the Prohibition Era lasted from 1920 to 1933. The violence of the underworld

gangs that supplied illegal liquor and the wild activities of the men and women who defied the law and drank at illegal bars called “speakeasies” earned the decade the nickname “the Roaring Twenties.”

EARLY PROHIBITION EFFORTS

During the early nineteenth century, the temperance movement began to urge Americans to avoid alcoholic beverages of all kinds. The term “temperance” as it related to this movement was a misnomer, since the members of the movement actually advocated total abstinence from alcohol. The supporters of the temperance movement were known as the “drys.” They believed that alcohol endangered people’s physical and mental health as well as encouraging crime and violent behavior. In 1846, Maine passed the first prohibition law, and by 1860, twelve more states had adopted prohibition. Throughout the U.S. Civil War the issue of temperance was ignored. The Women’s Temperance Union and the Anti-Saloon League picked up the battle from 1875 to 1900. In 1872, the Prohibition Party was formed, and it nominated candidates for president and vice president. The zenith of the party’s influence was reached in 1892, when it won 271,000 votes for its candidates. After that time, the party steadily lost ground.

By 1900, prohibitionists had lost so much ground that only five states still had prohibition laws. As a result, advocates of prohibition decided to make it a national issue, and they succeeded. In 1913, Congress passed the Webb-Kenyon Act, which forbade the shipment of alcohol from a wet to a dry state. During World War I, prohibitionists argued that using grain needed to feed soldiers to make alcohol was unpatriotic. A strong puritan strain in American culture served to support the prohibitionists’ claims. In 1917, the Eighteenth Amendment to the U.S. Constitution was passed, which prohibited the import, manufacture, sale, and transport of alcoholic beverages. Congress provided enforcement power by passing the Volstead Act, which penalized violations of the Eighteenth Amendment.

LIFE WITHOUT LEGAL ALCOHOL

Hundreds of thousands of U.S. citizens disobeyed prohibition laws, claiming that they had the right to live by their own standards. They believed that the laws were unjust and violated their rights, and were thus to be ignored.

As has been the case with illegal drugs, the demand for alcohol drove prices up, and the huge profits that could be realized attracted organized crime to the alcohol trade. The most notorious profiteer was Al Capone of Chicago, who made millions of dollars selling beer and liquor. The wealth and power of the crime gangs made it possible for them to bribe police and government officials. Those who could not be bribed were threatened or even killed. Gangs controlled the governments of several U.S. cities and were difficult to oppose.

Gangs not only made alcohol themselves but also found ways of controlling alcohol made by others. It was legal to make “near beer” by brewing beer of regular strength and then weakening it. Bootleggers simply bought or stole the strong beer and sold it to the public at exorbitant prices. The government al-

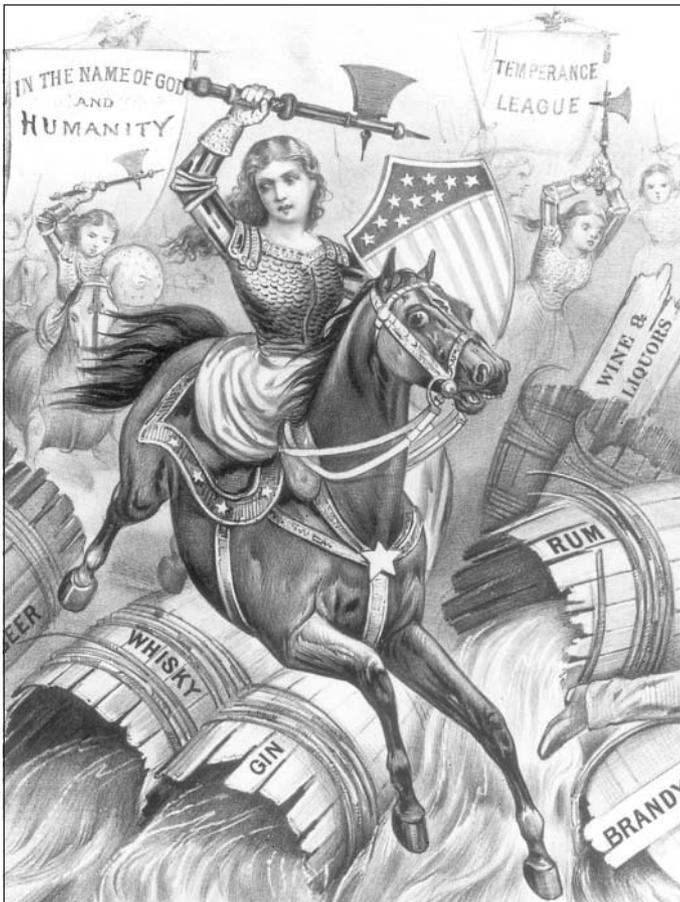

lowed industries to make alcohol for medical purposes and research. Again, the gangs either bought or stole this alcohol and converted it into beverages. The gangs also imported alcohol illegally by smuggling it into the United States from Europe, the Caribbean, or Canada. In 1924, this smuggled alcohol had an estimated worth of \$40 million, a huge sum of money at the time.

The outlawing of alcohol brought about great changes in American life. In the same way that some people produce drugs in home laboratories today, some people during the Prohibition Era made liquor at home, calling it by such names as “white lightning” and “bathtub gin.” Such liquor was strong and of poor quality, but it served to get people drunk. Prior to 1920, few women drank alcohol in public, but both sexes drank together in the crowded speakeasies.

This made it acceptable for women to drink in bars with men. Many people carried liquor in concealed hip flasks or in purses. Because the government never had enough agents to enforce Prohibition, people found it easy and relatively safe to defy the prohibition laws. Since these laws were so unpopular with the public, many officers were reluctant to enforce them.

LEGALIZATION

Many Americans concluded that Prohibition created more harm than good. It criminalized behavior that people were determined to pursue, thereby increasing crime and making a mockery of law enforcement. In addition, the 1929 stock market crash led to the Great Depression, and Americans had problems larger than alcohol consumption to worry about. Many people wanted to end Prohibition, and they argued that legalizing alcohol would help the government recover from the Great Depression by allowing it to tax the manufacture and sale of liquor. Consequently, in 1933, the Twenty-first Amendment to the Constitution repealed the Eighteenth Amendment and ended the Prohibition Era. In 1966, the state of Mississippi became the last state to repeal its prohibition laws. Less than 2 per-

Poster for the temperance movement published in 1874. (Library of Congress)

cent of Americans live in areas that have prohibition laws. In most cases, such laws reflect the influence of churches, not prohibition or temperance groups.

By 1976, only 16,000 Americans voted for the Prohibition Party's candidate for president. In 1977, the Prohibition Party changed its name to the National Statesman Party. It works closely with the American Council on Alcohol Problems and the Anti-Saloon League. Since the repeal of the Eighteenth Amendment, such groups have been relatively ineffective in promoting the prohibition of intoxicants.

CONCLUSIONS

For most people, the subjects of intemperance, alcoholism, and addiction conjure up mental images of individuals who are out of control, who are belligerent, argumentative, and violent. Many Americans associate substance abuse with spouse and child battering, frequent fighting, crimes against persons and property, and fetal alcohol syndrome. Once it was believed that alcoholics and other addicts could overcome their addiction through heroic acts of will. Nowadays, however, many physicians believe that a predisposition to alcoholism may be hereditary. Today, society views addiction as a disease rather than as a character flaw. Medical models have replaced social models, and addicts are now seen as people who need twelve-step programs and support groups such as Alcoholics Anonymous, and medical treatment rather than criticism, incarceration, and condemnation. Addiction is a complex issue that involves physiology as much as morality.

Temptation

DEFINITION: Enticement to do something one should probably not do

TYPE OF ETHICS: Personal and social ethics

SIGNIFICANCE: Temptation includes enticement to do anything from engaging in mildly self-destructive behavior, such as eating fattening foods, all the way up to committing heinous crimes. It is associated with weakness or wickedness, because it entails acting on desires one knows and acknowledges to be wrong.

Oscar Wilde's witty descriptions of temptation help to demonstrate the tremendous power of temptation over the human will. He said: "I can resist everything except temptation" and "The only way to get rid of a temptation is to yield to it."

Temptation is closely linked conceptually to the phenomenon of the weakness of human will. Paradoxically, although stories of weakness of will are found as early as in the biblical story of Adam and Eve, many philosophers have insisted that weakness of will does not exist. Weakness of will is usually defined as action that is contrary to one's better judgment. Some people have argued that it is impossible for a rational agent to act voluntarily while simultaneously realizing that his or her best judgment condemns that very act. Others have argued that since the acts in question are voluntary, the best evidence of what an agent wanted most strongly is the act itself. Therefore, they argue, it is impossible to know that weakness of will has been involved in any observed act.

Such arguments fly in the face of ordinary human experience, but the plausibility of the arguments does make the temptation involved in weakness of will

seem paradoxical. Some thinkers (such as Sterling Harwood and David McNaughton) suggest that weakness of will should be defined not as action contrary to one's better judgment but as a disposition to act against one's higher-order desires. Lower-order desires include hunger, thirst, and lust. Higher-order desires are desires that have to do with desires such as a dieter's desire for a suppressed appetite. This is one possible way to resolve the paradox, for it allows one to define the temptation in weakness of will as an unusually strong disposition to do the tempting act, whether or not one in fact succumbs to the temptation by performing that act. This conception of temptation seems to fit the hard data of human experience, which show (Fingarette, 1988) that even those who are professionally treated for alcoholism indulge their craving for drink about as often as those who are left untreated, and also show that smoking tobacco is roughly as addictive as heroin.

Ten Commandments

IDENTIFICATION: Ten absolute moral laws traditionally ascribed to the divine revelation of Moses on Mount Sinai

DATE: Proclaimed between the fifteenth and thirteenth centuries B.C.E.

TYPE OF ETHICS: Religious ethics

SIGNIFICANCE: By tradition, the Ten Commandments specify the Hebrews' responsibilities in their covenant with Yahweh. Beginning in the thirteenth century C.E., the Commandments were gradually incorporated into Christian instruction manuals and catechisms as well. Many scholars assert that they form the philosophical foundation upon which modern criminal law has been built, although many others see this notion as potentially dangerous, because it seems to combine secular and religious moral principles, weakening with the separation of church and state.

The Ten Commandments, or the Decalogue, appear twice in the Hebrew Bible (Christianity's Old Testament)—in Exodus 20:1-17 and Deuteronomy 5:6-21—with only slight variations in the wording.

The Decalogue was given within the context of Israel's deliverance from slavery and selection as the chosen nation of God. "I am the Lord thy God, which have brought thee out of the land of Egypt, out of the house of bondage" (Exod. 20:2; all biblical quotations in this article are from the King James Version). Following God's liberation of the Israelites from Egyptian servitude, God entered into a covenant relationship with them at Mount Sinai. The Lord (Yahweh) pledged to protect the Israelites and make them prosper, and they in turn vowed to honor Yahweh as their sovereign and to obey his commandments. The motivation for obedience was to be gratitude for the gracious actions of the Lord.

CONTENTS

The first four commandments deal with humanity's duties toward God; the concern of the last six is people's obligations to others. Biblical scholars generally agree that the commandments were stated originally in a concise fashion, probably as follows:

1. *Thou shalt have no other gods before me.* Allegiance to other deities is prohibited. Unlike Israel's polytheistic neighbors, the nation of Yahweh must

worship only the Lord. The first commandment establishes a practical—and perhaps a theoretical—monotheism, thus making Israel's faith unparalleled in the ancient world.

2. *Thou shalt not make unto thee any graven image.* A graven image is an idol, a visual representation of Yahweh for use in worship. Imageless worship was another unique feature of Israel's religion. The second commandment implies that Yahweh is so awesome that nothing in the physical world can represent him.

3. *Thou shalt not take the name of the Lord thy God in vain.* The term "in vain" means for an empty or worthless purpose. Forbidden here are frivolous, deceitful, and manipulative uses of the divine name. Examples of irreverent speech include profanity, magical incantations, and false oath-taking in Yahweh's name. In the Bible, the Lord's name is equivalent to his very person; therefore, the misuse of the divine name makes God himself to appear empty and worthless.

4. *Remember the sabbath day, to keep it holy.* The sabbath is the seventh day, or Saturday. To keep it holy means to observe it as a day that is different from the other days on which ordinary work is performed. Labor must cease on the sabbath; the sabbath is to be a day of rest and worship. Interestingly, this is the only commandment that is not repeated in the New Testament for Christians to observe. In commemoration of Christ's resurrection, the early church changed the day of worship from Saturday to Sunday.

5. *Honour thy father and thy mother.* Children of any age are to respect, obey, and cherish their parents. The admonition refers especially to supporting helpless old parents. They are not to be abandoned when they can no longer provide for themselves. Old and weak dependents must be cared for by their adult children.

6. *Thou shalt not kill.* Prohibited here is the unlawful killing of a human being; that is, murder. The Old Testament condemns murder as particularly heinous because it assaults the very image of God in man, a feature that makes human life unique and especially precious in the eyes of the Lord. The sixth commandment does not, however, outlaw warfare, legally sanctioned capital punishment, or the killing of animals. All these acts are clearly sanctioned elsewhere in the Hebrew Bible.

7. *Thou shalt not commit adultery.* This injunction aims to protect the sanctity of marriage and also re-

flects the importance that Yahweh places upon faithfulness in relationships. By implication, the seventh commandment relates to the entire range of sexual ethics. Adultery is singled out as the most pernicious sexual sin because it involves infidelity to a covenanted partner and undermines the stability of the home.

8. *Thou shalt not steal.* Theft covers all attempts to deprive an individual of his livelihood and property. In the Old Testament, property is viewed as a gift of God and necessary for earning a living. Hence, the eighth commandment implicitly upholds a person's right to own property. By extension, it also attempts to preserve human freedom, since the worst kind of theft involves kidnapping a human being and selling him or her into slavery.

9. *Thou shalt not bear false witness against thy neighbour.* To bear false witness is to lie. This commandment primarily forbids perjured testimony in a lawsuit involving a neighbor. Its application may be broadened, however, to cover any false statements that could damage a neighbor's reputation. This prohibition underscores the value that Yahweh places upon truthfulness.

10. *Thou shalt not covet any thing that is thy neighbour's.* The word "covet" refers to strong desire or craving for personal gain at the expense of one's neighbor. An Israelite was to be content with what the Lord provided. This final precept takes Yahweh's absolute ethical standard into an individual's inner life. By implication, all evil desires are prohibited. The tenth commandment reflects the teaching of the Hebrew prophets and Jesus that the source of almost all sinful behavior lies within the human heart.

Terrorism

DEFINITION: Unlawful use, or threatened use, of violence with the intent of intimidating or coercing societies or governments, often for ideological or political reasons

TYPE OF ETHICS: Military ethics

SIGNIFICANCE: While terrorist acts are widely regarded as unethical by those who are attacked, the acts themselves are typically guided by particular sets of ethics held by the attacking parties.

When Timothy McVeigh set a bomb that destroyed a federal government building in Oklahoma City in 1995, and when Middle Eastern suicide pilots hijacked the American airliners they used to attack New York City's World Trade Center and the Pentagon building outside Washington, D.C., on September 11, 2001, they all solemnly believed that the United States was an evil entity and that their actions were morally and ethically justified.

An essential element of terrorist actions is that they are attempts at communication. Through the direct material and human damage they cause, terrorists hope to convey certain "messages" that the target groups will interpret, understand, and act upon. They hope that the traumatic impact of their actions on public emotions will leave their targets emotionally

ready to react as they wish. However, the September 11, 2001, attacks by al-Qaeda prompted calls by political leaders for a world "war on terrorism." For terrorists and antiterrorists alike, it has seemed appropriate to adopt the terminology of war. A terrorist attack is almost always followed by reprisals, which in turn yield further terrorist attacks, which in turn lead to further reprisals.

ETHICS

The most commonly accepted body of ethical theory applied to the study of terrorism and counterterrorism is the just war theory. In the *Summa Theologica* (1266-1273), Saint Thomas Aquinas presented the general outline of this theory. He gave both a justification of war and the kinds of activity that are permissible in war.

Just war theory has two key divisions—the *jus ad bellum* and *jus in bello*. The *jus ad bellum* gives the conditions under which resorting to war is justifiable. First, war must be declared and waged by legitimate authority. Second, there must be a just cause for going to war. War must be waged only with a right intention. It must also be a last resort. The *jus ad bellum* insists that there must be reasonable prospect of success. Finally, the violence used must be proportional to the wrong being resisted.

The *jus in bello* is concerned with the permissible methods by which legitimate wars should be waged. It offers two basic governing principles. The first, known as the principle of discrimination, limits the kinds of violence that can be used, principally by placing restrictions on what constitute legitimate targets. A major part of the discrimination principle concerns the immunity of noncombatants from direct attack. The second principle is proportionality. It limits the degree of response by requiring that the violent methods used do not inflict more damage than the original offense could require.

A common element in ethical discussions of terrorism is the observation that one faction's "terrorists" may be another faction's "freedom fighters." Placing bombs on public buses or in shopping centers or abducting, torturing, and killing civilians in order to "send messages" to adversaries are actions carried out with little consideration for the victims' ethical status, that is, whether they have done anything to deserve such treatment. In *Second Treatise of Civil Government* (1690) English philosopher John Locke

said that legitimate violence should be directed only against perpetrators and not those who have no part in the offense.

SUPREME EMERGENCY

The “supreme emergency” principle attempts to justify both terrorism and counterterrorism measures by arguing that political communities that are defending themselves against external aggression—thus fulfilling the requirements of *jus ad bellum*—and that are facing dangers that are both imminent and serious may be justified in letting military necessity override the non-combatant immunity requirement of *jus in bello*.

Ethical caution—a heightened degree of making certain ethical rules are not being violated—is called for when the argument of supreme emergency is used. The fact that one’s only option to achieve a goal is to use violent means does not necessarily mean that violent means are ethically justified. For example, it might be true that the only chance a man with a terminal heart problem has of surviving would require killing another person in order to have that person’s heart implanted into his own body. Nevertheless, that situation does not mean that the man would be ethically justified in killing the other person.

When agents of national groups—such as Palestinians—that do not have states of their own commit acts of terrorism against persons undeserving of violent treatment simply to forward their goal of national independence, they send a message to the rest of the world that theirs will be states that are likely to disrespect the rights of individuals, possibly even of those of their own people.

COUNTERMEASURES

“Counterterrorism” may be taken to refer to fights against terrorism that are themselves conducted by terrorist means. To define it properly, it should mean “measures by state agencies designed to combat terrorism.” This is equivalent to the ethical necessity for

Image not available

New Yorkers flee as an explosion rocks the World Trade Center during the September 11, 2001, attacks. (AP/Wide World Photos)

the police force of any city to arrest and bring to justice murderers and robbers within its jurisdiction. Not to do so would be tantamount to accepting that some people may violate innocent citizens’ most basic rights and get away with it.

Ethical criticisms of terrorists who attack innocent persons have an obvious relevance to states and agencies that employ violent military means to combat terrorism. To the extent that they do not want themselves to be regarded as perpetrators of unjustified acts of terrorism, such governments and agencies must take special care to avoid indiscriminately killing, maiming, or incarcerating people who are unrelated to the terrorist activities they are trying to end.

THE PRINCIPLE OF DOUBLE EFFECT

Following just war theory, ethically bad effects of actions that are unintended but predictable may be justifiable if the actions themselves, as well as their intended effects, are ethically permissible. This is because the indiscriminate acts of terrorists create the need for antiterrorist operations; hence, the terrorists may become ethically responsible for situations in which further innocent people may be killed as unintended effects of the resulting antiterrorist operations. This is the principle of “double effect.”

However, there is a real danger that antiterrorist agencies will count all innocent victims of their operations as unintended casualties in justified wars against terrorism. This suggests that the principle of double effect should be modified by the antiterrorist agencies in a way that extends the agent’s responsibility for the recipients. One such modification has been proposed by philosopher Michael Walzer, who has argued that not only should soldiers in combat try not to kill noncombatants, they should also try to protect them from being killed, even if so doing means risking their own lives. In practice, this would mean undertaking more operations on the ground and engaging in face-to-face encounters with terrorist enemies, instead of relying on bombs and rockets that may be safe from terrorist fire, but which cannot discriminate between terrorists and nonterrorists. It also means that operations against terrorist bases must be preceded by careful collecting and studying of intelligence in order to make it possible to identify legitimate targets.

ALTERNATIVES TO VIOLENCE

What sorts of responses to terrorism can be ethically legitimate? Just war theory rules out the use of terrorism to combat terrorism. The use of violence to capture or even kill terrorists can be legitimate if it accords with the conditions of the just war theory and other principles that govern the ethics of resort to war. One of the most crucial conditions is the doctrine of last resort. This doctrine is based on the idea of the ethical superiority of peace over war. Decisions to go to war must be reluctant, and realistic alternatives to violence must be considered.

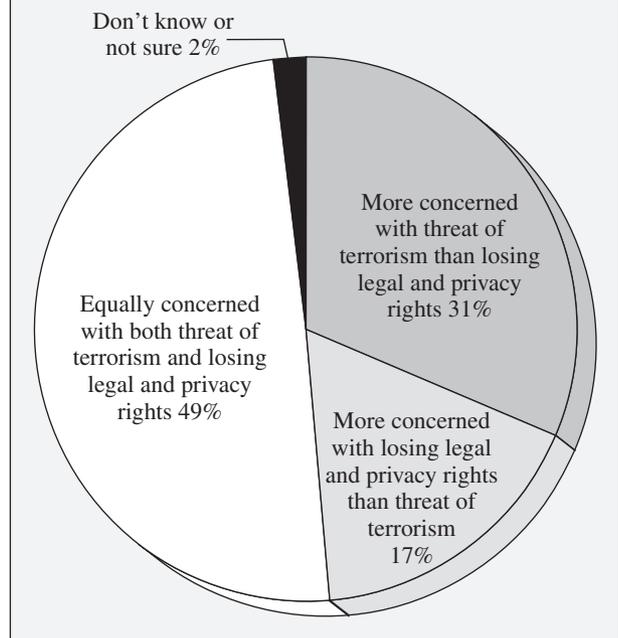

A necessary element among alternatives to violence is the attempt to understand terrorist

grievances. Attending to the grievances of the terrorists may be a precondition for defeating the terrorist campaign, and ignoring them may contribute to increasing the terrorist threat. Rigid refusals to negotiate with terrorists may be impediments to progress. Discussions among the parties can be helpful, but the chances of success are not assured. However, talking is sometimes the only alternative to violence, and willingness to talk with enemies is equivalent to recognizing the enemies as human beings. This tends to defuse the well-known strategy of dehumanizing adversaries and can lead to real progress.

Financial and other sanctions have been placed by many countries on organizations that directly or indirectly support terrorists. Such measures usually include restrictions on, or withdrawal of, trade rights, diplomatic ties, and membership in international or-

Public Concerns About Terrorism and Losing Privacy and Legal Rights

In August, 2003, a TIPP/Investor’s Business Daily/Christian Science Monitor Poll asked a cross section of Americans which of the views noted below most closely reflected their concerns about terrorism and the loss of privacy and legal rights.

Source: Roper Center for Public Opinion Research. Figures are based on responses of national sample of 901 adults.

ganizations or forums. Sanctions have been successful in gaining cooperation from some governments but were not effective with others.

MILITARY TRIBUNALS AND PROFILING

Few aspects of the war on terrorism have provoked as much criticism as U.S. president George W. Bush's military order of November, 2001, dealing with the detention, treatment, and trial of certain noncitizens in the U.S. war against terrorism. Hundreds of al-Qaeda and Taliban suspects were imprisoned on the U.S. Navy's base at Guantanamo, Cuba, and held for trial by military courts. Some attorneys representing the suspected terrorists attempted to have their trials moved to civilian courts.

Searching or screening for terrorist suspects by means of descriptive profiles has been used frequently by Israel and a few other countries. After September 11, 2001, the United States began the profiling of airline flight passengers to prevent possible terrorists from boarding planes. Profiling does not normally raise deep ethical issues for most people, but some concern was expressed regarding the Patriot Act that was passed shortly after the September 11, 2001, terrorist attacks on the United States. The fear was that the new law had little to do with catching terrorists but a lot to do with increasing the strength of the government to infiltrate and spy on organizations and individuals.

Certain rules, if followed, tend to legitimize profiled searches. First, the security of the country must be facing a clear and present danger. Next, profiled searches must be carried out by proper legitimate authorities. Finally, general privacy protection guidelines must be followed.

Theory and practice

DEFINITION: Theory: systematic abstract reasoning or a rational system of thought composed of abstract principles; practice: concrete action guided by such principles or applying them to actual situations

TYPE OF ETHICS: Beliefs and practices

SIGNIFICANCE: Theory necessarily involves simplification, and arguably falsification, of the world, since rationality is not a property of the world itself, but only of human interpretations of it. Successful practice thus requires that one anticipate disjunctions between theory and reality, and develop methods of compensating for these disjunctions. The difficulties of translating theory into practice acquire moral significance when theoretical misapplication or lack of preparation leads one to cause real harm.

According to George F. Kneller, science is the pursuit of knowledge about nature. Science seeks facts; that is, events or states or things that happen. In the service of that pursuit, science has developed a powerful method of inquiry that distinguishes it from other areas of inquiry, such as philosophy, literature, art, or religion. Kneller divides this scientific method into four successive steps: observation, classification, laws, and theories.

FROM OBSERVATIONS TO LAWS AND THEORIES

By using their senses and sophisticated instruments, scientists make systematic and detailed observations about the universe, which yield facts.

As facts accumulate, classification serves the purpose of discovering commonalities among a set of facts and thus making general statements about those facts. For example, Dmitry Mendeleev proposed in 1869 that if the various elements were arranged in order of atomic weight, they would arrange themselves into groups that have similar chemical properties.

Classification leads to laws, which are statements that describe regularities. Laws summarize a number of separate facts and enable predictions to be made. Isaac Newton's second law of thermodynamics (which states that heat cannot by itself pass from a colder to a hotter body) and Galileo's law of freely falling bodies are well-known examples of laws.

Theories stand at the pinnacle of the scientific method and are the most important part of the process. Theories organize and explain a number of known laws and also generate new predictions that can be tested. If the predictions are confirmed, new knowledge is obtained and the process begins anew. If the predictions are not confirmed, the theory will have to be revised or abandoned. Einstein's theory of relativity is a famous example of a theory that has stood the test of time and has greatly advanced our understanding of the universe.

THEORY INTO PRACTICE

Ethical issues enter into theory construction and testing in two ways. First, the knowledge that the theory generates by incorporating bodies of existing knowledge and by uncovering new knowledge can often be translated into technology and put into practice at a practical level. Technological applicability means that scientific knowledge is not necessarily neutral. It becomes part of other human purposes and endeavors and therefore can be used or misused. As long as scientific knowledge could not be applied via technology, unhampered search for the truth was a laudable goal. During the late nineteenth century, however, technology began to make significant use of scientific theory. The chemical industry, for example, used scientific theory to alter natural substances and, eventually, to synthesize new ones.

The great English scientist Francis Bacon said in the seventeenth century that science must be responsible to humanity. Since knowledge confers power, knowledge that benefits humankind should be sought. Science thus has a specific ethical, moral, and social responsibility to regulate itself that is more important

than professional responsibility, personal ambition, or the advancement of science. Kneller argues that scientists should not conduct research that may pose a danger to the public or may have technological uses that are potentially more harmful than useful.

Other scientists, however, have argued that the goal of science and theory building is to seek knowledge. It is axiomatic that knowledge is good, and it is the responsibility of the scientist to seek that knowledge without concern for its consequences or practical applications. As long as ethical guidelines are followed in conducting research and constructing and testing theories, then the pursuit of knowledge should be unregulated. A potential for abuse exists in any area of research. Through vigilance and external review boards, however, this problem can be managed.

The second issue is that, in the words of Norwood Russell Hanson, "observations are infused with the concept; they are loaded with the theories." That is, theories define a phenomenon in a particular way and influence the perception of that phenomenon. For example, as Hanson observed, Tycho Brahe and Johannes Kepler may both have seen the same sun, but each saw it differently. Brahe's geocentric theory caused him to see the sun rise over the earth. Kepler's heliocentric theory led him to see the earth's horizon fall away from the sun.

To take but one example of these two issues, the reigning theory of human sexuality has for a long time stated that sexual orientation is learned. Furthermore, it was held that heterosexuality was the normal sexual orientation and homosexuality was abnormal. Because homosexuality was both abnormal and learned, homosexuality was to be treated and undone. Male and female homosexuals were subjected to a variety of therapies that were derived from this particular theory of sexuality, some that were appalling. None proved to be in the least effective, but many were continued because of the theoretical orientation regarding homosexuality.

SEXUALITY AND BIOLOGY

Recent research suggests that sexuality is strongly influenced by biology. Sexuality is therefore not learned and normally occurs as heterosexual and homosexual. Rather than reassuring the homosexual community, this new theory has aroused considerable anxiety in some quarters. Such knowledge could be used by homophobic individuals or agencies to

once again seek a "cure" for homosexuality, this time through chemical or surgical treatment of the nervous system.

Scientists working in this field, however, reply that the potential for abuse exists in every area of biomedical research. To discontinue such work would stop efforts to construct a theory of sexual orientation, thus simultaneously forgoing the acquisition of new knowledge and the benefits that such a theory could provide.

The ethical issues involved in putting theories into practice thus constitute a dilemma. Two ethically defensible responses can be justified. The most common approach seems to be to let research and theory building progress in as unfettered a way as possible, while scrutinizing them carefully and watching for potential abuses.

A Theory of Justice

IDENTIFICATION: Book by John Rawls (1921-)

DATE: Published in 1971

TYPE OF ETHICS: Politico-economic ethics

SIGNIFICANCE: Rawls's book offers a major contribution to modern thinking about the proper rela-

tionship between individual citizens and government and represents a landmark attempt to resolve the ethical dilemma created by the conflict between equality and freedom.

According to the views John Rawls expresses in *A Theory of Justice*, political society should be viewed as the product of a choice made by free, rational, and equal persons who seek fair institutions and arrangements for the governance of their relationships. His theory, therefore, develops and generalizes the social contract theories of John Locke, Jean-Jacques Rousseau, and Immanuel Kant. While insisting that principles of justice for the basic structure of society are the object of the theoretical "agreement" between people and government.

In search of the principles of justice, Rawls places every person in an original position of equality corresponding to the state of nature in traditional contract theory. In this imaginary position, all people operate behind a "veil of ignorance" shielded from any knowledge of their relative positions in society, wealth, natural assets, and abilities. No person, therefore, can know what principles or social arrangements would be to his or her advantage. In this theoretical condition of equality and ignorance, Rawls then asks what principles of justice would free and rational persons choose as a basis for their government.

By this method, Rawls deduces his two principles of justice. The first broadly addresses the issue of personal freedom: Every person should have an equal right to the most extensive basic liberty compatible with similar liberty for others. Under this principle, the primary reason for limiting personal freedom is to avoid conflict among the full range of rights individuals wish to enjoy and that political institutions are obliged to protect.

The second principle holds that social and economic inequalities should be arranged so that they are reasonably expected to be to everyone's advantage and are attached to positions and offices that are open to all. Inequalities, therefore, are unjust if some are systematically advantaged at the expense of others, or if some are systematically excluded from influence over authoritative decisions.

Therapist-patient relationship

DEFINITION: Association between a psychotherapist and client

TYPE OF ETHICS: Psychological ethics

SIGNIFICANCE: Ethical aspects of the therapist-patient relationship are governed both by codes of professional conduct and by statutory law. The relationship raises issues involving paternalism, autonomy, confidentiality, and informed consent.

There are often disagreements among therapists regarding what constitutes the best treatment for a given individual. At last count, almost three hundred different forms of treatment had been described for the alleviation of emotional disorders. Samuel Perry, Allen Frances, and John Clarkin group treatments into three broad categories in their book *A DSM-III Casebook of Differential Therapeutics* (1985). These categories are exploratory, directive, and experiential. Exploratory techniques include psychoanalysis and treatments that are not as lengthy or as frequent as psychoanalysis but utilize at least some psychoanalytic techniques. Proponents of these psychodynamic treatments argue that their treatments are useful for many patients and can be adapted to the requirements of individual patients better than can traditional psychoanalysis, which requires the patient to come to therapy four to five days a week.

Directive techniques include the use of principles derived from the study of how people learn and may utilize reward, punishment, advice giving, or other methods designed to change maladaptive behaviors. For example, some directive therapists argue that patients have learned misconceptions about themselves or others that must be unlearned. Other therapists attempt to reduce patient anxieties by gradually exposing them to frightening situations in order to reduce and eliminate the impact of the anxiety-provoking situation.

Experiential techniques utilize a different perspective. Advocates of these techniques emphasize the expression of feelings. They see little, if any,

value in diagnosis or psychiatric classifications. They also object to the power differential found in most therapist-patient relationships. Instead, experiential therapy is viewed as an encounter between two equal individuals who care for each other as real people. Experiential therapists tend to focus on the present and believe that personal growth is an important aspect of therapy. Thus, it is not necessary to be emotionally disturbed to benefit from experiential treatment.

It should be pointed out that these descriptions are necessarily brief and are designed to give the reader an overview rather than a detailed understanding of techniques used in therapist-patient relationships. They are helpful, however, for providing a foundation for understanding some of the ethical issues involved in such relationships.

INFORMED CONSENT AND CONFIDENTIALITY

The American Psychological Association's "Ethical Principles and Code of Conduct" (1992) discusses a number of topics relevant to therapist-patient relationships. The code of conduct requires therapists to discuss with patients such topics as the nature and anticipated course of therapy, fees, and confidentiality. Thus, the beginning of a therapist-patient relationship involves the informed consent of the patient. Daniel R. Somberg, Gerald L. Stone, and Charles D. Claiborn (1993) suggest that this includes discussion of the potential risks of therapy, the length of treatment, the procedures to be used, alternatives to therapy, and the limits of confidentiality. Therapists need to be sure that the patient has given consent freely, and if the patient is unable to give consent legally (for example, if he or she is a young child), permission must be obtained from those who are able to give legal consent. Even with individuals who are not capable of giving informed consent, however, psychologists have an obligation to explain the proposed intervention and to seek cooperation and agreement. In addition, the therapist must take into account that person's best interest.

With regard to confidentiality, the limits of confidentiality must be discussed. In many jurisdictions, for example, there are limitations on confidentiality when treatment is done in a group or family setting. There may also be limitations on confidentiality whenever more than one therapist and one patient are present, as in marital therapy, for example. Disclosures of confidential information are not permitted

without the consent of the individual unless permitted by law. Usually, disclosures are limited in order to obtain professional consultations and to provide needed professional services. In addition, disclosures can be made in order to protect a patient or others from harm. Such disclosures are discussed further under the duty to warn.

DUTY TO WARN

This requirement arose out of a suit brought by the parents of Tatiana Tarasoff in the 1970's. Tatiana had been killed by an individual who had been in treatment at the student health facility at the University of California at Berkeley. The patient had revealed to the therapist that he was extremely attached to Tatiana and that he planned to purchase a gun. The therapist, after consulting with colleagues, concluded that the patient was both mentally ill and dangerous and should be hospitalized. Police interviewed the patient and decided there was no need for hospitalization after the patient agreed not to contact Tatiana. The parents of Tatiana sued, and their attorney eventually came before the California Supreme Court, arguing that the treating therapist should have warned Tatiana Tarasoff or her family and that the patient should have been committed involuntarily to an inpatient facility. Initially, the court decided that not only did the therapist have a duty to warn because of the special relationship between therapist and patient but also that the police might be liable, since their questioning of the patient probably resulted in the patient's decision to terminate treatment.

In a later opinion, the same court broadened the duty of the therapist to protect others from dangerous actions of patients but no longer held the police liable. Since that time, a number of states have passed laws requiring therapists to breach confidentiality in the face of patient threats to harm others. Alan Stone, in his book *Law, Psychiatry, and Morality* (1984), argues that therapists are not effective in consistently evaluating the dangerousness of their patients. Nevertheless, he believes that when a therapist is convinced of the dangerousness of a patient, the special relationship between patient and therapist does justify the legal duty to protect both the patient and the public. Thus, therapists are called upon to balance the interests of society against the interests of patient-therapist relationship.

Thomas Aquinas

IDENTIFICATION: Italian theologian

BORN: 1224 or 1225, Roccasecca, near Naples, Kingdom of Sicily (now in Italy)

DIED: March 7, 1274, Fossanova, Latium, Papal States (now in Italy)

TYPE OF ETHICS: Medieval history

SIGNIFICANCE: In such works as *Summa Theologica* (c. 1265-1273) and *Summa Contra Gentiles* (c. 1258-1264), Thomas Aquinas combined Aristotle's philosophical ethics based on happiness and virtue with the Christian understanding of law, grace, and love of God.

The moral life, for Thomas Aquinas, consists in each person achieving human fulfillment through freely chosen actions. Presupposed is a human nature with a given, determinate structure and a corresponding determinate fulfillment or perfection. Actions are morally good if they promote this fulfillment and bad if they hinder it. In this sense, Thomas Aquinas's ethics are teleological and eudaimonistic, but unlike classical utilitarianism, the end of good action is not simply pleasure, but the perfection of the human being. Being naturally social, persons cannot attain their perfection alone, but only in community. Consequently, although the ethical life is ordered to promote personal fulfillment, it is not individualistic. Every aspect of Aquinas's ethics (good action, virtue, law, and so forth) is understood in the light of achieving one's fulfillment.

HAPPINESS AND GOOD AND EVIL ACTIONS

Aquinas recognized two levels of human fulfillment or happiness. First is the perfection of human nature simply on the natural level, which is the object of philosophical ethics. Second is the Christian understanding of human nature as raised by divine grace and destined to a supernatural end. Theological ethics treats the latter and was Aquinas's major concern. At both levels, happiness lies primarily in intellectual activity, that of knowing God. The natural end consists in knowing God by philosophical investigation, while the supernatural end consists in a direct vision of God, which is possible only after death.

Actions such as studying, educating, praying, and temperate eating are good because they are intrinsic to true human fulfillment, while acts like murder, stealing, or adultery hinder it and therefore are evil. Besides choosing and performing a good act, a person must intend a good end; friendship in itself is good, but it would not be morally good if it were chosen for the sake of vanity or ambition. Morally good action requires a good act, the right circumstances, and a good intention.

VIRTUE AND VICE

An integral part of Aquinas's ethics is his theory of virtue and vice. Both virtue and vice are "habits," steady inner dispositions inclining an agent to a certain mode of action. The virtue of courage inclines one to face dangers when reason judges that good action requires it; under the influence of the vice of

Saint Thomas Aquinas. (Library of Congress)

cowardice, one would tend to commit evil action rather than face danger. Hence, all habitual tendencies toward perfective activities are virtues and their opposites are vices. There are many different moral virtues and vices corresponding to the many different spheres of moral action: the virtue of religion is a disposition to be properly related to God, liberality is the virtue of being generous with one's wealth, truthfulness concerns speaking the truth, and so on. The chief moral virtues are the four cardinal virtues: temperance, the right disposition toward pleasures (opposed vices: gluttony, drunkenness, sexual promiscuity); courage, the right disposition toward fearful dangers (opposed vices: cowardice, recklessness); justice, the disposition to respect the rights of others and to treat them fairly (opposed vice: injustice); and prudence, the disposition to deliberate well about moral action. Since

all good action requires a good judgment about what should be done, every other virtue depends upon prudence. These moral virtues are acquired by repeatedly performing appropriate virtuous actions.

The theological virtues are infused by God and are dispositions toward actions directed to the supernatural end. By means of the three theological virtues—faith, hope, and charity (love)—a person believes, hopes in, and loves God. These virtues, for Aquinas, are higher than the moral virtues, and among them charity is the highest. Ultimately, every virtuous action is done for the love of God and therefore depends upon the virtue of charity.

MORAL LAW

Moral law is a rational principle that directs actions toward their proper ends. Lacking animal instinct, free, rational, moral agents direct themselves toward an end according to a rational conception. This is supplied by the law, which commands good acts and prohibits bad acts. Since action always occurs in singular, concrete circumstances, however, law alone is an insufficient rule. Every particular action requires a prudential judgment as its proximate rule.

There are several kinds of law. First is the divine law, the explicit commands of God, such as the Ten Commandments or the Beatitudes, which direct persons to their supernatural end. Second is the natural law, consisting of general principles of right action that are discovered by reason, which reflects on human experience and learns over time what leads to fulfillment and what does not. Because human nature is determinate and is shared by all, the general principles of the natural law are valid for everyone and for all times. Finally, there are human positive laws, the civil laws enacted by society. These are part of the moral law in that they direct moral actions, especially those related to life in society. If, however, a civil law contradicts the natural law or the divine law, it is not a true law and has no binding force. All law, Aquinas said, is ultimately part of the eternal law, the ordering wisdom of God by which he governs the whole of creation.

Thoreau, Henry David

IDENTIFICATION: American writer and philosopher
 BORN: July 12, 1817, Concord, Massachusetts
 DIED: May 6, 1862, Concord, Massachusetts
 TYPE OF ETHICS: Modern history
 SIGNIFICANCE: The most influential practitioner of

New England Transcendentalism, Thoreau believed that self-reliant persons could, by using nature as a guide, live moral and productive lives without the excessive use of material goods. His most important works include "Civil Disobedience" (1849) and *Walden: Or, Life in the Woods* (1854).

Whether the words of *Walden* and "Resistance to Civil Government" ("Civil Disobedience") or the actions on which they are based have had greater influence, it is clear that Thoreau's life refutes the notion that the Transcendentalists spent their time in the clouds rather than on Earth. A skilled observer of nature as well as a citizen who spoke his mind on current ethical questions, Thoreau made the idealism of Transcendental philosophy a part of his daily life. At Walden Pond, he put into practice Ralph Waldo Emerson's advice to be self-reliant and self-directed. He built his own house, planted his own garden, and lived without a conventional job for more than two years quite contentedly and, as he goes into great detail to show, quite economically.

Thoreau believed that to mire oneself in materialism and then to sacrifice one's principles for fear of losing those material things was to sink into evil. He established that point in his essay "Resistance to Civil Government," in which he chastises his fellow citizens for grumbling about the government's war in Mexico while continuing to pay the taxes that supported it. His own refusal to pay was based not only on his moral judgment of the war but also on the questionable ethicality of a private individual's being forced to support any activity of the larger society. In "Resistance" and other essays—"A Plea for Captain John Brown," "Slavery in Massachusetts," "Life Without Principle"—Thoreau chides his fellow citizens for the disparity between their actions and their principles.

Three-strikes laws

DEFINITION: State laws mandating twenty-five-year-to-life prison sentences—usually without possibility of parole—for persons convicted of third felony offenses

TYPE OF ETHICS: Legal and judicial ethics

SIGNIFICANCE: Designed to remove habitual offenders from society, these laws violate several classical judicial principles and minimize judicial discretion, while also contributing to falling crime rates and rising prison populations in the United States.

The term “three-strikes laws” draws on the baseball analogy that calls a batter out after accumulating three strikes before hitting the ball fairly. The concept was introduced to U.S. criminal justice during the 1990’s, a period of declining national crime rates but growing concern about drug abuse and violence. A federal law was enacted during Bill Clinton’s presidency by a Democratic Congress in response to hardened voter sentiment on crime control issues. The federal law requires only one previous serious violent felony and one serious drug offense for the third felony to earn a life imprisonment. By 2003, twenty-six states had also enacted three-strikes laws and some, like Georgia, enacted two-strikes laws. California’s law, signed in 1994 by Governor Pete Wilson, followed outrage over the 1993 abduction-murder of twelve-year-old schoolgirl Polly Klaas by a twice-convicted kidnapper who was on parole. California’s law is retroactive, reaching back before its enactment, and progressive in that second-time offenders receive double the sentences that first-time offenders would receive for their crimes, before they are sentenced to life in prison for their third felonies.

PHILOSOPHY OF PUNISHMENT

Three-strikes laws embody the principles of certainty of punishment and of protecting the public through incapacitating offenders. However, they are more consistent with eighteenth century British philosopher Jeremy Bentham’s idea that repeat offenders should receive harsher sentences to outweigh the profit from offenses likely to be committed. In this, Bentham’s views differed from those of his contemporary, Italian classical theorist Cesare Beccaria, whose work informed the authors of the U.S. Consti-

tution. Indeed, three-strikes laws contradict classical ideas that punishment should fit the crime, since the lengths of sentences they impose are related to the numbers of offenses committed, rather than their seriousness. Under classical theory, punishment should be no more than deserved for a specific crime, rather than a series of crimes, and offenders should not be sentenced twice for a crime. Under the three-strikes laws, offenders receive, in effect, sentences for three crimes, even though they have already received sentences for their previous two offenses.

Three-strikes sentences are a version of mandatory sentences, meaning that they are invoked automatically on an offender’s conviction. This removes a judge’s discretion to set sentences based on the uniqueness of the cases, degrees of culpability, and other mitigating or aggravating circumstances. The fundamental moral question remains, should offenders be punished for the kinds of person they may be—that is, repeat offenders—or should they be punished strictly for the specific offenses they commit, with sentence lengths based on the seriousness of the harm they cause? Under a three-strikes law offenders may get life sentences, even if their previous two offenses are comparatively minor nonviolent drug offenses, and even if their third offenses are less serious than their previous two. Offenses as minor as purse-snatching and shoplifting count as “strikes” under three-strikes laws.

IMPACT AND CRITICISM

Advocates of stricter sentencing claim that the 5 percent per year decline in crime rates observed in the United States through the 1990’s resulted in part from the incarceration of habitual offenders by three-strikes laws, even though thirty-five states already had other habitual-offender laws in place since 1971. They claim that crime in states such as California has gone down 40 percent since implementation of three-strikes laws in 1994. They also claim that the certainty of punishment under three-strikes laws deters would-be offenders from continuing their patterns of crime. However, the actual effectiveness of the laws has been questioned by critics, such as the Sentencing Project, who argue that some states without three-strikes laws experienced similar reductions in crime rates through the same period. New York experienced a 41 percent reduction; Massachusetts, 33 percent; and Washington, D.C., 31 percent.

Three Strikes in California

Many people argue that three-strikes laws are inherently unethical and cite cases in California, which has an especially strict law. One of the most notorious cases is that of Leandro Andrade. In 1995, he shoplifted nine videocassettes from two K-Mart stores to give to his nieces for Christmas gifts. His crime was completely nonviolent, and he did not even resist arrest. However, because he had two prior felony convictions, he was given *two* sentences of from twenty-five years to life and could not hope for release before the year 2046.

In another California case, Gary Ewing received a twenty-five-year sentence for stealing three golf clubs, worth at total of \$400, from a country club.

Critics claim that three-strikes punishment is excessive and unnecessary, that it contributes to the problems of clogged courts and prison overcrowding, and that it increases the determination of third-time offenders to avoid arrest. These laws abandon the classical principle that repeat offenders are more likely to choose to commit lesser offenses. Instead, facing three-strikes laws, offenders might choose additional and more serious offenses in order to avoid apprehension and conviction.

Doug Kieso, who researched California's three-strikes laws, argues that the initial fear of "clogged courts" was based on the assumption that no plea bargaining would take place. However, he found evidence that judges and appellate courts have "looked the other way," allowing plea bargaining to take place, thereby providing added "pressure" that is used by prosecutors to force defendants to accept longer sentences, rather than risk a life sentence.

HIGHER COURTS

In 2003 the U.S. Supreme Court considered the case against a Court of Appeals ruling that California's three-strikes law was unconstitutional due to its violation of the Eighth Amendment ban on cruel and unusual punishment. Consistent with classical principles, the federal Court of Appeals had ruled that punishments for third-strike crimes cannot be grossly disproportionate to the offenses committed. How-

ever, by a 5-4 majority, the Supreme Court upheld the California law, allowing states the discretion to incapacitate repeat offenders for long periods in the interests of protecting public safety.

Whether because of state fiscal crises or a recognition of the ethical problems of "vengeance as social policy," some three-strikes states, such as Michigan, had by 2003 repealed their determinate sentences, at least for drug offending.

Tillich, Paul

IDENTIFICATION: German American theologian

BORN: August 20, 1886, Starzeddel, Germany

DIED: October 22, 1965, Chicago, Illinois

TYPE OF ETHICS: Modern history

SIGNIFICANCE: Tillich was one of the leading Christian theologians of the twentieth century. In such works as *Systematic Theology* (1951-1963), *Dynamics of Faith* (1957), and *The Protestant Era* (1948), he proposed a new conduit of Christian

systematic theology that helped to facilitate essential dialogue between Protestant and Roman Catholic Christianity, and enabled the Christian faith to relate to other world religions and to the world of secularism.

Tillich was a professor of theology and philosophy at a number of German universities before he was expelled by the Nazi regime for his ties with the Religious Socialists and his vehement anti-Nazi stand. He emigrated to the United States in 1933 and taught at Union Theological Seminary in New York (1933-1955), Harvard University (1955-1962), and the University of Chicago (1962-1965).

Tillich's major teaching in *Dynamics of Faith* (1957), the classic introduction to his thought, is the significance of faith as ultimate concern, which means that the unpredictable, and often forceful, penetration of the abstract ("ultimate") into one's consciousness elicits a concrete response ("concern"), making the revelatory manageable in one's own *Weltanschauung* (worldview). The experience of ultimate concern is a continual process of unconditional correlation of opposite but related elements (subject/object, particular/universal; law/freedom, and so forth), which Tillich views as the essential-existential ground of being, intellectually and emotionally. A true ultimacy, such as God-centrism, is worthy of human commitment, and such an ultimacy is reached by means of an assemblage of rites and symbols that point to and participate in but never replace the sacredness of an ultimate concern. A false ultimacy is an ultimate commitment to that which is not ultimate (idolatry) and opens the way to the demonic. Thus, for Tillich, the absolutization of Jesus, in opposition to orthodox Christology, is a form of heresy (Christolatry).

Although Tillich's categories of thought are not easily classified, this quintessential liberal Protestant thinker always wrote in the spirit of *Ecclesia Semper Reformanda*, as his complete works and supplementary volumes (Stuttgart, 1959-1981) show clearly. In his last public address (at the Divinity School of the University of Chicago, on October 12, 1965), "The Significance of the History of Religions for the Systematic Theologian" (*The Future of Religions*, 1966), he expressed limitations both in the supersessionist view of traditional Christian theology and the modern views of neo-orthodoxy and the "God is dead"

movement, and he proposed that future Christian systematic theology needs to consider the basic insights of other world religions. He taught as he lived—"on the boundary."

Tipping

DEFINITION: Gratuitously awarding money to persons who provide services, such as waiting on tables

TYPE OF ETHICS: Business and labor ethics

SIGNIFICANCE: From the point of view of customers, the central ethical question relating to tipping is whether the action should be regarded as voluntary or involuntary.

In modern Western societies, tipping is regarded as a custom whereby customers receiving services give to the providers additional direct compensation, usually in the form of cash. Service providers such as taxi drivers, restaurant waiters, hairstylists, and porters are examples of workers who accept tips. Custom generally dictates that tips from satisfied customers should range from 10 to 15 percent of the cost of the services provided, not including sales taxes. Owners of businesses themselves are generally regarded as exempt from tipping. For example, taxicab owners, barbers who own their barbershops, and restaurant owners are exempt.

There are two primary ways one might consider the ethics of tipping. The first is to understand a tip to be a voluntary reward and therefore an evaluation of the service rendered. The second is to consider a tip as an expected form of additional compensation over and above what the workers receive from their employers.

If one chooses to think of tipping as a reward for good service, the giving of tips, as well as the amounts of the tips, are entirely voluntary and left to the discretion of the customer. Seen in this light, generous tips serve as signals to workers that their performance is above average. Conversely, the absence of tips or ungenerous amounts are meant to indicate

Income Tax and Tipping

Many workers who receive tips do not report their tip income when they file their tax returns. However, failure to report tipping income not only is regarded as unethical, it is illegal. Tips earned by waiters, taxi drivers, hairdressers, caddies, and other service workers are subject to the same tax liabilities as other forms of income. In 2004, all employees working in the United States who received more than twenty dollars per month in tips were required, by federal law, to report their tips in full to their employers. The employers, in turn, were required to withhold from their employees' wages the same amounts for state income tax, federal income tax, Social Security tax, and Medicare tax that they would have withheld for the same amounts of money in the employees' regular salaries.

to workers that their performance needs improvement. From this market perspective, it is ethical to tip only if performance warrants it. In Europe, where tipping is less frequent than in the United States, tipping is considered just such a signal of exemplary service and gratitude on the part of the customer.

In the United States, the public custom of tipping is more complex. Some people consider tipping, as in the European custom, a reward of exemplary service. More often however, American tipping is regarded as customary; tipping is therefore an expected and routine part of the exchange. Customers thus tip 10 to 15 percent of the costs of the services they receive, regardless of the quality of service. Since tips are viewed as part of the overall charges, they are routinely expected by workers. From this perspective, the tip as part of the compensation owed to the server is simply a portion of the total compensation provided by the customer rather than the employer.

The expectation that tipping is customary has arisen, in part, in response to minimum wage laws. Many service workers—particularly those who are most likely to be tipped—are paid below minimum wage levels. Therefore customers, and certainly the workers themselves, view tipping as a just way to close the gap.

Title IX

IDENTIFICATION: Section of the federal Education Amendments designed to ban sex discrimination at educational institutions receiving federal funds

DATE: Enacted in 1972

TYPE OF ETHICS: Sex and gender issues

SIGNIFICANCE: Title IX was based on the straightforward view that the principle of equality demands unbiased treatment of female and male students; in practice, however, its provisions have been difficult to implement and have had both positive and negative consequences.

Title IX was signed into law by President Richard M. Nixon as part of the Education Amendments of 1972. It is administered by the Office of Civil Rights of the federal Department of Education. While Title IX covers all educational institutions receiving federal aid, and all activities of those institutions, its most dramatic impact has been in college sports. Prior to the passage of Title IX, fewer than 32,000 women competed annually in intercollegiate sports. By 2003, more than 150,000 women were competing. Over that same period, the number of girls playing high school sports likewise rose dramatically.

While participation in women's sports has surged, many colleges have eliminated parts of their men's sports programs in order to pay for the women's sports. Men's programs that have been dropped have typically been such nonrevenue-generating sports as swimming, wrestling, gymnastics, and tennis. Some observers have argued that Title IX is the cause, forc-

ing cash-strapped college athletic departments to cut men's programs in order to fund the women's programs and scholarships required under Title IX. Proponents of Title IX have countered that the real culprits are the major men's sports—principally football and basketball—whose coaches' salaries and program costs have skyrocketed.

Government enforcement of Title IX has done little to calm the waters. The Office of Civil Rights regulations have been interpreted by many legal scholars and university administrators to require a quota system for allocating funds and scholarships among men's and women's sports programs. "Quota" carries with it all the bad political baggage of late-twentieth century fights over affirmative action and reverse discrimination.

Underpinning the Title IX controversy are the uneasy relationships among education, sports, and sexuality in America. Universities are centers of learn-

ing and research, yet they also maintain huge athletic departments that are run much like business enterprises. To participate in sports, women must be aggressive and competitive, but those same women face conflicting social pressures to be demure and nurturing. Overlain on this apparent contradiction is the notion that sports is a meritocracy. Since the time of the Roman gladiators, it has been assumed that in sports only the strongest should survive. However, Title IX promotes equal participation for women, still considered in America the weaker sex.

Title IX is but a part of the intricate puzzle of modern gender discrimination. Most observers would agree that until basic cultural constraints on women—and men—are eliminated, no federal law or regulatory scheme can be expected to operate perfectly.

Robert L. Palmer

Title IX and the Women's World Cup

On July 10, 1999, the U.S. women's soccer team beat the Chinese national team, 1-0, to win the World Cup in Pasadena, California. The 90,000-plus spectators who attended the game made up the largest crowd to attend any women's sporting event in history. In the months leading up to the final match, the national media covered the U.S. team's progress through the preliminary games. Many of those games drew record crowds, some of them drew larger television audiences than National Hockey League playoff games airing at the same times, and individual players, such as Mia Hamm, became media stars. The American victory was seen as a great triumph—both for soccer in the United States and for women's sports generally. Less noticed by the public was the fact that the American team's success was also a triumph for Title IX. All twenty women on the American team had attended college on athletic scholarships they could not have dreamed of receiving if they had reached college age before Title IX came into law. Indeed, so aware were the players of their debt to that law that they nicknamed themselves the "Title IX Team."

Tobacco industry

DEFINITION: Producers and distributors of tobacco products

TYPE OF ETHICS: Business and labor ethics

SIGNIFICANCE: The American tobacco industry has come under fire for marketing products known to have links to severe health problems—a fact that raises questions as to the industry's ethical responsibility for the illnesses and deaths attributed to tobacco use. The issue also involves questions about the personal responsibility of adults who choose to use products they know are harmful.

During the 1990's, the American tobacco industry came under unprecedented attack from state and federal officials who sought compensation from the companies for the cost of medical treatments of tobacco-related illnesses. Government representatives argued that their publicly funded health care systems were swamped with payments for tobacco-related illnesses for which the tobacco industry was largely responsible.

INDUSTRY LIABILITY TO SOCIETY

Even with the addition of federal warnings of health problems associated with cigarettes, smoking remained a popular if declining activity in American culture. Prior to the 1990's the federal government conducted low-key antismoking campaigns, limited mainly to advertisements and surgeon general reports highlighting the dangers of smoking. By the early 1990's, a burst of antismoking activity broke out, starting with a 1993 Environmental Protection Agency (EPA) report, followed by congressional hearings and continuing into regulations by the Clinton administration. The impetus behind the antismoking campaign was the rising costs in government-funded health care programs.

The ballooning Medicare and Medicaid program budgets were blamed on tobacco-related illnesses including cancer and heart disease. The federal and state governments demanded that tobacco companies reimburse them for these health costs, which were partly caused by their products. This demand became part of a lawsuit filed by state governments seeking damages from the tobacco companies. A settlement was reached in 1998, with the major tobacco companies agreeing to pay more than \$200 billion to the states in return for an end to lawsuits over smoking. This money was to be used to reimburse states for health care costs and to pay for antismoking campaigns.

Antismoking advocates argued that the tobacco industry owed society and the government for taking care of those made ill by cigarette smoking. This was a different argument from the one offered by individual smokers who were suing the tobacco industry for smoking-related illnesses they personally suffered. The governments' lawsuits sought reimbursement not for direct damage caused to government or society by cigarette smoking, but for indirect damage—in the form of higher health care costs brought on by

more smoking-related illnesses. This made a single industry responsible for a product voluntarily used and known by the users to be dangerous to human health.

The state governments' arguments were not entirely convincing. Governments have agreed to pay for the poor and elderly's health care costs until their death. Many of those costs would exist with or without smoking because death is inevitable. While smoking may contribute to certain types of terminal illnesses, it does not necessarily produce or increase the costs of caring for terminal patients. Forcing tobacco companies to pay government for terminal illnesses linked to their product makes those companies responsible for the inevitable: terminal illness.

The 1990's also saw another, indirect, government assault on the tobacco industry in the form of rising excise taxes on cigarettes in order to discourage people from taking up smoking and to raise revenues. For many years most states had imposed taxes of only a few cents per pack on cigarettes. By 2004, however, the average state tax on a pack of cigarettes was sixty cents, and sixteen states had raised their taxes to more than one dollar a pack. Not surprisingly, the states with the lowest tax rates were all tobacco-producing southern states. Meanwhile, smokers in New York City faced a double tax: one dollar and fifty cents went to both the city and the state, adding a total of three dollars in taxes to each pack of cigarettes. In early 2004, New York City added to smokers' difficulties by outlawing all smoking in restaurants.

INDUSTRY LIABILITY TO INDIVIDUAL SMOKERS

In addition to lawsuits filed by state and federal governments, tobacco companies faced suits from individual smokers seeking damages for their own terminal illnesses. Other companies have suffered considerable economic damages when their products were found to have contributed to illness or death of consumers. The asbestos industry, the producers of silicon breast implants, and the producers of the Dalkon Shield all paid huge sums to those who suffered medical problems from their products.

However, there was a significant difference between those products and tobacco products. For nearly forty years consumers had been aware of the dangers of cigarette smoking, while those who used the other products were unaware of potential health

problems attributed to the products' use. However, prior knowledge of the potential health problems caused by cigarette smoking can shift only part of the responsibility from the industry to the consumer.

Smokers can also attribute specific illnesses and possibly early death and considerable suffering to tobacco products. Individuals suffering because of asbestos exposure or the negligence of makers of breast implants were paid directly by the companies in-

involved. By contrast, no government claimed that it should be reimbursed for the costs of caring for those who suffered lung cancers because of asbestos exposure.

The tobacco industry also had to accept responsibility for other ingredients in cigarettes, including nicotine. Studies have shown that nicotine is an addictive drug, partly explaining the difficulty many smokers have in "kicking the habit" of cigarettes.

During the 1990's further evidence was uncovered suggesting that tobacco companies had manipulated nicotine levels in cigarettes in order to create addicted smokers of their products. If tobacco companies were guilty of adjusting nicotine levels and knew about the addictive qualities of nicotine, then that fact raises new questions about the industry's accountability for the health problems of cigarette smokers.

While an individual might be considered responsible for choosing to smoke, an addictive and dangerous product might condemn that person to serious illness or death. An addictive product, not revealed as such to the consumer, places responsibility for its effects squarely on the tobacco industry. Deliberate manipulation of nicotine levels would suggest the companies were attempting to create an addiction to a product that all knew was potentially unsafe. Health problems including disease and death traced to cigarettes and their addictive qualities would make the tobacco industry responsible for the damage caused by smoking.

The Lethal Dangers of Not Smoking

Tobacco-related diseases are not the only health threats that the cigarette industry poses to the public. According to a National Fire Protection Association study of fires in the United States over the twenty-five years leading up to 2004, the greatest single cause of fire-related deaths is unextinguished cigarettes. Over that period, about 25,000 Americans—including many nonsmokers—were killed by fires started by untended cigarettes. The tobacco industry admits to designing cigarettes to keep burning when not being smoked—to save smokers the trouble of relighting. However, critics note that cigarettes that burn out on their own result in more sales.

It has long been possible to manufacture cigarettes that are self-extinguishing when not being smoked. In mid-2004, New York became the first state to ban the sale of cigarettes that do not meet fire-resistance standards. The New York law was expected to inspire other states to enact similar legislation and perhaps move the U.S. Congress to create a federal law requiring self-extinguishing cigarettes.

RESPONSIBILITY TO NONSMOKERS

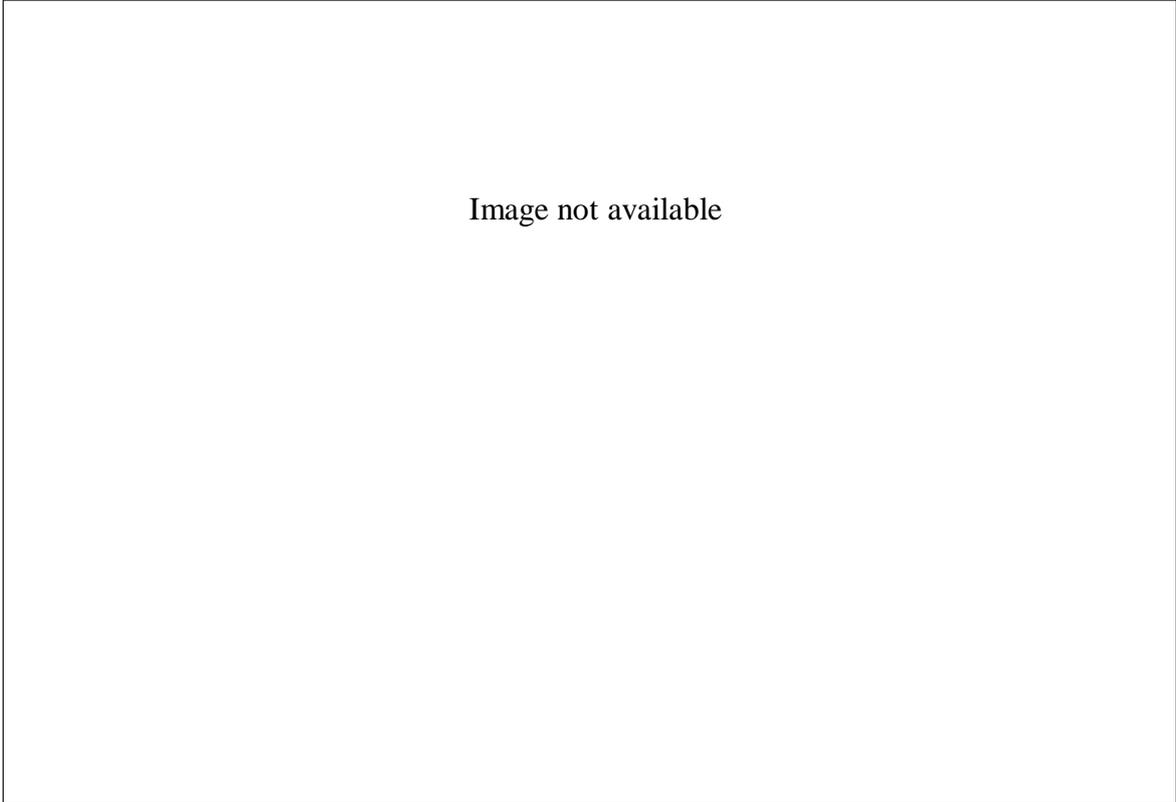

Another issue of responsibility for the tobacco industry is the cost to nonsmokers and their exposure to smoking. During the 1990's, the federal government and private antismoking organizations used a 1993 EPA report to warn of the dangers of what became known as secondhand smoking—the cigarette smoke inhaled by nonsmokers exposed to cigarette smoking.

The EPA report linked secondhand smoking to asthma in children or heart disease and cancer in adults. The report prompted the federal government to seek new methods of limiting exposure to smoking. Cigarette smoking was tied to the health problems of nonsmokers, breaking the chain of responsibility usually placed on smokers. Nonsmokers did not choose to smoke yet suffered negative effects of the product. They could thus blame any ill effects they suffered on the industry.

With secondhand smoking possibly contributing to negative health effects, local governments began limiting where and when people could smoke within public spaces. Starting in the mid-1990's, laws were passed prohibiting smoking in many public buildings including airports, courtrooms, and government offices. Supporters of the bans argued that nonsmokers in those buildings had no choice but to inhale cigarette smoke unless smoking was banned. The bans became broader as many cities and some states began prohibiting smoking within private businesses including bars, restaurants, and stores. These bans, initiated throughout the United States, were supported by the public based on the fear that secondhand smoke was dangerous. However, when it came to secondhand smoking, it was the antismoking advocates who faced ethical questions.

ETHICS OF TOBACCO CRITICS

When the EPA issued its 1993 report claiming that private studies linked secondhand smoking to health concerns, it did not explain the methodological problems associated with its report. The EPA report was actually a combination of nine studies, none of which showed a significant connection between secondhand smoking and health problems for nonsmokers. The EPA combined those nine studies and produced a report that contradicted the results of the nine. The greatest concern raised by this is the public policy that was based on the distorted results. Laws

A large rectangular box with a thin black border, centered in the upper half of the page. Inside the box, the text "Image not available" is centered in a black serif font.

passed restricting public smoking were based on public belief that secondhand smoke was dangerous to nonsmokers. Lack of definitive scientific proof of this casts doubt on the wisdom of limiting the right to smoke. It also raises concerns about the tactics of antismoking advocates. Those seeking to limit smoking are limiting the rights of other individuals to pursue activities—smoking—that they enjoy. Such a limitation of freedom must be accompanied by some national goal promoting the general welfare. If smoking does not harm nonsmokers, then the rush to limit exposure to secondhand smoking may be an unnecessary limit on individual choice.

ETHICS OF ADVERTISING

Known health dangers of smoking raise questions about the ethics of tobacco advertising. Companies use advertising to create new markets for their products, drawing in new consumers. These advertise-

ments highlight the popularity of products and suggest that use of the products will enhance a person's social standing and make him or her more popular among others. Like all other advertising, cigarette advertisements promote products, attempting to attract youths into using tobacco. However, even with the warning labels attached to such ads, there is little information about the potential harms associated with smoking. Young people have less experience with those dangers.

Antismoking advocates point to print ads, sponsorship of athletic events by tobacco companies, and placement of products in television shows and movies as examples of the industry's attempt to glamorize smoking to youth. The companies clearly attempt to gloss over the dangers of smoking while highlighting its social acceptability. Those seeking to regulate cigarettes contend that smoking should never receive any positive public relations because of

the serious health problems caused by it. Recruiting people to engage in smoking would expose them to the addictive nature of nicotine and possibly to higher rates of cancer and heart disease. To meet this criticism, the tobacco industry agreed to implement voluntary limitations on its advertising and mounted another ad campaign attempting to limit youth smoking. For the first time in any industry's history, the makers of products were spending money attempting to dissuade consumers from using their products.

Tolerance

DEFINITION: Indulgence for, or allowance of, beliefs or practices that conflict with one's own

TYPE OF ETHICS: Personal and social ethics

SIGNIFICANCE: Arguably as a consequence of ever-increasing diversity, tolerance of differing views, and especially of different religions, has become a widespread moral ideal in many Western societies. This ideal, however, is neither universally espoused nor always successfully realized by those who do embrace it.

The history of tolerance is shorter than are those of most of the concepts pertaining to personal and social ethics that are included in this work. The word itself has a long history, deriving from Latin and Greek words meaning "to bear" or "to put up with," but for centuries it referred to circumstances of physical conditions. In the sense of putting up with practices regarded as contrary to one's own, the word is not found before 1765. Although the word "toleration" was used in this general sense two centuries earlier, that term invariably referred to civil or religious bodies that were regarded as authoritative and capable of restricting the exercise of nonconforming thought. To tolerate dissident views implies the power not to tolerate them. The idea of tolerance as a personal ethical principle or general social attitude has developed much more slowly.

THE PARADOX OF TOLERANCE:

EARLY ADVOCATES

Why should one have any sympathy for beliefs or practices that one believes to be wrong or wrong-headed? Throughout most of human history, the right to differ, especially in religious matters, has simply been denied. A historical survey of human behavior in such matters might raise the question of whether powerful convictions and tolerance can ever coexist.

Michel de Montaigne was a man of remarkable tolerance for his time. He first published his *Essays* in 1580, and the title of one essay, "It Is Folly to Measure the True and the False by Our Own Capacity," suggests his disinclination to pass moral judgments. Although Montaigne did not preach nonconformity, the whole tenor of his work is individualistic and nonjudgmental. A corollary of the Renaissance spirit of individualism exemplified by Montaigne is respect for others as worthwhile individuals in their own right.

An early advocate of religious tolerance was the Jewish philosopher Moses Mendelssohn (grandfather of the composer Felix Mendelssohn-Bartholdy), whose friendship with Gotthold Ephraim Lessing, a noted writer of German Protestant origin, during the mid-eighteenth century shocked most of his coreligionists. He went on to defy Mosaic law by denouncing excommunication—certainly ironic behavior for a man named Moses. He saw excommunication as the attempt to control thought, which in his view neither church nor state had the right to do.

In the nineteenth century, Harriet Taylor identified the idea of conformity as "the root of all intolerance." John Stuart Mill, much influenced by Taylor (who became his wife), made individuality the subject of the third chapter of his *On Liberty* (1859). "In proportion to the development of his individuality, each person becomes more valuable to himself, and is therefore capable of being more valuable to others," he wrote. Thus, Mill would allow the widest latitude in people's ideas and behavior as long as they do no unjustifiable harm to others. One should not oppress the individuality of another, Mill argues, although one has a right to exercise one's own individuality in opposition in various ways; for example, by avoiding the society of, or cautioning others against, a person whose views one regards as wrong or dangerous.

ORGANIZED RELIGION AND TOLERANCE

Liberal Protestant thought has tended to minimize doctrine or at least find room for considerable differences within the confines of doctrine. Like orthodox Judaism, Roman Catholicism was slower to countenance deviation from official doctrine, but since the Second Vatican Council (1962-1965) Catholicism too has shown more of an inclination to tolerate views formerly regarded as dangerous. The ecumenical movement among Christians of various denominations has subsequently fostered tolerance as a positive and spiritually enriching value.

TOLERANCE AS A MODERN CHALLENGE

Increasingly in the modern world, liberal ethical thought has condemned the attitude of intolerance on the part of those who do not or cannot actively interfere with nonconforming individualists, the point being that people can hardly be expected to act tolerantly in the social sphere if they harbor intolerant attitudes. Certainly, many people without the disposition or capacity to interfere significantly with others' liberties express their intolerance in small ways that nevertheless work hardships on nonconformists and contribute to a general milieu of intolerance.

The limits of tolerance are often manifest in the public arena. For example, abortion, though morally acceptable to millions of people, remains for other millions a horrid evil not to be tolerated. It is unlikely that the fierce opposition to abortion clinics throughout the United States can be explained merely by the objection to the expenditure of public funds on a practice believed by its opponents to be evil. Abortion is, to many of its opponents, intolerable in itself despite its acceptance by others whose ethical standards generally appear to be above reproach. Some normally law-abiding people are quite willing to break the law to prevent what they regard as the murder of innocents; others are appalled by what they regard as the blatant infringement on a woman's right not to bear unwanted children who in many cases would impose a burden on society.

It may well be that the soundest ethical basis for tolerance is to be found not in organized religion but in humanistic respect for others and their right to express themselves freely so long as their expression does not harm other individuals or society. Because it is so difficult to achieve a consensus regard-

ing what constitutes serious and unjustifiable harm, however, the ethical value of tolerance remains controversial.

Torah

IDENTIFICATION: First five books of the Hebrew Bible, or Old Testament; also, totality of Hebrew oral and written law passed down from Moses

DATE: Collected and written before 622 B.C.E.

TYPE OF ETHICS: Religious ethics

SIGNIFICANCE: Torah is a system derived from contact between the human and the divine that instructs by means of narratives, aphorisms, laws, commandments, and statutes, providing rules of life for individuals and society. The goal provided by Torah is to achieve spiritual and temporal happiness in the full realization of the divine will.

Torah is a feminine noun formation of the verbal root *yrh* (“to instruct”) in its causative conjugational form; the root may be semantically related to the Arabic

rawa(y) (“to hand down”) or to the Akkadian (*w*)*aru* (“to guide”). The renderings of the biblical Hebrew word *torah* as *nomos* in the Greek Septuagint (first half of the third century B.C.E.) and as *lex* in the early Latin Bible translations have historically and theologically given rise to the misunderstanding that *torah* means legalism and that Torah means “Law.” In essence, Torah is not supernatural revelation, religious dogma, or general self-evident propositions. It is the cumulative record of moral truths formed by the divine, and codified by humanity. In addition, modern Hebrew uses the word *torah* to designate the thinking system of a savant (for example, the *torah* of Plato, Maimonides, or Einstein) or a body of knowledge (the *torah* of mechanics).

DUAL TORAH

Various biblical verses point to the Pentateuch as Torah distinct from the rest of the Scriptures. The verse “Moses charged us with the Teaching (Torah) as the heritage of the congregation of Jacob” (Deut. 33:44) suggests the inalienable importance of Torah to Israel: It is to be transmitted from age to age, and this transmission has become the major factor for the unity of the Jewish people throughout their wanderings.

The rabbis of the Talmud kept the Torah alive and made its message relevant in different regions and times. This has been done by means of the rabbinic hermeneutic of a dual Torah that has been read into verses from the book of Exodus. Regarding God’s words to Moses regarding the covenantal relationship between Himself and Israel, it is said in Exodus, “Write down [*ktav*] these words, for in accordance [*al pi*; literally, ‘by the mouth’] with these words I have made a covenant with you and with Israel” (Exod. 34:27), and, “I will give you the stone tablets with the teachings [*torah*] and commandments which I have inscribed [*ktav-ti*] to instruct [by word of mouth] them” (Exod. 24:12). The sages saw the words “write,” “accordance,” and “instruct” as the legitimate warrant for the written Torah (*Torah shehbiktav*) and the oral Torah (*Torah shehb’al peh*). In their view, the written Torah, the teaching of Moses, is eternal. The oral Torah is the application of the written Torah to forever changing historical situations, which continues to uncover new levels of depth and meaning and thus makes new facets of Judaism visible and meaningful in each generation.

THE PROCESS OF TORAH: REVELATION AND REASON

The ninth principle of the Creed of Maimonides (1134-1204) states, "I believe with perfect faith that this [written] Torah will not be changed, and that there never will be any other Torah from the Creator, blessed be His Name." It is clear from Maimonides' philosophical magnum opus *The Guide for the Perplexed* (c. 1200) that the written Torah is not to be taken in a literal fashion. For example, Genesis 1:26a says, "And God said, Let us make man in our image, after our likeness." If Judaism expresses strict monotheism, then what is to be made of the plural cohortative "us" and the notion that humanity and God share a "likeness"? For Maimonides, revelation teaches that God is incorporeal and ineffable, while reason imparts that humanity is finite, thus rendering a nonliteral reading (that the plural is that of majesty, anthropomorphic language, figurative speech). Not only in narrative but also in legislation are revelation and reason the primary forces in understanding Torah. Take *lex talionis*, for example.

Three times the Pentateuch mentions the legislation of *lex talionis* (the law of retaliation, of an "eye for an eye"): regarding the penalty for causing a pregnant bystander to miscarry when two individuals fight (Exod. 21:23-25), the case of one who maims another (Lev. 24:19-20), and the punishment meted out to one who gives false testimony (Deut. 19: 18-21).

Although the law of "measure for measure" existed in the ancient Near East and persists today in parts of the Muslim Middle East, there is little evidence that the Torah meant that this legislation should be fulfilled literally except in the case of willful murder. "Life for life" is taken literally in cases of homicidal intention, and fair compensation is appropriate when physical injuries are not fatal. Equitable monetary compensation is deemed appropriate by the oral Torah in the case of a pregnant woman whose unborn child's life is lost and when animal life is forfeited. Indeed, the written Torah casts aside all doubts regarding the intent of the biblical *lex talionis* injunction: "And he that kills a beast shall make it good; and he that kills a man shall be put to death" (Lev. 24:21).

Rejecting the literal application of *lex talionis* puts an end to the mean-spirited charge that Judaism is "strict justice." Instead, Judaism advocates reme-

dial justice for the guilty and concern for the injured. The wisdom of *mamon tahat 'ayin*, the "value of an eye," is not arbitrary, but a principle that is central in any democratic system of torts. The modern Jew who carefully probes for the reasons behind the commandments inculcated by the Torah will see their importance not in faith alone but also in association with logic and practicality.

Nevertheless, the severe language of the written Torah's "eye for an eye" sends forth a strong reminder. There is no remuneration in the world that can properly compensate serious injury, death, or any act of serious victimization.

THE ETERNAL TORAH

The doctrine of the eternity of the Torah is implicit in verses that speak of individual teachings of the Torah in phrases such as the following: "A perpetual statute throughout your generations in all your [lands of] dwellings" (Lev. 3:17) and "throughout the ages as a covenant for all time" (Exod. 3:16). Biblical (Proverbs, in which Torah equals wisdom), Apocryphal (the wisdom of Ben Sira), and Aggadic (Genesis Rabbah) traditions speak of the preexistence of Torah in Heaven. Although the Talmud acknowledges the prerevelation existence of Torah in Heaven, which was later revealed to Moses at Sinai, it concentrates more on Torah's eternal values.

Jewish thinkers from the first century to the nineteenth century have proclaimed the Torah eternal, some in terms of metaphysics, others in terms of theology, and most in defense of Judaism against the political polemics of Christianity and Islam, which taught that aspects of Torah are temporal or have been superseded. In the first century, Philo Judaeus spoke metaphysically of the Torah as the word (*logos*) of God, the beginning of creation. In the tenth century, Saadia Gaon proclaimed that the Jews were unique only by virtue of the Torah; if the Jewish nation will endure as long as Heaven and Earth, then Torah must also be eternal. In the twelfth century, Maimonides extolled the perfection (eternity) of Torah, regarding which there is neither addition or deletion. After Maimonides, the issue of the eternity of the Torah became routine; the Torah's eternity became an undisputed article of belief. The schools of Kabbala, however, declared that the preexistent form of Torah is eternal but that the words and message of the Torah are recycled every 7,000 years.

In the nineteenth century, the *Wissenschaft des Judentums* (Scientific Study of Judaism) movement, inspired by the scholarship of biblical critics, presented a historical-critical approach to Torah study. As a result, the traditional concept of the eternity of the Torah became a non sequitur and the idea of the Torah as a human book prevailed. By the mid-twentieth century, however, responding to negative trends in higher literary criticism, which was affected by classical Christian bias and “higher” anti-Semitism, objective and critical studies by Jewish loyalists helped to reaffirm the Jewishness of the Bible’s origins. No matter how a Jew views the nature of Torah—as a kind of “mythicizing history” or as a product of the people for the people or as written (inspired) by God—Torah as ultimate authority is an indisputable article of faith.

THE WAY OF TORAH: THREE PATHS

Whether the Torah is defined as the result of an exclusive encounter at Sinai or of an evolving journey from Sinai, this national treasure is traditionally understood by the response of *na’aseh ve-nishma’* (“We shall do and we shall hear [reason]”). Accordingly, the way of Torah presents three paths for the contemporary Jew:

1. One should believe that God’s Torah given at Sinai is all knowledge. (*Na’aseh* alone.)
2. The Torah-at-Sinai tradition should be abandoned, and Torah should be explained in purely rationalist terms. Torah is made in the image of the Jewish people. (*Nishma’* alone.)
3. One should accept the existential position that God’s teaching was shared at Sinai, face to face, with all of Israel, present and future. “Present” implies that God’s revelation occurred and that Torah is the memory of this unusual theophany; “future” hints that Israel’s dialogue with God is an ongoing process. This view holds that people know only a part of divine truth and that each generation seeks, makes distinctions, categorizes, and strives to discover more. (*Na’aseh ve-nishma’*.)

Na’aseh alone permits no ultimate questions; *nishma’* alone provides no ultimate answers. *Na’aseh* and *nishma’* together ask questions and attempt answers but leave many uncertainties unanswered. Yet uncertainty is truth in the making and the inevitable price for intellectual freedom.

Torture

DEFINITION: Deliberate, systematic inflicting of physical or mental pain, as a means of coercing information or confession, as a form of punishment, or out of sheer cruelty

TYPE OF ETHICS: Human rights

SIGNIFICANCE: Torture is almost universally thought of as a moral evil, but it is not always labeled as an absolute evil. Some consequentialists advocate the use of torture on terrorists or combatants in order to gain information that would save the lives of others. Even those who deem such acts to be excusable, however, would agree that they corrupt the goodness of their perpetrators.

The darker chapters in human history, including those of the modern era, have all involved torture. In fact, modern torture on a large scale, as practiced in Adolf Hitler’s death camps and Joseph Stalin’s gulags, has eclipsed even the horrors of the notorious

Spanish Inquisition. Yet there are no places where torture is still legally sanctioned, and it is viewed as morally repugnant, if not universally, at least in more highly developed countries. That, however, has not always been the case.

JUDICIAL TORTURE

In Europe after 1300, when the Roman canon law of evidence replaced ordeal as the basis for determining criminal guilt, legal torture became widespread. Ironically, the new law, in attempting to protect the accused against capricious justice, fostered judicial torture, because the death penalty, imposed for a variety of crimes, required “full proof” (the evidence of two eyewitnesses) or “half proof” (sufficient circumstantial evidence) plus a confession. Because many crimes were not witnessed, magistrates were empowered to torture suspects to exact confessions, and

they had at their disposal the infamous devices that haunt even the modern imagination—thumb and leg screws, pressing weights, rack, iron maiden, and strappado.

Although barbaric, torture was allowed because almost all criminal offenses carried blood sanctions, from death and maiming to branding and whipping. Capital punishment, which was exacted for crimes as minor as burglary, was meted out through such gruesome means as hanging, drawing and quartering, burning at the stake, pressing, gibbeting, beheading, and impaling. Knowing what the accused faced, magistrates demanded that suspects bear witness against themselves, and they usually resorted to torture only when the suspects remained uncooperative. Torture was seldom employed in full-proof cases or when the penalties faced were less severe than execution, and its use for punishment was not widely condoned.

ABOLITION OF LEGAL TORTURE

The practice of judicial torture was gradually abandoned, partly because alternatives to death as punishment for serious criminal offenses made it less necessary. Transportation and indentured servitude, imprisonment, and conveyance to the galleys were

options for judges in capital cases in which conviction was based on strong circumstantial evidence rather than incontrovertible proof. Furthermore, the validity of confessions exacted through torture had always been in doubt, and during the Enlightenment, circa 1750, that doubt was joined to the moral argu-

U.S. Abuse of Iraqi Prisoners

In early 2004, stunning new stories coming out of U.S.-occupied Iraq reported that U.S. military personnel had been severely and frequently abusing Iraqi prisoners under their control. The revelations were made even more shocking by the publication of photographs showing U.S. soldiers laughing and gesticulating beside such scenes as naked Iraqi men piled on top of each other and posed in positions simulating sex acts—scenes particularly abhorrent to Muslims. These revelations prompted Army and government investigations that led to changes in the command structure, the disciplining of key personnel, and criminal charges against those directly responsible for acts of abuse. Investigations and criminal proceedings continued through the year. Meanwhile, Americans were left to ponder how it was possible for fellow citizens representing the United States to participate in such unethical behavior.

Most news stories focused on Abu Ghraib, a prison near Baghdad administered by the U.S. military since the fall of Saddam Hussein's regime in early 2003. During Hussein's time, Abu Ghraib had been a notorious center of torture and secret executions of suspected government opponents. After Hussein's regime fell, Iraqi civilians gutted the prison, but the U.S. Army soon renovated the facility and began using it as a detention center for common criminals, civilians suspected of committing "crimes against the coalition," and known leaders of anticoalition insurgent movements.

Abu Ghraib's already unsavory reputation combined with the revelations of U.S. misbehavior to raise protests against the U.S. occupation to new levels both within and outside Iraq. Recognition of these acts of torture did irreparable damage to the moral reputation of the United States. As the scandal unfolded, evidence of U.S. military misconduct grew. In April, 2004, *The New Yorker* magazine obtained a copy of the official report of a secret Army investigation of the scandal written by Major General Antonio M. Taguba in February. According to Taguba, numerous instances of "sadistic, blatant, and wanton criminal abuses" had occurred at Abu Ghraib during the previous autumn.

One illustration is a faithful copy of one of the most notorious photographs taken at Abu Ghraib: A hooded Iraqi standing on a flimsy box was told that if he fell off the box, he would be electrocuted by the wires attached to his body. (AP/Wide World Photos)

ments promulgated against torture by such thinkers as Voltaire. By the end of the nineteenth century, legal torture had become an anomaly, and protections against it, as provided by the “cruel and unusual punishment” injunction of the Eighth Amendment to the U.S. Constitution, were almost universally in place.

MODERN TORTURE

It is, however, one thing to abolish a practice on paper, to make it illegal, and another to curtail completely its practice. As late as 1984, when the United Nations adopted the Convention Against Torture and Other Cruel, Inhuman, or Degrading Treatment or Punishment, dozens of nations, in violation of their own laws, were secretly sanctioning its use. In recent history, it has been a particularly invidious practice during war, despite Geneva Conference protocols, and during civil unrest and insurrection, when it has been used as an instrument of persecution and suppression, as in internally troubled states such as Chile, El Salvador, South Africa, Cambodia, and the former Yugoslavian state of Bosnia-Herzegovina.

It is unlikely that torture can ever be completely eradicated. It only takes two, persecutor and victim, to dance torture’s grim dance, and the potential for torture exists in any interpersonal relationship in which one party exercises physical or psychological control over another, as in, for example, familial relationships between parent and child or husband and wife.

The crude instruments of the *ancien régime* are now museum pieces, but they have been replaced by such things as psychoactive “brainwashing” drugs and electroshock, courtesy of modern science. The crude methods have not disappeared, even in the United States, as the burned, scarred, and starved bodies of abused children have testified.

Although organizations such as Amnesty International can bring before the United Nations evidence of the torture of citizens by governments, exposure of its practice under private circumstances—for example, within the family—has depended largely on the willingness of victims to complain. In the last few decades, victims have been more inclined to seek help and legal remedy, encouraged by civil rights legisla-

tion, counseling, and an awareness, fostered by media coverage of abuse, that their situation is not unique. Tragically, tortured children are often too young to know that redress is even possible.

The belief that the modern era is more humane and more morally astute than were previous eras is partly illusory. Although modern efforts to rectify human abuse and cruelty may be unprecedented, extending even to animals, modern events have repeatedly revealed and psychological studies have often documented that the sadomasochistic impulses that lie behind torture frequently accompany such fundamental human feelings as frustration, rage, guilt, and shame. The best hope for ending torture lies in legal recourse made possible by public awareness and ethical vigilance.

Toxic waste

DEFINITION: Poisonous or other dangerous substances needing specialized forms of disposal

TYPE OF ETHICS: Environmental ethics

SIGNIFICANCE: Ethical practices of toxic waste disposal are those that protect the environment and human life.

By the early twenty-first century, toxic waste was spreading throughout the world at an alarming rate. To protect the environment and human life, ethical practices must be employed to dispose of toxic waste materials generated by industry, agriculture, consumers, and individual persons. The numerous toxic-waste disposal abuses of the past were sometimes due to ignorance or carelessness; however, many abuses were due to the unethical practices used to save companies or individuals time and money in waste disposal. Disposed toxic substances can be highly detrimental to people, whether the people are aware that they are being exposed to the materials or not. Among other things, careless, unethical dumping of toxic waste has produced dirty streams, greasy drinking water, noxious fumes, and human suffering, disease, and death.

TOXIC SITES

During the nineteenth and twentieth centuries, many toxic waste substances were spread into the air, soil, and water. For example, Love Canal, an artificial waterway that was built near Niagara Falls, New York, during the 1890's became a site of industrial toxic waste disposal, with more than forty toxic organic compounds found in the canal and in nearby soil, water, and air samples collected during the late 1970's. In May, 1980, the federal Environmental Protection Agency released a study showing a rate of chromosome damage among babies born to people living near the Love Canal site. Among myriad other sites where dumped toxic wastes have produced documented cancer, mysterious health problems, and other devastating effects are Waukegan Harbor, Illinois; Times Beach, Missouri; Woburn, Massachusetts; Mapleton, Utah; and Bhopal, India.

Many of the more than fifty thousand toxic-waste-producing firms in the United States contract with waste-disposal companies to provide ethical, scientifically sound, legal ways to dispose of their waste materials. Some companies dump or bury their toxic wastes on-site. In many instances when problems develop, waste disposers claim that the problems are not serious and decline to spend any money to clean up disposal sites. This difficulty led the U.S. Congress to pass the Comprehensive Environmental Response, Compensation, and Liability Act in 1980, which included the establishment of the Superfund to pay for immediate cleanup of abandoned toxic-waste sites and inoperative sites where the owners refuse to clean them up.

As the numbers of toxic waste sites, the amounts and varieties of chemical contamination, and cleanup costs continue to escalate, the only feasible solutions for protecting the environment and human life and rights appear to be regulatory controls that focus on waste minimization and ethical practices of waste disposal. Grassroots organizations across America demand that the government legislate and enforce such action.

Tragedy

DEFINITION: Form of literary drama and a topic of philosophical investigation that involves the extremes of human behavior in the face of life's great misfortunes

TYPE OF ETHICS: Theory of ethics

SIGNIFICANCE: Both tragedy and ethics focus on the moral value of human conduct in the face of life's conflicts and extremities.

The term "tragedy" has been used in at least two distinct senses. First, tragedy refers to a genre of literary and dramatic works originally developed in ancient Greece. Aristotle defined tragedy, in this first sense, as an imitation (a theatrical play) of an action by, typically, a noble person whose character is flawed by a single weakness (such as pride or envy) that causes him to make an error in judgment resulting in his downfall. The hero moves from a state of ignorance to one of insight generally at the cost of personal misery. Aristotle believed the spectator of a tragic drama underwent a catharsis, or cleansing, of his own emotions.

In the second sense, tragedy has been used to refer to a subject of philosophical theorizing involving the meaning of tragic literature as well as the possible existence of tragic events in the world that must be philosophically reckoned with in any worldview. It is in this latter meaning of tragedy that the primary ethical import lies. However, it is unlikely that the two senses of the term can or should be completely disentangled, since presumably literature and drama often mirror something significant about human existence.

Plato, unlike Aristotle, believed that there were several ethically undesirable consequences of Greek tragedy and drama. Plato condemned tragic poetry for making men too emotional. Tragic drama, Plato argued, implies that a good person may be undone by an accidental reversal of fortune. Tragedies thus teach the young that their well-being is contingent upon the whims and vagaries of appearance. For Plato, the world of appearance and consequently what generally passes for "tragedy" is ultimately unreal. Even one's physical death is tragic only as long as one is in ignorance. For example, Socrates, Plato's teacher, understood the immortality and superiority of the real; hence, he did not fear the hemlock poison that the Athenian town counsel required him to drink.

What appeared to be a tragedy was in actuality a great victory for the good. Tragedies, however, encourage the audience to think that a hero can be undone by an accidental reversal of fortune. Consequently, for Plato, tragedies teach falsely and inspire fear of unrealities.

THE GERMAN PHILOSOPHERS

The early nineteenth century German philosopher G. W. F. Hegel held that, in the first sense noted above, Aristotle's definition of tragedy was definitive. In the second sense, however, tragedy is motivated by a conflict of two great moral forces, both justified and both embodying the good. For example, in Sophocles' ancient Greek play *Antigone*, one protagonist—Antigone—is motivated by justifiable family values to provide a proper burial for her brother, while King Creon is equally justified by public values to prevent her from doing so. The task of the tragic hero is to attain a "synthesis" in which the claims of each side are reconciled. Antigone and Creon are both right but not right enough. Consequently, their destruction is just and reveals the absolute rule of the divine principle. Hence, in Hegel, the ethical dilemma of tragedy consists in the conflict between two goods that can be resolved only through a higher synthesis of good. In one-sidedness, the tragic hero fails to comprehend this synthesis and is justifiably overruled and destroyed by the might of absolute justice.

Arthur Schopenhauer, taking a consistently pessimistic view of human life, argued that all existence is tragic. Quoting an ancient Greek source, he noted that the greatest thing that one could ever hope for was to have never been born. A quick death would be the next most desirable event. Thus, tragic art reveals the terrible side of life, which relentlessly destroys and annihilates anything that the human spirit might cherish. For Schopenhauer, tragedy teaches that the only resolution to the arbitrary cruelties of life is total renunciation of the will.

Friedrich Nietzsche, a student of Schopenhauer, believed that Greek tragedy answered a fundamental need of human life. Greek tragedy gave the Greeks the ability to face the horrors and arbitrariness of life and yet find a basis for self-affirmation. Nietzsche, while acknowledging the reality of human suffering, rejected the excessive rationalism of Plato and the excessive pessimism of Schopenhauer. In the two

Greek gods Dionysus and Apollo, Nietzsche discovered two basic elements of human nature. Dionysus embodies excess, vitality, and passion, while Apollo represents reason, order, and balance. In the time of the ancient Greeks, the tragic art form accomplished a unification of these tendencies and enabled the Greek culture to grow strong and noble.

In Nietzsche's later work, he showed that perception of the tragic realities of life could lead in two directions: to nihilism or to the superman. The superman is an individual who declares, "Joy is deeper than woe!" He affirms life and self in full light of the ambiguities and tragic qualities to which human flesh is heir. These elite and noble "Yea-Sayers" of Nietzsche represent his answer to the ethical challenge given by the tragic aspect of life.

During the late twentieth century, there was a general concern that the tragic sense of life had been lost, to the detriment of humanity's self-image. Tragedy has generally depicted a sometimes horrifying but heroic picture of the human condition. Although in tragedy there have been great "reversals of fortune," there has also been the implication that humanity has fallen from a great height. The twentieth century did not sustain a vision of human nature that was sufficient for great tragedy. For example, in Samuel Beckett's *Waiting for Godot* (1954) and Arthur Miller's *Death of a Salesman* (1949), tragedy was superseded by the Theater of the Absurd. The protagonists of these tragicomedies minimize the horror and terror of life but also fail even to hint at its possible greatness. These antiheroes exit the stage with a "whimper," not a bang.

Some recent developments did, however, follow the ennobling promises of modernity. Miguel de Unamuno y Jugo (1864-1936), author of *The Tragic Sense of Life*, argued that humanity thirsts for a status in life that reason cannot support. People live in the tragic sense of life when they refuse to abandon either the heart or the intellect. Humanity is neither God nor worm, but something in between. Unamuno suggests that this tension is unresolvable, yet people may live authentically by refusing to deny either aspect of life. Thus, a form of "tragic optimism" appeared to be emerging in the late twentieth century. By following the guidelines of Nietzsche, Unamuno, and other twentieth century philosophers, it is possible to recapture the nobility of humanity at the expense of illusions about absolutes. In the recognition

that life is a mystery to be heroically lived and not a problem to be intellectually solved, the birth pain of a new postmodern form of tragedy may be heard.

Transcendentalism

DEFINITION: Philosophical belief in an objective reality that exists beyond human experience

TYPE OF ETHICS: Theory of ethics

SIGNIFICANCE: Transcendentalism holds that the structure of the mind both grounds, and determines the limits of, human knowledge, and that there is an absolute division between human knowledge and reality. Some schools of transcendentalism also believe that the gap between experience and the real world can be breached in moments of irrational spirituality that provide guidance as to the ethically proper way to live

one's life. Others emphasize the rational nature of reality and assert that obeying rational moral law is the only way to achieve harmony with the objective world.

Transcendentalism was an idealistic revolt against materialist philosophies such as John Locke's empiricism, Sir Isaac Newton's mechanism, and William Paley's utilitarianism. In those materialist theories, one's code of behavior derived from a compilation of sensory experiences by means of which one determined what was good or useful. The transcendentalist, however, believed that one's code of behavior preceded his or her experiences, that the structure of ideas inherent in the mind itself molded ethical conduct.

ORIGINS

Although the term "transcendental" had been employed by medieval philosophers, the Prussian philosopher Immanuel Kant first used the term in its modern meaning during the late eighteenth century. His *Critique of Pure Reason* (1781) addressed a fundamental philosophical question: Does all knowledge come from the senses' interactions with the world, or is some knowledge embedded in the mind prior to sensory experiences? He concluded that there were ideas that "transcended" experience and that ethical conduct was a matter of the mind's inherent desire to act consistently with itself.

Philosophers and literary figures in Germany, France, Great Britain, and the United States who were seeking a liberating idealism believed that they had found it in Kant's work. His idea that the mind contained a set of moral ideas that helped mold a person's relationship to the universe made his theories a welcome alternative to materialistically based ones. His idea that one's primary ethical duty was to remain faithful to the ethical laws dictated by one's own mind appealed to those who were hungry for a more spiritually and individually based set of ethics. Many strongly believed that this set of transcendent ideas was humankind's connection to God, in which its highest and noblest aspirations could be found.

AMERICAN TRANSCENDENTALISM

Among those who were influenced by Kant were the American Transcendentalists, although they received his philosophy secondhand through the works

of the British authors Samuel Taylor Coleridge and Thomas Carlyle. This group consisted generally of New Englanders, many of them Unitarian ministers or former ministers, who were most influential from the first meeting of the Transcendental Club in 1836 until the American Civil War. Prominent members of the movement were Bronson Alcott, George Ripley, Theodore Parker, William H. Channing, Margaret Fuller, Henry David Thoreau, and Ralph Waldo Emerson, most of whom also contributed to the literary journal *The Dial*.

A popular idea among the group was Coleridge's simplified version of Kant's theory that the mind was divided into a higher faculty, called "reason," that sought to systematize and unify the various impressions collected and analyzed by the lower faculty, termed the "understanding." The works of Emerson and Thoreau both emphasize reason. "Higher laws" or "spiritual laws," as they called them, ranked above the mechanical rules of cause and effect in the material world and gave unity and ethical purpose to human activities. The permanence of the higher laws appealed to these thinkers, who deplored the utilitarian values and relative ethics that seemed to have replaced principled behavior. They also liked Kant's idea that the source of morals, and thus the closest link to God, was found in one's own mind. From this premise, they developed their influential concept of self-reliance.

Many of the major works of American Transcendentalism appropriated Kant's idea that morality exists in the mind and fused it with a mystical belief that a divine spirit was prevalent in nature. In *Nature* (1836), Emerson argued that ethics and the natural world were inextricably linked: "the moral law lies at the centre of nature. . . . All things with which we deal, preach to us. What is a farm but a mute gospel?" Thoreau expressed similar thoughts in *Walden* (1854). He spent two years at Walden Pond, where he built his own house, planted and harvested his own food, and yet reserved ample time for reflection. He consistently linked the simple acts of his daily life, such as hoeing a bean field or plumbing the depths of the pond, to the immanence of a universal spirit.

Although they resisted the trendiness of social movements, the American Transcendentalists were attracted to the moral issues raised by those movements. Margaret Fuller, in *Woman in the Nineteenth Century* (1845), argued the case for women's rights.

Thoreau went to jail rather than pay taxes that supported an immoral war, an experience that he chronicled in “Resistance to Civil Government” (1849), and in “Slavery in Massachusetts” (1854), he opposed slavery and the moral irresponsibility of those who allowed themselves to become accomplices to its evil.

Aside from the major political events of their time, the Transcendentalists were also concerned with the ethical content of their own day-to-day lives and those of their fellow citizens. In “The Transcendentalist” (1842), Emerson seemed almost to plead with his audience that it “tolerate one or two solitary voices in the land, speaking for thoughts and principles not marketable or perishable.” Thoreau, in “Life Without Principle” (1863), makes a similar case for the role of principles in the too often materialistic lives of the populace.

After several centuries of empirically based philosophy, Transcendentalism provided strong evidence that humankind still recognized a spiritual element in its personality. The Transcendentalists believed that innate spiritual insights were essential in directing ethical judgments.

Treason

DEFINITION: Betrayal of one's nation or one's government to its enemies, foreign or domestic

TYPE OF ETHICS: Politico-economic ethics

SIGNIFICANCE: Essentially a crime of disloyalty, treason raises the issue of the relative importance or precedence of competing types of loyalty, including loyalty to one's nation, ideals, family, religion, racial or ethnic group, class, gender, and self. The more idealized or mythologized a national government becomes, the more heinous acts of treason against it will seem.

The U.S. Constitution defines treason as “giving aid and comfort to the enemies of the United States.” In most legal systems, however, treason consists also in attempting to overthrow the legal government within the state, and it may be supplemented by crimes such as espionage and sedition. Most ethical systems see one as having moral obligations, including loyalty, to one's nation and to its rulers. Treason, therefore, is ordinarily a seriously blameworthy act, and the attendant horrors of foreign military conquest or revolutionary upheaval add to its inherent evils.

An anarchist could scarcely acknowledge the legitimacy of the concept of treason, but supporters of natural law and Kantian ethics, for example, would advocate a strong degree of deference owed to the sovereign but would also acknowledge that the sovereign may be defied, overthrown, or even assassinated if he or she commands or commits great evil.

Although there is almost universal opprobrium attached to treason done for profit or advancement, other cases of treason are muddied by the contrast of the objective evaluation of the ideology, religion, or philosophy prompting the act with the subjective element of the traitor's personal commitment to that belief.

Noted Historical Figures Charged with Treason

<i>Name</i>	<i>Basis of treason charges</i>
Niccolò Machiavelli	Tried for treason for opposing Florence's Medici family and sent into exile in 1512.
Guy Fawkes	Executed for plot to blow up England's Parliament and king in 1605.
James Scott, Duke of Monmouth	Executed for rebelling against England's King James II in 1685.
John Locke	Branded a traitor for his association with Monmouth; went into exile in the Netherlands.
Benedict Arnold	U.S. general who plotted to surrender West Point to British forces in 1780.
Aaron Burr	Allegedly conspired to take over western territories of United States during Thomas Jefferson's administration.
Sir Roger Casement	Executed in 1916 for plotting with Germany to obtain arms for Irish rebels.
Mildred Gillars, a.k.a. "Axis Sally"	American who broadcast propaganda for Germany during World War II.
Iva Toguri, a.k.a. "Tokyo Rose"	American who allegedly broadcast propaganda for Japan during World War II.
Ezra Pound	American who broadcast propaganda for Italy during World War II.
William Joyce, a.k.a. "Lord Haw-Haw"	British subject who broadcast propaganda for Germany during World War II.
Henri-Philippe Pétain and Pierre Laval	French leaders who collaborated with German occupation forces during World War II.
Vidkun Quisling	Norwegian officer executed in 1945 for collaborating with German occupation forces during World War II; his name afterward became synonymous with "traitor."
Alger Hiss	Allegedly spied on United States for the Soviet Union during the 1930's-1940's.
Julius Rosenberg and Ethel Rosenberg	Executed in 1953 for allegedly spying on U.S. atom bomb project for the Soviet Union.
Klaus Emil J. Fuchs	Stole British and U.S. atomic secrets for the Soviet Union during the 1940's.
Guy Burgess, Kim Philby, and Donald Maclean	Spied on British intelligence operations for the Soviet Union during the 1940's-1950's.
Sir Anthony Blunt	Spied on Britain for the Soviet Union during the 1930's-1950's.
John Anthony Walker	Spied on U.S. military for the Soviet Union 1970's-1980's.

Henri-Philippe Pétain (1856-1951) was one of France's greatest military heroes during World War I, but for collaborating with Nazi Germany by heading the puppet Vichy regime during World War II he was branded a traitor. After the war, he was convicted of treason; his sentence was commuted to life imprisonment, and he died in disgrace at the age of ninety-five. (Library of Congress)

The “judgment of history” often seems particularly amoral. To cite one example, Adolf Hitler is never labeled a traitor despite his having tried unsuccessfully to overthrow the Bavarian state government in the Munich “Beerhall Putsch,” because his eventual capture of the German government a decade later seems to have extinguished the guilt of treason in that view.

Treaty of Versailles

IDENTIFICATION: Treaty that formally ended the state of war between Germany and the Entente powers, concluding World War I

DATE: Ratified on June 28, 1919

TYPE OF ETHICS: International relations

SIGNIFICANCE: The Treaty of Versailles imposed harsh, economically disruptive conditions upon Germany aimed at permanently reducing its ability to wage war upon other nations and to act as a world power. These conditions undermined democracy in Germany and arguably fostered the nationalistic excesses that produced Nazi totalitarianism, state terrorism, and renewed global warfare.

The treaty encouraged the rise of German fascism and was an underlying cause of World War II. The German surrender in 1918 was based on a general acceptance of President Woodrow Wilson’s Fourteen Points. In formulating the peace terms, the British and French ignored most of those points.

The treaty stripped Germany of human and material resources, in violation of its avowed goals of national self-determination and respect for territorial integrity, and reduced the German armed forces to a level that was incompatible with national defense. It also imposed crushing indemnities upon Germany and forced Germans to accept sole war guilt. The treaty’s blatant unfairness and economically destabilizing consequences, further aggravated by the onset of the Great Depression in 1931, aided the success of Adolf Hitler’s revanchist, extremist National Socialist (Nazi) Party. Hitler’s sustained efforts to reverse the Versailles treaty provoked World War II, the most devastating conflict in history.

Triage

DEFINITION: Process of sorting victims of war, accident, or disaster to determine priority of medical treatment

TYPE OF ETHICS: Bioethics

SIGNIFICANCE: Triage is perhaps the most extreme single instance of ethically difficult resource allocation. It requires immediate, life-and-death decisions to be made about whose injuries will be treated first and who will be left to wait. The major ethical question raised by triage is whether severity of injury is the only appropriate criterion for determining priority, or whether other considerations such as age, occupation, social status, membership in the enemy military, and criminal record may be considered.

Triage employs a utilitarian calculation concerning how to do the most good with whatever resources are available, determining which patients will be helped at all, and in which order those to be helped will be treated. Triage may be employed in any situation in which all the injured, sick, or wounded cannot be treated: on the battlefield, at the site of a natural disaster, in the first moments of a traffic accident, in the emergency room of a large hospital, or in a country suffering from mass starvation. Triage is more easily defended than are some other types of utilitarian calculations, since there is no intent to sacrifice the innocent for the greater good of the majority. Since triage does require that one make a “quality of life” judgment before one decides which victims will be helped, however, it may be an ethically objectionable practice. If it is wrong to judge who is worth helping and who is not, then it is arguable that triage should be replaced with a “first-come-first-helped” principle.

Truman Doctrine

IDENTIFICATION: Foreign policy initiative undertaken by the U.S. president Harry S. Truman’s administration to prevent the spread of Soviet communism into Greece and Turkey

DATE: Promulgated on March 12, 1947

TYPE OF ETHICS: International relations

SIGNIFICANCE: The Truman Doctrine signaled a shift in American foreign policy. It proclaimed a sphere of influence in the Middle East, which had never been a traditional interest of the United States.

The Truman Doctrine was prompted by the British government’s announcement that it would withdraw from Greece after the British had liberated the country from the Nazis in 1944. After World War II, the Soviet Union was a threat to the Balkan Peninsula, and the Eastern European communist regimes were aiding the Greek communists in their civil war against the Greek government. To offset this communist threat, Truman asked the Congress for \$400 million for military and economic aid to Greece and Turkey.

Trustworthiness

DEFINITION: Disposition of character that leads people to do reliably what others have a right to expect of them

TYPE OF ETHICS: Personal and social ethics

SIGNIFICANCE: Trustworthiness is a crucial virtue for people living together in a community, in which personal, commercial, and professional relationships depend on it

Trustworthiness involves both words and conduct. A trustworthy person speaks truthfully to others, and therefore the words of such a person are to be trusted. Also, a trustworthy person is willing to make commitments concerning future behavior, and can and will keep whatever commitments have been entered into; therefore, the conduct of such a person is to be

relied upon. A trustworthy mechanic, for example, can be counted on both to tell one truthfully what repairs one's automobile needs and to fulfill the terms of any contract that he or she enters into to do the work.

Trustworthiness is an admirable trait of character because it is socially useful. Hence, it is appropriate to classify it as a moral virtue, even though it has been little discussed by traditional ethical theorists, the word "trustworthy" having entered English only in the nineteenth century.

The term "trustworthy" is ambiguous because it does not specify whether it refers to trustworthiness in some specific respect or trustworthiness as a pervasive disposition of a person's character. When one calls a mechanic trustworthy, one is usually speaking only of trustworthiness regarding automotive repairs, though one could mean to say that the person is trustworthy in all aspects of life. Marital fidelity and honesty in paying income tax will count as evidence of trustworthiness in a mechanic only when the second, broader meaning is intended.

RELATIONSHIP TO OTHER VIRTUES

Trustworthiness is akin to and overlaps such other virtues as truthfulness, honesty, and fidelity, but it is distinguishable from each of these. Trustworthiness differs from truthfulness in that the latter pertains only to communication, while the former can relate to a much wider range of behavior. Trustworthiness differs from honesty in that it can concern the keeping of commitments of any kind, not merely those the breach of which would be dishonest. It differs from fidelity in that trustworthiness requires greater effectiveness in the carrying out of commitments than is needed for fidelity; thus, a loyal but incompetent person can be faithful without being trustworthy.

Trustworthiness must also be distinguished from trustfulness (which is not, in general, a virtue) and from the appropriate degrees of trust that ought to pervade various relationships (these degrees of trust often arise only in proportion as the participants are properly trustworthy, yet this proportionality is merely contingent).

Within the family and in personal relationships generally, trustworthiness is required if all is to go well. When a husband is worthy of his wife's trust and she of his, this makes it likelier that they will indeed trust each other and that their affections will

remain firm and their responsibilities will be effectively shared. Lovers, friends, neighbors, and acquaintances all will find that their relationships tend to be strengthened when there are appropriate degrees of trustworthiness on each side.

Some feminist thinkers have particularly focused on the importance of trustworthiness. Sara Ruddick, for example, writes of trustworthiness as one of the virtues especially needed by a mother who is to have a sound relationship with her child. She stresses that the child must be able to rely on the mother to stand up for it against the father, against intrusive government, and against the archaic mores of society. Ruddick's emphasis is controversial, and one might wish to add that children also need to find their fathers trustworthy and need to be taught to be trustworthy themselves. In any case, trustworthiness on all sides seems to be indispensable for good family relationships.

Is trustworthiness more prized in men by women than it is in women by men? There may be some truth in Arthur Schopenhauer's view that women prize stability (and hence trustworthiness) in their liaisons, while men tend to seek variety. Yet such sweeping generalizations carry little weight.

TRUSTWORTHINESS IN BUSINESS

It is in the world of business, however, that trustworthiness finds its most distinctive place in modern life, especially in connection with the provision of financial services. Banking activities of a recognizable kind seem to have had their origin during the Renaissance in the dealings of merchant families, among whom the Medici and the Fuggers were leaders. Initially, these families had merely bought and sold on their own account, but then gradually they began to provide financial services to others, transferring money from one city to another, holding deposits, making commercial loans, and insuring against the loss of ships and shipments. The availability of these services became enormously helpful to commerce and set the stage for the rise of capitalism.

It was essential that the providers of such services should develop strong reputations for trustworthiness, since no merchant wanted to deposit funds except with a banker who could be relied upon to handle them as promised. The concept of trust (Latin, *fiducia*) has been central to the activities of banking and insurance from the start. Members of these businesses always have sought to cultivate favorable rep-

utations and have found that the most reliable way of doing so is by actually being trustworthy. Since the eighteenth century, the fiduciary trustworthiness of corporate entities has come to be even more important than that of individuals and families (some corporate entities even came to be called “trusts”). Without fiduciary trust, the economic world as it is known could not exist.

In the professions, such as medicine and law, trustworthiness also has come to play a central role. The patient or client is not equipped to make independent judgments about the complex technicalities of medicine or law and therefore must rely on the knowledge and technical skill of the professional, as well as on the professional’s motivation to serve well. Only professionals who acquire reputations for trustworthiness are likely to be successful in the long run. Part of the role of professional organizations has been to promote trustworthy behavior by members of the professions and to encourage potential patients and clients to trust them.

Truth

DEFINITION: Factual, actual, and real

TYPE OF ETHICS: Theory of ethics

SIGNIFICANCE: Truth is the central object of philosophical inquiry, and no consensus exists as to any aspect of it. At one extreme lies the belief that there is an objective reality, and objective truth exists either in the world or beyond it. At the other lies the belief that truth merely names the set of conventional beliefs and common metaphors in circulation in a given society, and it is generated by rhetoric rather than reality.

Truth is a feature of propositions—assertions, statements, and claims. If one claims that one’s notebook is on a desk, and it is, one’s claim is true. The desk is not true and the notebook is not true: They simply exist. If one removes the notebook but makes the same assertion as before, the assertion is false, but falseness would still not be a characteristic of the desk or the notebook. Equally, the number nine is neither true or false, but the equation $9 + 5 = 14$ is true, while $9 + 15 = 23$ is false.

Truthful statements or assertions represent “things” as they are—reality. False assertions do not depict things as they are. Truthful statements and falsehoods depend on those things as they are, not on a person’s (or a society’s) beliefs, desires, wishes, or prejudices. Furthermore, at the elemental level of logic, the “law of the excluded middle” is operative. According to that law, it is assumed that statements or claims have only two possible conditions: A claim is either true or false.

Throughout history, philosophers have attempted to develop sweeping theories to explain the nature of truth and its opposite, falsehood.

COHERENCE THEORY

Several philosophical theories of truth are extant, one being the coherence theory. Its groundbreakers include such thinkers as Baruch Spinoza, G. W. F. Hegel, and Gottfried Leibniz, and it is associated with the great rationalist system-making metaphysicians. In coherence theory, when one says that a statement or judgment is true or false, one means that the statement coheres or does not cohere with other statements, which, taken together, create a “system” that is held together either by logic or by pure mathe-

matics. To be called “true,” a statement must fit into a comprehensive account of the universe and its reality. In everyday language, people often reject outlandish assertions (such as someone claiming that he or she sees ghosts or claiming that God visits him or her every day) because the assertions do not cohere with other scientific views or even with common sense.

Believers in the coherence theory justify their position, in part, on the basis of their view of the theory of knowledge and also, in part, on the basis of a priori reasoning such as that found in such fields as mathematics and logic. They believe that all knowledge is a vastly organized and logically expressed interlocking series of statements or judgments.

Critics who reject the coherence theory point out that a priori statements that are typical of mathematics and physics are unlike empirical statements about observations of everyday life, and thus they give priority to empirical evidence rather than a priori judgments. For example, scientists may have determined by observation that water boils at 100 degrees Celsius but may, after further observation, learn that the statement is true of water at sea level but is not true of water at higher altitudes; either way, empirical evidence is the key to “the truth.”

CORRESPONDENCE THEORY

Influenced by Bertrand Russell, many modern philosophers embrace the correspondence theory of truth, which holds that the truth corresponds to reality. As Russell defined the term, truth exists in some form of correspondence between belief and fact (reality). Actually, the lineage of this belief can be traced back to Aristotle, who held that “A” is always “A” and “non-A” is never “A.” By the “facts” of a case, the case is true if the “facts” are true or is false if the “facts” are untrue. The “liar’s paradox,” however, bedevils those who embrace this theory. Eubulides, a Megarian philosopher, a near contemporary of Aristotle, first formulated the paradox: “I am a liar, and what I’m now saying is false.” Correspondence theorists would have to reason that the statement is true if the man is a liar; that is, it is true if it itself is false, but false if it is true.

Writing after the turn of the twentieth century, G. E. Moore justified the correspondence theory on the grounds that statements that reflect reality are true and those that do not reflect reality are false.

Moore held that truth is agreement between belief and fact. If the former is true, there is a “fact” in the universe to which the belief corresponds; if the belief were false, there would be no “fact” to which it could correspond. Bertrand Russell added that there can be no incompatibility among “real” facts, but there are many incompatibilities among falsehoods.

PRAGMATIC THEORY

Pragmatic theory holds that the truth is the satisfactory solution to a problematic situation. This theory developed, in part, as a reaction against Cartesian logic. René Descartes considered matters individually and subjectively, believing that an idea was clear and true if it seemed to him to be clear and true, never considering that an idea might seem clear and true even though it was false. Pragmatists such as Charles S. Peirce, who wrote during the late nineteenth and early twentieth centuries, argued that truth had a public rather than an individual character and that it should never be severed from the practicality and reality of human life or from the human pursuit of knowledge. Peirce then defined scientific truth as a learned judgment ultimately agreed upon by all who investigate a certain statement, issue, or problem.

John Dewey’s definition of pragmatic theory differed from that of Peirce; Dewey held that truth originates with doubt, which in turn prompts an investigation. First, relevant “facts” are gathered and applied; they mark off what seems safe and secure (true). Investigation then begins, lasting until “reality” (truth) is verified. Russell disagreed with Dewey, however, holding that truth is still truth even if it is not verified by an investigator. Another critic formed an example of what Russell meant: Smith committed a crime on Monday that was not discovered until Friday. The truth (the crime), “happened” on Monday and became reality then even if the authorities did not verify that truth until later.

Another pragmatist, William James, developed his own views of truth, holding that truth was expedient—it was whatever put one in a satisfactory position with the world. James came under attack from others who objected to his amoral approach, for if truth was only an expedient and a satisfactory position then lies might become truth, good might become bad, and all definitions of truth would be torn asunder.

Many pragmatists are also empiricists. For example, Isaac Newton’s theory of gravitation is true be-

cause Newton's ideas lead to computations that agree with observations. The old corpuscular theory of light was eventually rejected because certain of its ideas did not agree with experience and observation.

EARLY EVOLUTION OF THE PHILOSOPHICAL CONCERN FOR THE TRUTH

Many early philosophers, in addition to those mentioned above, decided that objective truth existed. Plato's ideas included elements of both the correspondence and coherence theories, and, as mentioned above, Aristotle also developed the correspondence model. Challenges and criticisms of this idea were made by the early Sophists, who held that the truth was relative, and early skeptics, who argued that the real truth is not knowable by humans and that people should therefore live in a state of suspension of judgment.

During the Middle Ages, the doctrine of double truth was in vogue, largely because it appeared to save theology from philosophy. Those who stressed double truth claimed that what might be true in philosophy might be false for religion. Thomas Aquinas contributed to the debate by modifying the correspondence theory. He held that truth was the "adequation" of thought to things, and added that since truth is a transcendental concept, the highest truth was that of God. In the modern era, the double truth doctrine remains in vogue, as would-be religionists allow science and theology to coexist.

Later philosophers added depth to the search for truth. Baruch Spinoza, for example, argued that truth was the standard literally of itself and of the false as well. Leibniz drew a distinction between truths of reason and truths of facts (today's analytic-synthetic distinction). The former relied on the principle of identity and the latter simply on "sufficient" reason. John Locke joined the debate by drawing distinctions between truths of thought and truths of words; the former rested on the agreement of ideas with things, the latter on the agreement of ideas. Hegel explored what he called the "historical truth" versus formal truth, with the former relating to concrete existence and the latter to mathematics.

TRUTH, ERROR, LOGIC, AND MORALITY

Formal logic holds that a proposition or a fact is true if it reports, portrays, or describes "things" as they are (reality). A true idea corresponds in structure

to reality. Formal logic, however, cannot account for certain types of falsehoods or errors, especially those that have moral or ethical overtones. Out of prejudice, ignorance, willfulness, or "feelings," people may embrace error. Many, for example, are superstitious; some deny certain scientific "truths" because they are not in accord with feelings or beliefs. Others embrace patently false philosophies and doubtful theological heresies because such heresies make them "feel" better. Worse, humans who are ignorant of "facts" experience a certain type of a void or a vacuum, and they often fill in their void or vacuum with errors.

Volitional untruth often leads to immorality and/or unethical behavior. Many a liar, for example, justifies his or her falsehoods with the phrase "everyone does it." Many a politician justifies the courting and the accepting of bribes because "everyone does it." Many a priest, preacher, or rabbi professes goodness while leading a private life that no "good" God could condone. Unfortunately, religion provides fertile ground for volitional untruth. Religionists believe in doctrines and ideas that are impossible to prove true. Yet many religionists still persecute and discriminate against those who do not embrace their unprovable assertions.

Prejudice appears to be a major source of volitional untruth that causes great harm. Historical examples could include the Holocaust, the German slaughter of at least six million Jews; Joseph Stalin's mass murders before and during World War II; and Serbia's "ethnic cleansing," a euphemism for attacks (that led to much destruction and many deaths) on other ethnic groups in what used to be Yugoslavia. It is clear that, worldwide, much racism and rabid ethnocentrism still exists.

TRUTH AS COMMON SENSE

When "common" people, living in the real world, use the term "common sense," they generally contrast the term with its opposite, nonsense, for what is opposed to common sense is nonsensical. Generally, people who have common sense tend to trust their five senses of perception and therefore to trust the observations about reality that their senses record. Common sense as a form of truth is usually opposed to "high" and obvious paradox, and it offers people protection from gross absurdity. For example, a person with common sense probably will not give much consideration to the following question: "if a tree

falls in the forest, does it make a noise if no one is there to hear it?" Common sense dictates that one should disregard that question, because it involves only mental gymnastics. Likewise, most people do not attempt to determine how many angels can stand on the head of a pin.

In terms of the truth (or philosophy) of common sense, Aristotle was one of the first to stress "A" and "non-A" and to argue that the reality of the world was for the most part exactly what it seemed to be. Some modern philosophers echo Aristotle's dictum. For example, G. E. Moore developed "truisms" that implied the correctness of common sense: Earth has existed many years in time and in space; human beings have also existed for many years and have related to the material Earth and to each other. Thus, Moore condemned philosophers who tried to deny the existence of material things, of space, and of time. Some woebegone philosophers, Moore complained, had even denied the existence of minds other than their own; thus, they had to convince their listeners or their readers that they—the listeners and readers—did not exist, but if they did not exist, how could they hear of or read about the philosopher's opinions in the first place?

Commonsense observations do, of course, have limitations. Common sense can produce error. Primitive humans probably could not have believed the modern "view" that the earth is always revolving in an orbit around the Sun. Trusting their powers of observation, primitives would likely laugh at such a statement because the earth under their feet was not moving. Philosophers who stress common sense, however, argue that such error is always temporary because common sense evolves as more is learned about the world and reality.

TRUTH AND UNTRUTH IN THE WORLD OF POLITICS AND ECONOMICS

In the real world in which people live, falsehoods and unethical behavior abound (caused by, for example, personal character flaws or someone's drive for power). Nowhere is this more evident than in the United States' political system and economic system. In politics, for example, in recent decades Americans have witnessed something of a public circus. The Watergate scandal of the early 1970's disgusted many people, especially after certain tapes revealed that President Richard Nixon, in speaking to aides, acted

much like a Mafia chieftain who plotted the destruction of his political enemies (real or imagined). The tapes also proved that Nixon was deeply involved in the scandal, not blameless as he had earlier maintained.

The 1980's and early 1990's witnessed such episodes as the "Iran-Contra" affair, which tainted President Ronald Reagan, and various congressional scandals involving the House of Representatives' "bank," its "post office," and its restaurant. Concerning economics, people witnessed such developments as the savings and loan scandal, a scandal that cost billions of dollars, most of which the general public ultimately will have to pay.

If one multiplied the examples above by one hundred, one might begin to approach the number of scandals that have occurred in modern America. The root cause has to do with unethical behavior, with falsehood rather than truth, with "bad" rather than "good." So wrong have things gone that many people have despaired and become apathetic, not knowing whom to trust. Furthermore, many analysts from different academic fields now talk about the decline of American civilization.

Tutu, Desmond

IDENTIFICATION: South African cleric and rights activist

BORN: October 7, 1931, Klerksdorp, Transvaal, South Africa

TYPE OF ETHICS: Religious ethics

SIGNIFICANCE: As an Anglican cleric, Tutu contributed moral force to help end South Africa's racial segregation.

Of native African heritage, Desmond Tutu grew up in Johannesburg, South Africa, under the rigid racial segregation system of apartheid. After training to become a teacher in black Africans schools, he left that profession because of the country's inherently unequal educational system. Eventually convinced only a moral challenge to apartheid could forcefully combat the system, he became a priest in the Anglican Church in 1961. The church was a worldwide body known for its forthright opposition to racism. Tutu spoke against the inhumanity of racial segregation to increasingly sympathetic listeners in South Africa and abroad. While the South African government used repressive force against violators of segregation laws, Tutu advised his followers to respond with the greater moral force of nonviolence.

After being appointed a bishop, Tutu became secretary-general of the South African Council of Churches in 1978. From that national platform, he courageously

Image not available

Archbishop Desmond Tutu (right) shakes hands with former South African president P. W. Botha in 1996. (AP/Wide World Photos)

transmitted his message of nonviolent opposition to racism and published a series of books, the first of which, *Hope and Suffering*, appeared in 1983. For his sustained nonviolent challenge to apartheid, he received the Nobel Peace Prize in 1984.

Ten years later apartheid definitively ended when South Africa elected its first black majority government and Nelson Mandela became president of the country. By then Tutu was archbishop of Cape Town. In 1995 he was selected to preside over the government's Truth and Reconciliation Commission. Requiring a firm sense of moral balance, the commission investigated atrocities by all factions in the struggle against apartheid. When the commission presented its final report in 1998, it concluded that primary blame lay with the former apartheid government, but that all sides were guilty of outrages. Tutu himself later spoke out against Israeli treatment of Palestinians, calling it a form of apartheid.

Two Treatises of Government

IDENTIFICATION: Book by John Locke (1632-1704)

DATE: Published in 1690

TYPE OF ETHICS: Enlightenment history

SIGNIFICANCE: A seminal work of classical liberalism, the *Treatises* argued for natural rights, private property ownership, limited government, and the construction of legitimate government on the basis of consent and a social contract.

Two Treatises of Government was supportive of the political agenda of the Whigs and articulated a revolutionary sophisticated political theory of classical liberalism. John Locke's political theory and political ethical arguments were derived from his interpretation of the natural and rational human self-interests to survive and to acquire private property. The moral premises of universal natural rights and government's ethical obligation to protect such rights underpinned Locke's interpretation of natural law.

The law of nature was a source of rational moral political principles and a universal code of ethics. It was morally obligatory for all individuals to consult and comply with these moral precepts. Because of partiality, self-interest, and the personal pursuit of private property, however, humans often misunderstood the law of nature. The law of nature required all individuals to preserve their own lives and property, and "no one ought to harm another in his life, health, liberty, or possessions."

Locke asserted a moral objectivist perspective, based on his assumption that the law of nature had universal applicability and transcended any particular historical or social context. In the state of nature, because of the lack of public authority each individual was responsible for the interpretation and implementation of the law of nature as well as for the punishment of transgressors. Although individuals were relatively equal, free, and independent rational moral agents who pursued property in the state of nature, inconveniences and disputes regarding property transactions prompted individuals to unite by means of a social contract to institute a civil society.

The concept of a state of nature was viewed by Locke as a fictional contrivance that served to demonstrate the normative basis of legitimate political authority. Unlike Thomas Hobbes's political ethical theory that humans were primarily motivated by fear of violent death to fulfill their moral obligations to the state, Locke's moral political philosophy held that individuals were guided by reason in the creation of their social and political institutions. Locke interpreted the political authority relationship as being derived from the consent of citizens to government. Governments were entrusted specifically to protect the natural rights (particularly of private property) of individuals.

Locke's *First Treatise* rejected the political theory of royal absolutism, monarchical prerogative, patriarchalism, and divine right of kings advocated by Sir Robert Filmer's *Patriarcha*. In contrast to Hobbes's theory of political absolutism, which was based upon the passive obedience of citizens, Locke's political theory of classical liberalism was grounded in the normative principles of limited government, governmental accountability, and the active moral assessment by citizens of public authority. Locke justified rebellion against an arbitrary, tyrannical sovereign who ruled by absolute power and existed in a state of

war with the people. In addition to simply being a moral justification of an individual's natural right to mix his or her labor with material objects and thereby claim exclusive property ownership, Locke's labor theory of value and concept of property were broadly identified with the ethical principle of individual moral autonomy.

Tyranny

DEFINITION: Oppressive power unjustly exerted by a government over its people

TYPE OF ETHICS: Politico-economic ethics

SIGNIFICANCE: Classically, there are three forms of political tyranny: dictatorship, or tyranny by an individual; oligarchy, or tyranny by a group; and nonrepublican democracy, or tyranny of the majority. Each form has been condemned on the grounds that it abridges the right to self-determination.

In seventh century B.C.E. Greece, aristocrats ruled city-states called *poleis*, whose citizens obeyed the laws made by kings and governing councils, called *archons* in Athens. The first tyrant was Cypseus, who took power by force in Corinth in 657 B.C.E. Pisistratus overthrew the political leadership in Athens with his army and ruled as a tyrant from 546 B.C.E. to his death in 528 B.C.E. A Greek tyrant was not necessarily feared or hated. Pisistratus, for example, built temples, sponsored festivals, and was admired, if not loved, by many Athenians. Tyranny, however, was established through extralegal means, and even if the tyrant later obtained popular approval, he still imposed his will on the people. It is this aspect of tyranny that has been emphasized in criticisms of rulers from George III of England by the Americans to Czar Nicholas II by the Russian revolutionaries. Tyranny implies the use of force by a powerful leader to control the people. It results in the denial of freedom and the imposition of the will of the ruler.

Tzaddik

DEFINITION: Jewish ideal of a person who is just, righteous, pious, and virtuous, or an action that is morally correct

TYPE OF ETHICS: Religious ethics

SIGNIFICANCE: The concept of the *tzaddik* provides Jews with an ideal model of moral and ethical behavior. In Hasidism, it is synonymous with the *rebbe*, the leader of a Hasidic court.

The Bible considers the *tzaddik*, who lives by faith, to be an abomination to the wicked and holds that the actions of the *tzaddik* can influence others to be righteous. Several of the prophets, however, along with the books of Ecclesiastes and Job, suggest a dilemma: The *tzaddik* is rewarded with material prosperity and divine blessings but suffers tribulations; his merit may endure forever, but he may perish in his righteousness. For the rationalist rabbis, the concept of absolute righteousness is unattainable. In their opinion, however, the *tzaddik* is to be praised more than are the ministering angels; his creative acts are coequal with those of God, and he is capable of canceling or at least minimizing the stern decrees of Heaven and Earth.

Indeed, it is because of the sustaining merit of the *tzaddikim*, rather than psychological determinism and mechanics, that the world exists. The Kabbala teaches that the soul of the *tzaddik* exhibits a harmonious relationship between the hidden aspect of the divine and the divine as it is manifested. The *tzaddik's* life, therefore, suggests that the inner turmoil of one's soul is not a problem that defies solution but a mystery that can be resolved if, following the *tzaddik's* narrow path to otherworldliness, one loves and fears God in joy. In the words of one talmudist-kabbalist, "The justification of [man's] life is that, at every moment, he burns in the consuming fire of the Lord, for his soul is the candle of God."

A central concept in the Kabbala is the symbiotic interaction of God and humanity, in which the ac-

tions of the lower world have an impact on the higher world. In the Hasidic world, this developed into the complementary roles of the *rebbe/tzaddik* and the *hasid* (“pious”). During the Shoah (the Holocaust), for example, the cadres of *rebbeim/tzaddikim* were a source of *hithazqut* (“encouragement”), which served to diminish despair (*ye’ush*) among the Hasidim. The *rebbeim/tzaddikim* acted as a kind of sponge for misery, absorbing pain and cruelty before they spilled out and overcame all else. They taught that multiple

acts of holiness in the service of God and humanity help to restore dignity and self-respect, and can bring sanity to a shattered world. This view provides a marked contrast to the “theology of suffering,” which views sainthood in terms of martyrdom.

U

Unamuno y Jugo, Miguel de

IDENTIFICATION: Spanish philosopher
BORN: September 29, 1864, Bilbao, Spain
DIED: December 31, 1936, Salamanca, Spain
TYPE OF ETHICS: Modern history

SIGNIFICANCE: In such works as *The Life of Don Quixote and Sancho* (*Vida de Don Quijote y Sancho según Miguel de Cervantes Saavedra, explicada y comentada por Miguel de Unamuno*, 1905), *The Tragic Sense of Life in Men and Peoples* (*Del sentimiento trágico de la vida en los hombres y en los pueblos*, 1913), and *The Agony of Christianity* (*La agonía del Cristianismo*, 1925), Unamuno explored his own soul in an attempt to understand humankind's quest for immortality. He believed that faith and emotion were the best tools with which to explore the tragedy of life.

Subjectivity, individualism, an acknowledgment of the role of irrationality, and a sense of life's anguish and tragedy were among the existential values that Miguel de Unamuno y Jugo shared with Søren Kierkegaard, Martin Heidegger, and Friedrich Nietzsche. Although he gave his own distinctive accent to their concept of the tragic sense of life, Unamuno rejected their idea that life was nothingness. He found meaning in his own passionate desire to escape annihilation by questing for the immortality of body and soul, and he concluded that this quest was common to all people. This perception was not derived from the principal philosophical systems of the day. Those systems were too abstract for Unamuno because they yielded only dehumanized ideas about human nature and human beings themselves: "thinking man," "economic man," or "freedom-seeking man."

Having devoted his intellect to exploring his inner self, Unamuno viewed humanity as a creature of flesh and bones, not as a philosophical object or an academic construct. Real humans were driven by passions and by faith. Since reason could explain neither the human search for immortality nor its own ex-

istence, Unamuno viewed humanity as being caught in a tragic struggle between reason and faith—faith being simply the hope that death does not bring annihilation. Unamuno's faith had, as Catholic theologians say, a "vital" religious base that also provided a foundation for his subjectivity and his intense individualism. Regarding most political systems as, at best, cloaks for civil privateering or masks for tyranny, and remaining innately suspicious of ethical and scientific ideals, he was a lifelong champion of the divine rights of individuals and of the battle for the human spirit.

Uncle Tom's Cabin

IDENTIFICATION: Novel by Harriet Beecher Stowe (1811-1896)

DATE: Published in 1852

TYPE OF ETHICS: Race and ethnicity

SIGNIFICANCE: One of the most influential and best-selling didactic novels in American history, *Uncle Tom's Cabin* used Christian ethics to attack slavery as immoral and to arouse popular sentiment against it.

Harriet Beecher Stowe's best-selling novel was the most influential antislavery work published in the years just prior to the American Civil War. It was a direct response to the moral concessions in the Compromise of 1850, and particularly the Fugitive Slave Law, which required citizens of northern states to return runaway slaves to their southern owners. The novel also refuted some contemporary religious arguments that attempted to justify slavery through biblical evidence.

CAUTION!!

COLORED PEOPLE

OF BOSTON, ONE & ALL,

You are hereby respectfully **CAUTIONED** and advised, to avoid conversing with the **Watchmen and Police Officers of Boston,**

For since the recent **ORDER OF THE MAYOR & ALDERMEN,** they are empowered to act as **KIDNAPPERS** AND **Slave Catchers,**

And they have already been actually employed in **KIDNAPPING, CATCHING, AND KEEPING SLAVES.** Therefore, if you value your **LIBERTY,** and the *Welfare of the Fugitives* among you, *Shun* them in every possible manner, as so many **HOUNDS** on the track of the most unfortunate of your race.

Keep a Sharp Look Out for KIDNAPPERS, and have TOP EYE open.

APRIL 24, 1851.

Notice posted in Boston in 1851—the year before Uncle Tom’s Cabin was published in book form—warning African Americans about the dangers of slave catchers. (Library of Congress)

Stowe was committed to exposing slavery as anti-family and atheistic. She believed that the materialistic values of mid-nineteenth century commerce had numbed Americans’ moral sense and blinded them to the tragic consequences of the slave trade. Stowe believed that the Christian, domestic values embodied by wives and mothers were the best antidote for this evil, and her book makes numerous appeals to American women to use their humanizing influence to end slavery. Another ethical issue raised by the novel is the appropriate response of slaves to oppression. Although some modern readers question the docility of the titular hero, Stowe’s purpose was to create a

Christ-like figure who embodied superior character traits, such as humility, goodness, and submission to God’s will, that were essential in Stowe’s Christian value system.

Unconditional surrender

DEFINITION: Total military capitulation in which the losing side has no power to negotiate and must accept any conditions that are imposed upon it by the victor

TYPE OF ETHICS: Military ethics

SIGNIFICANCE: Refusal to accept anything less than unconditional surrender may significantly prolong military conflicts or increase the destruction they cause, raising ethical questions about the permissible or justifiable scope of warfare.

During some of the most critical days of World War II, American president Franklin D. Roosevelt and British prime minister Winston S. Churchill met in January, 1943, in Casablanca, Morocco. Their intent was to plan future Allied operations and to reassure their hard-pressed Soviet ally that they would make no diplomatic

deals with the common Axis enemy. Concluding this Allied North African Conference (ANFA), Roosevelt publicly announced that the war against Nazi Germany, Japan, and Italy would end only with the “unconditional surrender” of those countries. Roosevelt made it clear that the Allies were conducting war not against the peoples of these enemy nations but against their governments and military machines. Enunciated after Great Britain had been at war for nearly four years and the United States had been at war for two, the doctrine of unconditional surrender signaled the Allied resolve to fight the war to the finish. Roosevelt’s announcement surprised some of his

own military chiefs, as well as Churchill, and it subsequently proved to be a source of confusion and controversy.

THE DOCTRINE'S ORIGINS

Just as the French Revolution introduced Europeans to the realities of the beginnings of total war, so too did the U.S. Civil War introduce Americans to them. In February, 1862, the previously little-known Brigadier General Ulysses S. Grant gained recognition by demanding the "unconditional surrender" of Confederate Fort Donelson. One year later, in January, 1863, he gained fame for demanding unconditional surrender at Vicksburg, when the commander of Confederate forces holding the town, Simon Bolivar Buckner, requested terms of surrender from Grant. Buckner had reason to expect generosity, for he and Grant had been friends at West Point. Grant's reply, however, was "unconditional surrender." In making this reply, Grant expressed his, and the Union's, acceptance of a grinding, bloody total war. In terms of doctrine, it hardly mattered that Grant later allowed his exhausted and starving Confederate prisoners to go home on parole or that the terms that Grant offered to Confederate general Robert E. Lee, which ended the war at Appomattox, were extremely generous.

THE DOCTRINE'S EVOLUTION

The diplomacy preceding and during warfare was something with which Americans had little experience between the Civil War and the nation's participation in the last years of World War I. The issuance of President Woodrow Wilson's Fourteen Points in January, 1918, marked a fresh and controversial approach to settling with the enemy, chiefly Wilhelminian Germany. An armistice was predicated on the overthrow of Kaiser Wilhelm and his government and the installation of a government that represented the German people—one that thereby became acceptable to Wilson. On November 9, 1918, the kaiser abdicated and a new government was formed; on November 11, an armistice ended the fighting. Subsequently, Wilson's detailed peace plans were compromised and the planned American participation in a League of Nations failed to materialize. Supporters of Wilson believed that Wilson's Fourteen Points and armistice terms, by separating the German people from the policies of the kaiser's government, had helped to shorten the war.

Many people believed, however, that Germany should have been crushed, that Berlin and most of Germany should have been occupied by the United States and its allies. By the mid-1930's, American disappointment over its wartime experience, combined with the new presence of a rearmed and militant Hitlerian Germany, led to the conclusion that Germany had profited from too much leniency in 1918. The unlimited warfare unleashed by Germany, Japan, and their allies in World War II provided ample grounds for reviving Grant's concept of unconditional surrender.

THE DOCTRINE DURING WORLD WAR II

President Roosevelt's reassertion of unconditional surrender at Casablanca was aimed at attaining several immediate objectives. A global war had reached a critical stage. A long string of unbroken Allied defeats had just been ended. The Battle of the Atlantic was still being lost. Mistrust persisted between Britain and the United States, on one hand, and their invaluable ally the Soviet Union, on the other. Thus, the doctrine was intended to raise Allied morale, reassure the Russians, and signal Allied resolve to the enemy. Scholars later noted that of all the Allied statements, this was the only one that Adolf Hitler believed completely.

In 1943, Roosevelt's military chieftains apparently had little or no prior knowledge of the unconditional surrender doctrine. Initially, therefore, the doctrine did not represent a military initiative. Roosevelt probably drew upon the recommendations of a 1942 State Department Advisory Committee on Postwar Policy that had been passed on to him by Committee Chairman Norman Davis. The recommendation was that "nothing short of unconditional surrender by the principal enemies, Germany and Japan, could be accepted" (The way was left open for a "negotiated peace" with Italy.) Amid the drama of Casablanca, Roosevelt apparently recalled the Committee's recommendation.

After the Allies won a number of victories in 1944, Roosevelt and his military commanders decided that German resistance had been stiffened by the doctrine, thus prolonging the war, but Winston Churchill adamantly refused to abandon the doctrine. Consequently, in order to preserve harmony within the Grand Alliance, unconditional surrender was retained.

ETHICAL IMPLICATIONS

The questions of whether the doctrine of unconditional surrender lengthened the war, whether it was necessary for military victory, and whether it was morally justifiable continued to be controversial after the war's end. Did the ruthless acts of the Axis nations make it ethically permissible to match total war and terror with more total war and terror? No conclusive answers to this question have been found. American Cold War doctrine (1946 to 1986) in reaction to Soviet policy indicated, however, that if war came, the United States and its allies were prepared for a nuclear war of mutually assured destruction (MAD). Logically, the doctrine of unconditional surrender meant annihilation.

UNESCO Declaration on the Human Genome and Human Rights

IDENTIFICATION: First universal instrument in the field of biology and ethics

DATE: Adopted on November 11, 1997

TYPE OF ETHICS: Bioethics

SIGNIFICANCE: Written in several iterations by representatives from around the world, this statement aims at striking a balance between the rights and freedoms of human beings and the goal of ensuring freedom of research.

In early 1995 the Bioethics Unit of the United Nations Educational, Scientific, and Cultural Organization (UNESCO) prepared a draft declaration regarding human genome research. The purpose was to prepare a universal instrument designed to safeguard cultural diversity while presenting an ethical stand on genetic research. In September, 1995, that draft was revised by a committee that met in Paris. The revised draft was given to the meeting of government experts in July, 1997, for their comments. The fifth session of the UNESCO International Bioethics Committee reconvened in October, 1997, in Cape Town, South Africa. The final version that emerged was the Universal Declaration on the Human Genome and Human Rights, which was adopted unanimously by the 188 members of the general conference of UNESCO on November 11, 1997. Five years later, the International Society for Bioethics (SIBI) awarded its SIBI Award to UNESCO for the declaration.

The preamble of the declaration presents UNESCO's mandate and previous declarations regarding human rights, discrimination, research, and related issues ratified by member states. The declaration's first section is about human dignity and the human genome. It underscores the unity of all human beings and calls for scientists to respect their subjects, not reduce individuals to genetic characteristics or base their work solely on financial gain. The second section, about the rights of concerned persons, calls for informed consent, rigorous preliminary research, nondiscrimination, confidentiality, and punitive damages for violation of an individual's genome.

The third section is about research on the human genome and has three articles that call for respect of

human rights over research; forbidding practices contrary to human dignity, such as human cloning and making universally available the results of research. The fourth section deals with the conditions under which scientific research is conducted. Its four articles pertain to meticulousness in inquiry, intellectual freedom, restriction of uses to peaceful purposes, and committee assessments. The fifth section pertains to solidarity and international cooperation, with two articles about global cooperation. The sixth section is about the promotion of principles in the declaration, and the final section is about implementation of the declaration by each of the member states.

Union of Concerned Scientists

IDENTIFICATION: Organization established to examine the uses and hazards of nuclear energy

DATE: Founded in 1969

TYPE OF ETHICS: Scientific ethics

SIGNIFICANCE: The Union of Concerned Scientists pursues a vigorous program of public advocacy and education concerning the effects of advanced technology on society and public policy.

At the end of the 1960's, the testing of nuclear weapons had been suspended by the United States, the Soviet Union, and other nations with nuclear arms, but the Strategic Arms Limitation Treaty (SALT) talks that would halt the construction of weapons had not

yet begun. In addition, the first nuclear power plants were either on the drawing boards or actually under construction. The Union of Concerned Scientists (USC) was founded at this time to gather information on the nuclear arms race, arms control, nuclear reactor safety, energy policy, and other related matters. (Although the membership of the USC is not made up exclusively of scientists, a core of technically competent professionals makes its studies definitive and disinterested.)

The USC's findings are made available in its own periodicals, in conferences, in public presentations, in the media, in speaking engagements, and in educational packets provided for school use. The USC also provides court testimony and appearances at hearings such as those conducted by the U.S. Nuclear Regulatory Commission (NRC) regarding the relicensing of atomic power plants. More recently, the USC has broadened its scope to deal with the impact of advanced technology in general on society and has organized scientists on a worldwide basis out of concern for the earth's ecology.

United Nations

IDENTIFICATION: Intergovernmental world organization established for the promotion of international peace and security

DATE: Established in 1945

TYPE OF ETHICS: International relations

SIGNIFICANCE: As an international mechanism for collective security, conflict resolution, and promotion of prosperity and humanitarian welfare, the United Nations is frequently involved in disputes that bring the competing goals and varying ethical standards of different nations into conflict.

Established at San Francisco by fifty world governments in 1945, the United Nations (U.N.) represented an effort to foster international cooperation, to encourage peaceful settlement of disputes, to prevent

war, to punish aggression, and to control conflict through a collective security system. After the widespread destruction of World War II, which left tens of millions of people dead, governments realized a need to prevent and control conflict through legal and diplomatic means, while addressing the underlying causes of conflict, such as poverty, ignorance, cultural misunderstanding, injustice, and disrespect for the dignity of the human person, human rights, and fundamental freedoms.

The United Nations was designed to be a comprehensive venue in which causes of conflict could be identified and addressed by governments so as to reduce the propensity to war among nations, and as a place where imminent threats to peace or threats of aggression could be prevented or managed. The U.N. General Assembly, comprising all member states, was charged with overall coordination of U.N. activities, while the Security Council, comprising a smaller number of states—including five great powers as permanent members—was established as the primary U.N. body for maintaining international peace. To address the promotion of human rights, humanitarian assistance, and economic development the Economic and Social Council (ECOSOC) was also established.

BASIC ETHICAL PRINCIPLES

The U.N. system is rooted in several important ethical principles. The U.N. Charter recognizes the principle of the sovereign equality of its members, who are called to cooperate with one another through common efforts to achieve a better world. This reflects the important ethical principle of solidarity. The cooperation is to be achieved by the mutual efforts of governments within their own domestic systems of government. This represents the ethical principle of subsidiarity, which is reflected in the sovereignty, territorial integrity, and political independence of each member state.

The United Nations is not an overarching or all-powerful world government, but rather a system through which politically independent and legally sovereign nations can cooperate to achieve common objectives such as collective security, peace, and greater social and economic advancement. To advance these goals, U.N. member states agree to refrain from the threat or use of force against fellow member states, and to cooperate with other members in punishing member states that violate their obliga-

tions to resolve disputes peacefully. The United Nations is rooted in the ethical principles of charity and preventing harm. However, charity can hurt as well as help and preventing harm often involves threats of harm against those who would inflict harm unjustly. U.N. efforts to oppose aggression may involve the use of force to punish egregious violations of Charter obligations. Wherever it turns the United Nations faces ethical dilemmas.

HUMAN RIGHTS AND SELF-DETERMINATION

Although member states may expect no interference in their domestic affairs or infringement upon their territorial integrity, the U.N. Charter does provide for the promotion of human rights, and it recognizes the principle of self-determination of peoples. If a member state engages in gross violation of human rights, may it expect the United Nations to refrain from any form of intervention? If a member state faces a civil war in which a portion of its population expresses a desire for self-determination, should the United Nations support the existing legal sovereign or should it honor the principle of self-determination of peoples?

These tensions complicate the work of the United Nations, which as a general rule has honored the principle of national sovereignty over that of human rights. The United Nations worked aggressively for the principle of self-determination for colonial areas, which rapidly gained independence and U.N. membership. However, many of these newly independent member states proved to be politically unstable, economically weak, and badly divided along ethnic lines from within. When civil wars and human rights abuses erupted in many of these countries, the tendency of the United Nations was to honor the principle of sovereignty to the detriment of human rights and self-determination. The civil wars were seen as largely domestic disputes lying outside the competence of U.N. collective security efforts, which were designed primarily to prevent international conflicts. There were exceptions to this, as when the United Nations intervened after the independence of the Congo in 1960 to put down civil wars and prevent the self-determination claims of the resource-rich Katanga Province.

As a rule, the Cold War that swiftly overtook international relations after World War II led to a stalemate among the permanent members of the Security Council that possessed veto power and could thus

prevent common action against international security threats. Not until the end of the Cold War in the late 1980's and early 1990's did the Security Council emerge as an active enforcer of collective security, and when it did so, it confronted primarily civil war situations where conflicting claims to self-determination complicated its work.

SOLIDARITY AND SUBSIDIARITY

At the very heart of the U.N. system is the mutual link between the principles of solidarity and subsidiarity. Solidarity is a quality of mutual support, cooperation, loyalty, and fellow feeling. It is most profoundly characteristic of families, where mutual love and support are most deeply felt. It is characteristic of local communities, of church groups, and of clan associations. It is also often exhibited in the feelings of patriotism of citizens toward their country, although in many parts of the world such a national sense of solidarity has never developed, which leaves such countries vulnerable to civil disturbance among competing groups with high levels of solidarity. Finally, the United Nations reflects an effort to develop a sense of global solidarity, in terms of achieving international peace and security. Clearly, solidarity is weakest at this international level, and it will likely always remain so. Still, a degree of solidarity is necessary at this level to encourage basic international cooperation in the interest of collective security and international justice.

Closely coupled with the principle of solidarity is that of subsidiarity, which acknowledges the proper independence of each level of human activity, from individuals and families, to local associations and civic bodies, to provincial and national political life, and to international associations. Subsidiarity asserts that each sphere of human activity should be left to its proper pursuit of human goods. Each person should be respected as endowed with fundamental rights and freedoms. Families have a right to beget and raise children into human maturity and to serve as the first educators and primary teachers of ethics and of solidarity to their children. However, individuals and families cannot provide for all things. Thus local governments come into being to promote the safety, security, and good public order in which individuals and families can thrive.

National governments arise to promote the general welfare, to provide for common defense, and to

support, not to displace, the efforts of local governments and of families in their primary duties. Similarly, history shows that nations must cooperate to maintain international peace and security and prevent humanitarian disasters. Global tasks require a concomitantly global organization to promote cooperation. The aim should be support rather than to dictate to governments how they must order their domestic life. Every level of human organization has an appropriate role to play in advancing the human good and in supporting those institutions that are best suited to achieve those goods.

SUBSIDIARITY IN PEACEMAKING

The U.N. Charter acknowledges the principle of subsidiarity in two ways: first, in honoring the principle of sovereignty and the inherent right of each member state to act in self-defense when facing imminent threats to security, and second, in providing for regional collective security organizations. The seventh chapter of the U.N. Charter provides that member states may join together in regional organizations to promote regional peace and security.

Member states have an obligation to keep the U.N. Security Council informed of acts of self-defense and regional collective security actions, but they are free to act in situations in which delay or even the impossibility of the Security Council to reach consensus on a decision to act would compromise their national safety and security. Thus, the U.S. action in Afghanistan to remove terrorist threats after the September 11, 2001, attacks, though controversial, won the general endorsement of the United Nations. The United States, Great Britain, Spain, and several other U.N. members, though failing to win explicit U.N. endorsement, justified the use of force against Iraq in 2003 on grounds of preemptory self-defense.

SUBSIDIARITY IN SOCIAL AND HUMANITARIAN POLICY

The promotion of human rights, the achievement of social and economic advancement, and the application of humanitarian assistance are primarily the right and duty of national governments, not of the United Nations itself, whose role is supportive. Similarly no government of a country can promote such causes without vigorous local action and implementation. When there is a disastrous breakdown in the capacity of local or national efforts to achieve such

goals, countries often turn to the United Nations for assistance. This happens during famines, natural disasters, or widespread civil disturbances. Normally, local nongovernmental organizations (NGOs), religious groups, private enterprises, and businesses in cooperation with governments of countries are the institutions in healthy civic settings where this work is more directly and effectively accomplished. If U.N. bodies or international nongovernmental organizations lose respect for these local capacities and cultural values and resources, or when they attempt to monopolize or co-opt them, even during an emergency, the principle of subsidiarity is compromised.

The spectacular growth in the numbers of NGOs and international advocacy groups, coupled with the growing number of U.N.-sponsored conferences to which such groups are now routinely invited along with governments, has created situations where the principle of subsidiarity can be violated. Some NGOs advance ideas and principles in such settings that could not gain legislative support within their own nations. Examples include various attempts at international conferences to redefine the traditional family values, to advance abortion as a human right, and to advance population control in ways that violate local cultural and religious norms. Such issues are politically controversial, culturally explosive, and deeply personal ones that beg for local and personal resolution in keeping with the principle of subsidiarity.

CONCLUSION

Questions concerning the cardinal virtues of justice, prudence, temperance, and fortitude populate the U.N. agenda. Just as individuals and governments must reflect these virtues, so must the United Nations wrestle in its often highly controversial debates with matters of public policy and ethics. It does so imperfectly. It is often unable to achieve consensus on appropriate action, leaving member states to accommodate as best they can.

When, how, and whether to intervene where human rights abuses of a member state shock civilized consciences remains a question of both politics and prudence. The failure of the United Nations and its members to effectively intervene in the Rwandan genocide of 1994 left hundreds of thousands dead, when minimal action might have saved countless lives. Ineffective though well-intentioned U.N. inter-

vention in Bosnia in the early 1990's contributed to human suffering in that strife-torn country. U.N. economic sanctions in Iraq and Haiti did little to force intransigent regimes to change invidious policies but imposed considerable hardship on innocent populations. On the other hand, U.N. economic sanctions were instrumental in paving the way to the demise of the racist apartheid system and the attainment of majority rule in South Africa, and U.N. charitable aid for starving peoples and displaced refugees has saved tens of millions of lives over the decades. The U.N. record is one of mixed failure and success that nonetheless illustrates the need for international institutions aware of both their limits and their potential in advancing the human good.

United Nations Convention on the Prevention and Punishment of the Crime of Genocide

IDENTIFICATION: International treaty

DATE: Adopted on December 9, 1948; became law on January 12, 1951

TYPE OF ETHICS: Human rights

SIGNIFICANCE: The United Nations (U.N.) convention allows all the nations that sign it to take appropriate actions against countries and individuals implementing genocide.

At the end of World War II, the horrifying visible evidence of the Holocaust illustrated to the world the effects of genocide on a massive scale. In 1948, when the General Assembly of the United Nations unanimously adopted the Convention on the Prevention and Punishment of the Crime of Genocide, it provided a way to inhibit this crime in the future. The intent of the framers of the convention was to establish a system of collective security for designated groups. Under the terms of the convention, any attempt to destroy a national, ethnic, racial, or religious group should result in the United Nations taking appropriate steps to stop the genocide. Moreover, charges should be filed against those attempting to develop or implement such a policy.

Ethically, it seems like a simple and straightfor-

ward process to eliminate genocide. However, the U.N. attempt to achieve what seemed to be a simple ethical goal has raised many other issues. For example, should political groups or others that are not specifically national ethnic, racial, or religious groups also be afforded protection? Is it possible to practice genocide against members of one's own group—which is what some people have said that the Khmer Rouge did in Cambodia during the 1970's?

Within the context of the convention, only the physical destruction of a group—by killing, inflicting bodily or mental harm, imposing intolerably harsh living conditions, or preventing births or taking away children—is considered genocide. Should other acts, such as cultural assimilation, be considered genocide? The convention states that for policies to be genocidal, they must intend to “destroy, in whole or in part” a protected group. How many members of a group must be killed or harmed to consider a policy one of genocide?

Two other, somewhat opposite, ethical considerations also relate to the convention. The agreement gives only the contracting parties that have signed the convention the right to invoke its provisions. That limitation leaves many groups at risk with no recourse against genocide. Do signatories of the convention have any responsibility for protecting them? How extreme must the circumstance get before other countries are willing to intervene? What does this do to the traditional ideal of national sovereignty?

At the other extreme, some countries are worried about false charges being brought against their citizens. This concern is the principal reason that the United States did not ratify the convention until 1988, even though it was one of the original signatories. What protection can be afforded innocent countries or individuals in these cases?

SIGNIFICANCE: The U.N. Declaration of the Rights of the Child formally recognized the ethical obligations of governments toward children. It paved the way for the Convention on the Rights of the Child, in which the nations of the world agreed to honor those theoretical obligations in practice.

United Nations Declaration of the Rights of the Child

IDENTIFICATION: Official edict laying out ten principles under which individuals, organizations, and governments should aid and protect children

DATE: Promulgated in 1959

TYPE OF ETHICS: Children's rights

The Declaration of the Rights of the Child grew out of earlier international accords: the 1924 League of Nations Declaration of the Rights of the Child and the 1948 Universal Declaration of Human Rights. The 1959 declaration reiterates that all people—regardless of race, color, religion, sex, and so on—have rights and freedoms simply because they are human. Children are often neglected or abused, however, because they cannot stand up and claim their basic human rights. Therefore, it is the duty of every

Ten Principles of the U.N. Declaration of the Rights of the Child

1. All children shall enjoy all the rights set forth in the declaration, without regard to race, color, sex, language, religion, political or other opinion, national or social origin, property, birth or other status.
2. All children shall enjoy special protection and be given opportunities and facilities, by law and by other means, to enable them to develop physically, mentally, morally, spiritually and socially in a healthy and normal manner and in conditions of freedom and dignity.
3. Every child shall be entitled from birth to a name and a nationality.
4. Every child shall enjoy the benefits of social security and be entitled to grow and develop in health and have the right to adequate nutrition, housing, recreation and medical services.
5. Children who have physical, mental or social disabilities shall be given the special treatment, education and care required by their conditions.
6. All children shall, wherever possible, grow up in the care and under the responsibility of their parents, and always in an atmosphere of affection and of moral and material security.
7. All children are entitled to education, which shall be free and compulsory, at least in the elementary stages.
8. Children shall in all circumstances be among the first to receive protection and relief.
9. Children shall be protected against all forms of neglect, cruelty and exploitation and shall not be admitted to employment before an appropriate minimum age or be placed in any occupation or employment that might prejudice their health, education, or physical, mental or moral development.
10. Children shall be protected from practices that may foster racial, religious or any other forms of discrimination. They shall be brought up in a spirit of understanding, tolerance, friendship among peoples, peace and universal brotherhood, and in full consciousness that their energy and talents should be devoted to the service of fellow human beings.

person and every government to take extra steps to guarantee the rights of children. The declaration spells out principles to guide this effort. All children are entitled to a name, a nationality, medical care, nutrition, housing, education, and recreation. Handicapped children have rights to special care. Governments should assist families in caring for children, and children without families are entitled to care. Children should not be subject to discrimination or taught to discriminate.

The declaration remained the primary United Nations statement on the rights of children until 1989, when a formal convention was adopted and opened for ratification by member nations. The Convention on the Rights of the Child was ratified by the requisite twenty states and entered into force on September 2, 1990. This convention listed thirty-eight rights of children that ratifying nations must respect, and it established an international oversight committee to which all such nations must periodically report. By the end of 1995, 185 nations had ratified the convention, making it both the most universally adopted and the most quickly ratified human rights treaty in history. Additionally, the U.N. adopted two Optional Protocols to the Convention on May 25, 2000. These protocols, which signatories to the convention could join at their discretion, banned child slavery, prostitution, and pornography, and also raised from fifteen to eighteen the minimum age for military service.

United Nations Declaration on the Rights of Disabled Persons

IDENTIFICATION: Official proclamation stating that people with physical disabilities have the same rights that other human beings have

DATE: Promulgated in 1975

TYPE OF ETHICS: Civil rights

SIGNIFICANCE: The declaration was the first of several attempts by the United Nations to address the

specific rights and needs of people with physical disabilities.

Adopted in 1975, the U.N. Declaration on the Rights of Disabled Persons confirmed and expanded the 1971 Declaration on the Rights of Mentally Retarded Persons. Although the preferred terminology has changed since these declarations were made, their intention was to recognize the humanity of mentally and physically challenged people. The 1975 declaration defines "disabled person" as anyone who is prevented, because of a physical or mental deficiency, from pursuing a normal life.

The declaration promises the same rights to persons with disabilities that other human beings share and recognizes that delivering on these promises may mean providing special programs. People with disabilities are entitled to proper medical care, physical therapy, education, and training. They have a right to economic security. They have a right to guardians and advisers, when needed, and the right to be protected from abuse and exploitation. The adoption of the declaration led to further study and action by the United Nations, which sponsored an International Year of the Disabled (1981) and a U.N. Decade of Disabled Persons (1983-1992).

Universal Declaration of Human Rights

IDENTIFICATION: Formal proclamation of fundamental principles of human rights to which all nations should adhere

DATE: Promulgated on December 10, 1948

TYPE OF ETHICS: Human rights

SIGNIFICANCE: The Universal Declaration of Human Rights, as an unbinding statement of basic principles, provided common standards of basic rights for all persons. This theoretical statement of standards later became the basis of binding agreements meant to enforce the principles laid out in the declaration.

The charter of the United Nations affirms the world organization's faith "in fundamental human rights" and its commitment to promote and encourage "respect for human rights." To fulfill that responsibility, the U.N. formed a Commission on Human Rights in 1946 to begin drafting an international bill of rights. On December 10, 1948, the General Assembly of the United Nations adopted the Universal Declaration of Human Rights. This declaration was not legally binding on member nations, but it established the fundamental principles upon which legally binding treaties would be based.

The declaration proclaimed several principles of civil and political rights that were already found in many declarations and constitutions: that all human beings are free and equally valuable; that everyone is entitled to freedom regardless of race, color, nationality, political opinion, and so on; that humans have rights to life, liberty, and security; and that all people are entitled to freedom from torture, freedom to travel, and freedom to own property. The declaration was unusual in also proclaiming several principles of economic, social, and cultural rights. These two sets of principles were regulated in 1966 by U.N. Covenants, which are legal treaties.

Universalizability

DEFINITION: Logical possibility of making the motive behind a moral decision into a general moral law

TYPE OF ETHICS: Theory of ethics

SIGNIFICANCE: A key concept for German philosopher Immanuel Kant, universalizability is founded upon Kant's notion that the only valid moral law is one that has the formal structure of law as such, regardless of content. If it is possible to turn an individual's motive into a universal maxim without contradicting the laws of reason,

Kant argued, then that motive has a logical structure which validates it ethically.

Immanuel Kant's ethical theory is called a deontological or nonconsequential or duty-based ethical theory. According to Kant, an action is right if it follows from duty; that is, an action should be done not because of its consequences but because it is the right thing to do. The principle that one follows must be universalizable; in other words, it should be possible to argue that everyone ought to act the same way in a similar situation. For example, the rules that promises should not be broken by anyone, that no one should kill others, and that no one should cheat should be followed by everyone always. There are certain moral rights that everyone possesses.

Kant uses the example of making a false promise to make his point. In a particular situation, making a false promise might suit one's purpose, yet one cannot make the principle of making a false promise into a universal law, because then the concept of promising would have no meaning.

Upaniṣads

IDENTIFICATION: Ancient Hindu scriptures

DATE: Written between 1000 and 400 B.C.E.

TYPE OF ETHICS: Religious ethics

SIGNIFICANCE: The Upaniṣads stress the importance of physical, mental, ethical, and spiritual disciplines as the prerequisites for the realization of the knowledge of *Brāhmin*, or ultimate reality.

The Upaniṣads, literally meaning "to sit near someone," constitute the concluding portion of the Vedas, the first original Hindu scripture, which has four sections: Samhitās or collections—hymns, prayers, and formulas of sacrifice; Brāhmaṇas—prose treatises discussing the significance of sacrificial rites and ceremonies; Āraṇyakas, or forest texts; and the Upaniṣads, or later Vedas. The Upaniṣads are the main basis for the Vedānta school of philosophy. The

doctrines of the Upaniṣads were imparted orally. Groups of students sat near the teacher to learn from him the truths by which ignorance could be destroyed. The authors of the Upaniṣads, of which there are more than two hundred, are not known.

The principal Upaniṣads are the *Īsa*, *Kena*, *Katha*, *Praśna*, *Muṇḍaka*, *Māṅkya*, *Taittirīya*, *Aitareya*, *Chāndogya*, and *Bṛhadāraṇyaka* Upaniṣads. Śaṅkara, a Vedānta philosopher, wrote commentaries on the above ten and on the *Śvetāśvatara Upaniṣad*. In addition, the *Kauṣītaki*, *Mahānārāyaṇa*, and *Maitri* are also considered principal Upaniṣads. These Upaniṣads were written partly in prose and partly in verse.

The Upaniṣads are concerned with the meaning of the sacrificial rites, and in the process of discussing them, they introduce some profound metaphysical and religious ideas. With the Upaniṣads began the period of speculative research into human nature and the individual's position in the universe. The practical result of the Upaniṣads was to depersonalize the universe and to minimize the importance of earlier Vedic gods. The Upaniṣads were not philosophical treatises, but they contained certain fundamental ideas that form the basis of a philosophical system out of which the orthodox schools of Indian philosophy—Sāṃkhya, Yoga, Nyāya, Vaiśeṣika, Mīmāṃsā, and Vedānta—developed their systems.

The Upaniṣads have for their ideal the realization of *Brāhmin*, becoming one with God. The world is not an end in itself. It comes from God, through his mysterious power, and it ends in God. Everything in the phenomenal world, including the individual, must realize the infinite, must strive to reclaim the highest. The Absolute is the highest and most desirable ideal. The performance of duty is necessary if one is to achieve the highest perfection. Morality is valuable because it leads one toward this highest perfection. Inner purity is more important than outer conformity. The ethics of the Upaniṣads insist on the transformation of the whole person. In the process of this transformation, one knows that one's liberation from the phenomenal appearance depends on oneself and not upon the grace of transcendent deity. The idea of rebirth, the idea that the individual who has not gained the ultimate reality will be subject to the cycle of birth and death, is also presented for the first time in the Upaniṣads.

Utilitarianism

DEFINITION: School of philosophy that defines the good as that which is useful

TYPE OF ETHICS: Theory of ethics

SIGNIFICANCE: Utilitarianism marks an early attempt to devise a secular, rational, scientific moral system; its influence can be attributed to its simplicity, its adaptability, and the talent of its defenders. Its most important ethical ideas are that individuals should strive for maximum pleasure and minimum pain and that society should strive to achieve the greatest amount of happiness for the greatest number of people.

Utilitarianism is a decision procedure for normative ethics that holds that the rightness (or wrongness) of human actions, policies, or rules is determined by their effects on the general welfare. Since the late eighteenth century, it has been one of the most prominent moral theories. In addition, utilitarian principles have become major factors in shaping social policy and have given rise to numerous applications, ranging from behaviorist psychology to cost-benefit analysis. Utilitarianism has undergone many changes, and it exists in many forms. Consequently, there are many versions of utilitarianism, which makes it difficult to discuss in general terms.

JEREMY BENTHAM

The dominant version was developed and articulated by Jeremy Bentham, who applied it to the reformation of the legal, political, social, educational, penal, and economic institutions of Britain and other countries. His principle of utility formed the standard by which actions are judged: "It is the greatest happiness of the greatest number that is the measure of right and wrong." Classical utilitarianism is based on a hedonistic theory of value. Happiness (that is, pleasure and the absence of pain) is the only thing that is intrinsically good. Other things are valuable only to the extent that they bring happiness. Thus, moral actions result in producing the greatest balance of plea-

sure over pain. Bentham held that pleasure and pain (in the basic, feeling sense) are quantifiable, and he devised a “felicific calculus” to measure the utility of acts numerically and to make comparisons among them.

Utilitarianism is consequentialist, not deontological: Actions are evaluated by their outcomes and not by the agent’s intentions or motives. This is consistent with Bentham’s desire to devise a system that would be objective and scientific. Although one can empirically ascertain the results of people’s actions, one can only guess regarding their intentions. Utilitarianism is universalist rather than egoistic. One should seek to maximize the pleasure of all, not act selfishly to maximize one’s own pleasure at the expense of others. Hence, utilitarianism is egalitarian, since each person’s happiness is of equal value. Even the feelings of animals can be taken into account. Bentham claims that the principle of utility is not susceptible to direct proof, because it is the principle that is used to prove everything else.

Bentham’s moral system drew storms of protest. Many critics complained that an ethics based on hedonism legitimized crass self-indulgence and base animal pleasures. Christians were troubled by utilitarianism’s secularism. Critics also complained that utilitarianism reduced ethics to cold, impersonal calculations; that it was too difficult and demanding; that it was too simplistic and easy; and that it could easily lead to rights violations and injustices. The history of utilitarianism since Bentham consists of the ways in which its advocates have reacted to critics by reshaping and improving the theory.

JOHN STUART MILL

Bentham’s chosen successor was his godson John Stuart Mill. In his major ethical work, *Utilitarianism* (1861), Mill responded to the aforementioned charges. He defended utilitarianism (to varying degrees of success), but he also changed Bentham’s hedonism in significant ways. Responding to Thomas Carlyle, whose distaste for ethical hedonism led him to denounce utilitarianism as a “sordid pig-philosophy,” Mill argued that pleasures differed qualitatively and that some pleasures are superior to others. Another significant change came forty years later, when G. E. Moore articulated his “ideal utilitarianism,” which allows for the intrinsic goodness and desirability of other values besides happiness.

Charges that utilitarianism could lead to injustice have persisted despite the explanations of Bentham, Mill, and a host of others. The strong claim that one should always do whatever results in the greatest utility has prompted critics to imagine scenarios in which utilitarianism is construed to endorse such detestable actions as gladiator fights (if the aggregate pleasure of the multitudinous spectators outweighs the pain of the participants), the punishing of innocents (if convicting someone of committing a sensational crime appeases the masses, staves off riots, and restores faith in the system), torture (if torture could force a captured terrorist to confess where a bomb has been planted), and even murder (if surgeons harvest an individual’s organs for transplant in other patients, thus improving and saving several lives).

Such problems have led to the distinction between act- and rule-utilitarianism and the view that utilitarianism is more effective as a formula for developing basic rules than as a method for rationalizing the best action in a particular case. John Rawls has argued that utilitarianism neglects basic principles of justice and fairness by ignoring the distinction between persons and the distribution of goods. He believes that emphasizing the sum total of happiness or average utility not only leads to inequalities but also legitimizes them. Utilitarians maintain that there is a natural dynamic that favors egalitarianism, in that a given sum of money will likely have greater utility value for a poor person than for a wealthy person. Moreover, utilitarians claim that it is unlikely that an extremely unequal distribution of resources or benefits would bring about the greatest possible amount of happiness.

The success of utilitarianism is remarkable. Few persons regard themselves as utilitarians, yet utilitarianism remains among the dominant schools of ethical theory. Its influence extends beyond ethics into social sciences and formal decision theory. Thanks to its able advocates, its appeal to basic rational principles, and its flexibility, utilitarianism has adjusted to the challenges of critics and maintained its prominence.

Utopia

IDENTIFICATION: Book by Sir Thomas More (1478-1535)

DATE: Published in 1516

TYPE OF ETHICS: Medieval history

SIGNIFICANCE: A description of a supposedly ideal society, *Utopia* revitalized ethical thinking on social planning, prompting a flood of utopian literature over the ensuing centuries.

Thomas More coined the word “utopia” for this book and simultaneously provided a noun to describe an ideal society and an adjective—utopian—to signify a hopelessly impractical approach to living. The word “utopia” derives from the Greek for “no place,” but it is also a pun on “good place.” With this play on words, More sowed the seeds of argument regarding his book: Was he serious? Was he a communist, a liberal, an autocrat? Was he an advocate of euthanasia and divorce?

Utopia shows many influences. More was a classical scholar of high standing—a product of the Renaissance. He also pursued a career in law with great success. Amerigo Vespucci’s writings on America inspired him with references to paradisiacal lands

Sir Thomas More. (Library of Congress)

and the communal ownership of property. The Roman Catholic Church was the dominant influence of his boyhood, and perhaps of his whole life. Interestingly, More wrote *Utopia* in a lull before the Reformation; one year after its publication, Martin Luther defied the Church by nailing his ninety-five theses to the door of All Saints Church in Wittenberg.

UTOPIAN PRACTICES AND ETHICS

Book 1 of *Utopia* describes meeting a man called Hythloday, who first castigates European society and then proceeds in book 2 to describe Utopia with heartfelt admiration. Hythloday condemns the idle of Europe, including noblemen and their servants. He asserts that rulers wage war, not peace, and that ministers at court do not listen to arguments, but indulge in politics for their own gain. His remedies for economic ills include stopping the enclosure and monopoly of land by the rich. With strong words, he condemns the execution of thieves as unfair and ineffective, stating that it incites men to kill, since murder carries the same penalty.

Book 2 describes More’s fictional state in detail. The Utopians live a regulated, standardized life. All the cities are beautiful and identical. All citizens wear the same simple clothes, with some modifications for gender. They live together in families of specific size and work six hours a day, spending their leisure time reading and attending lectures. Women

may marry at the age of eighteen, men at twenty-two. Adultery is strongly condemned and can result in slavery or even execution. In extreme circumstances of recurrent adultery or perversion, however, divorce is permitted.

Utopia is a state founded on compassion and altruism. No one wants for material goods. Health care is universal, though few get sick. Society gently encourages euthanasia when a mortally ill person suffers from great pain. All property is owned communally. Every ten years, a family exchanges its house, which is supposed to encourage people to take proper care for the next tenant. Even their eating takes place in a large hall that holds as many as thirty households.

Ultimately, authoritarianism is a strong feature of this model state. No one has the freedom to remain idle. Everyone needs permission to travel. Any discussion of government matters outside official meeting-places is punishable by death. Utopia also has rigid hierarchies: children defer to adults, women to men, younger to older, and families to their elected representatives. Paradoxically, however, Utopia has strong democratic elements, including voting for all key political posts, though people are barred from canvassing votes, to minimize corruption. Slavery replaces hanging as the deterrent for deviant behavior. Serious criminal behavior leads to slavery, which entails working constantly in chains, performing the meanest labor.

Citizens may practice any religion, but strong proselytizing is barred for fear that it may lead to argument. Certain tenets must be held by all: belief in a wise Providence and an afterlife. Utopians pursue pleasure as natural and logical, but they abhor vanity and pomp and place no value on gold and silver, even while storing it for economic advantage and for trade. They avoid war whenever possible but conduct military training for both sexes. When threatened by another nation, they offer rewards to kill the ruler of the opposing nation. Failing that, they sow contention in that nation and, as a last resort, hire mercenaries to fight alongside their own soldiers.

DISCUSSION

More uses this book to debate opposing viewpoints for intellectual stimulation. For example, when Hythloday says that as long as there is property there will be no justice, More counters that in a communist society people would not work or have any in-

centive to better themselves. Hythloday contrasts the greed and selfishness of Europe with Utopia's communism based on a harmony of purpose, with the family unit at its core. Utopia also, however, has internal contradictions. The residents' humanistic values—respecting individual inquiry and religious freedom—contrast with the total conformity of their lives and the fact that certain basic beliefs must be held by all.

Utopia is a commentary on More's own society, a combination of monasticism and feudalism, but Utopia is founded on reason, not Christianity. More is pleading: If they can do so well without divine revelation, why can Europe not do better with it? It is impossible to believe that More meant *Utopia* as a blueprint for an ideal society. Elements that support this conclusion include the deadpan humor (Anider, a river, means "no water"; Utopians use gold in making chamber pots) and the contrast with More's own religious convictions (he persecuted heretics and chose execution rather than compromise his opposition to divorce). Ultimately, *Utopia* is not so much interesting or original in itself as it is noteworthy because it stimulated discussion regarding "social engineering" as a remedy for society's ills.

V

Value

DEFINITION: Relative level of worth, goodness, significance, or utility possessed by an entity, attribute, or event; or, an intangible quality or attribute that has intrinsic worth in itself

TYPE OF ETHICS: Theory of ethics

SIGNIFICANCE: For an objectivist, value is the basis of judgment. For a subjectivist, value is the thing produced by judgment. Thus, all moral judgment involves either assigning value to an action, person, or thing, or accurately perceiving the value that exists within an action, person, or thing.

Values are of signal importance; without them, human life would be drained of significance, a bland and textureless existence without differentiation. Academic disciplines focus on value in a variety of ways: The arts explore expressions of value; sociology, anthropology, and history all examine the ways in which values are embedded in society's structures; and psychology, including the work of philosophical psychologists such as Friedrich Nietzsche, looks at the ways in which individuals acquire their beliefs about values and the roles these beliefs play in their psyches. The philosophical study of value, axiology, tries to step back from these particular inquiries and look instead at the question "What is value?" Axiology has been a central focus of philosophical inquiry throughout the history of the discipline. For all that, however, little consensus has emerged, although certain positions tend to run as threads throughout the discussion.

Answers to the question "What is value?" take two possible forms. The first and simplest provides a list of values, such as courage, honesty, beauty, and compassion. The second attempts to answer the question "What is value in general?" It may seem relatively simple to compile a list of values, but history and anthropology reveal that such lists vary considerably at different times and in different cultures. Homeric heroes were applauded for their ability to lie

and dissimulate, and classical Japanese samurai were expected to test a new sword by slicing through an unlucky wayfarer from the shoulder to the opposite flank. The honor of both the samurai and the sword-maker depended on a clean bisection.

Assuming that a list of values can be compiled, the inevitable next question is "What exactly is meant by 'courage' or 'beauty' or 'friendship'?" The ancient Greek philosopher Plato focused on questions of this "What is X?" form in his early dialogues. The *Laches* seeks the definition of courage, the *Euthyphro* that of piety, and the *Lysis* that of friendship. Although these dialogues are notorious for providing few answers and for clearly showing how quickly simplistic answers become tangled in their own contradictions, one important implication becomes clear: One cannot know what particular values are unless one knows the nature of value in general.

SUBJECTIVISM/OBJECTIVISM

Plato begins to address the question "What is value in general?" in the *Meno*, and it is a central theme in many of his other dialogues. One view to which he is clearly attracted is that personal excellence is knowledge; that view, however, is replaced in later dialogues, notably his *Republic*, by the view that there is a source of excellence, for both people and objects, that can be known. He argues that, since all instances of a certain value—for example, beauty or courage—share some property, there must be something, the "form" of that excellence, that they make manifest. Forms for Plato are separable essences, with an independent existence, that infuse the objects or people who display them. Objects or people are excellent or have value insofar as they make manifest the form of a particular value. There are, therefore, forms of all excellences, and the highest of these is the form of the good. One's own particular excellence or excellences are produced by one's knowledge of the good, and it is this knowledge that is the ultimate goal of all philosophical inquiry. This emphasis on an external source of value is one

of the threads that runs through all discussions of value.

The second thread arises from the indubitable fact that people have emotional responses to instances of value. Humans are moved by compassion and repulsed by wanton cruelty; they admire bravery and appreciate beauty. This raises the following question. Do people have these responses to these actions and objects because they have the value they do or do they have the value they do because people have these responses to them? In this article, “subjectivism” is taken to be the position that human emotional responses to actions, character traits, or objects are what endow them with value.

“Objectivism” is taken to be the position that there is some source or standard of value that is separate from the emotions; emotional responses to actions, character traits, or objects are prompted by, but in no way contribute to, their having value. Both negative and positive values are included in these analyses. Plato clearly took the objectivist path, and in this he was followed by many other great thinkers: Saint Thomas Aquinas, echoing Aristotle, said in his *In Divinus Nominibus* (1265), “It is not that a thing is beautiful because we love it, but we love it because it is beautiful and good.” Other philosophers, however, have argued powerfully that what makes something valuable is the act of valuing it; perhaps the greatest of these thinkers is David Hume.

DAVID HUME

Hume drew an important distinction between matters of fact and matters of value. In a famous passage from his *Treatise of Human Nature* (1739-1740), he said,

In every system of morality . . . I have always remark'd, that the author proceeds for some time in the ordinary way of reasoning . . . when of a sudden I am surpriz'd to find, that instead of the usual copulations of propositions, *is*, and *is not*, I meet with no proposition that is not connected with an *ought*, or an *ought not*. This change is imperceptible; but is, however, of the last consequence. For as this *ought*, or *ought not*, expresses some new relation or affirmation, 'tis necessary . . . a reason should be given, for what seems altogether inconceivable, how this new relation can be a deduction from others which are entirely different from it.

The illegitimacy of deriving value (ought) statements from factual (is) propositions alone was later labeled the “naturalistic fallacy” by G. E. Moore.

Hume's views on human psychology are an integral part of his answer to how one moves from matters of fact to matters of value. He identifies two distinct psychological processes: reason and sentiment. Reason establishes matters of fact, while sentiment, or the passions, provide a motive for action. For example, one's reason may tell one that one is standing on a railway line, that a train is coming, and that if one does not move one will be crushed, but it is only one's desire not to be crushed that provides the motive force to move. Given that moral judgments provide motives for action, Hume reasoned that they must be the result of sentiment “gilding and staining all natural objects with [its] colours.”

Distinguishing between matters of fact and matters of value and locating the source of value in human sentiment—usually some form of happiness or pleasure—are integral parts of the subjectivist position. People value, and ascribe value to, those things that make them happy or sad, or that cause them pleasure or pain. Although the notion of what constitutes happiness or pleasure can be somewhat crude (Aristippus opted for immediate physical pleasures, whereas Epicurus advocated philosophical reflection and a diet of bread, cheese, and milk), in the hands of someone like David Hume, it is a subtle and many-layered aspect of the psyche.

Although subjectivism holds that all positive value has its source in positive human sentiment, the corollary does not hold; not everything in which people find happiness or pleasure is good. Pulling the wings off flies is not good simply because generations of small children have relished it; there are better and worse pleasures. John Stuart Mill recognized this distinction in the quality of pleasures, and in *Utilitarianism* (1863) he wrote that

Few human creatures would consent to be changed into any of the lower animals, for a promise of the fullest allowance of that beast's pleasures; no intelligent human being would consent to be a fool, no instructed person would be an ignoramus, no person of feeling and conscience would be base, even though they should be persuaded that the fool, the dunce or the rascal is better satisfied with his lot than they are with theirs.

For Mill, the good life was founded on the refined pleasures of the higher faculties. The pleasures of a life of intelligent understanding, fine feeling, and elevated conscience are better than the pleasures of a life of ignorance, selfishness, and lack of restraint. His evidence for this is the fact that those who have had a chance to experience both types of life overwhelmingly prefer the more refined variety.

OBJECTIONS AND REPLIES

Locating the source of value in refined human sentiments brings with it three serious problems. The first is that, as G. E. Moore pointed out in an application of the naturalistic fallacy, simply because people *do* seek and value what provides them with pleasure does not mean that they *ought* to seek it. Subjectivists, including Mill and Hume, have tried to get around this objection by asserting that happiness is the only good in itself and that all else is sought as a means of obtaining it, but this fails to answer the thrust of Moore's objection. Even if everything else is sought as a means to happiness, it still does not mean that happiness is that which people ought to seek. The second problem is the parochialism of the idea of refined sentiment. While everyone can recognize what is wrong with the sadist who relishes inflicting pain, it is harder to say with any credibility that someone whose life is dedicated to a sybaritic wallow in the pleasures of the flesh is doing something *wrong*. (There is, of course, the issue of harm to others caused by this indulgence, but that is a separate question.) With this parochialism comes a potentially disturbing paternalism; if the refined pleasures are somehow better, then I may have some moral grounds for forcing unenlightened others to enjoy them. There are undertones of this view in Mill's *On Liberty* (1859).

Finally, there is the problem that if the source of value lies within the sentiments, then the value of an individual to others depends on their, the others', sentiments. X's value to Y depends on Y's feelings about X, not on some source of value possessed by X, and this does not seem to capture what philosophers mean when they talk about the moral value of persons. People, as Immanuel Kant pointed out, are valuable as ends in themselves, not simply as means to another's ends (in this case, the enjoyment of certain individual or social passions). These considerations have led many thinkers to reject the subjectiv-

ist source for value and to seek instead a source external to the human psyche. Plato identified the form of the good as this source, and generations of theistic writers including Thomas Aquinas and Saint Augustine of Hippo have taken a similar line by identifying God as the source of all value. Immanuel Kant saw the dictates of pure practical reason as the test for what was good and bad, and Moore argued that the good was an unanalyzable nonnatural property that one came to know by means of ethical intuition.

Although there is a problem of relativism with this position similar to that of subjectivism (Which religion or religious person has heard God's word correctly? Whose intuition has apprehended the good?), objectivism at least has a ready reply: Although humans may have an imperfect understanding of the good, there is nevertheless one right answer that they must find. A second difficulty is what J. L. Mackie in *Ethics* (1977) called the problem of "queerness." If there is an external, objective value, what would it look like; what kind of existence would it have? Clearly, it would have to be unlike anything else anyone has ever come across. The third and more serious problem comes by way, once again, of the naturalistic fallacy. Even supposing that there is a standard of right and wrong, a source of objective value, why should it necessarily be the case that we should accede to it? Assuming that God decrees compassion to be a valuable character trait, one still must decide, presumably by some separate standard, whether one ought to follow God's word. As Hume would say, the fact that God approves of compassion has no power over one's action unless one already wants to, or feels one ought to, obey God. Kant tries to argue that duty, one's motive force for obeying the dictates of pure practical reason, is not a sentiment, because it is produced by internal reason and not by fear or desire of external conditions, but this answer is extremely thin.

OTHER ALTERNATIVES

Faced with the seeming failure of both objectivism and subjectivism to provide an unequivocal and palatable answer to the question "What is value?" philosophers have tried other approaches. Existentialists such as Søren Kierkegaard, Jean-Paul Sartre, and Albert Camus focused on the fundamental choices and commitments by which people create value in the face of an absurd world. In the analytic school during the

mid-twentieth century, axiology waned as the focus switched to analyzing the meaningfulness of value language. A. J. Ayer and Charles L. Stevenson both argued that value language had no literal meaning, that it described no real property or object, and that it was rather an expression of emotion. Saying “Justice is good” was semantically equivalent to saying “Justice—hooray,” and the theory quickly became known as the “boo hooray” theory.

The problem at the heart of this issue is that both the factual aspects of actions or character traits and human emotional responses to them are important elements in valuation. The sharp division in Western philosophy between reason and emotion means that the issue has usually been framed as a dichotomy: The source of value is either in the emotions or in some objective standard. One way around this disjunction is to deny the dichotomy and to see value as an emergent property arising from the interaction between factual characteristics and beliefs about, and emotional responses to, those characteristics. Emergent properties are those properties that exist as part of a dynamic system and are not reducible to any part or additive combination of parts of that system. Therefore, people appreciate a beautiful object or a noble deed because it exhibits certain characteristics, and it is those characteristics that make it beautiful or noble. What isolates those characteristics from the total description of the action or object, groups them together, and endows them with significance, however, are one’s beliefs about and emotional responses to them. These responses, in turn, are shaped and guided by the characteristics that one perceives as significant.

In observing a bullfight, for example, one can isolate and describe many of the natural features of the event: the size and color of the bull, the number of people in the crowd, the blood of the bull on the sand, the color of the matador’s trousers, the pleasure experienced by the crowd, the day of the week, the pain experienced by the bull, the color of the sky, and so on. Only some of these features will be relevant to an ethical assessment of the value of a bullfight, and the network of beliefs and emotions through which we perceive them will group some of those features together and endow them with significance. For most observers, the pain of the bull will be relevant, while the color of the sky will not. The way in which that pain is interpreted, however, will vary depending on

the beliefs of the observer; it may be seen as evidence of the nobility of the bull and the bullfight or as evidence of the cruelty of both the event and the matador. It is not that the source of the value lies solely in the beliefs and emotions of the observers or solely in the natural features of the bullfight that one groups together, but rather in the interaction between the two. Such a process will, as Hume says, “raise, in a manner, a new creation.” Out of the vast array of features, beliefs, and emotions will rise a morally significant event, an odious or noble bullfight.

Values clarification

DEFINITION: Series of strategies designed to help individuals who have mutually exclusive values

TYPE OF ETHICS: Theory of ethics

SIGNIFICANCE: Values clarification seeks to develop an umbrella set of ethical values that will be able to reconcile conflicts between more specific values. This overall ethical framework, once developed, guides one's individual decisions and helps one to lead the kind of life one desires.

Traditionally, educators have taught values development through such strategies as didactic moralizing, prescriptive modeling, inspiring, and appealing to conscience. Yet these traditional strategies have not noticeably produced the desired results—at least, so believe the proponents of values clarification, who advocate a different set of strategies to develop effective values consciousness.

BACKGROUND

Values clarification evolved during the mid-1960's, when American activists challenged the war in Vietnam, along with the political system, and promoted civil rights for minorities. Concurrently, critics attacked the schools for ignoring the teaching of values in a time of crises. Noting that parents and religious institutions had little impact, critics believed that the media, particularly television, adversely affected the values of the young. Hence, they argued

that education should teach the young how to develop appropriate values.

The first major book on values clarification, Louis Rath's *Values and Teaching* (1966), argued that Western pluralistic society made it impossible to inculcate a uniform set of values. Instead, Rath wanted to teach individuals the processes through which values emerge and may be acted upon. Rath and his associates proceeded to devise the theoretical construct of values clarification and create appropriate strategies.

The clarifying stage is most crucial because clarification cannot occur unless values collide with competing values. Suppose that one strongly believes in the importance of sustaining life. Place that value in a particular situation, such as that of an elder suffering unbearable pain caused by an incurable disease. Two values thus conflict: the importance of sustaining life and the importance of lessening or eliminating pain. To clarify and then resolve the conflict of what to do, one must proceed through the seven-question framework established by Rath.

Louis Rath's Seven-Question Framework

1. What are the alternatives, given the choices?
2. What are the consequences of each alternative?
3. Can one's choices be made independently?
4. What are one's value preferences?
5. Can one declare one's preferences publicly?
6. Once decisions are made, can one act upon one's choices?
7. Can one develop a values stance that is consistent with a long-term framework of personal conduct?

The goals of values clarification are to help individuals select and reflect on the values chosen that best suit a particular situation. Borrowing from John Dewey the basic tenet that values are not fixed but change as life situations change, advocates of values clarification perceive all values as relative.

To engage in values clarification, its advocates recommend the workshop, with small informal groups providing an interchange of ideas. The leader-teacher stimulates the moral reasoning within the group, often providing some subject for the values discussion; for example, a story, poem, cartoon, game, or news event. After recapping the subject's content, the leader-teacher and the group probe both the intrinsic values of the material itself and the values of the group.

Three Stages of Values Clarification

1. identifying and analyzing values
2. clarifying the values
3. internalizing or acting upon the reconstituted values

VALUES CLARIFICATION AND ETHICS

Values clarification was initially regarded as an exciting area in education, filled with potential. Later, values clarification became an explosive educational issue.

Protest activists of the mid-1960's brought values-clarification techniques to the attention of the public through media events. Suddenly values clarification was "in." Teachers, too, reported that it stimulated students because of its wide applications to everyday experiences. Students not only learned to deal with their feelings but also practiced communication and decision-making skills and articulated their value judgments.

Values clarification advocates such as Sidney Simon, Howard Kirschenbaum, and Jack Fraenkel created innovative strategies. Both teachers and students delighted in using value ladders, role playing, value grids, rank-order and forced-choice dilemmas, time diaries, and so forth.

LATER REACTIONS

Once the novelty of values clarification lessened, some educators raised warning flags. For example, hard research data on its effectiveness was nonexistent. Because values clarification deals with feelings and emotions, some critics equated it with "touchy-

feely" activities found in sensitivity training. Others questioned the idea that values-clarification strategies are value free, noting that the valuing process itself, the seven-step criteria, held hidden values.

Likewise, inexperienced teachers allowed values discussions to drift and, on occasion, because of cultural differences, provoked unsettling confrontations among participants. Peer pressures among youngsters often discouraged the open, free exchange of ideas, while teachers were uncertain as to how far they should go in accepting all values. Were all values equal?

Parents, once aware that their children were engaging in values clarification, complained the children were not mature enough to participate in such complex processes. Moreover, if all values were viewed as equal, children were not learning right from wrong.

Pressure groups increasingly charged that values-clarification practices confused children because schools and teachers lacked standards of conduct. They also claimed that the schools brainwashed the children, insisting that teachers cannot remain ethically neutral and that they manipulate student values—inadvertently or by design.

When pressure groups offered values-clarification activities as evidence that schools were practicing "secular humanism," many school boards banned books and workshops on values clarification. The real conflict was over whose values should be taught and how.

Since the late 1970's, educators have sought compromise, attempting to balance the clarification of personal values with the transmission of lawful societal values. In sum, the major contribution of values clarification to the field of ethics has been the development of innovative exercises and strategies designed to allow individuals to clarify their values.

Vardhamāna

- IDENTIFICATION: Ancient Indian religious reformer
- BORN: c. 599 B.C.E., Kundagrama, Bihar, Magadha (now in India)
- DIED: 527 B.C.E., Pavapuri, Bihar, Magadha (now in India)
- TYPE OF ETHICS: Religious ethics
- SIGNIFICANCE: Vardhamānū was the founder of the Jain religion and an important teacher of the ethical values of nonviolence and spirituality.

Once, when he was attacked by a powerful man, Vardhamāna, also known as Mahāvīra, responded not with violence, anger, or fear but with love. This approach conquered his assailant, and thus Mahāvīra discovered the power of nonviolence. A new religion in India, Jainism, arose from the flames of Mahāvīra's love. In a world of destructive force, Mahāvīra bequeathed a great weapon to those seeking peace and justice: moral force. This moral force influenced the peace, civil rights, and animal rights movements.

In the sixth century B.C.E., India was dominated by Hinduism and the caste system. Mahāvīra rebelled against this system, and at age thirty he re-

nounced wealth, position, and his own family to seek spiritual fulfillment. Practicing an extreme asceticism, in twelve years he became a perfected soul, a *jina*, or "conqueror," of passions. The focus of his teaching was love of *all* life. To Mahāvīra, true justice meant to cause no suffering for any life, and thus required the practice of vegetarianism.

Salvation required the three jewels of the soul: right knowledge, right conviction, and right conduct. Mahāvīra regarded right conduct as the most precious jewel of the three. It consists of five vows: no killing of any living creature, no lying, no stealing, no sexual pleasure or alcohol, and no desire or attachments.

Mahāvīra believed that no harm could ever befall a good man. Ritual, prayer, sacrifice, and social power could not make one worthy. The only value is the good life, which must be realized by right conduct.

Mahāvīra and the Jains so loved life that they would not even harm insects. At a time when life has become cheap, perhaps nothing is more ethically relevant than the reverence for all life that Mahāvīra so fervently practiced.

Vedānta

- DEFINITION: Major school of Indian philosophy associated with monism, transcendentalism, and mysticism
- TYPE OF ETHICS: Religious ethics
- SIGNIFICANCE: The goal of Vedānta is to achieve the ultimate reality, or *Brāhmin*, by breaking the cy-

cle of birth and rebirth in three different ways: the way of knowledge, or *jñāna*; the way of devotion, or *bhakti*; and the way of action, or karma.

Vedānta, literally meaning the “end of the Vedas,” is a school of Indian philosophy. The Upaniṣads, *Bhagavadgītā*, and Brahma Sūtra, together with their commentaries, form the essence of the Vedānta philosophy.

ADVAITA, OR NONDUALISTIC, VEDĀNTA

Śaṅkara (788-850) is considered the most powerful advocate of pure monism, or Advaita. Śaṅkara advocates the way of knowledge, or *jñāna*, as the only way to attain liberation, or *mokṣa*. The basic question of Advaita is the nature of *Brāhmin*, or ultimate reality. *Brāhmin* is pure consciousness, devoid of attributes. *Brāhmin* is nondual (*advaita*) and transcends the distinction between the knower, knowledge, and the known. The world is not real; it is an illusion, or *māyā*. It appears to be real because of ignorance, or *avidyā*, but when one comes to the realization of *Brāhmin*, one realizes the illusoriness of the world. In understanding Indian philosophy, one must realize that it believes in different levels of being. Therefore, one who comes to the realization of *Brāhmin* becomes identical with *Brāhmin* and is, therefore, at the highest level of being and has the highest reality. Every individual has a phenomenal self, which is empirically real, since it is a part of his or her experience, and a real self, or *ātman*, which is transcendently real and is one with *Brāhmin*.

VIŚIṢṬADVAITA, OR QUALIFIED MONISM

The early twelfth century philosopher Ramanuja refutes the absolute monism of Śaṅkara and denies that the world is illusory, or *māyā*, and emphasizes *bhakti*, or worship, as a means of liberation. He advocated the way of devotion as opposed to the way of knowledge advocated by Advaita Vedāntins. For Ramanuja, *Brāhmin*, or ultimate reality, is spirit but has attributes. *Brāhmin* has self-consciousness and has a conscious will to create the world and bestow salvation. For Ramanuja, *Brāhmin* is a whole consisting of interrelated elements. There is no pure, undifferentiated consciousness. *Brāhmin*, for Ramanuja, is not a formless entity but a supreme person qualified by matter and souls. Matter (*achit*), soul (*chit*), and God (Īśvara) are real, but matter and soul are de-

pendent on God. God (Īśvara) is *Brāhmin*, and he manifests himself in various forms for his devotees. Souls are in bondage because of ignorance. Liberation can be achieved, according to Ramanuja, by the intuitive realization that the soul is a mode of God. The soul that is liberated is not identical with *Brāhmin* because soul is always finite and God is infinite. That is why Ramanuja believes that liberation can be achieved only after death, when the soul is separated from the body. Ramanuja’s view opened the way for theism, especially Vaiṣṇavism, within Vedānta.

DVAITA, OR DUALISTIC, VEDĀNTA

During the thirteenth century, Mādhava developed the philosophical view called Dvaita, or dualistic, Vedānta, and he was outspoken against Advaita Vedānta philosophy. Mādhava was considered an incarnation of the god Viṣṇu. He stressed duality and, like Ramanuja, advocated the way of devotion, or *bhakti*. For Mādhava, God is distinct from individual souls and matter, an individual soul is distinct from another individual soul, the individual soul is distinct from matter, and when matter is divided, each part of that matter is distinct from each other. According to Mādhava, souls can be classified into three groups: those who are devoted to God alone and are bound to achieve liberation, those who will never attain liberation and are destined to perpetual rebirth, and those who revile Viṣṇu and are subject to damnation. Mādhava believed that there are different degrees of knowledge and enjoyment of bliss in liberated souls. The worship of Viṣṇu in thought, word, and deed was for him the way to liberation.

MODERN VEDĀNTA

During the early twentieth century, Sri Aurobindo made a unique contribution to Vedānta philosophy. His view is popularly called the Philosophy of Integralism, or Integral Nondualism. His teaching is that the Absolute, God, world, and souls are One. His philosophy is a reinterpretation of traditional Vedānta that applies it to the social context. According to Aurobindo, human life can be transformed into the highest form of spiritual reality by practicing yoga. If one searches for the divine force that is within one and accordingly transforms all dimensions of life, one will be able to live in the highest possible divine way. Society should also be reshaped

in such a way that is helpful to this transformation of life.

Vivekānanda, a late nineteenth century disciple of Ramakrishna, organized the Ramakrishna Mission (it is also called the Vedānta Society in the United States). Vivekānanda considered himself an *advaitin*, but his Advaita viewpoint did not lead to inactive meditation; it was instead a call to action. He viewed knowledge, devotion, and action as three paths leading in different directions but reinforcing each other. He stressed practical work to achieve liberation. Since a person is identical with God, one should seek to abolish the indignities of the world.

The Indian philosopher Sarvepalli Radhakrishnan, who served as the second president of India (1962-1967), contributed to Advaita Vedānta philosophy by providing a positive approach to *Brāhmin* in which human values were preserved. He argued that the phenomenal world is temporal, which does not mean that it is unreal and does not have any meaning and significance. Karma should not be interpreted pessimistically. It is true that the past cannot be changed, but the past does not determine the future. An individual is still free to act within the limits of the past. He emphasized that one can lead a meaningful life here and now. His view constitutes a spiritual democracy that allows everyone to work side by side. He stressed unity rather than diversity. He conveyed his teaching to the West by stating that each religion is valid to the extent that it helps one to achieve spiritual realization.

Vegetarianism

DEFINITION: Dietary practice of subsisting primarily or entirely without eating meat, especially red meat or poultry

TYPE OF ETHICS: Animal rights

SIGNIFICANCE: Vegetarian diets have been advocated on ethical grounds, because they are believed to prevent famine, animal suffering, and environmental degradation.

Although vegetarian diets have been advocated for ethical reasons since ancient times, the English term “vegetarian” came into general use upon the founding of the Vegetarian Society at Ramsgate, England, in 1847.

TYPES OF VEGETARIANS

Modern nutritionists recognize several categories of vegetarians. Vegans are strict vegetarians who consume neither meat nor meat “by-products” (animal-based foods, such as dairy products and eggs, that can be obtained without slaughtering the animal). Among less strict vegetarians, *lacto-vegetarians* eat no meat or eggs but do eat dairy products, *ovovegetarians* eat no meat but do eat eggs, and *lacto-ovovegetarians* eat no meat, but do eat both dairy products and eggs. *Pescovegetarians* eat fish but neither poultry nor red meat (from mammals), and *semi-vegetarians* eat dairy products and eggs, and some poultry and fish, but no red meat.

ETHICAL ARGUMENTS FOR VEGETARIANISM

Several kinds of ethical arguments have been given for adopting vegetarian diets. These arguments differ in terms of the entities for which they express concern (human beings versus nonhuman animals and/or ecosystems) and which kinds of vegetarianism they support (semi-vegetarianism or lacto-

ovovegetarianism versus veganism, for example).

Arguments from human health are based on scientific studies of the effects of vegetarian diets on human health. During the 1970's and 1980's, evidence accumulated that diets high in saturated fats contribute to cardiovascular disease and that diets emphasizing vegetables might help to prevent certain cancers. Jeremy Rifkin and John Robbins emphasized these concerns in popular books which combined this human health argument with concerns about famine, ecology, and animal welfare related to diets heavy in meat and animal by-products.

Although a broad consensus emerged that Americans were eating too much red meat for their own good, arguments from human health do not decisively support veganism so much as semi-vegetarian, pescovegetarian, or lacto-ovovegetarian diets, for two reasons.

First, even lacto-ovovegetarian diets can be high in saturated fats (if one eats a lot of cheese and eggs, for example), and saturated fat can be reduced significantly without eliminating meat. As beef consumption dropped during the 1980's, consumption of poultry and fish (which are lower in fat) increased, butchers began removing more fat from cuts of meat, and farmers experimented with leaner breeds of pigs and cattle.

Second, some nutritionists believe that vegan diets are inordinately risky, especially for women and young children. Vegans commonly are cautioned to plan their diets carefully in order to avoid deficiencies of nutrients such as iron and calcium, which are either less prevalent in or less efficiently absorbed from nonanimal sources, and vitamin B₁₂, which is present only in animal products. Nutrition researchers have tended, however, to identify vegans with members of religions and cults who eat extremely simplified diets and eschew medical supervision and nutritionally fortified foods, and research on these individuals may not accurately portray the risks and benefits of a vegan diet.

Two other arguments support limited vegetarianism. The argument from famine, popularized by Frances Moore Lappé, stresses that vegetarian diets are a particularly efficient way to feed the hungry. More people could live by virtue of grains and vegetables that could be produced on the good farm land that is now used to raise feed grains supporting only feedlot cattle. Related ecological arguments oppose

the consumption of meat, especially beef, produced by razing Third World rain forests or in other ecologically unsustainable ways. Both arguments, however, support only semi-vegetarian or pescovegetarian diets. Two alternative ways to help alleviate hunger would be to harvest fish from the oceans and to raise livestock on rangelands unsuitable for row crop production, and neither of these practices is necessarily ecologically unsustainable.

Ethical support for stricter vegetarian diets comes from animal rights and animal welfare arguments, such as those popularized by Peter Singer and Tom Regan, whose arguments were criticized in detail by Raymond Frey. Many in the animal rights movement became vegetarians because they believed either that intensive, "factory" farming is inhumane (an animal welfare perspective) or that it is inherently wrong to slaughter animals for food, no matter how humanely they may have been treated (a true animal rights perspective).

Although primarily concerned with slaughter, the animal rights movement also targeted egg production as a particularly inhumane form of animal agriculture. Following World War II, economies of scale were achieved by confining laying hens in crowded "battery" cages in highly mechanized operations, in which the entire flock is slaughtered and replaced when average egg production drops below a certain level (approximately every twelve to fifteen months). Consequently, more than 90 percent of American laying hens were caged by 1990.

Dairy products also came under fire from some in the animal rights movement, because of intensification (epitomized by the development of bovine growth hormone during the 1980's and 1990's) and because of ties between the dairy industry and the veal and beef industries. Male offspring of dairy cattle are sold as veal calves, and dairy cows themselves spend only three to four years (on average) in production, after which they are slaughtered as low-grade beef. On these grounds, animal rights and animal welfare arguments are used to support not only lacto-ovovegetarianism but also veganism.

Veterans' rights

DEFINITION: Special rights due to former members of the military services

TYPE OF ETHICS: Politico-economic ethics

SIGNIFICANCE: The citizens of most nations recognize the principle that those who serve to protect their countries—and especially those who risk their lives in combat—deserve special privileges and should be accorded special respect.

Before 1636, wounded soldiers were not considered to be the responsibility of either the military branches in which they served or the governments that oversaw the military branches. During that year, the government of Plymouth Colony passed a law providing for the government to provide financial support to soldiers who were disabled in the recent war with the Pequot Indians. That colonial legislation was the first recognition of the ethical principle that a government has an obligation to care for soldiers after they have honorably served it in armed combat.

In 1776, the Continental Congress provided pensions for soldiers who were disabled. The thirteen

colonies that became states of the United States also gave direct medical and hospital care to their veterans. In 1811, the U.S. Congress set up the first home and medical facility for military veterans. After the mid-century Civil War, Congress authorized benefits and pensions not only for veterans, but also for their widows and dependents. At the same time, many state governments established veterans' homes to provide medical treatment for all injuries and diseases incurred by veterans, even ailments not related to the veterans' military service.

After the Civil War, the idea arose that veterans should not be penalized for the time taken away from their civilian jobs while they are serving their country, so they were accorded veterans preferences in employment. These meant that the veterans were to be the first applicants hired and the last to be laid off among other qualified job applicants and holders. By the beginning of the twenty-first century, veterans of the United States military were entitled to get back their former civilian jobs, with the same pay increases and seniority they would have received if they had never left their jobs.

In 1917, the U.S. Congress established veterans programs for disability compensation, insurance, and vocational rehabilitation for veterans with disabilities. In 1944, Congress passed the G.I. Bill, which provided veterans with funds to complete their educations, including college education. By the end of the century, the educational benefits of the bill applied to veterans of military service even if they were never involved in armed combat.

The modern United States has the world's most comprehensive veterans assistance. Some programs are considered entitlements that the government is required to provide; others are incentives offered to encourage new enlistments. Distinctions between rights, or entitlements, and incentives is not always clear, however.

One of the principles of veterans' rights is that they are granted only to those who receive honorable discharges when they leave military service. Since the opinions of superior officers about what constitutes good and bad conduct can be arbitrary, veterans who receive dishonorable discharges have the right to have their discharges reviewed before impartial adjudicative bodies.

What are considered veterans' rights in one country may not be so perceived in another. Within some

countries, local jurisdictions may provide more generous programs for veterans than those of their national governments. Thus, the determination of veterans' rights ultimately depends more on what political leaders believe that veterans are entitled to receive than on abstract ethical principles.

Vice

DEFINITION: Indulgence in immoral or depraved sources of pleasure, or a specific moral flaw or inherent depravity of character

TYPE OF ETHICS: Personal and social ethics

SIGNIFICANCE: The term "a vice" usually refers to a minor foible or weakness, such as smoking or buying lottery tickets. This type of vice, while possibly a subject of negative moral judgment, is rarely a criminal offense. Vice as a collective noun, however, can refer to much more serious moral and legal transgressions.

Deriving from the Latin word for "flaw," "vice" originally meant any defect of the will predisposing an individual toward socially unacceptable behavior. The opposite term, "virtue," also refers to habitual behavior. The so-called "seven deadly sins" of medieval moralists—pride, envy, anger, sloth, avarice, gluttony, and lust—are more properly termed cardinal vices, because they are habitual character defects that affect large numbers of people

The general concept of vice can be derived from observation and is not culture-specific, but the list of vices and the gravity ascribed to each vary markedly from culture to culture and historically within a culture. For example, masturbation, which was regarded as an exceedingly grave vice in early twentieth century European and American society, is ignored by many traditional cultures and has become acceptable in Western culture in recent years; attitudes toward homosexuality similarly range from acceptance to extreme condemnation.

Vice can involve any habitual act or attitude, but the vices that plague society are the common ones—those that tempt the average person and that the perpetrator may recognize as unwise, illegal, and potentially damaging, but not as heinous or depraved.

VICE AND CRIMINAL JUSTICE

In modern U.S. law enforcement, vice has come to be roughly synonymous with victimless crimes, including alcohol and drug abuse, prostitution, gambling, pornography, and sexually deviant behavior between consenting adults. This catalog of modern vices includes behavior that is damaging to the perpetrator, to society as a whole, and to indirect targets (notably, the family of the perpetrator), rather than to a specific intended victim. Such vices are typically psychologically if not physically addictive. Indeed, the medieval concept of vice and the modern concept of psychological addiction are surprisingly close.

Efforts to combat vice through the criminal justice system have a poor record of success and a tendency to co-opt the machinery of justice. Strong psychological, physiological, and financial motivations to persist in exercising proscribed vices have created a powerful underground subculture capable of corrupting and intimidating police and government officials. The collapse of communism in the Soviet Union demonstrated that even a regimented totalitarian regime is more effective at hiding than at suppressing vice, which blossomed with amazing rapidity once controls were loosened.

VICE AND BIOLOGY

The question of the origin of vice has long been a subject of debate and speculation, and, like most complex questions of human nature, probably has no single answer. The concept is not simply an artifact

created by human prejudice; it is a product of long experience identifying what is harmful in a particular social context. Prejudice and changing conditions, however, can and often do cause harmless actions to be labeled as vices.

The prevalent medieval view of vice (exemplified by Thomas Aquinas) stated that human beings, having free will, are free to choose evil, and they acquire vices by repeatedly performing evil acts. Since people are also free to choose virtue, vices can be overcome through grace, the exercise of virtue, knowledge, and prayer. Restated in modern terms, vice is learned, self-reinforcing behavior that can be overcome by education and behavior modification.

The alternative view, that vice is an innate, congenital quality, possibly suppressible but ultimately incurable, is in its earliest formulation a corollary of predestination: The qualities that damn the sinner are preordained by God, and neither petition nor the exercise of virtuous acts can change the underlying reality.

During the early part of the twentieth century, the popularization of Charles Darwin's theory of evolution and especially of Social Darwinism, the application of Darwinian biological models to society and psychology, led to a revival of the idea of vice as an innate quality. The Italian criminologist Cesare Lombroso proposed the theory of atavism, which gained wide currency. According to this theory, vices are relics of a lower state of evolution, are inherited, and are correlated with apelike physiognomy. Such a model readily lends itself to the labeling of non-European physical characteristics as atavistic, citing them as proof of the moral inferiority of other ethnic groups, and atavism was accepted as scientific dogma in Nazi Germany. Sociobiology also hypothesizes that certain types of habitual antisocial behavior (such as lust and aggression) may be a legacy from primitive hominid ancestors, but it does not postulate that atavism is more pronounced in any race or social group.

There is also some recent evidence that specific genetic factors may predispose individuals to vice. A large Danish study of children of criminal parents adopted at birth showed a high incidence of crime in this population, and a study of men with a doubled Y chromosome suggested that this group was prone to violence. The precise physiologic mechanisms for this behavior are unknown, however. Human person-

ality is complex and malleable, and a genetic predisposition toward particular behavior is not equivalent to a mandate.

Victims' rights

DEFINITION: Special legal and moral rights of victims of crimes

TYPE OF ETHICS: Legal and judicial ethics

SIGNIFICANCE: The recognition or failure of recognition of victims' rights shapes in part what and when legal proceedings are affected by victim testimony. For supporters of victims' rights, their recognition helps balance the legal and moral concerns of victims with those of offenders. For critics of victims' rights, their recognition contaminates the presumption of innocence and due legal process.

By early 2003, two-thirds of the states in the United States had constitutional amendments recognizing and identifying specific rights of crime victims. In

addition, a bill had been proposed in the U.S. Senate to amend the U.S. Constitution with a Victims' Rights Amendment. That bill addressed a concern felt by many people that the legal criminal system had long emphasized the rights of the accused over the rights of victims. For example, while persons accused of crimes have the legal right to speedy trials by juries of their peers and a legal right to be present throughout their trials, the victims of the accused have no legal right to either. The issue of victims' rights, then, falls under the larger issues of retributive justice, which is concerned with punishing criminals, and restorative justice, which is concerned with restoring or compensating victims.

WHO IS THE VICTIM?

A central issue within the scope of victims' rights is who actually should be considered the victim of a crime. Although it is obvious that the persons most directly harmed are victims, other people can be and are often indirectly harmed, such as the families of murder victims. This issue becomes especially important when victim impact statements (VIS) are allowed into legal proceedings.

A VIS is a written or verbal statement of a victim's views concerning the impact the crime has had. In cases in which the direct victim cannot give a VIS, other relevant persons—notably family members—can submit them. These statements, usually offered during sentencing or release hearings, provide not only the victims' opinions on the impacts of the crimes on their lives but also their recommendations of appropriate sentences, and even what they believe may be the risks to their own persons if the accused or convicted defendants are released or are given short sentences.

RIGHTS TO WHAT?

To exactly what do, or should, victims have rights? Answers to this question vary from state to state, but they generally fall under several types of categories.

In some states, victims have the right to information about numerous concerns, such as assistance programs for victims, compensation programs, protection and safety programs, and the status and location of the offenders. Victims may also have the right to participate in the different stages of the legal proceedings involving the offenders. These may include

the right to attend relevant hearings, to provide statements (including a VIS) within the context of the proceedings, to designate and confer with lawful representatives, and to contest the post-conviction releases of the offenders.

Victims may also have a right to restitution or compensation, that is, to have prosecutors ask judges to order the offenders to reimburse them for expenses incurred as a result of the offenders' crimes. Victims may also have access to special educational or employment services designed for people who, because of the crimes inflicted on them, cannot continue in their previous careers.

OBJECTIONS TO VICTIMS' RIGHTS

In spite of the apparently clear reasons for recognizing and supporting victims' rights, many people, groups, and organizations have expressed skepticism and concern over such rights and how they are to be understood. One concern is the question of who the victims are. Indirect victims, such as family members, are usually included as victims of crimes. Extending the definition of "victim" to indirect victims is usually explicit in victim impact statements.

A second concern is that allowing the views and interests of victims to be heard in a trial before a judge or jury returns a verdict contaminates the legal deliberation process and runs counter to the idea that the accused is innocent until proven guilty. Such victim testimony violates due process at two levels, say critics: first, prior to the decision about conviction,

Victims or Not?

A central difficulty in defining "victims" of crimes lies in drawing nonarbitrary lines between indirect victims and others. For example, if a person's home is burgled, and the next-door neighbor then purchases a home security system in order to avoid being similarly burgled, should that neighbor be considered an indirect victim? Or, suppose that a person driving into a convenience store parking lot sees an armed robbery taking place within the store and then suffers a serious injury in a collision while rushing to exit the lot to seek police help. Is that person a victim of the armed robbery crime?

and second, in sentencing after a conviction. For the determination of guilt or innocence, the burden of proof must lie with the state, but victim impact statements are not criminal evidence and so should not be allowed at this stage of legal proceedings. Once guilt is determined, victim statements can only inject emotion, perhaps simply revenge, into the process.

Critics also claim that victim impacts run counter to equal justice under the law, since the offenders are not being sentenced on objective common standards of punishment, but at least in part on how well victims can make their cases of suffering. That is, two similar or legally identical crimes might result in very dissimilar sentences because of the different eloquence of victims. Despite these objections, there has been growing support for the recognition, enunciation, and codification of victims' rights at the national level.

Vietnam War

THE EVENT: Civil war between North Vietnam and South Vietnam, in which the United States participated on the South Vietnamese side

DATE: August 5, 1964-April 30, 1975

TYPE OF ETHICS: Military ethics

SIGNIFICANCE: The morality of U.S. participation in the Vietnam War was questioned by many at the time it occurred and has been questioned ever since. The war's greatest legacy has arguably come in the form of its effects upon U.S. foreign policy, U.S. self-perception, and the world's perception of the United States. It was as a direct result of the Vietnam War that both the moral purity of the United States' interests and the invincibility of the U.S. military came to be questioned on a significant scale, both at home and abroad.

The question of when a powerful nation should intervene militarily in the affairs of a small country is not susceptible to a simple answer. Failure to intervene can mean that a small country will be subjected to tyranny, anarchy, or even genocide. Yet a military intervention that is bloody and inconclusive can also wreak havoc on a small country; furthermore, sending troops into a combat situation abroad means that some people will be killed or wounded. The unsuccessful end of the costly and controversial American intervention in Vietnam by no means ensured that policymakers would be spared similar dilemmas in the future.

The United States had been involved in the affairs of Vietnam ever since that country was divided, in 1954, into a communist North and an anticommunist South. As long as the American military mission in South Vietnam was small-scale, it aroused little opposition in the United States. Between 1965 and 1968, however, the number of American combat troops in Vietnam rose from 50,000 to 500,000; the casualties suffered by the troops and the monthly draft calls soared; and the loud debate at home reached an unprecedented level.

RELIGIOUS OPPOSITION TO THE WAR

Although at least one theologian (R. Paul Ramsey) did support the American military intervention in Vietnam, members of the clergy and theologians were conspicuous in the movement against

(1) France falls, 1954. (2) Tet Offensive, January, 1968. (3) Cambodian invasion, April-May, 1970. (4) Sihanouk falls, April, 1970. (5) Laotian incursion, February, 1971. (6) Areas of U.S. bombing, 1972. (7) Mining of Haiphong Harbor, May, 1972. (8) Lon Nol falls, April, 1975. (9) North Vietnamese offensive, spring, 1975. (10) South Vietnam surrenders, April 20, 1975.

such intervention. In 1966, the organization Clergy and Laymen Concerned About Vietnam was formed. Vocal opponents of the American war effort included the Protestant theologian Robert McAfee Brown; Yale University's Protestant chaplain, William Sloane Coffin; and two Roman Catholic priests, Daniel Berrigan and Philip Berrigan.

THE JUST WAR TRADITION

The just war tradition was first elaborated by the theologians of Christian Europe during the late Mid-

dle Ages. After centuries of indifference by peoples and governments, this tradition was revived by the Nuremberg War Crimes Trials of 1946, which followed the defeat of Nazi Germany in World War II (1939-1945).

The just war tradition sets forth six criteria for determining whether a particular war is just. The war must be waged for a just cause; it must be waged as a last resort; the intent behind the war must be right; there must be a reasonable hope of success; the war must be waged by a legitimate, duly constituted

authority; and the harm inflicted by the war must not be disproportionate to the good that one hopes to achieve. During the Vietnam War, America's clergy, theologians, and laypersons questioned whether American military intervention in Vietnam met all or even most of these criteria for a just war.

OPPOSITION TO THE WAR

The U.S. Constitution, while making the president commander in chief of the armed forces, gives Congress the right to declare war. Yet the massive war effort in Vietnam, dissenters pointed out, had come about through presidential orders alone. The first substantial increase in troop levels in Vietnam had been announced on July 28, 1965, at a little-publicized presidential news conference. The dis-

senters did not have an airtight case, however: The Korean War (1950-1953) had also started without a congressional declaration.

The official justification for the war, given by presidents Lyndon Baines Johnson (1963-1969) and Richard M. Nixon (1969-1974), was that the American military was in South Vietnam to repel aggression launched from communist North Vietnam. Defenders of the war viewed the conflict through an ideological lens, as an assault by international communism against those who loved freedom. The moral and material support that the world's major communist states, China and the Soviet Union, gave to North Vietnam was cited as evidence for this interpretation.

The opponents of the war, by contrast, stressed the facts that both sides of the conflict were ethnic

U.S. soldiers take cover behind a wall near the Army's bachelor officer quarters in Saigon during a Viet Cong attack in 1968. (National Archives)

Vietnamese and that Vietnam had been a single country until 1954. Dissenters viewed the United States as meddling in another country's civil war and thus committing aggression itself, rather than nobly defending a victim of unprovoked aggression; hence, the war did not meet the "just cause" criterion.

The dissenters' localized view of the Vietnam conflict led them to scorn the notion that defeating the communists in South Vietnam was necessary to protect the United States itself. The dissenters saw the Vietnamese communists as nationalist defenders of Vietnamese independence, not as the Southeast Asian arm of a worldwide conspiracy against American democracy. Hence, the war, dissenters believed, did not meet the "last resort" criterion.

WAR CRIMES

Until the early 1970's, the spearhead of the communist assault on the South Vietnamese government was not the North Vietnamese Army, but the so-called National Liberation Front, or Viet Cong. The Viet Cong, drawn from communist sympathizers in the South, were not regular troops in uniform; instead, they were guerrillas who wore peasant clothing and blended in with the villagers after conducting hit-and-run raids against American or South Vietnamese troops.

It was nearly impossible for American troops to fight such an enemy without hurting some innocent civilians. The American military attacked villages whence sniper fire had come (one officer declared that he had had to destroy a village in order to save it) and decreed whole areas to be free-fire zones, where anybody who moved was assumed to be the enemy. The chemical Agent Orange was used to defoliate certain areas, in order to deprive the Viet Cong of food. Napalm, a burning jelly, was dropped on centers of enemy fire; inevitably, some children were hurt. In the My Lai massacre of March, 1968 (made public in 1969), all the people in a village were killed by American troops under the command of Lieutenant William Calley.

Such suffering led all dissenters to question whether the war met the "proportionality" criterion; some dissenters even condemned the war as genocidal. Defenders of the war effort pointed out that the Viet Cong also committed atrocities and that the perpetrators of My Lai were finally subjected to American military justice.

THE DEBATE AFTER THE WAR'S END

In April, 1975, the North Vietnamese, having signed a peace agreement with the United States in January, 1973, overran and conquered South Vietnam. As a result, the United States admitted, by airlift, a wave of refugees. Contrary to the fears of earlier American administrations, the loss of South Vietnam did not lead to a communist advance to Hawaii or even to the fall of all of eastern Asia; the only other Asian countries to become communist were Vietnam's neighbors, Laos and Cambodia. By 1979, however, the repressiveness of the communist regime led to another massive flight of refugees, this time by boat; ironically, at least a few of the new refugees were former Viet Cong. The results of defeat started a new debate in America.

In 1978, historian Guenter Lewy published a history of the Vietnam War, defending American intervention in that conflict; in 1982, magazine editor Norman Podhoretz did the same thing. Both looked back on the Vietnam War as a noble effort to defend a free people against communism; so also did the president of the United States during the 1980's, Ronald Reagan. Political philosopher Michael Walzer, in *Just and Unjust Wars* (1977), condemned the means used in the Vietnam War without thoroughly discussing the issue of the war's rationale. In 1985, former president Richard M. Nixon published *No More Vietnams* defending his administration's Vietnam policy. Podhoretz's view, that post-1975 communist repression provided a retrospective justification for the American war effort of 1965 to 1973, never won a great following among academics or the general public. By the end of the 1980's, as the Cold War ended, the question of the morality of the war was still controversial among historians and journalists.

Violence

DEFINITION: Intentional infliction of physical or emotional harm or injury

TYPE OF ETHICS: Personal and social ethics

SIGNIFICANCE: It is a matter of debate whether violence is ever justified in, for example, a just war or the revolutionary overthrow of a tyrannical regime.

When people think about violence, they tend to think most often of a person being physically assaulted, raped, or murdered. As Robert McAfee Brown has noted in his book *Religion and Violence*, however, violence may be either personal or institutional, either overt or covert. Thus, personal overt violence may be physical assault. Personal covert violence could be psychological or emotional abuse of another person. Institutional overt violence may take the form of war

or revolution. Covert institutional violence may take the forms of repression, racism, or the denial of human rights. This article will be primarily concerned with issues of institutional violence—just war theory, violence and the Civil Rights movement, violence and revolution in liberation theology, and Marxism.

It is not clear whether violence or aggression is a natural part of the human species or a learned behavior. Thomas Hobbes, the author of *Leviathan* (1651), advocated a strong authoritarian government, partly using arguments based on a naturalistic concept of aggression. Chapter 13 of *Leviathan*, the famous passage on the “Natural Condition of Mankind,” claims that because of a kind of natural equality, human beings are, in their natural condition, always in a state of war, a *Bellum omnium contra omnes*, a “war of all against all.” He characterized the life of man as “solitary, poore, nasty, brutish and short.” He held to a dim view of human nature. Behavior arises because of “aversions” from fear and want and the desires for security and gain. A commonwealth becomes a necessary antidote to the horrors of human nature.

From a psychoanalytic point of view, Sigmund Freud argued that aggression was a natural human instinct. In his early writings, he developed the idea of instinctual conflict within the human psyche between two principles: the pleasure principle and the reality principle. The pleasure principle is the most impulsive instinct in driving the organism toward immediate gratification. The reality principle, however, operates as a rational mechanism that allows the organism to defer gratification and to sublimate potentially destructive wishes by means of a redirection of energy toward work. Both principles operate to reduce stress. Freud also discovered a compulsion on the part of neurotics to repeat past negative experiences as a defensive measure that often turned self-destructive. This led Freud to postulate the death instinct, or Thanatos. The death instinct preserves the organism from threats of death. When it confronts such threats, aggression results. Directed at the self, aggression becomes self-destructive.

Konrad Lorenz worked out a theory of aggression based on Charles Darwin's theory that struggle is pervasive in nature and in evolution. It appears in the struggle for survival, the defense of offspring, and the improvement of the species. The question therefore arises, “Does aggression play a positive and necessary role in furthering the organization of the human

species?" That aggression can be destructive and harmful is indisputable, but can aggression be directed rightfully for the just pursuit of good and beneficial consequences? Can violence be a force for good?

JUST WAR THEORY

Saint Augustine, in *The City of God* (413-427), argues that not all homicide is murder. Even God, the supreme authority, makes exceptions to the law against killing. The law against killing, says Augustine, is not broken by those who wage war by the authority of God or impose the death penalty by the authority of the state. Thus, Augustine sets up the state and God as authoritative and just sources of power. Here, then, is one of the criteria for waging a just war—it must be declared by a legitimate authority.

Aggression may also be justified on account of the wickedness of a neighboring nation. In Augustine's opinion, honest people do not go to war against peaceful neighbors. Thus, the cause must be just. It is not enough to wage war to increase one's borders. The increase of the empire may be justified, however, by the wickedness of those against whom war is waged.

The increase of empire was assisted by the wickedness of those against whom just wars were waged. In Augustine's words, "For it is the injustice of the opposing side that lays on the wise man the duty of waging wars; and this injustice is assuredly to be deplored by a human being."

In the thirteenth century, Thomas Aquinas gave fuller exposition to the just war theory. In answer to the question "Is it always sinful to wage war?" Aquinas set forth criteria for a just war. First, there must be a declaration on the part of a legitimate authority—the ruler of the state, for example. War may not be declared by a private individual. It is not the business of the private individual. Second, a just cause is required. Those who are attacked should be attacked because they deserve it, on account of some fault. Third, war should be waged with the right intention so that either good is advanced or evil is avoided. Fourth, the outcome of war must be peace. Fifth, a just war must avoid inordinate and perilous arms.

Martin Luther, in his political tract "Temporal Authority: to What Extent It Should be Obeyed" (1523), formulates the two-kingdoms theory, a theory obviously acquired from Augustine's *The City of*

God—civitas Dei (spiritual authority) and *civitas mundi* (earthly authority). Luther attempts to answer questions concerning the division of powers between Church and state. Is the Church an earthly power? Can secular rulers claim spiritual authority? Luther recognized the secular authority of the state and the spiritual authority of the Church. Each has its own realm. Each realm is a tool of the *Regnum Dei* (Kingdom of God) to fight the *Regnum diaboli* (Kingdom of the Devil). The state's weapons are law, power, force, and authority. The Church's weapons are faith and the Gospel. In effect, the individual becomes bifurcated into a public person and a private person. As a private person the individual abides by the gospel of love, but as a public person the individual may serve the state with the sword to inflict punishment on wrongdoers. The two-kingdoms theory was used by the Lutheran State churches in Germany to remain neutral in the face of Nazism (Ansbach Decree, 1935).

VIOLENCE AND THE CIVIL RIGHTS MOVEMENT

The American civil rights leader Martin Luther King, Jr., embodied a nonviolent philosophy of social change. He was catapulted to public attention by the bus boycott in Montgomery, Alabama, in 1955. He led voter registration drives and a desegregation campaign. His famous March on Washington eventually led to the signing of the Civil Rights Act in 1963, and, in 1964, he won the Nobel Peace Prize. His influence waned after the Watts riots in 1965. He came to his philosophy of nonviolent resistance through reading Henry David Thoreau's "Civil Disobedience" (1849). He also studied Walter Rauschenbusch's *Christianity and the Social Crisis* (1907), which laid the theological foundations for Christian social action and connected socioeconomic conditions to spiritual welfare.

Karl Marx sharpened King's consciousness of the gap between superfluous wealth and abject poverty. King was also influenced by Mohandas K. Gandhi's concept of *satyagraha*—"truth force" or "love force"—which advanced a love ethic as a powerful instrument of social and collective transformation. Gandhi presented the method of nonviolent resistance as the only moral way out for oppressed people. Reinhold Niebuhr refuted the false optimism of liberalism, and his work helped King to see the destructive power of sin not only at the level of personal life but also at the social, national, and international

levels. E. S. Brightman and L. Harold Dewolf, King's Boston University professors, insisted, in their philosophy of personal idealism, that personality is ultimately and cosmically real. This idea laid the ground for conceiving a personal God and the concept of cosmic backing for justice and the dignity of human beings.

King was convinced that love is an instrument of social transformation and that suffering is to be accepted without retaliation because unearned suffering is redemptive. Hate destroys, but love builds up. King set forth his method of nonviolence in the following principles: ascertain the situation of justice, attempt revolution by dialogue, undergo personal purification and accept violence, and use direct nonviolent action. In his famous "Letter from a Birmingham Jail," King also delineated several principles of nonviolent direct action: do not be cowardly; do not seek to defeat the opponent, but seek friendship and understanding; defeat the forces of evil, not people; accept suffering without retaliation; reject inward violence; and have faith that justice has a cosmic backing.

Malcolm X, King's contemporary in the leadership of the African American Civil Rights movement, rejected King's nonviolent philosophy and advocated his own brand of social revolution, which made room for violence. Malcolm X believed that when the law failed to protect African Americans, African Americans were justified in using arms to protect themselves from harm at the hands of whites. He believed that it was criminal to remain passive in the face of being attacked. He not only encouraged self-defense but also mandated it. In his own words, "I am for violence if nonviolence means we continue postponing a solution to the American black man's problem—just to avoid violence. I don't go for nonviolence if it also means a delayed solution."

VIOLENCE AND LIBERATION THEOLOGY

As has been shown, Christian thinkers have concerned themselves with the ethics of violence. Attitudes toward institutional forms of violence have included just war, holy crusades, pacifism, and civil disobedience. With liberation theology, Christian thinkers took seriously the question of a just revolution. Dom Helder Camara, a bishop in Recife, Brazil, believed that a repressive state starts a spiral of violence through institutional injustice that leads the op-

pressed to revolt. In his eyes, people had a right to revolt against an unjust government. Yet he cautioned that revolt would only lead to more repressive measures on the part of the government. Because of the fear of brutal retaliatory measures on the part of the state, Camara advocated a nonviolent approach.

A Colombian cleric, Camilio Torres, was exasperated by the brutality of the repressive state and believed in the people's right to revolt. Unlike Camara, however, Torres did not turn to passivism out of fear of the military and police apparatuses of the state. Instead, Torres left the church and joined guerrilla forces in the mountains to overthrow the unjust government. He believed that the essence of Christianity consisted in the love of one's neighbor. He also concluded that the welfare of the majority could be attained only through a revolution. Taking state power was necessary to complete the teaching of Jesus Christ to love one's neighbor. According to Torres, love must be embodied in social structures and the concern for well-being must be translated into a program for change. If those in power will not willingly share power, then the only other effective means of change is revolt. Revolution becomes obligatory for Christians in order to realize their love of humanity. In the viewpoint of Torres, there can be a just revolution.

Hugo Assmann, a Brazilian philosopher and theologian, argues for a Third World anti-imperialistic revolution for a universal and equitable share of the world's goods and for antioligarchic revolutions for political freedom. Assmann defines the world as a world in conflict. He argues for a language of liberation denouncing domination, articulating the mechanics of dependence, opposing capitalist economic systems, and breaking with unjust political governments.

Gustavo Gutierrez, a Peruvian priest, points out that the unjust violence of the oppressor is not to be equated with the just violence of the oppressed. Thus, he makes a distinction between just violence and unjust violence. Repression is unjust, but revolt against tyranny is just. For Gutierrez, the goal of the struggle against institutional injustice is the creation of a new kind of human being. The Exodus of the Hebrew slaves from Egypt serves as the model for active participation in the building of a new society. Christian brotherhood, according to Gutierrez, must be understood within the context of class struggle. Class

struggle, in his opinion, is a fact; therefore, neutrality is impossible. Universal love cannot be achieved except by resolutely opting for the oppressed, that is, by opposing the oppressive class.

In the view of José Miguez Bonino, of Argentina, history is a dialectic that implies a certain violence for the emergence of the new. Hence, violence will be accepted in the struggle for justice or rejected in the state's attempt to create law and order at all costs. Miguez Bonino agrees with Gutierrez and Assmann that class struggle is a fact. On one side, the dominant class tries to maintain the status quo; on the other, the oppressed classes struggle for a new society.

VIOLENCE AND MARXISM

The question of violence, in liberation theology, had to do with making Christian love effective in a situation of oppression. The issue of violence for Marxism has to do with the relationship between means and ends in the struggle for social transformation. That Karl Marx was a passionate and ardent revolutionary goes without saying. His advocacy of violence must be carefully regarded in the context of his writings. In his "Introduction" to *Towards a Critique of Hegel's Philosophy of Right* (1844), Marx claims that the weapon of criticism cannot supplant the criticism of weapons and that material force must be overthrown by material force.

In the famous *Communist Manifesto*, written on the eve of the 1848 revolutions, Marx clearly regarded the takeover of state power as the aim of the Communist Party: "The immediate aim of the communists is the same as that of all the other proletarian parties: formation of the proletariat into a class, overthrow of the bourgeois supremacy, conquest of political power by the proletariat."

Speaking in Amsterdam in 1872, Marx made it clear that the use of violence varies from circumstance to circumstance. In his own words, "there are countries like America, England . . . and Holland where the workers can achieve their aims by peaceful means. . . . [I]n most of the countries . . . it is force that must be the lever of our revolutions."

Marx believed that violence may be necessary to effect a socialist revolution, but he was not dogmatic and absolute about the use of violence. He also was not adamant about the velocity of the transformation to socialism. For Marx, violence was a means, not an end.

What Marx was unbending about was the fact that class struggle involves violence, coercion, and repression. Workers are exploited and alienated. Because of propertylessness, workers are coerced into selling their labor power for means of subsistence. If they try to organize themselves, mobilize, and politicize their interests, they are met with repression. Violence breeds violence. The workers' revolution may require violence.

Mikhail Bakunin, an erstwhile companion of Marx, believed that destruction was a necessary tool of social change. Georges Sorel, who lived from 1847 to 1922, was a syndicalist Marxist who denied the then-popular theory that capitalism would collapse because of its own contradictions. He espoused a radical brand of revolutionary syndicalism. In 1906, in *Reflections on Violence*, he set up class war as the very essence of socialism. Acts of violence, he believed, would create a workers' morality, destroy the bourgeoisie, and lay the foundations for socialism.

Vladimir Ilich Lenin believed that the Marxist doctrine of the dictatorship of the proletariat meant the seizing and holding of state power by the use of violence. Karl Kautsky argued in *Terrorism and Communism* (1919) that Lenin's concept of the dictatorship of the proletariat was leading away from the essence of socialism. Leon Trotsky replied, in his own book *Terrorism and Communism* (1920), that a violent revolution was necessary because parliamentary means were ineffective. The revolutionary class should attain its end by any means at its disposal—even terrorism. György Lukács decried Kautsky's peaceful transition to socialism and denied the validity of the question of the legality or illegality of means. For him, what counted was what would be most successful in achieving social transformation. A sense of world history and the sense of the world mission of the proletariat would determine the question of tactics and ethics.

Virtual reality

DEFINITION: Computer-generated experiences meant to resemble in form or content the perceptual experience of reality

TYPE OF ETHICS: Scientific ethics

SIGNIFICANCE: Virtual reality is designed to be the most visceral possible form of representation. It therefore raises all the issues raised by representation generally, involving responsible and irresponsible portrayals of people, social groups, and issues; the function of ideology within representation; and the ability or desirability of art to instruct people morally. In addition, virtual reality intensifies debates over whether "mere" representation is ultimately innocuous, or whether its

effects on the world are significant enough to merit moral concern or even legal regulation.

Virtual reality (VR) is a computerized system of data presentation that allows the user to project himself or herself into a simulated three-dimensional space and move about in that space, introduce other objects into it, change the positions and shapes of objects already there, and interact with animate objects in the space. VR was made possible by the enormous increase in computer memory and data-processing capacity, even in personal computers (PCs), and by the development of miniaturized video and audio devices and motion sensors that give the illusion of motion and of touching and manipulating material objects. Other descriptive names for this technology are artificial reality, virtual environment, telepresence, and immersive simulation, but VR is the preferred term.

SOFTWARE AND PRESENTATION DEVICES

The memory software of VR consists of many, many points of a three-dimensional grid, built from either an actual scene or a computer-generated space. The array of coordinates must be complete enough to allow the space to be rotated on three axes and the viewpoint to be moved similarly. In addition, other objects, animate and inanimate, must be held in memory with complete manipulability (including the tactile sensing of shape, inertia, texture, and so forth); and provision must be made for the creation of new objects with equal flexibility. Clearly, this technology calls for enormous memory capacity and complex programs to accomplish the apparent motion.

VR presentations can be very simple, such as viewing a scene on a PC monitor, or very complex, such as donning a helmet containing a miniature television screen for each eye, to give stereoscopic vision; headphones for directional sound; motion sensors to slew the scene left or right, up or down as the viewer's head moves; and a so-called Dataglove both to accept motion commands from the hand and to give back pressure information to define objects, motion, and so forth. Presentations between the simple and the complex seem to be missing; at the upper end, a whole-body sensing suit is expected to be available in the future. This very brief description of equipment may suggest why VR had to wait until microchip technology made the necessary memory available within reasonably sized computers.

POSITIVE APPLICATIONS OF VIRTUAL REALITY

Many uses of VR raise few if any ethical questions. It is used, for example, to train surgical students on a "virtual" patient before they actually perform an operation. Experienced surgeons can practice a complex new procedure before using it in the operating room. Operators of heavy construction equipment can train on VR devices, and in some cases controls have been redesigned for greater simplicity and efficiency on the basis of such experience. Physiological chemists can manipulate molecules in VR to see—or feel—how they fit together in three dimensions. Attractions and repulsions of functional groups in the molecules are programmed into memory, and the user can actually feel, through the Data-glove, when a drug molecule fits or fails to fit in a cellular structure, or when a virus clicks into place on a cell receptor. Pilots can be trained in VR simulations so lifelike that an hour of training is considered as effective as an hour of actual flying time. In fact, the Air Force was an early major developer of VR presentations. Architects and their clients can stroll through a building that has yet to be built, to get the feel of it and to identify where the design needs to be changed for greater comfort. These are all fairly unexceptionable applications.

POSSIBLE ETHICALLY NEGATIVE ASPECTS

One of the most frequently voiced criticisms of VR is that it makes possible what might be called participatory pornography—not simply reading, video viewing, or telephone talk, but all these combined but together with the tactile feedback of a whole body suit that will allow virtual sexual experience of all varieties. Some designers and marketers of VR equipment speak enthusiastically of such pornography as an exciting prospect for the future. Critics view it as a real moral menace in a society that is already awash in casual sexuality. Others believe that it is merely an extension of the pornography that has always existed.

One commentator spoke sourly of "the myth that sex and pornography are the keys to understanding the growth of all new technologies." Perhaps the real menace here is that VR can be a powerful new device for furthering the alienation of individuals by making artificial experience easier and more exciting than actual human contact. This is true not only of VR sex but also potentially of all VR experience except training applications. Another aspect of this ethical con-

cern lies in the enormous amount of time and attention that could be wasted because of VR. In a society that already spends a tenth of its time in front of television, imagine what the effect would be if every household had its own VR.

Other questions raised by VR that are perhaps medical rather than ethical but are worth mentioning: Can the tactile feedback become vigorous enough to cause physical damage? VR causes physical reactions for some users (such as nausea and actual vomiting in flight simulations); can it cause mental damage as well? Is this a technology that should be kept away from the undeveloped psyches of children and restricted to adults? All these ethical questions have yet to be addressed.

In sum, VR appears to be simply another new technology that can be used well or badly. Its capacities for good and evil seem not much greater than those of electric power, the automobile, or the telephone. The decisions lie, as always, in human hands.

Virtue

DEFINITION: Moral excellence, or a specific morally admirable quality, value, or characteristic

TYPE OF ETHICS: Personal and social ethics

SIGNIFICANCE: In most classical ethical systems, virtue both constitutes morality and stands as its ultimate goal or aim—an idea encapsulated in the phrase “virtue is its own reward.”

Each thought and act a person takes sets in motion two tendencies: a greater likelihood to engage in similar thoughts and acts, and a change in the character of the person. Thinking and action that lead a person away from life, goodness, and perfection of inner nature create *vice*—evil or wicked behavior and character. Conversely, those thoughts and acts that are life-promoting, aim for goodness, and work to perfect the inner nature lead to *virtue*—moral excellence of behavior and character. When people choose vice, their inner natures change and it becomes easier for them to choose the bad and more difficult for them to choose the good. In contrast, choosing virtue changes the inner nature so that it becomes easier, and more natural, to choose good rather than evil. Furthermore, this same principle appears to be operative with groups of individuals. For example, it seems quite logical that if a society wishes to prosper and to promote the well-being of its members, it should teach and encourage those people to pursue that which is virtuous. After all, is it possible to have a good society without good people? It is, therefore, in the best interests of both the individual and society to identify, promote, and practice those principles that work toward the ultimate good.

Numerous lists of virtuous principles have been

put forth by diverse cultures over thousands of years to serve as moral guidelines for those particular cultures. One such list, the Seven Virtues, which includes the cardinal and the theological virtues, has been particularly influential in Western thought. Although the Seven Virtues deserve special attention, it is important to consider conceptions arising from other cultures. Only by doing so can the attempt be made to identify virtues that are both universal and, perhaps, eternal.

CONFUCIAN VIRTUE

Confucius, who lived in the sixth century B.C.E., was the most influential person in the shaping of Chinese ethics. In *The Confucian Analects*, he describes himself as a transmitter of ancient wisdom, particularly in regard to distinctions between right and wrong and the characteristics of a virtuous character. In *The Doctrine of the Mean*, Confucius considers virtue to be a mean between the extremes of excess and deficiency. In the short treatise known as *The Great Learning*, steps for promoting personal and governmental virtue are described.

Confucianists believe that there are five primary virtues: charity, righteousness, propriety, wisdom, and sincerity. All these virtues are described in detail in *The Confucian Analects*. Charity is the virtue of human relations, the practice of benevolence and respect to others. Confucius believed that this virtue was summed up in the most important principle guiding a person’s life: the golden rule (Do unto others as you would have them do unto you). Righteousness is the virtue of public affairs: duty, responsibility, and the following of just principles. Propriety is concerned with fitting and proper behavior in human affairs. Confucius taught that propriety must always be accompanied by charity to keep a person from pride. Wisdom about humans, divine commands, and language is extolled by Confucius as the virtue of personal growth that comes only from study and practice. The final virtue, sincerity, is concerned with truthfulness and faithfulness in interactions with others.

BUDDHISTIC VIRTUE

Siddhārtha Gautama, who lived in India in the sixth century B.C.E., taught that right thinking and self-denial would enable a person to reach true wisdom and, ultimately, nirvana—a state free of all suf-

fering and sorrow. Gautama was given the title of Buddha—one who embodies the divine characteristics of virtue and wisdom. The Eightfold Path, consisting of rightness of views, speech, thoughts, actions, living, recall, exertion, and meditation, was taught by the Buddha as the way to nirvana. In the *Dhammapada*, a collection of proverbs and moral principles, it is said that a person can rightly be called a *brāhmin*—a Hindu of the priestly class—if that individual leads a life that expresses such virtues as patience, self-restraint, contentment, sympathy, and mildness. As precepts for all Buddhists, the Buddha set forth five commandments: Abstain from killing, stealing, adultery, lying, and strong drink. An interesting feature of Buddha's teaching was that these moral principles were interpreted particularly stringently for those aspiring to be monks or nuns. Thus, while the ordinary person was enjoined to simply refrain from adultery, absolute abstinence from all sexual activity was required of monks and nuns.

The closest Buddhist teaching to a list of virtues is contained in the six *pāramitās*—perfections of character. The *pāramitās* are virtues of love, morality, patience, courage, meditation, and knowledge. Followers of the Buddha are enjoined to exercise these virtues perfectly.

MUḤAMMAD AND ISLAM

The Arabian prophet Muḥammad, who lived from 570 to 632, wrote in the Qur'ān (the sacred book of Muslims) that it is the duty of all people to believe in Allah (the Muslim name for God) and to live a life of high moral standards. Although the Qur'ān presents numerous moral principles such as kindness to parents, kin, and strangers, the sum of Muḥammad's teaching consists of believing in Allah and living a virtuous life according to the Five Pillars of Islamic law: the creed, the prayer ritual, beneficence (loving acts to others), fasting, and the pilgrimage, or *hajj*, to Mecca. The golden rule was also taught by Muḥammad and could plausibly be considered a sixth primary moral duty.

TEUTONIC VIRTUES

Tacitus, the Roman historian of the first and second centuries C.E., describes in his book *Germania* the social and moral lives of the Teutonic peoples—inhabitants of northern Europe. The Teutonic virtues identified by Tacitus in the first century have been

greatly influential in the shaping of Western ideals in the succeeding centuries. Eight of these virtues have particular relevance to nobility of character: endurance (of purpose), loyalty, generosity, hospitality, truthfulness, modesty, marital purity (abstinence from adultery), and courage—considered the most important virtue by the Teutons.

VIRTUE IN CLASSICAL GREEK PHILOSOPHY

The great Greek philosophers of the fifth and fourth centuries B.C.E., Socrates, Plato, and Aristotle, devoted much attention to the subject of virtue. Their teachings on virtue have a timeless quality, shaping and stimulating modern thinking on moral matters. The ideas of Aristotle will be discussed first; Socrates and Plato will be dealt with in the discourse on the Seven Virtues.

In the *Nicomachean Ethics*, Aristotle distinguished between theoretical and practical virtues. The three theoretical virtues included wisdom (the ability to order knowledge into an ultimate system of truth), science (the ability to draw knowledge from demonstrations), and understanding (the ability to apprehend the truths that lie at the roots of knowledge). The two practical virtues were art (the ability to know how to produce or create things) and prudence (the ability to know how to act well in life's affairs). Prudence is considered to be the virtue most applicable to living a good moral life.

Like Confucius, Aristotle also proposed a doctrine of the mean, arguing that the essence of virtue is a middle ground between the vices of excess and deficiency. Thus, the virtue of courage can be considered the middle ground between cowardice on one hand and impulsiveness on the other. Aristotle did not intend to convey the notion that people should therefore look for the middle ground between leading a moral versus an immoral life. On the contrary, he said that people should find virtue and live it to the fullest. For example, the soldier should not settle for a middle ground between rashness and cowardice, but instead should serve as courageously as possible.

THE SEVEN VIRTUES IN WESTERN THINKING

Socrates, according to Plato in the *Republic* (book 4), contends that the ideal state would exemplify and promote four main qualities: wisdom, courage, temperance, and justice. Although the implication in the *Republic* is that these virtues were known and taught

by the predecessors of Socrates, it is Plato who first identifies these as the core components of the noble moral character. The four qualities are called the cardinal virtues (from the Latin word *cardo*, meaning “hinge”), because all other virtues are seen to hinge, or be dependent, on them. These four virtues, according to Plato, promote health and harmony of the soul—Plato’s definition of virtue. These virtues also correspond to Plato’s conception of the soul: Wisdom is the virtue of the intellect, courage that of the will, temperance that of feelings, and justice that of the soul’s relation to others—that is, society.

The acceptance of the four cardinal virtues as primary qualities of the moral life can be seen in the writings of subsequent Greek and Christian philosophers. Aristotle centered his *Nicomachean Ethics* on them, although he opposed the Platonic idea of innate virtue, arguing instead that they are acquired through experience. The Stoic school, opposing the Epicureans, who were promoting pleasure as the ultimate good, contended that virtue is the only good. The fourth century B.C.E. Stoic philosopher Zeno of Citium taught that people should live their lives in accordance with the divine plan of nature and that virtue alone was important in living the good life.

Among the early Christian writers, Origen, born in 185, taught that science and philosophy could be in accord with Christian teachings, and was among the first Christian writers to argue that the four cardinal virtues were essential to the Christian moral character. The crucial step in Christianizing the cardinal virtues was taken by Saint Augustine, who interpreted the cardinal virtues in light of the love of God: prudence is love’s discernment; courage, love’s endurance; temperance, love’s purity; and justice is the service of God’s love. It is in the teachings of Saint Augustine that the cardinal virtues are placed alongside the theological virtues of the New Testament (I Corinthians 13): faith, hope, and love. Among later Christian philosophers, Saint Thomas Aquinas in the thirteenth century, preeminent as a champion of the virtuous life, presents in works such as *Summa Theologica* the seven virtues as the chief signs of the Christian moral character. More recently, the great Christian author of the twentieth century, C. S. Lewis, in his classic defense of the Christian faith, *Mere Christianity* (1943), wrote that proper Christian behavior manifests the qualities of the seven virtues.

THE SEVEN VIRTUES DESCRIBED

Prudence means exercising common sense and sound judgment in practical matters, carefully considering the consequences of one’s actions. It involves forethought, caution, discretion, discernment, and circumspection. It is not the same thing as intelligence; great geniuses may act imprudently. The prudent person can speak the “fitting” word at the proper time, knows when and how to promote the interests of both self and others, and knows how to arrange his or her affairs for the greatest benefit.

Temperance refers to moderation and self-restraint in the pursuit and expression of all pleasures. The essence of temperance is self-control, not, generally speaking, complete abstinence. It involves moderation with food, chastity with sexuality, and humility with great success. A person lacking in temperance would be given to gluttony, promiscuity, and arrogance. Conversely, too much restraint would leave a person with austere eating habits, excessive prudishness in sexual behavior, and a self-deprecating personality.

Justice demands that affairs among people be guided by fairness, impartiality, and equality. Aristotle divided justice into general and particular categories. General justice can be construed as a social justice in which societies are organized in such a way that all members contribute to and benefit from the common good. Particular justice is subdivided into corrective justice—the fulfilling of contracts between people—and distributive justice—fairness and impartiality in the distribution of goods and burdens. The just person is honest, is truthful, stands for what is right, and keeps his or her word.

Courage is the ability to face danger and distress with endurance and purpose of heart. Courage involves not only withstanding evil but also attacking it and working to overcome it. The courageous person will stand for the moral right and persevere in it no matter how unpopular that may be. Bravery, determination, sturdiness, and tenacity are the characteristics of those who are courageous. Courageous people are not those who lack fear. Courageous people act in spite of fear, work to overcome their fears, and triumph in the face of fear.

Faith, according to the New Testament writer Paul (Heb. 11:1), is “the substance of things hoped for, the evidence of things not seen.” Faith, in the theological sense, involves apprehending, trusting, and hold-

ing on to spiritual truth. Although the context of faith in the writings of the apostle Paul certainly emphasizes the divine dimension, the importance of faith in the human condition cannot be ignored. The faithful person demonstrates the traits of loyalty, steadfastness, dependability, and trustworthiness. Faith works to bring and keep people together in marriage, politics, and religion (with God). It is the glue that binds one human heart to another. Infidelities of all sorts serve to separate even the closest of human relationships.

Hope is the expectation that one's desires will be realized. Hope is forward-looking, giving direction, purpose, and energy to life. The apostle Paul (Heb. 6:19) describes hope as the "anchor of the soul, both sure and steadfast." The person who hopes is stimulated to greater personal growth, works toward a better society, and believes in something better to come. Lack of hope—apathy, helplessness, and pessimism—saps life from individuals, brings stagnation to civilizations, and empties religion of its meaning.

Love is a transcending devotion to another. In his great discourse on love in I Corinthians 13:4-8, the apostle Paul describes love as "always patient and kind; it is never jealous; love is never boastful or conceited; it is never rude or selfish; it does not take offense, and is not resentful. Love takes no pleasure in other people's sins but delights in the truth; it is always ready to excuse, to trust, to hope, and to endure whatever comes. Love does not come to an end." Love is affective; it involves feelings of closeness, tenderness, and passion. Love is behavioral; it has to do with how one person acts and intends to act toward another. Love is cognitive; it involves knowing another, wishing for and thinking of another's best. The loving person cares for others, is benevolent, and stands against hatred and malice wherever it appears. In I Corinthians 13:13, love is considered to be pre-eminent over faith and hope. Indeed, many have called love the greatest of the seven virtues.

It is notable that in religiously inspired lists of virtues, love is almost always included and occupies a prominent position. In many secular lists, such as the cardinal virtues, love is often absent or is only indirectly mentioned. Perhaps to consider the greatest good, God, necessitates the consideration of the greatest virtue, love.

Aristotle. *On Man in the Universe*. Introduced and edited by Louise Ropes Loomis. New York: W. L. Black, 1943. English translations of five of Aristotle's greatest works are presented: *Metaphysics*, *Parts of Animals*, *Nicomachean Ethics*, *Politics*, and *Poetics*. The first seven books of *Nicomachean Ethics* are particularly concerned with virtue and closely related issues.

Darwall, Stephen, ed. *Virtue Ethics*. Malden, Mass.: Blackwell, 2002. Anthology collecting the major classical texts in virtue-based ethical theory (Aristotle, Hutcheson, Hume), as well as contemporary essays by Philippa Foot, Alasdair MacIntyre, and others.

Erikson, Erik H., ed. *Adulthood*. New York: W. W. Norton, 1978. Erikson's theory of personality development is one of the few modern psychological theories to integrate the notion of virtue into psychological growth. Erikson's description of the virtues attainable in each development stage is presented in the first chapter of the book, "Dr. Borg's Life Cycle."

Fagothey, Austin. *Fagothey's Right and Reason: Ethics in Theory and Practice*. 9th ed. Columbus, Ohio: Merrill, 1989. A general introduction to the study of ethics written in a style accessible to the novice reader. Many of the chapters are relevant to the topic of virtue; however, the sixteenth chapter, "Habit," specifically goes into detail regarding the cardinal virtues.

Lewis, C. S. *Mere Christianity*. London: Collins, 1988. This book, written by a Cambridge scholar, is a lucid exposition of the Christian faith and is considered to be among the greatest Christian works ever penned. Book 3, "Christian Behavior," relates each of the seven virtues to Christian living.

MacIntyre, Alasdair. *After Virtue: A Study in Moral Theory*. 2d ed. Notre Dame, Ind.: University of Notre Dame Press, 1984. One of the most significant works of twentieth century moral philosophy. In an attempt to revitalize moral theory, MacIntyre redefines a "virtue" as a value necessary to the preservation of a specific institution of social practice.

Plato. *The Collected Dialogues of Plato*. Edited by Edith Hamilton and Huntington Cairns. 1961. Reprint. Princeton, N.J.: Princeton University Press,

1984. English translations of five of Plato's greatest works are presented: *Apology*, *Crito*, *Phaedo*, *Symposium*, and *Republic*. Book 4 of the *Republic* deals specifically with the cardinal virtues. It is here that these virtues are first accepted as the standard virtues of the ancient world.

Virtue ethics

DEFINITION: Practical approach to both understanding and living the good life that is based on conceptions of moral excellence

TYPE OF ETHICS: Theory of ethics

SIGNIFICANCE: Virtue ethics eschews or minimizes talk of rules, principles, obligation, duty, or consequences. Instead, it focuses primarily on the notion of the good or virtuous person: It seeks to develop a concrete and nuanced understanding of what such a person is like, and then to use that theoretical exemplar to guide actual behavior.

Everyday life and the actions that constitute it involve patterns of interaction. People do good and perform right actions not so much as a consequence of individual acts of moral reasoning but as a consequence of inherited patterns of right and wrong, good and bad. It is in taking responsibility for these inherited patterns that meaningful ethical life takes place, not in esoteric discussions and tentative moral actions related to new technologies, fads, and lifestyles that seek ethical justification. Certainly, discussions of new ethical challenges must take place, but support for and recognition of the importance of character, values, and virtues in everyday life must be recognized as imperative.

One's point of view is expressed in one's thoughts and actions. Actions manifest one's values, commitment, and character. Good character is not an accident. It requires discipline, reflection, and responsibility. A virtue is a reflection of good character because it is a pattern of action. It should not be suggested, however, that one's ethical life is isolated and

is developed apart from other people. One's virtues depend on others for their origin and sustenance—for their origin, because one usually inherits the virtues of parents, peers, and significant others; for their sustenance, because to sustain a pattern of action over a prolonged period of time, one needs encouragement and positive reinforcement.

FOCUSING ON HUMAN LIFE RATHER THAN HUMAN RULES

Much of modern ethics focuses on specific acts that are justified by rules or consequences. Virtue ethics focuses on good judgment as a consequence of good character. Beliefs, sensitivity, and experience are of more importance than are rules and consequences for determining one's ethical life. Because its focus is on human life rather than on human rules, virtue ethics becomes involved with various psychologies of ethics as well as with the ways in which gender, race, ethnicity, economics, and power shape character and thus the experience of virtue.

How is one fulfilled as a human being? Does fulfillment vary on the basis of gender, race, ethnicity, and economic position? The answer to these questions is of vital importance to virtue ethics.

DIFFICULTIES

Since virtue ethics gives a significant role to feelings in the ethical life, many wonder where the consistency necessary for ethical living, independent of the subjectivity of daily life and transitory human feelings, exists. If feeling is central to virtue, then the ethical life is built on the shifting sands of human emotion. Those who practice virtue ethics recognize this difficulty and agree with the thrust of the critique. Yet it must be recognized that one reason for the growth of virtue ethics is that "rules and consequences ethics" leaves out an essential part of human life—feelings. All ethical theories and practice must deal with the whole person: mind and feelings, rules and consequences.

Virtue ethics presupposes that one will be drawn to the personally perceived good. Christians suggest, however, based on the doctrine of Original Sin, that humans are more attracted to the bad than to the good. The increase in the prison population as well as daily experience may cause many non-Christians to fear an ethic based on human perfectibility. One cannot say, "I will be good someday, but not today," they

claim. One must see one's duty and do it. These individual acts are important and cannot wait to become part of some overall pattern of living.

Virtue ethics, while reaffirming that people readily deceive themselves when searching for the good, prefers to speak about development. Human perfectibility is the base principle. Vice will always be part of that journey of perfectibility. Virtue is gained only in dealing with vices, but it is gained, say virtue ethicists, only because virtue is seen as better than vice.

Some virtues are part of any listing of virtues: justice, prudence, generosity, courage, temperance, magnanimity, gentleness, magnificence, wisdom. Yet there is no agreed-upon list of virtues. Some authors point out that there may be conflicts between some virtues—gentleness and justice, for example—that cannot be resolved. These authors suggest that the only way to resolve such conflicts is to give primacy to “rule and consequences ethics” rather than virtue ethics. Yet the challenge of human living is to deal with conflict in a constructive way, and virtue ethics holds that dealing with such conflicts will lead to growth in a person's ethical character.

Vivisection

DEFINITION: Invasive surgical experimentation upon living animals

TYPE OF ETHICS: Animal rights

SIGNIFICANCE: In current usage, “vivisection” carries a strong negative connotation. It is used by people opposed to the practice of animal experimentation in general, or by people condemning a specific experiment as cruel or unnecessary.

Formed from the Latin words *vivi* (living) and *sectio* (cutting), the word “vivisection” was used as early as 1707 to refer to an operation performed on a living animal. In both the nineteenth and twentieth centuries, people opposed to research on animals organized under the heading of “antivivisection” (for example, the National Anti-Vivisection Society). Since animal rights activists do not necessarily oppose all animal experimentation, however, “vivisection” usually is taken to refer specifically to operations performed without anesthesia or for trivial reasons.

Many or most scientists (and some animal rights advocates) assume that if the animals involved feel no pain or distress (for example, they are anesthetized), then no moral issues are raised by their use. The development of paralytic drugs in modern medicine created a problem. These strong muscle relaxants thoroughly immobilize the subject, allowing very delicate operations (like open heart surgery) to be performed, but when used alone (a practice called “chemical restraint”), they do not deaden sensations of pain. Chemical restraint is sometimes practiced on animals and human infants.

Voltaire

IDENTIFICATION: French writer and philosopher

BORN: François-Marie Arouet; November 21, 1694, Paris, France

DIED: May 30, 1778, Paris, France

TYPE OF ETHICS: Enlightenment history

SIGNIFICANCE: The author of *Candide: Or, All for the Best (Candide: Ou, L'Optimisme, 1759)*, Voltaire viewed morality as a commitment to justice and humanity that was based on the universal ethical precepts of natural law.

One of France's greatest writers, Voltaire distinguished himself as a historian, novelist, dramatist, poet, philosopher, and crusader against religious intolerance. As a rationalist and Deist, he rejected the traditional Christian view of God and belief in the immortality of the soul.

He adhered to a natural religion, believing in an impersonal, remote deity whose attributes were beyond human understanding but who inspired a great sense of awe. Voltaire shared the belief of fellow Deists who considered the essence of religion to be morality, a commitment to justice and humanity.

Voltaire strongly believed that universal ethical principles were inherent in natural law and that the merit of human laws was determined by the extent to which they reflected such just and humane standards. Even though all religions derived from a universal rational source, the teachings of theologians and priests distorted the common truth, divided humanity, and perpetuated intolerance. Only under the guidance of enlightened thinkers who rose above superstition and prejudice could a rational morality be cultivated that would bring about human brotherhood.

In practice, Voltaire promoted a social ethic that was conducive to the harmonious interests of the entire society. In pursuing this goal, he was quite will-

Voltaire. (Library of Congress)

ing to accept socially useful beliefs that he personally rejected. Thus, he held that, even though the deity probably did not concern himself with human affairs, it was good for the people to believe that there are rewards and punishments for human actions. Among his deepest concerns was the happiness of the individual in society. In *Candide*, he satirized the view that this is the best of all possible worlds, but he nevertheless imagined that in time reason and enlightenment would lessen superstition and fanaticism and bring about a more harmonious social order. To this end, Voltaire remained a passionate advocate of individuals who had been denied justice, especially by the power of the Church, and of judicial reform.

Voting fraud

DEFINITION: Violations of laws governing the privilege of voting

TYPE OF ETHICS: Politico-economic ethics

SIGNIFICANCE: Voting fraud can not only unfairly affect the outcomes of elections but also contribute to corrosion of the basic legitimacy of democratic society. American courts have responded by passing down decisions that expand definitions of fraud and stress the importance of legitimacy.

To have the privilege of casting a ballot in the United States, a person must be an American citizen over the age of eighteen years and comply with relevant federal, state, and local statutes. The individual states set the conditions for voting under a basic framework laid down by the U.S. Constitution and its amendments. For example, a state may insist on voters registering before they vote but may not deny the right to vote to a person on any grounds prohibited by the Fourteenth, Fifteenth, Nineteenth, Twenty-fourth, and Twenty-sixth Amendments to the U.S. Constitution. The prohibitions include denying persons the vote because of their race or sex.

Moreover, while the individual states grant voting privileges, or the franchise, they must also comply with the Fourteenth Amendment's equal protection clause by setting and applying equal conditions to every person eligible to vote. In the United States, the franchise is thus considered a legal right, though it is not considered a basic human right.

THE ETHICS OF EQUAL PROTECTION

While the concept of equal protection has served as a potential legal standard for determining vote fraud for years, the Supreme Court first made that standard explicit in its 2000 *Bush v. Gore* decision. The Court made its ruling at a moment when charges and counter-charges of voting fraud were swirling around Florida's tightly contested presidential election. The Court's ruling applied the equal protection clause to stop a recount of votes in Florida, effec-

tively giving the national election to George W. Bush. The Court asserted that Bush and his supporters would be denied equal protection if Florida counted some, but not all, Florida ballots. At the same time, the Court did not consider other equal protection issues, such as whether Florida's African American voters might be denied equal protection because of discriminatory voting-list purges, absentee ballot irregularities, and possible misuse of certain kinds of voting machines and ballots.

While the U.S. Supreme Court majority attempted to limit the scope of their judgment to the specific facts of the case, it is unlikely that the logic of equal protection can be so easily contained. Equal protection has become a complicated, demanding standard posing serious ethical issues relating to all aspects of voting and elections throughout the nation's fifty states, with their diverse voting laws. The new standard has expanded the scope of fraud, making many laws open to legal challenge. What were once limited questions to be resolved by state courts are now national constitutional fraud issues. In the years immediately following the 2000 presidential election, the final outcome of this ethical debate remained far from clear.

W

Wage discrimination

DEFINITION: Payment of different wages to members of different social groups for reasons unconnected with job performance

TYPE OF ETHICS: Sex and gender issues

SIGNIFICANCE: Taken in the aggregate, wage discrimination violates such values as fairness, equity, and social justice. It is difficult to combat, however, because any single instance of the practice may seem justifiable to an employer, who may point to factors other than social identity that influenced the wages of a particular individual.

During the 1960's, various disadvantaged groups asserted their rights in the job market. The Equal Employment Opportunity Commission and various laws provided for equal access to jobs in the United States, but little was said about the compensation for those jobs. Studies quickly established that white men in the United States earned more than people of any other race-and-sex combination.

Business advocates quickly postulated reasons for the discrepancies, including differences in experience, intelligence, education, on-the-job training, occupational choice, and attachment to the labor force. Many studies focused on women, who, it was argued, are more prone to periodic absences resulting from child care responsibilities and also are more likely to leave their jobs for long periods, or permanently, to have children. These propensities make them less valuable in the long run, even if their daily performance while on the job is identical to that of men. Employers defended their right to invest less in workers who were less likely to stay around and pay back the investment. One argument thus became circular: Women were paid less because they had less training, and they were given less training because they were women. Defenses of lower wages for minority workers rested primarily on lack of experience and lower levels of education and training.

Various studies explored these reasons for wage

differences. They typically found about half of the differences between men's and women's wages to be explained by objective factors, leaving the other half of the difference unexplained, possibly a result of discrimination.

Walden

IDENTIFICATION: Book by Henry David Thoreau (1817-1862)

DATE: Published in 1854

TYPE OF ETHICS: Environmental ethics

SIGNIFICANCE: *Walden* provides a model of the proper ethical treatment of nature and serves almost as a handbook for an environmental ethics.

Henry David Thoreau's two-year experiment of living at Massachusetts's Walden Pond was on one level an effort to determine whether a person really needed the material possessions that were considered essential in mid-nineteenth century America. His book demonstrated that one could attain the good life by living in harmony with nature supplied only with the bare necessities. The first chapter, entitled "Economy," demonstrates that human needs are few; thus, there is no need to exploit nature to attain them. Much of the rest of the book attacks the acquisitive spirit. At bottom, Thoreau argues, materialistic values indicate not enterprise but a basic lack of spiritual self-reliance. In Thoreau's ethic, ownership of the land is invalid. Humans should act as stewards rather than squires.

Thoreau's own love of nature is illustrated in the intricate detail with which he describes the seasons, flora and fauna, natural processes, and Walden Pond

itself. If he measures and documents, plumbs the depths of the lake, scrupulously counts every penny spent in the building of his house, and ponders his profit after selling produce from his garden, it is to show that empirical science does have a use, but that it should be subordinate to a guiding spirit that respects and loves the natural environment rather than exploits it. *Walden* continually demonstrates “correspondences”; that is, clear relationships between the ethical life of humankind and nature, an interconnectedness that Thoreau believed deserved more acknowledgment and respect.

Wang Yangming

IDENTIFICATION: Chinese philosopher

BORN: November 30, 1472, Youyao, Zhejiang, China

DIED: January 9, 1529, Nanen, Jiangxi, China

TYPE OF ETHICS: Medieval history

SIGNIFICANCE: In *Instructions for Practical Living* (*Zhuan xi lu*, 1527), Wang rejected the Confucian dualism of principle and material force, insisting instead on the unity of knowledge and action in human affairs.

At the time that Wang developed his ideas, Confucianism had been a major religion in China for more than 1,700 years, from the time when the ideas of Confucius were gathered, along with commentaries, during the Han Dynasty (256 B.C.E.-220 C.E.). Confucianism was a secular religion emphasizing proper conduct and relationships learned by observation of exemplary individuals.

The eclectic writings of Confucianism were codified in the twelfth century C.E. by Zhu Xi, who clarified the notion of principle (*li*, somewhat like the Platonic “idea”), which acted through the mind and material things to create the world, physical and moral, that people perceive. Wang regarded this as an unacceptable dualism, insisting that principle and mind are one, that knowledge and action are inseparable and are related to principle and mind, and that

the way to understand these things is not through study of canonic writings, as Zhu Xi taught, but by direct investigation of one’s own mind to find the knowledge of the good that resides there. These ideas led to the practice of a Zen-like form of meditation. Wang’s ideas were influential in Chinese Confucianism well into the eighteenth century, and even later in Japan.

War

DEFINITION: State of armed combat between enemy states

TYPE OF ETHICS: Military ethics

SIGNIFICANCE: War raises many ethical questions, including attempts to determine when—and if ever—waging war is morally permissible and what means combatants may use to gain their objectives.

The starting point of all discussions of the philosophy of war is the just war theory first articulated by the fourth-fifth century North African philosopher Saint Augustine and developed by later medieval philosophers, including Saint Thomas Aquinas. According to that theory, waging war is morally permissible if and only if seven conditions pertain.

The first condition is that the war must be declared legally by rightful authority. Second, the war must be pursued for a morally just cause. Next, the war must be undertaken with a morally permissible intention. This condition rules out waging war for reasons of greed, cruelty, mere vengeance, or hatred. The fourth requirement is that the just cause behind the war must be reasonably probable. This condition aspires to limit the unnecessary, purposeless slaughter of human lives. The fifth requirement is that war must be waged only as a last resort. While this condition cannot be taken literally—for nations almost always have one more available maneuver prior to declaring war—the principle requires that all reasonable efforts be made to resolve disputes peacefully before resorting to violence.

The sixth and seventh requirements concern the actual conduct of war. Any war must achieve a good that is greater than the amount of harm produced by military action. Finally, a war must be fought by means that are not inherently immoral. This condition precludes directly killing innocent people, inflicting more injuries than necessary, torturing people unjustifiably, and otherwise not undertaking actions that go beyond the immediate necessities of successful combat.

Ethical Questions Posed by Just War Theory

- Is it possible to measure the benefits and devastation of war even though numerous elements of each are not comparable? For example, how can lives lost in present combat be weighed against future possible gains in liberty?
- Do the “rightful” authorities that are permitted to declare war include *all* legally established governments? Or, must such governments themselves be morally rightful authorities?
- Must the intentions animating declarations of war be entirely pure? Or, can they be mixed, so long as the primary intentions are morally permissible?
- Is it inherently wrong for a nation or a group of soldiers to fight for a just cause that is likely to be crushed by a more powerful and evil enemy?

DOCTRINE OF DOUBLE EFFECT

Just war theory addresses two aspects of the justification of war: the reasons and causes for fighting (*jus ad bellum*) and the means used to secure military objectives (*jus in bello*). Even if a nation is morally justified in waging war it may be morally unjustified in the way it conducts the war. The doctrine, or principle, of double effect is sometimes invoked to justify means that may be morally troubling that are used to secure military objectives. According to this doctrine, acts that bring about foreseen evil effects, such as the deaths of innocent people, are morally permis-

sible if and only if those same acts also produce good effects that outweigh the bad ones. Such acts are not inherently immoral because the evil effects are not the means to the good effects, and only the good effects are intended.

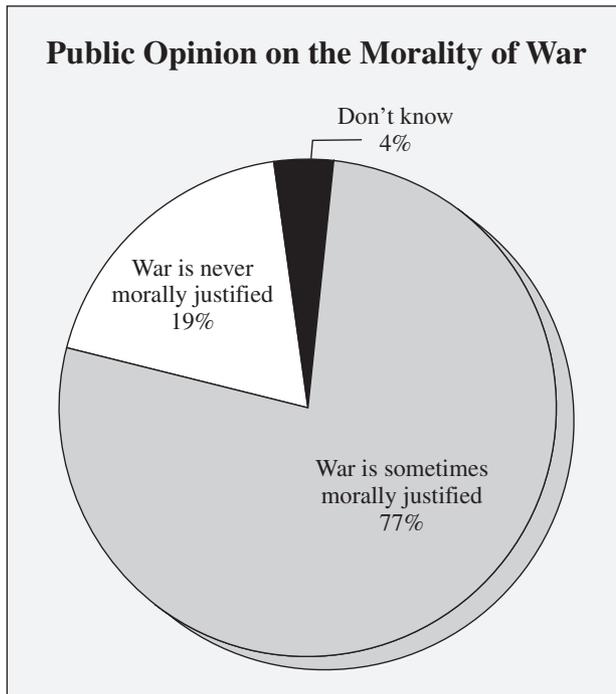

To understand this doctrine, suppose that a nation passes the conditions of just war theory pertaining to *jus ad bellum*. The nation decides to bomb its evil enemy even though its leaders foresee that their attack will kill people who are clearly innocent, such as children, people with mental disabilities, and civilians who oppose the wrongful objectives of their own leaders. At first view, the foreseen killing of innocent human beings contaminates the attacking nation in terms of *jus in bello*, even though the nation may be morally justified in waging war. The doctrine of double effect, however, justifies the bombing when all its conditions are fulfilled.

The doctrine of double effect, however, invites serious questions. Is it possibly truly to distinguish a combatant’s intentions when they are mixed? Is it not intuitively obvious that the more closely the two effects of the act—one focused on securing legitimate military objectives, the other centered on the foreseen killing of innocent human beings—are connected, the less plausible is the moral agent’s claim to intend one but not the other effect? Also, is it clear when the evil effects—for example, the killing of innocent human beings—are not the means to the good effects of attaining justified military goals?

THE REALIST ARGUMENT

The seemingly insurmountable moral puzzles surrounding the waging and conduct of war lead some thinkers to conclude that moral theorizing is irrelevant in the context of military action. The realist argument claims that nations at war operate within a Hobbesian state of nature, a condition in which moral notions are unenforceable because no force is powerful enough to guarantee compliance. Moral notions bear currency only within civilized settings in which contractual promises are enforceable. Talk of neither fairness nor unfairness is coherent in a state of nature.

The realist argument tends to exaggerate the global conditions surrounding war. Numerous international treaties pertaining to the conduct of war affirm that talk of a state of nature is extravagant. Even during times of war, nations are not fully independent

Source: Roper Center for Public Opinion Research. Figures reflect responses of 1,032 adults surveyed by Pew Research Center in March, 2003.

of all other nations. World opinion still bears moral currency as some warring nations are praised and others are disparaged for their reasons for waging war and their use of means to attain military objectives. The realist argument would be persuasive only in a global moral vacuum in which all nations renounce all efforts to make moral distinctions. However, such a moral vacuum did not occur even during the waging of the two great world wars of the twentieth century.

THE ARGUMENT FROM INNOCENCE

Beginning from a Kantian premise that it is never morally permissible to kill innocent human beings directly, the argument from innocence holds that the use of certain modern weapons, such as nuclear arms, is morally impermissible. Noncombatants are nonthreatening bystanders to war and thus innocent people. The notion that it is morally impermissible to treat human beings as a mere means to one's ends is a generally accepted Kantian maxim. People may not treat others as less than they themselves are, regard them as mere instruments for their own purposes, or

disregard their moral status to achieve their own goals. If a state harms nonthreatening bystanders to achieve its legitimate military goals, it wrongfully uses those innocent people as mere means to its (rightful) ends. Accordingly, the use of modern weapons that have a high probability of killing numerous noncombatants is morally impermissible because such use foreseeably and directly exploits innocent people.

The argument from innocence places a limit on *jus in bello*. Those who advocate the use of modern weapons despite the fact that noncombatants will thereby be foreseeably harmed sometimes appeal to the doctrine of double effect. The loss of innocent lives is not directly intended, but only a foreseen, unavoidable side effect of attaining a justified military objective. Only the good effect is intended, and the death of innocent people is not the means to secure the good effect. All other conditions of the doctrine of double effect are also satisfied. Advocates of modern weapons point out the differences between intentionally and wrongfully using innocent persons as, for example, human shields against an enemy, and foreseeably and indirectly killing noncombatants as an unintended consequence of an otherwise legitimate military attack.

The argument from innocence bears considerable moral currency. However, it must refine its notion of innocence. The combatant/noncombatant distinction is too crude. Not all combatants are soldiers by choice, while numerous noncombatants directly support the war efforts of their national leaders through the work they do, their advocacy of war, and money they give to their governments. Moreover, the argument from innocence resists all appeals to consequences. What if foreseeably and indirectly, or even directly, killing a few noncombatants might result in a faster ending of a war than otherwise available, in favor of a just cause that would lessen the number of overall war casualties?

PACIFISM

Some thinkers, such as the philosopher Robert Holmes, use the argument from innocence to conclude that all modern wars are presumptively immoral because they invariably and foreseeably result in the direct killing of numerous innocent people.

Holmes denies a sharp distinction between *jus ad bellum* and *jus in bello*. He argues that it is not possible morally to assess the justice of waging war in isolation from the inevitable means used to conduct modern wars.

Holmes understands the fragility of identifying the wrongfulness of war with the killing of noncombatants. Instead of stressing combatant/noncombatant distinctions, he advances innocent/noninnocent distinctions. People are innocent to the degree that they lack responsibility for wrongful aggression. Most initiators of wrongdoing, such as governmental leaders, and some agents of wrongdoing, such as military commanders and combat soldiers, are noninnocents because they are morally responsible for wrongful aggression. Some contributors to war efforts, such as munitions workers, military researchers, and taxpayers, and some who otherwise approve of the war are less morally responsible for wrongful aggression,

but are not clearly innocents. Clearly innocent are noncontributors to, and nonsupporters of, the wrongdoing such as young children, the insane, and active opponents of the war who refuse to pay taxes or are jailed for refusing induction into the armed forces.

In assessing these categories, one should pay special attention to the enormous social pressures upon citizens deciding whether to consent to their nations' military actions. Citizens are inclined to support their governments because of their habits of obedience to their governments, the psychological forces of patriotism, the moral investments they typically make in their nations, the misinformation and limitations on information typically provided to them by their governments, and, very often, fears that opposition to official policies will bring governmental and social retaliation.

Holmes argues that even a wrongfully aggressive nation—one that is deficient from the vantage point

Image not available

Children take shelter under a makeshift bomb shelter in a Karen refugee camp, into which guerilla allies of Myanmar's military government began firing mortar rounds in early 1998. As in other civil wars around the world, children endured a disproportionate amount of the suffering. (AP/Wide World Photos)

of *jus ad bellum*—includes numerous innocent people. At least some of those people will necessarily be killed in modern warfare, regardless of the intentions and motivations of the opposing sides. A morally righteous nation, for example, cannot be expected adequately to distinguish innocent from noninnocent members of its enemy. Moreover, the killing done by the wrongfully aggressive nation is the killing of innocents because it involves killing those who have done no wrong relative to the war. The morally righteous nation, presumably, contains only innocent people focused on morally permissible self-defense.

Virtually all members of a morally righteous side and many members of the wrongfully aggressive side can be considered innocent people. Given the inability of opposing sides clearly to distinguish innocent from noninnocent enemies, and given the nature of modern weapons, it is clear that waging modern war will inevitably kill innocent people. The impossibility of *jus in bello* destroys the possibility of *jus ad bellum*. Accordingly, modern war is presumptively wrong because it inevitably destroys innocent lives. As an antidote, Holmes champions nonviolent resistance as a way of life.

One might ask whether Holmes mistakenly reduces complex moral questions about the nature of war to only one of their components, the killing of innocent people. Does he take an unreasonably absolutist position on the notion that killing innocent people is always wrong? Is there a practical, less violent alternative to war when confronting wrongfully aggressive enemies? Moreover, is it possible that even innocent people might sometimes pose threats to the well-being of others that permit a right to self-defense? Finally, what would be the transition costs of moving to national pacifism?

WALZER'S ALTERNATIVE.

Michael Walzer, influenced by just war theory, offers an alternative to Holmes. He argues that the knowing, foreseeable, but merely incidental killing of noncombatant innocents of the aggressive nation is justified only when killing such people prevents the loss of a greater number of innocent lives; when such killing is done as a last resort; when the killers minimize the evil involved, including the manner and

number of killings; and when the killers accept reasonable risks and costs to themselves in minimizing the evil. If successful, Walzer's alternative permits at least the theoretical possibility that a morally righteous nation could fulfill the standards of both *jus ad bellum* and *jus in bello*.

War crimes trials

DEFINITION: International tribunals convened to try persons responsible for genocide and other gross violations of human rights during military conflicts

DATE: First trial began in 1945

TYPE OF ETHICS: Human rights

SIGNIFICANCE: Trying war criminals for their acts has developed into an important way to confront and perhaps deter some of the worst atrocities of war, but the ethics of war crime trials themselves have been challenged.

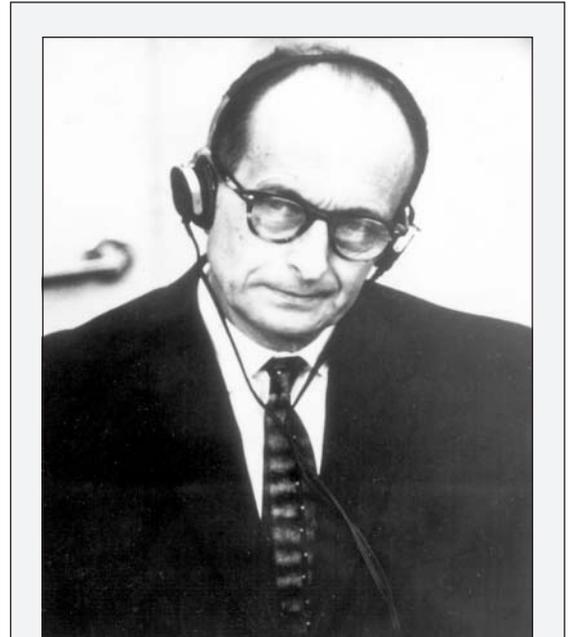

The idea of crimes of war and the legal prosecution of war criminals have had a brief and troubled history. Traditionally, moral and legal sanctions have been considered out of place in times of war, in which the rape and murder of innocents has been considered standard practice—and, in some eras, regarded as spoils of war—and thus beyond the boundaries of law. While it is true that since antiquity ethical objections have occasionally been raised about the conduct of war, only during the twentieth century did individuals begin to face criminal trials and punishment for their deeds.

The first major war crimes trials were in Nuremberg, Germany, and Tokyo, Japan, to try Axis leaders after World War II. After a five-decade silence during the ensuing Cold War, war crime trials returned in the wake of mass atrocities in Yugoslavia and Rwanda. Further, the International Criminal Court, which was established in The Hague in 2002, has the authority to prosecute war criminals who fall under its jurisdiction.

The laws of war crimes originate primarily through two series of treaties: The Hague Conventions of 1899 and 1907 and the Geneva Conventions of 1949. These collected treaties, along with other treaties, United Nations conventions, and precedents set by the post-World War II trials, established a framework for defining which acts are permissible in wartime and which merit prosecution. Among the war crimes that merit consideration for prosecution are waging aggressive warfare, genocide, deliberately targeting civilians, mistreating prisoners of war, and using such banned weapons as chemical and biological agents.

Numerous ethical and moral issues arise from war crime trials. Many observers have questioned the ap-

propriateness of trials for acts carried out under the stresses of war. They argue that the concept of the trials represents a civilian bias against the horrible military necessities of war. Others have wondered whether criminal trials for war crimes can ever be fair, as the trials usually lack objective courts, and their verdicts resemble punishments inflicted by victors on the vanquished. This criticism has led to charges of “victor’s justice” and a lingering bitter-

(Library of Congress)

Adolf Eichmann

One of Nazi Germany’s bloodiest war criminals, Adolf Eichmann was responsible for sending millions of people to extermination camps during World War II. After escaping from Allied troops when the war ended, he fled to Italy and eventually settled in Argentina, where he assumed the name “Ricardo Klement” and lived quietly as a Buenos Aires factory worker. In 1960, agents of the Israeli Security Service found him and brought him to Israel, where he was tried for his war crimes in a sensational tribunal that was televised around the world. He was found guilty and hanged in Israel on May 31, 1962.

ness over some of the trials. Some would argue that it would be better to have a postwar amnesty, or even summary executions of enemy leaders, than apply peacetime civilian notions of right and wrong to the horrors of war.

Traditionally, theories of criminal justice have implied that punishments are somehow equal to the crimes for which they are inflicted, that punishments somehow restore the moral balance that the criminals have disrupted, and that punishment puts things “right.” However, in cases in which criminals have taken hundreds or thousands or even millions of lives, it is difficult to imagine how punishing a few individual criminals—no matter how harshly—can provide satisfaction for the victims.

Warranties and guarantees

DEFINITION: Assurances made by manufacturers or dealers to consumers that if the products or services they sell fail to meet certain standards, they will repair or replace the goods or otherwise compensate buyers

TYPE OF ETHICS: Business and labor ethics

SIGNIFICANCE: In modern society, warranties and guarantees represent legally binding contracts between manufacturers and consumers. Ethical issues relating to warranties include consumer fraud (a consumer may pretend that a product had a defect when it was really damaged through care-

lessness), evasion of duty (a company may pretend that damage resulted from consumer carelessness rather than defect), and the proper calculation of a fair and reasonable warranty period.

The terms “guarantee” and “warranty” are virtually synonymous in their marketplace meanings. Laws in the United States generally use the term “warranty,” while “guarantee” is perhaps more common in everyday speech. Both terms imply some sort of assurance of quality or standards to the buyer of a product or service. Sellers of products have probably always offered some form of guarantee, if nothing more than their reputation. During the Middle Ages, guilds for various professions set standards for the training and qualifications of their members. This could be considered to be the first formal type of guarantee.

FORMS OF WARRANTIES

Product warranties can take the form of written or oral statements. Some warranties are implied and are in force even though they are not directly communicated from seller to buyer. Sellers have some protection, in that they can specify that products are warranted only for “reasonable use” or can attach warnings that products are not suited for particular uses. Many product liability lawsuits hinge on the meaning of “reasonable use” and whether a product is as safe as could reasonably have been expected.

In the United States, written warranties are covered by the Magnuson-Moss Warranty Act of 1975. According to the provisions of that act, a warranty must describe the specific coverage offered and what the purchaser of a product has to do to obtain it, as well as what the warrantor must do to remedy a problem. Prior to passage of the act, a warranty could be used to limit the seller’s responsibility to what was stated on the warranty, thus breaking some reasonable expectations on the part of the buyer. The act states that warranties must be available in writing and must be available for purchasers to read before a purchase is made.

The Magnuson-Moss Warranty Act specifies two types of implied warranties that almost always are in force even though they are not stated in a seller’s written warranty. In most cases, sellers are not able to release themselves from these implied warranties. The implied warranty of merchantability states that the product or service is suited for ordinary use. The

implied warranty of fitness for a particular purpose states that sellers are responsible for providing correct information regarding particular uses to which a buyer might put a product. Sellers in this case represent themselves as experts whom consumers can trust for advice. For example, a consumer might tell a vacuum-cleaner salesperson what types of carpets the vacuum cleaner is being purchased to clean. The salesperson then would make a recommendation based on this information. The consumer has a right to expect that the vacuum cleaner will perform, even if the use to which it is put is not ordinary.

Warranties can be either full or limited. The Magnuson-Moss Warranty Act states conditions that must be met for a warranty to be labeled as "full." Limited warranties restrict the promises made by sellers. They can include clauses calling for payment of labor charges by the purchaser, reinstallation charges, or pro-rata refunds based on how long the product had been in use.

Many warranties apply only to new products. Consumers have less protection when they buy used goods, particularly if the goods are specifically sold "as is." Implied warranties most often do not apply to such sales.

ETHICAL IMPLICATIONS

Warranties and guarantees protect consumers both from unscrupulous behavior and from unanticipated consequences. An honest seller may unintentionally sell a defective product. His or her guarantee to the purchaser may be a simple oral statement that the product can be returned if it is defective. It may also take a formal contractual form. In either case, buyers face little risk when dealing with honest sellers.

Written warranties protect consumers from sellers who misrepresent their products, perhaps lying about the characteristics or expected performance of the product or about what the sellers will do to remedy defects or other consumer dissatisfaction. In the absence of enforceable warranties, sellers would be able to make any claims about their products, and consumers would have no way of making judgments other than basing them on the reputation of the seller. Unscrupulous sellers could then make sales based on exaggerated claims, then refuse to back those claims. The marketplace might even offer an incentive for such behavior, since consumers would be drawn to products for which exaggerated claims had been

made, at least until the sellers' dishonesty had been established.

Warranties thus provide protection against dishonest marketplace behavior. They serve to make marketplaces more efficient, because consumers can be more certain of the information provided to them rather than having to rely on reputation. Warranties also increase the rewards to honest sellers, who are not faced with dishonest competitors who can make sales through false claims about their products. Warranties thus serve to enforce and reward ethical behavior.

Washington, Booker T.

IDENTIFICATION: American educator
 BORN: April 5, 1856, Hale's Ford, Virginia
 DIED: November 14, 1915, Tuskegee, Alabama
 TYPE OF ETHICS: Race and ethnicity
 SIGNIFICANCE: Washington was the founder and principal of Tuskegee Normal and Industrial Institute and author of *Up from Slavery* (1901). He

interpreted human actions by utilitarian and pragmatic principles, focusing on their results rather than their motives.

Booker T. Washington's ethical position is set against the cultural, political, and societal forces of the late nineteenth and early twentieth centuries. His life corresponded with the Reconstruction years and their aftermath, when the South was adjusting to the post-Civil War trauma. The United States was emerging as a powerful industrial nation, and few restraints had been placed on economic competition. The era was dominated by industrialists who amassed great wealth through hard work and shrewd business practices. Some of the wealth, however, was diverted to select philanthropic causes.

By 1881, when Washington became principal of the Tuskegee Normal and Industrial Institute, the status of African Americans, particularly in the South, had eroded. Jim Crow laws, supporting racially discriminatory practices, proliferated. There was grow-

ing support in all sections of the country for disenfranchisement. The U.S. Supreme Court, in 1883, overturned that portion of the 1875 Civil Rights Act that had prohibited racial discrimination in the public sector. In 1896, the Court held in *Plessy v. Ferguson* that "separate but equal" public facilities were constitutional. In this context, Washington lived and developed his ethical and social views.

THE INTERNATIONAL EXPOSITION ADDRESS

Washington's speech at an exposition in Atlanta, Georgia, on September 18, 1895, established him as a spokesperson for many African Americans, those he called the "masses of my race." The speech summarized his position on race relations, and it found an enthusiastic audience, especially among white listeners. Thereafter, he was in great demand as a speaker and a national symbol for his race, being publicly recognized by presidents William McKinley, Theodore Roosevelt, and William Howard Taft as well as Queen Victoria of England.

In his Atlanta address, Washington proposed a compromise through which demands for full political and civil rights of African Americans would be exchanged for a share in the economic benefits that were expected to arise out of industrial development in the South. Instead of appealing for political power and recognition, he urged African Americans to establish respect by developing marketable vocational skills. He asserted that prosperity would come "in proportion as we learn to dignify and glorify common labor and put brains and skills into the common occupations of life." Without confrontation and with practical skills, African Americans could present themselves as law-abiding and nonoffensive citizens so that the social standards of the South would not be challenged.

In a separate-but-equal appeal, Washington found a willing audience when he said, "In all things purely social we can be as separate as the fingers, yet one as the hand in all things essential to mutual progress." Social equality was rejected in exchange for "material prosperity [which] will bring into our beloved South a new heaven and a new earth." Later, when he proposed greater economic cooperation between the races, he was reminded by the white

Booker T. Washington. (Library of Congress)

establishment that even business relationships were social and therefore should be treated as separate. His correspondence, however, reveals that Washington was secretly working to combat disenfranchisement and segregation.

Although Washington's Atlanta address brought him praise and fame as a nonthreatening voice for African Americans, he was never able to move significantly from the compromise position he had so convincingly established in the speech. Strong opposition to his philosophy of accommodation was vocalized by W. E. B. Du Bois, founder of the Niagara Movement, and, later, executive secretary of the National Association for the Advancement of Colored People. Du Bois was a staunch advocate of full social, civil, political, and economic opportunities and recognition for all African Americans.

UP FROM SLAVERY

Since there was widespread interest in Washington's life, his 1901 autobiography presented the story of his rise from slavery, his diligent effort to receive an education, particularly at Hampton Institute, and his ensuing dedication to the development of Tuskegee and his race.

His story became a sacred text for many of his readers, and he was regarded as a hero, even a messianic figure. The autobiography was widely translated and was read in Africa, Asia, and Europe. Some regarded his story as an inspirational example of success against great odds, but others saw it as a safe statement intended for a white audience. Washington saw himself, however, as a moral leader who was capable of guiding both races to a new level of racial justice. He verbalized the traditional views of American society toward nonwhites, presenting an uncomplicated and childlike image of African Americans.

ETHICAL IMPLICATIONS

Washington's strategy was both utilitarian and pragmatic. His prevailing view was that economic success was the key to success in other areas of life. He was convinced that manual labor brought dignity and self-esteem. He wanted to send each of his graduates into society "feeling and knowing that labor is dignified and beautiful." Success came as a result of using practical principles to meet racial goals. Although some of his critics insisted that he was perpetuating a caste system, he insisted that industrial, vo-

ational, and agricultural education were morally valuable. He strongly believed that it was the duty of an African American "to deport himself modestly in regard to political claims, depending upon the slow but sure influences that proceed from the possession of property, intelligence, and high character for the full recognition of his political rights." Washington's pragmatic approach deemphasized claims to inherent rights.

At the conclusion of his autobiography, although he was optimistic about the future, Washington recognized that there was an ongoing struggle "in the hearts of both southern white people and their former slaves to free themselves from racial prejudice." Washington left no successor to guide the Tuskegee enterprise, and because his dreams were rooted in the past, his influence on the resolution of twentieth century racial complexities was marginal.

Watergate scandal

THE EVENT: Burglary of Democratic presidential campaign headquarters by agents working for Republican incumbent president Richard M. Nixon

DATE: June 17, 1972

TYPE OF ETHICS: Politico-economic ethics

SIGNIFICANCE: The Watergate break-in scandalized the American people and caused them to question the ethics of all politicians and the fairness of the electoral process. It provided the national vernacular with a new suffix, “-gate,” which has since adorned several major political scandals, such as “Irrigate,” “Whitewatergate,” and “Debategate.”

In early 1972, on behalf of President Richard M. Nixon’s reelection campaign, a group of so-called “plumbers” broke into the Democratic national headquarters, which was located in the Watergate complex in Washington. They photographed various documents and “bugged,” or tapped, the phone lines. Later, the plumbers broke in again to photograph more material, but the second time they were caught by an observant security guard.

Although the Watergate crisis seemed to drag on forever, eventually some of the truth finally came out in the courts and in the U.S. Senate Watergate hearings; the crusading newspapermen Bob Woodward and Carl Bernstein managed to learn some of the truth because they would not give up on the story. Eventually, investigators learned that President Nixon had approved of the Watergate break-in.

Many people who were linked to the break-in served terms in prison, including several high-ranking Nixon associates. After Nixon was pardoned by Gerald Ford, the public’s esteem for politicians (most of them lawyers) fell to an all-time low.

Weakness of will

DEFINITION: Inability to act on what one knows to be the best course of action

TYPE OF ETHICS: Theory of ethics

SIGNIFICANCE: Weakness of will creates questions not only in ethics and generally in philosophy of mind about the notion of rational action, but also in economics and psychology about the notions of rational choice and cognition.

To act deliberately against one’s better judgment is to fall prey to weakness of will in action. This is also known as incontinence, or *akrasia*, in its Greek form. Adam and Eve of the Bible knew that they ought not to eat the forbidden fruit but ate it all the same. Their behavior is an example of what the Roman poet Ovid called seeing and approving the better course and yet following the worse course. Similar experiences are well known to those who wish to give up bad habits but yield to temptation. Since the time of the early Greek Plato, philosophers have been interested in this phenomenon as a problem in morality. They ask questions such as, What leads a rational person to perform an action he or she believes to be wrong? However, the difficulty posed by such questions goes beyond morality by focusing attention on the very idea of rational action.

Rational actions are not those that deserve praise for their intelligence or logicity, but those that are rational in the light of their agents’ beliefs, desires, and intentions—the ingredients of what are thought to be an agent’s reasons. According to the principles of rational agency, insofar as an agent regards one of two courses of action as better, then that agent wants most to do that which is better and will in fact do it. However, according to this conception of rational agency, weakness of will is impossible, since an incontinent agent does something intentionally while believing there to be another available course of action which, all things considered, the agent deems as genuinely better. Few instances are needed to show

that *akrasia*, far from being impossible, is commonplace in people's lives.

Weakness of will is, therefore, a form of inconsistency, since the agents' actions are not of the kind specified in their practical reasoning. However, inconsistency is itself a form of irrationality, and, thus, *akrasia* is a type of irrationality. It is an irrationality that at least involves an evaluative inconsistency between one's judgment about what is best to do and what one actually does.

There is no universally agreed approach to the problem of incontinence, and intuitions vary on its source and solution. However, there is a consensus that the phenomenon poses problems in general conceptions of what it is to act for reasons, thus creating a scope that straddles the frontiers between philosophy, psychology, and economics. As a kind of irrationality, incontinence has interested economists because of its impact on the rationality/irrationality of human choices and deliberations. Many issues in psychology are also germane. Those most closely allied with weakness of will include compulsiveness, self-deception, unconscious motivation, and the possibility of dividing the human mind into a multiplicity of interacting subsystems. Generally, the problem highlights the complexity of mind and its activities.

Weapons research

DEFINITION: Investigation and experimentation to develop more effective means of waging war

TYPE OF ETHICS: Military ethics

SIGNIFICANCE: Perhaps more than any other branch of science, weapons research raises the question of the ethical relationship between theory and practice. In other words, when new forms of weaponry are used on the battlefield, does the re-

sponsibility for the effects of those weapons lie with their inventors, or does it lie only with their wielders?

The ethical stance used to justify research into developing more efficient weapon systems is nearly the same as that used to justify standing military forces—defense. The theory is that a society with a well-trained and well-equipped military force is the one best prepared to defend itself from outside aggression. Historically, the most efficient means to promote a military force's victory is to provide it with quality leadership and supply it with weapon systems superior to those of the adversary. Traditionally, any participation in the defense of one's nation and its people is seen as a moral, noble, and patriotic act. These reasons often motivate members of the scientific community to participate in defense projects in much the same way that they inspire other people to enter diplomatic or military service.

ETHICAL JUSTIFICATIONS

Ethical justification for any defense-oriented service to one's nation is readily accepted if the motivating force is to provide protection of way of life, family, sovereignty, territorial integrity, political agenda, or philosophical belief. On occasion, however, the missions of defensive weapons have been redefined or new weapons have been sought for purely offensive purposes in order to foster a society's political, territorial, or philosophical agenda. While the use of such weapons may be ethically and morally justified by those seeking to expand their political or philosophical influence, these weapons present many science professionals with an ethical dilemma involving their personal beliefs and the demands of their vocation: Do their personal or professional ethics conflict with the research that society demands of them, and if so, should they withhold their expertise and skills, or should they set aside personal beliefs and allow the ends to justify the means?

In an idealistic world, science professionals would work only on projects that conformed to their personal ethical standards. As a community, science professionals abide by a code of ethics governing scientific methodology, and adherence to this code influences their dedication, discipline, and loyalty in the pursuit of scientific goals. As individuals, however, science professionals are like all other citizens

in that they are members of society and by their choice of vocation have become providers of unique services to that society: They are educators, inventors, engineers, physicians, explorers, and theoretical and applied researchers in all fields. For this reason, science professionals have been asked throughout history to help solve problems for humanity. In most instances, society's requests of science pose little ethical difficulty: finding cures for disease, improving crop yields, designing safe products.

Another of society's requests, however, is that science professionals commit their knowledge and skills to aid in the defense of their society. As a result, many scientific discoveries are transformed into weapons systems providing more effective means for nations to defend themselves. Intellectually, science professionals participating in weapons research projects know that their work, if used, may cause the death of other living things, but this knowledge is complicated by a paradox: Technologies specifically developed for weapon systems have resulted in products that improve the quality of life, and, conversely, research done for totally benign purposes has resulted in very effective weapons.

Some examples are lasers, whose use has revolutionized both medical surgery and the delivery of explosive ordnance; computer systems that speed computations and communication yet also control weapons systems; materials research that provides energy savings, durability, and protection in commercial packaging as well as for armored vehicles; and aircraft designs that improve the performance of both civilian and military aircraft. The multiple uses of modern technologies make it nearly impossible to predict their long-term applications.

ETHICAL CODES OF PROFESSIONALS

Science professionals understand that the specialized educations and skills that they possess do not come with an inherent moral or ethical code, and each time they consider participating in a research project, their decision to participate or not is based on their perception of the research's possible ramifications. Each individual's choice may be influenced by theological beliefs, personal values, professional agendas, political motives, emotions, patriotism, or societal demands. These personal values have influenced many science professionals to turn away from all weapons research.

After World War II, many scientists and engineers, appalled by the massive civilian casualties resulting from the uncontrollable destructive force of tactical nuclear weapons, refused to continue working on weapons research. Other science professionals, who are opposed to the use of tactical nuclear weapons but aware of their society's defensive needs, have chosen to engage in "smart bomb" research, designing nonnuclear explosive ordnance that can be directed to point-specific military targets with minimal danger to civilian noncombatants.

Science professionals understand that the discoveries, inventions, and technologies that arise from their scientific inquiries are in themselves amoral. They view their input in the development and perfecting of new weapon technologies as something quite separate from the production and use of these technologies. Science and military professionals do not operate with *carte blanche* in the field of weapons research. It is society and its representatives, based on their interpretation of perceived threats, that establish a weapons research agenda. Society utilizes the services of science and military professionals to ensure that its defense agenda is fulfilled. It is also society that instructs these professionals to use weapon systems to make war. All too often, society proves reluctant to accept the ethical burdens and responsibilities resulting from war, and science and military professionals find themselves blamed for the efficiency with which they have carried out the will of their nation.

Weber, Max

IDENTIFICATION: German sociologist

BORN: April 21, 1864, Erfurt, Prussia (now in Germany)

DIED: June 14, 1920, Munich, Germany

TYPE OF ETHICS: Modern history

SIGNIFICANCE: Weber was one of the most prominent social scientists of the early twentieth century. His *The Protestant Ethic and the Spirit of Capitalism* (*Die protestantische Ethik und der Geist des Kapitalismus*, 1904-1905) explored the ways in which Protestant religious and ethical beliefs influenced the development of modern capitalism.

Weber is considered to be one of the founders of modern social science. His intellectual achievement reflected extraordinary breadth, including original studies of economy and law, social structure, comparative civilizations, and methods of the social sciences. He is best known for *The Protestant Ethic and the Spirit of Capitalism*, in which he analyzed human motives—that is, beliefs and values determining action—in the development of capitalism and concluded that certain religious beliefs could be linked to economic trends.

The Calvinist doctrine of predestination held that God had singled out humans before their births either to be saved by grace or to be damned. The uncertainty of not knowing whether believers were saved or damned prompted them to exhibit controlled and methodical conduct in the pursuit of their worldly calling, which Weber called “inner-worldly asceticism.” Many Calvinists came to regard economic success, including the accumulation of capital, as a possible sign of God’s grace and salvation, which often had been achieved by abstinence from “unnecessary”

Max Weber. (Library of Congress)

consumption, leading to savings and reinvestment in economic growth. Weber did not deny that other material and psychological factors were conducive to the development of capitalism, but he pointed out that never before the advent of capitalism had religious beliefs viewed economic success as a sign of God’s grace.

In studies of world religions, Weber attempted to explain how religious beliefs shaped a people’s social and political institutions and economic activities. He argued, for example, that in Confucianism and Hinduism particular doctrines inhibited economic advance under conditions that were otherwise favorable to economic pursuit. Such a finding, he hoped, would make more convincing the uniqueness of religious and ethical factors in the development of Western European capitalism.

Welfare programs

DEFINITION: Publicly funded, state-run distribution of money or material resources to those in need

TYPE OF ETHICS: Human rights

SIGNIFICANCE: Welfare programs are designed to ensure that all members of a given society enjoy a minimum standard of living. They raise theoretical issues about the responsibility of the state toward its citizens and the responsibility of individuals to support themselves, as well as practical concerns about the liability of welfare systems to fraudulent claims and their tendency to motivate people to remain unemployed or otherwise dependent on the state.

One of the first compulsory national programs of social insurance was instituted in Austria in 1854, but societies have always recognized responsibilities to less fortunate members. Welfare programs simply institutionalize society's responses to the various problems that individuals face.

PRIVATE VS. PUBLIC PROGRAMS

Many of the tasks of national or state welfare programs have been, and still are, performed by smaller groups. Many families care for their sick, old, or unemployed members. In other cases, individuals form voluntary organizations to protect their standards of living. Insurance companies and mutual aid societies are examples of individuals agreeing to provide for others in exchange for a guarantee that they will be provided for if necessary. Governments step in when families or other larger groups are unwilling to or cannot provide what is deemed to be an adequate standard of living.

Private systems of contracting sometimes break down, or the scale of programs becomes so large that government provision becomes the least costly means of delivery. In other cases, society may declare that a condition is desirable, in opposition to individuals. One example concerns child labor and education. Poor families may decide that having a child work and provide an income is preferable to having the child become educated. Society as a whole may enforce education and prohibit child labor, both for the children's immediate good and to break a cycle of poverty in which uneducated children grow up unable to earn a living.

TYPES OF WELFARE

The most basic welfare programs provide cash grants so that recipients can buy what they need. Concerned that welfare recipients may make poor choices, welfare providers sometimes provide goods "in kind"; for example, food stamps and housing vouchers that can be used only for those specific goods or services. These restrictions on welfare are sometimes justified on the basis of the argument that the adult direct recipients of welfare may not, in the absence of restrictions, pass on benefits to indirect recipients such as children.

Welfare programs correct a variety of individual problems. People may be unable to work because of illness or injury, or simply because they cannot find jobs. They may have the responsibility of caring for someone else. Perhaps society deems that people above a certain age should not have to work. In any of these cases, welfare programs may provide income to take the place of wages or salaries.

Programs can also provide particular goods and services. Provision of food, housing, health care, and education is common. Health care and education programs have become so institutionalized that many people do not consider them to be welfare. In many cases, however, these services are provided to consumers at a price lower than would exist in a free, competitive market.

INTERNATIONAL COMPARISONS

Typically, the countries of Western Europe have the most extensive welfare systems. Great Britain, for example, has a national health care system. Several Western European countries provide widespread housing allowances. Switzerland went so far as to provide that local governments would plant rose-bushes on graves if the friends or relatives of the deceased were unwilling or unable to do so. Clearly, different governments have differing definitions of an adequate standard of living and how far government should go to provide it. It is not uncommon for a Western European government to spend 20 percent or more of its gross national product on welfare programs. Much of this spending takes the place of private spending, as in the case of housing allowances, but the figure still illustrates a deep commitment to social welfare.

In less developed countries, an adequate standard of living may mean simply having enough food to

avoid starvation. These countries cannot afford to set higher standards, even though such standards obviously are desirable. Some of the wealthier countries therefore have extended welfare programs to encompass foreign aid.

ETHICAL ISSUES

Ethical issues arise regarding both the acceptance and the provision of welfare. Acceptance of welfare implies a moral choice. Numerous cases exist in which people have abused welfare systems by claiming benefits for which they have no true need, perhaps choosing not to work when they are able and when jobs exist. Some programs insist that able-bodied welfare recipients either work or enroll in training programs to enhance their job skills.

Welfare providers must make choices. Money spent to achieve one standard of living cannot be spent on another goal, and money spent on one family cannot be spent on another. Some system of priorities therefore is necessary. A further trade-off is that money spent on welfare programs cannot be spent on other types of programs such as national defense or research. Finally, money given to one person must be taken from someone else. Governments must decide how much redistribution is equitable and must be concerned that taking money from those who work discourages them from working.

A different set of issues concerns the goals of welfare programs. An obvious goal is ensuring that individuals achieve a minimum standard of living. Means of achieving that goal, however, differ in their consequences. Providing aid to someone, for example, may destroy private initiative. People may become dependent on welfare. Rules of welfare programs may also instigate a "cycle of poverty" in which children raised on welfare learn the rules of that system but do not learn how to earn a living on their own. Welfare rules that provide extra payments to families may encourage women to have children, thus locking them in to child care and dependence on the welfare system. Welfare planners must consider such unintended consequences.

Welfare rights

DEFINITION: Legitimate claim of all persons, regardless of status, to the basic economic resources needed to maintain well-being

TYPE OF ETHICS: Human rights; Politico-economic ethics; Religious ethics

SIGNIFICANCE: The principle of welfare rights is central to many modern arguments about the nature and scope of justice and human rights.

In traditional (precapitalist) societies, persons recognized a mutual obligation to meet the essential economic needs of all other members of the community. This obligation is asserted in Judaism, Christianity, Islam, Hinduism, Buddhism, Daoism, and Confucianism. In African and Native American traditions, moral development was demonstrated by giving away personal wealth during festivals. All these various traditions operated with a kinship model of ethics (in which all members of the community are to be treated as family). As these traditions developed, their morality was universalized so that all humanity

was to be regarded as family. Based on these religious foundations, peasants in feudal societies retained certain economic rights (subsistence rights) vis-à-vis the nobility. The modern concept of welfare rights draws on this earlier, highly developed concept of community obligation.

MODERN HISTORY

The rise of industrial capitalism in the nineteenth century destroyed the earlier model. Modern individualism and laissez-faire economics separated the individual from the community and made survival dependent upon individual employment, effort, opportunity, and reward. In the process, poverty was reconceptualized as being self-caused and the poor were denigrated as being lazy and immoral. Consequently, society renounced any moral obligation to help the poor. A distinction was drawn between the deserving poor (disabled and orphans) and the undeserving, but programs to help the poor became a matter of optional private charity, not of justice and social policy.

The right to accumulate unlimited personal wealth by almost any means, regardless of social cost, was given moral priority over meeting the needs of all persons in the community. In response, protest against the widespread harsh forms of poverty generated by capitalism developed. Recognizing that the primary causes of poverty were economic cycles of depression and unemployment, exploitation of workers, low wages, and lack of educational opportunity, socialist movements reasserted the right of all to basic economic security. Karl Marx proposed an economic system based on the following principle: "From each according to ability, to each according to need." Frightened by threats of socialist revolution and labor unrest, models of capitalism were proposed that included welfare rights, a guaranteed level of subsistence for all. A rudimentary welfare state was implemented in Germany in 1871.

This model gained influence during the 1930's in response to the Great Depression. U.S. president Franklin D. Roosevelt's New Deal incorporated many of the elements of the welfare state. The actual term "welfare state" was first employed in 1941 by British archbishop William Temple. Following World War II, most European nations adopted systems based on a recognition of welfare rights, which included health care, adequate diet and housing, and

guaranteed employment or a guaranteed minimum annual income for all. Such policies were endorsed by the United Nations Declaration on Human Rights (1948). The United States was one of the few developed nations to reject such rights.

The 1960's recognized the emergence of a new period of social activism on behalf of welfare rights. Socialist revolutions erupted in numerous developing nations. In the United States, George Wiley formed the National Welfare Rights Organization (NWRO) and Lyndon Johnson initiated the War on Poverty, expanding welfare programs. In 1966, the United Nations ratified the Covenant on Economic, Social, and Cultural Rights, giving universal validation to the concept of welfare rights. Welfare rights, however, continue to conflict with the basic premises of American individualism and laissez-faire economics.

The United States did not endorse the United Nations' covenant and during the 1980's began a conservative attack on welfare programs and welfare rights. Nineteenth century arguments against helping the poor and distinctions between the deserving and the undeserving were resurrected and used to shape social policy. The number of the poor and severity of their conditions increased dramatically. This attack was resisted by liberal religious groups that instituted programs to feed and house the poor. They also reaffirmed the centrality of the moral obligation to meet the needs of the poor. Third World liberation theologians and the U.S. Catholic Bishops' pastoral *Economic Justice for All* (1986) cite a "preferential option for the poor" that should inform all social policy. A similar concept is articulated by philosopher John Rawls in his earlier work *A Theory of Justice* (1971). The central issue remains the relative rights and obligations of persons in a community to one another.

ETHICAL ARGUMENTS EMPLOYED

(1) Basic economic needs (food, shelter, education, health care) must be met, since they are necessary for survival and development. (2) All persons have equal worth. (For religious persons, all are created equal.) (3) Greed and personal pleasure are not sufficient reasons for depriving others of resources needed for human survival. (For religious persons, God created the world to benefit all.) (4) The primary causes of poverty are a function of chance (place of

birth, social location, innate capabilities, economic cycles). Therefore, there exists a moral obligation to meet the basic needs of others. (5) For religious persons, the primary moral requirement “Love your neighbor” obligates persons to meet others’ needs. (6) As part of a community that provides myriad benefits, members of the community have a moral obligation to ensure the economic subsistence of all other members. (7) Fulfilling welfare rights improves the quality of life for all by reducing crime, reducing class antagonisms and conflicts, and providing a healthy, well-educated workforce.

Whistleblowing

DEFINITION: Publicly revealing, or reporting to appropriate authorities, that one’s employer is guilty of corporate or professional wrongdoing

TYPE OF ETHICS: Business and labor ethics

SIGNIFICANCE: Whistleblowing may violate both ethical values, such as loyalty and confidentiality, and specific legal requirements, such as nondisclosure agreements. It is generally defended, however, on the grounds that it serves the public interest and protects third parties from harm. Whistleblowing laws have been passed in many states to protect whistleblowers from corporate reprisals such as lawsuits, dismissal, or demotion.

Blowing the whistle on a person or activity is intended to bring to a halt some activity that will cause harm to the public. Since it is generally recognized that one should prevent harm to others if one can do so without causing great harm to oneself, whistleblowing would seem to be morally required. It is also generally recognized, however, that one should be loyal to one’s employers and professional colleagues. Since whistleblowing by an employee appears to breach this loyalty by reporting the harmful activity to those outside the organization, the employee who discovers misconduct is faced with a moral dilemma.

Some writers argue that such “ratting” on one’s employer is always wrong. Others argue that those who are willing to risk their futures to expose wrongdoing are heroes. Still others assess individual acts of whistleblowing by asking various questions: Have all the internal reporting channels been exhausted without results? Is the harm to the public without a report significantly greater than the harm to the organization with a report? What is the likelihood that the report will actually prevent the harm; that is, is the report believable and substantiatable?

White-collar crime

DEFINITION: Criminal activity in the corporate, commercial, professional, and political arenas

TYPE OF ETHICS: Business and labor ethics

SIGNIFICANCE: The treatment of white-collar crime both by law enforcement officials and by the media raises fundamental issues of social justice and equal treatment under the law, since such crime is often under-prosecuted in comparison with similar crimes committed by working-class people.

White-collar crimes are distinguished by the fact that they most commonly take place at the workplace and involve activities related to otherwise legitimate occupations. In addition, white-collar criminals rarely use violence or weapons.

The lowest level of white-collar crime, and the one easiest to identify and prosecute, is employee theft, ranging from taking office supplies for non-work use to the theft of products intended for sale. Higher levels of white-collar crime typically involve manipulations of bookkeeping accounts or legal documents. These crimes are more difficult to trace, particularly as more records are kept in electronic form, with fewer “paper trails” to identify wrongdoing. A variation of this type of crime involves violating the terms of a business contract or law with the intent of earning a profit in a way not intended by the other contracting parties or by society. An example is insider trading, in which stock, bond, or commodity traders use information they have learned earlier than other traders in order to make a profit in their trading. This example points out a difficulty in prosecuting some white-collar crime: It is difficult to say what information is illegal to use, since financial markets are designed to reward those who make effective use of information. The lines of ethical and legal behavior are also difficult to draw in cases of political corruption; “constituent service” to one person might be considered to be political favoritism or graft to another.

Whitehead, Alfred North

IDENTIFICATION: English mathematician and philosopher

BORN: February 15, 1861, Ramsgate, Isle of Thanet, Kent, England

DIED: December 30, 1947, Cambridge, Massachusetts

TYPE OF ETHICS: Modern history

SIGNIFICANCE: In such works as *Science and the Modern World* (1925), *Religion in the Making* (1926), *Process and Reality: An Essay in Cosmology* (1929), *Symbolism: Its Meaning and Effect* (1927), and *Adventures of Ideas* (1933), Whitehead applied mathematical and scientific principles to philosophical ethics.

In 1924, at the age of sixty-three and nearing compulsory retirement at the Imperial College, London, Whitehead accepted an appointment to teach philosophy at Harvard University in Cambridge, Massachusetts. For the next thirteen years, he lectured and developed his metaphysics. Influenced by the thought of Henri Bergson and, at the same time, an erstwhile Platonist, Whitehead considered the requirements for an ethical society through an analysis of religion (*Religion in the Making*) and the fundamental requirements for a dynamic society (*Adventures of Ideas*). He argued that religion—realized only through profound human reflection—contributed to an ethical understanding of the relationship of the individual in society and the universe.

After earlier affiliations with Anglicanism and Roman Catholicism, Whitehead did not identify with any organized religion; he did not consider religion as a societal institution to be very meaningful. *Adventures of Ideas* constituted Whitehead’s most comprehensive statement of his philosophy and has been his most widely acclaimed and read book. Individual freedom required an ordered society; Whitehead was not sympathetic to anarchism, which frequently advanced values similar to his. Whitehead was concerned with the nature of beauty, art, and peace, predicated upon an ethics that recognized the fundamental primacy of the individual within the context of Western civilization.

Wickedness

DEFINITION: Quality of desiring to do wrong for its own sake; evil

TYPE OF ETHICS: Theory of ethics

SIGNIFICANCE: Wickedness, far more than vice, is the precise opposite of virtue. It is the positive valuation of evil as its own reward.

The problem of evil is an ancient problem in philosophy and religion. In religion, the problem consists in explaining why God, who is all good, can allow for evil in the world; in philosophy, the problem entails accounting for the motives that lead people to do evil things. Socrates, for example, denies that people are motivated to do evil; he claims that people are motivated to do what is good and that it is only from ignorance of what is good that people do evil. Thus, people do not knowingly do wrong. Others have taken a similar stance with respect to God, arguing that God does not allow for evil and that it is only the inadequate and finite human knowledge of God that leads people to think that evil exists. Both these responses to the problem of evil, therefore, simply deny the existence of evil. In the philosophical discussion that has surrounded the topic of wickedness, however, there has been an acceptance of the fact that evil does indeed exist; because of this acceptance, the problem of why people are wicked (the problem of evil) reappears with all its force.

In Immanuel Kant's article "Of the Indwelling of the Bad Principle Along with the Good" (1927), he argues that evil results when people are not properly motivated. By being properly motivated, Kant means that one should be motivated to act out of respect for the moral law (that is, universal moral principles), not from self-interest. It is when one's moral principles follow from one's self-interest, and not the other way around as it should be, that one can be wicked and evil. Despite this account of why people do evil, Kant nevertheless believes that evil actions are to be understood in the light of the good that motivates them—that is, the good as perceived in terms of self-interest rather than of the universal moral law. Kant consequently does not believe that people are ever wicked or do evil for the sake of wickedness or evil, and thus he is part of the tradition that denies the existence of evil as such.

Arthur Schopenhauer, in his book *The World as*

Will and Representation (1818), denies the traditional rejection of evil and sets forth the notion of "pure wickedness" as an act done solely for the sake of evil. Citing the character Iago from William Shakespeare's play *Othello*, Schopenhauer claims that people can be wicked because they derive disinterested pleasure from the suffering of others or because they are motivated to act by evil.

TYPES OF WICKEDNESS

S. I. Benn has set forth a more detailed typology and discussion of wickedness in his article "Wickedness" (1985). Benn cites two ways in which one can be wicked: either one is wicked in pursuing what one perceives to be good, or one is wicked in acting for the sake of evil. Benn further divides the first class of wickedness into "self-centered," "conscientious," and "heteronomous" wickedness. With self-centered wickedness, one acts in order to promote the interests of oneself or one's family, company, or nation, but does so with a ruthless disregard for others. With conscientious wickedness, one believes that the good that one pursues is universally valid, not only valid for oneself, and pursues this good ruthlessly while excluding others. A Nazi, for example, may act according to a good that he or she believes to be universally valid, but will exclude others to the point of genocide. Heteronomous wickedness entails choosing to act according to another's principles—principles that can be seen to be evil.

The second class of wickedness that Benn discusses, acting for the sake of evil, corresponds to Schopenhauer's idea of "pure wickedness"; Benn labels it "malignity" or "unalloyed wickedness." In discussing this class of wickedness, Benn turns to the problem of evil: Why are people wicked if they are not motivated by self-interest or by something that is thought of as good? Benn's answer to this question consists largely of showing the inadequacy of attempts to subsume all evil actions under a motivation to do good; when it comes to stating why one would be motivated to do evil because it is evil, however, Benn for the most part avoids the issue.

The problem of why people are wicked, or why evil is pursued as an evil and not as a good, is the central theme of Mary Midgley's book *Wickedness: A Philosophical Essay* (1984). Midgley argues that wickedness cannot be explained by referring it to external, social causes or by denying it exists. Wicked-

ness, she argues, is a real potential that all people have. This potential results from what Midgley takes to be a perversion of natural hostilities and conflicts with others. Midgley claims that this perversion is not the same thing as Sigmund Freud's concept of the "death-instinct" (which is an instinct that serves to bring about death and destruction). People have motives that aim toward negative, destructive ends (such as eliminating enemies and threats), and the perversion of such motives leads to the pursuit of negative ends for their own sake. In short, this perversion entails doing something evil simply because it is evil; it is, as Midgley and others have understood it, wickedness.

Wiesel, Elie

IDENTIFICATION: Romanian-born author and rights activist

BORN: September 30, 1928, Sighet, Transylvania

TYPE OF ETHICS: Modern history

SIGNIFICANCE: Wiesel, an outstanding defender of human rights and a pioneer interpreter of the Shoah (Holocaust), is the author of *Night (Un di Velt hot geshvign, 1956)*, one of the most important and widely read memoirs of a concentration camp survivor. In that and other works, he explores ways in which the faith of Holocaust survivors can be used to help heal the post-Holocaust world. Wiesel was awarded the Nobel Peace Prize in 1986.

Image not available

Elie Wiesel. (Copyright *Washington Post*, reprinted by permission of the Washington, D.C., Public Library)

Elie Wiesel's writings have made him the messenger of the Jewish Holocaust dead and the prophetic muse of the post-Auschwitz age. This fact may explain why he wrote his first published memoir, *Night*, in Yiddish, the *lingua franca* of the murdered Jewish people, rather than in French, the language in which he wrote all of his other works. Wiesel writes masterfully, with a Kafkaesque pen, and his themes include pogroms, the destruction of the *shtetls* (Jewish villages), songs of mourning and exile, the madness of the Messiah, divine love and silence, and the guilt and obligation of survival, all of which are interwoven with threads of Hasidic tales, Kabbalistic mysticism, talmudic wisdom, and pietistic folklore.

Theologically, Wiesel's testimony is a continuous *Din Torah* (a disputation based on the judgment of the Torah) with God, who allowed Auschwitz to occur, and with radical dehumanization, the existence of which raises the possibility that the world is either not listening to or does not care about the lessons that can be learned from the Shoah. Wiesel has done more than anyone to establish "Holocaust" (a word that invokes images of fire and burnt offerings) as the accepted term for the Judeocide that occurred during World War II. Because the term is associated with the *akedah*, or "binding," of Isaac in the biblical story in which Abraham is tested and Isaac is victimized (Gen. 22), the use of the term permits Wiesel to question the intentions of God. This act of questioning does not diminish the paradox of the Shoah, but serves to make the issue more significant and more troubling, and therefore also more full of hope. Wiesel has strongly advocated that the specific lessons of the Shoah should never be lost. His eyewitness approach to the issue, which is rooted in the redemptive quality of memory, carries the message that one can survive with morality, a message that will appeal to all those who have suffered or will suffer.

Wilderness Act of 1964

IDENTIFICATION: Federal law setting aside specific tracts of land to be preserved and managed so that the natural conditions of the wilderness ecosystem remain unaltered

DATE: Enacted on September 3, 1964

TYPE OF ETHICS: Environmental ethics

SIGNIFICANCE: Designed to ensure that wilderness would be available as a resource for future generations, the Wilderness Act brought into federal law for the first time the principle that nature is valuable for its own sake, not only for the uses to which humans can put it.

A wilderness bill was first introduced in the U.S. Senate in 1956, but because of conflicts between economic interests and conservationists regarding the appropriate uses of land in areas set aside for wilderness, it was not until 1964 that the Wilderness Act was finally made law. The Wilderness Act of 1964 defines wilderness as "an area where the earth and community of life are untrammelled by man, where man himself is a visitor who does not remain."

The act does allow prospecting for minerals and protects mining interests that existed as of January 1, 1964, but it does not allow any new mineral patents after that date. This was a compromise that was difficult to effect. No motorized equipment, motor vehicles, motorboats, or commercial enterprises are allowed in wilderness areas. Supporters of the act stated that these exclusions did not violate the multiple-use principle, which calls for public lands to be used for their highest and best use, but indeed applied the principle by reserving some lands for the whole of the community to enjoy. The act embodies the principle that nature should not be managed, in these wilderness areas, merely to suit people, but so as to preserve and protect the land in its natural condition in accordance with wilderness values.

Will

DEFINITION: Mental faculty used by conscious beings to initiate autonomous action

TYPE OF ETHICS: Theory of ethics

SIGNIFICANCE: In traditional philosophical models of the mind, reason is used to evaluate one's desires to determine whether or not they should be acted upon, and will is the faculty that carries out those decisions once they have been made. Thus, it is the will in conjunction with reason that makes morality possible on a practical level by preventing people from becoming automatons ruled solely by brute impulse and instinct.

One of the presuppositions of morality is the belief that a human being is a special kind of agent that is to be held morally responsible for its actions. A boulder that tumbles from a precipice and crushes the leg of a climber is an agent, because the energy that it has acquired is a source of change, the crushing of the climber's leg. Nevertheless, the boulder is not held responsible for its actions, since it is not deemed a moral agent. Although there have been periods when animals other than human beings have been treated as moral agents, it is generally true that human beings alone are held morally responsible for their actions and thus are taken to be the only moral agents within the natural order. (This remark must be confined to the natural order, since many theists believe that God and other spiritual beings—angels, demons, and so forth—are moral agents.) The conviction that a human being is an agent in this special way is often explained by claiming that a human being has a will, a capacity to initiate action through the formation of mental events (volitions) that prompt the desired action.

NATURE OF THE WILL

Although philosophers who believe in the will are in agreement concerning its importance to moral responsibility, there is considerable disagreement over what kind of thing it is. Some philosophers (for example, Plato, Saint Augustine, and Thomas Aquinas) maintain that the will is a faculty that is literally a part of the soul. The will, according to this view, is distinct from other mental faculties such as the intellect and also distinct from its volitions.

Other philosophers (such as Baruch Spinoza and

David Hume) reject the notion that the will is literally a part of the soul. These thinkers maintain that the attribution of a will to human beings is simply a shorthand way of saying that the human soul can form volitions and that these volitions can initiate action. In this view, there is no distinct faculty or part of the soul that stands behind its volitions; rather, the will is simply the sum total of all the soul's volitions.

Regardless of the stand that one takes on the precise nature of the will, one still must deal with the two most difficult issues confronting any adequate theory of the will. The first issue is that of explaining the mechanism whereby volitions exert their influence. This issue is one aspect of the larger philosophical problem of explaining how the mind and the body interact—the so-called “problem of interaction.” The second issue is that of specifying what it is about the will's agency that distinguishes it from other agents in a morally significant way. This second issue is that of the will's freedom or autonomy.

PROBLEM OF INTERACTION

Experience seems to indicate that bodily events can cause mental events and that mental events can cause bodily events. The unfortunate climber mentioned at the beginning of this essay experienced the bodily event of a broken leg and then experienced the pain, a mental event, caused by this physical trauma. In fact, all sensations, all cases of tasting, touching, seeing, smelling, and hearing, seem, at least uncritically, to involve bodily events (in which the physical environment acts upon one's sensory organs) that cause mental events (the actual sensory experiences). By the same token, experience indicates that mental events cause bodily events. The mental event of willing to raise one's hand does, under normal circumstances, lead to the bodily event of one's hand raising. The problem of interaction refers to the challenge of explaining this apparent causal interplay between the mind and the body. With regard to the will, the problem of interaction arises in terms of the need to explain how the mind's volitions can give rise to bodily actions.

Although the problem of interaction was explicitly formulated at least as early as the fourth century B.C.E. in Aristotle's *De anima*, attention to it intensified dramatically in the seventeenth century in response to René Descartes's promulgation of substance dualism. Substance dualism is a theory of

human nature that holds that human beings are composed of two radically different kinds of substances: mind and body. Descartes conceived of the mind as an immaterial (spatially unextended) substance and the body as a material (spatially extended) substance. In addition, he maintained that the mind and the body can exist apart from each other.

Although the Cartesian philosophy grew in popularity during the late seventeenth and early eighteenth centuries, concern over the problem of interaction grew as well. The radical heterogeneity of the mind and the body upheld by Cartesian dualism led thinkers to wonder how such radically different substances could interact. Descartes himself never fully came to grips with this issue; however, a number of solutions were developed by those who were either avowed Cartesians or were at least heavily influenced by Descartes's philosophy.

The late-seventeenth century French philosopher Nicholas Malebranche attempted to solve the problem by conceding that the mind and the body do not really interact. The reason that mental events appear to cause bodily events is that God creates these events so that they exhibit the correlation that people experience. Thus, the connections between willing to raise one's arm and the subsequent act of arm raising must be explained in terms of God's causing the arm to raise on the occasion of the volition that it be raised. Insofar as it implies that mental events and bodily events are not true causes but are only occasions upon which God acts as a cause, this view is known as occasionalism.

The late-seventeenth century German philosopher Gottfried Wilhelm Leibniz worried that the occasionalists' supposition of God's ongoing intervention in the world was an unjustifiably complex assumption that would destroy the possibility of there being laws of nature. He preferred his own view of pre-established harmony. Like occasionalism, pre-established harmony conceded that the mind and the body do not really interact. Unlike the occasionalists, however, Leibniz explained the correlation between mental and bodily events by supposing that the events occurring within a substance result from an internal principle of development that God placed in the substance from the outset and designed so that the events unfolding in the mind would be in harmony with the events unfolding in the body.

A third response to the problem of interaction was

that of rejecting the dualism that gave rise to the problem. In the seventeenth century, this solution was attempted in two very different theories. First, the seventeenth century British philosopher Thomas Hobbes maintained that the very concept of an immaterial substance was a contradiction in terms, for substance could only mean body. According to this materialism, then, mental events are nothing other than internal bodily events; thus, the interaction of the mind with the body is always nothing more than matter acting upon matter.

Also rejecting the dualism of Descartes was the seventeenth century Dutch philosopher Baruch Spinoza. Like Hobbes, Spinoza maintained that there is only one substance in the universe. Unlike Hobbes, however, he maintained that this substance should not be characterized exclusively as material, for spatial extension and thought are both attributes of the single substance constituting the universe. In keeping with this dual-aspect theory, Spinoza maintained that correlated mental and bodily events are really the same event viewed from different standpoints: the standpoints of thought and extension. Insofar as there is, at bottom, only one event behind any given mind-body correlation, the problem of explaining the interaction of distinct events dissolves in Spinoza's system.

Regardless of which of these avenues one chooses to explain the efficacy of volitions, one still must undertake the task of explaining why the agency manifested by the will is of a special type that can support the attribution of moral responsibility. Although recognition of the will's special agency is commonly made by referring to it as free and autonomous, there is considerable disagreement concerning the nature of this freedom and autonomy.

FREEDOM AND AUTONOMY

Numerous theories of human freedom have been defended throughout the history of philosophy; however, it does not do excessive violence to the subtleties of these theories to classify them all in one of the two following categories: voluntarism and compatibilism.

Advocates of voluntarism note that people normally do not punish others for actions that they could not have altered, and they thus maintain that the agency underpinning moral responsibility cannot be one that is governed by causal necessity. With this in mind, voluntarists (also known as incompatibilists

and indeterminists) maintain that the will's freedom entails that its volition not be necessitated by antecedent causes or conditions. According to the voluntarist, if one could reproduce the external and internal conditions immediately preceding an individual's choice, the individual would still be free to choose otherwise than he or she actually did. Thus it is that voluntarists such as John Duns Scotus (c. 1265-1308) and William of Ockham (c. 1280-1347) explain the will's freedom in terms of its complete independence of causally determining factors.

In direct opposition to voluntarism, compatibilism maintains that it is possible for certain human actions to be both free and causally determined. Also known as soft determinism and necessitarianism, compatibilism admits that all human actions are causally determined; it maintains, however, that certain human actions are still free insofar as they are free from external constraint and compulsion. One's walking to the corner to mail a letter is, in this view, free, even though it is causally determined by one's beliefs, desires, and character traits. Were another individual to force one to post the letter and drop it in the box, however, one's action would be compelled and hence not free. Freedom thus does not consist in an absence of all causes; rather, it consists in being caused by the right kind of causes: beliefs, desires, and character traits.

COMPATIBILIST DEFINITIONS OF "FREE"

Fully aware that their attempt to reconcile freedom with causal determinism seems to amount to nothing more than inventing a new meaning for the term "free," the compatibilists are quick to point out that it is their definition of "free," not that of the voluntarists, that makes sense of moral responsibility. According to the compatibilist, voluntarism makes free choice a random affair, since it implies that no sufficient explanation can be given for an individual's choices. This is problematic, according to the compatibilist, because people do not hold others morally accountable for actions that happen randomly or by chance. People do not think that the lottery official who randomly pulls the ticket of a destitute mother is more charitable than is the official who randomly draws the name of a tycoon. These events happen by chance and are thus to neither official's moral credit or discredit. For this reason, the compatibilist charges the voluntarist with having re-

duced human freedom to a kind of internal lottery, a lottery that undermines the very moral responsibility that freedom is supposed to explain.

In defense of their own definition of "free," compatibilists point out that people do think it appropriate to punish those whose actions flowed from wicked wants or a wicked character and to praise those whose actions flowed from virtuous wants or a virtuous character. This fact shows, they argue, that people do not hesitate to hold people responsible for actions that are caused, provided they are caused by the appropriate internal states.

The debate is not thus decided in favor of the compatibilist, however, for the voluntarist will note that the compatibilists' attempt to uphold freedom only succeeds while one focuses upon the immediate causes of free action, the agent's beliefs, desires, and character traits. When one considers the causes of these internal states, one quickly sees that compatibilism implies that they are ultimately caused by factors that are wholly external to the individual in question, factors that obtained even before the individual was born. The voluntarist therefore notes that the causal determinism that is part of compatibilism undermines its attempt to redefine freedom. Since determinism implies that all of an agent's actions are ultimately the results of wholly external causes, it turns out that no actions are free even according to the compatibilists' definition of "free."

Convinced of the inability of both voluntarism and compatibilism to offer a satisfactory account of moral responsibility, some philosophers have resisted the call to offer a theory of freedom. Such hard determinists as the late-eighteenth century English philosopher Joseph Priestley resist the call by simply denying that there is any such thing as free agency. Freedom, they insist, is merely an illusion created by one's ignorance of those causal factors that have determined the way that one will act on a given occasion. Other philosophers, such as Immanuel Kant, see freedom as a necessary condition of moral responsibility and thus are not willing to dismiss it; nevertheless, they resist the call to supply a theory of freedom by maintaining that the nature of free agency is a mystery that cannot be penetrated by human reason.

Although philosophical discussion of the will's freedom and autonomy normally focuses on the degree to which the will must be immune from deter-

mining factors, an interesting sidelight to this debate concerns the possibility that an individual can, freely and knowingly, choose evil.

WEAKNESS OF WILL

Acting in a way that is contrary to one's moral obligation while one is fully aware of that obligation constitutes weakness of will. Sometimes called moral weakness or incontinence, weakness of will seems to be a part of most individuals' experience. What is philosophically interesting about incontinence is that some philosophers have been unconvinced by the abundance of experiential evidence for its occurrence and have insisted that it never actually happens.

Probably the best-known advocate of the impossibility of incontinence is Socrates. He rejected incontinence on the grounds that no person wants to be miserable and that the surest way to make oneself miserable is by disregarding the demands of morality. Having accepted these points, Socrates was led to explain those who do choose lives of vice by supposing that they must be ignorant of the true nature of a virtuous life.

Other philosophers (such as R. M. Hare) have rejected incontinence on the grounds that it is impossible to act contrary to the moral principles that one holds insofar as the only true indicators of one's moral principles are the actions that one performs. According to this view, it is what a person does and not what he or she says that reveals his or her actual moral principles. It is only because people delude themselves into thinking that they hold certain moral principles that the illusion of incontinence is so prevalent.

Wisdom

DEFINITION: Accumulated knowledge and the ability to exercise sound judgment, especially in difficult ethical cases

TYPE OF ETHICS: Personal and social ethics

SIGNIFICANCE: Traditionally regarded as a cardinal virtue, wisdom remains a moral ideal, although modern critics reject the concept as elitist or arbitrary.

Wisdom, or good judgment, comprises both knowledge about facts and values and the ability to apply relevant knowledge appropriately in decision making and action. Wise judges possess discernment, fairness, and openness. They discern hidden possibilities and discover among conflicting interests unsuspected options for compromise. This ability requires patience and a tolerance for ambiguity. Aristotle emphasizes that fairness or “equity” prevents sacrificing the spirit of a rule in order to adhere to its letter. Wise judgment requires a flexible approach to rules, so the wise path may appear foolish. A long tradition concerning the so-called “wisdom of the fool” testifies to the shifting boundary between wisdom and folly. If wisdom turns into clichés, slogans, and rigid dichotomies, it may take a foolish mental openness—what in Zen Buddhism is called “emptiness”—to reveal what is truly real.

Prudence or practical wisdom (Aristotle’s *phronesis*) is considered the key virtue necessary for living a morally good life. Theoretical wisdom (*sophia*) by itself is insufficient, as amply illustrated by such familiar Platonic examples as foolish theorists falling into wells or selfish sophists claiming that might makes right. In Aristotle’s analysis of moral virtue as a mean between contrary vices of too much and too little, the correct judgment (*orthos lo-*

gos) required to determine what is “just right” depends on the *phronesis* of the morally serious judge (*spoudaios*). However, Aristotle’s arbitrary characterization of this judge and moral mistakes like his defense of “natural slavery” create doubt about his “wisdom.”

Contests among competing “experts” in lawsuits and on opposing sides of almost every political debate give rise to suspicion that their show of knowledge is merely a power struggle. Philosophers such as Friedrich Nietzsche and Michel Foucault make suspicion about the uses of disguised power central to their interpretations of ethical discourse. Traditional appeals to knowledge, truth, or wisdom appear as rhetorical maneuvers for foisting one’s preferred definitions of reality upon those whom one wishes to control. Suspicion provides a way of changing the subject and challenging the moral status quo.

Wisdom allows those who are—or believe they are—oppressed to challenge their oppressors’ claims to deference, based on sex, race, age, or other categories. Attacks on conventional beliefs as “pseudowisdom” have figured prominently in social debates over civil rights, multiculturalism, feminism, sexual preference, and other areas. Attacks on the objectivity of science, in the work of Thomas Kuhn and others, have indirectly raised doubts about wisdom regarding human values, as have the social scientific ideas of David Hume and Max Weber.

Wittgenstein, Ludwig

IDENTIFICATION: Austrian-born British philosopher

BORN: April 26, 1889, Vienna, Austro-Hungarian Empire (now in Austria)

DIED: April 29, 1951, Cambridge, England

TYPE OF ETHICS: Modern history

SIGNIFICANCE: The author of *Tractatus Logico-Philosophicus* (“Logisch-philosophische Abhandlung,” 1921) and *Philosophical Investigations* (*Philosophische Untersuchungen/Philosophical Investigations*, 1953), and one of the most important philosophers of the first half of the twentieth century, Wittgenstein argued that value, including moral value, falls outside the purview of philosophy, which he viewed as an activity that is primarily concerned with the explanation and delimitation of meaning to facilitate purely factual descriptions of the world.

Wittgenstein’s philosophy is divided into early and later periods. The early period is marked by his interest in the formal semantics for possible languages. Wittgenstein believed that language could be meaningful only if sentences are analyzable into ultimate atomic constituents that, in a one-to-one correspondence, exactly mirror possible facts, thereby providing a picture of the world. The sentence that describes a fact about the world is a concatenation of names for simple objects that corresponds to a juxtaposition of the named objects. The implication is that language is meaningful only if it describes contingent empirical states of affairs. This means that sentences that purport to express moral judgments and values are literally meaningless.

Wittgenstein regards this conclusion as showing that ethics must be transcendent, by which he means that value—right and wrong, good and evil—is neither part of the world nor a truth about the world. From this it follows that there simply is no matter of fact about whether it is right or wrong to do something; instead, moral value is a function of subjective attitude, aesthetic taste, or emotional response to the facts of the world. It is in this sense that Wittgenstein, in the *Tractatus* (6.421), enigmatically declares: “It is clear that ethics cannot be expressed. Ethics is transcendental. (Ethics and aesthetics are one).” Wittgenstein sees the mind’s transcendent moral stance toward the world of facts as vitally important to phi-

losophy and the conduct of life, despite the claims that value statements are literally meaningless and that value judgments cannot be stated, but only shown.

In his later development, Wittgenstein rejected the picture theory of meaning but continued to regard ethics as being deeply rooted in common social practices, or forms of life. There can be no adequate reductive philosophical theory of forms of life, because they are too basic, and they constitute the foundation in Wittgenstein’s later work for the philosophical explanation of the meaningfulness of discourse. After rejecting the semantic theory of the *Tractatus*, Wittgenstein, in the *Philosophical Investigations* and other posthumously published writings, continued to regard philosophy as a kind of therapy for eliminating problems that arise through the misunderstanding of language. It is not the function of philosophy to offer a positive doctrine of right and wrong, of good and evil, but only to explain what Wittgenstein calls the philosophical grammar of these terms as they can permissibly be used in the language of ethics. The business of philosophy is to arrive at a correct understanding of meaning, not to formulate and defend substantive commitments to particular doctrines of morally justified action or the good.

Wollstonecraft, Mary

IDENTIFICATION: English journalist and educator

BORN: April 27, 1759, London, England

DIED: September 10, 1797, London, England

TYPE OF ETHICS: Sex and gender issues

SIGNIFICANCE: Wollstonecraft’s *Vindication of the Rights of Woman* (1792) brought together her interests in women’s education and democratic human rights to argue that women deserve an education equal to that of men.

Wollstonecraft’s significant public activities included running a girls’ school and working with radical political groups that supported the French Revolution. She wrote many articles that were published

Mary Wollstonecraft. (Library of Congress)

in left-wing periodicals as well as eight books, including novels, educational manuals, and partisan political treatises. In her most famous work, *A Vindication of the Rights of Woman*, Wollstonecraft criticized the view that women should learn only how to keep house and be attractive. Being admired for one's beauty and vocational skills, she said, is demeaning to a human being. Human beings, both male and female, are distinguished from animals in that they were created by God with the ability to shape their emotions and morals through reason. All human beings deserve an education that cultivates their reason. If all people had such an education, they would be able to respect one another as self-controlled, independent, moral, and rational beings. Mutual respect of this sort between husbands and wives is the only route to a happy marriage. In her second-most-famous work, *A Vindication of the Rights of Men* (1790), Wollstonecraft argued that mutual respect of this sort between social classes is the route to a just society.

Women's ethics

DEFINITION: Study or advocacy of distinctively feminine or feminist ethical values

TYPE OF ETHICS: Sex and gender issues

SIGNIFICANCE: Women's ethics has challenged the traditional emphasis on reason, impartiality, autonomy, and universal principles, arguing that traditional moral philosophy has portrayed as universal values which are actually masculine or masculinist. The question of what makes a value feminine or masculine—whether it is a matter of essential biological difference, or of the particular processes of socialization prevalent in a given culture—is a matter of significant controversy.

The inclusion of women's experience and the increasing number of women philosophers have had an impact on ethical theory and practice. This impact has been enormous and varied. It is difficult to identify "women's experience." Women are not only women alone, but also belong to socioeconomic classes, racial groups, religions, geographical areas, and cultures. What is common to women's ethics is that experience matters. Just as women's experience is varied, so is women's ethical theory and practice varied.

The common classifications of women's ethical theory are maternal, psychoanalytic, liberal, socialist, Marxist, radical, and lesbian. Each of these views can be divided further among those who extol some aspect of the "feminine" as the highest virtue, those who accept the traditional "masculine" values but seek to redefine them as human, and those who propose a challenge to the idea of feminine and masculine virtues and seek to generate new concepts of morality.

Women's ethics, of any variety, recognizes "traditional" ethical theories as male centered. These theories either intentionally exclude women (and people of certain races and classes) from moral experience or unintentionally use certain male moral experience as the standard for all moral experience, thus effectively excluding women (and people of certain races

and classes). The result of such exclusion is a tradition that generally favors reason over emotion, impartiality over partiality, autonomy over interdependence or dependence, the abstract over the concrete, the universal over the particular, and justice over caring. In response to this exclusion, and the resulting tradition, women's ethics consciously considers women's experiences.

MATERNAL ETHICS

Maternal ethics, also referred to as the ethic of care, holds that women's unique experiences as mothers (biological or social) lead to an ethic that focuses on relationships and interdependence, and includes self-sacrifice and care for others as primary moral qualities. Whether they believe women are specially suited for such moral action by biology or by socialization, proponents of such theories believe that it is these moral characteristics that women should be recognized as having. Celebrating women's differences from men leads some theorists to suggest that women's morality is different from but complementary to the more male voice of justice. Others suggest that the feminine voice is superior and should be the model for all humanity.

PSYCHOANALYTIC ETHICS

Psychoanalytic feminists see the family arrangement, in which it is primarily the woman who stays with and cares for the children, as problematic. They believe that it is this arrangement that leads to sharp gender distinctions and inequalities. Because girls stay attached to the same-sex parent and never learn to define themselves as selves, they remain dependent. Boys, however, must define themselves in opposition to the mother and therefore become excessively autonomous. These differences have played out in power struggles in which boys learn to break away and be independent and girls learn to compromise and save relationships. These gender distinctions could be minimized, such feminists believe, by increasing dual parenting. This approach challenges the tradition by questioning the moral superiority of autonomy over interdependence.

POLITICAL ETHICS

The liberal feminist generally calls for the equal education of women and equal opportunity to pursue traditionally male occupations. It is at times summa-

rized as fighting for the opportunity for women to become men. Liberal feminism does not go too far in challenging the traditional approach to ethics; instead, it asks that women be included as human under the same definition as men—as rational, autonomous moral agents.

Marxist feminists see the power imbalance as primarily economic. If the marketplace is changed, women will no longer be available to be possessions of men and equality will emerge. Socialist feminists share this concern about the need to change the market but also believe that it will be necessary to change education, the home, media, and women's self-images if equality is to emerge. These approaches also accept much of the tradition and ask that conditions be changed so that women too can be rational autonomous actors.

Radical and lesbian feminists call for women to separate from men (the length and extent of the called-for separation vary). They claim that women cannot know who they are or what they believe unless they define themselves in terms of relationships with other women rather than relationships with men. If they are to avoid copying the oppression and power inequalities of patriarchy, they must first break out of it. This approach seeks to challenge the tradition at its very foundation, by rejecting it and calling women to build a separate tradition for themselves that is based on their own rich and varied experiences.

CONCLUSION

Despite the variations in theories of women's ethics, they do pose some common challenges to the tradition. These theories bring to the forefront the dynamics of power that are present in almost any given situation. The solutions that they offer to address the power imbalance between men and women vary, but they all suggest a reevaluation of the assumption that moral decisions are faced by, or made by, people with real or perceived power. They ask people to evaluate traditional "universal values" from the point of view of the disempowered and ask if they still appear to be universal values. They force people to see that being inclusive of many different viewpoints requires a willingness to be critical of the canon of traditional ethics in ways not previously attempted. It would be a mistake to remove the word "man" and replace it with "human." The differences between men and women must be addressed.

Some of these possible differences include seeing relationships and interdependence as the moral starting point and questioning the ideals of impartiality and autonomy as absolute moral values. Women's ethics forces people to rethink the concept of the moral agent and the moral act. It is necessary to see the connectedness of feeling and thinking and to broaden the notion of what counts as moral.

Women's liberation movement

DEFINITION: Set of social and political movements resisting patriarchy and advocating the interests of women

TYPE OF ETHICS: Sex and gender issues

SIGNIFICANCE: The women's liberation movement began by seeking to achieve equal rights and equal treatment for women and men. Later, however, this model of liberation became controversial, as some feminists began to question the assumption behind it that men and women share the

same basic values. The response of this so-called Second Wave of feminism was to advocate treating feminine values as just as legitimate as masculine values, rather than pretending that one set of values fits both genders equally.

Women's liberation is the dominant version of feminism in modern American society. Women's liberation emerged in the political context of the American New Left during the 1960's. Prior to this time, the earlier feminist movement, often called the "Old Wave" or "First Wave," referred to the formation of the suffrage movement in the United States and in Britain between about 1840 and 1920. The suffrage movement stressed reforms for women in family law, economic opportunity, and obtaining the right to vote.

First Wave feminists of the 1960's carried on the suffrage movement tradition by promoting a vision of equality between men and women. They spoke and thought in terms of equality of rights, nondiscrimination, equity, and fair treatment for everyone, and they worked for constitutional changes to guarantee equal opportunity, especially in politics and education. For example, a prominent First Wave advocate, Supreme Court Justice Ruth Bader Ginsburg, championed a vision of women's liberation during the 1970's that rejected the traditional belief that men and women lived in separate and different spheres. Laws based on this distinction were designed to seemingly protect the "weaker sex" by, for example, limiting work hours or acceptable occupations. These laws created the perception that women could not take care of themselves and needed special legal protection. Ginsburg and other feminists, however, argued that such laws only justified legal subordination. They attacked laws that treated men and women differently and demanded that men and women be given equal rather than special treatment. The accomplishments of this contemporary First Wave women's liberation constitute a great and significant American success story.

SECOND WAVE WOMEN'S LIBERATION

During the 1960's and 1970's, a different and more radical women's liberation movement evolved. Self-examination in consciousness-raising groups caused the unifying theme to emerge that women were systematically and thoroughly dominated, con-

Milestones in Women's Liberation

<i>Year</i>	<i>Event</i>	<i>Significance</i>
1848	Declaration of Sentiments at Seneca Falls Convention	Crucial document of nineteenth century feminism.
1848	Geneva Falls Convention of Women	First women's rights convention.
1869	American and National Suffrage Associations	Early Old Wave feminist organizations founded.
1869	Wyoming grants woman suffrage	First woman suffrage law in the United States.
1920	Nineteenth Amendment is ratified	Women given the right to vote.
1937	U.S. Supreme Court upholds Washington States's minimum wage law for women.	Women workers given new legal supports.
1947	<i>Fay v. New York</i>	Supreme Court rules that women are equally qualified to serve with men on juries.
1963	<i>The Feminine Mystique</i>	Pioneering First Wave book by Betty Friedan.
1963	President's Commission on the Status of Women	Recommends appointment of women to important political positions.
1964	Title VII of the Civil Rights Act	Prohibits employment discrimination on the basis of race, color, religion, national origin, or sex.
1966	National Organization of Women (NOW) is founded	Influential contemporary women's organization.
1968	Executive Order 11246	Prohibits sex discrimination by government contractors.
1970	<i>The Female Eunuch</i>	Important Second Wave book by Germaine Greer which focused media attention on women's oppression.
1972	Equal Rights Amendment (ERA) is passed by Congress and sent to the states for ratification	Takes an important step toward guaranteeing equal rights to all women.
1972	National Women's Political Caucus is organized	Pioneering group for involving women in the political process.
1972	Title IX is passed by Congress	Prohibits discrimination based on sex in schools receiving federal monies.
1973	<i>Roe v. Wade</i>	Supreme Court ruling affirming a woman's right to abortion via her right to privacy.
1975	<i>Signs: Journal of Women, Culture and Society</i> founded	Groundbreaking forum for publication of feminist scholarship and theory.

(continued)

Milestones in Women's Liberation — continued

<i>Year</i>	<i>Event</i>	<i>Significance</i>
1976	Democratic National Convention	A rule is made that women must make up half of all delegates.
1978	Pregnancy Discrimination Act	Bans job discrimination against expectant mothers.
1981- 1989	Reagan administration	The administration's antifeminist tone causes many setbacks for women's movement.
1981	Greenham	All-women's peace camp is set up at an Air Force base; positive use of feminist theory.
1981	Sandra Day O'Connor is appointed to U.S. Supreme Court	First woman Supreme Court justice.
1982	ERA is defeated	Not ratified by enough states.
1984	Geraldine Ferraro runs for vice president on the Democratic ticket	First woman to run for national office on a major party ticket.
1991	Anita Hill-Clarence Thomas hearings	Catalyzed the women's movement; key event in consciousness-raising.
1992	<i>Casey v. Planned Parenthood</i>	Abortion rights somewhat limited.
1992- 1993	"Year of the Woman"	Historic number of women run for and are elected to Congress.
1993- 2000	Clinton administration	Many women appointed to important positions, including secretary of state and attorney general.
1993	Ruth Bader Ginsburg is appointed to U.S. Supreme Court	Second woman Supreme Court justice.
1993	Violence Against Women Act	Enhances penalties for crimes motivated by gender.
1994	Gender Equity in Education Act	Federal law to train teachers in gender equity.
	Violence Against Women Act	Funds services for rape and domestic violence victims.
1996	<i>United States v. Virginia</i>	Supreme Court rules that male-only admission policy of the state-supported Virginia Military Institute (VMI) is unconstitutional.
1996	Summer Olympic Games in Atlanta	Spectacular successes of U.S. women are credited to advances in women's sports fostered by Title IX.
1997	Reinterpretation of Title IX	Supreme Court rules that college sports programs must involve roughly equal numbers of men and women.
2000	<i>United States v. Morrison</i>	Supreme Court permits victims of rape and domestic violence to sue their attackers in federal courts.

trolled, victimized, and oppressed legally, economically, and culturally by a male-dominated social structure ("andro-centricity," "hetero-patriarchy," or "sex-gender system"). As part of consciousness-raising, women would come to realize that this oppression and victimization on an individual level could form the basis for collective action, activism, and political change at a group level. This shift from stressing equity and fair treatment for everyone to stressing the oppression and victimization of women by men and the differences between men and women characterizes the "Second Wave" of women's liberation, a term coined by Marsha Weinman Lear in 1968.

COMPARING THE TWO WAVES

The First and Second Waves of women's liberation are similar in that they both believe that sexual politics is central in the struggle for women's rights. Many of their goals are the same in terms of improving the position of women in society. Certainly, both waves have had a profound effect on American politics and society, American consciousness, and awareness of gender roles and the relationship between men and women. The fundamental difference between the First and Second Waves is that the Second Wave is, as Maggie Humm pointed out, an ideology whose purpose is to create an environment for women that transcends social equity. That is, the Second Wave stresses the separateness of and differences between women and men and the communality between women, and it seeks to provide for the emancipation of women from their yoke of male oppression, victimization, and dominance. A major goal is to challenge and change the relevant social institutions and their practices, which have created and perpetuated these oppressive systems.

These goals of Second Wave feminism can be accomplished only by developing "gynaesthesia," a term coined by Mary Daley in 1978 to describe the radically new and altered perception and understanding that occur in women when they become Second Wave feminists. Christina Hoff Sommers describes this situation as a "gyncentric prism"; that is, a sharing among women of certain women-centered beliefs and social organizations. Rather than viewing men and women as equals, Second Wave feminists generally believe that equality is impossible to achieve given the patriarchal structure and orienta-

tion of American society. To adhere to equality between men and women would be like sleeping with the enemy. Men are the enemies of women, and there is a gender war in progress. The difference between the First and Second Waves is starkly defined in three statements, two by First Wave feminists Betty Friedan and Iris Murdoch, and one by Germaine Greer, a Second Wave feminist. According to Betty Friedan, "We must not let feminism be co-opted as a mask for cynical corruption by women or by men. We must resist that polarization of us against them (women against other women, even women against men) with our new vision of community that puts first the real needs of people in life." Iris Murdoch says, "to lay claim to [Second Wave feminism] . . . is to set up a new female ghetto. . . . It is a dead end in danger of simply separating women from the mainstream thinking of the human race." According to Germaine Greer, however, "male hostility to women is a constant; all men hate all women some of the time; some men hate all women all of the time; some men hate some women all of the time. . . . What is remarkable, given the implacability of male hostility to uppity women, is that we have survived."

Work

DEFINITION: Exertion of effort to perform a task or accomplish a goal, especially habitually as one's means of livelihood; labor

TYPE OF ETHICS: Beliefs and practices

SIGNIFICANCE: The meaning or function of work, for an individual and for a society, is one of the central problems of social philosophy. Many philosophers ascribe to work either an inherent ethical value—seeing all work as a good in itself—or a potential ethical value—seeing work as potentially expressive of human freedom when performed under the proper circumstances or in the ideal society.

The Hebrew Bible, known to Christians as the Old Testament, in the mythology of creation in Genesis and in the pessimistic poetry of Ecclesiastes, evinces both a positive and a negative attitude toward work. According to the Genesis myth, God commanded the first human pair to subdue and have dominion over the earth (Gen. 1:28). God placed Adam in the Garden of Eden “to dress it and keep it” (Gen. 2:5). Thus, work was considered a necessary and integral part of human life in this world.

According to the Genesis myth, however, because of the sin of Adam and Eve, work would be filled with hardship and toil:

Cursed is the ground for thy sake; in sorrow shalt thou eat of it all the days of thy life. Thorns also and thistles shalt it bring forth to thee; and thou shalt eat the herb of it all the days of thy life; In the sweat of thy face shalt thou eat bread, till thou return unto the ground; for out of it was thou taken; for dust thou art, and unto dust shalt thou return. . . . Therefore, the Lord God sent him forth from the garden of Eden to till the ground from whence he was taken (Gen. 3:17-19, 23).

This ambivalent attitude toward work also appears in Hebrew wisdom literature. The author of Ecclesiastes, an anonymous Hebrew poet, rhetorically asks with a pessimistic tone, “What profit hath a man of all his labour which he taketh under the Sun?” (Eccles. 1:3). Human labor appears to be empty and futile. “Then I looked on all the works that my hands had wrought, and on the labour that I had laboured to do: and behold, all was vanity and vexation of spirit, and there was no profit under the sun.” The poet, who is traditionally held to be Solomon, also expresses a positive attitude, and, in the end, seems to be as ambivalent as are the Genesis myths. “There is nothing better for a man, than that he should make his soul enjoy good in his labour. This also I saw, that it was from the hand of God.”

The ancient Greeks were just as ambivalent toward work as were the Hebrews, although, overall, the Greek attitude toward work, especially manual labor, was pessimistic. Plato, writing in the *Statesman*, depicts primordial life in the mythical time of Chronos as idyllic. Work was not necessary in those days because the earth, unaided by human cultivation, brought forth fruits from trees that no human had planted. The seasons were mild, the air was fresh, and the people were naked and lounged on couches of grass. In the *Laws* (book 4), Plato called the time of Chronos a “blessed rule” in which humans were happy and provisions were abundant and spontaneously generated.

Not only the ancients but also the moderns were unsure about the role of work in early human life. Jean-Jacques Rousseau postulated an early state of nature in which the needs of human beings were provided for by a generous, benevolent world: “The produce of the earth furnished him with all he needed, and instinct told him how to use it” (*A Discourse upon the Origin and Foundation of Inequality Among Mankind*, 1761). Georg Wilhelm Friedrich Hegel, even though he castigated early human beings as lazy, regarded toil as a universal feature of human activity intended to satisfy need (*Philosophy of Right*, 1875).

WORK AS NECESSITY

Even the fanciful and speculative ancient Greeks realized that labor was necessary in order to make leisure and happiness possible. Plato, in *Critias*, stated that mythology and intellectual inquiry were possi-

ble only after the necessities of life had been provided for. In the *Metaphysics*, Aristotle claimed that the arts of recreation, which were more esteemed than the arts of life's necessities, could be practiced only in an environment of leisure. In book 10 of the *Ethics*, Aristotle opined that happiness depended upon leisure and that people occupied themselves in work in order to have leisure. In book 1 of the *Politics*, he made the commonsense claim that one cannot live well until the necessities of life are provided for.

Hegel, in the *Philosophy of History*, held that the worker, in diligently providing for his or her needs, created his or her dignity. Montesquieu, in the *Spirit of the Laws* (1748), wrote that the activity of an "industrious" people was the source of their "blessing." Adam Smith held that the industriousness of even the lowest type of worker made possible the necessities and conveniences of life.

THE NATURE AND END OF WORK

Usually, a distinction has been made between types of work. One distinction was between honorable and dishonorable types of work. In *Charmides*, Plato quoted Hesiod, who held that work is no disgrace. In fact, Plato made reference to things nobly and usefully made as works, although he explicitly excluded such ignominious activities as shoemaking and pickle selling. Plato's distinction seems to be based on the belief that things that serve a utilitarian purpose are mundane and therefore ignoble. Plato, in *Republic* and *Timaeus*, separated the class of husbandmen and artisans from the class of guardians. In *Laws*, Plato strictly forbade artisans from participating in politics and citizens from occupying themselves in the handicraft arts. The craft of citizenship requires much study and knowledge, and no individual could occupy himself well with two different arts.

In the *Politics*, Aristotle agreed with Plato and insisted that the citizen refrain from the trades and crafts; otherwise, there would be no distinction between master and slave. According to Aristotle, the food-producing class and the artisans provide for the necessities of life and thus are necessary elements of the life of the state, but the state has a higher end: providing for the greater good. Aristotle also deemed the mastercraftsman more honorable and wiser than the manual laborer because the former has thorough knowledge about his activity, whereas the latter

works in ignorance. In *Politics*, Aristotle wrote that some duties are necessary but others are more honorable.

In the *Critique of Judgment* (1790), Immanuel Kant made a similar distinction between artistic production and manual labor. Artistic production is distinguished from labor in that the former is free and the latter is drudgery.

Hegel, however, was not so pessimistic about the nature of labor. He believed that adults, in working, devoted their lives to labor for definite intelligent and objective aims. Adam Smith echoed the ancient Greeks in his claim that people who pursue trades for a livelihood that others pursue merely as diversions are inferior people. Smith also made a distinction between productive and nonproductive labor that would figure prominently in the thought of classical political economy. Labor that adds value to the product is productive labor, and labor that merely renders a service but fails to add value to a product is nonproductive labor. This distinction yielded ethical advantages for the advocates of capitalism, who wanted to justify the social utility and ethical value of wage labor.

Thomas Hobbes's attitude toward work was practical and utilitarian. He advocated the creation of laws that would force those with strong bodies to be employed in useful arts and manufacture. Rousseau, with his negative attitude toward the stultifying and dehumanizing aspects of modern civilization, deplored the unhealthy trades because they shortened human life and destroyed human bodies.

WORK AND PROPERTY

Jesus said that "The workman is worthy of his hire" (Matt. 10:10). The social philosophy embedded in this pithy epigram simply sets forth the ethical principle that the worker deserves just compensation, in some form, for his or her labor. Each deserves what is proper. Property means what properly belongs to a person. Views on property have ranged from the communitarianism of Plato and Karl Marx to the concepts of private ownership found in John Locke.

In *Laws*, Plato advocated communal ownership of property and cited the old saying that "Friends have all things in common." The communal state, according to Plato, is the ideal state. Plato argued that in the ideal state there should exist neither the extreme of poverty nor that of wealth, for they produce social

evils. Aristotle modified Plato's concept of property ownership. Property should be common but private. In other words, the production of property should be social but ownership should be private.

Aristotle presumes that individuals will be more industrious if they look out for their own property and attend to their own business. Yet extreme poverty should not be allowed, because it lowers the character of democracy. People should be given the opportunity to start a farm or learn a trade. As Hobbes saw it, accident and fortune may make it impossible for some to sustain themselves by means of their labor; therefore, the state must force the physically fit to work, thereby creating social resources to be distributed to the unfortunate. Rousseau, like Plato and Aristotle, believed that government should prevent inequality by denying individuals the ability and opportunity to accumulate wealth. Rousseau believed that society enslaved the poor and empowered the rich, thereby destroying natural human liberty. Property laws and inequality worked for the advantage of the few and subjected the many.

Rousseau claimed that he could not conceive how property could come about except for manual labor. John Locke appears to agree with Rousseau, but in the end Locke took a decidedly opposing stand. In the *Second Treatise of Government* (1690), Locke began the section on property by ostensibly arguing for limited appropriation on the basis that an object that was created by means of one's labor was one's property. Yet, as he saw it, the introduction of money allowed the unlimited appropriation of property. According to Hegel, what makes an object the property of a person is that the person stamps his or her will into the thing. Hegel believed that property could be alienated only because it was external to the essential being of the worker. An individual may alienate—give up, sell, set aside, yield, or abandon—any possession, because it is external to the personality of the individual. Personality, ethical character, morality, and faith are essential characteristics of the self and therefore may not be alienated. Hegel believed that an individual could alienate his or her abilities to another person for a restricted period but not for a whole lifetime, because that would amount to making the essence of the self into a thing.

Even Adam Smith conceded that the entire product of labor does not belong to the laborer. According to Smith, in the original state of nature the entire

product belonged to the producer; he deplored the condition in modern society in which, all the lands having been converted into private property, the landlords reaped where they did not sow.

MARXISM AND WORK

Karl Marx condemned capitalism because it ripped away the meaningfulness of work from the worker and, through the imposition of alienated labor, dehumanized the worker. For Marx, the question of work is central to the social question, because the mode of production of material life determines the social, political, and cultural aspects of life. Work is essential to human nature, first of all, because it provides for the physical existence of human life. Work is not, however, only a means for physical existence; work is valuable for its own sake. Work is human life-activity itself. It is the realization and the fulfillment of human capacities and drives.

By means of work, human beings objectify themselves and create a human world, an environment that is conducive to the full development and flowering of all human potentials and capacities. The object of labor is not only to create a product but also to build the objective social world. The construction of the human world is the primary end of work.

Under capitalism, however, human work becomes alienated labor. Alienated labor dehumanizes the worker by enslaving the worker to an activity in which the worker becomes a passive object rather than an active agent. The worker becomes a slave of work because work is given by the capitalist and because work becomes necessary in order to maintain existence as a physical organism. The alienation of labor stems from the fact that the human being is not realized or fulfilled in work; such work does not affirm the humanity of the worker but denies it. Work is not freely entered into but is coerced. In the modern industrial world, the worker becomes a commodity, because the worker not only produces commodities but also is a commodity.

Alienated labor presupposes private property. Therefore, the emancipation from alienation, the process of dealienation, entails the abolition of private property. Dealienated labor becomes the foundation for the formulation of just political institutions and social arrangements and must be included in any conception of justice. Work is essential to human nature, a necessary expression of human life-activity

and the form of human self-realization. Finally, work is the foundation of culture. By means of their work, human beings shape and construct a human world in all its aspects: culture, politics, society, and so forth.

Herbert Marcuse, in *Eros and Civilization* (1955), viewed emancipation in terms of the play impulse. The character of work itself could be changed in accord with the nondistorted needs of the life instincts. The very character of production could change as a result of instinctual transformation entering into the relations of production. The character of the working day would change, causing the elimination of the distinction between necessary time and leisure time. Human production and self-creation would lose their antithetical character. Technological advancement would allow labor to be transformed into a realm of freedom within the realm of necessity. Rationality of gratification would inform new science and new technology. It would require a new worker and a new sensibility that would abolish the distinction between productive utilitarian labor and the creative aspects of work. The new sensibility would unite work and play. Such a unity can come about, however, only if it becomes a basic need of human nature.

In *An Essay on Liberation* (1965), Marcuse stated that aim-inhibited sexuality develops in individuals a sense of what is permissible and what is not—the reality principle. Repression is heightened in advanced capitalism to prevent human beings from enjoying emancipatory possibilities; it keeps them in productive gear. In socialism, a properly repressed libido will emerge in new human relations and in culture-building activities. The prospect of automation suggests the elimination of the distinction between labor and leisure.

CHRISTIANITY AND THE SOCIAL QUESTION OF WORK

Saint Paul enjoined Christians to work and not be idle. The Cistercians' *ora et labora* cautioned the faithful to pray and work. Martin Luther interpreted the call to salvation as being inextricably tied to the position that one held in society. One's call to salvation was also a call to accept work as vocation. John Calvin interpreted work as enterprise and held that success justifies work. Max Weber demonstrated that, for Calvinist Protestants, successful work proved God's election. This idea found fertile soil in the Puritan ethos, where frugality and hard work

were believed to be the keys to success. Weber called this Protestant ethic the "spirit of capitalism." Jürgen Moltmann interprets work as participation in God's history. Work is not only self-supporting but also self-realizing. Work affirms existence; therefore, work is a right that presupposes freedom. Work must allow for self-formation. Work requiring cooperation helps in the socialization of the individual. Therefore, work should be understood as part of the socialization process. Through work, people participate in creating or destroying the world. Thus, work has eschatological significance.

In *Laborem exercens* (1982), Pope John Paul II strongly emphasized the central role that work plays in solving social ills. Making life more human presupposes making work more human. Men and women participate with God in creation by carrying out the mandate given in Genesis to subdue and dominate the earth. Men and women are created in the image of the Creator. Therefore, human beings are creative subjects and agents who are capable of planning and rationally deciding about the future.

Men and women are not only workers but also the subjects of work. They are persons apart from their work. Thus, work should realize their humanity. From this idea is derived the ethical idea of work. Work is ethical because in it, and by means of it, human beings realize their humanity and rationally decide to bring about their future. The dignity of work therefore is based on the subjectivity of the person who works. Accordingly, Pope John Paul II stressed the primacy of work over capital, the priority of human beings over things. Work is also considered to be a means toward self-realization, as is expressed in the Vatican II documents *Mater et Magistra* (1961) and *Gaudium et Spes* (1965). The Roman Catholic Church views the commodification of the worker, the treatment of the worker as a mere means of production, as a denial of human dignity.

Pope John Paul II also affirmed the world-shaping power of work. It is the foundation of the family and society. It is foundational for the family because it provides for the subsistence of the family. Work, combined with the virtue of industriousness, influences the process of family education. In Roman Catholic social teaching, work has been considered as a fundamental force shaping the world of culture and society in a human and rational manner.

John Paul II, Pope. *Laborem exercens*. Boston: St. Paul Editions, 1981. *Laborem exercens* sums up centuries of Catholic social teaching on work and characteristically takes up a middle position between capitalism and socialism. It is crystal clear in its call for the right to meaningful work.

Marcuse, Herbert. *Eros and Civilization: A Philosophical Inquiry into Freud*. Boston: Beacon, 1974. Using Freudian categories, Marcuse argues that advanced capitalism represses the fundamental creative powers of human beings. He sets forth the idea that the very nature of work should change and that work and leisure should not be so radically distinguished.

_____. *An Essay on Liberation*. Boston: Beacon Press, 1969. Written in the turbulent late 1960's, *An Essay on Liberation* offers a new vision of socialism in which unchained aesthetic sensibilities would unleash creative productive powers that would make possible an environment of freedom. Work is interpreted as being playful.

Marx, Karl. *Selected Writings*. Edited by David McLellan. 2d ed. New York: Oxford University Press, 2000. Includes the *Economic and Philosophical Manuscripts of 1844*, in which Marx develops his fullest expression of both free and alienated labor, as well as selections from *Capital* on the labor theory of value.

Plato. *The Republic*. Translated by Desmond Lee. 2d ed. New York: Penguin Books, 2003. This book captures Plato's vision of the good city, which is divided into three classes with three varieties of duty.

Schaff, Kory, ed. *Philosophy and the Problems of Work: A Reader*. Lanham, Md.: Rowman & Littlefield, 2001. An anthology collecting a wide-ranging group of texts by scholars of every political stripe, covering such subjects as work and technology, market socialism, exploitation, and the welfare state.

Weber, Max. *The Protestant Ethic and the Spirit of Capitalism*. Translated by Talcott Parsons. Introduction by Anthony Giddens. New York: Routledge, 2001. This classic text successfully demonstrates the power of ideas to influence social and economic structures. It does not quite refute Marx's materialist concept of history but does a convincing job of linking the origins of capitalism with the Calvinistic-Puritan work ethic.

World Health Organization

IDENTIFICATION: International agency that initiates and coordinates efforts to solve global health problems

DATE: Founded in 1948

TYPE OF ETHICS: Bioethics

SIGNIFICANCE: Also known as WHO, the World Health Organization was founded in response to the perceived need for an entity capable of addressing medical and health problems that cross national boundaries to affect entire regions, continents, or the planet as a whole.

International health organizations have existed from the first decade of the twentieth century, but WHO's scale is far larger than that of anything that existed earlier. It admits and provides services to all states, regardless of whether they are U.N. members. Its tasks fall by their nature into three categories. The first, carried out mainly at headquarters in Geneva, might be called "minding the store": maintaining international drug standards and sanitary and quarantine regulations, and disseminating information regarding epidemics, drug addiction, chemical residues, radiation hazards, and so forth. The second involves providing education and technical assistance for member nations, experts to help plan and set up local health centers, teachers, temporary medical personnel, and so forth. The third is mobilization to deal with specific diseases, including services provided by the central organization, national health bodies, medical laboratories, and other entities.

Smallpox was declared eradicated from the world in 1980. The list of other diseases that WHO has targeted for eradication is striking. In 1988, the organization set the year 2000 as the target date for eradicating polio. That goal was not met, but by the year 2004, only 530 cases of polio were reported worldwide, and those cases were confined to six nations: India, Pakistan, and Afghanistan in South Asia, and Nigeria, Niger, and Egypt in Africa. WHO also set

2000 as the target date for eradicating leprosy. Progress in eradicating that bacterial disease has not been nearly as dramatic as has been the case for polio, but the incidence of leprosy through the world was dramatically reduced by 2004 and was continuing to decline. Other diseases that WHO has targeted for eradication include AIDS, tuberculosis, malaria, yellow fever, cholera, and diphtheria.

In the nondisease category, WHO's goals include the providing of new contraceptives, chemical and mechanical, male and female; the promotion of health practices for mothers and children in developing countries; and even antismoking campaigns. As its charter states, WHO aims for "the highest possible level of health" for all people.

World Society for the Protection of Animals

IDENTIFICATION: International organization dedicated to the protection of domestic and wild animals, including their natural habitats

DATE: Founded in 1981

TYPE OF ETHICS: Animal rights

SIGNIFICANCE: The World Society for the Protection of Animals (WSPA), which has more than 460 member organizations, as well as offices in twelve countries, monitors and intervenes in cases of animal cruelty and detrimental ecological practices.

Formed by the merger of two international organizations, the World Federation for the Protection of Animals (founded in 1950) and the International Society for the Protection of Animals (founded in 1959), and by absorbing the International Council Against Bullfighting in 1984, the World Society for the Protection of Animals has more than 100,000 international members. The society studies international animal welfare laws and intervenes in a diverse variety of cases involving cruelty. In 1990, for example, WSPA activities included a campaign against the an-

nual Texas rattlesnake roundup, which was condemned because of the suffering of the snakes and because of adverse ecological effects.

The society also operates an emergency rescue service for individual distressed animals, which took action, for example, in 1989, when Colombian peasants discovered and aided a wounded Andean condor. The WSPA engineered the condor's removal to a Bogotá zoo and found a sponsor to pay for its extensive medical treatment.

World Trade Organization

IDENTIFICATION: International body that promotes and enforces trade laws and regulations

DATE: Began operating in 1995

TYPE OF ETHICS: International relations

SIGNIFICANCE: A global international body, the World Trade Organization manages the rules of trade among nations; its international ethics have come under attack because critics argue that its trade rules are undemocratic and affect not only people from member countries but the environment as well.

The World Trade Organization (WTO) was created in 1994 to replace the General Agreement on Tariffs and Trade (GATT). The WTO began officially functioning the following year, with its headquarters in Geneva, Switzerland. By the beginning of the twenty-first century, it had nearly 150 member countries.

The WTO's mission is to help those who produce goods and services, including importers and exporters, conduct their business. WTO agreements ensure member countries that their exports will be treated fairly in other countries' markets. Similarly, member countries promise to do the same for imports into their own markets. Supporters of the WTO argue that the organization adheres to ethical principles: It handles disputes constructively, it provides training and technical assistance for developing countries, and it provides more choices of products and qualities.

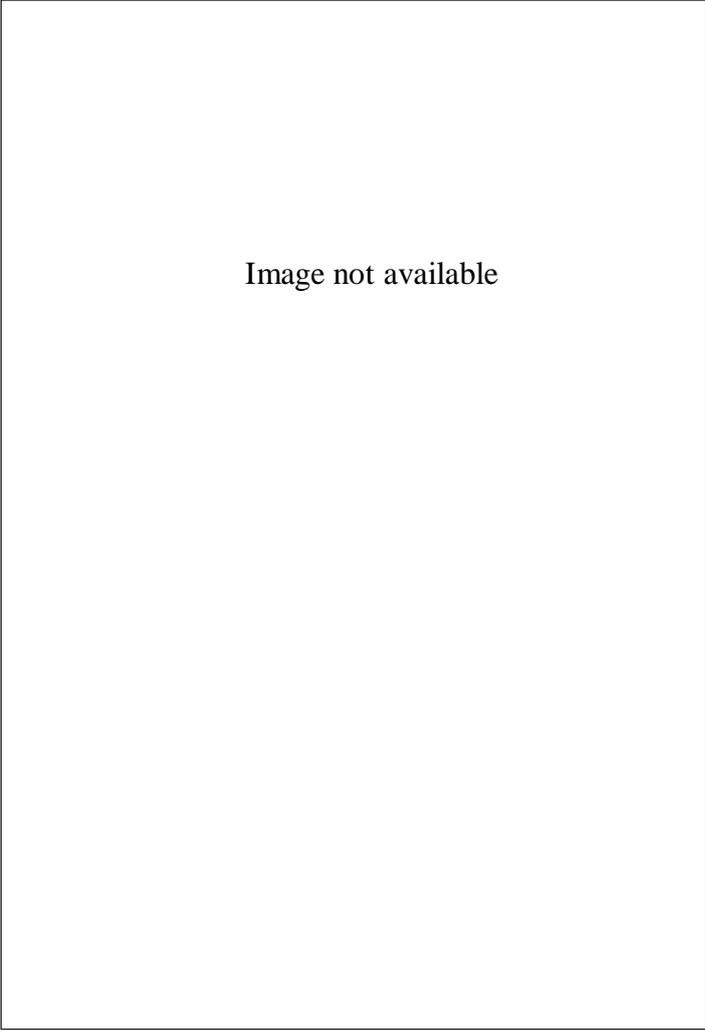

Image not available

Mounted Australian police run down protestors demonstrating against a meeting of World Trade Organization trade ministers in Sydney in November, 2002. (AP/Wide World Photos)

The world trade that it fosters raises income levels and stimulates economic growth, cuts the costs of living, promotes peace, and encourages good government.

Critics argue that the WTO is too powerful because it can declare the laws and regulations of sovereign nations in violation of trade rules. They allege that the WTO pressures nations into changing trade laws. Developing countries that are WTO members complain that a few powerful member countries dominate WTO discussions. Other critics maintain that WTO trade rules do not adequately protect work-

ers' rights, the environment, or human health. United States consumer advocate Ralph Nader believes that WTO policies are undemocratic because they erase national laws and move far beyond settling disputes over tariffs and import quotas. An activist group called the Global Trade Watch wants the WTO to restore each nation's right to make its own decisions about goods sold in its own domestic market and to allow individual nations to set their own environmental and health standards. Environmentalists have initiated the most powerful lobbying efforts against WTO policies. They argue that the WTO has canceled modern environmental protection by nullifying pollution prevention efforts through the use of bans.

When WTO leaders met to discuss trade policy in Seattle, Washington, in late 1999, thousands of people gathered there to protest against the organization. The protesters maintained that the organization neglected poor countries and endangered the environment with its policies.

Legal observers have pointed out significant gaps in WTO agreements and treaties. These include unclear definitions and articles, and contradictory elements within them that have become sources of disagreement among WTO members. The challenge for the WTO in the future is to become an ethically sound bargaining forum because

of changing mixes of cooperation and aggressive unilateralism present in many countries.

The Wretched of the Earth

IDENTIFICATION: Book by Frantz Fanon (1925-1961)

DATE: *Les Damnés de la terre*, 1961 (*The Damned*, 1963; better known as *The Wretched of the Earth*, 1965)

TYPE OF ETHICS: International relations

SIGNIFICANCE: Focusing on Africa, *The Wretched of the Earth* condemns colonialism and neocolonialism from a Marxist perspective and calls for natives to rise in violence against foreign settlers.

Frantz Fanon indicted colonialist countries for using force to exploit raw materials and labor from colonized countries. Attempting to justify their actions, colonialists stereotyped natives as savages and referred to natives' "precolonial barbarism." Colonialists proclaimed that European culture was the ideal for native peoples to emulate and used violence and divide-and-conquer strategies to keep the natives down. Fanon advocated violence against the settlers as the way for colonized people to regain their sense of self-respect. Although he was a psychiatrist, Fanon did not show that such violence would be psychologically liberating. Instead, he cited cases in which such violence led to psychological degeneration. Even if anticolonial violence were the only way to regain a sense of self-respect, however, such violence would not be automatically justifiable. Rape is not justifiable, for example, even if it appears to be the only way for a person to gain a feeling of self-respect. Thus, it is a mistake to think that Fanon has adequately justified terrorist attacks on the innocent. Fanon encouraged the colonized to reject the dehumanizing domination of Western culture. He claimed that Western culture corrupted the leaders of the decolonized state, making them put their own interests above the interests of the people. He urged former colonial powers to compensate their former colonies instead of continuing to exploit them.

X

Xunzi

IDENTIFICATION: Ancient Chinese philosopher

BORN: c. 307 B.C.E., Zhao Kingdom, China

DIED: c. 235 B.C.E., Lanling, Chu, China

TYPE OF ETHICS: Religious ethics

SIGNIFICANCE: Xunzi (Hsün Tzu in Wade-Giles spelling) superseded Mencius (371-289 B.C.E.) as the foremost interpreter of Confucius. His humanistic philosophy was primarily concerned with the moral education and training necessary to cultivate the self and develop character, whereas Mencius had held that people are inherently good from birth and that they should depend on transcendental power and project universal love.

Xunzi's philosophy was primarily humanistic and realistic, being focused on humanity and the investigation of things. He rejected human dependence on any transcendental power or spirit, such as heaven (*tian*). Instead, he recommended that people depend on their own proper actions as spelled out by the rules of right conduct (*li*), especially in the *Li ji* (*The Book of*

Rites), and by justice (*yi*), combined with their own experience. Although people are born evil—that is, “uncivilized”—and are moved by desire, like other animals, they have intelligence and sympathy, which are beyond the abilities of other animals, and can learn to act righteously through knowledge and wisdom acquired by education, self-cultivation, and moral training. They can thus control their animal drives by an act of will and sense of discipline.

Xunzi thought that Mencius's idea of universal love (*jian ai*), which involved loving everyone in the world equally, was unrealistic and impractical. Instead, he held that knowledge gained by study (*xue*) and wisdom (*zhi*) would enable people to control their desires. He also realized that the basis of education was the proper understanding of language and a rational approach. Hence, he stressed the importance of linguistic analysis under the rubric of “the rectification of names.”

Z

Zen

DEFINITION: Buddhist school of thought whose adherents seek direct, unmediated knowledge of reality through meditation

TYPE OF ETHICS: Religious ethics

SIGNIFICANCE: A major religion in its own right, Zen Buddhism adheres to principles that have also been extremely influential in secularized form as the basis for various nondenominational spiritual philosophies.

Zen, or Zen Buddhism, is a major religion of China and Japan. The name (*Chan* in Chinese, *Zen* in Japanese) means “meditation.” Zen is one branch of the Mahāyāna School of Buddhism. Buddhism originated in India before 500 B.C.E. The historical Buddha (“Enlightened Being”)—whose sculpted image is familiar worldwide—taught followers to meditate to gain understanding of the true self, or Buddhature. Bodhidharma, the legendary founder of Zen in China, came from India during the late fifth century C.E.

Great teachers and Daoist doctrine helped shape Zen, and two Chinese schools developed, with different methods of seeking enlightenment and using meditation; these had entered Japan by the fourteenth century as Rinzai and Sōtō. Temples and monasteries arose, and Zen influenced Japanese military life, poetry, art, and landscape gardening. In the twentieth century, writings by Daisetz Teitaro Suzuki and Alan Watts helped to popularize Zen in the West.

ETHICAL IMPLICATIONS

A compassionate realist, Buddha hoped to control suffering and eliminate possessiveness, greed, and self-centeredness. Nirvana, freedom from all earthly ties, was a spiritual goal. Although Buddha avoided specific ethical rules, his Eightfold Path sought to cure humanity’s “dislocation” with right views, right aspiration, right speech, right conduct, right vocation, right effort, right mind control, and right medi-

tation. Still central to Zen, these steps encourage careful, truthful thought and speech; respect for basic moral laws; useful work that hurts no one; and suppression of physical appetites and materialism. Although Zenists have sometimes been stereotyped as “happy have-nothings,” one traditional Zen precept has been daily work.

Zen stresses inwardness over altruism or social interaction, assuming that people who are at peace with themselves will harmonize with the world and others. Zen tries to eliminate selfishness by curbing ego, teaching that the intuitively wise person is compassionate and humane. It encourages restraint, humility, patience, and quietness. It emphasizes the symbiotic continuity of life and the connectedness of thought and action.

Zero-base ethics

DEFINITION: Moral theory arising from the premise that one person's gain is always balanced by another's loss

TYPE OF ETHICS: Legal and judicial ethics

SIGNIFICANCE: Zero-base ethics takes zero-base, or zero-sum, economics as an axiom and attempts to ascertain the moral consequences of this axiom. In particular, it develops models and principles to guide decisions about who should suffer and who should benefit in the economic realm, given the assumption that for one person to benefit, another must necessarily suffer.

The zero-base concept is an economic concept that is often illustrated by means of the "fixed pie" analogy: The pie is of a fixed size, so if one person gets a larger piece, another person must get a smaller piece; if one person gets a piece at all, someone else must get none.

Zero-base economics has two major implications for ethics. First, it primarily involves the distribution of resources, not their production. Second, the question of distribution becomes the problem of deciding whose interests must be sacrificed so that others' may be satisfied.

Those who accept zero-base economics often use "lifeboat" scenarios to illustrate the essence of ethics. If eight people are on a lifeboat that contains provisions only for six, then the task is to decide which two must be sacrificed, voluntarily or not, so that the other six can live.

Zero-base economics is contrasted to the "expanding pie," or "win/win," model of production and distribution. Advocates of the expanding pie model argue that the production of wealth can be a dynamic, ever-increasing process, and therefore that ethics is fundamentally about production, not distribution. They point out, for example, that between the years 1750 and 2000, the world's population increased by roughly a factor of 6, yet during that time the world's production increased roughly by a factor of 1,600.

Zhu Xi

IDENTIFICATION: Medieval Chinese philosopher

BORN: October 18, 1130, Yougi, Fujian, China

DIED: April 23, 1200, Jianyang, Fujian, China

TYPE OF ETHICS: Medieval history

SIGNIFICANCE: An influential historian and philosopher, Zhu Xi (Chu Hsi in Wade-Giles spelling) advocated extending knowledge "through the investigation of things" ("*dan jin zai ge wu*"), which referred particularly to the study of ethical conduct in and out of government. His neo-Confucianism dominated the intellectual life of China into the first decade of the twentieth century and was influential in Korea and Japan as well.

Zhu Xi's major works are virtually all revisions of, compilations of, or commentaries upon the work of others. His *Outline and Digest of the General Mirror* (1172) is a revision of Sima Qian's history of China, *Comprehensive Mirror for Aid in Government* (late eleventh century), and his philosophy is put forward in commentaries upon the texts of his predecessors, especially Confucius and Mencius. Possibly his most famous work, *Reflections on Things at Hand* (1175), collects the writings of the foremost neo-Confucian philosophers.

Zhu Xi's own neo-Confucianism embraces cosmology and metaphysics as well as ethics and a theory of evil. What he calls the supreme ultimate (*tai ji*) is the summation of emptiness, or the realm of no-things (*li*), which is "above shapes"; it is the ideal prototype and standard that determines the nature of things. The concrete physical world is determined by the vital force (*qi*; literally, "breath"), which is "within shapes." It individuates each thing. In this way, each thing has a nature (*li*) and a specific character (*qi*). Every single thing is instilled with the supreme ultimate, which is the totality of *li* in all things. Every man can cultivate *tai ji* through earnest investigation of things and extend his knowledge of *li*; such research includes the study of the *Four Books* (*Si Shu*) of Confucianism and the study of ethical conduct. People are born with either good or bad *qi*: If it is pure and clear, they are talented and wise; if it is impure and turgid, they are foolish and degenerate. In China, Zhu Xi's philosophy was called the school of *li* (*li xue*). From a Western point of view, it is a variety of idealism.

Zhuangzi

IDENTIFICATION: Ancient Chinese philosopher
BORN: c. 369 B.C.E., Meng, Kingdom of Song,
China

DIED: 286 B.C.E., Nanhua Hill, Caozhou, Kingdom
of Qi, China

TYPE OF ETHICS: Classical history

SIGNIFICANCE: Zhuangzi (Chuang Chou in Wade-Giles spelling) developed relativism and introduced naturalism and individualism into Daoist philosophy.

Zhuangzi criticized the other schools of thought in feudal China, such as Confucianism, Mohism, and Legalism, for their artificiality. He argued that their political and social ethics were conducive to the very disharmony that their proponents appeared to be combating. Words such as “duty” and “righteousness,” as well as concepts of “good” and “evil,” were the unnatural products of thinkers who were ignoring the real nature of humanity and its place in the universe. The way, or *dao*, of the universe was non-judgmental. Nothing was either good or bad. In fact, the concept “good” could not exist without the concept “bad,” and thus any effort to promote one of these concepts led to the unwitting encouragement of the other. As the *Zhuangzi* (his collected works) states, “The Dao is hidden by meaningless disputation, and speech is subsumed by artificiality. The Confucians and Mohists argue endlessly that each school is ‘right’ and the other ‘wrong,’ but the Dao is universal and does not recognize right or wrong.”

ZHUANGZI

The text of the *Zhuangzi* has been corrupted by additions and emendations, and there is much controversy regarding which parts constitute the inner core of Zhuangzi’s thought. Despite this uncertainty, it is possible to perceive several consistent themes in the work. Zhuangzi was continuing the Daoist relativism of the *Dao De Jing*, a work attributed to a philosopher by the name of Laozi (“Master Lao”). The essence of this work is that there is a *dao*, or “way of the uni-

verse,” which encompasses all things and cannot be reduced into words, which have parameters. The *dao* is not subject to parameters of any kind. The first paragraph in this short work states that the *dao* that can be spoken about or identified cannot be the true *dao*. Nevertheless, Laozi’s book has eighty subsequent chapters that attempt to identify the manifestations of the *dao*. The *Dao De Jing* implies that if left alone, people are naturally peaceful and harmonious, but if they are harangued by moral argumentation, they can change for the worse. Just as concepts of shape, size, and aesthetics are all relative, so too are ethical dictates that become counterproductive because of the relativity of language.

In a sense, Zhuangzi’s writing is more consistent with Laozi’s injunction against trying to verbalize or even conceptualize the *dao* than is any other work of Daoism. Instead of sermonizing, Zhuangzi’s work primarily relates anecdotes and parables, leaving the reader to intuit the universality of the *dao*. Reality and illusion are integral parts of the *dao*, and the sage does not try to distinguish between the two. Thus, Zhuangzi states simply that, on a given night, he dreamed that he was a butterfly but wondered if he were a butterfly dreaming that he was a man. In order for skepticism to be in accord with the *dao*, it must be an all-inclusive skepticism that doubts even doubt itself.

Instead of despairing at this uncertainty, Zhuangzi suggests that one should act as if what one is doing is real and important but should also know that it might be an illusion. This is an important point in understanding Zhuangzi’s ethics. He does not dismiss moral behavior, and he frequently suggests that one should live simply and harmoniously with others. What he does dismiss, however, is the act of attributing much importance to what one does. According to Zhuangzi, therefore, ceremonies and sermons do nothing to induce moral behavior. Simplicity, and by inference what is “good,” can be achieved only by “getting closer to the *dao*.”

When Zhuangzi’s wife died and he beat on a drum instead of mourning for her, he answered his critics by explaining that perhaps his wife had evolved into a happier existence than that which she had enjoyed while in human form. It was not wrong to have loved her and to miss her, but it was wrong to mourn her change from one form to another. Zhuangzi’s parables point out that one cannot be certain what is best

for other people and that one should therefore avoid imposing tentative and uncertain values on others.

In several tales in the *Zhuangzi*, men who, because they are criminals, have been punished by amputation seem to possess considerable wisdom, most of which has to do with not valuing things, including their limbs. Zhuangzi suggests that these men are in some ways more honest than others and have attained contentment and even "virtue" by losing that which other people strive so desperately to keep.

Zhuangzi also ridiculed those who would try to define the dao as a philosophy of action or ethics, perhaps anticipating the plethora of "The Zen of . . ." and the "Dao of . . ." literature that abounds today. A famous bandit by the name of "Robber Zhi," to whom an entire chapter of the *Zhuangzi* is devoted, is said to have argued that there is even a dao of stealing: "There is cleverness in locating the booty, courage and heroism in taking it, and the intelligence of plotting the theft. Finally, there is the honesty of dividing it fairly."

Although Zhuangzi calls for individualism and skeptical relativity, he does not argue in favor of selfishness or dissipation. Instead, his ethics consist of leaving other people to decide for themselves what is right and wrong and having no state, religion, or social organization make such determinations. To Zhuangzi, one could best perfect oneself by blending with nature and not competing with it. Only when people ceased to interfere with nature or with other people could there be peace.

Zionism

IDENTIFICATION: Historical movement to establish a national Jewish state in Palestine, or, the political movement supporting the national and international interests of modern Israel

DATE: Formally established on August 29, 1897

TYPE OF ETHICS: Race and ethnicity

SIGNIFICANCE: The original Zionists believed that the reestablishment of a Jewish state was the only realistic means of escaping virulent anti-Semitism and the only way that Jews could fully implement Judaism as a way of life. Modern day Zionism is a form of nationalism which is closely associated with the extreme complexity and moral ambiguities of the Israeli-Palestinian conflict.

In 1882, after a series of pogroms (organized persecutions of Jews) in Russia, Russian Jewish youths formed a group called the *Hovevei Ziyon* ("Lovers of Zion") to promote immigration to Palestine. "Zion" is the ancient Hebrew poetic term for the abode of the faithful; specifically, Jerusalem and the Holy Land. The *Hovevei Ziyon* began what was called "practical Zionism."

In 1896, after witnessing anti-Semitic demonstrations in Paris resulting from the Dreyfus affair, Theodor Herzl wrote *The Jewish State*, in which he reasoned that if the Jewish army officer Alfred Dreyfus could be falsely convicted of treason in a country supposedly as enlightened and ethical as France simply because he was Jewish, there was no hope for Jews to live in peace anywhere except in an independent Jewish national state. Subsequently, Herzl organized "political Zionism" on a worldwide scale at

the First Zionist Congress in Basel, Switzerland, in 1897.

After Herzl's death in 1904, Zionist leaders worked tirelessly in the face of Arab hostility and the horrors of the Holocaust to bring about the founding of the state of Israel on May 14, 1948. By the 1980's, practically all Jews of the Diaspora had become committed to Zionism, or at least to its mission of supporting Israel and human rights for Jews.

Zoroastrian ethics

DEFINITION: Ethical values and principles of the Zoroastrian religion

TYPE OF ETHICS: Religious ethics

SIGNIFICANCE: Zoroastrian ethics emphasizes personal free choice and individual responsibility for good or evil behavior, measured according to a person's effects in the world. It has heavily influenced the ethical doctrines of Judaism, Christianity, Islam, and Buddhism.

Zoroastrian doctrine teaches that human beings freely choose right or wrong behavior and are personally responsible for their conduct. To achieve lasting happiness, people should recognize and engage in right conduct as it is defined in Zoroastrian teachings. At death, the good and evil thoughts, words, and actions of each person are judged by God; the good souls are rewarded in Paradise, while the bad are punished in Hell. Right and wrong conduct, which are clearly defined in Zoroastrian texts, encompass thoughts, words, and actions.

The basic doctrines of Zoroastrianism were first expressed in the *Gathas* (inspired poems, or *manthra*), which were composed from approximately 1700 to 1500 B.C.E. Their author, Zoroaster (Zarathustra), was a priest in a preliterate society probably in eastern Iran, where he experienced a series of divine visions and a call to teach all people a new spiritual way that would become the first divinely revealed world religion.

This way emphasizes right conduct and teaches a cosmic duality of two opposing divine spirits: the All-Wise and Good God (Ahura Mazda) and the All-Ignorant and Evil Adversary (Angra Mainyu). During Zoroaster's life, a system of rituals and customs developed as part of the new religion, many of them adapted from the older polytheistic religion that he had practiced. These rituals and customs are strikingly similar to early Hindu religious observances, suggesting a common origin of Hinduism and Zoroastrianism.

By 600 B.C.E., Zoroastrianism had become the state religion of the widespread Persian Empire and eventually was adapted by peoples from the borders of Greece in the West to those of India and China in the East. It remained the official state religion of Persia until around 700 C.E., when Islam replaced it. Through the twelve centuries that followed, it gradually lost both prestige and membership. It continues to be practiced in small communities, chiefly in Iran and India.

ETHICAL DOCTRINE

Human conduct plays a crucial role in the fate of the world, according to Zoroastrian teachings. By choosing the right conduct defined by Zoroaster, humans join the All-Wise God and the accompanying six holy immortal ones and other divinities (*yazatas*), including Mithra, in an ongoing cosmic battle against the Adversary and his followers, the race of evil ones.

This battle, which began when the Adversary attacked the newly created world, will continue to rage until righteousness finally overcomes evil, the savior of the world appears, and the day of final judgment arrives. Therefore, the personal choices in daily human life are a battleground of good and evil forces. When individuals choose good thoughts, words, and actions, they support the All-Wise One and strengthen the world's prosperity, growth, and natural order: the power of the just (*asha*). When individuals choose evil thoughts, words, and actions, they support the Adversary and increase distortion, decay, and conflict in the world: the power of the evil force (*drug*). Followers of this teaching must, therefore, recognize and follow right conduct, resist the temptations of wrong conduct, and purify themselves when they think, say, or do evil.

Human conduct not only influences the outcome of the cosmic battle of good and evil but also is the

Image not available

Zoroastrians reading their holy book, Avesta, at a festival in Iran in early 2002. (AP/Wide World Photos)

sole basis of individual reward or punishment in life after death. After death, humans continue to exist in a spiritual state and are judged by the All-Wise God regarding their right or wrong conduct; good and evil conduct are placed on the scale of justice to determine reward or punishment in an afterlife of paradise or hell, with a shadowy place for the indeterminate ones.

Thus, good conduct leads to a place of joy and peace, while evil conduct leads to a place of suffering and conflict. Another judgment and a permanent assignment occur on the day of resurrection and judgment, when all living and dead people meet and are finally judged based on their conduct to be sent to either eternal life in a perfect material paradise or final destruction.

RIGHT CONDUCT

Since both individual and world salvation depend on the sum of an individual's own thoughts,

words, and actions, the precepts of right conduct are paramount. They are the means of both fighting evil and supporting good in daily life. Good thoughts include intention and effort to preserve good and oppose evil. Good words include prayers, agreements, and promises. Good actions include protection of the natural world, a perfect creation of the All-Wise God.

These precepts entail many rituals that are found in other religions: daily prayer, careful preparation of food, and caring for the poor and sick. Other, less common practices include marrying next of kin (brother-sister, father-daughter), conserving land and vegetation, protecting water and fire from pollution, and treating carefully dead bodies and waste material. Conserving the purity found in nature (vegetation, lakes, and so forth) and purifying unclean pollutants (decaying flesh, sewage, and so forth) become the basis of personal and world salvation.

INFLUENCE OF ETHICS

Although Zoroastrian ethics have insignificant direct influence today, they have indirectly influenced modern societies through other religions, including Judaism, Christianity, and Buddhism, which adapted and preserved these teachings. This influence occurred when these religions came into prolonged contact with Zoroastrianism and Zoroastrian ideas gained recognition and respect.

Chief among the adapted teachings are these: Individuals are solely responsible for their own spiritual destinies; the individuals freely choose good or evil conduct; individuals can learn to support good and oppose evil conduct; conduct has permanent moral consequences; and salvation is based on the sum of thoughts, words, and actions. These ethical ideas survive today in religions practiced by millions of people.

Bibliography

This bibliography includes introductory texts, anthologies, and other secondary sources on general moral philosophy; a selection of primary and secondary sources in applied ethics, metaethics, and problems in ethics; primary and secondary sources on social and political philosophy; and important recent publications in general ethics that have not yet had a chance to attain canonical stature in the field. Texts are listed by subject. Some are entered under more than one category heading where appropriate, but this practice has been kept to a minimum. The most significant primary texts in ethics are listed separately in the Time Line of Primary Works in Moral and Ethical Philosophy. For narrowly focused texts on specific ethical topics, consult the Further Reading listings in individual essays.

CONTENTS

Introductory Texts	1619	Christianity	1628
History of Ethics	1620	Other Faiths	1628
Surveys	1620	Moral Education and Development	1629
Focused Studies	1620	Aesthetics, Language, and Representation	1630
Contemporary, Postmodern, and Post-Holocaust Moral Philosophy	1621	Applied Ethics	1631
Social and Political Philosophy	1623	Animals and the Environment	1631
Alternative Viewpoints and Critiques of Traditional Ethics	1625	Corporate and Professional Conduct	1632
Personal and Interpersonal Ethics	1626	Health and Medicine	1633
Religion	1627	Law, Government, and Public Policy	1634

Biographical Directory

All the ethicists, philosophers, and historical figures listed here are discussed in the main body of essays. Figures whose names are printed in SMALL-CAPPED letters are subjects of essays, which are alphabetically arranged. For additional information on all figures, see the *Personages Index*.

- ABELARD, PETER (c. 1079-1142):** French philosopher and theologian who wrote many works on ethics, logic, philosophy, and theology.
- ABŪ BAKR (c. 573-634):** Arab caliph who succeeded Muḥammad. He afforded Muḥammad moral and financial support while he was in Mecca.
- ABŪ ḤANĪFAH (c. 699-767):** Muslim theologian and legal scholar who contributed to Islamic ethics with the creation of his legal doctrines.
- Adams, John (1735-1826):** Second president of the United States who believed that religion was necessary to sustain society and favored common sense over abstract theory. Adams placed society above the individual and contributed to the foundation of modern or traditionalist conservatism.
- AKBAR (1542-1605):** Mogul emperor who invented a new religion, called “Din-e-Ilahi,” which combined parts of several religions, such as Islam and Hinduism.
- ʿALĪ IBN ABĪ ṬĀLIB (600-661):** The fourth and last of the Arab caliphs after Muḥammad’s death. He is regarded as one of the most important leaders in early Islam because of his extensive knowledge of Islam.
- ARENDT, HANNAH (1906-1975):** German philosopher and author of numerous books such as *The Origins of Totalitarianism* (1951), *The Human Condition* (1958), *Eichmann in Jerusalem* (1963), and *On Revolution* (1963).
- Aristippus (c. 435-365 B.C.E.):** Greek philosopher who founded the Cyrenaic School of philosophy, the central component of which was hedonism.
- Aristotle (384-322 B.C.E.):** Greek philosopher who wrote the extremely influential *Nicomachean Ethics* (335-323 B.C.E.), the first methodical work on ethics in the Western world.
- AŚOKA (c. 302-c. 230 B.C.E.):** Indian emperor who fostered the spread of Buddhism and promoted public morality.
- ATATÜRK (1881-1938):** Atatürk launched a massive social reform movement as the founder and first president of Turkey.
- AUGUSTINE, SAINT (354-430):** Theologian and philosopher whose ethical teachings have influenced the Christian church for centuries. His most significant works were *Confessions* (397-400) and *City of God* (413-427).
- AUROBINDO, SRI (1872-1950):** Indian philosopher and a leading religious visionary who aided the spiritual and political growth of India. His works include *The Life Divine* (1914-1919) and *Synthesis of Yoga* (1948).
- AVERROËS (1126-1198):** Arab philosopher who wrote many studies on Aristotle’s work, as well as critical interpretations on the work of Avicenna and al-Fārābī.
- AVICENNA (980-1037):** Persian philosopher and important author of many works including *The Book of Healing* (early eleventh century). Avicenna is considered to be the most thoroughly regarded philosopher in the Islamic world.
- AYER, A. J. (1910-1989):** English philosopher who combined logical positivism and empiricism to form his own idea of ethics, which he detailed in the book *Language, Truth, and Logic* (1936).
- BACON, FRANCIS (1561-1626):** English philosopher whose partiality toward a naturalistic approach toward ethics governed English moral philosophy into the modern era.
- BAḤYA BEN JOSEPH IBN PAḤUDA (fl. second half of eleventh century):** Arab philosopher who is celebrated for writing *Duties of the Heart* (c. 1080). The work is regarded as the most renowned moral-religious work of the medieval era and had a lasting influence on ensuing generations of Jewish ethical and pietistic writing. It is about the personal response needed for a sincere devotion of self to the service of God.
- Bakunin, Mikhail (1814-1876):** Leading Russian anarchist and author who likened violence to vir-

- tue, believing that violence would inspire social change.
- BEAUVOIR, SIMONE DE (1908-1986):** French existentialist philosopher and author of numerous works including *The Second Sex* (1949).
- Bellah, Robert (1927-):** American sociologist who is the leader of the Communitarianism movement—a drive toward community-based, rather than individual-based existence. Bellah believes that the fabric of the American community is in such a state of disaster that morality is essentially impossible. Author and editor of numerous books including *Habits of the Heart: Individualism and Commitment in American Life* (1985).
- BENNETT, WILLIAM (1943-):** American statesman who published *The Book of Virtues: A Treasury of Great Moral Stories* (1993). His virtuous character was questioned when it was revealed he was a high-stakes gambler.
- BENTHAM, JEREMY (1748-1832):** English philosopher, economist, and author of numerous works including *A Fragment on Government* (1776), *An Introduction to the Principles of Morals and Legislation* (1789), *The Rationale of Reward* (1825), and *The Rationale of Punishment* (1830). Bentham also initiated the philosophy of utilitarianism in England.
- BERDYAYEV, NIKOLAY (1874-1948):** Russian philosopher and author of *The Origin of Russian Communism* (1937) and editor of the journal *Put'* (path). Berdyayev used Christian existentialism to examine the function of freedom in improving the human race.
- BERGSON, HENRI (1859-1941):** French philosopher who promoted “process philosophy.” He wrote several significant philosophical discourses, the most renowned of which was *Matter and Memory* (1896). Bergson was awarded the Nobel Prize in Literature in 1927.
- Berkeley, George (1685-1753):** British empiricist whose theory denied the existence of physical objects. Everything that exists is said to exist in the mind.
- Binet, Alfred (1857-1911):** French psychologist and physician who tried to scientifically evaluate intelligence—it was Binet who invented the expression “intelligence quotient.” Binet was most concerned with how the normal mind works.
- Black, Hugo L. (1886-1971):** American Supreme Court associate justice (1937-1971) who attempted to delineate and in some areas expand constitutional protection of civil liberties.
- BODDHARMA (fifth century-sixth century):** Buddhist monk who founded Chinese Chan Buddhism.
- BOETHIUS (c. 480-524):** Roman philosopher and author of *The Consolation of Philosophy* (523) who mixed classical philosophical ideas with Christian ethics to establish a guideline for virtuous living.
- BONHOEFFER, DIETRICH (1906-1945):** German theologian and author of numerous works including *The Cost of Discipleship* (1937), *Ethics* (1949), and *Letters and Papers from Prison* (1951). Bonhoeffer developed a consequentialist ethical theology.
- BRADLEY, F. H. (1846-1924):** English philosopher and author of several works including *The Presuppositions of Critical History* (1874), *Ethical Studies* (1876), *Principles of Logic* (1883), and *Appearance and Reality: A Metaphysical Essay* (1893). Bradley’s work focused on the individual’s role within society.
- BRANDEIS, LOUIS D. (1856-1941):** American Supreme Court Justice (1916-1939) who incorporated moral values into his legal reasoning and opinions.
- Brandt, Richard (1910-1997):** Notable American moral philosopher of the twentieth century. His most celebrated book on ethics is *A Theory of the Good and the Right* (1979).
- BUBER, MARTIN (1878-1965):** Austrian philosopher and author of *I and Thou* (1923). Buber believed the core of ethics centered on the “I-Thou” personal relationship rather than the detached “I-It” relationship.
- BUDDHA (c. 566-c. 486 B.C.E.):** Indian religious leader who started Buddhism and developed its moral code. Buddhism is one of society’s primary religious orders.
- BŪKHĀRĪ, AL- (810-870):** Islamic scholar who assembled the *al-Jāmi’ al-Ṣaḥīḥ*, a collection of customs, or *ḥadīth* from Muḥammad’s life.
- Burger, Warren (1907-1995):** Chief Justice of the United States Supreme Court (1969-1986) who criticized the Court for “moral neglect” because of its decisions on insanity and self-incrimination. He also helped found the American Inns of Court.

- BURKE, EDMUND (1729-1797):** English politician and author of *Reflections on the Revolution in France* (1790). He provided the model that serves as the foundation of modern conservatism.
- Bush, George W. (1946-):** President of the United States (2001-) during a time that the United States faced several significant moral issues such as the war in Iraq, stem cell research, and capital punishment.
- BUTLER, JOSEPH (1692-1752):** English cleric and author of *Fifteen Sermons Preached at the Rolls Chapel* (1726), in which he emphasized the significance of morals in life and decisions.
- CALVIN, JOHN (1509-1564):** Swiss theologian who believed in the supremacy of God's will—everyone's destiny is predetermined.
- CAMUS, ALBERT (1913-1960):** French Algerian journalist and author of numerous works such as *The Stranger* (1942), *The Myth of Sisyphus* (1942), *The Plague* (1947), *The Rebel* (1951), and *The Fall* (1956). Camus was an advocate of the individual and opposed to totalitarianism.
- Carritt, Edgar F. (1876-1964):** Twentieth century ethicist who explained his view of ethics in his *Theory of Morals* (1928).
- CICERO (106-43 B.C.E.):** Roman orator, politician, and writer of essays including *On the Republic* (52 B.C.E.), *On the Laws* (52 B.C.E.), *On the Chief End of Man* (45 B.C.E.), *Tusculan Disputations* (44 B.C.E.), and *On Duty* (44 B.C.E.). He believed just men dedicated their lives to public service.
- Clausewitz, Carl von (1780-1831):** Prussian intellectual and soldier whose *On War* (1832) is the most significant work of military philosophy—theory and strategy of warfare—in the Western world.
- CLINTON, BILL (1946-):** President of the United States (1993-2001) who was charged with perjury and obstruction of justice because of his role in the Monica Lewinsky scandal. Clinton's impeachment led to an ethical debate over whether a president's private life should be used as a criterion to assess his public performance.
- COHEN, RANDY (1948-):** American author of a syndicated column on applied ethics. Cohen has also published a collection of his columns called *The Good, the Bad, and the Difference: How to Tell Right from Wrong in Everyday Situations* (2002).
- Comstock, Anthony (1844-1915):** American postal official who lobbied Congress to pass the Federal Anti-Obscenity Act (1873), popularly known as the "Comstock Law." The statute prohibited the sending of materials judged "obscene, lewd, or lascivious."
- COMTE, AUGUSTE (1798-1857):** French philosopher who was the father of positivism. He stressed the importance of "moral progress" as a vital responsibility of society.
- CONFUCIUS (551-479 B.C.E.):** Chinese philosopher who stressed the idea of combining morality with the act of governing. Confucianism became the official state philosophy of China in the second century B.C.E. and it remained as the primary philosophy until the early twentieth century. Confucianism continues to be a significant influence on people throughout East Asia.
- DALAI LAMA (Tenzin Gyatso; 1935-):** Tibetan spiritual leader of the Buddhist community in Tibet who has ruled the government in exile because of Chinese occupation. His teachings stress the importance of mixing ethical values and ethical politics. The Dalai Lama was awarded the 1989 Nobel Peace Prize.
- DALLAIRE, ROMÉO (1946-):** Canadian commander of the U.N. peacekeeping force in Rwanda during that nation's 1994 genocide. Dallaire explored the world community's negligent behavior in response to the warnings about the uprisings in his *Shake Hands with the Devil: The Failure of Humanity in Rwanda* (2003).
- DARWIN, CHARLES (1809-1882):** English naturalist whose concept of evolution through natural selection, which he detailed in *On the Origin of Species* (1859), has been the foundation of numerous movements within ethics, such as Social Darwinism and evolutionary ethics.
- de Klerk, F. W. (1936-):** President of South Africa who started the process of ending the racist system of apartheid.
- DERRIDA, JACQUES (1930-2004):** Jewish philosopher renown for founding the deconstructionist school of philosophy. His most noted works, including *Speech and Phenomena* (1967), *Writing and Difference* (1967), and *Margins of Philosophy* (1972), offer lengthy evaluations of the metaphysical model underlying all of conventional Western philosophy. This analysis has forced phi-

- losophers to reexamine the very nature, methodology, and boundaries of the field of ethics.
- DESCARTES, RENÉ (1596-1650):** French mathematician and philosopher whose teachings changed philosophy from a metaphysical science to one more interested in the individual, which raised awareness in ethics and conduct.
- DEWEY, JOHN (1859-1952):** Notable American philosopher whose ethical theory defines ethical conduct as a function of human behavior initiated by the individual. He was the author of *Outlines of a Critical Theory of Ethics* (1891), *The Study of Ethics: A Syllabus* (1894), "Theory of the Moral Life" (1908, 1932), *Human Nature and Conduct* (1922), and *Theory of Valuation* (1939).
- DŌGEN (1200-1253):** Founder of Japan's Sōtō school of Zen Buddhism.
- DOSTOEVSKI, FYODOR (1821-1881):** Russian author whose fiction describes the individual experience of morality and its connection to Christian religion.
- DU BOIS, W. E. B. (1868-1963):** African American writer and social activist who was one of the founders of the National Association for the Advancement of Colored People. Du Bois examined the ethical consequences of racism.
- Dunant, Jean Henri (1828-1910):** Swiss founding father of the humanitarian organization the International Red Cross and cofounder of the Young Men's Christian Association.
- DURKHEIM, ÉMILE (1858-1917):** Founder of the French school of sociology who voiced concerns about the influence of modern society on the ethics of humankind.
- EDWARDS, JONATHAN (1703-1758):** American theologian and philosopher who tried to provide a sound interpretation of predestination.
- EMERSON, RALPH WALDO (1803-1882):** American theologian and author who was a leader of the American Transcendentalist movement.
- EPICETUS (c. 55-c. 135 C.E.):** Greek philosopher who founded a school of Stoic philosophy. His ethical theory urged leading disciplined lives in accordance with natural law.
- EPICURUS (341-270 B.C.E.):** Greek philosopher whose ethical system is based on the belief that seeking personal pleasure results in the highest good. He founded the Garden School to put this philosophy into practice.
- EVERS, MEDGAR (1925-1963):** African American civil rights activist who staged an immense protest to bring attention to the unjust policies of discrimination and segregation in Mississippi. He became a martyr of the Civil Rights movement after his murder.
- FĀRĀBĪ, AL- (870-950):** Muslim philosopher who influenced Islamic ethics and thought in medieval Europe. He tried to reconcile the ideas of Aristotle, Plato, and Neoplatonic thought.
- FARRAKHAN, LOUIS (1933-):** African American leader of the Nation of Islam who has made statements involving Malcolm X and Jesse Jackson that have raised ethical concerns about his character.
- FĀṬĪMA (c. 606-632):** The revered daughter of the Prophet Muḥammad who is viewed as a paragon of Islamic spirituality.
- Fichte, Johann Gottlieb (1762-1814):** German philosopher who provided the groundwork for the school of German Idealism.
- FOUCAULT, MICHEL (1926-1984):** French philosopher and author concerned with the effects of imprisonment and whose work generated reforms in the prison system. He is well known for such works as *Madness and Civilization* (1961), *The Order of Things* (1966), *The Discourse on Language* (1971), *Discipline and Punish* (1975), and his three-volume *The History of Sexuality* (1976-1984).
- FREUD, SIGMUND (1856-1939):** Austrian founder of psychoanalysis whose work had an enormous influence on the field of ethics.
- Galen (129-c. 199):** Greek physician and philosopher who was instrumental in formulating logical empiricism.
- Galileo (1564-1642):** Italian astronomer who was a principal figure of the early scientific revolution. His work helped develop the modern scientific methods of observation and experimentation. Galileo's *Dialogue Concerning the Two Chief World Systems* (1632) was condemned by the Vatican.
- GANDHI, MOHANDAS K. (1869-1948):** Indian nationalist leader who used nonviolent protests as a means to fight for Indian independence, women's rights, and the untouchables.
- Garvey, Marcus (1887-1940):** Jamaican-born journalist and orator who founded the Universal Negro Improvement Association. A proponent of

black nationalism, he urged African Americans to move back to Africa.

- Gewirth, Alan (1912-):** Gewirth is one of the foremost American ethicists from the late twentieth century. He is renowned for his belief in the ethical commitment to respect human rights. Gewirth has written over one hundred articles on ethical, moral, political, and social philosophy and some of his books include *Reason and Morality* (1978), *Human Rights: Essays on Justification and Applications* (1982), *The Community of Rights* (1996), and *Self-Fulfillment* (1998).
- GHAZĀLĪ, AL- (1058-1111):** Persian author who is well known for his writings on ethics and mysticism.
- Gilligan, Carol (1936-):** American psychologist and author. Gilligan's early work focused on moral development in girls, leading to the formation of her "difference feminism"—women possess different moral and psychological inclinations than men. Her most famous book is *In a Different Voice: Psychological Theory and Women's Development* (1982).
- Goldman, Emma (1869-1940):** Russian-born American anarchist who criticized the capitalist and socialist systems. Goldman supported the ideals of anarchy through her fight for women's rights.
- Gregory, John (1725-1773):** Scottish physician who wrote *Lectures on the Duties and Qualifications of a Physician* (1772). The book stressed the virtues of the physician and described the physician's obligations.
- GROTIUS, HUGO (1583-1645):** Dutch philosopher who provided the framework for such pacts as the Geneva Conventions which dictate the conduct of war, through his influential book *On the Law of War and Peace* (1625).
- Habermas, Jürgen (1929-):** German philosopher who was an influential member of the Frankfurt School for Social Research. Habermas is well known for trying to articulate an inclusive theory of communication, language, and the development of society within an ethical system. His principal works include *Theory and Practice* (1963), *Knowledge and Human Interests* (1968), *The Theory of Communicative Action* (1981), *Between Facts and Norms* (1992).
- HALLĀJ, AL- (c. 858-922):** Persian mystic whose martyrdom was vital to the growth of Sufism.

- Hardin, Garrett James (1915-2003):** American ecologist and microbiologist. A prolific author, Hardin wrote articles and books on numerous subjects such as bioethics, ecology, ethics, immigration, and population theory. In *Filters Against Folly* (1985), he discussed the three intellectual filters necessary for a useful ethical theory. His other principal works include the essays "The Tragedy of the Commons" and "Living on a Lifeboat" and the books *Living Within Limits: Ecology, Economics and Population Taboos* (1993), *The Immigration Dilemma: Avoiding the Tragedy of the Commons* (1995), *Stalking the Wild Taboo* (1996), and *The Ostrich Factor: Our Population Myopia* (1999).
- HARE, R. M. (1919-2002):** English philosopher and author of *The Language of Morals* (1952), *Freedom and Reason* (1963), *Applications of Moral Philosophy* (1972), *Moral Thinking* (1981), *Essays in Ethical Theory* (1989), and *Essays on Political Morality* (1989). Hare developed a moral theory called "universal prescriptivism." He also displayed an interest in difficulties related to moral education and moral decision making.
- HART, H. L. A. (1907-1992):** English philosopher who wrote on numerous topics, including the nature of obligation, punishment, and the role of pardons in ethics and law. He contended that law and morality are not necessarily connected. One of his most famous works is *The Concept of Law* (1961).
- HARTSHORNE, CHARLES (1897-2000):** American philosopher, theologian, and author who was a proponent of a logical, germane view of ethics.
- HEGEL, GEORG WILHELM FRIEDRICH (1770-1831):** German philosopher who developed numerous doctrines that influenced various disciplines such as anthropology, history, psychology, political theory, and sociology.
- HEIDEGGER, MARTIN (1889-1976):** German philosopher whose theories were concerned with the study and meaning of "being."
- HIPPOCRATES (c. 460-c. 377 B.C.E.):** Greek physician known as the "father of Western medicine." He wrote the guidelines for ethical conduct within the medical profession—the Hippocratic oath—a standard for physician behavior in medicine.
- HITLER, ADOLF (1889-1945):** German dictator who was responsible for the death of thousands of peo-

- ple during the Holocaust and for triggering the events that started World War II.
- HOBBS, THOMAS (1588-1679):** English political philosopher well known as a proponent of political absolutism.
- Holmes, Robert (1935-):** American philosopher who inferred that all modern wars are immoral because innocent people are killed. He argued for the practice of nonviolence. Holmes is the author of *On War and Morality* (1989) and *Basic Moral Philosophy* (1992) and the editor of *Nonviolence in Theory and Practice* (1990).
- HUINENG (638-713):** Chinese Buddhist monk who taught that freedom is achieved when one realizes that there is no self.
- HUME, DAVID (1711-1776):** English philosopher who was a proponent of empiricism.
- ḤUSAYN (626-680):** Grandson of the Prophet Muḥammad, who served as a political and religious leader. Ḥusayn's death was a defining moment in Shī'a Islam.
- HUSSEIN, SADDAM (1937-):** Dictatorial Arab leader of Iraq (1979-2003), who brutally repressed his people and was responsible for the death or inhuman treatment of thousands of civilians.
- Hutcheson, Francis (1694-1746):** Scottish moral philosopher who was celebrated for his ethical philosophy of innate moral sense. He also wrote *Inquiry into the Original of Our Ideas of Beauty and Virtue* (1725), *Essay on the Nature and Conduct of the Passions and Affections* (1728), and *System of Moral Philosophy* (1755).
- Ibn al-ʿArabī (1165-1240):** Arab philosopher who articulated a systematic philosophical account of Sufism that remains influential in modern practice. His writings include *Meccan Revelations* and *Gems of Wisdom* (1229).
- IBN GABIROL (c. 1020-c. 1057):** Arab philosopher and poet. Ibn Gabirol's version of Neoplatonism philosophy came to be intergrated within Christian Augustinian thought. He authored *The Source of Life* (eleventh century).
- IBN KHALDŪN (1332-1406):** Arab philosopher who was the first and one of the best philosophers in history. He produced a system of political ethics that he trusted would assist in the growth of civilization and better society. His massive work, *The Muqaddimah* (1375-1379) is the first known work in the philosophy of social and cultural history.
- JACKSON, JESSE (1941-):** Noted African American Christian minister and civil rights leader whose ethical conduct has come into question on two occasions. Jackson has faced criticism for making disparaging racial and religious remarks and for committing adultery and fathering a child outside of his marriage.
- JAMES, WILLIAM (1842-1910):** American philosopher whose ethical theory is based upon humankind's freedom of choice. His most significant works include *The Principles of Psychology* (1890), *The Varieties of Religious Experience: A Study in Human Nature* (1902), *Pragmatism: A New Name for Some Old Ways of Thinking* (1907), and *A Pluralistic Universe* (1909).
- Jaspers, Karl (1883-1969):** Leading German philosopher who provided the foundation for the existential movement.
- JEFFERSON, THOMAS (1743-1826):** American philosopher and third president of the United States. Jefferson was the author of the Declaration of Independence, and he strived to expand and protect civil rights, democracy, public education, and religious freedom.
- JESUS CHRIST (c. 6 B.C.E.-30 C.E.):** Religious teacher who initiated Christianity and instructed that love is the consummate value and that sin may be forgiven through genuine penance.
- Johnson, Lyndon B. (1908-1973):** Thirty-sixth president of the United States who was a proponent of civil rights and increased the government's role in social welfare through his Great Society programs.
- JUNG, CARL (1875-1961):** Swiss psychologist and father of analytical psychology. Jung is probably best known for his descriptions of the orientations of the personality, "extroversion" and "introversion."
- KANT, IMMANUEL (1724-1804):** German philosopher who combined empiricism and rationalism into a new system of philosophical thought.
- KELLER, HELEN (1880-1968):** Blind and deaf American social activist who committed her life to serving disabled people. Keller was also an author who wrote *The Story of My Life* (1903), *The World I Live In* (1908), *Out of the Dark* (1913), *Helen Keller's Journal* (1938), and *Teacher: Anne Sullivan Macy* (1955).

- Kennedy, John Fitzgerald (1917-1963):** Thirty-fifth president of the United States who contributed to the tendency toward dishonesty within political circles when he received the Pulitzer Prize for a book he did not write.
- KEVORKIAN, JACK (1928-):** American pathologist who assisted in the suicide of many terminally ill patients. His actions were covered extensively by the media resulting in an ethical debate on the rights and wrongs of physician-assisted suicide.
- KIERKEGAARD, SØREN (1813-1855):** Danish philosopher and theologian who is viewed as the founder of existentialism. His most noted works include *Either/Or: A Fragment of Life* (1843), *Fear and Trembling* (1843), and *Concluding Unscientific Postscript* (1846).
- KINDĪ, AL- (c. 800-866):** A prolific author who wrote on many subjects, al-Kindī was the first significant Arab philosopher. He furnished the first methodical philosophical presentation of ethics and moral psychology in Arabic.
- KING, MARTIN LUTHER, JR. (1929-1968):** American civil rights leader. As founding president of the Southern Christian Leadership Conference, King headed the nonviolent movement that led to the 1964 Civil Rights Act and the 1965 Voting Rights Act. He was awarded the Nobel Peace Prize in 1964 for his role in the nonviolent war against racial injustice and poverty.
- KOHLBERG, LAWRENCE (1927-1987):** American psychologist. He outlined his concept of moral development—a cognitive skill that evolves in phases—in his book *Essays on Moral Development* (1981).
- KŪKAI (774-835):** Born Saeki Mao, Kūkai, was a Japanese monk who established the Shingon school of Japanese Buddhism. He instructed that compliance to moral and social principles comprised the second of the ten rungs on the ladder that leads to actual Buddhahood.
- LAOZI (604 B.C.E.-sixth century B.C.E.):** Chinese philosopher and religious figure who is widely identified as one of the primary masters of Daoism, the second of China's great philosophical schools.
- LEIBNIZ, GOTTFRIED WILHELM (1646-1716):** German philosopher, theologian, and historian. Leibniz contributed to the development of rationalist philosophy. His works include *Theodicy: Essays on the Goodness of God, the Freedom of Man, and the Origin of Evil* (1710) and *New Essays Concerning Human Understanding* (written 1704; published 1765).
- LEMKIN, RAPHAEL (1900-1959):** Renowned Polish legal scholar and political activist who defined the word genocide. His efforts to have genocide acknowledged as a crime aided the 1948 adoption of the United Nations Genocide Convention.
- LENIN, VLADIMIR ILICH (1870-1924):** Born Vladimir Ilich Ulyanov. Lenin, a Russian political ruler, modified Marxist theory to the politics of late imperial Russia, establishing and heading the Communist Party. He was the main architect of the new socialist state that became the model for world communism.
- LEOPOLD, ALDO (1887-1948):** American scientist and writer who has been called the father of modern wildlife management and ecology. He wrote the influential *A Sand County Almanac* (1949) and founded the Wilderness Society in 1935.
- LEVINAS, EMMANUEL (1906-1995):** Levinas fostered the idea that responsibility to others is the foundation of ethics. His writings on ethics include *Difficult Freedom: Essays on Judaism*.
- LINCOLN, ABRAHAM (1809-1865):** President of the United States who issued the Emancipation Proclamation and supported other legislation to deal with the ethical dilemma of slavery.
- LOCKE, JOHN (1632-1704):** English philosopher who mixed empiricism and theism, creating a powerful philosophy of mind and ethics. He was one of the most powerful political theorists from the Enlightenment era. His writings include *An Essay Concerning Human Understanding* (1690) and *Two Treatises of Government* (1690).
- Lorenz, Konrad (1903-1989):** Austrian ethologist and zoologist who was awarded the Nobel Prize in Physiology or Medicine in 1973. He was considered a principal founder of the science of ethology because of his work in correlating patterns of animal and human behavior. As a result of this work, Lorenz developed his theory of aggression which has numerous ethical implications.
- LUTHER, MARTIN (1483-1546):** German Protestant reformer who developed a theology and a religious movement that had a profound impact on the social, political, and religious thought of Western society.

- McCARTHY, JOSEPH R. (1908-1957):** United States senator who achieved notoriety for his unethical persecution of political and entertainment figures during the 1950's.
- MACHIAVELLI, NICCOLÒ (1469-1527):** Italian political theorist who introduced a pragmatic manner of political discourse that is completely free of ethical considerations derived from traditional sources of moral authority, such as classical philosophy and Christian theology.
- MACINTYRE, ALASDAIR (1929-):** An influential Scottish moral philosopher. In *After Virtue* (1981), MacIntyre outlines the history of Western ethical thinking, defines the moral dilemmas of the modern era, and provides a novel approach to ethical theory to face and settle those dilemmas. MacIntyre's other works include *A Short History of Ethics* (1966), *Difficulties in Christian Belief* (1959), *Marxism and Christianity* (1968), and *First Principles, Final Ends, and Contemporary Philosophical Issues* (1990).
- MacKinnon, Catharine A. (1946-):** American lawyer, professor, author, and activist. A leader in the formation of feminist legal theory, MacKinnon's argument that sexual harassment is a form of sex discrimination was later ratified.
- MAIMONIDES, MOSES (1135-1204):** Jewish philosopher whose works were characterized by ethical concerns, most particularly in *Mishneh Torah* (1185) and *Guide of the Perplexed* (1190).
- MALCOLM X (1925-1965):** Born Malcolm Little. As an American religious leader and social activist, Malcolm X was a proponent of using "any means necessary" to achieve equality, justice, and freedom for African Americans. His actions spurred ethical debates about nonviolent and violent protest.
- MALTHUS, THOMAS ROBERT (1766-1834):** English economist who encouraged controls on human reproduction in his *An Essay on the Principle of Population, as It Affects the Future Improvement of Society* (1798).
- MANDELA, NELSON (1918-):** South African social activist and statesman who has been a leader or participant in many ethical issues such as apartheid, AIDS, and human rights.
- Mao Zedong (1893-1976):** Chinese political figure who established the People's Republic of China. His regime was one of repression and oppression that led to the mass murder of his country's people.
- MAPPLETHORPE, ROBERT (1946-1989):** American artist whose work was the center of controversy in disputes over censorship and public funding of the arts during the late 1980's and early 1990's.
- MARCUS AURELIUS (121-180):** Born Marcus Annius Verus. Roman emperor who produced a Stoic philosophy in his *Meditations* (c. 171-180). This work reflects the emperor's efforts to achieve the Platonic ideal of the philosopher-king and is the last great literary statement of Stoicism.
- Marcuse, Herbert (1898-1979):** German philosopher who was a member of the Frankfurt School for Social Research. His works included *Eros and Civilization* (1955) and *One-Dimensional Man* (1964), both of which criticized capitalist society as oppressed. In *Soviet Marxism* (1958) he was antagonistic toward bureaucratic communism.
- MARX, KARL (1818-1883):** German political philosopher. Marx's opinions regarding economic distribution and social class have significantly influenced theories in economic and philosophical thought and have helped form the political structure of the modern world.
- Mead, George Herbert (1863-1931):** American pragmatist philosopher and psychologist. His principal works include *The Philosophy of the Present* (1932), *Mind, Self, and Society* (1934), *Movements of Thought in the Nineteenth Century* (1936), and *The Philosophy of the Act* (1938).
- MENCIUS (c. 372-c. 289 B.C.E.):** Chinese philosopher born Meng Ke. Mencius explained and developed the wisdom embodied in Confucius's *Analects*, rendering Confucian ideas more accessible. His *Mengzi* transcended other interpretations of Confucius and gained acceptance as the orthodox version of Confucian thought.
- MILL, JOHN STUART (1806-1873):** English philosopher and economist who was the most renowned modern advocate of utilitarianism. His most influential works include *On Liberty* (1859), *Utilitarianism* (1863), and *The Subjection of Women* (1869).
- Milošević, Slobodan (1941-):** Serbian political leader whose ethnic cleansing policies against ethnic Albanians received widespread outrage and was eventually stopped.
- Moniz, Egas António (1874-1955):** Portuguese neurosurgeon who won the Nobel Prize in Physi-

ology or Medicine in 1949 for his prefrontal leukotomy procedure. Moniz believed that his technique could be used to reduce apprehension and other emotional conditions in humans.

Montaigne, Michel de (1533-1592): French essayist who declared that European colonization of the New World was morally wrong. He also denounced animal cruelty.

MONTESQUIEU (1689-1755): French political philosopher who studied the nature of government, laws, and society. His works include *The Persian Letters* (1721) and *The Spirit of the Laws* (1748).

MOORE, G. E. (1873-1958): English philosopher who established analytic philosophy as a major system in modern philosophical thought. His work includes *Principia Ethica* (1903) and *Ethics* (1912).

MOSES (c. 1300-c. 1200 B.C.E.): Early Hebrew leader. The codification of religious and ethical laws in the Pentateuch, the first five books of the Old Testament, is traditionally attributed to him.

MOZI (c. 470-c. 391 B.C.E.): Chinese philosopher and teacher whose philosophy advocated universal love and condemned warfare. His teachings are preserved in a book, *Mozi* (fifth century B.C.E.; *The Ethical and Political Works of Motse*, 1929; also known as *Mo Tzu: Basic Writings*, 1963), compiled by his disciples.

MUHAMMAD (c. 570-632 C.E.): Founder of Islam whose visions served as the basis for the Qurʾān. Muslims believe that Muḥammad’s life serves as the premier example of an ethical existence.

MUIR, JOHN (1838-1914): Scottish American naturalist who founded the Sierra Club and played an important role in the conservation movement and the development of the national park system.

Mussolini, Benito (1883-1945): Italian dictator whose fascist regime placed the state’s interests above individual human rights. Mussolini also ordered the unethical invasion and use of poison gas against Ethiopia.

NADER, RALPH (1934-): American advocate of consumer rights and a proponent of responsible government behavior.

Naess, Arne (1912-): Norwegian philosopher who founded the environmental movement known as deep ecology. His most influential work is *Ecology, Community, and Lifestyle* (1974).

NĀGĀRJUNA (c. 150-c. 250 C.E.): Indian Buddhist

philosopher who founded the Mādhyamaka school of Mahāyāna Buddhism. His most important innovation was the concept of “emptiness,” or *śūnyatā*—a recognition that things derived their only meaning from their relationships to other things.

NAGEL, THOMAS (1937-): American philosopher who devised a form of ethical realism that acknowledges objective and subjective grounds for action. He is famous for his books, *The Possibility of Altruism* (1970) and *The View from Nowhere* (1986).

NĀNAK (1469-1539): Indian religious leader who combined the basic principles of Islam and the tradition of Hinduism into a new universal religion, Sikhism. His teaching emphasizes the equality of all human beings and regards responsible social action as central to true spiritual practice.

Newton, Isaac (1642-1727): English physicist whose scientific studies served to provide an explanation of occurrences in the physical world thereby moving away from God as the explanation for these occurrences.

NIEBUHR, H. RICHARD (1894-1962): American theologian who became one of the principal Christian ethicists of the twentieth century. He wrote influential books such as *The Meaning of Revelation* (1941) and *Christ and Culture* (1951).

NIEBUHR, REINHOLD (1892-1971): American theologian who devised Neoorthodox theology. He used the political and social arenas to place the Christian faith in the center of the cultural and political world of his day.

NIETZSCHE, FRIEDRICH (1844-1900): German philosopher whose analysis of traditional ethics in *Beyond Good and Evil* (1886) and *On the Genealogy of Morals* (1887) significantly impacted the intellectual perspective of the twentieth century.

Nixon, Richard (1913-1994): Thirty-seventh president of the United States (1969-1974) who was impeached for his unethical behavior during the Watergate scandal.

Noddings, Nel (1929-): American professor and education theorist. Noddings is well known for her writings on caring and the part it plays in ethical behavior and moral training. Noddings’s principal works include *Caring: A Feminine Approach to Ethics and Moral Education* (1984),

- Educating Moral People: A Caring Alternative to Character Education* (2002), and *Starting at Home: Caring and Social Policy* (2002).
- NOZICK, ROBERT (1938-2002):** American philosopher and author. He is most famous for his book *Anarchy, State, and Utopia* (1974).
- NUSSBAUM, MARTHA (1947-):** American scholar who believes that ethical and moral interests should always be the guiding force in international relationships.
- ORTEGA Y GASSET, JOSÉ (1883-1955):** Spanish philosopher whose fame helped to bring Spain out of a long period of cultural isolation and whose thought contributed greatly to his country's intellectual reawakening. He wrote the book *The Revolt of the Masses* (1929).
- ORWELL, GEORGE (1903-1950):** Born Eric Blair. British novelist who expressed his consideration of social concern in a diverse body of works. He believed that people should be afforded equality and justice under the law.
- Paley, William (1743-1805):** English theologian and author who established a moral system based on utilitarianism.
- PASCAL, BLAISE (1623-1662):** French philosopher who believed that one should not compromise one's ethical beliefs to achieve political or social influence. He wrote *The Provincial Letters* (1656-1657) and *Pensées* (1670).
- PEIRCE, CHARLES SANDERS (1839-1914):** American philosopher who is one of the fathers of pragmatism. Peirce criticized established ideas regarding truth and knowledge and made important contributions to the fields of logic and epistemology.
- Percival, Thomas (1740-1804):** English physician who wrote *Medical Ethics* (1803). His work laid the foundation for the first American Medical Association Code of Ethics in 1847.
- PERRY, R. B. (1876-1957):** American philosopher who wrote *General Theory of Value* (1926) and *Realms of Value* (1954). Perry is renowned for his development of the theory of value.
- PHILO OF ALEXANDRIA (c. 20 B.C.E.-c. 45 C.E.):** Egyptian philosopher who united Greek philosophy with Old Testament teaching. He wrote *The Creation of the World, That God Is Immutable*, and *On the Ten Commandments* (all early first century C.E.).
- Pinchot, Gifford (1865-1946):** American leader in the late nineteenth century conservation movement. He and Theodore Roosevelt wrote extensively about the conservation ethic.
- Pius XII (1876-1958):** Italian pope who spoke on behalf of the Church on moral issues such as euthanasia and lifesaving measures. He also denounced the practice of situational ethics.
- PLATO (c. 427-347 B.C.E.):** Born Aristocles, Plato was a Greek philosopher. He is one of the most influential thinkers of Western civilization. Plato used the dialogue structure in order to pose basic questions about knowledge, reality, society, and human nature. He formulated his own philosophy, Platonism, in order to answer these questions, a philosophy which has been one of the most influential thought-systems in the Western tradition.
- QUINLAN, KAREN ANN (1954-1985):** Comatose patient whose case is important in discussions of the right to die, the ordinary/extraordinary care distinction, the euthanasia debate, and the need for a living will. The removal of her respirator helped the fight for the right to die, and her death is important in discussions regarding whether there is a difference between active and passive euthanasia.
- RĀBĪ'AH AL-'ADAWĪYAH (712-801):** Arab mystical poet who composed several significant poems inspired by the absolute love of God. Her life represents an example of religious devotion.
- RAND, AYN (1905-1982):** Born Alisa Rosenbaum. A Russian American novelist and philosopher who promoted rational egoism and libertarianism. Rand declared her philosophy in works, such as *The Fountainhead* (1943), *Atlas Shrugged* (1957), *The Virtue of Selfishness: A New Concept of Egoism* (1964), and *Capitalism: The Unknown Ideal* (1966).
- RAWLS, JOHN (1921-2002):** American political philosopher whose theory of justice is based on the social contract theory. Rawls is best known for his works *A Theory of Justice* (1971) and *Political Liberalism* (1993).
- RAZI, AL- (c. 864-c. 925):** Arab philosopher and physician who set new standards for medical ethics, the clinical observation of disease, and the testing of medical treatment. His works include a comprehensive medical encyclopedia in twelve volumes; *The Book of Spiritual Physick* (c. 920),

his principal ethical treatise; and the apologetic *The Philosopher's Way of Life* (c. 920).

Read, Herbert (1893-1968): English author and critic who defined the differences between the theory of liberty and personal freedom.

Reagan, Ronald (1911-2004): Fortieth president of the United States (1981-1989) whose presidency was tainted by the Iran-Contra scandal and possible cover-up. Other issues during the Reagan administration that had ethical implications were Reagan's opposition to abortion rights and his signature on a bill prohibiting the use of federal money for what many regarded as obscene works of art.

Regan, Tom (1938-): American philosopher, author and editor of several philosophy books on animal rights, environmental policy, ethics, and medical ethics. Regan is regarded as the "philosophical father" of the animal rights movement. Some of Regan's principal works on animal rights include *The Case for Animal Rights* (1983), *The Animal Rights Debate* (2001), and *Defending Animal Rights* (2001).

Robertson, Pat (1930-): American religious broadcaster and politician. He is well known as the creator of *The 700 Club*, a Christian television show, and for ethical and religious views which some view as extreme. Robertson also founded the Christian Coalition, the conservative, grass-roots political organization.

Roosevelt, Franklin D. (1882-1945): Thirty-second president of the United States (1933-1945) who passed the New Deal legislation, yet also ruled the country in an imperial fashion.

Roosevelt, Theodore (1858-1919): Twenty-sixth president of the United States (1901-1909) who considered himself a moral leader and struck a balance between the collective good and individualism.

RORTY, RICHARD (1931-): American author and philosopher who has developed his own theory of ethics that addresses immigration, gender, and democracy among other issues.

Ross, W. D. (1877-1940): Scottish moral philosopher who denounced utilitarianism and promoted a form of intuitionism. His works include *Aristotle* (1923), *The Right and the Good* (1930), *Foundations of Ethics* (1939), *Plato's Theory of Ideas* (1951), and *Kant's Ethical Theory* (1954).

ROUSSEAU, JEAN-JACQUES (1712-1778): French philosopher who helped transform the Western world into a predominantly democratic civilization dedicated to assuring the dignity and fulfillment of the individual. He wrote *A Treatise on the Social Contract: Or, The Principles of Politic Law* (1762).

ROYCE, JOSIAH (1855-1916): American philosopher who was a proponent of philosophic idealism. His works include *The World and the Individual* (1899-1901) and *The Philosophy of Loyalty* (1908).

Ruddick, Sara (1935-): American feminist philosopher and author of *Maternal Thinking: Towards a Politics of Peace* (1989). Ruddick contends in her book that a focus on nurturing and educating children has an effect on their ethical decisions and actions.

RŪMĪ, JALĀL AL-DĪN (c. 1207-1273): Afghan mystical poet who was the founder of the Mevlevī Sufi order. His most influential work is *Mathnavī* (1259-1273).

Rummel, Rudolph (1932-): American author and professor who coined the term "democide." His works include *Death by Government* (1994), *The Miracle That Is Freedom* (1996), *Power Kills* (1997), and *Statistics of Democide* (1997).

RUSSELL, BERTRAND (1872-1970): English philosopher who believed that people could choose good over evil. His most influential ethical works include *On Education* (1926), *Why I Am Not a Christian* (1927), *Marriage and Morals* (1929), *Education and the Social Order* (1932), *Religion and Science* (1935), and *Human Society and Ethics* (1955). He won the 1950 Nobel Prize in Literature.

ŚAṄKARA (c. 700-750): Indian philosopher and commentator of Advaita Vedanta Hinduism, a religious and philosophical tradition based on a non-dualist, monistic reading of the Hindu sacred texts. He is also the author of commentaries on the *Bhagavadgītā* and the Upaniṣads and established four Indian monasteries.

SANTAYANA, GEORGE (1863-1952): Spanish philosopher, poet, and novelist who wrote *The Life of Reason: Or, The Phases of Human Progress* (1905-1906), *Scepticism and Animal Faith* (1923), and *Realms of Being* (1927-1940). Santayana's view of ethics amounted to a life that stressed detachment, reflection, generosity, and faith.

- SARTRE, JEAN-PAUL (1905-1980):** French philosopher, playwright, and novelist. Sartre was a principal advocate of modern existentialist thought. His works include *Being and Nothingness* (1943) and *Existentialism and Humanism* (1946). He won the 1964 Nobel Prize in Literature.
- SCHINDLER, OSKAR (1908-1974):** German merchant who rescued eleven hundred Jews from death sentences during the Holocaust. He risked his life and fortune in order to act morally responsible.
- SCHOPENHAUER, ARTHUR (1788-1860):** German philosopher who developed a pessimistic system of philosophy based upon the primacy of will. His *The World as Will and Representation* (1819), advanced his philosophy.
- SCHWEITZER, ALBERT (1875-1965):** German theologian and missionary who urged the public, politicians, and statesmen to come to grips with the threat of nuclear war and work for peace. He wrote the *Philosophy of Civilization* (1923). He was recipient of the 1952 Nobel Peace Prize.
- SHAFTESBURY, THIRD EARL OF (1671-1713):** Born Anthony Ashley Cooper, he was an English philosopher who emphasized common sense as opposed to logical systems and introduced the theory of moral sense as a significant component of ethical theory. Among his most important works are *An Inquiry Concerning Virtue* (1699), *A Letter Concerning Enthusiasm* (1708), *Sensus Communis* (1709), *The Moralists* (1709), and *Characteristics of Men, Manners, Opinions, Times* (1711).
- Shakespeare, William (1564-1616):** English Renaissance dramatist whose plays often touched on the morality of issues such as assassination.
- SHINRAN (1173-1262):** Born Matsuwaka-Maru. Shinran was a Japanese Buddhist monk who founded the Japanese Mahāyānist Buddhist sect Jōdo Shinshū, or the True Pure Land Sect. He taught the difference between faith (salvation in the next world) and morality (one's duty to society in this world).
- SIDGWICK, HENRY (1838-1900):** English philosopher who tried to reconcile an intuitive approach to morality with that of utilitarianism. He produced *Methods of Ethics*, one of the most significant works on ethics in English, the capstone of nineteenth century British moral philosophy.
- SINGER, PETER (1946-):** Australian philosopher and ethicist who wrote *Animal Liberation* (1975), *Practical Ethics* (1979), and *Rethinking Life and Death* (1994), among many other works. Singer is an eminent authority in two areas of ethics—animal rights and bioethics.
- Skinner, B. F. (1904-1990):** American psychologist and behaviorist primarily responsible for the development of modern behaviorism. Skinner believed that the fundamental traits of human nature are neither good nor bad but the outcome of complicated environmental interactions.
- SMITH, ADAM (1723-1790):** Scottish economist who was a leading proponent of laissez-faire economics. He wrote *The Theory of Moral Sentiments* (1759), and *An Inquiry into the Nature and Causes of the Wealth of Nations* (1776).
- SOCRATES (c. 470-399 B.C.E.):** Greek philosopher who is thought to have switched the focus of Greek philosophy from the natural world to the human mind and ethics. He believed that moral goodness is based on objective knowledge.
- SOLZHENITSYN, ALEKSANDR (1918-):** Russian novelist and historian who promoted the idea of the mutuality of communal and individual ethics within the context of the Russian Christian tradition. He advanced this idea in literary works such as *One Day in the Life of Ivan Denisovich* (1962), *The First Circle* (1968), and *Cancer Ward* (1968), and in historical works such as *The Gulag Archipelago, 1918-1956: An Experiment in Literary Investigation* (1973-1975). He was the recipient of the 1970 Nobel Prize in Literature.
- Sophocles (c. 496-406 B.C.E.):** Greek dramatist, military and civil leader. His play *Antigone* (c. 441 B.C.E.) showed an awareness of the conflict between respecting civic duty versus the demands of the conscience within the individual.
- Spencer, Herbert (1820-1903):** British philosopher and sociologist who was one of the main defenders of evolutionary theory. He also criticized utilitarian positivism.
- SPINOZA, BARUCH (1632-1677):** Dutch philosopher who contributed much to the emergence of political and religious tolerance. His works include *A Theologico-Political Treatise* (1670) and *Ethics* (1677).
- STALIN, JOSEPH (1879-1953):** Russian political leader of the Communist Party of the Soviet Union (1928-1953). Under his leadership, the Soviet Union became a repressive totalitarian state.

- STANTON, ELIZABETH CADY (1815-1902):** American suffragist who was a proponent of complete moral and social equality for women.
- Stevenson, Charles L. (1908-1979):** American philosopher who largely developed the ethical theory of emotivism. He also wrote *Ethics and Language* (1944), one of the most pivotal works on ethics in the modern era.
- STEWART, MARTHA (1941-):** American entrepreneur whose character was questioned after a series of unethical business decisions.
- TAGORE, RABINDRANATH (1861-1941):** Indian poet, playwright, and philosopher. The foundation for Tagore's literary achievements is his vision of the universal man, based on his unique integration of Eastern and Western thought. *Gitanjali (Song Offerings; 1910)* is his best-known work in the West. He was the recipient of the Nobel Prize in Literature in 1913.
- Tertullian (c. 155-160 C.E.-after 217 C.E.):** Religious figure from the age of Imperial Rome who is considered the prominent spokesman for Christianity in the Latin West before Saint Augustine. Tertullian's polemical treatises set the direction for much of later Western theology. Among his personal beliefs was an opposition to vivisection.
- THOMAS AQUINAS (1224 or 1225-1274):** Italian theologian who combined elements of the Christian faith with Aristotle's theory of ethics that had implications for ethics, law, psychology, semantics, and the nature of reason itself. His works include *Summa Theologica* (c. 1265-1273) and *Summa Contra Gentiles* (c. 1258-1264).
- THOREAU, HENRY DAVID (1817-1862):** American writer, philosopher, and a major figure in the Transcendentalist movement. His most significant works include "Civil Disobedience" (1849) and *Walden: Or, Life in the Woods* (1854).
- TILLICH, PAUL (1886-1965):** German American theologian who introduced a unique and challenging approach to the area of theology. His works include *Systematic Theology* (1951-1963), *Dynamics of Faith* (1957), and *The Protestant Era* (1948).
- Tolstoy, Leo (1828-1910):** Russian author who was renowned for his fiction and later achieved prominence as a moralist, pacifist, and social activist.
- TUTU, DESMOND (1931-):** South African advocate of civil and human rights who urged the end of apartheid by appealing to the moral conscience of people worldwide.
- UNAMUNO Y JUGO, MIGUEL DE (1864-1936):** Spanish philosopher who was a key figure in the expression of the existentialist tension between reason and faith. He wrote such works as *The Life of Don Quixote and Sancho* (1905), *The Tragic Sense of Life in Men and Peoples* (1913), and *The Agony of Christianity* (1925).
- VARDHAMĀNA (c. 599-527 B.C.E.):** Indian religious reformer who established the Jain religion. He instructed on the ethical significance of nonviolence and spirituality.
- VOLTAIRE (1694-1778):** Born François-Marie Arouet. French writer and philosopher who believed that morality was an obligation to humanity and justice. He wrote *Candide: Or, All for the Best* (1759).
- WANG YANGMING (1472-1529):** Chinese philosopher who quelled rebellions and created a reign of peace in China that lasted a century. As a Neo-Confucian philosopher, he exercised tremendous influence in both China and Japan for 150 years. He wrote *Instructions for Practical Living* (1527).
- WASHINGTON, BOOKER T. (1856-1915):** African American educator who used utilitarian and pragmatic standards to explain human behavior. He was the author of *Up from Slavery* (1901).
- WEBER, MAX (1864-1920):** German social scientist and theorist widely acclaimed as the "father of sociology." Weber is best known for his thesis of the Protestant ethic, which links the psychological effects of Calvinism with the development of modern capitalism. He detailed his theory in *The Protestant Ethic and the Spirit of Capitalism* (1904-1905).
- WHITEHEAD, ALFRED NORTH (1861-1947):** English philosopher who applied mathematical and scientific laws to philosophical ethics. He explored his theories in works such as *Science and the Modern World* (1925), *Religion in the Making* (1926), *Process and Reality: An Essay in Cosmology* (1929), *Symbolism: Its Meaning and Effect* (1927), and *Adventures of Ideas* (1933).
- WIESEL, ELIE (1928-):** Romanian-born author and rights activist. Wiesel is a significant figure in the human rights cause and author of *Night* (1956),

one of the most influential and best known memoirs of a concentration camp survivor. He was awarded the Nobel Peace Prize in 1986.

Wilson, Edward O. (1929-): American scholar and activist whose work introduced a new academic discipline, sociobiology. Wilson believes that behavior is rooted in genetics. He has written on numerous subjects such as animal behavior and evolutionary psychology, biodiversity, environmental ethics, and the philosophy of knowledge. Author of the Pulitzer Prize-winning *On Human Nature* (1978), Wilson went on to write numerous other books including *The Diversity of Life* (1992), *Consilience: The Unity of Knowledge* (1998), and *The Future of Life* (2002).

Wilson, Woodrow (1856-1924): Twenty-eighth president of the United States (1913-1921) and the primary architect of the League of Nations.

WITTGENSTEIN, LUDWIG (1889-1951): Austrian-born British philosopher. Wittgenstein is one of the most important and influential philosophers of the twentieth century. He believed that moral value was outside the scope of philosophy. He

was the author of *Tractatus Logico-Philosophicus* (1922), and *Philosophical Investigations* (1953).

WOLLSTONECRAFT, MARY (1759-1797): English journalist and educator who developed a comprehensive feminist program. She described her beliefs in her *Vindication of the Rights of Woman* (1792).

XUNZI (c. 307-c. 235 B.C.E.): Chinese philosopher who promoted a humanistic philosophy concerned with the moral training required to enhance one's self and character.

Zeno of Citium (c. 335-c. 263 B.C.E.): Greek philosopher who founded Stoicism, the principal Hellenistic school of philosophy. Stoicism focused on abstract ideas and on how an individual functioned in the world.

ZHU XI (1130-1200): Chinese philosopher whose most important contribution to the field of ethics was his examination of ethical behavior in and out of government.

ZHUANGZI (c. 369-286 B.C.E.): Chinese philosopher who incorporated individualism and naturalism into Daoist philosophy.

Glossary

Note that many terms listed here have multiple meanings. This glossary provides only the definitions most directly relevant to ethics.

- A priori.* Independent of, or logically prior to, lived experience; logically deduced solely from abstract rational premises without reference to empirical evidence.
- Absolutist.* Advocating the belief in objective truth and universal moral values.
- Absurd, the:* That which points toward the ultimately meaningless character of human life.
- Accountable.* Answerable for a moral or ethical transgression.
- Actual.* Existing; real.
- Adjudicate.* To act as a judge in a legal proceeding; or, to judge between two conflicting ethical claims or priorities.
- Adversarial.* Acting as opponents in a competition.
- Afterlife.* Eternal existence following death, usually in a location determined by the moral quality of one's actions while alive.
- Ageism.* Unfair treatment of people, or unjust beliefs about them, based upon their age.
- Aggression:* Any behavior that is intended to harm someone, either physically or verbally.
- Ahimsā.* Hindu practice of refraining from harming living creatures.
- Alienation.* Unnatural emotional isolation from, or inability to comprehend or communicate with, either oneself or the external world.
- Alterity.* Absolute radical difference; otherness.
- Altruism.* Unselfish devotion to helping others.
- Anarchy.* Political disorder; chaos.
- Anathema.* Hated or attacked as being diametrically opposed to one's own values.
- Anthropocentrism.* Tendency to see the world solely in terms of human concerns.
- Anthropomorphism of the divine:* Description of God or gods in terms of properties that are typical of human beings.
- Applied ethics.* Branch of moral philosophy that deals with making practical ethical choices and solving actual problems in the real world.
- Argument.* Series of logical statements designed to prove that something is true or to persuade another person to believe something.
- Aristotelian ethics.* Ethics based on the values and ideas central to Aristotle, especially concern with defining the nature of the good life and with the ultimate purpose, or *telos*, of all things.
- Ascetic.* Strictly observant of religious rules requiring self-denial and abstinence.
- Atheism.* Belief that there is no god.
- Attribute.* Property; characteristic.
- Authentic.* Truly originating from oneself and not imposed by outside influences; genuine.
- Authority.* Legitimate right to exercise power, issue commands, have one's judgments accepted, or have one's opinions believed.
- Autonomy.* Complete self-sufficiency and independence.
- Bad faith.* Dishonesty or insincerity behind words or actions designed to win someone's trust.
- Benevolent.* Kind.
- Bigotry.* Intolerance for the opinions of others.
- Binding.* Imposing an inescapable obligation.
- Bioethics.* Branch of ethics dealing with the moral implications of science and technology for medical practices and procedures.
- Bodhisattva ideal.* Deferral of nirvana so that one can help other, less enlightened people on their paths to nirvana.
- Bushido:* Japanese military code meaning "way of the warrior" that incorporates strict ethical responsibilities with a code of physical sacrifice.
- Capitalism.* Economic system in which private individuals and corporations are the primary owners of the means of production, and wealth circulates in order to create more wealth.
- Casistry.* Making an argument to prove something that one knows to be false; or, applying general moral principles to resolve specific questions.
- Character.* One's level of personal integrity.
- Charity:* Sharing one's property and person with others in order to alleviate their basic needs.
- Chivalry:* Medieval code of stressing loyalty, wis-

- dom, courage, generosity, religious fidelity, and the virtues of courtly love.
- Citizen.* Person both subject to a sovereign state and enjoying the full rights and privileges accorded to the members of that state.
- Civil disobedience.* Intentional violation of an unjust law; or, intentional violation of laws maintaining social order to draw public attention to, or to prevent, a specific injustice.
- Class.* One of the broad categories of economic identity, such as upper class, middle class, lower class, bourgeoisie, aristocracy, or proletariat, that divide and categorize the members of a given society.
- Code.* System of rules or laws governing behavior.
- Coercion.* Use of intimidation or force to make someone comply with one's desires.
- Cognitivism.* Belief that ethical utterances constitute logical propositions that can be evaluated for truth or falsity.
- Command.* Instruction or order given by someone in a position of authority.
- Common good.* Set of interests shared by all members of a group or society.
- Common sense.* Beliefs that, whether actually true or false, seem to be obviously true and to require no explanation or justification.
- Communism.* Politico-economic system in which private property has been abolished, the means of production are controlled by everyone equally (at least in theory), and wealth merely circulates without being created or increased; or, a social theory advocating the creation of such a system.
- Communitarian.* Ethically concerned primarily with the common good rather than the good of each individual member of the community.
- Community.* Group of people, of any size and geographic distribution, whose members perceive themselves as sharing certain traits, interests, or values in common.
- Comparative ethics.* Study of similarities and differences between the moral theories, moral values, and moral behaviors of different cultures or communities.
- Compromise.* To lessen one's demands in return for similar concessions on the part of an adversary; or, to jeopardize or violate the integrity of a thing, especially of something affecting one's character or reputation.
- Conduct.* Behavior, especially behavior regulated by codes of etiquette or professional ethics.
- Confidentiality.* Secrecy of information, deriving from the nature of the relationship in which the information was shared.
- Conflict of interest.* Situation in which one person has two goals or desires that are mutually exclusive, especially when one goal is a private desire and the other is a public goal; or, situation in which one professional serves two clients who are in direct or indirect competition with each other.
- Conscience.* Intuitive sense of right and wrong influencing one's moral decisions and behavior.
- Conscientious objection.* Refusal to perform an action, such as military service, on moral or religious grounds.
- Consent.* To give permission, especially permission to perform a medical procedure.
- Consequence.* Effect or result.
- Consequentialism.* Doctrine that the morality of one's actions should be judged by the positive or negative nature of their consequences.
- Conservative.* Advocating or believing in traditional values and institutions; generally resistant to change.
- Consistency.* Unwavering adherence to a pattern of behavior or belief; lack of self-contradiction.
- Constraint.* Physical or mental restriction, coercion, or obligation; lack of autonomy.
- Contract.* Formal, morally and legally binding agreement.
- Conventional.* Traditionally, customarily, or commonly done, accepted or believed.
- Criterion.* (plural, *criteria*). Standard of judgment; yardstick.
- Critique.* Evaluation of the form, content, significance, and effects of a human creation, institution, or pattern of behavior.
- Culpability.* Worthiness of blame; guilt.
- Cultural.* Deriving from culture rather than nature; produced by humans; artificial.
- Culture.* Set of all distinctive or meaningful ways of behaving, interrelating, communicating, and living common to a given society, social group, or subgroup.
- Cynicism.* Distrust of the motives of others or disbelief in the ability of ethical theory to guide actual human behavior; or, more narrowly (and always

capitalized) a school of ancient Greek philosophy holding that self-control is the highest good.

Daoism. Philosophical system advocating a lifestyle of extreme simplicity and harmony with nature.

Deconstruction. Literary and philosophical movement that investigates the construction and consequences of truth, meaning, and value.

Defamation. Malicious lies designed to harm a person's reputation.

Deism: Belief that it is possible to establish the existence of an intelligent and ethical supreme being on the basis of reason.

Democracy. Government in which ultimate authority is vested in the citizenry.

Deontology. Formal study of duty and moral obligations.

Descriptive. Portraying or describing factually, without making value judgments.

Desert. Just reward or punishment, or other treatment that is merited.

Determinism. Belief that human thought and action are governed by the laws of cause and effect.

Deterrent. Explicit or implicit threat of consequences meant to discourage undesirable actions.

Diagnose. To determine the root cause of a symptom.

Difference. Existence of significant, socially meaningful dissimilarities between the members of a given community; or, quality or state of having a trait that prevents one from resembling another.

Dignity. Recognition of or respect for a person's inherent worth.

Dilemma. Problem that forces one to choose between two evils, or, more broadly, an insoluble problem "Dirty hands." Taint one one bears when performing morally or ethically questionable acts.

Discipline. Self-control or self-regulation maintained through training.

Discrimination. Illegitimate treatment of an individual based on the social category, such as race or gender, to which the individual belongs.

Disempowered. Deprived of social influence or of control over one's own life.

Dissent. Public expression of disagreement with the values, methods, actions, or ideology of one's government or of the political majority.

Distributive justice. Fair allocation of resources to all members of a community.

Diversity. Presence of multiple types of people, with

fundamentally different identities or values, within the same community.

Divine command theory: Belief that the ethical values and principles binding upon human beings depend only on the commands of a higher power or god.

Doctrine. Fundamental teaching or axiom advocated by a particular religion, government, philosophical school, or other formal belief system.

Dominant values. Values or ideologies accepted or followed by the majority of members of a community, including members whose own best interests may be damaged by their acceptance.

Dualism. Belief in the existence of two absolutely irreconcilable and fundamentally opposed entities, such as the mind and the body, good and evil, or facts and values.

Duress. Coercion that compels and thus legally invalidates or mitigates an action, decision, or contract by depriving one of the ability to consent or act freely.

Duty. Commitment one is morally required to fulfill.

Egalitarian. Embracing equality as one of the fundamental moral values; treating all people in exactly the same fashion.

Ego. Portion of the psyche, both conscious and unconscious, that forms the recognizable identity or self; the "I."

Egoism. Philosophical system that asserts that self-interest is the highest good.

Egotism. Tendency to understand all aspects of life in terms of their effects upon oneself.

Elitist. Characterized by a belief that one segment of society is better than another segment, because it is more educated, richer, or otherwise more fully developed.

Emotivism. Philosophical theory that language expresses and influences emotions, rather than signifying meanings or making logical assertions.

Empirical. Based solely upon perceptual experience rather than abstract theory.

Empiricism. Doctrine that all genuine knowledge and all legitimate philosophical theories derive from perceptual experience.

End. Entity whose value comes solely from itself and not from the uses to which it may be put; or, the ultimate purpose or goal.

Enlightenment, the. Philosophical movement of the seventeenth and eighteenth centuries character-

- ized by a belief in the power of reason, the autonomy and sovereignty of the rational individual, and the existence of natural rights.
- Entity.* Particular, self-contained thing.
- Environmental ethics.* Branch of moral philosophy dealing with the rights and obligations of human beings with respect to nature.
- Epistemology.* Philosophical study of knowledge and the nature of truth.
- Equality.* State in which all people are acknowledged to have the same moral worth and to enjoy the same fundamental rights and privileges.
- Ethics.* Philosophical science that deals with the rightness and wrongness of human actions; closely allied with morality.
- Ethnocentrism.* Belief that one's own race or ethnicity is the norm according to which all others are to be judged.
- Etiquette.* Formal or informal code of conduct governing proper social behavior.
- Euthanasia.* Killing someone, or allowing someone to die, as an act of mercy.
- Evidence.* Facts, details, or observations that tend to support a subjective opinion or prove the truth of an objective assertion.
- Evil.* Clear and extreme moral transgression for the sake of such transgression alone; or, quality of taking pleasure in such an act; or, anything that has only harmful effects.
- Excellence.* Quality of surpassing all or most others in skill or achievement.
- Excuse.* Legitimate reason for a fault or transgression.
- Existentialism.* School of philosophy that holds that the world lacks objective meaning or purpose, but individuals are morally obligated to create such meaning for themselves.
- Explanation.* Description of a state of affairs in terms of causes and effects; description meant to make something make sense.
- Exploit.* To treat people as a means to achieve one's own ends, or as objects rather than as subjects; or, to extract surplus value from laborers.
- Expression.* Act of uttering, writing, or otherwise representing one's ideas or emotions to others; communication.
- Fact.* Something that is objectively true.
- Fair.* Unbiased; equitable; just.
- Fatalism.* Belief that events are predetermined by forces beyond human control and that individual destinies cannot be altered.
- Federal.* Pertaining to the central, national government of the United States.
- Feminism.* Political, social, and theoretical movements resisting masculine domination and masculinist values.
- First philosophy.* Branch of philosophy—different according to different philosophers—that grounds all other branches and that must therefore be completed prior to any other philosophical inquiry. The Greeks believed that ontology was first philosophy. In the Enlightenment, epistemology was considered first philosophy, and for some twentieth century philosophers, philosophy of language became first philosophy.
- Formal.* Official, or explicitly set out in writing or in some other manner that imparts authority or validity; or, having a rigorously defined set of elements and structure, as in a system or model.
- Foundationalism.* Philosophical doctrine that logical or scientific methods of reasoning both can and should be used to establish the objective truth or validity of knowledge and judgment, and that this grounding should take place prior to any further reasoning or action.
- Four noble truths.* Buddhist belief that eliminating consciousness of the individual self will enable one to overcome desire and to eliminate all suffering in one's life.
- Fraud.* Unfairly depriving someone of something of value by means of deception.
- Free-riding.* Enjoying of benefits produced by the efforts of others without contributing one's own fair share.
- Freedom.* Lack of constraint; autonomy of judgment and action; or, living in a manner that allows one to realize one's true potential and to express fully one's creative impulses.
- Gaia hypothesis.* Belief that the earth is a living entity whose biosphere is self-regulating and capable of maintaining planetary health by controlling its chemical and physical environment.
- Gender.* Set of cultural meanings and values that attach to or are produced by biological sex; that is, masculinity or femininity, as opposed to maleness or femaleness.

- Genocide.* Mass murder based on shared cultural identity of the victims.
- Golden mean.* Perfect balance between extremes.
- Golden rule.* Always do unto others as you would have them do unto you.
- Good, the.* Source or embodiment of moral value; the set of all things and actions that should be desired.
- Good faith.* Sincere attempt to do right by one's actions, regardless of their actual outcome; or, sincere intent to honor both the letter and the spirit of contract or agreement and to ensure that both parties to the agreement benefit from it.
- Ground.* To demonstrate logically the objective validity of a judgment, belief, or system.
- Guilt.* Moral culpability for wrongdoing; or, subjective awareness of such culpability accompanied by feelings of shame and remorse.
- Happiness.* Joy; or, living the good life.
- Hate crime:* Criminal acts committed against individuals or groups because of their race, ethnicity, religion, sexual orientation, or other group affiliation.
- Homophobia.* Irrational hatred of nonheterosexual people, or of one's own homosocial impulses.
- Honor.* Self-esteem based upon one's rigorous commitment to a personal or conventional ethical code.
- Human nature.* Qualities, capacities, or propensities shared in common by all human beings.
- Human rights.* Set of basic moral rights that inhere in all people.
- Humanism.* Philosophy grounded in a belief in human nature and in the ethical centrality of the values and interests shared by all people.
- Humility.* Self-effacement or modesty arising from one's recognition of people or forces whose power, value, or significance is greater than one's own.
- Hypocrisy.* Practice of condemning in public what one does in private, or otherwise espousing values one does not actually possess.
- Id.* Portion of the psyche, residing entirely in the unconscious, that consists solely of instinct and impulse, ungoverned by reason or restraint.
- Idealism.* Belief in noble principles that seem to conflict with the state of the actual world; dedication to achieving extremely or unrealistically high standards.
- Idealism, German.* School of philosophy concerned to investigate the nature and structure of subjective experience and its relationship to material reality.
- Idealism, Platonic.* School of philosophy that asserts that abstract concepts such as Justice or Equality exist independently of human subjects and have actual effects in the world.
- Identity.* Person's fundamental continuity of experience or character over time; the specific characteristic or characteristics felt to be most important in defining one's character; sense of self.
- Identity politics.* Activism rooted in specific, culturally significant categories of identity, such as race, class, gender, or sexuality.
- Ideology.* Socially determined structures of thought that make possible the conversion of perception into meaningful experience while simultaneously limiting the range of possible meanings of that experience; or, a specific example of these structures, as capitalist ideology, communist ideology, feminist ideology, patriarchal ideology, and so on.
- Immediate.* Intuited or known directly, without any intervening filter or template; not mediated.
- Immortality:* Eternal life.
- Impartial.* Unbiased; objective; fair.
- Imperative.* Demand or requirement for action.
- Imperative, categorical.* Imperative that is demanded universally by all situations, as "always treat people as ends in themselves and never as means only."
- Imperative, hypothetical.* Imperative that is demanded by a particular situation or goal, as "in order to keep your belongings safe, lock the door behind you."
- Imply.* To require logically, as the existence of a watch implies the existence of a watchmaker.
- Inalienable.* Inherent, unquestionable, and incapable of being taken away.
- Incommensurable.* Lacking any common basis for comparison or exchange.
- Individualism.* Interpretation of human culture or history in terms of single persons rather than groups or movements; belief that a single person is a more significant moral unit than is a community.
- Inherent.* Permanently, definitively, inseparably, or essentially characteristic of a person or thing; innate.

- Innate.* Arising necessarily as a result of the fundamental nature of a person or thing; inherent.
- Institution.* Publicly recognized, formally structured organization or set of relationships, especially one that generates some form of authority and distributes it hierarchically among its members.
- Integrity.* Strength of character; moral fortitude; honesty.
- Intention.* Purpose or motive behind an action.
- Intentionality.* Property of referring to something; “aboutness.”
- Interest.* State of relative fulfillment or attainment of a need, benefit, or advantage; or, causal connection between a particular state of affairs and such a benefit.
- Intrinsic.* Resulting inherently from the essential nature of a thing; inseparable; innate.
- Intuition.* Direct, pure, immediate perception, insight, or knowledge.
- Intuitionism.* Philosophical belief that moral truth can be apprehended directly through intuition, rather than being learned or deduced logically.
- Investment.* Expenditure of emotion, energy, or value on a person, thing, or situation, in anticipation of a desired or beneficial result.
- Involuntary.* Against or not as a result of one’s will; unintentional.
- Irrational.* Not based upon or agreeing with reason; nonsensical; illogical.
- Judgment.* Assignment of positive or negative value, moral praise, or blame to a person, thing, or action; evaluation.
- Jurisprudence.* Philosophy of law.
- Justice.* Fundamental moral principle or ideal of perfect correspondence between desert and actual reward or punishment.
- Kantian ethics.* Ethics based on the values and ideas central to Immanuel Kant, especially belief in a categorical imperative and the importance of moral duty.
- Karma.* Positive or negative spiritual energy resulting from moral or immoral acts.
- Law.* Formally or institutionally authorized rule, or set of all such rules in a given society.
- Legitimate.* Backed up, verified, or validated by official rules or standards; lawful; just.
- Liable.* Legitimately responsible; answerable in court.
- Libel.* Written defamation.
- Liberal.* Open to or advocating progress and reform; disinclined to preserve traditional values for the sake of tradition.
- Liberal individualism.* Central political ideology in the United States and much of Europe, that portrays individuals as autonomous, rational decision makers who enjoy fundamental natural rights.
- Libertarianism.* Political philosophy, combining social liberalism with economic conservatism, dedicated to maximizing individual liberties and minimizing centralized government.
- Liberty.* Political freedom; ability to act as one sees fit without interference by government.
- Limited war.* Warfare involving a fraction of the total military resources of a nation, or whose goal is to defeat or control only a fraction of the enemy’s military or territory.
- Lobby.* To attempt to persuade a legislator to vote in a particular way.
- Logic.* Formal system of reasoning, rational argumentation, or analysis.
- Logocentrism.* Belief that logic is the superior method, or the only valid method, for divining truth, producing knowledge, or communicating.
- Loyalty.* Unwavering dedication; faithfulness.
- Luck.* Randomness or arbitrariness in events that affect one’s life positively or negatively; fortune.
- Lust.* Strong or unmanageable desire, especially sexual desire.
- Mādhyamaka.* School of Buddhist philosophy advocating moderation in all things.
- Manichean.* Divided between two absolute extremes; given to seeing things as black or white.
- Materialism.* Marxist school of philosophy that asserts that brute physical reality, especially economic reality, is the ultimate determinant of history, and that economic and political changes cause new ideas, not the other way around; or, philosophical rejection of spirituality in favor of beliefs that correspond with empirically verifiable experience; or, trait of caring excessively about physical objects and wealth and ignoring spiritual or intangible values.
- Meaning.* Source and nature of the importance of a thing, person, idea, or situation; significance.

Means. Tool or method used to accomplish some goal.

Mediate. To filter, transmit, translate, or otherwise convey in an indirect fashion.

Mercy. Leniency motivated by compassion.

Merit. Legitimate claim to recognition or reward; desert.

Messiah. Prophesied figure who is expected to deliver the Jewish people from harm; or, any such promised deliverer or savior, such as Jesus Christ.

Messianism: Belief in a messiah.

Metaethics. Branch of philosophy concerned to ground or criticize the practice of ethics.

Metaphysics. Branch of philosophy that studies the fundamental nature of the world, especially as that nature relates to and is presupposed by other branches of philosophical inquiry; or, any specific set of presumptions about the nature of reality; or, belief that the world humans experience has a hidden, objective nature lying underneath its surface.

Metaphysics of presence. Belief that the world is composed of objects or things that exist independently of one another, that these objects present themselves to equally autonomous human subjects who can experience and evaluate them without affecting or being affected by them, and that the objects, once evaluated, can be exhaustively described and understood through logical propositions; or, belief that meaning is objectively present in spoken and written language, and that language can convey this meaning immediately from one speaker to another without the need for interpretation.

Model. System of rational principles or axioms that define the nature or parameters of a particular discipline, practice, or thing.

Monotheism. Belief in a single, all-powerful god.

Moral equivalence: Equating of the morality and ethics of two entities that are not usually seen as comparable, such as Adolf Hitler and Saddam Hussein.

Moral luck. Any instance of random fortune or chance that affects a person's ethical status.

Morality. Belief in right and wrong; or, any specific set of ethical values or beliefs, especially absolute or totalizing values.

Motive. Purpose or intent behind a given action; reason for acting.

Multiculturalism. Diversity of cultural backgrounds

and viewpoints within a community; or, ethical position advocating such diversity or advocating tolerance for the mixture of values and beliefs that results from it.

Mysticism. Belief in a reality or a spiritual or divine entity that normally transcends human experience, but that can be contacted and provide enlightenment under specific circumstances.

Narrative. Story.

Nation. A people unified under, or desiring to be unified under, a centralized government; or, any such centralized government that exercises or enjoys sovereignty.

Nationalism. Belief that one's national affiliation defines one's identity and that one's nation commands one's absolute loyalty.

Natural law. Moral rules derived from objective human nature and applicable to and within all societies.

Natural rights. Rights enjoyed by all people according to the principles of natural law.

Naturalistic fallacy. Any attempt to define moral good in terms of something else, rather than taking it to be an irreducible concept in itself.

Necessary. Logically mandated as a prior requirement for some proposition to be true or for some situation to prevail.

Negative. Bad; or, reactive rather than active—defined primarily in terms of an opposition to some external entity or set of values, rather than in purely internal terms.

Negligence. Failure to take proper care or otherwise to safeguard some person or interest one was morally obligated to protect.

Nihilism. Rejection of all beliefs, except the belief that all other beliefs should be rejected.

Nirvana. Buddhist spiritual enlightenment and transcendence resulting from moral virtue.

Noncognitivism. Belief that ethical utterances are irrational expressions of value rather than fact, and that they therefore are neither true nor false.

Nonviolent resistance. Passive physical interference with unjust activities; or, passive refusal by a protester to comply with the instructions or commands of law enforcement agents who are placing the protester under arrest, requiring the agents to lift or drag the protester bodily in order to accomplish the arrest.

Norm. Accepted, average, or customary state of affairs.

Normative. Prescribing rules or making value judgments about what ought to be done and what ought not to be done.

Obedience. Compliance with commands issued by someone in authority; or, general tendency or predisposition to follow such commands.

Object. Thing or person that is acted upon, thought about, or judged.

Objective. Existing independently of human perceptions, values, or interpretations; simply and undeniably true; or, unbiased or impartial.

Objectivism. Philosophical belief that objective facts exist and are the necessary starting point for any genuine philosophy.

Obligation. Moral requirement or duty.

Ontology. Philosophical study of being and the nature of existence.

Oppression. Unjust, usually systematic, exercise of power or authority to subjugate a social group.

Optimism. Tendency to interpret things in the most positive possible light or to anticipate good things happening in the future.

Other. Absolutely different from the self, especially, characterized by attributes that are diametrically opposed to one's own or one's culture's most deeply cherished values.

Pacifism. Commitment to nonviolent resolution of conflict on all scales from the personal to the international.

Panentheism: Belief system that attempts to mediate between theism and pantheism.

Pantheism: Belief that God is synonymous with the universe.

Passion. Strong and irrational emotion.

Paternalism. Practice of intrusively managing or interfering in the affairs of others, purportedly for their own good.

Perspectivism. Belief that the world has no fundamental or inherent nature, and therefore that no single point of view can be exhaustive or objectively valid.

Pessimism. Tendency to interpret things in the most negative possible light or to anticipate bad things happening in the future.

Phenomenological. Having to do with the nature of

subjective experience, especially as studied or understood from the internal point of view of the subject having the experience.

Philosophy. Formal study of knowledge, truth, reality, and value.

Platonic ethics. Ethics based on the values and ideas central to Plato, especially belief in objective, ideal forms and the importance of guiding all people to lead virtuous lives.

Pleasure. Feeling produced by the satisfaction of desire; enjoyment.

Pluralism. System that fosters tolerance for multiple points of view or advocacy of a community in which diverse perspectives are accepted or celebrated; or, ethical philosophy that asserts that there is a plural but finite number of valid moral beliefs and values.

Politically correct. In accord with or advocating an informal set of conventions governing appropriate and inappropriate forms of social and political speech.

Politics. Practice or profession of exercising governmental power; or, practice of maneuvering for power in a nongovernmental institution.

Positive. Good; or, the opposite of negative; active rather than reactive—defined primarily in terms of internal traits or values, rather than in opposition to something external.

Postmodernism. Set of aesthetic and intellectual movements within late capitalist or postindustrial culture, characterized primarily by a celebration of cultural fragmentation, by disbelief in any distinction between art and popular culture, and by an extreme skepticism toward any attempt to ground values or judgments.

Poststructuralism. School of philosophy and criticism that looks at human culture as a set of texts, and that understands those texts as rule-governed but irrational, noncentered structures or systems that include among their elements the philosopher or critic who reads them.

Power. Ability to have effects in the world.

Practical. Directed toward, preparing for, informing, or influencing concrete action.

Practice. Concrete action based upon or applying theoretical principles; or, a meaningful social activity that takes place within a specific institution and that can function as an arena for achievement or excellence.

- Pragmatism.* School of philosophy asserting that the meaning of a word or sign is a function of its practical effects in the world, and that the truth of a belief is determined by its usefulness.
- Prejudice.* Preconception, especially an unfavorable preconception about an individual based upon the individual's group affiliations; bias.
- Prescription.* Ethical command or edict.
- Prescriptivism.* Belief that moral language is meant to command actions and omissions, rather than describe values or express feelings or judgments.
- Principle.* General law or truth governing or grounding more specific laws or truths within a particular discipline or context; or, any generally accepted rule, especially one guiding proper moral conduct.
- Prior restraint.* Governmental or legal action that prevents someone in advance from publishing or otherwise circulating specific information or opinions.
- Privacy.* Right or ability to withhold some portion of one's life from public scrutiny or to protect it from governmental interference.
- Private.* Pertaining to or located within the domestic or personal sphere; separated from general social interaction.
- Professional ethics.* Codes of conduct defined by unions or other vocational organizations, or through customary work-related interactions, that define the moral standards of behavior required or expected of all members of a particular occupation or profession.
- Progressive.* Dedicated to reforming and improving society, especially through grassroots movements and by lobbying or otherwise utilizing existing social and political institutions.
- Propaganda.* Material designed to manipulate the opinions of its audience in order to support a particular ideology.
- Property.* That which belongs legitimately to a particular person, group, corporation, community, or government; anything that is owned; or, quality, characteristic, or attribute.
- Proscription.* Command to refrain from an action; interdiction; prohibition.
- Prudence.* Justifiable caution; good judgment.
- Public.* Pertaining to or located within the professional, political, or economic sphere; occurring outside domestic space and within the general purview of society.
- Pure (of reason).* Prior to or independent of practical experience; based solely on abstract logical principles without reference to the actual world.
- Quality.* Essential characteristic or attribute that distinguishes one thing from another.
- Racism.* Prejudice or bias that is based on race and that exists as a structural principle within one or more social or political institutions.
- Rational.* Based on reason; sensical; logical.
- Rationale.* Reason provided to justify something, especially an empty or specious reason invented to justify a course of action already desired or settled upon, or a reason created after the fact to provide retrospective justification.
- Rationalism.* Doctrine that all genuine knowledge and all legitimate philosophical theories derive from abstract logic or reason.
- Rationality.* Faculty of logic and reason within the human psyche; or, quality of being reasonable or logical.
- Realism.* Moral theory that holds that values, including ethical values, have an objective existence in the world; or, set of aesthetic movements that attempt to portray objects, or to transmit meanings, without calling attention to the techniques, styles, or signs used to accomplish the portrayal or transmission.
- Realpolitik.* Doctrine that political policies and actions, especially in foreign affairs, should be based solely on practical considerations and should be unaffected by moral or ethical principles.
- Reason.* Rational faculty of the human mind that evaluates, judges, and makes sense of its experiences; logic.
- Recognition.* Sympathetic perception of another person that acknowledges the inherent worth both of the person and of the person's goals, projects, and desires.
- Reconcile.* To cause two contradictory principles to coexist or fit together.
- Regulation.* Formal, usually quasi-legal, rule published or circulated in an official set of guidelines or principles.
- Relationship.* Connection or association between two or more entities.
- Relativism.* Belief that the fundamental or inherent nature of the world is such that it admits of an infi-

- nite number of valid, exhaustive descriptions, or that all moral beliefs are true.
- Religion.* Any systematic and customary set of shared beliefs in a supernatural or divine Entity or entities that gives meaning to or provides explanations of human experience, and that generally includes a specific set of moral values and principles to guide human action.
- Resources.* Any materials, skills, objects, abilities, currency, or other potentially useful items of value that are in finite supply.
- Responsibility.* Accountability; liability; culpability.
- Retaliation.* Vengeful or strategic response to a wrongful or transgressive action; reprisal.
- Reverse discrimination.* Discrimination by members of a socially disempowered group against a socially empowered group; or, institutional discrimination in favor of a socially disempowered group designed to correct or redress traditional discrimination against that group.
- Revolution.* Sudden social and political change or upheaval.
- Right.* That which is fair, just, and proper; the set of all actions that are permissible or required by accepted moral principles.
- Rights.* Objectively legitimate, universally valid moral claims to privileges or entitlements; or, similar claims whose legitimacy is derived from specific laws or legal principles within a particular society.
- Rule.* Principle; regulation; law.
- Salvation.* Deliverance from the world of pain to a transcendent or paradisiacal existence, especially deliverance from and redemption of sin.
- Secular.* Advocating belief only in empirical reality; nonreligious.
- Self.* Unified entity or identity underlying all subjective experience and differentiated from the external world of objects and other subjects; ego.
- Self-regulation.* Voluntary passage of formal, internal rules of ethical conduct by a professional organization or other entity that might otherwise be subject to external regulation by the government.
- Semiotics.* Study of signs.
- Sense.* One of the five types of physical interface between the human perceiving mind and the external world: sight, hearing, taste, touch, or smell; or, any mental faculty that seems to convey information or perceptions to the mind in a manner analogous to the physical senses; intuition; or, a specific feeling or intuition conveyed by such a faculty.
- Sentience.* Conscious awareness.
- Sentiment.* Feeling, sense, or emotion.
- Sex.* Physical distinction between two biological reproductive categories, upon which gender identities are based; that is, maleness or femaleness, as opposed to masculinity or femininity.
- Sexism.* Prejudice or bias that is based on sex or gender and that exists as a structural principle within one or more social or political institutions.
- Sign.* Any thing that conventionally symbolizes or stands for another thing or otherwise conveys or expresses meaning.
- Signify.* To symbolize; to mean; to stand for.
- Sin.* Serious moral transgression, especially transgression against religious moral laws.
- Situated.* Placed or located; having a particular position or perspective; partial rather than impartial.
- Situation.* State of affairs; context.
- Situational ethics.* Nonuniversal, nonabsolutist ethics based solely upon moral principles that arise from the particular context in which a moral decision or act takes place.
- Skepticism.* Intentional doubt of apparent or obvious truths, cultivated as a method to facilitate successful philosophical inquiry; or, unintentional doubt, or utter inability to believe in such truths.
- Slander.* Spoken defamation.
- Slippery slope.* Tendency of minor erosions of safeguards, scruples, or freedoms to escalate rapidly into major erosions and to continue escalating until the safeguards, scruples, or freedoms no longer exist.
- Social.* Having to do with the communal or interactive aspects of human behavior.
- Social contract.* Theoretical construct retroactively describing the circumstances under which society would have formed if it were formed as a result of rational, premeditated choice.
- Social Darwinism.* Political philosophy, modeled loosely and unscientifically after Darwin's theory of evolution by means of natural selection, that seeks to apply the theory to societies as if they were organisms.
- Social justice.* Fair and equitable distribution of wealth, resources, and power across all levels of

society or throughout the globe, especially to counteract or ameliorate disparities produced by the division of labor.

Society. Large-scale, usually national, group of people that exists in a set of highly structured relationships, produces an identifiable culture or set of cultures, and understands itself as a community.

Sophism. Philosophical school popularly believed to have taught that rhetorical skill was more important than, or constitutive of, truth and that successful legal argumentation was more important than, or constitutive of, moral right.

Spiritual. Valuing intangible or mystical types of experience, or things of benefit to the soul, rather than wealth or other material objects and pleasures of the body.

Standard. Thing to which one compares all other things of the same class or type; basis for evaluation or judgment.

State. Unit of political sovereignty, especially a nation that enjoys a legal monopoly on the means of violence within its borders.

State of nature. Philosophical fiction describing human experience prior to or outside of any community.

Stereotype. Caricatured mental image or other preconception about members of a social group or class based upon simplification and exaggeration of features that are common among the group.

Stoicism. Ancient Greek philosophy characterized by studied indifference to joys and sorrows and advocating the use of reason alone to make moral decisions.

Subject. Self-aware, knowing, judging, willing, and communicating entity; a total self, including the conscious mind, the unconscious mind, and other aspects of identity that exceed the “I” or ego.

Subjective. Biased, partial, or otherwise based upon personal values and experience; or, perceived or experienced by a subject.

Subjectivism. Belief that knowledge is partial or perspectival by definition, and that objective knowledge is not only impossible but is an incoherent concept.

Subjectivity. Conscious, self-conscious, and unconscious rational and irrational mental processes of a sentient, social, and linguistic entity; interiority; psyche.

Sufficient. Logically adequate in itself to cause some proposition to be true or some situation to prevail.

Superego. Portion of the psyche, residing largely but not solely in the preconscious, that regulates, restrains, and redirects thoughts and desires before they can become fully conscious or before they can motivate action; conscience.

Supererogation: Doing what is morally praiseworthy beyond what is required by duty or what is required to be free of moral blame.

Supernatural. Not explainable by the scientifically accepted laws of nature.

Symptom. Perceivable sign that indicates the existence of a hidden problem, disease, or contradiction.

System. Rationally ordered set of elements, structured in well-defined relationships to one another, that forms a unitary whole.

Teleology. Belief that the world as a whole, or things in the world, have objective purposes or ends.

Telos. Greek word referring to the “final cause” or ultimate purpose of an entity.

Terror. Violence perpetrated to eliminate difference.

Theism. Belief in the existence of a higher power, or god, who is responsible for creating the earth and humankind and on whom all finite things are in some way dependent.

Theodicy. Theological explanation for the presence of evil in a world created by a benevolent deity.

Theology. Study of religion; or, a particular body of religious belief or doctrine.

Theory. Abstract rational knowledge of general rules or principles; or, a proposed fact or principle that has yet to be proven or disproven; or, a nickname (often capitalized) for a large body of academic social, literary, and cultural theory that is meant to be applicable to the interpretation and analysis of every meaningful aspect of human existence; critical theory.

Tolerance. Allowing or acceptance of difference.

Totalizing. Claiming to apply to or include everything, without exception.

Traditional. Rooted in the practices or values of the past; conventional; customary.

Transcendental. Investigating subjective experience in order to deduce facts or truths that exist beyond or prior to subjective experience.

Transgression. Violation; crime; impermissible or forbidden act.

Truth. Quality of beliefs that causes them to count as knowledge, of statements that causes them to count as honest or accurate, and of propositions that causes them to count as factual.

Tyranny. Cruel, domineering, or illegitimate rule.

Understand. To know the meaning or importance of; to comprehend.

Universal. Applying equally to all things in all times and all places.

Utilitarianism. Hedonistic social philosophy that asserts that usefulness is the highest good.

Value. Goodness or badness; worth.

Vice. An immoral or merely frowned-upon pleasure; or body of such pleasures generally.

Violence. Material or spiritual attack causing physical or emotional harm.

Virtue. An inherent moral value, or body of such values generally.

Voluntary. Caused through the exercise of will; freely chosen.

War. Large-scale combat between societies, usually nation-states or national factions.

Western. Having to do with the dominant or the traditionally dominant cultures or values shared by Western Europe and the United States.

Will. Ability intentionally to act or to refrain from action; volition.

Worth. Relative value.

Wrong. That which is unfair, unjust, or improper; the set of all actions that are impermissible or forbidden by accepted moral principles.

Zen: Buddhist school whose adherents seek an experiential perception of reality through meditation.

Organizations

Listed below are centers, institutions, organizations, and societies that dispense information, conduct research, sponsor education, and advocate policies promoting ethical issues and topics.

AARP

FOUNDED: 1958

601 E Street NW

Washington, DC 20049

PHONE: (888) 687-2277

FAX: (202) 434-2320

WEB SITE: www.aarp.org/

ETHICAL CONCERNS: Civil rights; elder rights; politico-economic ethics

Formerly known as the American Association of Retired Persons, AARP is committed to helping older Americans achieve lives of dignity, independence, and purpose. Members are afforded easy access to information on such topics as computers and the Internet, finances, health and wellness, legislative issues, and leisure activities.

Accuracy in Media (AIM)

FOUNDED: 1969

4455 Connecticut Avenue NW, Suite 330

Washington, DC 20008

PHONE: (800) 787-4567

FAX: (202) 364-4098

E-MAIL: info@aim.org

WEB SITE: www.aim.org/

ETHICAL CONCERNS: Media ethics; professional ethics

Grassroots news media monitoring group that assesses “botched and bungled” news stories and corrects the record on significant issues that have received biased coverage. AIM’s intent is to promote fair and objective media coverage without bias or partisanship.

American Academy of Religion (AAR)

FOUNDED: 1909

825 Houston Mill Road NE, Suite 300

Atlanta, GA 30329-4205

PHONE: (404) 727-3049

FAX: (404) 727-7959

WEB SITE: www.aarweb.org/

ETHICAL CONCERNS: Religion; religious ethics

World’s largest organization for American scholars in the field of religious studies. The Ethics Section of the AAR provides a symposium for the ethical issues all religious bodies face.

American Association of Retired Persons. See AARP

American Bar Association (ABA)

FOUNDED: 1878

321 North Clark Street

Chicago, IL 60610

PHONE: (312) 988-5000

E-MAIL: askaba@abanet.org

WEB SITE: w3.abanet.org/home.cfm

ETHICAL CONCERNS: Attorney conduct; legal ethics

Organization founded to serve as the voice of the legal profession. Although the ABA does not have the authority to chastise attorneys, it influences attorney behavior through its ethical guidelines. One of the ABA’s goals is “to achieve the highest standards of professionalism, competence and ethical conduct.” The ABA has three committees relating to ethics: the Special Committee on Bioethics and the Law, the Standing Committee on Ethics and Professional Responsibility, and the Legal Ethics and Professional Responsibility committee.

American Catholic Philosophical Association

FOUNDED: 1926

Administration Building

Fordham University

Bronx, NY 10458

PHONE: (718) 817-4081

FAX: (718) 817-5709

E-MAIL: acpa@fordham.edu

WEB SITE: www.acpa-main.org/

ETHICAL CONCERNS: Ethical issues; philosophy

The members of the association, largely composed of college and university professors of philosophy, incorporate the work of major philosophers from every era into the issues and focus of modern

philosophy. Basic ethical issues are often the focus of conferences and research carried out by the association.

American Civil Liberties Union (ACLU)

FOUNDED: 1920

125 Broad Street, 18th Floor

New York, NY 10004

PHONE: (212) 344-3005

WEB SITE: www.aclu.org/

ETHICAL CONCERNS: Civil liberties; civil rights; legal ethics

Established to safeguard civil liberties, the ACLU works in communities, courts, and legislatures to defend First Amendment rights, equal protection, right to due process, and the right to privacy laws afforded to all Americans under the Constitution and Bill of Rights.

American Enterprise Institute

FOUNDED: 1943

1150 Seventeenth Street NW

Washington, DC 20036

PHONE: (202) 862-5800

FAX: (202) 862-7177

E-MAIL: info@aei.org

WEB SITE: www.aei.org

ETHICAL CONCERNS: Domestic policy; international policy; moral issues

Think tank established to uphold and enrich cultural and political values in the United States. Research on moral issues and domestic and international economic policy is conducted and published by the institute.

American Federation of Labor and Congress of Industrial Organizations (AFL-CIO)

FOUNDED: 1955

815 16th Street NW

Washington, DC 20006

PHONE: (202) 637-5000

FAX: (202) 637-5058

WEB SITE: www.aflcio.org/

ETHICAL CONCERNS: Business and labor ethics; economic justice; social justice

Formed through a merger, the AFL-CIO was created to fight for economic and social justice in the workplace and throughout the United States. It is a voluntary federation of national and international la-

bor unions whose goals include empowering working families, strengthening the political voice of families, and providing a voice for workers in the global economy.

American Humanist Association (AHA)

FOUNDED: 1941

1777 T Street NW

Washington, DC 20009-7125

PHONE: (202) 238-9088

FAX: (202) 238-9003

E-MAIL: aha@americanhumanist.org

WEB SITE: www.americanhumanist.org/

ETHICAL CONCERNS: Civil liberties; education; humanism; human rights

The AHA introduces social reforms and establishes new programs. Much notable progress in the areas of civil liberties, education, human rights, humanistic psychology, and science was first proposed and supported by the AHA and by Humanists.

American Inns of Court (AIC)

FOUNDED: 1985

1229 King Street

Alexandria, VA 22314

PHONE: (703) 684-3590

FAX: (703) 684-3607

E-MAIL: info@innsofcourt.org

WEB SITE: www.innsofcourt.org/default.asp

ETHICAL CONCERNS: Legal and judicial ethics; professional ethics

Organization of legal professionals whose purpose is to enrich the abilities, ethics, and professionalism of judges and lawyers. Most inns focus on issues encompassing civil and criminal litigation. There are others that focus on administrative law, family law, federal litigation, labor law, white-collar crime, and numerous other types of law.

American Medical Association (AMA)

FOUNDED: 1847

515 North State Street

Chicago, IL 60610

PHONE: (800) 621-8335

WEB SITE: www.ama-assn.org/

ETHICAL CONCERNS: Bioethics; medical ethics; professional ethics

Principal organization of medical doctors that advocates for patients and physicians and works toward

the betterment of the health care system in the United States. The AMA's code of medical ethics, first issued in 1847, underwent several substantial revisions during the twentieth century. In 1997 the AMA established the Institute for Ethics, an academic research center that conducts research on end-of-life matters, genetics, managed care, and professionalism. The institute's own Web site is located at ife@ama-assn.org. The AMA also sponsors the Ethics Resource Center, which provides students and physicians with the instruments and ability to handle ethical difficulties in a transforming health care climate. Its Web site is erc@ama-assn.org.

American Philosophical Association (APA)

FOUNDED: 1900

31 Amstel Avenue

University of Delaware

Newark, DE 19716-4797

PHONE: (302) 831-1112

FAX: (302) 831-8690

E-MAIL: apaOnline@udel.edu

WEB SITE: www.udel.edu/apa

ETHICAL CONCERNS: Ethical issues; philosophy

One of the largest philosophical societies in the world, with a membership of over 10,000. Ethical issues are a major focus of the association. The APA publishes newsletters and holds conferences related to many issues in ethics such as computer use, the environment, feminism, law, medicine, and race.

American Society for Bioethics and Humanities (ASBH)

FOUNDED: 1998

4700 West Lake

Glenview, IL 60025-1485

PHONE: (847) 375-4745

FAX: (877) 734-9385

E-MAIL: info@asbh.org

WEB SITE: www.asbh.org/

ETHICAL CONCERNS: Bioethics; professional ethics

ASBH strives to further the sharing of ideas and promote "multidisciplinary, interdisciplinary, and interprofessional scholarship, research, teaching, policy development, professional development, and collegiality" among those working in fields related to bioethics and health-associated humanities.

American Society for the Prevention of Cruelty to Animals (ASPCA)

FOUNDED: 1866

424 East 92nd Street

New York, NY 10128-6804

PHONE: (212) 876-7700

E-MAIL: napcc@aspc.org

WEB SITE: www.aspc.org/site/PageServer

ETHICAL CONCERNS: Animal rights

The ASPCA promotes respect for and humane treatment of all animals. The ASPCA conducts nationwide programs in humane education, public awareness, government advocacy, shelter support, and animal medical services and placement.

American Society of Newspaper Editors (ASNE)

FOUNDED: 1922

11690B Sunrise Valley Drive

Reston, VA 20191-1409

PHONE: (703) 453-1122

FAX: (703) 453-1133

E-MAIL: asne@asne.org

WEB SITE: www.asne.org

ETHICAL CONCERNS: Media ethics; professional ethics

The goals of the ASNE are to maintain the propriety and rights of the craft of journalism, to contemplate and institute ethical standards of professional conduct, and to exchange ideas for the promotion of professional ideals.

Amnesty International (AI)

FOUNDED: 1961

322 8th Avenue

New York, NY 10001

PHONE: (212) 807-8400

FAX: (212) 463-9193

E-MAIL: admin-us@aiusa.org

WEB SITE: www.amnesty.org/

ETHICAL CONCERNS: Death penalty; human rights; international relations

Watchdog organization established to campaign for internationally accepted human rights. AI conducts research and seeks to prevent and end human rights abuses worldwide. The following are some of the types of campaigns initiated by AI: ending violence against women, controlling arms, ending the use of child soldiers, eradicating the death penalty, ending torture, fighting for international justice,

fighting for economic globalization and human rights.

Anti-Defamation League (ADL)

FOUNDED: 1913

823 United Nations Plaza

New York, NY 10017

E-MAIL: webmaster@adl.org

WEB SITE: www.adl.org/adl.asp

ETHICAL CONCERNS: Anti-Semitism; civil liberties; discrimination; prejudice

Founded to combat the vilification of Jewish people, the ADL strives to achieve fair and just treatment for all citizens. The league also monitors the activities of hate groups. In 1977, the ADL founded the Braun Center of Holocaust Studies (later renamed the Braun Holocaust Institute). It also publishes a magazine on the Holocaust, *Dimensions: A Journal of Holocaust Studies*.

Association for Practical and Professional Ethics (APPE)

FOUNDED: 1991

Indiana University

618 East Third Street

Bloomington, IN 47405-3602

PHONE: (812) 855-6450

FAX: (812) 855-3315

E-MAIL: appe@indiana.edu

WEB SITE: www.indiana.edu/~appe/

ETHICAL CONCERNS: Professional ethics

Established to foster high-caliber interdisciplinary scholarship and teaching of ethics, APPE supports this mandate by advancing communication and shared ventures among centers, colleges, and professional associations.

Association for the Prevention of Torture (APT)

FOUNDED: 1977

Route de Ferney 10

P.O. Box 2267

CH-1211 Geneva 2

Switzerland

PHONE: 41 22 919 21 70

FAX: 41 22 919 21 80

E-MAIL: apt@apt.ch

WEB SITE: www.apt.ch

ETHICAL CONCERNS: Human rights; torture

Independent nongovernmental organization working worldwide to prevent torture and inhumane treatment of prisoners.

Brookings Institution

FOUNDED: 1916

1775 Massachusetts Avenue NW

Washington, DC 20036

PHONE: (202) 797-6000

FAX: (202) 797-6004

E-MAIL: webmaster@brookings.edu

WEB SITE: www.brook.edu/

ETHICAL CONCERNS: Economics; foreign policy; government

Independent and nonpartisan think tank devoted to research, analysis, and public education, with a focus on economics, government, and foreign policy.

Carnegie Council on Ethics and International Affairs

FOUNDED: 1914

Merrill House

170 East 64th Street

New York, NY 10021-7478

PHONE: (212) 838-4120

FAX: (212) 752-2432

E-MAIL: info@cceia.org

WEB SITE: www.cceia.org

ETHICAL CONCERNS: Armed conflict; economics; environmental protection; global justice; human rights

Organization's original objective was to achieve world peace. The council has evolved into a medium for education and study in ethics and international policy. The council gathers specialists to discuss numerous ethical approaches to confusing moral problems such as environmental protection, human rights violations, and global economic disparities.

Center for Environmental Philosophy (CEP)

FOUNDED: 1989

University of North Texas

370 EESAT

P.O. Box 310980

Denton, TX 76203-0980

PHONE: (940) 565-2727

FAX: (940) 565-4439

E-MAIL: cep@unt.edu

WEB SITE: www.cep.unt.edu/

ETHICAL CONCERNS: Environmental ethics

CEP publishes the journal *Environmental Ethics*, promotes research in environmental ethics through conferences and workshops, reprints significant books through its book series *Environmental Ethics Books*, and promotes graduate and postdoctoral research and education in environmental ethics.

Center for Professional Responsibility

FOUNDED: 1978

321 North Clark Street, 15th Floor
Chicago, IL 60610

PHONE: (312) 988-5323

E-MAIL: ETHICSearch@staff.abanet.org

ETHICAL CONCERNS: Legal ethics

Established by the American Bar Association (see above), the center produces and interprets principles and academic resources in legal ethics, professional behavior, professional responsibility, and client protection mechanisms. A feature of the center is its Ethics Department, which is the nucleus for development, research, and implementation of legal and judicial ethical principles. The department distributes information in various ways, such as advising the ABA Standing Committee on Ethics and Professional Responsibility and through its use of ETHICSearch. ETHICSearch is a comprehensive research service that studies ethical predicaments and identifies suitable standards to settle the problems.

Center for Science in the Public Interest (CSPI)

FOUNDED: 1971

1875 Connecticut Avenue NW, Suite 300
Washington, DC 20009

PHONE: (202) 332-9110

FAX: (202) 265-4954

E-MAIL: cspi@cspinet.org

WEB SITE: www.cspinet.org/

ETHICAL CONCERNS: Consumer protection; health and nutrition

Consumer advocacy organization that has focused on health and nutrition and food safety issues for the American public. The CSPI conducts research on issues such as alcohol, the environment, food, and health and dispenses up-to-date, unbiased information to consumers and policymakers.

Children's Bureau

FOUNDED: 1912

330 C Street SW
Washington, DC 20447

WEB SITE: www.acf.hhs.gov/programs/cb

ETHICAL CONCERNS: Children's rights

Oldest federal organization to advocate for children's rights. Its original intent was to handle problems related to infant mortality, preventive medicine, orphanages, the juvenile justice system, and child labor. The agency's efforts have evolved to include preventing child abuse and finding new homes for children who have been removed from their homes because of neglect or abuse.

Congress of Racial Equality (CORE)

FOUNDED: 1942

817 Broadway
New York, NY 10003

PHONE: (212) 598-4000

FAX: (212) 598-4141

E-MAIL: core@core-online.org

WEB SITE: www.core-online.org/index.html

ETHICAL CONCERNS: Civil rights; equal rights; race and ethnicity

CORE's goal is to establish "equality for all people regardless of race, creed, sex, age, disability, sexual orientation, religion or ethnic background." In striving to reach its goal, CORE attempts to identify and reveal discriminatory acts in the private and civil sectors.

Council on Foreign Relations

FOUNDED: 1921

The Harold Pratt House
58 East 68th Street
New York, NY 10021

PHONE: (212) 434-9400

FAX: (212) 434-9800

WEB SITE: www.cfr.org/

ETHICAL CONCERNS: Foreign policy

Independent, nonpartisan body in which senior government officials, scholars, world leaders, and members of the council debate and examine the current significant foreign policy concerns facing the world. The council generates articles and books that analyze these concerns and recommend solutions to these policy issues. *Foreign Affairs* is a journal published by the council, covering U.S. foreign policy

and international affairs. The council also supports autonomous task forces whose reports assist in setting the public foreign policy agenda.

Elie Wiesel Foundation for Humanity

FOUNDED: 1988
 529 Fifth Avenue, Suite 1802
 New York, NY 10017
 PHONE: (212) 490-7777
 FAX: (212) 490-6006
 E-MAIL: info@eliewieselfoundation.org
 WEB SITE: www.eliewieselfoundation.org/
 ETHICAL CONCERNS: Human rights

The foundation promotes human rights by developing platforms for the debate and resolution of pressing ethical problems. The Prize in Ethics Essay Contest was started by the foundation in 1989. Each year, students from colleges and universities across the United States participate in the contest by submitting an essay on an ethics issue of their choice. The foundation also sponsors a humanitarian award, which was established to recognize notable individuals whose achievements are consistent with the aims of the foundation. Recipients of this award have included Danielle Mitterrand (1989), George H. W. Bush (1991), King Juan Carlos of Spain (1991), Hillary Rodham Clinton (1994), and Laura Bush (2002).

Environmental Protection Agency (EPA)

FOUNDED: 1970
 Ariel Rios Building
 1200 Pennsylvania Avenue NW
 Washington, DC 20460
 PHONE: (202) 272-0167
 WEB SITE: www.epa.gov/epahome/
 ETHICAL CONCERNS: Environment; environmental ethics

Federal government agency whose objective is to safeguard human health and the environment. Some of the functions of the EPA include developing and executing the regulations of environmental laws, conducting environmental research, and promoting environmental education.

Ethics and Public Policy Center (EPPC)

FOUNDED: 1976
 1015 15th Street NW, Suite 900
 Washington, DC 20005
 PHONE: (202) 682-1200

FAX: (202) 408-0632
 E-MAIL: Ethics@eppc.org
 WEB SITE: www.eppc.org
 ETHICAL CONCERNS: Public policy

The EPPC emphasizes the role of moral tradition in the area of domestic and foreign policy issues. The center has various programs, such as research, writing, publication, and conferences to encourage debate on public policy issues in the Judeo-Christian moral tradition.

Ethics Resource Center (ERC)

FOUNDED: 1977
 1747 Pennsylvania Avenue NW, Suite 400
 Washington, DC 20006
 PHONE: (202) 737-2258
 FAX: (202) 737-2227
 E-MAIL: ethics@ethics.org
 WEB SITE: www.ethics.org
 ETHICAL CONCERNS: Global ethics

The ERC aims to support global ethical leadership through the use of education, partnerships, and research. The goals of the ERC are for individuals to act in an ethical manner toward one another, for institutions to act ethically, and for individuals and institutions to work together to encourage or nurture ethical communities. *Ethics Today* is sponsored by the ERC as a platform for examining an immense scope of business ethics and character development questions and for presenting and addressing business ethics, global ethics, and character development ideologies. It is a free monthly publication that is e-mailed to subscribers. Each issue is also posted online for a month and then stored in the *Ethics Today* archive.

Facing History and Ourselves

FOUNDED: 1976
 16 Hurd Road
 Brookline, MA 02445
 PHONE: (617) 232-1595
 FAX: (617) 232-0281
 WEB SITE: www.facing.org
 ETHICAL CONCERNS: Human rights; racism

Educational organization whose mission is to fight prejudice and racism and to promote human rights through the study of the Holocaust and other incidents in the history of collective violence. The organization conducts research, holds seminars, and

has an extensive collection of resources available to promote critical thinking and moral behavior.

Fairness and Accuracy in Reporting (FAIR)

FOUNDED: 1986

112 West 27th Street

New York, NY 10001

PHONE: (212) 633-6700

FAX: (212) 727-7668

E-MAIL: fair@fair.org

WEB SITE: www.fair.org/

ETHICAL CONCERNS: Censorship; media bias; professional ethics

National media-monitoring group that works to vitalize the First Amendment by urging for greater diversity in the media and studying media practices that marginalize public interest, minority, and opposing views. FAIR also serves as an anticensorship organization by uncovering slighted news stories and supporting journalists who have been silenced.

Gray Panthers

FOUNDED: 1970

733 15th Street NW

Washington, DC 20005

PHONE: (800) 280-5362

FAX: (202) 737-1160

E-MAIL: info@graypanthers.org

WEB SITE: www.graypanthers.org/

ETHICAL CONCERNS: Discrimination; environmental issues; rights for the disabled

National organization of activists committed to social change. The Gray Panthers includes more than fifty local networks that advocate for antidiscrimination legislation, campaign reform, disability rights, employment, environmental issues, families, housing, and peace. The organization has helped fight mandatory retirement age regulations, revealed nursing home abuse, and has supported a national health care system.

Greenpeace International

FOUNDED: 1971

Otto Helderstraat 5

1066 AZ Amsterdam

The Netherlands

PHONE: 31 20 5148150

FAX: 31 20 5148151

E-MAIL: supporter.services@int.greenpeace.org

WEB SITE: www.greenpeace.org/international_en/

ETHICAL CONCERNS: Environmental protection; international relations

Global organization dedicated to protecting the earth's biodiversity and environment. Greenpeace's campaigns have included trying to stop climate change, the nuclear threat, war, and whaling; eliminating toxic chemicals; protecting ancient forests; saving the seas; encouraging sustainable trade; and saying no to genetic engineering.

Hastings Center

FOUNDED: 1969

21 Malcolm Gordon Road

Garrison, NY 10524-5555

PHONE: (845) 424-4040

FAX: (845) 424-4545

E-MAIL: mail@thehastingscenter.org

WEB SITE: www.thehastingscenter.org

ETHICAL CONCERNS: Bioethics

Bioethics research institute established to examine vital and developing questions in biotechnology, health care, and the environment. It conducts many research projects on issues that concern medical professionals, the public, and social policy such as genetics and biotechnology; ethics, science, and the environment; health care and policy; and ethics and scientific research. The Hastings Center publishes *IRB: Ethics & Human Research*, a journal that discusses the ethical issues facing administrators, investigators, participants, and others involved in research with human subjects.

Human Rights Information and Documentation Systems, International (HURIDOCS)

FOUNDED: 1982

HURIDOCS Secretariat

48, chemin du Grand-Montfleury

CH-1290 Versoix, Switzerland

PHONE: 41 22 755 52 52

FAX: 41 22 755 52 60

E-MAIL: info@huridocs.org

WEB SITE: www.huridocs.org/

ETHICAL CONCERNS: Human rights

Worldwide network of human rights organizations concerned with improving access to and dissemination of information regarding human rights. HURIDOCS organizes documentation practices and

examines difficulties and procedures of data handling in this domain.

Human Rights Watch

FOUNDED: 1978

350 Fifth Avenue, 34th Floor

New York, NY 10118-3299

PHONE: (212) 290-4700

FAX: (212) 736-1300

E-MAIL: hrwnyc@hrw.org

WEB SITE: www.hrw.org/

ETHICAL CONCERNS: Arms control; children's rights; human rights; international relations; women's rights

Organization that monitors the human rights practices of more than seventy nations around the globe. It determines whether the practices are in harmony with principles recognized by agreements such as the Helsinki Accords and the United Nations Declaration of Human Rights. It also tracks children's rights, women's rights, and arms control and reports abuses. Other areas of interest for Human Rights Watch include academic freedom, drugs, international justice, prisons, and refugees.

Humane Society of the United States (HSUS)

FOUNDED: 1954

2100 L Street NW

Washington, DC 20037

PHONE: (202) 452-1100

WEB SITE: www.hsus.org/ace/352

ETHICAL CONCERNS: Animal rights

Organization that promotes the elimination of animal abuse and exploitation, protection for endangered species and their environments, and a relationship of compassion and respect for all animals. The society has become the world's largest animal protection organization and addresses global animal abuses and concerns through advocacy, education, litigation, and rehabilitation.

Institute for Global Ethics

FOUNDED: 1990

11 Main Street

P.O. Box 563

PHONE: (207) 236-6658

FAX: (207) 236-4014

E-MAIL: ethics@globalethics.org

WEB SITE: www.globalethics.org

ETHICAL CONCERNS: Global ethics

Organization whose goal is to foster ethical behavior in people, institutions, and the world through discussion, education, practical action, and research. The institute also publishes the weekly *Ethics Newsline*, an online source for news and information on ethics and current events.

Institute for Philosophy and Public Policy

FOUNDED: 1976

Maryland School of Public Affairs

3111 Van Munching

College Park, MD 20742

PHONE: (301) 405-4753

FAX: (301) 314-9346

WEB SITE: www.puaf.umd.edu/IPPP/

ETHICAL CONCERNS: Public policy

Established to investigate complex and ethical questions of public policy debate and formulation, this organization concentrates on issues such as the teaching of ethics, equal opportunity, and democratic values.

Intercollegiate Studies Institute (ISI)

FOUNDED: 1953

3901 Centerville Road

P.O. Box 4431

Wilmington, DE 19807-0431

PHONE: (800) 526-7022

FAX: (302) 652-1760

E-MAIL: info@isi.org

WEB SITE: www.isi.org/

ETHICAL CONCERNS: Economics; politics

Organization established to promote among collegians a deeper understanding of the economic, political, and spiritual principles that support a free and ethical society. ISI sponsors more than three hundred educational programs, such as lectures and seminars, and offers graduate fellowships to teachers.

International Business Ethics Institute (IBEI)

FOUNDED: 1994

1725 K Street NW, Suite 1207

Washington, DC 20006

PHONE: (202) 296-6938

FAX: (202) 296-5897

E-MAIL: info@business-ethics.org

WEB SITE: www.business-ethics.org

ETHICAL CONCERNS: Business ethics

Nonprofit, educational organization dedicated to elevating public understanding of international business ethics matters and distributing information about corporate responsibility through the use of educational resources. IBEI's educational resources include its Web site, its roundtable discussion series, and the publication *International Business Ethics Review*.

International Committee of the Red Cross

FOUNDED: 1863

19 avenue de la Paix

CH 1202 Geneva, Switzerland

PHONE: 41 22 734 60 01

FAX: 41 22 733 20 57

WEB SITE: www.icrc.org/

ETHICAL CONCERNS: Humanitarianism; international relations

Organization established to assist in humanitarian efforts around the globe on a neutral and impartial basis. The Red Cross visits prisoners of war to ensure they are being treated properly, searches for missing people, provides food, water, and medical assistance to people in need, and fosters regard for international humanitarian law.

International Labour Organization (ILO)

FOUNDED: 1919

4, route des Morillons

CH-1211 Geneva 22

Switzerland

PHONE: 41 22 799 61 11

FAX: 41 22 798 86 85

E-MAIL: ilo@ilo.org

WEB SITE: www.ilo.org/public/english/index.htm

ETHICAL CONCERNS: Human rights; business and labor ethics

Dedicated to fostering social justice and internationally accepted human and labor rights, the ILO creates international labor standards by setting minimum standards of basic labor rights, such as the eradication of forced labor, implementation of collective bargaining, equal opportunity and treatment, freedom of association, and freedom to organize. The ILO also advocates the growth of independent employer and employee organizations and provides advice and training services to the organizations.

JCT Center for Business Ethics & Social Responsibility

FOUNDED: 1992

P.O. Box 16031

Jerusalem 91160 Israel

PHONE: 972-2-675-1182

FAX: 972-2-642-2075

WEB SITE: www.besr.org/

ETHICAL CONCERNS: Business ethics; Jewish ethics; personal and social ethics

Center that fosters and encourages a high level of business integrity through promoting an understanding of Jewish ethical teachings. The center produces a weekly column called the "Jewish Ethicist," in which a question regarding a business dilemma is posed and answered by a rabbi who includes general standards of Jewish ethics and law into his response. The public may suggest questions for the column by submitting them to: jewishethicist@yahoo.com. The Web site offers an archive of previous questions.

Josephson Institute of Ethics

FOUNDED: 1987

9841 Airport Blvd., #300

Los Angeles, CA 90045

PHONE: (310) 846-4800

FAX: (310) 846-4857

E-MAIL: webmaster@jiethics.org

WEB SITE: www.josephsoninstitute.org/

ETHICAL CONCERNS: Business ethics; education

Established to promote the teaching of ethics in businesses, schools, and workplaces, the institute conducts numerous programs and workshops catered to influential persons, such as mayors, judges, reporters, corporate executives, and military and police officers. The institute also conducts an "Ethics in the Workplace" training seminar.

Kennedy Institute of Ethics

FOUNDED: 1971

Healy, 4th Floor

Georgetown University

Washington, DC 20057

PHONE: (202) 687-8099

FAX: (202) 687-8089

WEB SITE: www.georgetown.edu/research/kie/site/index.htm

ETHICAL CONCERNS: Bioethics

Center focuses on research and teaching on such bioethical issues as cloning, eugenics, gene therapy, and reproductive and feminist bioethics. The institute is a source of information for those who analyze and study ethics, as well as those who debate and decide public policy.

League of Women Voters (LWV)

FOUNDED: 1920

1730 M Street NW, Suite 1000

Washington, DC 20036-4508

PHONE: (202) 429-1965

FAX: (202) 429-0854

WEB SITE: www.lwv.org

ETHICAL CONCERNS: Politico-economic ethics; public policy; sex and gender issues

Nonpartisan political organization that promotes the participation of all citizens in government, works to further the understanding of significant public policy issues, and addresses public policy through advocacy and education.

Markkula Center for Applied Ethics

FOUNDED: 1986

500 El Camino Real

Santa Clara, CA 95053

PHONE: (408) 554-5319

E-MAIL: ethics@scu.edu

WEB SITE: www.scu.edu/ethics/

ETHICAL CONCERNS: Applied ethics

Established at Santa Clara University, the center focuses on the research and dialogue of ethical issues. The center fosters communication among community leaders, faculty, staff, students, and the public to face ethical issues effectively in action, teaching, and research. The center focuses on ethical issues in the fields of biotechnology and health care, business, character education, global leadership, and government. In 1996, the center launched Ethics Connection, its interactive Web site which provides information and useful tips on making ethical decisions and allows visitors to communicate with one another and the Ethics Connection staff through the use of message boards and a feedback feature. Ethics Connection also features a section on case studies, on which visitors may comment and study.

Media Institute

FOUNDED: 1979

1800 North Kent Street, Suite 1130

Arlington, VA 22209

PHONE: (703) 243-5060

FAX: (703) 243-2453

E-MAIL: info@mediainstitute.org

WEB SITE: www.mediainstitute.org/

ETHICAL CONCERNS: Media ethics; free expression

Think tank that studies the First Amendment and communications practices. The institute fosters and advances the growth of awareness and understanding of American communications and the media. The three goals of the institute are freedom of speech, a competitive communications and media industry, and virtue in journalism. The institute fosters research into the economic, ethical, legal, and political arenas of the media and communications fields.

National Anti-Vivisection Society (NAVS)

FOUNDED: 1929

53 West Jackson Boulevard, Suite 1552

Chicago, IL 60604

PHONE: (800) 888-NAVS

FAX: (312) 427-6524

E-MAIL: feedback@navs.org

WEB SITE: www.navs.org/

ETHICAL CONCERNS: Animal rights; bioethics; scientific ethics

Educational organization founded to abolish the use of animals in product testing and biomedical research. NAVS aims to educate manufacturers, physicians, researchers, teachers, and government officials about the alternatives to using animals, which will save millions of animal lives each year and still achieve the goals of these individuals.

National Association for the Advancement of Colored People (NAACP)

FOUNDED: 1909

4805 Mount Hope Drive

Baltimore, MD 21215

PHONE: (877) NAACP-98

WEB SITE: www.naacp.org/

ETHICAL CONCERNS: Civil rights; prejudice; race and ethnicity

Civil rights organization that aims to eradicate racial prejudice by ending discrimination in all areas of the public and private sectors, including business,

employment, housing, the judicial system, schools, transportation, and voting.

National Conference of State Legislatures (NCSL)

FOUNDED: 1975

444 North Capital Street NW, Suite 515

Washington, DC 20001

PHONE: (202) 624-5400

FAX: (202) 737-1069

WEB SITE: www.ncsl.org/programs/ethics/overview_ethics.htm

ETHICAL CONCERNS: Government ethics

Nonpartisan, nonprofit organization established to address the loss of trust in democracy by the American people. The Ethics Center of the NCSL has assembled information from every state on legislative ethics laws in five primary areas: gifts, honoraria, lobbyists, nepotism, and revolving door policies.

National Gay and Lesbian Task Force (NGLTF)

PHONE: (202) 628-8669

FAX: (202) 785-8576

E-MAIL: now@now.org

WEB SITE: www.now.org/

ETHICAL CONCERNS: Civil rights; feminism; sex and gender issues; women's rights

Women's rights organization established to eradicate discrimination and prejudice against women in all areas of life. The organization seeks to acquire economic equality for women and assure it through a constitutional amendment that guarantees equal rights for women; supports abortion and reproductive freedom rights; fights racism and bigotry against lesbians and gays; and opposes violence against women. NOW uses civil action, organizing marches and rallies, lawsuits, and lobbying to work toward its goals.

New York Society for the Prevention of Cruelty to Children (NYSPCC)

FOUNDED: 1875

161 William Street

New York, NY 10038

PHONE: (212) 233-5500

FAX: (212) 791-5227

WEB SITE: www.nyspcc.org/index.htm

ETHICAL CONCERNS: Children's rights

Oldest organization in the world dedicated to protecting the interests of children. The society strives to develop and introduce educational, legal, and mental health programs that assure the healthy development of children and shield them from harm.

Office of the High Commissioner for Human Rights (OHCHR)

FOUNDED: 1993

United Nations Office at Geneva

8-14 Avenue de la Paix

1211 Geneva 10

Switzerland

PHONE: 41 22 917 9000
 FAX: 41 22 917 9011
 E-MAIL: 1503@ohchr.org
 WEB SITE: www.unhchr.ch/
 ETHICAL CONCERNS: Human rights

Branch of the United Nations that strives for the international community and its member states to abide by universally agreed upon human-rights standards. The OHCHR serves as the voice of people whose human rights have been violated; it pushes the international community to thwart violations.

People for the Ethical Treatment of Animals (PETA)

FOUNDED: 1980
 501 Front Street
 Norfolk, VA 23510
 PHONE: (757) 622-PETA
 FAX: (757) 622-0457
 E-MAIL: info@peta.org
 WEB SITE: www.peta.org/
 ETHICAL CONCERNS: Animal rights

Militant animal-rights organization committed to establishing and defending the rights of all animals. PETA's guiding principle is that "animals are not ours to eat, wear, experiment on, or use for entertainment."

Philosophy Documentation Center

FOUNDED: 1966
 P.O. Box 7147
 Charlottesville, VA 22906-7147
 PHONE: (800) 444-2419
 FAX: (434) 220-3301
 E-MAIL: order@pdcnet.org
 WEB SITE: www.pdcnet.org/
 ETHICAL CONCERNS: Ethics; philosophy

Information center that specializes in bibliographical and other types of information pertaining to ethics, philosophy, and philosophers. It is committed to providing affordable access to these materials. The center produces academic journals, conference and reference materials, and instructional software.

Physicians Committee for Responsible Medicine (PCRM)

FOUNDED: 1985
 5100 Wisconsin Avenue NW, Suite 400
 Washington, DC 20016
 PHONE: (202) 686-2210

FAX: (202) 686-2216
 E-MAIL: pcmr@pcrm.org
 WEB SITE: www.pcrm.org/
 ETHICAL CONCERNS: Animal rights; medical ethics
 Professional organization of physicians and laypersons working together for humane and effective "medical practice, research, and health promotion." PCRM opposes unethical human experiments and encourages alternatives to animal research.

Population Connection

FOUNDED: 1968
 1400 16th Street NW, Suite 320
 Washington, DC 20036
 PHONE: (202) 332-2200
 FAX: (202) 332-2302
 E-MAIL: info@populationconnection.org
 WEB SITE: www.populationconnection.org
 ETHICAL CONCERNS: Environmentalism; population control

National grassroots organization that champions efforts to stabilize world population at a level that can be sustained by the earth's resources. Formerly known as Zero Population Growth, Population Connection influences political action on international, national, state, and local levels; conducts teacher education and public education programs; provides educational materials; participates in coalitions; conducts research; and provides a forecast on the effect of the population on environmental and social problems. The organization encourages measures that seek voluntary compliance.

Prejudice Institute

FOUNDED: 1985
 2743 Maryland Avenue
 Baltimore, MD 21218
 PHONE: (410) 243-6987
 E-MAIL: prejinst@aol.com
