NURSING DRUG HANDBOOK

2016

- Detailed drug data and Evolve website for students
- Updated Black Box Alerts
- Latest FDA Safety Recommendations

ELSEVIER

http://evolve.elsevier.com

Lifespan Considerations in each monograph note factors to be considered for geriatric, pediatric, pregnant, or nursing populations. Appendix H provides additional resources.

Black Box Alerts advise about the increased risks of a particular drug.

morphine

HIGH ALERT

mor-feen

(Astramorph PF, Avinza, DepoDur, Duramorph PF, Infumorph, Kadian, M-Eslon, MS Contin, MSIR, Oramorph SR, Roxanol)

BLACK BOX ALERT Be alert for signs of abuse, misuse, diversion. ***Epidural:*** Monitor for delayed sedation. ***Sustained-release:*** Do not crush or chew. ***MS Contin:*** Use only in opioid-tolerant pts requiring over 400 mg/day. ***Kadian:*** Use only in opioid-tolerant pts. ***Avinza:*** Alcohol disrupts extended-release timing. ***Duramorph PF:*** Risk of severe and/or sustained cardiopulmonary depression.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Narcotic agonist. **CLINICAL:** Opiate analgesic **(Schedule II)** (see p. 142C).

M

ACTION

Binds with opioid receptors within CNS. **Therapeutic Effect:** Alters pain perception, emotional response to pain.

PHARMACOKINETICS

Variably absorbed from GI tract. Readily absorbed after IM, subcutaneous administration. Protein binding: 20%–35%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 2–4 hrs (increased in hepatic disease).

USES

Relief of moderate to severe, acute, or chronic pain; analgesia during labor. Drug of choice for pain due to MI, dyspnea from pulmonary edema not resulting from chemical respiratory irritant. **DepoDur:** Epidural (lumbar) single dose management of surgical pain.

PRECAUTIONS

Contraindications: Acute or severe asthma, GI obstruction, paralytic ileus, severe hepatic/renal impairment, severe respiratory depression. **Cautions:** Biliary tract disease, pancreatitis, Addison's disease, hypothyroidism, urethral stricture, prostatic hyperplasia, debilitated pts, those with CNS depression, toxic psychosis, seizure disorders, alcoholism.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C (D if used for prolonged periods or at high dosages at term). Children:** Paradoxical excitement may occur; those younger than 2 yrs are more susceptible to respiratory depressant effects. **Elderly:** Paradoxical excitement may occur.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS effects, respiratory depression, hypotension. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Injection, Liposomal Suspension (DepoDur): 10 mg/ml. **Injection, Solution:** 2 mg/ml, 4 mg/ml, 5 mg/ml, 10 mg/ml, 15 mg/ml, 25 mg/ml, 50 mg/ml. **Injection, Solution (Epidural, Intrathecal, IV Infusion) (Astramorph PF, Duramorph PF):** 0.5 mg/ml, 1 mg/ml.

Capsules, Extended-Release (Avinza): 30 mg, 45 mg, 60 mg, 75 mg, 90 mg, 120 mg. **Capsules, Sustained-Release (Kadian):** 20 mg, 30 mg, 50 mg, 60 mg, 80 mg, 100 mg, 200 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • May give undiluted. • For IV injection, may dilute 2.5–15 mg morphine in 4–5 ml Sterile Water for Injection. • For continuous IV infusion, dilute to concentration of 0.1–1 mg/ml in D_5W and give through controlled infusion device.

Rate of administration • Always administer very slowly. Rapid IV increases risk of severe adverse reactions (apnea, chest wall

underlined – top prescribed drug

Interactions identify potential herbal, drug, and food interactions with a particular drug.

Uses section in each monograph notes the standard and off-label uses for a particular drug.

Top prescribed drugs are underlined.

rigidity, peripheral circulatory collapse, cardiac arrest, anaphylactoid effects).
Storage • Store at room temperature.

Epidural, Liposomal
• May give either diluted or undiluted. • Do not use an in-line filter. • Store solution in refrigerator; do not freeze. May store at room temperature for 7 days. • Following withdrawal from vial, use within 4 hrs. • Gently invert vial to resuspend drug; avoid aggressive agitation.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), doxorubicin (Doxil), lipids, phenytoin (Dilantin), thiopental.

IV COMPATIBILITIES

Amiodarone (Cordarone), atropine, bumetanide (Bumex), bupivacaine (Marcaine, Sensorcaine), diltiazem (Cardizem), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), glycopyrrolate (Robinul), heparin, hydroxyzine (Vistaril), lidocaine, lorazepam (Ativan), magnesium, midazolam (Versed), milrinone (Primacor), nitroglycerin, potassium, propofol (Diprivan), total parenteral nutrition (TPN).

INDICATIONS/ROUTES/DOSAGE

ALERT Dosage should be titrated to desired effect.

Analgesia

PO (IMMEDIATE-RELEASE): ADULTS, ELDERLY: 10–30 mg q3–4h as needed. **CHILDREN:** 0.15–0.3 mg/kg q3–4h as needed.

PO (EXTENDED-RELEASE [AVINZA]): ADULTS, ELDERLY: Dosage requirement should be established using prompt-release formulations and is based on total daily dose. Avinza is given once a day only.

PO (EXTENDED-RELEASE [KADIAN]): ADULTS, ELDERLY: Dosage requirement should be established using prompt-release formulations and is based on total daily dose. Dose is given once a day or divided and given q12h.

Patient-Controlled Analgesia (PCA)
IV: ADULTS, ELDERLY: Loading dose: 5–10 mg. **Intermittent bolus:** 0.5–3 mg. **Lockout interval:** 5–12 min. **Continuous infusion:** 1–10 mg/hr. **4-hr limit:** 20–30 mg.

SIDE EFFECTS

Frequent: Sedation, decreased B/P (including orthostatic hypotension), diaphoresis, facial flushing, constipation, dizziness, drowsiness, nausea, vomiting. **Occasional:** Allergic reaction (rash, pruritus), dyspnea, confusion, palpitations, tremors, urinary retention, abdominal cramps, vision changes, dry mouth, headache, decreased appetite, pain/burning at injection site. **Rare:** Paralytic ileus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose results in respiratory depression, skeletal muscle flaccidity, cold/clammy skin, cyanosis, extreme drowsiness progressing to seizures, stupor, coma. Tolerance to analgesic effect, physical dependence may occur with repeated use.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pt should be in recumbent position before drug is given by parenteral route. Assess onset, type, location, duration of pain.

INTERVENTION/EVALUATION

Monitor vital signs 5–10 min after IV administration, 15–30 min after subcutaneous, IM. Be alert for decreased respirations, B/P. Check for adequate voiding. Monitor daily pattern of bowel activity and stool consistency. Avoid constipation.

PATIENT/FAMILY TEACHING

• Discomfort may occur with injection. • Change positions slowly to avoid orthostatic hypotension. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol, CNS depressants.

♣ Canadian trade name Non-Crushable Drug High Alert drug

M

IV Incompatibilities/ Compatibilities present important information for IV drugs.

Side Effects section in each drug monograph specifies the frequency of particular side effects.

Adverse Reactions highlight the particularly dangerous side effects.

High Alert drugs are shaded in blue for easy identification.

New to this Edition!
- Nearly 30 drugs recently approved by the FDA
- Hundreds of updates and revisions
- Over 270 updated Black Box Alerts

NOTICES

Knowledge and best practice in this field are constantly changing. As new research and experience broaden our understanding, changes in research methods, professional practices, or medical treatment may become necessary.

Practitioners and researchers must always rely on their own experience and knowledge in evaluating and using any information, methods, compounds, or experiments described herein. In using such information or methods, they should be mindful of their own safety and the safety of others, including parties for whom they have a professional responsibility.

With respect to any drug or pharmaceutical products identified, readers are advised to check the most current information provided (i) on procedures featured or (ii) by the manufacturer of each product to be administered, to verify the recommended dose or formula, the method and duration of administration, and contraindications. It is the responsibility of practitioners, relying on their own experience and knowledge of their patients, to make diagnoses, to determine dosages and the best treatment for each individual patient, and to take all appropriate safety precautions.

To the fullest extent of the law, neither the Publisher nor the authors, contributors, or editors, assume any liability for any injury and/or damage to persons or property as a matter of products liability, negligence or otherwise, or from any use or operation of any methods, products, instructions, or ideas contained in the material herein.

CONTENTS

AUTHOR BIOGRAPHIES

Robert (Bob) J. Kizior, BS, RPh

Bob graduated from the University of Illinois School of Pharmacy and is licensed to practice in the state of Illinois. He has worked as a hospital pharmacist for more than 40 years at Alexian Brothers Medical Center in Elk Grove Village, Illinois—a suburb of Chicago. Bob is the Pharmacy Surgery Coordinator for the Department of Pharmacy, where he participates in educational programs for pharmacists, nurses, physicians, and patients. He plays a major role in coordinating pharmacy services in the OR satellite. Bob is a former adjunct faculty member at William Rainey Harper Community College in Palatine, Illinois.

An avid fan of Big Ten college athletics, Bob also has eclectic tastes in music that range from classical, big band, rock 'n' roll, and jazz to country and western. Bob spends much of his free time reviewing the professional literature to stay current on new drug information.

Keith J. Hodgson, RN, BSN, CCRN

Keith was born into a loving family in Chicago, Illinois. His mother, Barbara B. Hodgson, was an author and publisher of several medication products, and her work has been a part of his life since he was a child. By the time he was four years old, Keith was already helping his mother with the drug cards by stacking the draft pages that were piled up throughout their home.

Because of his mother's influence, Keith contemplated becoming a nurse in college, but his mind was fully made up after he shadowed his sister in the Emergency Department. Keith received his Associates Degree in Nursing from Hillsborough Community College and his Bachelor of Science in Nursing from the University of South Florida in Tampa, Florida. Keith started his career in the Emergency Department and now works in the Trauma/Neurological/Surgical Intensive Care Unit at St. Joseph's Hospital in Tampa, Florida.

Keith's favorite interests include music, reading, Kentucky basketball, and, if he gets the chance, watching every minute of the Olympic Games.

ACKNOWLEDGMENTS

I would like to thank my co-author Bob Kizior for his knowledge, experience, support, and friendship. We would like to give special thanks to Sonya Seigafuse, Billie Sharp, Charlene Ketchum, Jeff Patterson, Jodi Willard, and the entire Elsevier team for their superior dedication, hard work, and belief in us. We gratefully acknowledge Megan Knight and the staff at Graphic World for their tenacious detail and work. We would also like to thank Jim Witmer, RN, BSN, for his support, attention to detail, and knowledge. Without this wonderful team, none of this would be possible.

Keith J. Hodgson, RN, BSN, CCRN

DEDICATION

I dedicate my work to the practicing nurse, those aspiring to become nurses, and to all health care professionals who are dedicated to the art and science of healing.

Bob Kizior, BS, RPh

I dedicate this work to my sister, Lauren, a foundation for our family; my sister, Kathryn, for her love and support; my father, David Hodgson, the best father a son could have; my brothers-in-law, Andy and Jim, great additions to the family; the grandchildren, Paige Olivia, Logan James, Ryan James, and Dylan Boyd; to Jen Nicely for always being there; and to my band of brothers, Peter, Jamie, Miguel, Ritch, George, Jon, Domingo, Ben, Craig, Pat, and Shay.

We also make a special dedication to Barbara B. Hodgson, RN, OCN. She truly was a piece of something wonderful. Barbara often gave her love and support without needing any in return, and would do anything for a smile. Not only was she a colleague and a friend, she was also a small business owner, an artist, a dreamer, and an innovator. We hope the pride we offer in her honor comes close to what she always gave us. Her dedication and perseverance lives on.

Keith J. Hodgson, RN, BSN, CCRN

PREFACE

Nurses are faced with the ever-challenging responsibility of ensuring safe and effective drug therapy for their patients. Not surprisingly, the greatest challenge for nurses is keeping up with the overwhelming amount of new drug information, including the latest FDA-approved drugs and changes to already approved drugs, such as new uses, dosage forms, warnings, and much more. Nurses must integrate this information into their patient care quickly and in an informed manner.

Saunders Nursing Drug Handbook 2016 is designed as an easy-to-use source of current drug information to help the busy nurse meet these challenges. What separates this book from others is that it guides the nurse through patient care to better practice and better care.

This handbook contains the following:

1. **An IV compatibility chart.** This handy chart is bound into the handbook to prevent accidental loss.
2. **The Drug Classifications section.** The action and uses for some of the most common clinical and pharmacotherapeutic classes are presented. Unique to this handbook, each class provides an at-a-glance table that compares all the generic drugs within the classification according to product availability, dosages, side effects, and other characteristics. Its half-page color tab ensures you can't miss it!
3. **An alphabetical listing of drug entries by generic name.** Blue letter thumb tabs help you page through this section quickly. Information on medications that contain a Black Box Alert is an added feature of the drug entries. This alert identifies those medications for which the FDA has issued a warning that the drugs may cause serious adverse effects. Tall Man lettering, with emphasis on certain syllables to avoid confusing similar sounding/looking medications, is shown in slim blue capitalized letters (e.g., *aceta**ZOLAMIDE**). High Alert drugs with a blue icon HIGH ALERT are considered dangerous by The Joint Commission and the Institute for Safe Medication Practices (ISMP) because if they are administered incorrectly, they may cause life-threatening or permanent harm to the patient. The entire High Alert generic drug entry sits on a blue-shaded background so that it's easy to spot! To make scanning pages easier, each new entry begins with a shaded box containing the generic name, pronunciation, trade name(s), fixed combination(s), and classification(s).
4. **A comprehensive reference section.** Appendixes include vital information on calculation of doses; controlled drugs; chronic wound care; drugs of abuse; equianalgesic dosing; FDA pregnancy categories; herbals: common natural medicines; lifespan, cultural aspects, and pharmacogenomics of drug therapy; normal laboratory values; cytochrome P450 enzymes; poison antidotes; preventing medication errors; parenteral fluid administration; and (new to 2016 edition) Common Terminology Criteria for Adverse Events (CTCAE).
5. **Drugs by Disorder.** You'll find Drugs by Disorder in the front of the book for easy reference. It lists common disorders and the drugs most often used for treatment.
6. **The index.** The comprehensive index is located at the back of the book on light blue pages. Undoubtedly the best tool to help you navigate the handbook, the comprehensive index is organized by showing generic drug names in **bold,** trade names in regular type, classifications in *italics,* and the page number of the main drug entry listed first and in **bold.**

A DETAILED GUIDE TO THE SAUNDERS NURSING DRUG HANDBOOK

An intensive review by consultants and reviewers helped us to revise the **Saunders Nursing Drug Handbook** so that it is most useful in both educational and clinical practice. The main objective of the handbook is to provide essential drug information in a user-friendly format. The bulk of the handbook contains an alphabetical listing of drug entries by generic name.

To maintain the portability of this handbook and meet the challenge of keeping content current, we have also included additional information for some medications on the Evolve® Internet site. Users can also choose from 100 monographs for the most commonly used medications and customize and print drug cards. Evolve® also includes drug alerts (e.g., medications removed from the market) and drug updates (e.g., new drugs, updates on existing entries). Information is periodically added, allowing the nurse to keep abreast of current drug information.

We have incorporated the IV Incompatibilities/Compatibilities heading. The drugs listed in this section are compatible or incompatible with the generic drug when administered directly by IV push, via a Y-site, or via IV piggyback. We have highlighted the intravenous drug administration and handling information with a special heading icon and have broken it down by Reconstitution, Rate of Administration, and Storage.

We present entries in an order that follows the logical thought process the nurse undergoes whenever a drug is ordered for a patient:

- What is the drug?
- How is the drug classified?
- What does the drug do?
- What is the drug used for?
- Under what conditions should you **not** use the drug?
- How do you administer the drug?
- How do you store the drug?
- What is the dose of the drug?
- What should you monitor the patient for once he or she has received the drug?
- What do you assess the patient for?
- What interventions should you perform?
- What should you teach the patient?

The following are included within the drug entries:

Generic Name, Pronunciation, Trade Names. Each entry begins with the generic name and pronunciation, followed by the U.S. and Canadian trade names. Exclusively Canadian trade names are followed by a blue maple leaf. Trade names that were most prescribed in the year 2014 are underlined in this section.

Black Box Alert. This feature highlights drugs that carry a significant risk of serious or life-threatening adverse effects. Black Box Alerts are ordered by the FDA.

Do Not Confuse With. Drug names that sound similar to the generic and/or trade names are listed under this heading to help you avoid potential medication errors.

Fixed-Combination Drugs. Where appropriate, fixed-combinations, or drugs made up of two or more generic medications, are listed with the generic drug.

Pharmacotherapeutic and Clinical Classification Names. Each entry includes both the pharmacotherapeutic and clinical classifications for the generic drug.

Action/Therapeutic Effect. This section describes how the drug is predicted to behave, with the expected therapeutic effect(s) under a separate heading.

Pharmacokinetics. This section includes the absorption, distribution, metabolism, excretion, and half-life of the medication. The half-life is bolded in blue for easy access.
Uses/Off-Label. The listing of uses for each drug includes both the FDA uses and the off-label uses. The off-label heading is shown in bold blue for emphasis.
Precautions. This heading incorporates a discussion about when the generic drug is contraindicated or should be used with caution. The cautions warn the nurse of specific situations in which a drug should be closely monitored.
Lifespan Considerations. This section includes the pregnancy category and lactation data and age-specific information concerning children and elderly people.
Interactions. This heading enumerates drug, food, and herbal interactions with the generic drug. As the number of medications a patient receives increases, awareness of drug interactions becomes more important. Also included is information about therapeutic and toxic blood levels in addition to the altered lab values that show what effects the drug may have on lab results.
Product Availability. Each drug monograph gives the form and availability of the drug. The icon identifies non-crushable drug forms.
Administration/Handling. Instructions for administration are given for each route of administration (e.g., IV, IM, PO, rectal). Special handling, such as refrigeration, is also included where applicable. The routes in this section are always presented in the order IV, IM, Subcutaneous, and PO, with subsequent routes in alphabetical order (e.g., Ophthalmic, Otic, Topical). **IV administration** is broken down by reconstitution, rate of administration (how fast the IV should be given), and storage (including how long the medication is stable once reconstituted).
IV Incompatibilities/IV Compatibilities. These sections give the nurse the most comprehensive compatibility information possible when administering medications by direct IV push, via a Y-site, or via IV piggyback.
Indications/Routes/Dosage. Each entry provides specific dosing guidelines for adults, elderly, children, and patients with renal and/or hepatic impairment. Dose modification for toxicity has been added where applicable. Dosages are clearly indicated for each approved indication and route.
Side Effects. Side effects are defined as those responses that are usually predictable with the drug, are **not** life-threatening, and may or may not require discontinuation of the drug. Unique to this handbook, side effects are grouped by frequency listed from highest occurrence percentage to lowest so that the nurse can focus on patient care without wading through myriad signs and symptoms of side effects.
Adverse Effects/Toxic Reactions. Adverse effects and toxic reactions are very serious and often life-threatening undesirable responses that require prompt intervention from a health care provider.
Nursing Considerations. Nursing considerations are organized as care is organized. That is:

- What needs to be assessed or done before the first dose is administered? (Baseline Assessment)
- What interventions and evaluations are needed during drug therapy? (Intervention/Evaluation)
- What explicit teaching is needed for the patient and family? (Patient/Family Teaching)

Saunders Nursing Drug Handbook is an easy-to-use source of current drug information for nurses, students, and other health care providers. It is our hope that this handbook will help you provide quality care to your patients.

We welcome any comments you may have that would help us to improve future editions of the handbook. Please contact us via the publisher at *http://evolve.elsevier.com/SaundersNDH.*

Robert J. Kizior, BS, RPh
Keith J. Hodgson, RN, BSN, CCRN

NEWLY APPROVED MEDICATIONS

Name	Indication
Albiglutide (Tanzeum)	An injectable GLP-1 agonist for type 2 diabetes
Apremilast (Otezla)	A phosphodiesterase 4 (PDE4) inhibitor for psoriatic arthritis
Belinostat (Beleodaq)	A histone deacetylase inhibitor for advanced peripheral T-cell lymphoma
Ceritinib (Zykadia)	A kinase inhibitor for treatment of certain type of metastatic non–small-cell lung cancer
Cobicistat (Tybost)	Pharmaco-enhancing or "boosting" agent for antiviral drugs used in treatment of HIV infection
Dalbavancin (Dalvance)	Antibiotic for treatment of adult patients with complicated skin and skin structure infections, including MRSA
Dapagliflozin (Farxiga)	A sodium glucose co-transporter 2 (SGLT-2) inhibitor for type 2 diabetes
Droxidopa (Northera)	A synthetic amino acid analogue for neurogenic orthostatic hypotension
Dulaglutide (Trulicity)	A glucagon-like peptide receptor agonist for the treatment of type 2 diabetes
Elvitegravir (Vitekta)	Integrase inhibitor for treatment of HIV-1 infection
Empagliflozin (Jardiance)	An SGLT-2 inhibitor for type 2 diabetes
Idelalisib (Zydelig)	A kinase inhibitor for treatment of chronic lymphocytic leukemia, relapsed follicular B-cell non-Hodgkin's lymphoma, and relapsed small lymphocytic lymphoma
Metreleptin (Myalept)	A leptin analogue for patients with lipodystrophy
Naloxegol (Movantik)	A peripherally acting opioid receptor antagonist indicated for the treatment of opioid-induced constipation
Olodaterol (Striverdi Respimat)	A long-acting beta agonist oral inhaler for COPD
Oritavancin (Orbactiv)	An injectable lipoglycopeptide antibiotic for skin and skin structure infections
Peginterferon beta-1a (Plegridy)	An interferon beta for treatment of relapsing forms of multiple sclerosis

Continued

Name	Indication
Pembrolizumab (Keytruda)	A human PD1-blocking antibody indicated for the treatment of metastatic melanoma
Ramucirumab (Cyramza)	An angiogenesis inhibitor for gastric cancer
Suvorexant (Belsomra)	An orexin receptor antagonist indicated for the treatment of insomnia
Tedizolid (Sivextro)	An antibiotic for skin infections
Umeclidinium (Incruse Ellipta)	New anticholinergic oral inhaler for maintenance treatment of COPD
Vedolizumab (Entyvio)	An integrin receptor antagonist for treatment of Crohn's disease and ulcerative colitis
Vorapaxar (Zontivity)	An antiplatelet agent for pts with history of MI or with peripheral arterial disease (PAD)

DRUGS BY DISORDER

Note: Not all medications appropriate for a given condition are listed, nor are those not listed inappropriate.
Generic names appear first, followed by brand names in parentheses.

Alcohol dependence
Acamprosate (Campral)
Disulfiram (Antabuse)
Naltrexone (Depade, ReVia, Vivitrol)

Allergic rhinitis
Azelastine (Astepro)
Azelastine/fluticasone (Dymista)
Beclomethasone (Beconase AQ)
Budesonide (Rhinocort Aqua)
Ciclesonide (Omnaris)
Flunisolide (Nasarel)
Fluticasone (Flonase)
Mometasone (Nasonex)
Olopatadine (Patanase)
Triamcinolone (Nasacort)

Allergy
Beclomethasone (Beclovent, Vanceril)
Betamethasone (Celestone)
Brompheniramine (Dimetane)
Budesonide (Pulmicort, Rhinocort)
Cetirizine (Zyrtec)
Chlorpheniramine (Chlor-Trimeton)
Clemastine (Tavist)
Cyproheptadine (Periactin)
Desloratadine (Clarinex)
Dexamethasone (Decadron)
Dimenhydrinate (Dramamine)
Diphenhydramine (Benadryl)
Epinephrine (Adrenalin)
Fexofenadine (Allegra)
Flunisolide (AeroBid, Nasalide)
Fluticasone (Flovent)
Hydrocortisone (Solu-Cortef)
Levocetirizine (Xyzal)
Loratadine (Claritin)
Prednisolone (Prelone)
Prednisone (Deltasone)
Promethazine (Phenergan)
Triamcinolone (Kenalog)

Alzheimer's disease
Donepezil (Aricept, Aricept ODT)
Galantamine (Razadyne, Razadyne ER)
Memantine (Namenda, Namenda XR)
Rivastigmine (Exelon, Exelon Patch)

Angina
Amlodipine (Norvasc)
Atenolol (Tenormin)
Diltiazem (Cardizem, Dilacor)
Isosorbide (Imdur, Isordil)
Metoprolol (Lopressor)
Nadolol (Corgard)
Nicardipine (Cardene)
Nifedipine (Adalat, Procardia)
Nitroglycerin
Propranolol (Inderal)
Verapamil (Calan, Isoptin)

Anxiety
Alprazolam (Xanax)
Buspirone (BuSpar)
Diazepam (Valium)
Hydroxyzine (Atarax, Vistaril)
Lorazepam (Ativan)
Oxazepam (Serax)
Paroxetine (Paxil)
Trazodone (Desyrel)
Venlafaxine (Effexor)

Arrhythmias
Adenosine (Adenocard)
Amiodarone (Cordarone, Pacerone)
Digoxin (Lanoxin)
Diltiazem (Cardizem, Dilacor)
Disopyramide (Norpace)
Dofetilide (Tikosyn)
Dronedarone (Multaq)
Esmolol (Brevibloc)
Flecainide (Tambocor)
Ibutilide (Corvert)

Lidocaine
Metoprolol (Lopressor)
Mexiletine (Mexitil)
Procainamide (Procan, Pronestyl)
Propafenone (Rythmol)
Propranolol (Inderal)
Sotalol (Betapace)
Verapamil (Calan, Isoptin)

Arthritis, rheumatoid (RA)

Abatacept (Orencia)
Adalimumab (Humira)
Anakinra (Kineret)
Azathioprine (Imuran)
Certolizumab (Cimzia)
Etanercept (Enbrel)
Golimumab (Simponi)
Hydroxychloroquine (Plaquenil)
Infliximab (Remicade)
Leflunomide (Arava)
Methotrexate
Prednisone (Deltasone)
Rituximab (Rituxan)
Sulfasalazine (Azulfidine-EN)
Tocilizumab (Actemra)
Tofacitinib (Xeljanz)

Asthma

Albuterol (Proventil, Ventolin)
Aminophylline (Theophylline)
Arformoterol (Brovana)
Beclomethasone (Beclovent, Vanceril)
Budesonide (Pulmicort)
Ciclesonide (Alvesco)
Cromolyn (Crolom, Intal)
Epinephrine (Adrenalin)
Flunisolide (AeroBid)
Fluticasone (Flovent)
Formoterol (Foradil)
Hydrocortisone (Solu-Cortef)
Ipratropium (Atrovent)
Levalbuterol (Xopenex)
Metaproterenol (Alupent)
Methylprednisolone (Solu-Medrol)
Mometasone (Asmanex)
Montelukast (Singulair)
Nedocromil (Tilade)
Prednisolone (Prelone)
Prednisone (Deltasone)
Salmeterol (Serevent)
Terbutaline (Brethine)
Theophylline (SloBid)
Zafirlukast (Accolate)
Zileuton (Zyflo, Zyflo CR)

Attention-deficit hyperactivity disorder (ADHD)

Atomoxetine (Strattera)
Clonidine (Catapres, Kapvay)
Desipramine (Norpramin)
Dexmethylphenidate (Focalin, Focalin XR)
Dextroamphetamine (Dexedrine, Dextrostat)
Guanfacine (Intuniv)
Lisdexamfetamine (Vyvanse)
Methylphenidate (Concerta, Daytrana, Focalin, Methylin, Ritalin)
Mixed amphetamine (dextroamphetamine and amphetamine salts) (Adderall, Adderall XR)

Benign prostatic hypertrophy (BPH)

Alfuzosin (Uroxatral)
Doxazosin (Cardura)
Dutasteride (Avodart)
Finasteride (Proscar)
Mirabegron (Myrbetriq)
Silodosin (Rapaflo)
Tadalafil (Cialis)
Tamsulosin (Flomax)
Terazosin (Hytrin)

Bipolar disorder (mania)

Carbamazepine (Tegretol)
Lamotrigine (Lamictal)
Lithium (Lithobid)
Oxcarbazepine (Trileptal)
Quetiapine (Seroquel)
Valproic acid (Depakene, Depakote)

Bladder hyperactivity

Darifenacin (Enablex)
Oxybutynin (Ditropan, Gelnique)
Solifenacin (VESIcare)
Tolterodine (Detrol)
Trospium (Sanctura)

Bronchospasm

Albuterol (Proventil, Ventolin)
Bitolterol (Tornalate)
Levalbuterol (Xopenex)
Metaproterenol (Alupent)
Salmeterol (Serevent)
Terbutaline (Brethine)

Cancer

Abarelix (Plenaxis)
Abiraterone (Zytiga)

Ado-trastuzumab (Kadeyla)
Afatinib (Gilotrif)
Aldesleukin (Proleukin)
Alemtuzumab (Campath)
Alitretinoin (Panretin)
Altretamine (Hexalen)
Anastrozole (Arimidex)
Arsenic trioxide (Trisenox)
Asparaginase (Elspar)
Axitinib (Inlyta)
Azacitidine (Vidaza)
BCG (TheraCys, Tice BCG)
Belinostat (Beleodaq)
Bendamustine (Treanda)
Bevacizumab (Avastin)
Bexarotene (Targretin)
Bicalutamide (Casodex)
Bleomycin (Blenoxane)
Bortezomib (Velcade)
Bosutinib (Bosulif)
Brentuximab (Adcetris)
Busulfan (Myleran)
Cabazitaxel (Jevtana)
Cabozantinib (Cometriq)
Capecitabine (Xeloda)
Carboplatin (Paraplatin)
Carfilzomib (Kyprolis)
Carmustine (BiCNU)
Ceritinib (Zykadia)
Cetuximab (Erbitux)
Chlorambucil (Leukeran)
Cisplatin (Platinol)
Cladribine (Leustatin)
Clofarabine (Clolar)
Crizotinib (Xalkori)
Cyclophosphamide (Cytoxan)
Cytarabine (Ara-C, Cytosar)
Dabrafenib (Tafinlar)
Dacarbazine (DTIC)
Dactinomycin (Cosmegen)
Dasatinib (Sprycel)
Daunorubicin (Cerubidine, DaunoXome)
Degarelix (Firmagon)
Denileukin (Ontak)
Docetaxel (Taxotere)
Doxorubicin (Adriamycin, Doxil)
Enzalutamide (Xtandi)
Epirubicin (Ellence)
Eribulin (Halaven)
Erlotinib (Tarceva)
Estramustine (Emcyt)
Etoposide (VePesid)
Everolimus (Afinitor)
Fludarabine (Fludara)
Fluorouracil
Flutamide (Eulexin)
Fulvestrant (Faslodex)
Gefitinib (Iressa)
Gemcitabine (Gemzar)
Goserelin (Zoladex)
Hydroxyurea (Hydrea)
Ibritumomab (Zevalin)
Ibrutinib (Imbruvica)
Idarubicin (Idamycin)
Idelalisib (Zydelig)
Ifosfamide (Ifex)
Imatinib (Gleevec)
Interferon alfa-2b (Intron A)
Ipilimumab (Yervoy)
Irinotecan (Camptosar)
Ixabepilone (Ixempra)
Lapatinib (Tykerb)
Letrozole (Femara)
Leuprolide (Lupron)
Lomustine (CeeNU)
Mechlorethamine (Mustargen)
Megestrol (Megace)
Melphalan (Alkeran)
Mercaptopurine (Purinethol)
Methotrexate
Mitomycin (Mutamycin)
Mitotane (Lysodren)
Mitoxantrone (Novantrone)
Nelarabine (Arranon)
Nilotinib (Tasigna)
Nilutamide (Nilandron)
Obinutuzumab (Gazyva)
Ofatumumab (Arzerra)
Omacetaxine (Synribo)
Oxaliplatin (Eloxatin)
Paclitaxel (Taxol)
Panitumumab (Vectibix)
Pazopanib (Votrient)
Pegaspargase (Oncaspar)
Pembrolizumab (Keytruda)
Pemetrexed (Alimta)
Pentostatin (Nipent)
Pertuzumab (Perjeta)
Plicamycin (Mithracin)
Pomalidomide (Pohmalyst)
Ponatinib (Iclusig)
Pralatrexate (Folotyn)
Procarbazine (Matulane)
Ramucirumab (Cyramza)
Rasburicase (Elitek)
Regorafenib (Stivarga)
Rituximab (Rituxan)
Romidepsin (Istodax)

Sipuleucel-T (Provenge)
Sorafenib (Nexavar)
Streptozocin (Zanosar)
Sunitinib (Sutent)
Tamoxifen (Nolvadex)
Temozolomide (Temodar)
Temsirolimus (Torisel)
Teniposide (Vumon)
Thioguanine
Thiotepa (Thioplex)
Tipifarnib (Zarnestra)
Topotecan (Hycamtin)
Toremifene (Fareston)
Tositumomab (Bexxar)
Trametinib (Mekinest)
Trastuzumab (Herceptin)
Tretinoin (ATRA, Vesanoid)
Valrubicin (Valstar)
Vandetanib (Caprelsa)
Vemurafenib (Zelboraf)
Vinblastine (Velban)
Vincristine (Oncovin)
Vinorelbine (Navelbine)
Vismodegib (Erivedge)
Vorinostat (Zolinza)

Cerebrovascular accident (CVA)

Aspirin
Clopidogrel (Plavix)
Heparin
Nimodipine (Nimotop)
Prasugrel (Effient)
Ticlopidine (Ticlid)
Warfarin (Coumadin)

Chronic obstructive pulmonary disease (COPD)

Aclidinium (Tudorza)
Albuterol (Proventil HFA, Ventolin HFA)
Aminophylline (Theophylline)
Arformoterol (Brovana)
Budesonide (Pulmicort)
Budesonide/formoterol (Symbicort)
Formoterol (Foradil)
Indacaterol (Arcapta)
Ipratropium (Atrovent HFA)
Levalbuterol (Xopenex)
Olodaterol (Striverdi Respimat)
Pirbuterol (Maxair)
Roflumilast (Daliresp)
Salmeterol (Serevent)
Salmeterol/fluticasone (Advair)
Theophylline (Theochron, Theo ZY)
Tiotropium (Spiriva)
Umeclidinium (Incruse Ellipta)

Constipation

Bisacodyl (Dulcolax)
Docusate (Colace)
Lactulose (Kristalose)
Lubiprostone (Amitiza)
Methylcellulose (Citrucel)
Milk of magnesia (MOM)
Polyethylene glycol (MiraLax)
Psyllium (Metamucil)
Senna (Senokot)
Tegaserod (Zelnorm)

Deep vein thrombosis (DVT)

Dalteparin (Fragmin)
Enoxaparin (Lovenox)
Heparin
Tinzaparin (Innohep)
Warfarin (Coumadin)

Depression

Amitriptyline (Elavil, Endep)
Bupropion (Aplenzin, Wellbutrin)
Citalopram (Celexa)
Desipramine (Norpramin)
Desvenlafaxine (Khedezla, Pristiq)
Doxepin (Sinequan)
Duloxetine (Cymbalta)
Escitalopram (Lexapro)
Fluoxetine (Prozac)
Fluvoxamine (Luvox)
Ievomilnacipram (Fetzima)
Imipramine (Tofranil)
Mirtazapine (Remeron)
Nortriptyline (Aventyl, Pamelor)
Paroxetine (Paxil)
Selegiline (Emsam)
Sertraline (Zoloft)
Trazodone (Desyrel)
Venlafaxine (Effexor)
Vilazodone (Viibryd)
Vortioxetene (Brintellix)

Diabetes mellitus

Acarbose (Precose)
Albiglutide (Tanzeum)
Alogliptin (Nesina)
Bromocriptine (Cycloset)
Canaglifozin (Invokana)
Colesevelam (Welchol)
Dapagliflozin (Farxiga)

Dulaglutide (Trulicity)
Empagliflozin (Jardiance)
Exenatide (Byetta)
Glimepiride (Amaryl)
Glipizide (Glucotrol)
Glyburide (Micronase)
Insulin preparations (see Classification section)
Linagliptin (Tradjenta)
Liraglutide (Victoza)
Metformin (Glucophage)
Nateglinide (Starlix)
Pioglitazone (Actos)
Pramlintide (Symlin)
Repaglinide (Prandin)
Rosiglitazone (Avandia)
Saxagliptin (Onglyza)
Sitagliptin (Januvia)

Diabetic peripheral neuropathy

Amitriptyline (Elavil)
Bupropion (Wellbutrin)
Capsaicin (Trixaicin)
Carbamazepine (Tegretol)
Citalopram (Celexa)
Desipramine (Norpramin)
Duloxetine (Cymbalta)
Gabapentin (Neurontin)
Lamotrigine (Lamictal)
Lidocaine patch (Lidoderm)
Nortriptyline (Pamelor)
Oxcarbazepine (Trileptal)
Oxycodone (OxyContin)
Paroxetine (Paxil)
Pregabalin (Lyrica)
Tramadol (Ultram)
Valproic acid (Depakote)
Venlafaxine, extended-release (Effexor XR)

Diarrhea

Bismuth subsalicylate (Pepto-Bismol)
Diphenoxylate and atropine (Lomotil)
Fidaxomicin (Dificid)
Kaolin-pectin (Kaopectate)
Loperamide (Imodium)
Octreotide (Sandostatin)
Rifaximin (Xifaxan)

Duodenal, gastric ulcer

Cimetidine (Tagamet)
Esomeprazole (Nexium)
Famotidine (Pepcid)
Lansoprazole (Prevacid)
Misoprostol (Cytotec)
Nizatidine (Axid)
Omeprazole (Prilosec)
Pantoprazole (Protonix)
Rabeprazole (Aciphex)
Ranitidine (Zantac)
Sucralfate (Carafate)

Edema

Amiloride (Midamor)
Bumetanide (Bumex)
Chlorthalidone (Hygroton)
Ethacrynic acid (Edecrin)
Furosemide (Lasix)
Hydrochlorothiazide (HydroDIURIL)
Indapamide (Lozol)
Metolazone (Zaroxolyn)
Spironolactone (Aldactone)
Torsemide (Demadex)
Triamterene (Dyrenium)

Epilepsy

Carbamazepine (Tegretol)
Clobazam (Onfi)
Clonazepam (Klonopin)
Clorazepate (Tranxene)
Diazepam (Valium)
Eslicarbazepine (Aptiom)
Ethosuximide (Zarontin)
Ezogabine (Potiga)
Fosphenytoin (Cerebyx)
Gabapentin (Neurontin)
Lacosamide (Vimpat)
Lamotrigine (Lamictal, Lamictal ODT, Lamictal XR)
Levetiracetam (Keppra)
Lorazepam (Ativan)
Midazolam (Versed)
Oxcarbazepine (Trileptal)
Perampanel (Fycompa)
Phenobarbital
Phenytoin (Dilantin)
Pregabalin (Lyrica)
Primidone (Mysoline)
Rufinamide (Banzel)
Tiagabine (Gabitril)
Topiramate (Qudexy XR, Topamax Trokendi XR)
Valproic acid (Depakene, Depakote)
Vigabatrin (Sabril)
Zonisamide (Zonegran)

Esophageal reflux, esophagitis
Cimetidine (Tagamet)
Dexlansoprazole (Kapidex)
Esomeprazole (Nexium)
Famotidine (Pepcid)
Lansoprazole (Prevacid)
Nizatidine (Axid)
Omeprazole (Prilosec)
Pantoprazole (Protonix)
Rabeprazole (Aciphex)
Ranitidine (Zantac)

Fever
Acetaminophen (Tylenol)
Aspirin
Ibuprofen (Advil, Caldolor, Motrin)
Naproxen (Aleve, Anaprox, Naprosyn)

Fibromyalgia
Acetaminophen (Tylenol)
Amitriptyline (Elavil)
Carisoprodol (Soma)
Citalopram (Celexa)
Cyclobenzaprine (Flexeril)
Duloxetine (Cymbalta)
Fluoxetine (Prozac)
Gabapentin (Neurontin)
Milnacipran (Savella)
Paroxetine (Paxil)
Pregabalin (Lyrica)
Tramadol (Ultram)
Venlafaxine (Effexor)

Gastritis
Cimetidine (Tagamet)
Famotidine (Pepcid)
Nizatidine (Axid)
Ranitidine (Zantac)

Gastroesophageal reflux disease (GERD)
Cimetidine (Tagamet)
Dexlansoprazole (Kapidex)
Esomeprazole (Nexium)
Famotidine (Pepcid)
Lansoprazole (Prevacid)
Nizatidine (Axid)
Omeprazole (Prilosec)
Pantoprazole (Protonix)
Rabeprazole (Aciphex)
Ranitidine (Zantac)

Glaucoma
Acetazolamide (Diamox)
Apraclonidine (Iopidine)
Betaxolol (Betoptic)
Bimatoprost (Lumigan)
Brimonidine (Alphagan)
Brinzolamide (Azopt)
Carbachol
Dorzolamide (Trusopt)
Echothiophate iodide (Phospholine)
Latanoprost (Xalatan)
Levobunolol (Betagan)
Pilocarpine (Isopto Carpine)
Tafluprost (Zioptan)
Timolol (Timoptic)
Travoprost (Travatan)
Unoprostone (Rescula)

Gout
Allopurinol (Zyloprim)
Colchicine (Colcrys)
Febuxostat (Uloric)
Ibuprofen (Motrin)
Indomethacin (Indocin)
Naproxen (Naprosyn)
Pegloticase (Krystexxa)
Piroxicam (Feldene)
Probenecid (Benemid)
Sulindac (Clinoril)

Heart failure (HF)
Bisoprolol (Zebeta)
Bumetanide (Bumex)
Candesartan (Atacand)
Captopril (Capoten)
Carvedilol (Coreg)
Digoxin (Lanoxin)
Dobutamine (Dobutrex)
Dopamine (Intropin)
Enalapril (Vasotec)
Eplerenone (Inspra)
Fosinopril (Monopril)
Furosemide (Lasix)
Hydralazine (Apresoline)
Isosorbide (Isordil)
Lisinopril (Prinivil, Zestril)
Losartan (Cozaar)
Metoprolol (Lopressor)
Milrinone (Primacor)
Nitroglycerin
Quinapril (Accupril)
Ramipril (Altace)
Spironolactone (Aldactone)

Torsemide (Demadex)
Valsartan (Diovan)

Hepatitis B
Adefovir (Hepsera)
Entecavir (Baraclude)
Lamivudine (Epivir)
Peginterferon alpha-2a (Pegasys)
Telbivudine (Tyzeka)
Tenofovir (Viread)

Hepatitis C
Boceprevir (Victrelis)
Ledipasvir/Sofosbuvir (Harvoni)
Peginterferon alfa-2a (Pegasys)
Peginterferon alfa-2b (Pegintron)
Ribavirin (Copegus, Rebetol, Ribasphere)
Simeprevir (Olysio)
Sofosbuvir (Sovaldi)

Human immunodeficiency virus (HIV)
Abacavir (Ziagen)
Atazanavir (Reyataz)
Cobicistat (Tybost)
Darunavir (Prezista)
Delavirdine (Rescriptor)
Didanosine (Videx)
Dolutegravir (Tivicay)
Efavirenz (Sustiva)
Elvitegravir (Vitekta)
Emtricitabine (Emtriva)
Enfuvirtide (Fuzeon)
Etravirine (Intelence)
Fosamprenavir (Lexiva)
Indinavir (Crixivan)
Lamivudine (Epivir)
Lopinavir/ritonavir (Kaletra)
Maraviroc (Selzentry)
Nelfinavir (Viracept)
Nevirapine (Viramune)
Raltegravir (Isentress)
Rilpivirine (Edurant)
Ritonavir (Norvir)
Saquinavir (Invirase)
Stavudine (Zerit)
Tenofovir (Viread)
Tesamorelin (Egrifta)
Tipranavir (Aptivus)
Zidovudine (AZT, Retrovir)

Hypercholesterolemia
Atorvastatin (Lipitor)
Cholestyramine (Questran)
Colesevelam (Welchol)
Colestipol (Colestid)
Ezetimibe (Zetia)
Fenofibrate (Antara, Lofibra, Tricor)
Fenofibric Acid (Trilipix)
Fish oil (Lovaza)
Fluvastatin (Lescol)
Gemfibrozil (Lopid)
Lomitapide (Juxapid)
Lovastatin (Altoprev, Mevacor)
Mipomersen (Kynamro)
Niacin (Niaspan, Slo-Niacin)
Pitavastatin (Livalo)
Pravastatin (Pravachol)
Rosuvastatin (Crestor)
Simvastatin (Zocor)

Hyperphosphatemia
Aluminum salts
Calcium salts
Ferric Citrate (Auryxia)
Lanthanum (Fosrenol)
Sevelamer (Renagel)

Hypertension
Aliskiren (Tekturna)
Amlodipine (Norvasc)
Atenolol (Tenormin)
Azilsartan (Edarbi)
Benazepril (Lotensin)
Bisoprolol (Zebeta)
Candesartan (Atacand)
Captopril (Capoten)
Clonidine (Catapres)
Diltiazem (Cardizem, Dilacor)
Doxazosin (Cardura)
Enalapril (Vasotec)
Eplerenone (Inspra)
Eprosartan (Teveten)
Felodipine (Plendil)
Fosinopril (Monopril)
Hydralazine (Apresoline)
Hydrochlorothiazide (HydroDIURIL)
Indapamide (Lozol)
Irbesartan (Avapro)
Isradipine (DynaCirc)
Labetalol (Normodyne, Trandate)
Lisinopril (Prinivil, Zestril)
Losartan (Cozaar)
Methyldopa (Aldomet)
Metolazone (Diulo, Zaroxolyn)
Metoprolol (Lopressor)
Minoxidil (Loniten)

Moexipril (Univasc)
Nadolol (Corgard)
Nebivolol (Bystolic)
Nicardipine (Cardene)
Nifedipine (Adalat, Procardia)
Nitroglycerin
Nitroprusside (Nipride)
Olmesartan (Benicar)
Perindopril (Aceon)
Pindolol (Visken)
Prazosin (Minipress)
Propranolol (Inderal)
Quinapril (Accupril)
Ramipril (Altace)
Spironolactone (Aldactone)
Telmisartan (Micardis)
Terazosin (Hytrin)
Trandolapril (Mavik)
Valsartan (Diovan)
Verapamil (Calan, Isoptin)

Hypertriglyceridemia

Atorvastatin (Lipitor)
Colesevelam (Welchol)
Fenofibrate (Tricor)
Fluvastatin (Lescol)
Gemfibrozil (Lopid)
Icosapent (Vascepa)
Lovastatin (Mevacor)
Niacin (Niaspan)
Omega-3 acid ethyl esters (Lovaza)
Pravastatin (Pravachol)
Rosuvastatin (Crestor)
Simvastatin (Zocor)

Hyperuricemia

Allopurinol (Zyloprim)
Febuxostat (Uloric)
Pegloticase (Krystexxa)
Probenecid (Benemid)

Hypotension

Dobutamine (Dobutrex)
Dopamine (Intropin)
Ephedrine
Epinephrine
Norepinephrine (Levophed)
Phenylephrine (Neo-Synephrine)

Hypothyroidism

Levothyroxine (Levoxyl, Synthroid)
Liothyronine (Cytomel)
Thyroid

Idiopathic thrombocytopenic purpura (ITP)

Cyclophosphamide (Cytoxan)
Dexamethasone (Decadron)
Hydrocortisone (Solu-Cortef)
Immune globulin intravenous
Methylprednisolone (Solu-Medrol)
Prednisone
Rh_0(D) immune globulin (RhoGam)
Rituximab (Rituxan)

Insomnia

Diphenhydramine (Benadryl)
Estazolam (ProSom)
Eszopiclone (Lunesta)
Flurazepam (Dalmane)
Ramelteon (Rozerem)
Suvorexant (Belsomra)
Temazepam (Restoril)
Zaleplon (Sonata)
Zolpidem (Ambien, Edluar)

Inflammatory bowel disease (Crohn's disease, ulcerative colitis)

Adalimumab (Humira)
Azathioprine (Imuran)
Balsalazide (Colazal, Giazo)
Budesonide (Entocort EC, Uceris)
Certolizumab (Cimzia)
Cyclosporine (Sandimmune)
Golimumab (Simponi)
Hydrocortisone (Colocort, Cortifoam)
Infliximab (Remicade)
Mercaptopurine (Purinethol)
Mesalamine (Apriso, Asacol HD, Delzicol, Lialda, Pentasa)
Methotrexate (Otrexup, Rasuvo)
Olsalazine (Dipentum)
Prednisone
Sulfasalazine (Azulfidine)
Tacrolimus (Prograf)
Vedolizumab (Entyvio)

Migraine headaches

Almotriptan (Axert)
Amitriptyline (Elavil, Endep)
Diclofenac (Cambia)
Dihydroergotamine
Eletriptan (Relpax)
Ergotamine (Ergomar)
Frovatriptan (Frova)
Naratriptan (Amerge)
Propranolol (Inderal)

Rizatriptan (Maxalt)
Sumatriptan (Imitrex)
Zolmitriptan (Zomig)

Multiple sclerosis (MS)
Alemtuzumab (Lemtrada)
Dalfampridine (Ampyra)
Dimethyl fumarate (Tecfidera)
Fingolimod (Gilenya)
Glatiramer (Copaxone)
Interferon beta-1a (Avonex, Rebif)
Interferon beta-1b (Betaseron, Extavia)
Peginterferon beta-la (Plegridy)
Mitoxantrone (Novantrone)
Natalizumab (Tysabri)
Teriflunomide (Aubagio)

Myelodysplastic syndrome
Azacitidine (Vidaza)
Clofarabine (Clolar)
Decitabine (Dacogen)
Lenalidomide (Revlimid)

Myocardial infarction (MI)
Alteplase (Activase)
Aspirin
Atenolol (Tenormin)
Captopril (Capoten)
Clopidogrel (Plavix)
Dalteparin (Fragmin)
Diltiazem (Cardizem, Dilacor)
Enalapril (Vasotec)
Enoxaparin (Lovenox)
Heparin
Lidocaine
Lisinopril (Prinivil, Zestril)
Metoprolol (Lopressor)
Morphine
Nitroglycerin
Propranolol (Inderal)
Quinapril (Accupril)
Ramipril (Altace)
Reteplase (Retavase)
Streptokinase
Timolol (Blocadren)
Warfarin (Coumadin)

Nausea
Aprepitant (Emend)
Chlorpromazine (Thorazine)
Dexamethasone (Decadron)
Dimenhydrinate (Dramamine)
Dolasetron (Anzemet)
Dronabinol (Marinol)
Droperidol (Inapsine)
Fosaprepitant (Emend)
Granisetron (Kytril)
Hydroxyzine (Vistaril)
Lorazepam (Ativan)
Meclizine (Antivert)
Metoclopramide (Reglan)
Nabilone (Cesamet)
Ondansetron (Zofran)
Palonosetron (Aloxi)
Prochlorperazine (Compazine)
Promethazine (Phenergan)

Obesity
Benzphetamine (Didrex)
Bupropion (Wellbutrin)
Bupropion/naltrexone (Contrave)
Diethylpropion (Tenuate)
Exenatide (Bydureon, Byetta)
Lorcaserin (Belviq)
Methamphetamine (Desoxyn)
Orlistat (Alli, Xenical)
Phendimetrazine (Bontril)
Phentermine (Ionamin)
Phentermine and topiramate (Qsymia)

Obsessive-compulsive disorder (OCD)
Citalopram (Celexa)
Clomipramine (Anafranil)
Escitalopram (Lexapro)
Fluoxetine (Prozac)
Fluvoxamine (Luvox)
Paroxetine (Paxil)
Sertraline (Zoloft)

Organ transplant, rejection prophylaxis
Azathioprine (Imuran)
Basiliximab (Simulect)
Belatacept (Nulojix)
Cyclophosphamide (Cytoxan, Neosar)
Cyclosporine (Sandimmune)
Daclizumab (Zenapax)
Everolimus (Zortress)
Mycophenolate (CellCept)
Sirolimus (Rapamune)
Tacrolimus (Prograf)

Osteoarthritis
Acetaminophen (Tylenol)
Celecoxib (Celebrex)
Diclofenac (Cataflam, Pennsaid, Voltaren)
Duloxetine (Cymbalta)

Etodolac (Lodine)
Flurbiprofen (Ansaid)
Ibuprofen (Motrin)
Ketoprofen (Orudis)
Meloxicam (Mobic)
Nabumetone (Relafen)
Naproxen (Naprosyn)
Sulindac (Clinoril)
Tramadol (Ultram)

Osteoporosis
Alendronate (Fosamax)
Calcitonin (Miacalcin)
Calcium salts
Conjugated estrogens/bazedoxifene (Duavee)
Denosumab (Prolia)
Ibandronate (Boniva)
Raloxifene (Evista)
Risedronate (Actonel)
Teriparatide (Forteo)
Vitamin D
Zoledronic acid (Reclast)

Paget's disease
Alendronate (Fosamax)
Calcitonin (Miacalcin)
Etidronate (Didronel)
Pamidronate (Aredia)
Risedronate (Actonel)
Tiludronate (Skelid)
Zoledronic acid (Reclast)

Pain, mild to moderate
Acetaminophen (Tylenol)
Aspirin
Celecoxib (Celebrex)
Codeine
Diclofenac (Cataflam, Voltaren, Zipsor)
Diflunisal (Dolobid)
Etodolac (Lodine)
Flurbiprofen (Ansaid)
Ibuprofen (Advil, Caldolor, Motrin)
Ketorolac (Toradol)
Naproxen (Anaprox, Naprosyn)
Salsalate (Disalcid)
Tramadol (Ultram)

Pain, moderate to severe
Butorphanol (Stadol)
Fentanyl (Onsolis, Sublimaze)
Hydromorphone (Dilaudid)
Meperidine (Demerol)
Methadone (Dolophine)
Morphine (MS Contin)
Morphine/naltrexone (Embeda)
Nalbuphine (Nubain)
Oxycodone (OxyFast, Roxicodone)
Oxymorphone (Opana)
Ziconotide (Prialt)

Panic attack disorder
Alprazolam (Xanax)
Clonazepam (Klonopin)
Paroxetine (Paxil)
Sertraline (Zoloft)
Venlafaxine (Effexor)

Parkinsonism
Apomorphine (Apokyn)
Carbidopa/levodopa (Sinemet, Sinemet CR)
Entacapone (Comtan)
Pramipexole (Mirapex)
Rasagiline (Azilect)
Ropinirole (Requip)
Rotigotine (Neupro)
Selegiline (Eldepryl, Zelapar)
Tolcapone (Tasmar)

Peptic ulcer disease
Cimetidine (Tagamet)
Dexlansoprazole (Dexilant)
Esomeprazole (Nexium)
Famotidine (Pepcid)
Lansoprazole (Prevacid)
Misoprostol (Cytotec)
Nizatidine (Axid)
Omeprazole (Prilosec)
Pantoprazole (Protonix)
Rabeprazole (Aciphex)
Ranitidine (Zantac)
Sucralfate (Carafate)

Pneumonia
Amoxicillin (Amoxil)
Amoxicillin/clavulanate (Augmentin)
Ampicillin (Polycillin)
Azithromycin (Zithromax)
Cefaclor (Ceclor)
Cefpodoxime (Vantin)
Ceftriaxone (Rocephin)
Cefuroxime (Kefurox, Zinacef)
Clarithromycin (Biaxin)
Co-trimoxazole (Bactrim, Septra)
Erythromycin
Gentamicin (Garamycin)
Levofloxacin (Levaquin)

Linezolid (Zyvox)
Moxifloxacin (Avelox)
Piperacillin/tazobactam (Zosyn)
Tobramycin (Nebcin)
Vancomycin (Vancocin)

Pneumonia, *Pneumocystis jiroveci*
Atovaquone (Mepron)
Clindamycin (Cleocin)
Co-trimoxazole (Bactrim, Septra)
Pentamidine (Pentam)
Trimethoprim (Proloprim)

Post-traumatic stress disorder
Amitriptyline (Elavil)
Aripiprazole (Abilify)
Citalopram (Celexa)
Escitalopram (Lexapro)
Fluoxetine (Prozac)
Imipramine (Tofranil)
Lamotrigine (Lamictal)
Olanzapine (Zyprexa)
Paroxetine (Paxil)
Phenelzine (Nardil)
Prazosin (Minipress)
Propranolol (Inderal)
Quetiapine (Seroquel)
Risperidone (Risperdal)
Sertraline (Zoloft)
Topiramate (Topamax)
Valproic acid (Depakote)
Venlafaxine (Effexor)
Ziprasidone (Geodon)

Pruritus
Amcinonide (Cyclocort)
Brompheniramine (Dimetane)
Cetirizine (Zyrtec)
Chlorpheniramine (Dimetane)
Clemastine (Tavist)
Clobetasol (Temovate)
Cyproheptadine (Periactin)
Desloratadine (Clarinex)
Desonide (Tridesilon)
Desoximetasone (Topicort)
Diphenhydramine (Benadryl)
Fluocinolone (Synalar)
Fluocinonide (Lidex)
Halobetasol (Ultravate)
Hydrocortisone (Cort-Dome, Hytone)
Hydroxyzine (Atarax, Vistaril)
Prednisolone (Prelone)
Prednisone (Deltasone)
Promethazine (Phenergan)

Psychosis
Aripiprazole (Abilify)
Asenapine (Saphris)
Chlorpromazine (Thorazine)
Clozapine (Clozaril)
Fluphenazine (Prolixin)
Haloperidol (Haldol)
Iloperidone (Fanapt)
Loxapine (Adasuve)
Lurasidone (Latuda)
Olanzapine (Zyprexa)
Quetiapine (Seroquel, Seroquel XR)
Risperidone (Risperdal)
Thioridazine (Mellaril)
Thiothixene (Navane)
Ziprasidone (Geodon)

Pulmonary arterial hypertension
Ambrisentan (Letairis)
Bosentan (Tracleer)
Epoprostenol (Flolan)
Iloprost (Ventavis)
Macitentan (Opsumit)
Riociguat (Adempas)
Sildenafil (Revatio)
Tadalafil (Adcirca)
Treprostinil (Remodulin, Tyvaso)

Respiratory distress syndrome (RDS)
Beractant (Survanta)
Calfactant (Infasurf)
Poractant alfa (Curosurf)

Restless legs syndrome
Cabergoline (Dostinex)
Carbidopa/levodopa (Sinemet)
Clonazepam (Klonopin)
Gabapentin (Horizant, Neurontin)
Levodopa
Oxycodone (Roxicodone)
Pramipexole (Mirapex)
Ropinirole (Requip)
Rotigotine (Neupro)
Tramadol (Ultram)
Zaleplon (Sonata)
Zolpidem (Ambien)

Schizophrenia
Aripiprazole (Abilify)
Asenapine (Saphris)
Chlorpromazine (Thorazine)
Clozapine (Clozaril)
Fluphenazine (Prolixin)

Haloperidol (Haldol)
Iloperidone (Fanapt)
Lurasidone (Latuda)
Olanzapine (Zyprexa)
Paliperidone (Invega, Invega Sustenna)
Quetiapine (Seroquel, Seroquel XR)
Risperidone (Risperdal)
Thioridazine (Mellaril)
Thiothixene (Navane)
Ziprasidone (Geodon)

Smoking cessation
Bupropion (Zyban)
Clonidine (Catapres)
Nicotine (Nicoderm, Nicotrol)
Nortriptyline (Pamelor)
Varenicline (Chantix)

Thrombosis
Apixaban (Eliquis)
Dalteparin (Fragmin)
Enoxaparin (Lovenox)
Fondaparinux (Arixtra)
Heparin
Tinzaparin (Innohep)
Warfarin (Coumadin)

Thyroid disorders
Levothyroxine (Levoxyl, Synthroid)
Liothyronine (Cytomel)
Thyroid

Transient ischemic attack (TIA)
Aspirin
Clopidogrel (Plavix)
Prasugrel (Effient)
Ticlopidine (Ticlid)
Warfarin (Coumadin)

Tremor
Atenolol (Tenormin)
Chlordiazepoxide (Librium)
Diazepam (Valium)
Lorazepam (Ativan)
Metoprolol (Lopressor)
Nadolol (Corgard)
Propranolol (Inderal)

Tuberculosis (TB)
Bedaquiline (Sirturo)
Cycloserine (Seromycin)
Ethambutol (Myambutol)
Isoniazid (INH)
Pyrazinamide
Rifabutin (Mycobutin)
Rifampin (Rifadin)
Rifapentine (Priftin)

Urticaria
Cetirizine (Zyrtec)
Cimetidine (Tagamet)
Clemastine (Tavist)
Cyproheptadine (Periactin)
Diphenhydramine (Benadryl)
Hydroxyzine (Atarax, Vistaril)
Loratadine (Claritin)
Promethazine (Phenergan)
Ranitidine (Zantac)

Vertigo
Dimenhydrinate (Dramamine)
Diphenhydramine (Benadryl)
Meclizine (Antivert)
Scopolamine (Trans-Derm Scop)

Vomiting
Aprepitant (Emend)
Chlorpromazine (Thorazine)
Dexamethasone (Decadron)
Dimenhydrinate (Dramamine)
Dolasetron (Anzemet)
Dronabinol (Marinol)
Droperidol (Inapsine)
Fosaprepitant (Emend)
Granisetron (Kytril)
Hydroxyzine (Vistaril)
Lorazepam (Ativan)
Meclizine (Antivert)
Metoclopramide (Reglan)
Nabilone (Cesamet)
Ondansetron (Zofran)
Palonosetron (Aloxi)
Prochlorperazine (Compazine)
Promethazine (Phenergan)
Scopolamine (Trans-Derm Scop)
Trimethobenzamide (Tigan)

Zollinger-Ellison syndrome
Aluminum salts
Cimetidine (Tagamet)
Esomeprazole (Nexium)
Famotidine (Pepcid)
Lansoprazole (Prevacid)
Omeprazole (Prilosec)
Pantoprazole (Protonix)
Rabeprazole (Aciphex)
Ranitidine (Zantac)

DRUG CLASSIFICATION CONTENTS

Allergic Rhinitis Nasal Preparations

USES

Relieve symptoms associated with allergic rhinitis. These symptoms include rhinorrhea, nasal congestion, pruritus, sneezing, postnasal drip, nasal pain.

Allergic rhinitis or hay fever is an inflammation of the nasal airways occurring when an allergen (e.g., pollen) is inhaled. This triggers antibody production. The antibodies bind to mast cells, which contain histamine. Histamine is released, causing symptoms of allergic rhinitis.

ACTION

Intranasal corticosteroids: Depress migration of polymorphonuclear leucocytes and fibroblasts, reverse capillary permeability, and stabilize nasal membranes to prevent/control inflammation.

Intranasal antihistamines: Reduce histamine-mediated symptoms of allergic rhinitis, including pruritus, sneezing, rhinorrhea, watery eyes.

Intranasal mast cell stabilizers: Inhibit the mast cell release of histamine and other inflammatory mediators.

Intranasal anticholinergics: Block acetylcholine in the nasal mucosa. Effective in treating rhinorrhea associated with allergic rhinitis.

Intranasal decongestants: Vasoconstrict the respiratory mucosa, provide short-term relief of nasal congestion.

CORTICOSTEROIDS

Generic (Brand)	Adult Dose	Pediatric Dose	Side Effects
Beclomethasone (Beconase AQ) (Qnasi)	Beconase AQ: 1–2 sprays in each nostril 2 times/day Qnasi: 2 sprays in each nostril once daily	Beconase AQ: 5–11 yrs: 1–2 sprays in each nostril 2 times/day	Altered taste and smell, epistaxis, burning, stinging, headache, nasal septum perforation
Budesonide (Rhinocort Aqua)	1 spray in each nostril daily	6–11 yrs: 1 spray in each nostril daily	Bronchospasm, cough, epistaxis, nasal/throat irritation
Ciclesonide (Omnaris, Zetonna)	Omnaris: 2 sprays in each nostril daily Zetonna: 1 spray in each nostril daily	Omnaris: 2–11 yrs: 1–2 sprays in each nostril daily	Fever, headache, nausea, cough, epistaxis, nasal septum disorder

Flunisolide (Nasalide)	2 sprays in each nostril 2 or 3 times/day (maximum: 8 sprays in each nostril daily)	6–14 yrs: 2 sprays in each nostril 2 times/day or 1 spray in each nostril 3 times/day (maximum: 4 sprays in each nostril daily)	Nasal burning/stinging, nasal dryness/irritation
Fluticasone (Flonase)	2 sprays in each nostril daily or 1 spray in each nostril 2 times/day	4–17 yrs: 1–2 sprays in each nostril daily	Dizziness, fever, headache, nausea, cough, epistaxis
Fluticasone/Azelastine (Dymista)	1 spray in each nostril 2 times/day	Not indicated in children younger than 12 yrs	Same as fluticasone and azelastine
Fluticasone (Veramyst)	1–2 sprays in each nostril daily	2–11 yrs: 1–2 sprays in each nostril once daily	Same as fluticasone
Mometasone (Nasonex)	2 sprays in each nostril daily	2–11 yrs: 1 spray in each nostril daily	Headache, nasopharyngitis, sinusitis
Triamcinolone (Nasacort AQ)	1–2 sprays in each nostril daily	2–5 yrs: 1 spray in each nostril once daily 6–11 yrs: 1–2 sprays in each nostril daily	Bronchitis, chest congestion, cough, epistaxis, pharyngitis, sinusitis

ANTIHISTAMINES

Generic (Brand)	Adult Dose	Pediatric Dose	Side Effects
Azelastine (Astelin) Astepro 0.15%	Astelin: 1–2 sprays in each nostril 2 times/day Astepro 0.15%: 1–2 sprays in each nostril two times/day or 2 sprays each nostril once daily	Astelin: 5–11 yrs: 1 spray in each nostril 2 times/day	Sedation, epistaxis, nasal irritation
Azelastine/Fluticasone (Dymista)	1 spray in each nostril 2 times/day	Not approved for children younger than 12 yrs	Same as azelastine and fluticasone
Olopatadine (Patanase)	2 sprays in each nostril 2 times/day	6–11 yrs: 1 spray in each nostril 2 times/day	Same as azelastine

MAST CELL STABILIZERS

Generic (Brand)	Adult Dose	Pediatric Dose	Side Effects
Cromolyn (Nasalcrom)	1 spray in each nostril 3–6 times/day	2–11 yrs: 1 spray in each nostril 3–6 times/day	Nasal irritation, unpleasant taste

ANTICHOLINERGICS

Generic (Brand)	Adult Dose	Pediatric Dose	Side Effects
Ipratropium (Atrovent) 0.03%	2 sprays in each nostril 2–3 times/day	6–11 yrs: 2 sprays in each nostril 2–3 times/day	Nasal irritation, epistaxis, dizziness, headache, blurry vision
Ipratropium (Atrovent) 0.06%	2 sprays in each nostril 4 times/day	5–11 yrs: 2 sprays in each nostril 4 times/day	Same as ipratropium 0.03%

DECONGESTANTS

Generic (Brand)	Adult Dose	Pediatric Dose	Side Effects
Oxymetazoline (Afrin)	2–3 drops or sprays 2 times/day	2–3 drops or sprays 2 times/day	Insomnia, tachycardia, nervousness, nausea, vomiting, transient burning, headache, rebound congestion if used longer than 72 hrs
Phenylephrine (Neo-Synephrine)	2–3 drops or 1–2 sprays q4h as needed (0.25% or 0.5%)	6–11 yrs: 2–3 drops (0.25%) q4h as needed 1–5 yrs: 2–3 drops (0.125%) q4h as needed	Restlessness, nervousness, headache, rebound nasal congestion, burning, stinging, dryness

Anesthetics: General

USES

Intravenous (IV) anesthetic agents are used to induce general anesthesia. The general anesthetic state consists of unconsciousness, amnesia, analgesia, immobility, and attenuation of autonomic responses to noxious stimuli.

Volatile inhalation agents produce all the components of the anesthetic state but are administered through the lungs via an anesthesia machine. Agents for use include desflurane, sevoflurane, isoflurane, enflurane, and halothane.

General anesthetics are medications producing unconsciousness and a lack of response to all painful stimuli.

ACTION

IV anesthetic agents: Most agents produce CNS depression by action on the gamma-aminobutyric acid (GABA) receptor complex. GABA is the primary inhibitory neurotransmitter in the CNS. Ketamine produces dissociation between the thalamus and the limbic system.

Volatile inhalation agents: The action of these agents is not fully understood, but they may disrupt neuronal transmission throughout the CNS. These agents may either block excitatory or enhance inhibitory transmission through axons or synapses.

ANESTHETICS: GENERAL

Name	Availability	Uses	Dosage Range	Side Effects
Etomidate (Amidate)	**I:** 2 mg/ml	IV induction	0.2–0.6 mg/kg	Myoclonus, pain on injection, nausea, vomiting, respiratory depression
Ketamine (Ketalar)	**I:** 10 mg/ml, 50 mg/ml, 100 mg/ml	Analgesia, sedation, IV induction	1–4.5 mg/kg	Delirium, euphoria, nausea, vomiting
Methohexital (Brevital)	**Powder for injection:** 500 mg	IV induction, sedation	50–120 mg	Cardiovascular depression, myoclonus, nausea, vomiting, respiratory depression

Continued

ANESTHETICS: GENERAL—cont'd

Name	Availability	Uses	Dosage Range	Side Effects
Midazolam (Versed)	**I:** 1 mg/ml, 5 mg/ml	Anxiolytic, amnesic, sedation	1–5 mg titrated slowly	Respiratory depression
Propofol (Diprivan)	**I:** 10 mg/ml	Sedation IV induction Maintenance	0.5 mg/kg 2–2.5 mg/kg 100–200 mcg/kg/min	Cardiovascular depression, delirium, euphoria, pain on injection, respiratory depression

I, Injection.

Anesthetics: Local

USES

Local anesthetics suppress pain by blocking impulses along axons. Suppression of pain does not cause generalized depression of the entire nervous system. Local anesthetics may be given topically and by injection (local infiltration, peripheral nerve block [axillary], IV regional [Bier block], epidural, and spinal).

ACTION

Most local anesthetics fall into one of two groups: esters or amides. Both provide anesthesia and analgesia by reversibly binding to and blocking sodium (Na) channels. This slows the rate of depolarization of the nerve action potential; thus, propagation of the electrical impulses needed for nerve conduction is prevented.

ANESTHETICS: LOCAL

Name	Uses	Onset (min)	Duration (hrs)	Side Effects
Esters				
Chloroprocaine (Nesacaine)	Local infiltrate, nerve block, spinal	6–12	0.5–1	Seizures, bradycardia, cardiac arrest, hypotension, arrhythmias, anxiety, dizziness, restlessness, erythema, pruritus, urticaria, blurred vision, allergic reaction
Procaine (Novocaine)	Local infiltrate, nerve block, spinal	2–5	0.5–1.5	Burning sensation/pain at injection site, tissue irritation, CNS stimulation followed by CNS depression, chills
Amides				
Bupivacaine (Marcaine, Sensorcaine)	Local infiltrate, nerve block, epidural, spinal	5	2–9	Cardiac arrest, hypotension, bradycardia, palpitations, seizures, restlessness, anxiety, dizziness, nausea, vomiting, blurred vision, weakness, tinnitus, apnea
Lidocaine	Local infiltrate, nerve block, spinal, epidural, topical, IV regional	Less than 2	0.5–1	Bradycardia, hypotension, arrhythmias, agitation, anxiety, dizziness, seizures, pruritus, rash, nausea, vomiting, altered taste, visual changes, tinnitus, respiratory depression, allergic reaction
Mepivacaine (Carbocaine, Polocaine)	Local infiltrate, nerve block, epidural	3–20	2–2.5	Bradycardia, syncope, arrhythmias, anxiety, seizures, dizziness, restlessness, chills, pruritus, urticaria, nausea, vomiting, incontinence, blurred vision, tinnitus, allergic reaction
Ropivacaine (Naropin)	Local infiltrate, nerve block, epidural, spinal	1–15	3–15	Hypotension, bradycardia, headache, pruritus, nausea, vomiting, dizziness, anxiety, tinnitus, dyspnea, cardiac arrest, arrhythmias, seizures, syncope, chills

Note: Most side effects are manifestations of excessive plasma concentrations.

Anesthetics: Local Topical

ANESTHETICS: LOCAL TOPICAL

Name	Indications	Peak Effect (min)	Duration (min)
Amides			
Dibucaine (Nupercainal)	Skin	Less than 5	15–45
Lidocaine	Skin, mucous membranes	2–5	15–45
Esters			
Benzocaine	Skin, mucous membranes	Less than 5	15–45
Cocaine	Mucous membranes	2–5	30–60
Tetracaine (Pontocaine)	Skin, mucous membranes	3–8	30–60

Angiotensin-Converting Enzyme (ACE) Inhibitors

USES	ACTION	
Treatment of hypertension (HTN), adjunctive therapy for heart failure (HF).	*Antihypertensive:* Exact mechanism unknown. May be related to competitive inhibition of angiotensin I converting enzyme (ACE) activity causing decreased conversion of angiotensin I to angiotensin II, a potent vasoconstrictor. Reduces peripheral arterial resistance.	*HF:* Decreases peripheral vascular resistance (afterload), pulmonary capillary wedge pressure (preload); improves cardiac output, exercise tolerance.

ACE INHIBITORS

Name	Availability	Uses	Dosage Range (per day)	Side Effects
Benazepril (Lotensin)	**T:** 5 mg, 10 mg, 20 mg, 40 mg	HTN	**HTN:** 5–80 mg in 1 or 2 doses	Headaches, dizziness, fatigue, cough
Captopril (Capoten)	**T:** 12.5 mg, 25 mg, 50 mg, 100 mg	HTN HF	**HTN:** 12.5–150 mg in 2–3 doses **HF:** 12.5–450 mg	Insomnia, headaches, dizziness, fatigue, GI complaints, cough, rash
Enalapril (Vasotec)	**T:** 2.5 mg, 5 mg, 10 mg, 20 mg **IV:** 1.25 mg/ml	HTN HF	**HTN:** 2.5–40 mg in 1 or 2 doses (**IV:** 1.25 mg q6h) **HF:** 5–20 mg	Chest pain, hypotension, headaches, fatigue, dizziness
Fosinopril (Monopril)	**T:** 10 mg, 20 mg, 40 mg	HTN HF	**HTN:** 10–80 mg in 1 or 2 doses **HF:** 20–40 mg	Hypotension, nausea, vomiting, cough
Lisinopril (Prinivil, Zestril)	**T:** 2.5 mg, 5 mg, 10 mg, 20 mg, 40 mg	HTN HF	**HTN:** 5–40 mg **HF:** 5–20 mg	Chest pain, hypotension, headaches, dizziness, fatigue, diarrhea
Moexipril (Univasc)	**T:** 7.5 mg, 15 mg	HTN	**HTN:** 7.5–30 mg in 1 or 2 doses	Dizziness, fatigue, diarrhea, cough
Perindopril (Aceon)	**T:** 2 mg, 4 mg, 6 mg	HTN	**HTN:** 4–8 mg in 1 or 2 doses	Hypotension, dizziness, fatigue, syncope, cough
Quinapril (Accupril)	**T:** 5 mg, 10 mg, 20 mg, 40 mg	HTN HF	**HTN:** 10–80 mg in 1 or 2 doses **HF:** 10–40 mg	Chest pain, hypotension, headaches, dizziness, fatigue, diarrhea, nausea, vomiting, cough
Ramipril (Altace)	**C:** 1.25 mg, 2.5 mg, 5 mg, 10 mg	HTN HF	**HTN:** 2.5–20 mg in 1 or 2 doses **HF:** 1.25–10 mg	Hypotension, headaches, dizziness, cough

Continued

ACE INHIBITORS—cont'd

Name	Availability	Uses	Dosage Range (per day)	Side Effects
Trandolapril (Mavik)	**T:** 1 mg, 2 mg, 4 mg	HTN HF	**HTN:** 1–8 mg in 1 or 2 doses **HF:** 1–4 mg	Dizziness, dyspepsia, cough, asthenia (loss of strength, energy), syncope, myalgia

C, Capsules; ***HF,*** heart failure; ***HTN,*** hypertension; ***T,*** tablets.

Angiotensin II Receptor Antagonists

USES	ACTION
Treatment of hypertension (HTN) alone or in combination with other antihypertensives. Treatment of heart failure (HF).	Angiotensin II receptor antagonists (AIIRA) block vasoconstrictor and aldosterone-secreting effects on angiotensin II by selectively blocking the binding of angiotensin II to AT_1 receptors in vascular smooth muscle and the adrenal gland, causing vasodilation and a decrease in aldosterone effects.

ANGIOTENSIN II RECEPTOR ANTAGONISTS

Name	Availability	Uses	Dosage Range (per day)	Side Effects
Azilsartan (Edarbi)	**T:** 40 mg, 80 mg	HTN	40–80 mg once daily	Diarrhea, hypotension, muscle spasms, weakness
Candesartan (Atacand)	**T:** 4 mg, 8 mg, 16 mg, 32 mg	HTN HF	8–32 mg in 1–2 divided doses 4–32 mg once daily	Headaches, upper respiratory tract infection, pain, dizziness
Eprosartan (Teveten)	**T:** 400 mg, 600 mg	HTN	400–800 mg in 1–2 divided doses	Headaches, upper respiratory tract infection, myalgia

Irbesartan (Avapro)	**T:** 75 mg, 150 mg, 300 mg	HTN Nephropathy	150–300 mg once daily 300 mg once daily	Headaches, upper respiratory tract infection
Losartan (Cozaar)	**T:** 25 mg, 50 mg, 100 mg	HTN Nephropathy	25–100 mg in 1–2 divided doses 100 mg once daily	Dizziness, headaches, upper respiratory tract infection, diarrhea, fatigue, cough
Olmesartan (Benicar)	**T:** 5 mg, 20 mg, 40 mg	HTN	20–40 mg once daily	Headaches, upper respiratory tract infection, flu-like symptoms, dizziness, bronchitis, rhinitis, back pain, pharyngitis, sinusitis, diarrhea, peripheral edema
Telmisartan (Micardis)	**T:** 40 mg, 80 mg	HTN CV risk reduction	20–80 mg once daily 80 mg once daily	Upper respiratory tract infection, dizziness, back pain, sinusitis, diarrhea
Valsartan (Diovan)	**T:** 80 mg, 160 mg	HTN HF Post MI	80–320 mg once daily 40–160 mg 2 times/day 20–160 mg 2 times/day	Dizziness, headaches, upper respiratory tract infection, diarrhea, fatigue

CV, Cardiovascular; ***HF,*** heart failure; ***HTN,*** hypertension; ***MI,*** myocardial infarction; ***T,*** tablets.

Antacids

USES

Relief of symptoms associated with hyperacidity (e.g., heartburn, acid indigestion, sour stomach), hyperacidity associated with gastric/duodenal ulcers, treatment of pathologic gastric hypersecretion associated with Zollinger-Ellison syndrome, symptomatic treatment of gastroesophageal reflux disease (GERD), prevention and treatment of upper GI stress-induced ulceration and bleeding (esp. in intensive care unit [ICU]).

Aluminum hydroxide in conjunction with a low-phosphate diet to reduce elevated phosphate in pts with renal insufficiency. Calcium for calcium deficiency, magnesium for magnesium deficiency.

ACTION

Antacids act primarily in the stomach to neutralize gastric acid (increase pH). Antacids do not have a direct effect on acid output. The ability to increase pH depends on the dose, dosage form used, presence or absence of food in the stomach, and acid-neutralizing capacity (ANC). ANC is the number of mEq of hydrochloric acid that can be neutralized by a particular weight or volume of antacid.

Antacids reduce elevated phosphate by binding with phosphate in the intestine to form an insoluble complex, which is then eliminated.

ANTACIDS

Antacid	Brand Names	Availability	Dosage Range	Side Effects
Aluminum				
Hydroxide	Amphojel, Alu-Tab, Dialume	**T:** 300 mg, 500 mg, 600 mg **C:** 500 mg	500–1,500 mg 3–6 times/day	Chalky taste, mild constipation, abdominal cramps *Long-term use:* Neurotoxicity in dialysis pts, hypercalcemia, osteoporosis *Large doses:* Fecal impaction, peripheral edema

Calcium				
Carbonate	Tums, Caltrate 600, Oyst-Cal 500	**T (chewable):** 500 mg, 750 mg, 1,000 mg **T:** 1,250 mg	500–1,500 mg as needed (**Maximum:** 7,000 mg in 24 hrs)	Chalky taste *Large doses:* Fecal impaction, peripheral edema, metabolic alkalosis *Long-term use:* Difficult/painful urination
Citrate	Calcitrate	**C:** 225 mg **T:** 200 mg	500–2,000 mg	Constipation, nausea, vomiting
Magnesium				
Hydroxide	Milk of Magnesia	**T (chewable):** 311 mg **L:** 400 mg/5 ml, 800 mg/5 ml	**T:** 622–1,244 mg up to 4 times/day **L:** 2.5–7.5 ml up to 4 times/day	Chalky taste, diarrhea, laxative effect, electrolyte imbalance (dizziness, irregular heartbeat, fatigue)
Oxide	Mag-Ox 400	**T:** 400 mg, 420 mg, 500 mg	400–800 mg/day	Same as above

C, Capsules; ***L,*** liquid; ***T,*** tablets.

Antianxiety Agents

USES

Treatment of anxiety including generalized anxiety disorder (GAD), panic disorder, obsessive-compulsive disorder (OCD), social anxiety disorder (SAD), posttraumatic stress disorder (PTSD), and acute stress disorder. In addition, some benzodiazepines are used as hypnotics, anticonvulsants to prevent delirium tremors during alcohol withdrawal, and as adjunctive therapy for relaxation of skeletal muscle spasms. Midazolam, a short-acting benzodiazepine, is used for preop sedation and relief of anxiety for short diagnostic/endoscopic procedures (see individual monograph for midazolam).

ACTION

Benzodiazepines are the largest and most frequently prescribed group of antianxiety agents. The exact mechanism is unknown, but they may increase the inhibiting effect of gamma-aminobutyric acid (GABA), which inhibits nerve impulse transmission by binding to specific benzodiazepine receptors in various areas of the central nervous system (CNS).

◄**ALERT**► Refer to individual entries of nonbenzodiazepine drugs for more information on uses and actions.

ANTIANXIETY AGENTS

Name	Availability	Uses	Dosage Range (per day)	Side Effects
Benzodiazepine				
Alprazolam (Xanax)	**T:** 0.25 mg, 0.5 mg, 1 mg, 2 mg **S:** 0.5 mg/5 ml, 1 mg/ml **ER:** 0.5 mg, 1 mg, 2 mg, 3 mg **ODT:** 0.25 mg, 0.5 mg, 1 mg, 2 mg	Anxiety, panic disorder	0.75–10 mg	Drowsiness, weakness, fatigue, ataxia, slurred speech, confusion, lack of coordination, impaired memory, paradoxical agitation, dizziness, nausea
Chlordiazepoxide (Librium)	**C:** 5 mg, 10 mg, 25 mg **T:** 10 mg, 25 mg **I:** 100 mg	Anxiety, alcohol withdrawal	5–100 mg	Drowsiness, fatigue, ataxia, memory impairment

Clorazepate (Tranxene)	**C:** 3.75 mg, 7.5 mg, 15 mg **SD:** 11.25 mg, 22.5 mg	Anxiety, alcohol withdrawal, anticonvulsant	7.5–90 mg	Hypotension, drowsiness, fatigue, ataxia, memory impairment, headache, nausea
Diazepam (Valium)	**T:** 2.5 mg, 5 mg, 10 mg **S:** 5 mg/5 ml, 5 mg/ml **I:** 5 mg/ml	Anxiety, alcohol withdrawal, anticonvulsant, muscle relaxant	2–40 mg	Hypotension, ataxia, drowsiness, fatigue, vertigo
Lorazepam (Ativan)	**T:** 0.5 mg, 1 mg, 2 mg **S:** 2 mg/ml **I:** 2 mg/ml, 4 mg/ml	Anxiety	0.5–10 mg	Sedation, respiratory depression, ataxia, dizziness, headache
Nonbenzodiazepine				
Buspirone (BuSpar)	**T:** 5 mg, 10 mg, 15 mg, 30 mg	Anxiety	7.5–60 mg	Dizziness, light-headedness, headaches, nausea, restlessness
Hydroxyzine (Atarax, Vistaril)	**T:** 10 mg, 25 mg, 50 mg, 100 mg	Anxiety, rhinitis, pruritus, urticaria, nausea or vomiting	100–400 mg	Drowsiness; dry mouth, nose, and throat
Paroxetine (Paxil)	**S:** 10 mg/5 ml **T:** 10 mg, 20 mg, 30 mg, 40 mg **T (CR):** 12.5 mg, 25 mg, 37.5 mg	Anxiety, depression, obsessive-compulsive disorder, panic disorder	10–50 mg	Drowsiness, dry mouth, nose, and throat; dizziness; diarrhea; diaphoresis; constipation; vomiting; tremors
Trazodone (Desyrel)	**T:** 50 mg, 100 mg, 150 mg, 300 mg	Anxiety, depression	100–400 mg	Drowsiness, dizziness, headaches, dry mouth, nausea, vomiting, unpleasant taste
Venlafaxine (Effexor)	**C (ER):** 37.5 mg, 75 mg, 150 mg **T (ER):** 37.5 mg, 75 mg, 150 mg **T:** 25 mg, 37.5 mg, 50 mg, 75 mg, 150 mg	Anxiety, depression	37.5–225 mg	Drowsiness, nausea, headaches, dry mouth

C, Capsules; ***CR,*** controlled-release; ***ER,*** extended-release; ***I,*** injection; ***ODT,*** orally disintegrating tablet; ***S,*** solution; ***SD,*** single dose; ***T,*** tablets.

Antiarrhythmics

USES

Prevention and treatment of cardiac arrhythmias, such as premature ventricular contractions, ventricular tachycardia, premature atrial contractions, paroxysmal atrial tachycardia, atrial fibrillation and flutter.

ACTION

The antiarrhythmics are divided into four classes based on their effects on certain ion channels and/or receptors located on the myocardial cell membrane. Class I is further divided into three subclasses (IA, IB, IC) based on electrophysiologic effects.

Class I: Blocks cardiac sodium channels and slows conduction velocity, prolonging refractory period and decreasing automaticity of sodium-dependent tissue.

Class IA: Blocks sodium and potassium channels.

Class IB: Shortens the repolarization phase.

Class IC: No effect on repolarization phase, but slows conduction velocity.

Class II: Slows sinus and atrioventricular (AV) nodal conduction.

Class III: Blocks cardiac potassium channels, prolonging the repolarization phase of electrical cells.

Class IV: Inhibits the influx of calcium through its channels, causing slower conduction through the sinus and AV nodes.

ANTIARRHYTHMICS

Name	Availability	Uses	Dosage Range	Side Effects
Class IA				
Disopyramide (Norpace, Norpace CR)	**C:** 100 mg, 150 mg **C (ER):** 100 mg, 150 mg	AF, WPW, PSVT, PVCs, VT	400–800 mg/day	Dry mouth, blurred vision, urinary retention, HF, proarrhythmia, heart block, nausea, vomiting, diarrhea, hypoglycemia, nervousness
Procainamide (Procan-SR, Pronestyl)	**T:** 250 mg, 375 mg, 500 mg **C:** 250 mg, 375 mg, 500 mg **T (SR):** 250 mg, 500 mg, 750 mg, 1,000 mg **I:** 100 mg/ml, 500 mg/ml	AF, WPW, PVCs, VT	**A (PO):** 250–500 mg q3h; **(ER):** 250–750 mg q6h	Hypotension, fever, agranulocytosis, SLE, headaches, proarrhythmia, confusion, disorientation, GI symptoms, hypotension

Quinidine (Quinaglute, Quinidex)	**T:** 200 mg, 300 mg **T (ER):** 300 mg, 324 mg **I:** 80 mg/ml	AF, WPW, PVCs, VT	**A (PO):** 200–600 mg q2–4h; **(ER):** 300–600 mg q8h	Diarrhea, hypotension, nausea, vomiting, cinchonism, fever, bitter taste, heart block, thrombocytopenia, proarrhythmia
Class IB				
Lidocaine (Xylocaine)	**I:** 300 mg for IM **IV Infusion:** 2 mg/ml, 4 mg/ml	PVCs, VT, VF	**IV:** 50–100 mg bolus, then 1–4 mg/min infusion	Drowsiness, agitation, muscle twitching, seizures, paresthesia, proarrhythmia, slurred speech, tinnitus, cardiac depression, bradycardia, asystole
Mexiletine (Mexitil)	**C:** 150 mg, 200 mg, 250 mg	PVCs, VT, VF	**A:** 600–1,200 mg/day	Drowsiness, agitation, muscle twitching, seizures, paresthesia, proarrhythmia, nausea, vomiting, blood dyscrasias, hepatitis, fever
Tocainide (Tonocard)	**T:** 400 mg, 600 mg	PVCs, VT, VF	**A:** 1,200–1,800 mg/day	Drowsiness, agitation, muscle twitching, seizures, paresthesia, proarrhythmia, nausea, vomiting, diarrhea, agranulocytosis
Class IC				
Flecainide (Tambocor)	**T:** 50 mg, 100 mg, 150 mg	AF, PSVT, life-threatening ventricular arrhythmias	**A:** 200–400 mg/day	Dizziness, tremors, bradycardia, heart block, heart failure, GI upset, neutropenia, flushing, blurred vision, metallic taste, proarrhythmia
Propafenone (Rythmol)	**T:** 150 mg, 225 mg, 300 mg	PAF, WPW, life-threatening ventricular arrhythmias	**A:** 450–900 mg/day	Dizziness, blurred vision, altered taste, nausea, exacerbation of asthma, proarrhythmia, bradycardia, heart block, heart failure, GI upset, bronchospasm, hepatotoxicity

Continued

ANTIARRHYTHMICS—cont'd

Name	Availability	Uses	Dosage Range	Side Effects
Class II (Beta-Blockers)				
Acebutolol (Sectral)	**C:** 200 mg, 400 mg	Ventricular arrhythmias	**A:** 600–1,200 mg/day	Bradycardia, hypotension, depression, nightmares, fatigue, sexual dysfunction, SLE, arthritis, myalgia
Esmolol (Brevibloc)	**I:** 10 mg/ml, 20 mg/ml	Supraventricular tachycardia	**A:** 50–200 mcg/kg/min	Hypotension, heart block, heart failure, bronchospasm
Propranolol (Inderal)	**T:** 10 mg, 20 mg	Tachyarrhythmias	**A:** 10–30 mg 3–4 times/day	Bradycardia, hypotension, depression, nightmares, fatigue, sexual dysfunction, heart block, bronchospasm
Class III				
Amiodarone (Cordarone, Pacerone)	**T:** 200 mg, 400 mg **I:** 50 mg/ml	AF, PAF, PSVT, life-threatening ventricular arrhythmias	**A (PO):** 800–1,600 mg/day for 1–3 wks, then 600–800 mg/day **(IV):** 150 mg bolus, then IV infusion	Blurred vision, photophobia, constipation, ataxia, proarrhythmia, pulmonary fibrosis, bradycardia, heart block, hyperthyroidism or hypothyroidism, peripheral neuropathy, GI upset, blue-gray skin, optic neuritis, hypotension
Dofetilide (Tikosyn)	**C:** 125 mcg, 250 mcg, 500 mcg	AF, A flutter	**A:** Individualized	Torsades de pointes, hypotension
Dronedarone (Multaq)	**T:** 400 mg	AF, A flutter	**A (PO):** 400 mg 2 times/day	Diarrhea, nausea, abdominal pain, vomiting, asthenia (loss of strength, energy)
Ibutilide (Corvert)	**I:** 0.1 mg/ml	AF, A flutter	**A (greater than 60 kg):** 1 mg over 10 min; **(less than 60 kg):** 0.01 mg/kg over 10 min	Torsades de pointes

Sotalol (Betapace)	**T:** 80 mg, 120 mg, 160 mg, 240 mg	AF, PAF, PSVT, life-threatening ventricular arrhythmias	**A:** 160–640 mg/day	Fatigue, dizziness, dyspnea, bradycardia, proarrhythmia, heart block, hypotension, bronchospasm
Class IV (Calcium Channel Blockers)				
Diltiazem (Cardizem)	**I:** 25 mg/ml vials **Infusion:** 1 mg/ml	AF, A flutter, PSVT	**A (IV):** 20–25 mg bolus, then infusion of 5–15 mg/hr	Hypotension, bradycardia, dizziness, headaches, heart block, asystole, heart failure
Verapamil (Calan, Isoptin)	**I:** 5 mg/2 ml	AF, A flutter, PSVT	**A (IV):** 5–10 mg	Hypotension, bradycardia, dizziness, headaches, constipation, heart block, heart failure, asystole, fatigue, edema, nausea

A, Adults; ***AF,*** atrial fibrillation; ***A flutter,*** atrial flutter; ***C,*** capsules; ***HF,*** heart failure; ***ER,*** extended-release; ***I,*** injection; ***PAF,*** paroxysmal atrial fibrillation; ***PSVT,*** paroxysmal supraventricular tachycardia; ***PVCs,*** premature ventricular contractions; ***SLE,*** systemic lupus erythematosus; ***SR,*** sustained-release; ***T,*** tablets; ***VT,*** ventricular tachycardia; ***WPW,*** Wolff-Parkinson-White syndrome.

Antibiotics

USES

Treatment of wide range of gram-positive or gram-negative bacterial infections, suppression of intestinal flora before surgery, control of acne, prophylactically to prevent rheumatic fever, prophylactically in high-risk situations (e.g., some surgical procedures or medical conditions) to prevent bacterial infection.

ACTION

Antibiotics are natural or synthetic compounds that have the ability to kill or suppress the growth of microorganisms.

One means of classifying antibiotics is by their anti-microbial spectrum. Narrow-spectrum agents are effective against few microorganisms (e.g., aminoglycosides are effective against gram-negative aerobes), whereas broad-spectrum agents are effective against a wide variety of microorganisms (e.g., fluoroquinolones are effective against gram-positive cocci and gram-negative bacilli).

Antimicrobial agents may also be classified based on their mechanism of action.

- Agents that inhibit cell wall synthesis or activate enzymes that disrupt the cell wall, causing a weakening in the cell, cell lysis, and death. Include penicillins, cephalosporins, vancomycin, imidazole antifungal agents.
- Agents that act directly on the cell wall, affecting permeability of cell membranes, causing leakage of intracellular substances. Include antifungal agents amphotericin and nystatin, polymyxin, colistin.
- Agents that bind to ribosomal subunits, altering protein synthesis and eventually causing cell death. Include aminoglycosides.
- Agents that affect bacterial ribosome function, altering protein synthesis and causing slow microbial growth. Do not cause cell death. Include chloramphenicol, clindamycin, erythromycin, tetracyclines.
- Agents that inhibit nucleic acid metabolism by binding to nucleic acid or interacting with enzymes necessary for nucleic acid synthesis. Inhibit DNA or RNA synthesis. Include rifampin, metronidazole, fluoroquinolones (e.g., ciprofloxacin).
- Agents that inhibit specific metabolic steps necessary for microbial growth, causing a decrease in essential cell components or synthesis of nonfunctional analogues of normal metabolites. Include trimethoprim, sulfonamides.
- Agents that inhibit viral DNA synthesis by binding to viral enzymes necessary for DNA synthesis, preventing viral replication. Include acyclovir, vidarabine.

SELECTION OF ANTIMICROBIAL AGENTS

The goal of therapy is to achieve antimicrobial action at the site of infection sufficient to inhibit the growth of the microorganism. The agent selected should be the most active against the most likely infecting organism, least likely to cause toxicity or allergic reaction. Factors to consider in selection of an antimicrobial agent include the following:

- Sensitivity pattern of the infecting microorganism
- Location and severity of infection (may determine route of administration)
- Pt's ability to eliminate the drug (status of renal and hepatic function)
- Pt's defense mechanisms (includes both cellular and humoral immunity)
- Pt's age, pregnancy status, genetic factors, allergies, CNS disorder, preexisting medical problems

CATEGORIZATION OF ORGANISMS BY GRAM STAINING

Gram-Positive Cocci	Gram-Negative Cocci	Gram-Positive Bacilli	Gram-Negative Bacilli
Aerobic *Staphylococcus aureus* *Staphylococcus epidermidis* *Streptococcus pneumoniae* *Streptococcus pyogenes* *Viridans streptococci* *Enterococcus faecalis* *Enterococcus faecium* **Anaerobic** *Peptostreptococcus* spp. *Peptococcus* spp.	**Aerobic** *Neisseria gonorrhoeae* *Neisseria meningitidis* *Moraxella catarrhalis*	**Aerobic** *Listeria monocytogenes* *Bacillus anthracis* *Corynebacterium diphtheriae* **Anaerobic** *Clostridium difficile* *Clostridium perfringens* *Clostridium tetani* *Actinomyces* spp.	**Aerobic** *Escherichia coli* *Klebsiella pneumoniae* *Proteus mirabilis* *Serratia marcescens* *Acinetobacter* spp. *Pseudomonas aeruginosa* *Enterobacter* spp. *Haemophilus influenzae* *Legionella pneumophila* **Anaerobic** *Bacteroides fragilis* *Fusobacterium* spp.

Antibiotic: Aminoglycosides

USES

Treatment of serious infections when other less-toxic agents are not effective, are contraindicated, or require adjunctive therapy (e.g., with penicillins or cephalosporins). Used primarily in the treatment of infections caused by gram-negative microorganisms, such as those caused by *Proteus, Klebsiella, Pseudomonas, Escherichia coli, Serratia,* and *Enterobacter*. Inactive against most gram-positive microorganisms. Not well absorbed systemically from GI tract (must be administered parenterally for systemic infections). Oral agents are given to suppress intestinal bacteria.

ACTION

Bactericidal. Transported across bacterial cell membrane; irreversibly bind to specific receptor proteins of bacterial ribosomes. Interfere with protein synthesis, preventing cell reproduction and eventually causing cell death.

ANTIBIOTIC: AMINOGLYCOSIDES

Name	Availability	Dosage Range	Side Effects
Amikacin (Amikin)	**I:** 50 mg/ml, 250 mg/ml	**A:** 7.5 mg/kg q12h or 15–20 mg/kg once daily **C:** 7.5 mg/kg q12h	Nephrotoxicity, neurotoxicity, ototoxicity (both auditory and vestibular), hypersensitivity (skin itching, redness, rash, swelling)
Gentamicin (Garamycin)	**I:** 10 mg/ml, 40 mg/ml	**A:** 5–7 mg/kg once daily or 1–2.5 mg/kg q8h **C:** 1–2.5 mg/kg q8h	Same as amikacin
Neomycin	**T:** 500 mg	**A:** 1 g for 3 doses as preop	Nausea, vomiting, diarrhea
Tobramycin (Nebcin)	**I:** 10 mg/ml, 40 mg/ml	**A:** 5–7 mg/kg once daily or 1–2.5 mg/kg q8h **C:** 1–2.5 mg/kg q8h	Same as amikacin

A, Adults; ***C*** *(dosage),* children; ***I,*** injection; ***T,*** tablets.

Antibiotic: Cephalosporins

USES

Broad-spectrum antibiotics, which, like penicillins, may be used in a number of diseases, including respiratory diseases, skin and soft tissue infection, bone/joint infections, genitourinary infections, prophylactically in some surgical procedures.

First-generation cephalosporins have activity against gram-positive organisms (e.g., streptococci and most staphylococci) and activity against most gram-negative organisms, including *Escherichia coli, Klebsiella pneumoniae, Proteus mirabilis, Salmonella,* and *Shigella.*

ACTION

Second-generation cephalosporins have same effectiveness as first-generation and increased activity against gram-negative organisms, including *Haemophilus influenzae, Neisseria, Enterobacter,* and several anaerobic organisms.

Third-generation cephalosporins are less active against gram-positive organisms but more active against the Enterobacteriaceae with some activity against *Pseudomonas aeruginosa, Serratia* spp., and *Acinetobacter* spp.

Fourth-generation cephalosporins have good activity against gram-positive organisms (e.g., *Staphylococcus aureus*) and gram-negative organisms (e.g., *Pseudomonas aeruginosa, E. coli, Klebsiella,* and *Proteus*).

Fifth-generation cephalosporins have good activity against gram-positive organisms (e.g., *Staphylococcus aureus, Streptococcus spp.*) and gram-negative organisms (e.g., *E. coli, Klebsiella* spp.).

Cephalosporins inhibit cell wall synthesis or activate enzymes that disrupt the cell wall, causing cell lysis and cell death. May be bacteriostatic or bactericidal. Most effective against rapidly dividing cells.

ANTIBIOTIC: CEPHALOSPORINS

Name	Availability	Dosage Range	Side Effects
First-Generation			
Cefadroxil (Duricef)	**C:** 500 mg **T:** 1 g **S:** 125 mg/5 ml, 250 mg/5 ml, 500 mg/5 ml	**A:** 500 mg–1 g q12h **C:** 15 mg/kg q12h	Abdominal cramps/pain, fever, nausea, vomiting, diarrhea, headaches, oral/vaginal candidiasis

Continued

ANTIBIOTIC: CEPHALOSPORINS—cont'd

Name	Availability	Dosage Range	Side Effects
Cefazolin (Ancef)	**I:** 500 mg, 1 g, 2 g	**A:** 500 mg–2 g q6–8h **C:** 25–100 mg/kg/day divided q6–8h	Fever, rash, diarrhea, nausea, pain at injection site
Cephalexin (Keflex, Keftab)	**C:** 250 mg, 500 mg **T:** 250 mg, 500 mg, 1 g	**A:** 250 mg–1 g q6–12h **C:** 25–100 mg/kg/day divided q6–8h	Headache, abdominal pain, diarrhea, nausea, dyspepsia
Second-Generation			
Cefaclor (Ceclor)	**C:** 250 mg, 500 mg **T (ER):** 500 mg **S:** 125 mg/5 ml, 187 mg/5 ml, 250 mg/5 ml, 375 mg/5 ml	**A:** 250–500 mg q8h **C:** 20–40 mg/kg/day q8–12h	Rash, diarrhea, increased transaminases May have serum sickness–like reaction
Cefotetan	**I:** 1 g, 2 g	**A:** 500 mg–3 g q12h **C:** 20–50 mg/kg q12h	Diarrhea, increased AST, ALT, hypersensitivity reactions
Cefoxitin (Mefoxin)	**I:** 1 g, 2 g	**A:** 1–2 g q6–8h **C:** 80–160 mg/kg/day divided q6h	Diarrhea
Cefprozil (Cefzil)	**T:** 250 mg, 500 mg **S:** 125 mg/5 ml, 250 mg/5 ml	**A:** 500 mg q12–24h **C:** 7.5–15 mg/kg q12h	Dizziness, abdominal pain, diarrhea, nausea, increased AST, ALT
Cefuroxime (Ceftin, Kefurox, Zinacef)	**T:** 125 mg, 250 mg, 500 mg **S:** 125 mg/5 ml, 250 mg/5 ml **I:** 750 mg, 1.5 g	**A (PO):** 125–500 mg q12h **(IM/IV):** 750 mg–1.5 g q8–12h **C (PO):** 10–15 mg/kg q12h **(IM/IV):** 50–150 mg/kg/day divided q8h	Diarrhea, nausea, vomiting, thrombophlebitis, increased AST, ALT

Third-Generation			
Cefdinir (Omnicef)	**C:** 300 mg **S:** 125 mg/5 ml	**A:** 300 mg q12h or 600 mg once daily **C:** 7 mg/kg q12h or 14 mg/kg once daily	Headache, hyperglycemia, abdominal pain, diarrhea, nausea
Cefditoren (Spectracef)	**T:** 200 mg	**A:** 200–400 mg q12h **C: (>11 yrs):** 200–400 mg q12h	Diarrhea, nausea
Cefotaxime (Claforan)	**I:** 500 mg, 1 g, 2 g	**A:** 1–2 g q4–12h **C:** 50–200 mg/kg/day divided q4–6h	Rash, diarrhea, nausea, pain at injection site
Cefpodoxime (Vantin)	**T:** 100 mg, 200 mg **S:** 50 mg/5 ml, 100 mg/5 ml	**A:** 100–400 mg q12h **C:** 5 mg/kg q12h	Rash, diarrhea, nausea
Ceftazidime (Fortaz, Tazicef, Tazidime)	**I:** 500 mg, 1 g, 2 g	**A:** 500 mg–2 g q8–12h **C:** 30–100 mg/kg q8h	Diarrhea, pain at injection site
Ceftibuten (Cedax)	**C:** 400 mg **S:** 90 mg/5 ml, 180 mg/5 ml	**A:** 400 mg once daily **C:** 4.5 mg/kg bid or 9 mg/kg once daily	Headache, nausea, diarrhea
Ceftriaxone (Rocephin)	**I:** 250 mg, 500 mg, 1 g, 2 g	**A:** 1–2 g q12–24h **C:** 50–100 mg/kg/day divided q12–24h	Rash, diarrhea, eosinophilia, increased AST, ALT
Fourth-Generation			
Cefepime (Maxipime)	**I:** 500 mg, 1 g, 2 g	**A:** 1–2 g q8–12h **C:** 50 mg/kg q8–12h	Rash, diarrhea, nausea; increased AST, ALT
Fifth-Generation			
Ceftaroline (Teflaro)	**I:** 400 mg, 600 mg	**A:** 600 mg q12h	Headache, insomnia, rash, pruritus, diarrhea, nausea

A, Adults; ***C,*** capsules; ***C (dosage),*** children; ***ER,*** extended-release; ***I,*** injection; ***S,*** suspension; ***T,*** tablets.

Antibiotic: Fluoroquinolones

USES

Fluoroquinolones act against a wide range of gram-negative and gram-positive organisms. They are used primarily in the treatment of lower respiratory infections, skin/skin structure infections, urinary tract infections, and sexually transmitted diseases.

ACTION

Bactericidal. Inhibit DNA gyrase in susceptible microorganisms, interfering with bacterial DNA replication and repair.

ANTIBIOTIC: FLUOROQUINOLONES

Name	Availability	Dosage Range	Side Effects
Ciprofloxacin (Cipro)	**T:** 100 mg, 250 mg, 500 mg, 750 mg **S:** 250 mg/5 ml, 500 mg/5 ml **I:** 200 mg, 400 mg	**A (PO):** 250–750 mg q12h; **(IV):** 200–400 mg q12h	Dizziness, headaches, anxiety, drowsiness, insomnia, abdominal pain, nausea, diarrhea, vomiting, phlebitis (parenteral)
Gemifloxacin (Factive)	**T:** 320 mg	**A:** 320 mg once daily	Headache, dizziness, rash, diarrhea, nausea
Levofloxacin (Levaquin)	**T:** 250 mg, 500 mg, 750 mg **I:** 250 mg, 500 mg, 750 mg **OS:** 250 mg/10 ml	**A (PO/IV):** 250–750 mg/day as single dose	Headache, insomnia, dizziness, rash, nausea, diarrhea, constipation
Moxifloxacin (Avelox)	**T:** 400 mg **I:** 400 mg	**A:** 400 mg/day	Headache, dizziness, insomnia, nausea, diarrhea
Norfloxacin (Noroxin)	**T:** 400 mg	**A:** 400 mg q12h	Same as ciprofloxacin
Ofloxacin	**T:** 200 mg, 300 mg, 400 mg	**A:** 200–400 mg q12h	Dizziness, headache, insomnia, abdominal cramps, diarrhea, nausea

A, Adults; ***I,*** injection; ***OS,*** oral solution; ***PO,*** oral; ***S,*** suspension; ***T,*** tablets.

Antibiotic: Macrolides

USES	ACTION
Macrolides act primarily against most gram-positive microorganisms and some gram-negative cocci. Azithromycin and clarithromycin appear to be more potent than erythromycin. Macrolides are used in the treatment of pharyngitis/tonsillitis, sinusitis, chronic bronchitis, pneumonia, uncomplicated skin/skin structure infections.	Bacteriostatic or bactericidal. Reversibly binds to the P site of the 50S ribosomal subunit of susceptible organisms, inhibiting RNA-dependent protein synthesis.

ANTIBIOTIC: MACROLIDES

Name	Availability	Dosage Range	Side Effects
Azithromycin (Zithromax)	**T:** 250 mg, 600 mg **S:** 100 mg/5 ml, 200 mg/5 ml, 1-g packet **I:** 500 mg	**A (PO):** 500 mg once, then 250 mg once daily **(IV):** 500 mg/day **C (PO/IV):** 5–10 mg/kg once daily	**PO:** Nausea, diarrhea, vomiting, abdominal pain **IV:** Pain, redness, swelling at injection site
Clarithromycin (Biaxin)	**T:** 250 mg, 500 mg **T (XL):** 500 mg **S:** 125 mg/5 ml	**A:** 250–500 mg q12h **C:** 7.5 mg/kg q12h	Headaches, loss of taste, nausea, vomiting, diarrhea, abdominal pain/discomfort
Erythromycin (EES, Eryc, EryPed, Ery-Tab, Erythrocin, PCE)	**T:** 200 mg, 250 mg, 333 mg, 400 mg, 500 mg **C**: 250 mg **S:** 100 mg/2.5 ml, 125 mg/5 ml, 200 mg/5 ml, 250 mg/5 ml, 400 mg/5 ml	**A (PO):** 250–500 mg q6h **(IV):** 500 mg–1 g q6h **C (PO):** 7.5 mg/kg q6h **(IV):** 15–50 mg/kg/day in divided doses q6h	**PO:** Nausea, vomiting, diarrhea, abdominal pain **IV:** Inflammation, phlebitis at injection site

A, Adults; ***C,*** capsules; ***C (dosage),*** children; ***I,*** injection; ***S,*** suspension; ***T,*** tablets; ***XL,*** long-acting.

Antibiotic: Penicillins

USES

Penicillins (also referred to as beta-lactam antibiotics) may be used to treat a large number of infections, including pneumonia and other respiratory diseases, urinary tract infections, septicemia, meningitis, intra-abdominal infections, gonorrhea and syphilis, bone/joint infection.

Penicillins are classified based on an antimicrobial spectrum:

Natural penicillins are very active against gram-positive cocci but ineffective against most strains of *Staphylococcus aureus* (inactivated by enzyme penicillinase).

Penicillinase-resistant penicillins are effective against penicillinase-producing *Staphylococcus aureus* but are less effective against gram-positive cocci than the natural penicillins.

Broad-spectrum penicillins are effective against gram-positive cocci and some gram-negative bacteria (e.g., *Haemophilus influenzae, Escherichia coli, Proteus mirabilis, Salmonella,* and *Shigella*).

Extended-spectrum penicillins are effective against gram-negative organisms, including *Pseudomonas aeruginosa, Enterobacter, Proteus* spp., *Klebsiella, Serratia* spp., and *Acinetobacter* spp.

ACTION

Penicillins inhibit cell wall synthesis or activate enzymes, which disrupt the bacterial cell wall, causing cell lysis and cell death. May be bacteriostatic or bactericidal. Most effective against bacteria undergoing active growth and division.

ANTIBIOTIC: PENICILLINS

Name	Availability	Dosage Range	Side Effects
Natural			
Penicillin G benzathine (Bicillin, Bicillin LA)	**I:** 600,000 units, 1.2 million units, 2.4 million units	**A:** 1.2–2.4 million units as single dose **C:** 25,000–50,000 units/kg as single dose	Mild diarrhea, nausea, vomiting, headaches, sore mouth/tongue, vaginal itching/discharge, allergic reaction (including anaphylaxis, skin rash, urticaria, pruritus)

Penicillin G potassium (Pfizerpen)	**I:** 1, 2, 3, 5 million-unit vials	**A:** 2–4 million units q4h **C:** 100,000–250,000 units/kg/day divided q4–6h	Rash, injection site reaction, phlebitis
Penicillin V potassium (Apo-Pen-VK)	**T:** 250 mg, 500 mg **S:** 125 mg/5 ml, 250 mg/5 ml	**A:** 250–500 mg q6–8h **C:** 25–50 mg/kg/day in divided doses q6–8h	Diarrhea, nausea, vomiting
Penicillinase-Resistant			
Dicloxacillin (Dynapen, Pathocil)	**C:** 125 mg, 250 mg, 500 mg **S:** 62.5 mg/5 ml	**A:** 125–500 mg q6h **C:** 25–50 mg/kg/day divided q6h	Abdominal pain, diarrhea, nausea
Nafcillin (Unipen)	**I:** 500 mg, 1 g, 2 g	**A (IV):** 500 mg–2 g q4–6h **C (IV):** 50–150 mg/kg/day in divided doses q4–6h	Inflammation, pain, phlebitis Increased risk of interstitial nephritis
Oxacillin (Bactocill)	**C:** 250 mg, 500 mg **S:** 250 mg/5 ml **I:** 250 mg, 500 mg, 1 g, 2 g	**A (IV):** 1–2 g q4–6h **C (IV):** 25–50 mg/kg q6h	Diarrhea, nausea, vomiting Increased risk of hepatotoxicity, interstitial nephritis
Broad-Spectrum			
Amoxicillin (Amoxil, Trimox)	**T:** 125 mg, 250 mg, 500 mg, 875 mg **C:** 250 mg, 500 mg **S:** 50 mg/ml, 125 mg/5 ml, 250 mg/5 ml	**A:** 250–500 mg q8h or 500–875 g q12h **C:** 20–90 mg/kg/day divided q8–12h	Diarrhea, colitis, nausea
Amoxicillin/clavulanate (Augmentin)	**T:** 250 mg, 500 mg, 875 mg **T (chewable):** 125 mg, 200 mg, 250 mg, 400 mg **S:** 125 mg/5 ml, 200 mg/5 ml, 250 mg/5 ml, 400 mg/5 ml	**A:** 875 mg q12h or 250–500 mg q8h **C:** 25–90 mg/kg/day divided q12h	Diarrhea, rash, nausea, vomiting

ANTIBIOTIC: PENICILLINS—cont'd

Name	Availability	Dosage Range	Side Effects
Ampicillin (Principen)	**C:** 250 mg, 500 mg **S:** 125 mg/5 ml, 250 mg/5 ml **I:** 125 mg, 250 mg, 500 mg, 1 g, 2 g	**A (PO):** 250–500 mg q6h **(IV):** 500 mg–2 g q6h **C (PO):** 12.5–50 mg/kg q6h **(IV):** 25–50 mg/kg q6h	Nausea, vomiting, diarrhea
Ampicillin/sulbactam (Unasyn)	**I:** 1.5 g, 3 g	**A:** 1.5–3 g q6h **C:** 25–50 mg/kg q6h	Local pain at injection site, rash, diarrhea
Extended-Spectrum			
Piperacillin/tazobactam (Zosyn)	**I:** 2.25 g, 3.375 g, 4.5 g	**A:** 3.375 g q6h or 4.5 g q6–8h **C:** 240–300 mg/kg/day divided q8h	Diarrhea, insomnia, headache, fever, rash
Ticarcillin/clavulanate (Timentin)	**I:** 3.1 g	**A:** 3.1 g q4–6h **C:** 200–300 mg/kg/day divided q4–6h	Colitis, nausea, vomiting, diarrhea

A, Adults; ***C,*** capsules; ***C** (dosage),* children; ***I,*** injection; ***PO,*** oral; ***S,*** suspension; ***T,*** tablets.

Anticoagulants/Antiplatelets/Thrombolytics

USES	ACTION
Treatment and prevention of venous thromboembolism, acute MI, acute cerebral embolism; reduce risk of acute MI; reduction of total mortality in pts with unstable angina; prevent occlusion of saphenous grafts following open heart surgery; prevent embolism in select pts with atrial fibrillation, prosthetic heart valves, valvular heart disease, cardiomyopathy. Heparin also used for acute/chronic consumption coagulopathies (disseminated intravascular coagulation).	*Anticoagulants:* Inhibit blood coagulation by preventing the formation of new clots and extension of existing ones *but do not dissolve formed clots.* Anticoagulants are subdivided into three classes. *Heparin* (including low molecular weight heparin): Indirectly interferes with blood coagulation by blocking the conversion of prothrombin to thrombin and fibrinogen to fibrin. *Coumarin:* Acts indirectly to prevent synthesis in the liver of vitamin K–dependent clotting factors. *Direct Thrombin Inhibitors:* Inhibit thrombin from converting fibrinogen to fibrin.
	Antiplatelets: Interfere with platelet aggregation. Effects are irreversible for life of platelet. Medications in this group act by different mechanisms. Aspirin irreversibly inhibits cyclo-oxygenase and formation of thromboxane A_2. Clopidogrel, dipyridamole, prasugrel, and ticlopidine have similar effects as aspirin and are known as adenosine diphosphate (ADP) inhibitors. Abciximab, eptifibatide, and tirofiban block binding of fibrinogen to the glycoprotein IIb/IIIa receptor on platelet surface (known as platelet glycoprotein IIb/IIIa receptor antagonists).
	Thrombolytics: Act directly or indirectly on fibrinolytic system to dissolve clots (converting plasminogen to plasmin, an enzyme that digests fibrin clot).

ANTICOAGULANTS/ANTIPLATELETS/THROMBOLYTICS

Name	Availability	Uses	Side Effects
Anticoagulants			
Direct Thrombin Inhibitors			
Argatroban	**I:** 100 mg/ml	Prevent/treat VTE in pts with HIT or at risk for HIT undergoing PCI	Bleeding, hypotension, hematuria
Bivalirudin (Angiomax)	**I:** 250-mg vials	Pts with unstable angina undergoing PTCA	Bleeding, hypotension, pain, headache, nausea, back pain
Dabigatran (Pradaxa)	**C:** 75 mg, 150 mg	Reduce risk for stroke/embolism with nonvalvular atrial fibrillation	Bleeding, gastritis, dyspepsia
Desirudin (Iprivask)	**I:** 15 mg	Hip surgery	Bleeding
Heparin, Low Molecular Weight Heparins			
Dalteparin (Fragmin)	**I:** 2,500 units, 5,000 units, 7,500 units, 10,000 units	Hip surgery, abdominal surgery, unstable angina or non–Q-wave MI	Bleeding, hematoma, increased ALT, AST, pain at injection site, bruising
Enoxaparin (Lovenox)	**I:** 30 mg, 40 mg, 60 mg, 80 mg, 100 mg, 120 mg, 150 mg	Hip surgery, knee surgery, abdominal surgery, unstable angina or non–Q-wave MI, acute illness	Bleeding, thrombocytopenia, hematoma, increased ALT, AST, nausea, bruising
Heparin	**I:** 1,000 units/ml, 2,500 units/ml, 5,000 units/ml, 7,500 units/ml, 10,000 units/ml, 20,000 units/ml	Prevent/treat VTE	Bleeding, thrombocytopenia, skin rash, itching, burning
Tinzaparin (Innohep)	**I:** 20,000 units/ml vials	Treatment of VTE (with warfarin)	Bleeding, thrombocytopenia, increased ALT, injection site hematoma
Factor Xa Inhibitor			
Apixaban (Eliquis)	**T:** 2.5 mg, 5 mg	Reduce risk of stroke/embolism in nonvalvular atrial fibrillation	Bleeding, nausea, anemia

Fondaparinux (Arixtra)	**I:** 2.5 mg	Hip surgery, knee surgery, DVT	Bleeding, thrombocytopenia, hematoma, fever, nausea, anemia
Rivaroxaban (Xarelto)	**T:** 10 mg	Prevent DVT post knee, hip replacement Prevent thromboembolism in atrial fibrillation	Bleeding
Coumarin			
Warfarin (Coumadin)	**PO:** 1 mg, 2 mg, 2.5 mg, 3 mg, 4 mg, 5 mg, 6 mg, 7.5 mg, 10 mg **I:** 5 mg	Prevent/treat VTE in pts; prevent systemic embolism in pts with heart valve replacement, valve heart disease, MI, atrial fibrillation	Bleeding, skin necrosis, anorexia, nausea, vomiting, diarrhea, rash, abdominal cramps, purple toe syndrome, drug interactions (see individual monograph)
Antiplatelets			
Abciximab (ReoPro)	**I:** 2 mg/ml	Adjunct to PCI to prevent acute cardiac ischemic complications (with heparin and aspirin)	Bleeding, hypotension, nausea, vomiting, back pain, allergic reactions, thrombocytopenia
Aspirin	**PO:** 81 mg, 165 mg, 325 mg, 500 mg, 650 mg	TIA Prevention of reinfarction and thromboembolism post MI	Tinnitus, dizziness, hypersensitivity, dyspepsia, minor bleeding, GI ulceration
Clopidogrel (Plavix)	**PO:** 75 mg	Reduce risk of stroke, MI, or vascular death in pts with recent MI, noncardioembolic stroke, peripheral artery disease. Reduce CV death, MI, stroke, reinfarction in pts with non-STEMI/STEMI	Bleeding, rash, pruritus, bruising, epistaxis
Dipyridamole (Persantine)	**PO:** 25 mg, 50 mg, 75 mg	Prevent postop thromboembolic complications following cardiac valve replacement	Dizziness, GI distress

Continued

ANTICOAGULANTS/ANTIPLATELETS/THROMBOLYTICS—cont'd

Name	Availability	Uses	Side Effects
Eptifibatide (Integrilin)	**I:** 0.75 mg/ml, 2 mg/ml	Treatment of acute coronary syndrome	Bleeding, hypotension
Prasugrel (Effient)	**PO:** 5 mg, 10 mg	Reduce thrombotic cardiovascular events in pts with ACS to be managed with PCI (including stenting)	Bleeding, hypotension
Ticagrelor (Brilinta)	**PO:** 90 mg	Reduce thrombotic cardiovascular events in pts with ACS	Bleeding, dyspnea
Ticlopidine (Ticlid)	**PO:** 250 mg	Reduce risk stroke in pts with CVA precursors, TIA Prevention of stent thrombosis	Neutropenia, agranulocytosis, thrombocytopenia, aplastic anemia, increased serum cholesterol/triglycerides, rash, diarrhea, nausea, vomiting, GI pain
Tirofiban (Aggrastat)	**I:** 50 mcg/ml, 250 mcg/ml	Treatment of acute coronary syndrome	Bleeding, thrombocytopenia, bradycardia, pelvic pain
Thrombolytics			
Alteplase (Activase)	**I:** 50 mg, 100 mg	Acute MI, acute ischemic stroke, pulmonary embolism	Bleeding, epistaxis
Reteplase (Retavase)	**I:** 10.4 units	Acute MI	Bleeding, injection site bleeding, anemia
Tenecteplase (TNKase)	**I:** 50 mg	Acute MI	Bleeding, hematuria

ACS, Acute coronary syndrome; ***DTV,*** deep vein thrombosis; ***HIT,*** heparin-induced thrombocytopenia; ***I,*** injection; ***MI,*** myocardial infarction; ***PCI,*** percutaneous coronary intervention; ***PO,*** oral; ***PTCA,*** percutaneous transluminal coronary angioplasty; ***STEMI,*** ST segment elevation MI; ***T,*** tablet; ***TIA,*** transient ischemic attack; ***VTE,*** venous thromboembolism.

Anticonvulsants

USES

Anticonvulsants are used to treat seizures. Seizures can be divided into two broad categories: partial seizures and generalized seizures. *Partial seizures* begin focally in the cerebral cortex, undergoing limited spread. Simple partial seizures do not involve loss of consciousness but may evolve secondarily into generalized seizures. Complex partial seizures involve impairment of consciousness.

Generalized seizures may be convulsive or nonconvulsive and usually produce immediate loss of consciousness.

ACTION

Anticonvulsants can prevent or reduce excessive discharge of neurons with seizure foci or decrease the spread of excitation from seizure foci to normal neurons. The exact mechanism is unknown but may be due to (1) suppressing sodium influx, (2) suppressing calcium influx, or (3) increasing the action of gamma-aminobutyric acid (GABA), which inhibits neurotransmitters throughout the brain.

ANTICONVULSANTS

Name	Availability	Uses	Dosage Range	Side Effects
Carbamazepine (Carbatrol, Tegretol, Tegretol XR)	**S:** 100 mg/5 ml **T (chewable):** 100 mg **T:** 200 mg **T (ER):** 100 mg, 200 mg, 400 mg **C (ER):** 200 mg, 300 mg	Complex partial, tonic-clonic, mixed seizures; trigeminal neuralgia	**A:** 800–1,600 mg/day in 2–3 doses **C:** 400–800 mg/day in 3–4 doses	Dizziness, diplopia, leukopenia, drowsiness, blurred vision, headache, ataxia, nausea, vomiting, hyponatremia
Clonazepam (Klonopin)	**T:** 0.5 mg, 1 mg, 2 mg	Petit mal, akinetic, myoclonic, absence seizures	**A:** 1.5–8 mg/day in 2–3 doses	CNS depression, sedation, ataxia, confusion, depression, behavior disorders, respiratory depression
Ezogabine (Potiga)	**T:** 50 mg, 200 mg, 300 mg, 400 mg	Partial onset seizures	**A:** 600–1,200 mg/day in 3 doses	Dizziness, somnolence, fatigue, confusion, vertigo, tremor, diplopia, blurred vision, balance disorder

ANTICONVULSANTS—cont'd

Name	Availability	Uses	Dosage Range	Side Effects
Fosphenytoin (Cerebyx)	**I:** 50 mg PE/ml	Status epilepticus, seizures occurring during neurosurgery	**A:** 15–20 mg PE/kg bolus, then 4–6 mg PE/kg/day maintenance	Burning, itching, paresthesia, nystagmus, ataxia
Gabapentin (Neurontin)	**C:** 100 mg, 300 mg, 400 mg	Partial seizures with and without secondary generalization	**A:** 1,800–3,600 mg/day in 3 doses	CNS depression, fatigue, drowsiness, dizziness, ataxia, nystagmus, blurred vision, confusion
Lacosamide (Vimpat)	**T:** 50 mg, 100 mg, 150 mg, 200 mg **S:** 10 mg/ml **I:** 10 mg/ml	Adjunctive therapy, partial seizures	**A:** 200–400 mg/day in 2 doses	Diplopia, headache, dizziness, nausea
Lamotrigine (Lamictal)	**T:** 25 mg, 100 mg, 150 mg, 200 mg **T (ER):** 25 mg, 50 mg, 100 mg, 200 mg **T (ODT):** 25 mg, 50 mg, 100 mg, 200 mg	Partial seizures, primary generalized tonic-clonic seizures, generalized seizures of Lennox-Gastaut syndrome	**A:** 100–600 mg/day in 2 doses	Dizziness, ataxia, drowsiness, diplopia, nausea, rash, headache, vomiting, insomnia, incoordination
Levetiracetam (Keppra)	**T:** 250 mg, 500 mg, 750 mg, 2,000 mg **S:** 100 mg/ml	Adjunctive therapy, partial seizures, primary tonic-clonic seizures, myoclonic seizures	**A:** 1,000–3,000 mg/day in 2 doses	Dizziness, drowsiness, weakness, irritability, hallucinations, psychosis
Oxcarbazepine (Trileptal)	**T:** 150 mg, 300 mg, 600 mg	Partial seizures	**A:** 1,200–2,400 mg/day in 2 doses	Drowsiness, dizziness, headaches, diplopia, ataxia, nausea, vomiting
Phenobarbital	**T:** 30 mg, 60 mg, 100 mg **I:** 65 mg, 130 mg	Tonic-clonic, partial seizures; status epilepticus	**A (PO):** 100–300 mg/day; **(IM/IV):** 200–600 mg **C (PO):** 3–5 mg/kg/day; **(IM/IV):** 100–400 mg	CNS depression, sedation, paradoxical excitement and hyperactivity, rash

Phenytoin (Dilantin)	**C:** 100 mg **T (chewable):** 50 mg **S:** 125 mg/5 ml **I:** 50 mg/ml	Tonic-clonic, psychomotor seizures	**A (PO):** 300–600 mg/day in 1–3 doses; **IV:** 150–250 mg **C (PO):** 4–8 mg/kg/day in 1–3 doses; **(IV):** 10–15 mg/kg	Nystagmus, ataxia, hypertrichosis, gingival hyperplasia, rash, osteomalacia, lymphadenopathy
Pregabalin (Lyrica)	**C:** 25 mg, 50 mg, 75 mg, 100 mg, 150 mg, 200 mg, 225 mg, 300 mg	Adjunctive therapy, partial seizures	**A:** 150–600 mg/day in 2 or 3 doses	Confusion, drowsiness, dizziness, ataxia, weight gain, dry mouth, blurred vision, peripheral edema
Primidone (Mysoline)	**T:** 50 mg, 250 mg **S:** 250 mg/5 ml	Complex partial, akinetic, tonic-clonic seizures	**A:** 750–1250 mg/day in 3–4 doses **C:** 10–25 mg/kg/day	CNS depression, sedation, paradoxical excitement and hyperactivity, rash, dizziness, ataxia
Tiagabine (Gabitril)	**T:** 4 mg, 12 mg, 16 mg, 20 mg	Partial seizures	**A:** Initially, 4 mg up to 56 mg/day in 2–4 doses **C:** Initially, 4 mg up to 32 mg/day in 2–4 doses	Dizziness, asthenia (loss of strength, energy), nervousness, anxiety, tremors, abdominal pain
Topiramate (Topamax)	**T:** 25 mg, 100 mg, 200 mg	Partial seizures	**A:** 200–400 mg/day in 2 doses **C:** 1–9 mg/kg/day in 2 divided doses	Drowsiness, dizziness, headache, ataxia, confusion, weight loss, diplopia
Valproic acid (Depakene, Depakote)	**C:** 250 mg **S:** 250 mg/5 ml **Sprinkles:** 125 mg **T:** 125 mg, 250 mg, 500 mg **T (ER):** 500 mg **I:** 100 mg/ml	Complex partial, absence seizures	**A, C:** 15–60 mg/kg/day in 2–3 doses	Nausea, vomiting, tremors, thrombocytopenia, hair loss, hepatic dysfunction, weight gain, decreased platelet function

Continued

ANTICONVULSANTS—cont'd

Name	Availability	Uses	Dosage Range	Side Effects
Vigabatrin (Sabril)	**T:** 500 mg **PS:** 500 mg	Infantile spasms, refractory complex partial seizures	**A:** 3 g/day in 2 divided doses **C:** 40–100 mg/kg/day in 2 divided doses	Vision changes, eye pain, abdominal pain, agitation, confusion, mood/mental changes, abnormal coordination
Zonisamide (Zonegran)	**C:** 100 mg	Partial seizures	**A:** 100–400 mg/day in 1 or 2 doses	Drowsiness, dizziness, anorexia, diarrhea, weight loss, agitation, irritability, rash, nausea

A, Adults; ***C,*** capsules; ***C** (dosage),* children; ***ER,*** extended-release; ***I,*** injection; ***ODT,*** orally disintegrating tablets; ***PE,*** phenytoin equivalent; ***PO,*** oral; ***PS,*** powder sachet; ***S,*** suspension; ***T,*** tablets.

Antidepressants

USES

Used primarily for the treatment of depression. Depression can be a chronic or recurrent mental disorder presenting with symptoms such as depressed mood, loss of interest or pleasure, guilt feelings, disturbed sleep/appetite, low energy, and difficulty in thinking. Depression can also lead to suicide.

ACTION

Antidepressants include tricyclics, monoamine oxidase inhibitors (MAOIs), selective serotonin reuptake inhibitors (SSRIs), serotonin-norepinephrine reuptake inhibitors (SNRIs), and other antidepressants. Depression may be due to reduced functioning of monoamine neurotransmitters (e.g., norepinephrine, serotonin [5-HT], dopamine) in the CNS (decreased amount and/or decreased effects at the receptor sites). Antidepressants block metabolism, increase amount/effects of monoamine neurotransmitters, and act at receptor sites (change responsiveness/sensitivities of both presynaptic and postsynaptic receptor sites).

ANTIDEPRESSANTS

Name	Availability	Uses	Dosage Range (per day)	Side Effects
Tricyclics				
Amitriptyline (Elavil)	**T:** 10 mg, 25 mg, 50 mg, 75 mg, 100 mg, 150 mg	Depression, neuropathic pain	50–150 mg	Drowsiness, blurred vision, constipation, confusion, postural hypotension, cardiac conduction defects, weight gain, seizures, dry mouth
Clomipramine (Anafranil)	**C:** 25 mg, 50 mg, 75 mg	OCD	25–250 mg	Dizziness, somnolence, drowsiness, headache, xerostomia, constipation, nausea
Desipramine (Norpramin)	**T:** 10 mg, 25 mg, 50 mg, 75 mg, 100 mg, 150 mg	Depression, neuropathic pain	50–150 mg	Dizziness, drowsiness, fatigue, headache, anorexia, diarrhea, nausea
Imipramine (Tofranil)	**T:** 10 mg, 25 mg, 50 mg **C:** 75 mg, 100 mg, 125 mg, 150 mg	Depression, enuresis, neuropathic pain, panic disorder, ADHD	25–100 mg	Dizziness, fatigue, headache, vomiting, xerostomia
Nortriptyline (Aventyl, Pamelor)	**C:** 10 mg, 25 mg, 50 mg, 75 mg **S:** 10 mg/5 ml	Depression, neuropathic pain, smoking cessation	75–150 mg	Dizziness, fatigue, headache, anorexia, xerostomia
Monoamine Oxidase Inhibitors				
Phenelzine (Nardil)	**T:** 15 mg	Depression	45–60 mg	Sedation, hypertensive crisis, weight gain, orthostatic hypotension

Continued

ANTIDEPRESSANTS—cont'd

Name	Availability	Uses	Dosage Range (per day)	Side Effects
Tranylcypromine (Parnate)	**T:** 10 mg	Depression	10–60 mg	Same as phenelzine
Selective Serotonin Reuptake Inhibitors				
Citalopram (Celexa)	**T:** 20 mg, 40 mg **S:** 10 mg/5 ml	Depression, OCD, panic disorder	20–40 mg	Insomnia or sedation, nausea, agitation, headaches
Escitalopram (Lexapro)	**T:** 5 mg, 10 mg, 20 mg	Depression, GAD	10–20 mg	Insomnia or sedation, nausea, agitation, headaches
Fluoxetine (Prozac)	**C:** 10 mg, 20 mg, 40 mg **T:** 10 mg **S:** 20 mg/5 ml	Depression, OCD, bulimia, panic disorder, anorexia, bipolar disorder, premenstrual syndrome	10–80 mg	Akathisia, sexual dysfunction, skin rash, urticaria, pruritus, decreased appetite, asthenia (loss of strength, energy), diarrhea, drowsiness, headaches, diaphoresis, insomnia, nausea, tremors
Fluvoxamine (Luvox, Luvox CR)	**T:** 25 mg, 50 mg, 100 mg **C (SR):** 100 mg, 150 mg	OCD, SAD	100–300 mg	Sexual dysfunction, fatigue, constipation, dizziness, drowsiness, headaches, insomnia, nausea, vomiting
Paroxetine (Paxil)	**T:** 10 mg, 20 mg, 30 mg, 40 mg **S:** 10 mg/5 ml	Depression, OCD, panic attack, SAD	20–50 mg	Asthenia (loss of strength, energy), constipation, diarrhea, diaphoresis, insomnia, nausea, sexual dysfunction, tremors, vomiting, urinary frequency or retention
Sertraline (Zoloft)	**T:** 25 mg, 50 mg, 100 mg **S:** 20 mg/ml	Depression, OCD, panic attack	50–200 mg	Sexual dysfunction, dizziness, drowsiness, anorexia, diarrhea, nausea, dry mouth, abdominal cramps, decreased weight, headaches, increased diaphoresis, tremors, insomnia

Serotonin-Norepinephrine Reuptake Inhibitors

Desvenlafaxine (Pristiq)	**T:** 50 mg, 100 mg	Depression	50–100 mg	Nausea, dizziness, insomnia, hyperhidrosis, constipation, drowsiness, decreased appetite, anxiety, male sexual function disorders
Duloxetine (Cymbalta)	**C:** 20 mg, 30 mg, 60 mg	Depression, fibromyalgia, neuropathic pain	40–60 mg	Nausea, dry mouth, constipation, decreased appetite, fatigue, diaphoresis
Venlafaxine (Effexor)	**T:** 25 mg, 37.5 mg, 50 mg, 75 mg, 100 mg **T (ER):** 37.5 mg, 75 mg, 150 mg	Depression, anxiety	75–375 mg	Increased blood pressure, agitation, sedation, insomnia, nausea

Other

Bupropion (Wellbutrin)	**T:** 75 mg, 100 mg **SR:** 100 mg, 150 mg	Depression, smoking cessation, ADHD, bipolar disorder	150–450 mg	Insomnia, irritability, seizures
Mirtazapine (Remeron)	**T:** 15 mg, 30 mg, 45 mg	Depression	15–45 mg	Sedation, dry mouth, weight gain, agranulocytosis, hepatic toxicity
Trazodone (Desyrel)	**T:** 50 mg, 100 mg, 150 mg, 300 mg	Depression	50–600 mg	Sedation, orthostatic hypotension, priapism
Vilazodone (Viibyrd)	**T:** 10 mg, 20 mg, 40 mg	Depression	10–40 mg	Diarrhea, nausea, dizziness, dry mouth, insomnia, vomiting, decreased libido

ADHD, Attention-deficit hyperactivity disorder; ***C,*** capsules; ***ER,*** extended-release; ***GAD,*** generalized anxiety disorder; ***OC,*** oral concentrate; ***OCD,*** obsessive-compulsive disorder; ***S,*** suspension; ***SAD,*** social anxiety disorder; ***SR,*** sustained-release; ***T,*** tablets.

Antidiabetics

USES

Insulin: Treatment of insulin-dependent diabetes (type 1) and non–insulin-dependent diabetes (type 2). Also used in acute situations such as ketoacidosis, severe infections, major surgery in otherwise non–insulin-dependent diabetics. Administered to pts receiving parenteral nutrition. Drug of choice during pregnancy. All insulins, including long-acting insulins, can cause hypoglycemia and weight gain.

Alpha-glucosidase inhibitors: Adjunct to diet and exercise for management of type 2 diabetes mellitus.

Biguanides: Adjunct to diet and exercise for management of type 2 diabetes mellitus.

Dipeptidyl peptidase 4 inhibitors (DPP-4): Adjunct to diet and exercise for management of type 2 diabetes mellitus.

Meglitinide: Adjunct to diet and exercise for management of type 2 diabetes mellitus.

Sulfonylureas: Adjunct to diet and exercise for management of type 2 diabetes mellitus.

Thiazolidinediones: Adjunct to diet and exercise for management of type 2 diabetes mellitus.

ACTION

Insulin: A hormone synthesized and secreted by beta cells of Langerhans' islet in the pancreas. Controls storage and utilization of glucose, amino acids, and fatty acids by activated transport systems/enzymes. Inhibits breakdown of glycogen, fat, protein. Insulin lowers blood glucose by inhibiting glycogenolysis and gluconeogenesis in liver; stimulates glucose uptake by muscle, adipose tissue. Activity of insulin is initiated by binding to cell surface receptors.

Alpha-glucosidase inhibitors: Work locally in small intestine, slowing carbohydrate breakdown and glucose absorption.

Biguanides: Inhibit hepatic gluconeogenesis, glycogenolysis; enhance insulin sensitivity in muscle and fat.

DPP-4: Inhibit degradation of endogenous incretins, which increases insulin secretion, decreases glucagon secretion.

Meglitinide: Stimulates pancreatic insulin secretion.

Sulfonylureas: Stimulate release of insulin from beta cells of the pancreas.

Thiazolidinediones: Enhance insulin sensitivity in muscle and fat.

ANTIDIABETICS

INSULIN

Type	Onset	Peak	Duration	Comments
Rapid-Acting				
Apidra, glulisine	10–15 min	1–1.5 hrs	3–5 hrs	Stable at room temp for 28 days Can mix with NPH
Humalog, lispro	15–30 min	0.5–2.5 hrs	6–8 hrs	Stable at room temp for 28 days Can mix with NPH
Novolog, aspart	10–20 min	1–3 hrs	3–5 hrs	Stable at room temp for 28 days Can mix with NPH
Short-Acting				
Humulin R, Novolin R, regular	30–60 min	1–5 hrs	6–10 hrs	Stable at room temp for 28 days Can mix with NPH
Intermediate-Acting				
Humulin N, Novolin N, NPH	1–2 hrs	6–14 hrs	16–24 hrs	Stable at room temp for 28 days Can mix with aspart, lispro, glulisine
Long-Acting				
Lantus, glargine	1.1 hrs	No significant peak	24 hrs	Do NOT mix with other insulins Stable at room temp for 28 days
Levemir, detemir	0.8–2 hrs	No significant peak	12–24 hrs (dose dependent)	Do NOT mix with other insulins Stable at room temp for 42 days

Oral Agents

Name	Availability	Dosage Range	Side Effects
Sulfonylureas			
Glimepiride (Amaryl)	**T:** 1 mg, 2 mg, 4 mg	1–8 mg/day	Hypoglycemia, dizziness, headache, nausea, flu-like syndrome
Glipizide (Glucotrol)	**T:** 5 mg, 10 mg **T (XL):** 5 mg	**T:** 2.5–40 mg/day **XL:** 5–20 mg/day	Dizziness, nervousness, anxiety, diarrhea, tremor
Glyburide (DiaBeta, Micronase)	**T:** 1.25 mg, 2.5 mg, 5 mg **PT:** 1.5 mg, 3 mg	**T:** 1.25–20 mg/day **PT:** 1.5–12 mg/day	Dizziness, headache, nausea
Alpha-Glucosidase Inhibitors			
Acarbose (Precose)	**T:** 25 mg, 50 mg, 100 mg	75–300 mg/day	Flatulence, diarrhea, abdominal pain, increased risk of hypoglycemia when used with insulin or sulfonylureas
Miglitol (Glyset)	**T:** 25 mg, 50 mg, 100 mg	75–300 mg/day	Flatulence, diarrhea, abdominal pain, rash
Dipeptidyl Peptidase Inhibitors			
Alogliptin (Nesina)	**T:** 6.25 mg, 12.5 mg, 25 mg	6.25–25 mg/day	Nasopharyngitis, cough, headache, upper respiratory tract infections
Linagliptin (Tradjenta)	**T:** 5 mg	5 mg/day	Arthralgia, back pain, headache
Saxagliptin (Onglyza)	**T:** 2.5 mg, 5 mg	2.5–5 mg/day	Upper respiratory tract infection, urinary tract infection, headache
Sitagliptin (Januvia)	**T:** 25 mg, 50 mg, 100 mg	25–100 mg/day	Nasopharyngitis, upper respiratory infection, headaches, modest weight gain, increased incidence of hypoglycemia when added to a sulfonylurea

Biguanides			
Metformin (Glucophage)	**T:** 500 mg, 850 mg **XR:** 500 mg	**T:** 0.5–2.5 g/day **XR:** 1,500–2,000 mg/day	Nausea, vomiting, diarrhea, loss of appetite, metallic taste, lactic acidosis (rare but potentially fatal complication)
Glucagon-Like Peptide-1 (GLP-1)			
Albiglutide (Tanzeum)	**I:** 30 mg, 50 mg	30–50 mg once weekly	Diarrhea, nausea, upper respiratory tract infection, injection site reaction
Exenatide (Byetta)	**I:** 5 mcg, 10 mcg	5–10 mcg 2 times/day	Diarrhea, dizziness, dyspnea, headaches, nausea, vomiting
Exenatide extended-release (Bydureon)	**I:** 2 mg	2 mg once weekly	Diarrhea, nausea, headache
Liraglutide (Victoza)	**I:** 0.6 mg, 1.2 mg, 1.8 mg (6 mg/ml)	0.6–1.8 mg/day	Headache, nausea, diarrhea
Meglitinides			
Nateglinide (Starlix)	**T:** 60 mg, 120 mg	60–120 mg 3 times/day	Hypoglycemia, upper respiratory infection, dizziness, back pain, flu-like syndrome
Repaglinide (Prandin)	**T:** 0.5 mg, 1 mg, 2 mg	0.5–1 mg with each meal (**Maximum:** 16 mg/day)	Headache, hypoglycemia, upper respiratory infection
Thiazolidinediones			
Pioglitazone (Actos)	**T:** 15 mg, 30 mg, 45 mg	15–45 mg/day	Mild to moderate peripheral edema, weight gain, increased risk of HF, associated with reduced bone mineral density and increased incidence of fractures
Rosiglitazone (Avandia)	**T:** 2 mg, 4 mg, 8 mg	4–8 mg/day	Increased cholesterol, wgt gain, back pain, upper respiratory tract infection

ANTIDIABETICS—cont'd

Name	Availability	Dosage Range	Side Effects
Miscellaneous			
Bromocriptine (Cycloset)	**T:** 0.8 mg	1.6–4.8 mg/day	Nausea, fatigue, dizziness, vomiting
Canagliflozin (Invokana)	**T:** 100 mg, 300 mg	100–300 mg/day	Increased urination, genital yeast infections, urticaria, rash, pruritus
Colesevelam (Welchol)	**T:** 625 mg **S:** 1.875 g, 3.75 g packet	3.75 g/day	Constipation, dyspepsia, nausea
Dapagliflozin (Farxiga)	**T:** 5 mg, 10 mg	5–10 mg/day	Genital yeast infections, nasopharyngitis, urinary tract infections
Empagliflozin (Jardiance)	**T:** 10 mg, 25 mg	10–25 mg/day	Female genital mycotic infections, urinary tract infections
Pramlintide (Symlin)	**I:** 0.6 mg/ml	15–60 mcg immediately prior to meals	Abdominal pain, anorexia, headaches, nausea, vomiting, severe hypoglycemia may occur when used in combination with insulin (reduction in dosages of short-acting, including premixed, insulins recommended)

HF, Heart failure; ***I,*** injection; ***PT,*** prestab; ***S:*** suspension; ***T,*** tablets; ***XL,*** extended-release; ***XR,*** extended-release.

Antidiarrheals

USES	ACTION	
Acute diarrhea, chronic diarrhea of inflammatory bowel disease, reduction of fluid from ileostomies.	*Systemic agents:* Act as smooth muscle receptors (enteric) disrupting peristaltic movements, decreasing GI motility, increasing transit time of intestinal contents.	*Local agents:* Adsorb toxic substances and fluids to large surface areas of particles in the preparation. Some of these agents coat and protect irritated intestinal walls. May have local anti-inflammatory action.

ANTIDIARRHEALS

Name	Availability	Type	Dosage Range
Bismuth (Pepto-Bismol)	**T:** 262 mg **C:** 262 mg **L:** 130 mg/15 ml, 262 mg/15 ml, 524 mg/15 ml	Local	**A:** 2 **T** or 30 ml **C (9–12 yrs):** 1 **T** or 15 ml **C (6–8 yrs):** 2/3 **T** or 10 ml **C (3–5 yrs):** 1/3 **T** or 5 ml
Diphenoxylate with atropine (Lomotil)	**T:** 2.5 mg **L:** 2.5 mg/5 ml	Systemic	**A:** 5 mg 4 times/day **C:** 0.3–0.4 mg/kg/day in 4 divided doses **(L)**
Loperamide (Imodium)	**C:** 2 mg **T:** 2 mg **L:** 1 mg/5 ml, 1 mg/ml	Systemic	**A:** Initially, 4 mg (**Maximum:** 16 mg/day) **C (9–12 yrs):** 2 mg 3 times/day **C (6–8 yrs):** 2 mg 2 times/day **C (2–5 yrs):** 1 mg 3 times/day **(L)**

A, Adults; ***C,*** capsules; ***C** (dosage),* children; ***L,*** liquid; ***S,*** suspension; ***T,*** tablets.

Antifungals: Systemic Mycoses

Systemic mycoses are subdivided into opportunistic infections (candidiasis, aspergillosis, cryptococcosis, and mucormycosis) that are seen primarily in debilitated or immunocompromised hosts and nonopportunistic infections (blastomycosis, histoplasmosis, and coccidioidomycosis) that occur in any host. Treatment can be difficult because these infections often resist treatment and may require prolonged therapy.

ANTIFUNGALS: SYSTEMIC MYCOSES

Name	Indications	Side Effects
Amphotericin B	Potentially life-threatening fungal infections, including aspergillosis, blastomycosis, coccidioidomycosis, cryptococcosis, histoplasmosis, systemic candidiasis	Fever, chills, headache, nausea, vomiting, nephrotoxicity, hypokalemia, hypomagnesemia, hypotension, dyspnea, arrhythmias, abdominal pain, diarrhea, increased hepatic function tests
Amphotericin B lipid complex (Abelcet)	Invasive fungal infections	Chills, fever, hypotension, headache, nausea, vomiting
Amphotericin B liposomal (AmBisome)	Empiric therapy for presumed fungal infections in febrile neutropenic pts, treatment of cryptococcal meningitis in HIV-infected pts, treatment of *Aspergillus, Candida, Cryptococcus* infections, treatment of visceral leishmaniasis	Peripheral edema, tachycardia, hypotension, chills, insomnia, headache
Amphotericin colloidal dispersion (Amphotec)	Invasive *Aspergillus*	Hypotension, tachycardia, chills, fever, vomiting
Anidulafungin (Eraxis)	Candidemia, esophageal candidiasis	Diarrhea, hypokalemia, increased hepatic function tests, headache
Caspofungin (Cancidas)	Candidemia, invasive aspergillosis, empiric therapy for presumed fungal infections in febrile neutropenic pts	Headache, nausea, vomiting, diarrhea, increased hepatic function tests
Fluconazole (Diflucan)	Treatment of vaginal candidiasis; oropharyngeal, esophageal candidiasis; and cryptococcal meningitis. Prophylaxis to decrease incidence of candidiasis in pts undergoing bone marrow transplant receiving cytotoxic chemotherapy and/or radiation	Nausea, vomiting, abdominal pain, diarrhea, dysgeusia, increased hepatic function tests, liver necrosis, hepatitis, cholestasis, headache, rash, pruritus, eosinophilia, alopecia
Itraconazole (Sporanox)	Blastomycosis, histoplasmosis, aspergillosis, onychomycosis, empiric therapy of febrile neutropenic pts with suspected fungal infections, treatment of oropharyngeal and esophageal candidiasis	Congestive heart failure, peripheral edema, nausea, vomiting, abdominal pain, diarrhea, increased hepatic function tests, liver necrosis, hepatitis, cholestasis, headache, rash, pruritus, eosinophilia

Ketoconazole (Nizoral)	Candidiasis, chronic mucocutaneous candidiasis, oral thrush, candiduria, blastomycosis, coccidioidomycosis	Nausea, vomiting, abdominal pain, diarrhea, gynecomastia, increased hepatic function tests, liver necrosis, hepatitis, cholestasis, headache, rash, pruritus, eosinophilia
Micafungin (Mycamine)	Esophageal candidiasis, *Candida* infections, prophylaxis in pts undergoing hematopoietin stem cell transplantation	Fever, chills, hypokalemia, hypomagnesemia, hypocalcemia, myelosuppression, thrombocytopenia, nausea, vomiting, abdominal pain, diarrhea, increased hepatic function tests, dizziness, headache, rash, pruritus, pain or inflammation at injection site, fever
Posaconazole (Noxafil)	Prevent invasive aspergillosis and *Candida* infections in pts 13 yrs and older who are immunocompromised, treatment of oropharyngeal candidiasis	Fever, headaches, nausea, vomiting, diarrhea, abdominal pain, hypokalemia, cough, dyspnea
Voriconazole (Vfend)	Invasive aspergillosis, candidemia, esophageal candidiasis, serious fungal infections	Visual disturbances, nausea, vomiting, abdominal pain, diarrhea, increased hepatic function tests, liver necrosis, hepatitis, cholestasis, headache, rash, pruritus, eosinophilia

Antifungals: Topical

USES	ACTION
Treatment of tinea infections, cutaneous candidiasis (moniliasis) due to *Candida albicans.*	Exact mechanism unknown. May deplete essential intracellular components by inhibiting transport of potassium, other ions into cells; alter membrane permeability, resulting in loss of potassium, other cellular components.

ANTIFUNGALS: TOPICAL

Name	Availability	Dosage Range	Side Effects
Butenafine (Mentax)	**C:** 1%	2 times/day	Burning, stinging, pruritus, contact dermatitis, erythema
Ciclopirox (Loprox)	**C:** 1% **L:** 1%	2 times/day	Irritation, pruritus, redness

Continued

ANTIFUNGALS: TOPICAL—cont'd

Name	Availability	Dosage Range	Side Effects
Clioquinol (Vioform)	**C:** 3% **O:** 3%	2–3 times/day	Irritation, stinging, swelling
Clotrimazole (Lotrimin, Mycelex)	**C:** 1% **L:** 1% **S:** 1%	2 times/day	Erythema, stinging, blistering, edema, pruritus
Efinaconazole (Jublia)	**S:** 10%	Once daily	Application site dermatitis/vesicles
Ketoconazole (Nizoral)	**C:** 2%	1–2 times/day	Irritation, pruritus, stinging
Miconazole (Micatin, Monistat)	**C:** 2% **P:** 2%	2 times/day	Irritation, burning, allergic contact dermatitis
Nystatin (Mycostatin, Nilstat)	**C:** 100,000 g **O:** 100,000 g **P:** 100,000 g	2–3 times/day	Irritation
Oxiconazole (Oxistat)	**C:** 1% **L:** 1%	1–2 times/day	Pruritus, burning, stinging, irritation, pain, tingling
Sertaconazole (Ertaczo)	**C:** 2%	2 times/day	Dry skin, burning, pruritus, erythema
Terbinafine (Lamisil)	**C:** 1% **G:** 10 mg	1–2 times/day	Irritation, burning, pruritus, dryness
Tolnaftate (Tinactin)	**C:** 1% **G:** 1% **S:** 1%	2 times/day	Mild irritation
Triacetin (Fungoid)	**C:** 1% **S:** 1%	3 times/day	Irritation
Undecylenic acid (Caldesene, Cruex, Desenex)	**C:** 8%, 20% **P:** 10%, 12%, 15%, 19%, 25% **O:** 25%	As needed	None significant

C, Cream; ***G,*** gel; ***L,*** lotion; ***O,*** ointment; ***P,*** powder; ***S,*** solution.

Antiglaucoma Agents

USES	ACTION
Reduction of elevated intraocular pressure (IOP) in pts with open-angle glaucoma and ocular hypertension.	Medications decrease IOP by two primary mechanisms: decreasing aqueous humor (AH) production or increasing AH outflow. • *Miotics (direct acting and indirect acting):* Constrict pupils, opening channels in the trabecular meshwork, reducing resistance to outflow of AH. • *Alpha$_2$ agonists:* Activate receptors in ciliary body, inhibiting aqueous secretion and increasing uveoscleral aqueous outflow. • *Beta blockers:* Reduce production of aqueous humor. • *Carbonic anhydrase inhibitors:* Decrease production of AH by inhibiting enzyme carbonic anhydrase. • *Prostaglandins:* Increase outflow of aqueous fluid through uveoscleral route.

ANTIGLAUCOMA AGENTS

Name	Availability	Dosage Range	Side Effects
Miotics			
Carbachol (Isopto-Carbachol)	**S:** 1.5%, 3%	1 drop qid	Brow ache, corneal toxicity, conjunctival inflammation, transient myopia, blurred vision, retinal detachment
Pilocarpine (Isopto Carpine Pilopine HS [Gel])	**G:** 4% **S:** 1%, 2%, 4%	**S:** 1 drop qid **G:** 1 drop HS	Same as carbachol
Alpha$_2$ Agonists			
Apraclonidine (Iopidine)	**S:** 0.5%, 1%	1 drop tid	Fatigue, somnolence, local allergic reaction, dry eyes, stinging

Continued

ANTIGLAUCOMA AGENTS—cont'd

Name	Availability	Dosage Range	Side Effects
Brimonidine (Alphagan HP)	**S:** 0.1%, 0.15%, 0.2%	1 drop tid	Same as apraclonidine
Prostaglandins			
Bimatoprost (Lumigan)	**S:** 0.01%	1 drop daily in evening	Conjunctival hyperemia; darkening of iris, eyelids; increase in length, thickness, and number of eyelashes; local irritation; itching; dryness; blurred vision
Latanoprost (Xalatan)	**S:** 0.005%	1 drop daily in evening	See bimatoprost
Tafluprost (Zioptan)	**S:** 0.0015%	1 drop daily in evening	See bimatoprost
Travoprost (Travatan)	**S:** 0.004%	1 drop daily in evening	See bimatoprost
Unoprostone (Rescula)	**S:** 0.15%	1 drop bid	See bimatoprost
Beta Blockers			
Betaxolol (Betoptic, Betoptic-S)	**Suspension (Betoptic-S):** 0.25% **S (Betoptic):** 0.5%	Betoptic-S: 1 drop 2 times/day Betoptic: 1–2 drops 2 times/day	Fatigue, dizziness, bradycardia, respiratory depression, mask symptoms of hypoglycemia, block effects of beta agonists in treatment of asthma
Levobunolol (Betagan)	**S:** 0.25%, 0.5%	1 drop 1–2 times/day	Same as betaxolol
Timolol (Betimol, Istalol, Timoptic, Timoptic XE)	**S:** 0.25%, 0.5% **G, Timoptic XE:** 0.25%, 0.5%	**S:** 1 drop 2 times/day (Istalol): 1 drop daily **G:** 1 drop daily	Same as betaxolol
Carbonic Anhydrase Inhibitors			
Brinzolamide (Azopt)	**Suspension:** 1%	1 drop 3 times/day	Bitter taste, stinging, redness, burning, conjunctivitis, dry eyes, blurred vision

Dorzolamide (Trusopt)	**S:** 2%	1 drop 3 times/day	Same as brinzolamide
Combinations			
Brimonidine/timolol (Combigan)	0.2%/0.5%	1 drop bid	See individual agents
Brinzolamide/ brimonidine (Simbrinza)	1%/0.2%	1 drop tid	See individual agents
Timolol/dorzolamide (Cosopt)	0.5%/2%	1 drop bid	See individual agents

C, Capsules; ***G,*** gel; ***O,*** ointment; ***S,*** solution; ***T,*** tablets.

Antihistamines

USES

Symptomatic relief of upper respiratory allergic disorders. Allergic reactions associated with other drugs respond to antihistamines, as do blood transfusion reactions. Used as a second-choice drug in treatment of angioneurotic edema. Effective in treatment of acute urticaria and other dermatologic conditions. May also be used for preop sedation, Parkinson's disease, and motion sickness.

ACTION

Antihistamines (H_1 antagonists) inhibit vasoconstrictor effects and vasodilator effects on endothelial cells of histamine. They block increased capillary permeability, formation of edema/wheal caused by histamine. Many antihistamines can bind to receptors in CNS, causing primarily depression (decreased alertness, slowed reaction times, drowsiness) but also stimulation (restlessness, nervousness, inability to sleep). Some may counter motion sickness.

ANTIHISTAMINES

Name	Availability	Dosage Range	Side Effects
Cetirizine (Zyrtec)	**T:** 5 mg, 10 mg **C:** 5 mg, 10 mg **T (chew):** 5 mg/10 mg **S:** 5 mg/5 ml	**A:** 5–10 mg/day **C (6–12 yrs):** 5–10 mg/day **C (2–5 yrs):** 2.5–5 mg/day	Headache, somnolence, fatigue, abdominal pain, dry mouth
Desloratadine (Clarinex)	**T:** 5 mg **ODT:** 2.5 mg, 5 mg **S:** 0.5 mg/ml	**A, C (12 yrs and older):** 5 mg/day **C (6–11 yrs):** 2.5 mg/day **C (1–5 yrs):** 1.25 mg/day **C (6–11 mos):** 1 mg/day	Dizziness, fatigue, headache, nausea
Dimenhydrinate (Dramamine)	**T:** 50 mg **T (chew):** 25 mg, 50 mg	**A:** 50–100 mg q4–6h **C:** 12.5–50 mg q6–8h	Dizziness, drowsiness, headache, nausea
Diphenhydramine (Benadryl)	**T:** 25 mg, 50 mg **C:** 25 mg, 50 mg **L:** 12.5 mg/5 ml	**A:** 25–50 mg q6–8h **C (6–11 yrs):** 12.5–25 mg q4–6h **C (2–5 yrs):** 6.25 mg q4–6h	Chills, confusion, dizziness, fatigue, headache, sedation, nausea
Fexofenadine (Allegra)	**T:** 30 mg, 60 mg, 180 mg **ODT:** 30 mg **S:** 30 mg/5 ml	**A:** 60 mg q12h or 180 mg/day **C (2–11 yrs):** 30 mg q12h, **(6–23 mos):** 15 mg bid	Headache, vomiting, fatigue, diarrhea
Hydroxyzine (Atarax)	**T:** 10 mg, 25 mg, 50 mg **C:** 25 mg, 50 mg, 100 mg **S:** 10 mg/5 ml	**A:** 25 mg q6–8h **C:** 2 mg/kg/day in divided doses q6–8h	Dizziness, drowsiness, fatigue, headache
Levocetirizine (Xyzal)	**T:** 5 mg **S:** 2.5 mg/ml	**A, C (12 yrs and older):** 5 mg once daily in evening **C (6–11 yrs):** 2.5 mg once daily in evening **(6 mos–5 yrs):** 1.25 mg once daily	Fatigue, fever, somnolence, vomiting

Loratadine (Claritin)	**ODT:** 10 mg **T (chew):** 5 mg **T:** 10 mg **S:** 1 mg/ml	**A:** 10 mg/day **C (6–12 yrs):** 10 mg/day **(2–5 yrs):** 5 mg/day	Fatigue, headache, malaise, somnolence, abdominal pain
Promethazine (Phenergan)	**T:** 12.5 mg, 25 mg, 50 mg **S:** 6.25 mg/5 ml	**A:** 25 mg at bedtime or 12.5 mg q8h **C:** 0.5 mg/kg at bedtime or 0.1 mg/kg q6–8h	Confusion, dizziness, drowsiness, fatigue, constipation, nausea, vomiting

A, Adults; ***C,*** capsules; ***C** (dosage),* children; ***L,*** liquid; ***ODT,*** orally disintegrating tablet; ***S,*** syrup; ***SR,*** sustained-release; ***T,*** tablets.

Antihyperlipidemics

USES	ACTION
Cholesterol management.	*Bile acid sequestrants:* Bind bile acids in the intestine; prevent active transport and reabsorption and enhance bile acid excretion. Depletion of hepatic bile acid results in the increased conversion of cholesterol to bile acids. *HMG-CoA reductase inhibitors (statins):* Inhibit HMG-CoA reductase, the last regulated step in the synthesis of cholesterol. Cholesterol synthesis in the liver is reduced. *Niacin (nicotinic acid):* Reduces hepatic synthesis of triglycerides and secretion of VLDL by inhibiting the mobilization of free fatty acids from peripheral tissues. *Fibric acid:* Increases the oxidation of fatty acids in the liver, resulting in reduced secretion of triglyceride-rich lipoproteins, and increases lipoprotein lipase activity and fatty acid uptake. *Cholesterol absorption inhibitor:* Acts in the gut wall to prevent cholesterol absorption through the intestinal villi. *Omega fatty acids:* Exact mechanism unknown. Mechanisms may include inhibition of acyl-CoA, decreased lipogenesis in liver, increased lipoprotein lipase activity.

ANTIHYPERLIPIDEMICS

Name	Primary Effect	Dosage	Comments/Side Effects
Bile Acid Sequestrants			
Cholestyramine (Prevalite, Questran)	Decreases LDL Increases HDL, TG	4 g 1–2 times/day 8 g once daily	May bind drugs given concurrently. Take at least 1 hr before or 4–6 hrs after cholestyramine. **Side Effects:** Constipation, heartburn, nausea, vomiting, stomach pain
Colesevelam (Welchol)	Decreases LDL Increases HDL, TG	6–7 625-mg tablets once daily or 2 divided doses with meals	Take with food. **Side Effects:** Constipation, dyspepsia, weakness, myalgia, pharyngitis
Colestipol (Colestid)	Decreases LDL Increases TG	10 g once daily or 5 g 2 times/day	Do not crush tablets. May bind drugs given concurrently. Take at least 1 hr before or 4–6 hrs after colestipol. **Side Effects:** Constipation, headache, dizziness, anxiety, vertigo, drowsiness, nausea, vomiting, diarrhea, flatulence
Cholesterol Absorption Inhibitor			
Ezetimibe (Zetia)	Decreases LDL Increases HDL Decreases TG	10 mg once daily	Administer at least 2 hrs before or 4 hrs after bile acid sequestrants. **Side Effects:** Dizziness, headache, fatigue, diarrhea, abdominal pain, arthralgia, sinusitis, pharyngitis
Fibric Acid			
Fenofibrate (Antara, Lofibra, Tricor, Triglide)	Decreases TG Decreases LDL Increases HDL	**Antara:** 43–130 mg/day **Lofibra:** 67–200 mg/day **Tricor:** 48–145 mg/day **Triglide:** 50–160 mg/day	May increase levels of ezetimibe. Concomitant use of statins may increase rhabdomyolysis, elevate CPK levels, and cause myoglobinuria. **Side Effects:** Abdominal pain, constipation, diarrhea, respiratory complaints, headache, fever, flu-like syndrome, asthenia (loss of strength, energy)

Fenofibric acid (Fibricor, Trilipix)	Decreases TG, LDL Increases HDL	45–135 mg/day	May give without regard to meals. Concomitant use of statins may increase rhabdomyolysis. **Side Effects:** Headache, upper respiratory tract infection, pain, nausea, dizziness, nasopharyngitis
Gemfibrozil (Lopid)	Decreases TG Increases HDL	600 mg 2 times/day	Give 30 min before breakfast and dinner. Concomitant use of statins may increase rhabdomyolysis, elevate CPK levels, and cause myoglobinuria. **Side Effects:** Fatigue, vertigo, headache, rash, eczema, diarrhea, abdominal pain, nausea, vomiting, constipation
Niacin			
Niacin, nicotinic acid (Niacor, Niaspan)	Decreases LDL, TG Increases HDL	**Regular-release (Niacor):** 1 g tid **Extended-release (Niaspan):** 1 g at bedtime	Diabetics may experience a dose-related elevation in glucose. **Side Effects:** Increased hepatic function tests, hyperglycemia, dyspepsia, itching, flushing, dizziness, insomnia
Statins			
Atorvastatin (Lipitor)	Decreases LDL, TG Increases HDL	10–80 mg/day	May interact with CYP3A4 inhibitors (e.g., amiodarone, diltiazem, cyclosporine, grapefruit juice) increasing risk of myopathy. **Side Effects:** Myalgia, myopathy, rhabdomyolysis, headache, chest pain, peripheral edema, dizziness, rash, abdominal pain, constipation, diarrhea, dyspepsia, nausea, flatulence, increased hepatic function tests, back pain, sinusitis
Fluvastatin (Lescol)	Decreases LDL, TG Increases HDL	20–80 mg/day	Primarily metabolized by CYP2C9 enzyme system. May increase levels of phenytoin, rifampin. May lower fluvastatin levels. **Side Effects:** Headache, fatigue, dyspepsia, diarrhea, nausea, abdominal pain, myalgia, myopathy, rhabdomyolysis

Continued

ANTIHYPERLIPIDEMICS—cont'd

Name	Primary Effect	Dosage	Comments/Side Effects
Lovastatin (Mevacor)	Decreases LDL, TG Increases HDL	20–80 mg/day	May interact with CYP3A4 inhibitors (e.g., amiodarone, diltiazem, cyclosporine, grapefruit products) increasing risk of myopathy. **Side Effects:** Increased CPK levels, headache, dizziness, rash, constipation, diarrhea, abdominal pain, dyspepsia, nausea, flatulence, myalgia, myopathy, rhabdomyolysis
Pitavastatin (Livalo)	Decreases LDL, TG Increases HDL	1–4 mg/day	Erythromycin, rifampin may increase concentration. **Side Effects:** Myalgia, back pain, diarrhea, constipation, pain in extremities
Pravastatin (Pravachol)	Decreases LDL, TG Increases HDL	20–80 mg/day	May be less likely to be involved in drug interactions. Cyclosporine may increase pravastatin levels. **Side Effects:** Chest pain, headache, dizziness, rash, nausea, vomiting, diarrhea, increased hepatic function tests, cough, flu-like symptoms, myalgia, myopathy, rhabdomyolysis
Rosuvastatin (Crestor)	Decreases LDL, TG Increases HDL	5–40 mg/day	May be less likely to be involved in drug interactions. Cyclosporine may increase rosuvastatin levels. **Side Effects:** Chest pain, peripheral edema, headache, rash, dizziness, vertigo, pharyngitis, diarrhea, nausea, constipation, abdominal pain, dyspepsia, sinusitis, flu-like symptoms, myalgia, myopathy, rhabdomyolysis

Simvastatin (Zocor)	Decreases LDL, TG Increases HDL	5–80 mg/day	May interact with CYP3A4 inhibitors (e.g., amiodarone, diltiazem, cyclosporine, grapefruit products) increasing risk of myopathy. **Side Effects:** Constipation, flatulence, dyspepsia, increased hepatic function tests, increased CPK, upper respiratory tract infection
Omega Fatty Acids			
Icosapent (Vascepa)	Decreases TG	2 g 2 times/day	**Side Effects:** Arthralgia
Lovaza	Decreases TG Increases LDL, HDL	2 g 2 times/day or 4 g once daily	Use with caution with fish or shellfish allergy. **Side Effects:** Eructation, dyspepsia, taste perversion

CPK, Creatine phosphokinase; ***G,*** granules; ***HDL,*** high-density lipoprotein; ***LDL,*** low-density lipoprotein; ***T,*** tablets; ***TG,*** triglycerides.

Antihypertensives

USES	ACTION
Treatment of mild to severe hypertension.	Many groups of medications are used in the treatment of hypertension. *ACE inhibitors:* Decrease conversion of angiotensin I to angiotensin II, a potent vasoconstrictor, reducing peripheral vascular resistance and B/P. *Alpha agonists (central action):* Stimulate alpha$_2$-adrenergic receptors in the cardiovascular centers of the CNS, reducing sympathetic outflow and producing an antihypertensive effect. *Alpha antagonists (peripheral action):* Block alpha$_1$-adrenergic receptors in arterioles and veins, inhibiting vasoconstriction and decreasing peripheral vascular resistance, causing a fall in B/P. *Angiotensin receptor blockers:* Block vasoconstrictor effects of angiotensin II by blocking the binding of angiotensin II to AT1 receptors in vascular smooth muscle, helping blood vessels to relax and reduce B/P. *Beta blockers:* Decrease B/P by inhibiting beta$_1$-adrenergic receptors, which lowers heart rate, heart workload, and the heart's output of blood. *Calcium channel blockers:* Reduce B/P by inhibiting flow of extracellular calcium across cell membranes of vascular tissue, relaxing arterial smooth muscle. *Diuretics:* Inhibit sodium (Na) reabsorption, increasing excretion of Na and water. Reduce plasma, extracellular fluid volume, and peripheral vascular resistance. *Renin inhibitors:* Directly inhibit renin, decreasing plasma renin activity (PRA), inhibiting conversion of angiotensinogen to angiotensin, producing antihypertensive effect. *Vasodilators:* Directly relaxe arteriolar smooth muscle, decreasing vascular resistance. Exact mechanism unknown.

ANTIHYPERTENSIVES

Name	Availability	Dosage Range	Side Effects
(ACE) Inhibitors			
Benazepril (Lotensin)	**T:** 5 mg, 10 mg, 20 mg, 40 mg	20–80 mg/day as single or 2 divided doses	Postural dizziness, headache, cough
Enalapril (Vasotec)	**T:** 2.5 mg, 5 mg, 10 mg, 20 mg	2.5–40 mg/day in 1–2 divided doses	Hypotension, chest pain, syncope, headache, dizziness, fatigue
Lisinopril (Prinivil, Zestril)	**T:** 2.5 mg, 5 mg, 10 mg, 20 mg, 30 mg, 40 mg	10–40 mg/day	Hypotension, headache, fatigue, dizziness, hyperkalemia, cough
Quinapril	**T:** 5 mg, 10 mg, 20 mg, 40 mg	10–40 mg/day	Hypotension, dizziness, fatigue, headache, myalgia, hyperkalemia
Ramipril (Altace)	**T or C:** 1.25 mg, 2.5 mg, 5 mg, 10 mg	2.5–20 mg/day	Cough, hypotension, angina, headache, dizziness, hyperkalemia
Alpha Agonists: Central Action			
Clonidine (Catapres)	**T:** 0.1 mg, 0.2 mg, 0.3 mg **P:** 0.1 mg/hr, 0.2 mg/hr, 0.3 mg/hr	**PO:** 0.1–0.8 mg/day **Topical:** 0.1–0.6 mg/wk	Sedation, dry mouth, constipation, sexual dysfunction, bradycardia, xerostomia, drowsiness, headache
Methyldopa (Aldomet)	**T:** 125 mg, 250 mg, 500 mg	**PO:** 250–1,000 mg/day in 2 divided doses	Nausea, vomiting, weight gain, impaired memory, depression, nasal congestion
Alpha Agonists: Peripheral Action			
Doxazosin (Cardura)	**T:** 1 mg, 2 mg, 4 mg, 8 mg	**PO:** 2–16 mg/day	Dizziness, vertigo, headaches
Prazosin (Minipress)	**C:** 1 mg, 2 mg, 5 mg	**PO:** 6–20 mg/day	Dizziness, light-headedness, headaches, drowsiness
Terazosin (Hytrin)	**C:** 1 mg, 2 mg, 5 mg, 10 mg	**PO:** 1–20 mg/day	Dizziness, headaches, asthenia (loss of strength, energy)
Angiotensin Receptor Blockers			
Azilsartan (Edarbi)	**T:** 40 mg, 80 mg	40–80 mg/day	Diarrhea, hypotension, nausea, cough

Continued

ANTIHYPERTENSIVES—cont'd

Name	Availability	Dosage Range	Side Effects
Candesartan (Atacand)	**T:** 4 mg, 8 mg, 16 mg, 32 mg	8–32 mg/day	Hypotension, dizziness, headache, hyperkalemia
Losartan (Cozaar)	**T:** 25 mg, 50 mg, 100 mg	25–100 mg/day	Chest pain, fatigue, hypoglycemia, weakness, cough, hypotension
Olmesartan (Benicar)	**T:** 5 mg, 20 mg, 40 mg	20–40 mg/day	Dizziness, headache, diarrhea, flu-like symptoms
Valsartan (Diovan)	**T:** 80 mg, 160 mg, 320 mg	80–320 mg/day	Dizziness, fatigue, increased BUN
Beta Blockers			
Atenolol (Tenormin)	**T:** 25 mg, 50 mg, 100 mg	25–100 mg/day	Fatigue, bradycardia, reduced exercise tolerance, increased triglycerides, bronchospasm, sexual dysfunction, masked hypoglycemia
Bisoprolol (Zebeta)	**T:** 5 mg, 10 mg	2.5–10 mg/day	Fatigue, insomnia, diarrhea, arthralgia, upper respiratory infections
Metoprolol (Lopressor)	**T:** 25 mg, 50 mg, 100 mg	50–100 mg/day	Hypotension, bradycardia, fatigue, 1st degree heart block, dizziness
Metoprolol XL (Toprol XL)	**T:** 25 mg, 50 mg, 100 mg, 200 mg	50–100 mg/day	Same as metoprolol
Calcium Channel Blockers			
Amlodipine (Norvasc)	**T:** 2.5 mg, 5 mg, 10 mg	2.5–10 mg/day	Headache, fatigue, peripheral edema, flushing, worsening heart failure
Diltiazem CD (Cardizem CD)	**C:** 120 mg, 180 mg, 240 mg, 300 mg	180–420 mg/day	Dizziness, headache, bradycardia, heart block, worsening heart failure, edema, constipation
Felodipine (Plendil)	**T:** 2.5 mg, 5 mg, 10 mg	2.5–20 mg/day	Headache, flushing, peripheral edema

Nifedipine XL (Adalat CC, Procardia XL)	**T:** 30 mg, 60 mg, 90 mg	90–120 mg/day	Flushing, peripheral edema, headache, dizziness, nausea
Verapamil SR (Calan SR)	**T:** 120 mg, 180 mg, 240 mg **T (Sustained-Release):** 120 mg, 180 mg	**T (Immediate-Release):** 80–320 mg/day **T (Sustained-Release):** 120–480 mg/day	Headache, gingival hyperplasia, constipation
Diuretics			
Chlorthalidone (Hygroton)	**T:** 25 mg, 50 mg	12.5–25 mg/day	Same as hydrochlorothiazide
Hydrochlorothiazide (Hydrodiuril)	**T:** 25 mg, 50 mg	12.5–50 mg/day	Hypokalemia, hyperuricemia, hypomagnesemia, hyperglycemia
Renin Inhibitor			
Aliskiren (Tekturna)	**T:** 150 mg, 300 mg	**PO:** 150–300 mg/day	Diarrhea, dyspepsia, headache, dizziness, fatigue, upper respiratory tract infection
Vasodilators			
Hydralazine (Apresoline)	**T:** 10 mg, 25 mg, 50 mg, 100 mg	**PO:** 40–300 mg/day	Anorexia, nausea, diarrhea, vomiting, headaches, palpitations
Minoxidil (Loniten)	**T:** 2.5 mg, 10 mg	**PO:** 10–40 mg/day	Rapid/irregular heartbeat, hypertrichosis, peripheral edema

C, Capsules; ***P,*** patch; ***T,*** tablets.

Antimigraine (Triptans)

USES	ACTION
Treatment of migraine headaches with or without aura in adults 18 yrs and older.	Triptans are selective agonists of the serotonin (5-HT) receptor in cranial arteries, which cause vasoconstriction and reduce inflammation associated with antidromic neuronal transmission correlating with relief of migraine headache.

TRIPTANS

Name	Availability	Dosage Range	Contraindications	Side Effects
Almotriptan (Axert)	**T:** 6.25 mg, 12.5 mg	6.25–12.5 mg; may repeat after 2 hrs	Ischemic heart disease, angina pectoris, arrhythmias, previous MI, uncontrolled hypertension, hemiplegic or basilar migraine, peripheral vascular disease	Drowsiness, dizziness, fatigue, hot flashes, chest pain/discomfort, paresthesia, nausea, vomiting
Eletriptan (Relpax)	**T:** 20 mg, 40 mg	**A:** 20–40 mg; may repeat after 2 hrs (**Maximum:** 60 mg/day)	Same as almotriptan	Asthenia (loss of strength, energy), nausea, dizziness, drowsiness
Frovatriptan (Frova)	**T:** 2.5 mg	2.5 mg; may repeat after 2 hrs; no more than 3 **T**/day	Same as almotriptan	Hot/cold sensations, dizziness, fatigue, headaches, chest pain, skeletal pain, dry mouth, dyspepsia, flushing
Naratriptan (Amerge)	**T:** 1 mg, 2.5 mg	1–2.5 mg; may repeat once after 4 hrs	Same as almotriptan plus severe renal/hepatic disease	Atypical sensations, pain, nausea, fatigue

Rizatriptan (Maxalt, Maxalt-MLT)	**T:** 5 mg, 10 mg **DT:** 5 mg, 10 mg	5 or 10 mg; may repeat after 2 hrs	Same as almotriptan	Atypical sensations, pain, nausea, dizziness, drowsiness, asthenia (loss of strength, energy), fatigue
Sumatriptan (Imitrex, Sumavel DosePro)	**T:** 25 mg, 50 mg, 100 mg **NS:** 5 mg, 20 mg **I:** 4 mg, 6 mg	**PO:** 25–100 mg; may repeat after 2 hrs **NS:** 5–20 mg; may repeat after 2 hrs **Subcutaneous:** 4–6 mg; may repeat after 1 hr	Same as almotriptan plus severe hepatic dysfunction	*Oral:* Atypical sensations, pain, malaise, fatigue *Injection:* Atypical sensations, flushing, chest pain/discomfort, injection site reaction, dizziness, vertigo *Nasal:* Discomfort, nausea, vomiting, altered taste
Zolmitriptan (Zomig, Zomig-ZMT)	**T:** 2.5 mg, 5 mg **DT:** 2.5 mg, 5 mg **NS:** 5 mg/0.1 ml	2.5–5 mg; may repeat after 2 hrs **NS:** 1 spray (5 mg) at onset of migrane headache	Same as almotriptan plus symptomatic Wolff-Parkinson-White syndrome	Atypical sensations, pain, nausea, dizziness, asthenia (loss of strength, energy), drowsiness

A, Adults; ***DT,*** disintegrating tablets; ***I,*** injection; ***NS,*** nasal spray; ***T,*** tablets.

Antipsychotics

USES

Primarily used in managing psychotic illness (esp. in pts with increased psychomotor activity). Also used to treat the manic phase of bipolar disorder, behavioral problems in children, nausea and vomiting, intractable hiccups, anxiety and agitation, as adjunct in treatment of tetanus, and to potentiate effects of narcotics.

ACTION

Effects of these agents occur at all levels of the CNS. Antipsychotic mechanism unknown but may antagonize dopamine action as a neurotransmitter in basal ganglia and limbic system. Antipsychotics may block postsynaptic dopamine receptors, inhibit dopamine release, increase dopamine turnover. These medications can be divided into the phenothiazines and nonphenothiazines (miscellaneous). In addition to their use in the symptomatic treatment of psychiatric illness, some have antiemetic, antinausea, antihistamine, anticholinergic, and/or sedative effects.

ANTIPSYCHOTICS

Name	Availability	Dosage	Relative Side Effect Profile			
			EPS	Anticholinergic	Sedation	Hypotension

Antivirals

USES

Treatment of HIV infection. Treatment of cytomegalovirus (CMV) retinitis in pts with AIDS, acute herpes zoster (shingles), genital herpes (recurrent), mucosal and cutaneous herpes simplex virus (HSV), chickenpox, and influenza A viral illness.

ACTION

Effective antivirals must inhibit virus-specific nucleic acid/protein synthesis. Possible mechanisms of action of antivirals used for non-HIV infection may include interference with viral DNA synthesis and viral replication, inactivation of viral DNA polymerases, incorporation and termination of the growing viral DNA chain, prevention of release of viral nucleic acid into the host cell, or interference with viral penetration into cells.

ANTIVIRALS

Name	Availability	Uses	Side Effects
Abacavir (Ziagen)	**T:** 300 mg **OS:** 20 mg/ml	HIV infection	Nausea, vomiting, loss of appetite, diarrhea, headaches, fatigue, hypersensitivity reactions
Acyclovir (Zovirax)	**T:** 400 mg, 800 mg **C:** 200 mg **I:** 50 mg/ml	Mucosal/cutaneous HSV-1 and HSV-2, varicella-zoster (shingles), genital herpes, herpes simplex, encephalitis, chickenpox	Malaise, anorexia, nausea, vomiting, light-headedness
Adefovir (Hepsera)	**T:** 10 mg	Chronic hepatitis B	Asthenia (loss of strength, energy), headaches, abdominal pain, nausea, diarrhea, flatulence, dyspepsia
Amantadine (Symmetrel)	**T:** 100 mg **C:** 100 mg **S:** 50 mg/5 ml	Influenza A	Anxiety, dizziness, headaches, nausea, loss of appetite
Cidofovir (Vistide)	**I:** 75 mg/ml	CMV retinitis	Decreased urination, fever, chills, diarrhea, nausea, vomiting, headaches, loss of appetite
Darunavir (Prezista)	**T:** 75 mg, 150 mg, 400 mg, 600 mg, 800 mg	HIV infection	Diarrhea, nausea, vomiting, headaches, skin rash, constipation
Delavirdine (Rescriptor)	**T:** 100 mg, 200 mg	HIV infection	Diarrhea, fatigue, rash, headaches, nausea
Didanosine (Videx)	**C:** 125 mg, 200 mg, 250 mg, 400 mg **Powder for suspension:** 2 g, 4 g	HIV infection	Peripheral neuropathy, anxiety, headaches, rash, nausea, diarrhea, dry mouth
Efavirenz (Sustiva)	**C:** 50 mg, 200 mg **T:** 600 mg	HIV infection	Diarrhea, dizziness, headaches, insomnia, nausea, vomiting, drowsiness
Etravirine (Intelence)	**T:** 25 mg, 100 mg, 200 mg	HIV infection	Rash, nausea, abdominal pain, vomiting

ANTIVIRALS—cont'd

Name	Availability	Uses	Side Effects
Famciclovir (Famvir)	**T:** 125 mg, 250 mg, 500 mg	Herpes zoster, genital herpes, herpes labialis, mucosal/cutaneous herpes simplex	Headaches, nausea
Foscarnet (Foscavir)	**I:** 24 mg/ml	CMV retinitis, HSV infections	Decreased urination, abdominal pain, nausea, vomiting, dizziness, fatigue, headaches
Ganciclovir (Cytovene)	**I:** 500 mg	CMV retinitis, CMV disease	Sore throat, fever, unusual bleeding/bruising
Indinavir (Crixivan)	**C:** 200 mg, 400 mg	HIV infection	Blood in urine, weakness, nausea, vomiting, diarrhea, headaches, insomnia, altered taste
Lamivudine (Epivir)	**T:** 100 mg, 150 mg, 300 mg **OS:** 5 mg/ml, 10 mg/ml	HIV infection, chronic hepatitis B	Nausea, vomiting, abdominal pain, paresthesia
Lopinavir/ritonavir (Kaletra)	**T:** 100 mg/25 mg, 200 mg/50 mg **OS:** 80 mg/20 mg per ml	HIV infection	Diarrhea, nausea
Maraviroc (Selzentry)	**T:** 150 mg, 300 mg	HIV infection	Cough, pyrexia, upper respiratory tract infection, rash, musculoskeletal symptoms, abdominal pain, dizziness
Nelfinavir (Viracept)	**T:** 250 mg, 625 mg	HIV infection	Diarrhea
Oseltamivir (Tamiflu)	**C:** 30 mg, 45 mg, 75 mg **S:** 6 mg/ml	Influenza A or B	Diarrhea, nausea, vomiting
Raltegravir (Isentress)	**T:** 400 mg **T (chew):** 25 mg, 100 mg	HIV infection	Nausea, headache, diarrhea, pyrexia
Ribavirin (Virazole)	**Aerosol:** 6 g **OS:** 40 mg/ml **T:** 200 mg, 400 mg, 600 mg	Lowers respiratory infections in infants, children due to respiratory syncytial virus (RSV), chronic hepatitis C	Anemia

Ritonavir (Norvir)	**C:** 100 mg **T:** 100 mg **OS:** 80 mg/ml	HIV infection	Weakness, diarrhea, nausea, decreased appetite, vomiting, altered taste
Saquinavir (Invirase)	**C:** 200 mg **T:** 500 mg	HIV infection	Weakness, diarrhea, nausea, oral ulcers, abdominal pain
Stavudine (Zerit)	**C:** 15 mg, 20 mg, 30 mg, 40 mg **OS:** 1 mg/ml	HIV infection	Paresthesia, decreased appetite, chills, fever, rash
Tenofovir (Viread)	**T:** 150 mg, 200 mg, 250 mg, 300 mg **Powder (oral):** 40 mg/g	HIV infection	Diarrhea, nausea, pharyngitis, headaches
Valacyclovir (Valtrex)	**T:** 500 mg, 1 g	Herpes zoster, genital herpes, herpes labialis, chickenpox	Headaches, nausea
Valganciclovir (Valcyte)	**T:** 450 mg, **OS:** 50 mg/ml	CMV retinitis	Anemia, abdominal pain, diarrhea, headaches, nausea, vomiting, paresthesia
Zanamivir (Relenza)	**Inhalation:** 5 mg	Influenza A and B	Cough, diarrhea, dizziness, headaches, nausea, vomiting
Zidovudine (Retrovir)	**C:** 100 mg **S:** 50 mg/5 ml **I:** 10 mg/ml	HIV infection	Fatigue, fever, chills, headaches, nausea, muscle pain

C, Capsules; ***I,*** injection; ***OS,*** oral solution; ***S,*** syrup; ***T,*** tablets.

Beta-Adrenergic Blockers

USES

Management of hypertension, angina pectoris, arrhythmias, hypertrophic subaortic stenosis, migraine headaches, MI (prevention), glaucoma.

ACTION

Beta-adrenergic blockers competitively block $beta_1$-adrenergic receptors, located primarily in myocardium, and $beta_2$-adrenergic receptors, located primarily in bronchial and vascular smooth muscle. By occupying beta-receptor sites, these agents prevent naturally occurring or administered epinephrine/norepinephrine from exerting their effects. The results are basically opposite to those of sympathetic stimulation.

Effects of $beta_1$ blockade include slowing heart rate, decreasing cardiac output and contractility; effects of $beta_2$ blockade include bronchoconstriction, increased airway resistance in pts with asthma or COPD. Beta blockers can affect cardiac rhythm/automaticity (decrease sinus rate, SA/AV conduction; increase refractory period in AV node); decrease systolic and diastolic B/P; exact mechanism unknown but may block peripheral receptors, decrease sympathetic outflow from CNS, or decrease renin release from kidney. All beta blockers mask tachycardia that occurs with hypoglycemia. When applied to the eye, reduce intraocular pressure and aqueous production.

BETA-ADRENERGIC BLOCKERS

Name	Availability	Indication	Dosage Range
Acebutolol (Sectral)	**C:** 200 mg, 400 mg	HTN, arrhythmias	**HTN:** 400–1,200 mg/day in 1–2 divided doses **Arrhythmia:** 300–600 mg bid
Atenolol (Tenormin)	**T:** 25 mg, 50 mg, 100 mg	HTN, angina, MI	**Angina:** 50–100 mg once daily **HTN:** 50–100 mg once daily **MI:** 50 mg bid or 100 mg once daily
Bisoprolol (Zebeta)	**T:** 5 mg, 10 mg	HTN	2.5–20 mg once daily

Carvedilol (Coreg)	**T:** 3.125 mg, 6.25 mg, 12.5 mg, 25 mg **C (SR):** 10 mg, 20 mg, 40 mg, 80 mg	HF, LVD after MI, HTN	**Immediate-Release HF:** 3.125–50 mg bid **LVD after MI:** 6.25–25 mg BID **HTN:** 6.25–25 mg BID **Extended-Release HF:** 10–80 mg once daily **LVD after MI:** 10–80 mg once daily **HTN:** 20–80 mg once daily
Labetalol (Trandate)	**T:** 100 mg, 200 mg, 300 mg **I:** 5 mg/ml	HTN	200–2,400 mg/day in 2–3 divided doses **I:** 20–80 mg at 10-min intervals (**Maximum:** 300 mg)
Metoprolol (Lopressor [IR], Toprol XL [SR])	**T (IR):** 50 mg, 100 mg **I:** 1 mg/ml **T (SR):** 25 mg, 50 mg	HTN, angina, HF, MI	**IR:** **Angina:** 100–400 mg bid **HTN:** 100–450 mg once daily or bid **Post-MI:** 100 mg bid **SR:** **Angina:** 100–400 mg once daily **HF:** 12.5–200 mg once daily **HTN:** 25–400 mg once daily
Nadolol (Corgard)	**T:** 20 mg, 40 mg, 80 mg	HTN, angina	40–320 mg once daily
Nebivolol (Bystolic)	**T:** 2.5 mg, 5 mg, 10 mg, 20 mg	HTN	5–40 mg once daily
Pindolol (Visken)	**T:** 5 mg, 10 mg	HTN	10–60 mg bid

Bronchodilators

USES	ACTION	
Relief of bronchospasm occurring during anesthesia and in bronchial asthma, bronchitis, emphysema.	*Inhaled corticosteroids:* Exact mechanism unknown. May act as anti-inflammatories, decrease mucus secretion. *Beta$_2$-adrenergic agonists:* Stimulate beta receptors in lung, relax bronchial smooth muscle, increase vital capacity, decrease airway resistance. *Anticholinergics:* Inhibit cholinergic receptors on bronchial smooth muscle (block acetylcholine action).	*Leukotriene modifiers:* Decrease effect of leukotrienes, which increase migration of eosinophils, producing mucus/edema of airway wall, causing bronchoconstriction. *Methylxanthines:* Directly relax smooth muscle of bronchial airway, pulmonary blood vessels (relieve bronchospasm, increase vital capacity). Increase cyclic 3,5-adenosine monophosphate.

BRONCHODILATORS

Name	Availability	Dosage Range	Side Effects
Anticholinergics			
Aclidinium (Tudorza)	**Inhalation powder:** 400 mcg/actuation	**A:** 400 mcg 2 times/day	Headache, nasopharyngitis, cough
Ipratropium (Atrovent)	**NEB:** 0.02% (500 mcg) **MDI:** 18 mcg/actuation	**A (NEB):** 500 mcg q6–8h **A (MDI):** 2 puffs 4 times/day	Upper respiratory tract infection, bronchitis, sinusitis, headache, dyspnea
Tiotropium (Spiriva)	**Inhalation powder:** 18 mcg/capsule	**A:** Once/day (inhaled twice)	Xerostomia, upper respiratory tract infection, sinusitis, pharyngitis
Umeclidinium (Incruse Ellipta)	**Inhalation powder:** 62.5 mcg/blister	**A:** Once daily	Nasopharyngitis, upper respiratory tract infection, cough, arthralgia

Albuterol/ipratropium (Combivent, DuoNeb)	**MDI:** 90 mcg albuterol/ 18 mcg ipratropium/ actuation **NEB:** 2.5 mg albuterol/ 0.5 mg ipratropium/3 ml	**MDI:** 2 inhalations 4 times/day as needed **NEB:** 2.5 mg/0.5 mg 4 times/day as needed	Same as individual listing for albuterol and ipratropium
Arformoterol (Brovana)	**NEB:** 15 mcg/2 ml	**NEB:** 15 mcg 2 times/day	Same as formoterol
Formoterol (Foradil, Perforomist)	**DPI:** 12 mcg/capsule **NEB:** 20 mcg/2 ml	**DPI:** 12 mcg q12h **NEB:** 20 mcg q12h	Diarrhea, nausea, asthma exacerbation, bronchitis, infection
Formoterol/budesonide (Symbicort)	**MDI:** 80, 160 mcg/ 4.5 mcg/inhalation	**MDI:** 2 inhalations 2 times/day	Same as individual listing for formoterol and budesonide
Formoterol/mometasone (Dulera)	**MDI:** 5 mcg/100 mcg, 5 mcg/200 mcg	**MDI:** 2 inhalations 2 times/day	Same as individual listing for formoterol and beclomethasone
Indacaterol (Arcapta)	**DPI:** 75 mcg/capsule	**DPI:** 75–300 mcg once daily	Cough, oropharyngeal pain, nasopharyngitis, headache, nausea
Levalbuterol (Xopenex)	**MDI:** 45 mcg/actuation **NEB:** 0.31, 0.63, 1.25 mg/3 ml	**MDI:** 2 inhalations q4–6h as needed **NEB:** 0.63–1.25 mg q6–8h	Tremor, rhinitis, viral infection, headache, nervousness, asthma, pharyngitis, rash

Olodaterol (Striverdi)	**MDI:** 2.5 mcg/actuation	**MDI:** 2 inhalations once daily	Nasopharyngitis, rash, dizziness, cough, bronchitis, upper respiratory tract infections
Salmeterol (Serevent Diskus)	**DPI:** 50 mcg/blister	**DPI:** 50 mcg q12h	Headache, pain, throat irritation, nasal congestion, bronchitis, pharyngitis
Salmeterol/fluticasone (Advair Diskus, Advair HFA)	**DPI:** 100, 250, 500 mcg/ 50 mcg/blister **MDI:** 45, 115, 230 mcg/ 21 mcg/inhalation	**DPI:** 1 inhalation 2 times/day **MDI:** 2 inhalations 2 times/day	Same as individual listing for salmeterol and fluticasone
Inhaled Corticosteroids			
Beclomethasone (Qvar)	**MDI:** 40, 80 mcg/inhalation	**MDI:** 40–320 mcg 2 times/day	Cough, hoarseness, headache, pharyngitis
Budesonide (Pulmicort Flexhaler, Pulmicort Respules)	**DPI: (Flexhaler):** 90, 180 mcg/inhalation **DPI: (Turbuhaler):** 200 mcg/inhalation **NEB: (Respules):** 0.25, 0.5 mg/2 ml	**DPI: (Flexhaler):** 180–720 mcg 2 times/day **DPI: (Turbuhaler):** 400–2,400 mcg/day in 2–4 divided doses **NEB: (Respules):** 250–500 mcg 1–2 times/day or 1 mg once daily	Headache, nausea, respiratory infection, rhinitis
Ciclesonide (Alvesco HFA)	**HFA:** 80, 160 mcg/inhalation	**HFA:** 80–320 mcg 2 times/day	Headache, nasopharyngitis, upper respiratory infection, epistaxis, nasal congestion, sinusitis
Fluticasone (Flovent Diskus, Flovent HFA)	**DPI: (Flovent Diskus):** 50, 100, 250 mcg/blister **MDI: (Flovent HFA):** 44, 110, 220 mcg/inhalation	**DPI: (Flovent Diskus):** 100–1,000 mcg 2 times/day **MDI: (Flovent HFA):** 88–880 mcg 2 times/day	Headache, nasal congestion, pharyngitis, sinusitis, respiratory infections

BRONCHODILATORS—cont'd

Name	Availability	Dosage Range	Side Effects
Formoterol/budesonide (Symbicort)	**MDI:** 80, 160 mcg/4.5 mcg/ inhalation	**MDI:** 2 inhalations 2 times/day	Same as individual listing for formoterol and budesonide
Mometasone (Asmanex Twisthaler)	**DPI:** 110–220 mcg/inhalation	**DPI:** 220–880 mcg once daily in evening or 220 mcg bid	Same as beclomethasone
Salmeterol/fluticasone (Advair Diskus, Advair HFA)	**DPI:** 100, 250, 500 mcg/ 50 mcg/blister **MDI:** 45, 115, 230 mcg/ 21 mcg/inhalation	**DPI:** 1 inhalation 2 times/day **MDI:** 2 inhalations 2 times/day	Same as individual listing for salmeterol and fluticasone
Leukotriene Modifiers			
Montelukast (Singulair)	**T:** 4 mg, 5 mg, 10 mg	**A:** 10 mg/day **C (6–14 yrs):** 5 mg/day **C (2–5 yrs):** 4 mg/day	Dyspepsia, increased hepatic function tests, cough, nasal congestion, headache, dizziness, fatigue
Zafirlukast (Accolate)	**T:** 10 mg, 20 mg	**A, C (12 yrs and older):** 20 mg 2 times/day **C (5–11 yrs):** 10 mg 2 times/day	Headache, nausea, diarrhea, infection
PDE-4 Inhibitor			
Roflumilast (Daliresp)	**T:** 500 mcg	**A:** 500 mcg once daily	Headache, dizziness, insomnia

Calcium Channel Blockers

USES

Treatment of essential hypertension, treatment of and prophylaxis of angina pectoris (including vasospastic, chronic stable, unstable), prevention/control of supraventricular tachyarrhythmias, prevention of neurologic damage due to subarachnoid hemorrhage.

ACTION

Calcium channel blockers inhibit the flow of extracellular Ca^{2+} ions across cell membranes of cardiac cells, vascular tissue. They relax arterial smooth muscle, depress the rate of sinus node pacemaker, slow AV conduction, decrease heart rate, produce negative inotropic effect (rarely seen clinically due to reflex response). Calcium channel blockers decrease coronary vascular resistance, increase coronary blood flow, reduce myocardial oxygen demand. Degree of action varies with individual agent.

CALCIUM CHANNEL BLOCKERS

Name	Availability	Dosage Range	Side Effects	Indications
Amlodipine (Norvasc)	**T:** 2.5 mg, 5 mg, 10 mg	**HTN:** 2.5–10 mg once daily **Angina:** 10 mg once daily	Abdominal pain, flushing, headaches, peripheral edema	HTN, angina
Diltiazem (Cardizem)	**T:** 30 mg, 60 mg, 90 mg **T (SR):** 120 mg, 180 mg, 240 mg **C (SR):** 60 mg, 90 mg, 120 mg, 180 mg, 240 mg, 300 mg, 360 mg **I:** 5 mg/ml	**HTN:** 120–540 mg/day **Angina:** 120–480 mg/day **I:** 20–25 mg IV bolus, then 5–15 mg/hr infusion	Dizziness, drowsiness, edema, headache	**PO:** HTN, angina **IV:** Arrhythmias
Felodipine (Plendil)	**T:** 2.5 mg, 5 mg, 10 mg	2.5–20 mg once daily	Peripheral edema, headaches	HTN

Continued

CALCIUM CHANNEL BLOCKERS—cont'd

Name	Availability	Dosage Range	Side Effects	Indications
Isradipine (DynaCirc)	**C:** 2.5 mg, 5 mg	2.5–10 mg/day in 2 divided doses	Headaches	HTN
Nicardipine (Cardene)	**C (IR):** 20 mg, 30 mg **C (ER):** 30 mg, 45 mg, 60 mg **I:** 2.5 mg/ml	**HTN (IR):** 20–40 mg tid or **(ER):** 30–60 mg bid **Angina (IR):** 20–40 mg tid	Flushing, peripheral edema, headache, dizziness	HTN, angina
Nifedipine (Adalat, Procardia)	**C (IR):** 10 mg, 20 mg **T (ER):** 30 mg, 60 mg, 90 mg	**HTN (ER):** 90–120 mg once daily **Angina (IR):** 10–20 mg tid or **(ER):** 120–180 mg once daily	Peripheral edema, dizziness, flushed face, headaches, nausea	HTN, angina
Nimodipine (Nimotop)	**C:** 30 mg	60 mg q4h for 21 days	Nausea, reduced B/P, headache, rash, diarrhea	Prevent neurologic damage following subarachnoid hemorrhage
Verapamil (Calan, Isoptin)	**T (IR):** 40 mg, 80 mg, 120 mg **T (SR):** 120 mg, 180 mg, 240 mg	**Angina (IR):** 80–160 mg tid or **(SR):** 180–480 mg once daily **HTN (IR):** 80–320 mg/day in 2 divided doses or **(SR):** 120–480 mg/day in 2 divided doses	Nausea, gingival hyperplasia, headache, fatigue, dizziness	HTN, angina

Chemotherapeutic Agents

USES

Treatment of a variety of cancers; may be palliative or curative. Treatment of choice in hematologic cancers. Often used as adjunctive therapy (e.g., with surgery or irradiation); most effective when tumor mass has been removed or reduced by radiation. Often used in combinations to increase therapeutic results, decrease toxic effects. Certain agents may be used in nonmalignant conditions: polycythemia vera, psoriasis, rheumatoid arthritis, or immunosuppression in organ transplantation (used only in select cases that are severe and unresponsive to other forms of therapy). Refer to individual monographs.

ACTION

Most antineoplastics can be divided into alkylating agents, antimetabolites, anthracyclines, plant alkaloids, and topoisomerase inhibitors. These agents affect cell division or DNA synthesis. Newer agents (monoclonal antibodies and tyrosine kinase inhibitors) directly target a molecular abnormality in certain types of cancer. Hormones modulate tumor cell behavior without directly attacking those cells. Some agents are classified as miscellaneous.

CHEMOTHERAPEUTIC AGENTS

Name	Availability	Category	Side Effects
Abiraterone (Zytiga)	**T:** 250 mg	Antiandrogen	Joint swelling, hypokalemia, edema, muscle discomfort, hot flashes, diarrhea, UTI, cough, hypertension, arrhythmia, dyspepsia, upper respiratory tract infection
Aldesleukin (Proleukin)	**I:** 22 million units	Biologic response modifier	Hypotension, sinus tachycardia, nausea, vomiting, diarrhea, renal impairment, anemia, rash, fatigue, agitation, pulmonary congestion, dyspnea, fever, chills, oliguria, weight gain, dizziness
Alemtuzumab (Campath)	**I:** 30 mg/3 ml	Monoclonal antibody	Rigors, fever, fatigue, hypotension, neutropenia, anemia, sepsis, dyspnea, bronchitis, pneumonia, urticaria

Continued

CHEMOTHERAPEUTIC AGENTS—cont'd

Name	Availability	Category	Side Effects
Anastrozole (Arimidex)	**T:** 1 mg	Aromatase inhibitor	Peripheral edema, chest pain, nausea, vomiting, diarrhea, constipation, abdominal pain, anorexia, pharyngitis, vaginal hemorrhage, anemia, leukopenia, rash, weight gain, diaphoresis, increased appetite, pain, headaches, dizziness, depression, paresthesia, hot flashes, increased cough, dry mouth, asthenia (loss of strength, energy), dyspnea, phlebitis
Arsenic trioxide (Trisenox)	**I:** 10 mg/ml	Miscellaneous	AV block, GI hemorrhage, hypertension, hypoglycemia, hypokalemia, hypomagnesemia, neutropenia, oliguria, prolonged QT interval, seizures, sepsis, thrombocytopenia
Asparaginase (Elspar)	**I:** 10,000 units	Miscellaneous	Anorexia, nausea, vomiting, hepatic toxicity, pancreatitis, nephrotoxicity, clotting factor abnormalities, malaise, confusion, lethargy, EEG changes, respiratory distress, fever, hyperglycemia, depression, stomatitis, allergic reactions, drowsiness
Axitinib (Inlyta)	**T:** 1 mg, 5 mg	Kinase inhibitor	Diarrhea, hypertension, fatigue, decreased appetite, nausea, dysphoria, vomiting, asthenia (loss of strength, energy), constipation
Azacitidine (Vidaza)	**I:** 100 mg	DNA methylation inhibitor	Edema, hypokalemia, weight loss, myalgia, cough, dyspnea, upper respiratory tract infection, back pain, pyrexia, weakness
BCG (TheraCys, Tice BCG)	**I:** 50 mg, 81 mg	Biologic response modulator	Nausea, vomiting, anorexia, diarrhea, dysuria, hematuria, cystitis, urinary urgency, anemia, malaise, fever, chills
Belinostat (Beleodaq)	**I:** 500 mg	Miscellaneous	Nausea, fatigue, pyrexia, anemia, vomiting
Bendamustine (Treanda)	**I:** 100 mg	Alkylating agent	Neutropenia, pyrexia, thrombocytopenia, nausea, anemia, leukopenia, vomiting
Bevacizumab (Avastin)	**I:** 25 mg/ml	Monoclonal antibody	Increased B/P, fatigue, blood clots, diarrhea, decreased WBCs, headaches, decreased appetite, stomatitis
Bexarotene (Targretin)	**C:** 75 mg **Gel:** 1%	Miscellaneous	Anemia, dermatitis, fever, hypercholesterolemia, infection, leukopenia, peripheral edema

Bicalutamide (Casodex)	**T:** 50 mg	Antiandrogen	Gynecomastia, hot flashes, breast pain, nausea, diarrhea, constipation, nocturia, impotence, pain, muscle pain, asthenia (loss of strength, energy), abdominal pain
Bleomycin (Blenoxane)	**I:** 15 units, 30 units	Antibiotic	Nausea, vomiting, anorexia, stomatitis, hyperpigmentation, alopecia, pruritus, hyperkeratosis, urticaria, pneumonitis progression to fibrosis, weight loss, rash
Bortezomib (Velcade)	**I:** 3.5 mg	Proteasome inhibitor	Anxiety, dizziness, headaches, insomnia, peripheral neuropathy, pruritus, rash, abdominal pain, decreased appetite, constipation, diarrhea, dyspepsia, nausea, vomiting, arthralgia, dyspnea, asthenia (loss of strength, energy), edema, pain
Bosutinib (Bosulif)	**T:** 100 mg, 500 mg	Kinase inhibitor	Nausea, diarrhea, thrombocytopenia, vomiting, abdominal pain, anemia, fever, fatigue
Brentuximab (Adcetris)	**I:** 50 mg	Miscellaneous	Neutropenia, peripheral sensory neuropathy, fatigue, nausea, anemia, upper respiratory tract infection, diarrhea, pyrexia, thrombocytopenia, cough, vomiting
Busulfan (Myleran)	**T:** 2 mg	Alkylating agent	Nausea, vomiting, hyperuricemia, myelosuppression, skin hyperpigmentation, alopecia, anorexia, weight loss, diarrhea, stomatitis
Cabazitaxel (Jevtana)	**I:** 60 mg/1.5 ml	Microtubule inhibitor	Neutropenia, anemia, leukopenia, thrombocytopenia, diarrhea, fatigue, nausea, vomiting, constipation, asthenia (loss of strength, energy), abdominal pain, hematuria, anorexia, peripheral neuropathy, dyspnea, alopecia
Capecitabine (Xeloda)	**T:** 150 mg, 300 mg	Antimetabolite	Nausea, vomiting, diarrhea, stomatitis, myelosuppression, palmar-plantar erythrodysesthesia syndrome, dermatitis, fatigue, anorexia
Carboplatin (Paraplatin)	**I:** 50 mg, 150 mg, 450 mg	Alkylating agent	Nausea, vomiting, nephrotoxicity, myelosuppression, alopecia, peripheral neuropathy, hypersensitivity, ototoxicity, asthenia (loss of strength, energy), diarrhea, constipation
Carfilzomib (Kyprolis)	**I:** 60 mg	Proteasome inhibitor	Anemia, fatigue, nausea, thrombocytopenia, dyspnea, diarrhea, pyrexia
Carmustine (BiCNU)	**I:** 100 mg	Alkylating agent	Anorexia, nausea, vomiting, myelosuppression, pulmonary fibrosis, pain at injection site, diarrhea, skin discoloration

Continued

CHEMOTHERAPEUTIC AGENTS—cont'd

Name	Availability	Category	Side Effects
Ceritinib (Zykadia)	**C:** 150 mg	Kinase inhibitor	Diarrhea, nausea, increased LFTs, vomiting, abdominal pain, fatigue, decreased appetite, constipation
Cetuximab (Erbitux)	**I:** 2 mg/ml	Monoclonal antibody	Dyspnea, hypotension, acne-like rash, dry skin, weakness, fatigue, fever, constipation, abdominal pain
Chlorambucil (Leukeran)	**T:** 2 mg	Alkylating agent	Myelosuppression, dermatitis, nausea, vomiting, hepatic toxicity, anorexia, diarrhea, abdominal discomfort, rash
Cisplatin (Platinol-AQ)	**I:** 50 mg, 100 mg	Alkylating agent	Nausea, vomiting, nephrotoxicity, myelosuppression, neuropathies, ototoxicity, anaphylactic-like reactions, hyperuricemia, hypomagnesemia, hypophosphatemia, hypokalemia, hypocalcemia, pain at injection site
Cladribine (Leustatin)	**I:** 1 mg/ml	Antimetabolite	Nausea, vomiting, diarrhea, myelosuppression, chills, fatigue, rash, fever, headaches, anorexia, diaphoresis
Crizotinib (Xalkori)	**C:** 200 mg, 250 mg	Tyrosine kinase inhibitor	Vision disorders, nausea, vomiting, diarrhea, edema, constipation
Cyclophosphamide (Cytoxan)	**I:** 100 mg, 200 mg, 500 mg, 1 g, 2 g **T:** 25 mg, 50 mg	Alkylating agent	Nausea, vomiting, hemorrhagic cystitis, myelosuppression, alopecia, interstitial pulmonary fibrosis, amenorrhea, azoospermia, diarrhea, darkening skin/fingernails, headaches, diaphoresis
Cytarabine (Ara-C, Cytosar)	**I:** 100 mg, 500 mg, 1 g, 2 g	Antimetabolite	Anorexia, nausea, vomiting, stomatitis, esophagitis, diarrhea, myelosuppression, alopecia, rash, fever, neuropathies, abdominal pain
Dacarbazine (DTIC)	**I:** 200 mg	Alkylating agent	Nausea, vomiting, anorexia, hepatic necrosis, myelosuppression, alopecia, rash, facial flushing, photosensitivity, flu-like symptoms, confusion, blurred vision
Dasatinib (Sprycel)	**T:** 20 mg, 50 mg, 70 mg	Tyrosine kinase inhibitor	Pyrexia, pleural effusion, febrile neutropenia, GI bleeding, pneumonia, thrombocytopenia, dyspnea, anemia, cardiac failure, diarrhea
Daunorubicin (Cerubidine)	**I:** 20 mg	Anthracycline	HF, nausea, vomiting, stomatitis, mucositis, diarrhea, hematuria, myelosuppression, alopecia, fever, chills, abdominal pain

Daunorubicin liposomal (DaunoXome)	**I:** 50 mg	Anthracycline	Nausea, diarrhea, abdominal pain, anorexia, vomiting, stomatitis, myelosuppression, rigors, back pain, headaches, neuropathy, depression, dyspnea, fatigue, fever, cough, allergic reactions, diaphoresis
Denileukin (Ontak)	**I:** 300 mcg/2 ml	Miscellaneous	Hypersensitivity reaction, back pain, dyspnea, rash, chest pain, tachycardia, asthenia (loss of strength, energy), flu-like symptoms, chills, nausea, vomiting, infection
Docetaxel (Taxotere)	**I:** 20 mg, 80 mg	Antimicrotubular	Hypotension, nausea, vomiting, diarrhea, mucositis, myelosuppression, rash, paresthesia, hypersensitivity, fluid retention, alopecia, asthenia (loss of strength, energy), stomatitis, fever
Doxorubicin (Adriamycin)	**I:** 10 mg, 20 mg, 50 mg, 75 mg, 150 mg, 200 mg	Anthracycline	Cardiotoxicity, including HF; arrhythmias, nausea, vomiting, stomatitis, esophagitis, GI ulceration, diarrhea, anorexia, hematuria, myelosuppression, alopecia, hyperpigmentation of nail beds and skin, local inflammation at injection site, rash, fever, chills, urticaria, lacrimation, conjunctivitis
Doxorubicin liposomal (Doxil)	**I:** 20 mg, 50 mg	Anthracycline	Neutropenia, palmar-plantar erythrodysesthesia syndrome, cardiomyopathy, HF
Enzalutamide (Xtandi)	**C:** 40 mg	Antiandrogen	Fatigue, weakness, back pain, diarrhea, tissue swelling, musculoskeletal pain, headache, upper respiratory tract infections, blood in urine, spinal cord compression
Epirubicin (Ellence)	**I:** 2 mg/ml	Anthracycline	Anemia, leukopenia, neutropenia, infection, mucositis
Erlotinib (Tarceva)	**T:** 25 mg, 100 mg, 150 mg	Tyrosine kinase inhibitor	Diarrhea, rash, nausea, vomiting
Estramustine (Emcyt)	**C:** 140 mg	Alkylating agent	Increased risk of thrombosis, gynecomastia, nausea, vomiting, diarrhea, thrombocytopenia, peripheral edema
Etoposide (VePesid)	**I:** 20 mg/ml **C:** 50 mg	Podophyllotoxin derivative	Nausea, vomiting, anorexia, myelosuppression, alopecia, diarrhea, drowsiness, peripheral neuropathies

Continued

CHEMOTHERAPEUTIC AGENTS—cont'd

Name	Availability	Category	Side Effects
Everolimus (Afinitor, Zortress)	**T (Afinitor):** 5 mg, 10 mg **T (Zortress):** 0.25 mg, 0.5 mg, 0.75 mg	mTOR kinase inhibitor	Stomatitis, infections, asthenia (loss of strength, energy), fatigue, cough, diarrhea
Exemestane (Aromasin)	**T:** 25 mg	Aromatase inactivator	Dyspnea, edema, hypertension, mental depression
Fludarabine (Fludara)	**I:** 50 mg	Antimetabolite	Nausea, diarrhea, stomatitis, bleeding, anemia, myelosuppression, skin rash, weakness, confusion, visual disturbances, peripheral neuropathy, coma, pneumonia, peripheral edema, anorexia
Fluorouracil (Adrucil, Efudex)	**I:** 50 mg/ml **Cream:** 1%, 5% **Solution:** 1%, 2%, 5%	Antimetabolite	Nausea, vomiting, stomatitis, GI ulceration, diarrhea, anorexia, myelosuppression, alopecia, skin hyperpigmentation, nail changes, headaches, drowsiness, blurred vision, fever
Flutamide (Eulexin)	**C:** 125 mg	Antiandrogen	Hot flashes, nausea, vomiting, diarrhea, hepatitis, impotence, decreased libido, rash, anorexia
Fulvestrant (Faslodex)	**I:** 125 mg/2.5 ml, 250 mg/5 ml syringes	Estrogen receptor antagonist	Asthenia (loss of strength, energy), pain, headaches, injection site pain, flu-like symptoms, fever, nausea, vomiting, constipation, anorexia, diarrhea, peripheral edema, dizziness, depression, anxiety, rash, increased cough, UTI
Gefitinib (Iressa)	**T:** 250 mg	Tyrosine kinase inhibitor	Diarrhea, rash, acne, nausea, dry skin, vomiting, pruritus, anorexia
Gemcitabine (Gemzar)	**I:** 200 mg, 1 g	Antimetabolite	Increased hepatic function tests, nausea, vomiting, diarrhea, stomatitis, hematuria, myelosuppression, rash, mild paresthesia, dyspnea, fever, edema, flu-like symptoms, constipation
Goserelin (Zoladex)	**I:** 3.6 mg, 10.8 mg	Hormone agonist	Hot flashes, sexual dysfunction, erectile dysfunction, gynecomastia, lethargy, pain, lower urinary tract symptoms, headaches, nausea, depression, diaphoresis

Hydroxyurea (Hydrea)	**C:** 500 mg	Antimetabolite	Anorexia, nausea, vomiting, stomatitis, diarrhea, constipation, myelosuppression, fever, chills, malaise
Ibritumomab (Zevalin)	Injection kit	Monoclonal antibody	Neutropenia, thrombocytopenia, anemia, infection, asthenia (loss of strength, energy), abdominal pain, fever, pain, headaches, nausea, peripheral edema, allergic reaction, GI hemorrhage, apnea
Idarubicin (Idamycin PFS)	**I:** 5 mg, 10 mg, 20 mg	Anthracycline	HF, arrhythmias, nausea, vomiting, stomatitis, myelosuppression, alopecia, rash, urticaria, hyperuricemia, abdominal pain, diarrhea, esophagitis, anorexia
Idelalisib (Zydelig)	**T:** 100 mg, 150 mg	Kinase inhibitor	Diarrhea, pyrexia, fatigue, nausea, cough, abdominal pain, pneumonia, increased ALT/AST
Ifosfamide (Ifex)	**I:** 1 g, 3 g	Alkylating agent	Nausea, vomiting, hemorrhagic cystitis, myelosuppression, alopecia, lethargy, drowsiness, confusion, hallucinations, hematuria
Imatinib (Gleevec)	**C:** 100 mg	Tyrosine kinase inhibitor	Nausea, fluid retention, hemorrhage, musculoskeletal pain, arthralgia, weight gain, pyrexia, abdominal pain, dyspnea, pneumonia
Interferon alfa-2b (Intron-A)	**I:** 3 million units, 5 million units, 10 million units, 18 million units, 25 million units, 50 million units	Miscellaneous	Mild hypotension, hypertension, tachycardia with high fever, nausea, diarrhea, altered taste, weight loss, thrombocytopenia, myelosuppression, rash, pruritus, myalgia, arthralgia associated with flu-like symptoms
Ipilimumab (Yervoy)	**I:** 5 mg/ml	Miscellaneous	Fatigue, diarrhea, pruritus, rash, colitis
Irinotecan (Camptosar)	**I:** 40 mg, 100 mg	Camptothecin	Diarrhea, nausea, vomiting, abdominal cramps, anorexia, stomatitis, increased AST, severe myelosuppression, alopecia, diaphoresis, rash, weight loss, dehydration, increased serum alkaline phosphatase, headaches, insomnia, dizziness, dyspnea, cough, asthenia (loss of strength, energy), rhinitis, fever, back pain, chills
Ixabepilone (Ixempra)	**I:** 15 mg, 45 mg	Antimicrotubular	Peripheral sensory neuropathy, fatigue, myalgia, alopecia, nausea, vomiting, stomatitis, diarrhea, anorexia, abdominal pain

Continued

CHEMOTHERAPEUTIC AGENTS—cont'd

Name	Availability	Category	Side Effects
Lapatinib (Tykerb)	**T:** 250 mg	Tyrosine kinase inhibitor	Diarrhea, palmar-plantar erythrodysesthesia, nausea, rash, vomiting, fatigue
Letrozole (Femara)	**T:** 2.5 mg	Aromatase inhibitor	Hypertension, nausea, vomiting, constipation, diarrhea, abdominal pain, anorexia, rash, pruritus, musculoskeletal pain, arthralgia, fatigue, headaches, dyspnea, coughing, hot flashes
Leuprolide (Lupron)	**I:** 3.75 mg, 5 mg, 7.5 mg, 11.25 mg, 15 mg, 22.5 mg, 30 mg	Hormone agonist	Hot flashes, gynecomastia, nausea, vomiting, constipation, anorexia, dizziness, headaches, insomnia, paresthesia, bone pain
Lomustine (CeeNU)	**C:** 10 mg, 40 mg, 100 mg	Alkylating agent	Anorexia, nausea, vomiting, stomatitis, hepatotoxicity, nephrotoxicity, myelosuppression, alopecia, confusion, slurred speech
Mechlorethamine (Mustargen)	**I:** 10 mg/ml	Alkylating agent	Severe nausea and vomiting, metallic taste, diarrhea, myelosuppression, alopecia, phlebitis, vertigo, tinnitus, hyperuricemia, infertility, azoospermia, anorexia, headaches, drowsiness, fever
Megestrol (Megace)	**T:** 20 mg, 40 mg **Suspension:** 40 mg/ml	Hormone	Deep vein thrombosis, Cushing-like syndrome, alopecia, carpal tunnel syndrome, weight gain, nausea
Melphalan (Alkeran)	**T:** 2 mg	Alkylating agent	Anorexia, nausea, vomiting, myelosuppression, diarrhea, stomatitis
Mercaptopurine (Purinethol)	**T:** 50 mg	Antimetabolite	Anorexia, nausea, vomiting, stomatitis, hepatic toxicity, myelosuppression, hyperuricemia, diarrhea, rash
Methotrexate (Rheumatrex)	**T:** 2.5 mg, 5 mg, 7.5 mg, 10 mg, 15 mg **I:** 5 mg, 50 mg, 100 mg, 200 mg, 250 mg	Antimetabolite	Nausea, vomiting, stomatitis, GI ulceration, diarrhea, hepatic toxicity, renal failure, cystitis, myelosuppression, alopecia, urticaria, acne, photosensitivity, interstitial pneumonitis, fever, malaise, chills, anorexia

Mitomycin (Mutamycin)	**I:** 20 mg, 40 mg	Antibiotic	Anorexia, nausea, vomiting, stomatitis, diarrhea, renal toxicity, myelosuppression, alopecia, pruritus, fever, hemolytic uremic syndrome, weakness
Mitotane (Lysodren)	**T:** 500 mg	Miscellaneous	Anorexia, nausea, vomiting, diarrhea, skin rashes, depression, lethargy, drowsiness, dizziness, adrenal insufficiency, blurred vision, impaired hearing
Mitoxantrone (Novantrone)	**I:** 20 mg, 25 mg, 30 mg	Anthracenedione	HF, tachycardia, EKG changes, chest pain, nausea, vomiting, stomatitis, mucositis, myelosuppression, rash, alopecia, urine discoloration (bluish green), phlebitis, diarrhea, cough, headaches, fever
Nelarabine (Arranon)	**I:** 5 mg/ml	Antimetabolite	Anemia, neutropenia, thrombocytopenia, nausea, vomiting, diarrhea, fatigue, fever, dyspnea, severe neurologic events (convulsions, peripheral neuropathy)
Nilotinib (Tasigna)	**C:** 200 mg	Tyrosine kinase inhibitor	Rash, pruritus, nausea, fatigue, headache, constipation, diarrhea, vomiting, thrombocytopenia, neutropenia
Nilutamide (Nilandron)	**T:** 50 mg	Antiandrogen	Hypertension, angina, hot flashes, nausea, anorexia, increased hepatic enzymes, dizziness, dyspnea, visual disturbances, impaired adaptation to dark, constipation, decreased libido
Oxaliplatin (Eloxatin)	**I:** 50 mg, 100 mg	Alkylating agent	Fatigue, neuropathy, abdominal pain, dyspnea, diarrhea, nausea, vomiting, anorexia, fever, edema, chest pain, anemia, thrombocytopenia, thromboembolism, altered hepatic function tests
Paclitaxel (Taxol)	**I:** 30 mg, 100 mg	Antimicrotubular	Hypertension, bradycardia, EKG changes, nausea, vomiting, diarrhea, mucositis, myelosuppression, alopecia, peripheral neuropathies, hypersensitivity reaction, arthralgia, myalgia
Panitumumab (Vectibix)	**I:** 20 mg/ml	Monoclonal antibody	Pulmonary fibrosis, severe dermatologic toxicity, infusion reactions, abdominal pain, nausea, vomiting, constipation, skin rash, fatigue
Pegaspargase (Oncaspar)	**I:** 750 international units/ml	Miscellaneous	Hypotension, anorexia, nausea, vomiting, hepatotoxicity, pancreatitis, depression of clotting factors, malaise, confusion, lethargy, EEG changes, respiratory distress, hypersensitivity reaction, fever, hyperglycemia, stomatitis
Pemetrexed (Alimta)	**I:** 500 mg	Antimetabolite	Anorexia, constipation, diarrhea, neuropathy, anemia, chest pain, dyspnea, rash, fatigue

CHEMOTHERAPEUTIC AGENTS—cont'd

Name	Availability	Category	Side Effects
Pentostatin (Nipent)	**I:** 10 mg	Antibiotic	Nausea, vomiting, hepatic disorders, elevated hepatic function tests, leukopenia, anemia, thrombocytopenia, rash, fever, upper respiratory infection, fatigue, hematuria, headaches, myalgia, arthralgia, diarrhea, anorexia
Pertuzumab (Perjeta)	**I:** 420 mg/14 ml	HERZ/neu receptor antagonist	Alopecia, diarrhea, nausea, neutropenia, rash, fatigue, peripheral neuropathy
Procarbazine (Matulane)	**C:** 50 mg	Alkylating agent	Nausea, vomiting, stomatitis, diarrhea, constipation, myelosuppression, pruritus, hyperpigmentation, alopecia, myalgia, paresthesia, confusion, lethargy, mental depression, fever, hepatic toxicity, arthralgia, respiratory disorders
Ramucirumab (Cyramza)	**I:** 100 mg, 500 mg	Miscellaneous	Diarrhea, hypertension
Rituximab (Rituxan)	**I:** 100 mg, 500 mg	Monoclonal antibody	Hypotension, arrhythmias, peripheral edema, nausea, vomiting, abdominal pain, leukopenia, thrombocytopenia, neutropenia, rash, pruritus, urticaria, angioedema, myalgia, headaches, dizziness, throat irritation, rhinitis, bronchospasm, hypersensitivity reaction
Sipuleucel-T (Provenge)	**I:** Minimum of 50 million autologous $CD54^+$ cells in lactated Ringer's	Miscellaneous	Chills, fatigue, fever, back pain, nausea, headache, joint ache
Sorafenib (Nexavar)	**T:** 200 mg	Tyrosine kinase inhibitor	Fatigue, alopecia, nausea, vomiting, anorexia, constipation, diarrhea, neuropathy, dyspnea, cough, asthenia (loss of strength, energy), pain
Sunitinib (Sutent)	**C:** 12.5 mg, 25 mg, 50 mg	Tyrosine kinase inhibitor	Hypotension, edema, fatigue, headache, fever, dizziness, rash, hyperpigmentation, diarrhea, nausea, dyspepsia, altered taste, vomiting, neutropenia, thrombocytopenia, increased ALT/AST

Tamoxifen (Nolvadex-D)	**T:** 10 mg, 20 mg	Estrogen receptor antagonist	Skin rash, nausea, vomiting, anorexia, menstrual irregularities, hot flashes, pruritus, vaginal discharge or bleeding, myelosuppression, headaches, tumor or bone pain, ophthalmic changes, weight gain, confusion
Temozolomide (Temodar)	**C:** 5 mg, 20 mg, 100 mg, 250 mg	Alkylating agent	Amnesia, fever, infection, leukopenia, neutropenia, peripheral edema, seizures, thrombocytopenia
Temsirolimus (Torisel)	**I:** 25 mg/ml	mTOR kinase inhibitor	Rash, asthenia (loss of strength, energy), mucositis, nausea, edema, anorexia, thrombocytopenia, leukopenia
Thioguanine (Tabloid)	**T:** 40 mg	Antimetabolite	Anorexia, stomatitis, myelosuppression, hyperuricemia, nausea, vomiting, diarrhea
Thiotepa (Thioplex)	**I:** 15 mg	Alkylating agent	Anorexia, nausea, vomiting, mucositis, myelosuppression, amenorrhea, reduced spermatogenesis, fever, hypersensitivity reactions, pain at injection site, headaches, dizziness, alopecia
Topotecan (Hycamtin)	**I:** 4 mg	Camptothecin	Nausea, vomiting, diarrhea, constipation, abdominal pain, stomatitis, anorexia, neutropenia, leukopenia, thrombocytopenia, anemia, alopecia, headaches, dyspnea, paresthesia
Toremifene (Fareston)	**T:** 60 mg	Estrogen receptor antagonist	Elevated hepatic function tests, nausea, vomiting, constipation, skin discoloration, dermatitis, dizziness, hot flashes, diaphoresis, vaginal discharge or bleeding, ocular changes, cataracts, anxiety
Trastuzumab (Herceptin)	**I:** 440 mg	Monoclonal antibody	HF, heart murmur (S_3 gallop), nausea, vomiting, diarrhea, abdominal pain, anorexia, rash, peripheral edema, back or bone pain, asthenia (loss of strength, energy), headaches, insomnia, dizziness, cough, dyspnea, rhinitis, pharyngitis
Tretinoin (Vesanoid)	**C:** 10 mg	Miscellaneous	Flushing, nausea, vomiting, diarrhea, constipation, dyspepsia, mucositis, leukocytosis, dry skin/mucous membranes, rash, pruritus, alopecia, dizziness, anxiety, insomnia, headaches, depression, confusion, intracranial hypertension, agitation, dyspnea, shivering, fever, visual changes, earaches, hearing loss, bone pain, myalgia, arthralgia

CHEMOTHERAPEUTIC AGENTS—cont'd

Name	Availability	Category	Side Effects
Valrubicin (Valstar)	**I:** 200 mg/5 ml	Anthracycline	Dysuria, hematuria, urinary frequency/incontinence/urgency
Vandetanib (Caprelsa)	**T:** 100 mg, 300 mg	Tyrosine kinase inhibitor	Diarrhea, rash, acne, nausea, hypertension, headache, fatigue, decreased appetite, abdominal pain
Vinblastine (Velban)	**I:** 10 mg	Vinca alkaloid	Nausea, vomiting, stomatitis, constipation, myelosuppression, alopecia, peripheral neuropathy, loss of deep tendon reflexes, paresthesia, diarrhea
Vincristine (Oncovin)	**I:** 1 mg, 2 mg, 3 mg	Vinca alkaloid	Nausea, vomiting, stomatitis, constipation, pharyngitis, polyuria, myelosuppression, alopecia, numbness, paresthesia, peripheral neuropathy, loss of deep tendon reflexes, headaches, abdominal pain
Vincristine liposomal (Marqibo)	**I:** 5 mg/31 ml	Vinca alkaloid	Constipation, nausea, pyrexia, fatigue, peripheral neuropathy, febrile neutropenia, diarrhea, anemia, reduced appetite, insomnia
Vinorelbine (Navelbine)	**I:** 10 mg, 50 mg	Vinca alkaloid	Elevated hepatic function tests, nausea, vomiting, constipation, ileus, anorexia, stomatitis, myelosuppression, alopecia, vein discoloration, venous pain, phlebitis, interstitial pulmonary changes, asthenia (loss of strength, energy), fatigue, diarrhea, peripheral neuropathy, loss of deep tendon reflexes
Vismodegib (Erivedge)	**C:** 150 mg	Hedgehog pathway inhibitor	Alopecia, muscle spasms, dysgensia, weight loss, fatigue, nausea, diarrhea, reduced appetite, vomiting, arthralgia
Vorinostat (Zolinza)	**C:** 100 mg	Histone deacetylase inhibitor	Diarrhea, fatigue, nausea, thrombocytopenia, anorexia, dysgeusia
ziv-aflibercept (Zaltrap)	**I:** 25 mg/ml	Miscellaneous	Leukopenia, neutropenia, diarrhea, proteinuria, increased ALT/AST, stomatitis, thrombocytopenia, hypertension, epistaxis, headache, abdominal pain

Contraception

ACTION	CLASSIFICATION	
Combination oral contraceptives decrease fertility primarily by inhibition of ovulation. In addition, they can promote thickening of the cervical mucus, thereby creating a physical barrier for the passage of sperm. Also, they can modify the endometrium, making it less favorable for nidation.	Oral contraceptives either contain both an estrogen and a progestin (combination oral contraceptives) or contain only a progestin (progestin-only oral contraceptives). The combination oral contraceptives have three subgroups: *Monophasic:* Daily estrogen and progestin dosage remains constant.	*Biphasic:* Estrogen remains constant, but the progestin dosage increases during the second half of the cycle. *Triphasic:* Progestin changes for each phase of the cycle.

Over the past several years, options have expanded to include a combined hormonal patch (Ortho Evra), vaginal ring (NuvaRing), and extended cycle contraceptives (e.g., Loestrin-24 FE, Seasonale, Seasonique, Yaz). The latest oral contraceptive, Natazia, is a four-phase dosing regimen (estradiol steps down and dienogest, a progestin, steps up during the cycle to help avoid breakthrough bleeding).

COMMON COMPLAINTS WITH ORAL CONTRACEPTIVES

Too much estrogen	Nausea, bloating, breast tenderness, increased B/P, melasma, headache
Too little estrogen	Early or midcycle breakthrough bleeding, increased spotting, hypomenorrhea
Too much progestin	Breast tenderness, headache, fatigue, changes in mood
Too little progestin	Late breakthrough bleeding
Too much androgen	Increased appetite, weight gain, acne, oily skin, hirsutism, decreased libido, increased breast size, breast tenderness, increased LDL cholesterol, decreased HDL cholesterol

HDL, High-density lipoprotein; ***LDL,*** low-density lipoprotein.

Corticosteroids

USES	ACTION
Replacement therapy in adrenal insufficiency, including Addison's disease. Symptomatic treatment of multiorgan disease/conditions. Rheumatoid arthritis (RA), osteoarthritis, severe psoriasis, ulcerative colitis, lupus erythematosus, anaphylactic shock, acute exacerbation of asthma, status asthmaticus, organ transplant.	Suppress migration of polymorphonuclear leukocytes (PML) and reverse increased capillary permeability by their anti-inflammatory effect. Suppress immune system by decreasing activity of lymphatic system.

Corticosteroids: Topical

USES	ACTION
Provide relief of inflammation/pruritus associated with corticosteroid-responsive disorders (e.g., contact dermatitis, eczema, insect bite reactions, first- and second-degree localized burns/sunburn).	Diffuse across cell membranes, form complexes with cytoplasm. Complexes stimulate protein synthesis of inhibitory enzymes responsible for anti-inflammatory effects (e.g., inhibit edema, erythema, pruritus, capillary dilation, phagocytic activity). Topical corticosteroids can be classified based on potency: May use for facial and intertriginous application for only limited time. *High potency:* For more severe inflammatory conditions (e.g., lichen simplex chronicus, psoriasis). May use for facial and intertriginous application for short time only. Used in areas of thickened skin due to chronic conditions. *Low potency:* Modest anti-inflammatory effect, safest for chronic application, facial and intertriginous application, with occlusion, for infants/young children. *Medium potency:* For moderate inflammatory conditions (e.g., chronic eczematous dermatoses). *Very high potency:* Alternative to systemic therapy for local effect (e.g., chronic lesions caused by psoriasis). Increased risk of skin atrophy. Used for short periods on small areas. Avoid occlusive dressings.

CORTICOSTEROIDS: TOPICAL

Diuretics

USES

Thiazides: Management of edema resulting from a number of causes (e.g., HF, hepatic cirrhosis); hypertension either alone or in combination with other antihypertensives.

Loop: Management of edema associated with HF, cirrhosis of the liver, and renal disease. Furosemide used in treatment of hypertension alone or in combination with other antihypertensives.

Potassium-sparing: Adjunctive treatment with thiazides, loop diuretics in treatment of HF and hypertension.

ACTION

Increase the excretion of water/sodium and other electrolytes via the kidneys. Exact mechanism of antihypertensive effect unknown; may be due to reduced plasma volume or decreased peripheral vascular resistance. Subclassifications of diuretics are based on their mechanism and site of action.

Thiazides: Act at cortical diluting segment of nephron, block reabsorption of Na, Cl, and water; promote excretion of Na, Cl, K, and water. *Loop:* Act primarily at the thick ascending limb of Henle's loop to inhibit Na, Cl, and water absorption.

Potassium-sparing: Spironolactone blocks aldosterone action on distal nephron (causes K retention, Na excretion). Triamterene, amiloride act on distal nephron, decreasing Na reuptake, reducing K secretion.

DIURETICS

Name	Availability	Dosage Range	Side Effects
Thiazide, Thiazide-related			
Chlorothiazide (Diuril)	**T:** 250 mg, 500 mg **S:** 250 mg/5 ml **I:** 500 mg	**Edema:** 500–1,000 mg 1–2 times/day **HTN:** 500–2,000 mg/day in 1–2 divided doses	Confusion, fatigue, muscle cramps, abdominal discomfort
Chlorthalidone (Hygroton)	**Hygroton:** 25 mg, 50 mg	**Edema:** 50–200 mg/day **HTN:** 12.5–100 mg/day	Same as chlorothiazide

Fertility Agents

Infertility is defined as unsuccessful conception after 12 months of attempting to conceive, as opposed to *sterility,* the inability to reproduce. Infertility may be due to reproduction dysfunction of the male, female, or both.

Female infertility can be due to disruption of any phase of the reproductive process. The most critical phases include follicular maturation, ovulation, transport of the ovum through the fallopian tubes, fertilization of the ovum, nidation, and growth/development of the conceptus. Causes of infertility include the following:

Anovulation, failure of follicular maturation: Absence of adequate hormonal stimulation; ovarian follicles do not ripen, and ovulation will not occur.

Unfavorable cervical mucus: Normally the cervical glands secrete large volumes of thin, watery mucus, but if the mucus is unfavorable (scant, thick, or sticky), sperm is unable to pass through to the uterus.

Hyperprolactinemia: Excessive prolactin secretion may cause amenorrhea, galactorrhea, and infertility.

Luteal phase defect: Progesterone secretion by the corpus luteum is insufficient to maintain endometrial integrity.

Endometriosis: Endometrial tissue is implanted in abnormal locations (e.g., uterine wall, ovary, extragenital sites).

Androgen excess: May decrease fertility (most common condition is polycystic ovary).

Male infertility is due to decreased density or motility of sperm or semen of abnormal volume or quality. The most obvious manifestation of male infertility is impotence (inability to achieve erection). Whereas in female infertility an identifiable endocrine disorder can be found, most cases of male infertility are not associated with an identifiable endocrine disorder.

ACTION

Antiestrogens: Nonsteroidal estrogen antagonists that increase follicle-stimulating hormone (FSH) and leutinizing hormone (LH) levels by blocking estrogen-negative feedback at the hypothalamus.

Gonadotropins: Produce ovulation induction in women with hypogonadotropic hypogonadism and polycystic ovary syndrome (PCOS). Ovaries must be able to respond normally to FSH and LH stimulation.

Gonadotropin-releasing hormone (GnRH) agonists: Cause downregulation of endogenous FSH and LH levels. GnRH agonists stimulate release of pituitary gonadotropins. Suppression of endogenous LH can decrease number of oocytes released prematurely, improve oocyte quality, and increase pregnancy rates.

Gonadotropin-releasing hormone (GnRH) antagonists: Suppress endogenous LH surges during ovarian stimulation. GnRH antagonists avoid initial flare-up seen with GnRH agonists, shortening the number of days needed for LH suppression and allowing ovarian stimulation to begin within the spontaneous cycle.

MEDICATIONS TO INDUCE OVULATION

Name	Category	Availability	Uses	Side Effects
Cetrorelix (Cetrotide)	GnRH antagonist	**I:** 0.25 mg, 3 mg	Inhibition of premature LH surges in women undergoing ovarian hyperstimulation	Ovarian hyperstimulation syndrome (OHSS): Abdominal pain, indigestion, bloating, decreased urinary output, nausea, vomiting, diarrhea, rapid weight gain, dyspnea, peripheral/dependent edema, headaches, pain/redness at injection site, mood swings, hot flashes, insomnia, vaginal dryness
Chorionic gonadotropin (Novarel, Ovidrel, Pregnyl)	Gonadotropin	**I:** 5,000 units, 10,000 units, 20,000 units **Ovidrel:** 250 mcg/0.5 ml	In conjunction with clomiphene, human menotropins or urofolitropin to stimulate ovulation	OHSS: Abdominal pain, indigestion, bloating, decreased urinary output, nausea, vomiting, diarrhea, rapid weight gain, dyspnea, peripheral/dependent edema, ovarian enlargement, ovarian cyst formation, headache, pain at injection site
Clomiphene (Clomid, Milophene, Serophene)	Antiestrogen	**T:** 50 mg	Anovulation, oligo-ovulation with intact pituitary/ovarian response and endogenous estrogen	Ovarian cyst formation, ovarian enlargement, visual disturbances, premenstrual syndrome, hot flashes, headaches, blurred vision, nausea, breast tenderness
Follitropin alpha (Gonal-F)	Gonadotropin	**Injection, powder:** 75 units, 450 units, 1,050 units **Injection, solution:** 300 units/0.5 ml, 450 units/0.75 ml, 900 units/15 ml	In conjunction with human chorionic gonadotropin to stimulate ovarian follicular development in pts with ovulatory dysfunction not due to primary ovarian failure (e.g., anovulation, oligo-ovulation)	OHSS: Abdominal pain, indigestion, bloating, decreased urinary output, nausea, vomiting, diarrhea, rapid weight gain, dyspnea, peripheral/dependent edema, flu-like symptoms, upper respiratory tract infections, bleeding between menstrual periods, nausea, ovarian enlargement, ovarian cysts, acne, breast pain/tenderness, mood swings

Continued

MEDICATIONS TO INDUCE OVULATION—cont'd

Name	Category	Availability	Uses	Side Effects
Follitropin beta (Follistim AQ)	Gonadotropin	**I:** 75, 350, 650, 975 international units FSH	In conjunction with human chorionic gonadotropin to stimulate ovarian follicular development in patients with ovulatory dysfunction not due to primary ovarian failure (e.g., anovulation, oligo-ovulation)	OHSS: Abdominal pain, indigestion, bloating, decreased urinary output, nausea, vomiting, diarrhea, rapid weight gain, shortness of breath, peripheral/dependent edema, flu-like symptoms, breast tenderness, dry skin, rash, dizziness, fever, headaches, nausea, fatigue, mood swings
Goserelin (Zoladex)	GnRH agonist	**Implant:** 3.6 mg, 10.8 mg	Endometriosis, adjunct to menotropins for ovulation induction	Hot flashes, amenorrhea, blurred vision, edema, headaches, nausea, vomiting, breast tenderness, weight gain, mood swings, insomnia, vaginal dryness
Leuprolide (Eligard, Lupron)	GnRH agonist	**Injection, Solution:** 5 mg/ml for subcutaneous injection **Injection, powder:** 3.75 mg, 7.5 mg, 11.25 mg, 15 mg, 22.5 mg, 30 mg	Endometriosis, adjunct to menotropins/human chorionic gonadotropin for ovulation induction	Hot flashes, amenorrhea, blurred vision, edema, headaches, nausea, vomiting, breast tenderness, weight gain, mood swings, insomnia, vaginal dryness
Menotropins (Menopur, Repronex)	Gonadotropin	75 units FSH, 75 units LH activity	In conjunction with chorionic gonadotropin for ovulation stimulation in pts with ovulatory dysfunction due to primary ovarian failure	OHSS: Abdominal pain, indigestion, bloating, decreased urinary output, nausea, vomiting, diarrhea, rapid weight gain, dyspnea, edema of lower extremities, ovarian enlargement, ovarian cyst formation, breast tenderness, mood swings

Nafarelin (Synarel)	GnRH	2 mg/ml nasal spray (200 mcg/spray)	Endometriosis, adjunct to menotropins/human chorionic gonadotropin for ovulation induction	Loss of bone mineral density, breast enlargement, bleeding between regular menstrual periods, acne, mood swings, seborrhea, hot flashes, headache, insomnia, vaginal dryness
Urofollitropin (Bravelle)	Gonadotropin	75 units FSH activity	In conjunction with human chorionic gonadotropin for ovulation stimulation in pts with polycystic ovary syndrome who have elevated LH:FSH ratio and have failed clomiphene therapy	OHSS: Abdominal pain, indigestion, bloating, decreased urinary output, nausea, vomiting, diarrhea, rapid weight gain, shortness of breath, edema of lower extremities, ovarian enlargement, ovarian cyst formation, pain/ redness at injection site, breast tenderness, nausea, vomiting, diarrhea, mood swings

I, Injection; ***T,*** tablets.

H_2 Antagonists

USES

Short-term treatment of duodenal ulcer (DU), active benign gastric ulcer (GU), maintenance therapy of DU, pathologic hypersecretory conditions (e.g., Zollinger-Ellison syndrome), gastroesophageal reflux disease (GERD), and prevention of upper GI bleeding in critically ill pts.

ACTION

Inhibit gastric acid secretion by interfering with histamine at the histamine H_2 receptors in parietal cells. Also inhibit acid secretion caused by gastrin. Inhibition occurs with basal (fasting), nocturnal, food-stimulated, or fundic distention secretion. H_2 antagonists decrease both the volume and H_2 concentration of gastric juices.

H_2 ANTAGONISTS

Name	Availability	Dosage Range	Side Effects
Cimetidine (Tagamet)	**T:** 200 mg, 300 mg, 400 mg, 800 mg **L:** 300 mg/5 ml	**Treatment of DU:** 800 mg at bedtime, 400 mg 2 times/day or 300 mg 4 times/day **Maintenance of DU:** 400 mg at bedtime **Treatment of GU:** 800 mg at bedtime or 300 mg 4 times/day **GERD:** 1,600 mg/day **Hypersecretory:** 1,200–2,400 mg/day	Headaches, fatigue, dizziness, confusion, diarrhea, gynecomastia
Famotidine (Pepcid)	**T:** 10 mg, 20 mg, 40 mg **T (chewable):** 10 mg **DT:** 20 mg, 40 mg **Gelcap:** 10 mg **OS:** 40 mg/5 ml **I:** 10 mg/ml	**Treatment of DU:** 40 mg/day **Maintenance of DU:** 20 mg/day **Treatment of GU:** 40 mg/day **GERD:** 40–80 mg/day **Hypersecretory:** 80–640 mg/day	Headaches, dizziness, diarrhea, constipation, abdominal pain, tinnitus

Nizatidine (Axid)	**OS:** 15 mg/ml **C:** 150 mg, 300 mg	**Treatment of DU:** 300 mg/day **Maintenance of DU:** 150 mg/day	Fatigue, urticaria, abdominal pain, constipation, nausea
Ranitidine (Zantac)	**T:** 75 mg, 150 mg, 300 mg **C:** 150 mg, 300 mg **Syrup:** 15 mg/ml **I:** 25 mg/ml	**Treatment of DU:** 300 mg/day **Maintenance of DU:** 150 mg/day **Treatment of GU:** 300 mg/day **GERD:** 300 mg/day **Hypersecretory:** 0.3–6 g/day	Blurred vision, constipation, nausea, abdominal pain

C, Capsules; ***DT,*** disintegrating tablets; ***I,*** injection; ***L,*** liquid; ***OS,*** oral suspension; ***T,*** tablets.

Hematinic Preparations

USES	ACTION
Prevention or treatment of iron deficiency resulting from improper diet, pregnancy, impaired absorption, or prolonged blood loss.	Iron supplements are provided to ensure adequate supplies for the formation of hemoglobin, which is needed for erythropoiesis and O_2 transport.

HEMATINIC (IRON) PREPARATIONS

Name	Availability	Side Effects
Ferrous fumarate (Femiron, Feostat)	**T:** 63 mg, 200 mg, 324 mg	Constipation, nausea, vomiting, diarrhea, abdominal pain/cramps
Ferrous gluconate (Fergon)	**T:** 240 mg, 325 mg	Same as ferrous fumarate
Ferrous sulfate (Fer-In-Sol)	**T:** 325 mg **Liquid:** 300 mg/5 ml **E:** 220 mg/5 ml **D:** 75 mg/ml	Same as ferrous fumarate
Ferrous sulfate exsiccated (Slow-Fe)	**T:** 200 mg	Same as ferrous fumarate

C, Caplets; ***D,*** drops; ***E,*** elixir; ***ER,*** extended-release; ***S,*** suspension; ***SR,*** sustained-release; ***T,*** tablets.

Hormones

USES

Functions of the body are regulated by two major control systems: the nervous system and the endocrine (hormone) system. Together they maintain homeostasis and control different metabolic functions in the body.

Hormones are concerned with control of different metabolic functions in the body (e.g., rates of chemical reactions in cells, transporting substances through cell membranes, cellular metabolism [growth/secretions]). By definition, a hormone is a chemical substance secreted into body fluids by cells and has control over other cells in the body.

Hormones can be local or general:

- *Local hormones* have specific local effects (e.g., acetylcholine, which is secreted at parasympathetic and skeletal nerve endings).

ACTION

- *General hormones* are mostly secreted by specific endocrine glands (e.g., epinephrine/norepinephrine are secreted by the adrenal medulla in response to sympathetic stimulation), transported in the blood to all parts of the body, causing many different reactions.

Some general hormones affect all or almost all cells of the body (e.g., thyroid hormone from the thyroid gland increases the rate of most chemical reactions in almost all cells of the body); other general hormones affect only specific tissue (e.g., ovarian hormones are specific to female sex organs and secondary sexual characteristics of the female).

Endocrine hormones almost never directly act intracellularly affecting chemical reactions. They first combine with hormone receptors either on the cell surface or inside the cell (cell cytoplasm or nucleus). The combination of hormone and receptors alters the function of the receptor, and the receptor is the direct cause of the hormone effects. Altered receptor function may include the following:

Altered cell permeability, which causes a change in protein structure of the receptor, usually opening or closing a channel for one or more ions. The movement of these ions causes the effect of the hormone.

Activation of intracellular enzymes immediately inside the cell membrane (e.g., hormone combines with receptor that then becomes the activated enzyme adenyl cyclase, which causes formation of cAMP).

◄**ALERT**► cAMP has effects inside the cell. It is not the hormone but cAMP that causes these effects.

Regulation of hormone secretion is controlled by an internal control system, the negative feedback system:

- Endocrine gland oversecretes.
- Hormone exerts more and more of its effect.
- Target organ performs its function.
- Too much function in turn feeds back to endocrine gland to decrease secretory rate.

The endocrine system contains many glands and hormones. A summary of the important glands and their hormones secreted are as follows:

The pituitary gland (hypophysis) is a small gland found in the sella turcica at the base of the brain. The pituitary is divided into two portions physiologically: the anterior pituitary (adenohypophysis) and the posterior pituitary (neurohypophysis). Six important hormones are secreted from the anterior pituitary and two from the posterior pituitary.

Anterior pituitary hormones:

- Growth hormone (GH)
- Adrenocorticotropin (corticotropin)
- Thyroid-stimulating hormone (thyrotropin) (TSH)
- Follicle-stimulating hormone (FSH)
- Luteinizing hormone (LH)
- Prolactin

Continued

Hormones—cont'd

ACTION—cont'd

Posterior pituitary hormones:

- Antidiuretic hormone (vasopressin)
- Oxytocin

Almost all secretions of the pituitary hormones are controlled by hormonal or nervous signals from the hypothalamus. The hypothalamus is a center of information concerned with the well-being of the body, which in turn is used to control secretions of the important pituitary hormones just listed. Secretions from the posterior pituitary are controlled by nerve signals originating in the hypothalamus; anterior pituitary hormones are controlled by hormones secreted within the hypothalamus. These hormones are as follows:

- Thyrotropin-releasing hormone (TRH) releasing thyroid-stimulating hormone
- Corticotropin-releasing hormone (CRH) releasing adrenocorticotropin
- Growth hormone–releasing hormone (GHRH) releasing growth hormone and growth hormone inhibitory hormone (GHIH) (same as somatostatin)
- Gonadotropin-releasing hormone (GnRH) releasing the two gonadotropic hormones LH and FSH
- Prolactin inhibitory factor (PIF) causing inhibition of prolactin and prolactin-releasing factor

Anterior Pituitary Hormones

All anterior pituitary hormones (except growth hormone) have as their principal effect stimulating target glands.

Growth Hormone (GH)

Growth hormone affects almost all tissues of the body. GH (somatopropin) causes growth in almost all tissues of the body (increases cell size, increases mitosis with increased number of cells, and differentiates certain types of cells). Metabolic effects include increased rate of protein synthesis, mobilization of fatty acids from adipose tissue, decreased rate of glucose utilization.

Thyroid-Stimulating Hormone (TSH)

Thyroid-stimulating hormone controls secretion of the thyroid hormones. The thyroid gland is located immediately below the larynx on either side of and anterior to the trachea and secretes two significant hormones, thyroxine (T_4) and triiodothyroxine (T_3), which have a profound effect on increasing the metabolic rate of the body. The thyroid gland also secretes calcitonin, an important hormone for calcium metabolism. Calcitonin promotes deposition of calcium in the bones, which decreases calcium concentration in the extracellular fluid.

Adrenocorticotropin

Adrenocorticotropin causes the adrenal cortex to secrete adrenocortical hormones. The adrenal glands lie at the superior poles of the two kidneys. Each gland is composed of two distinct parts: the adrenal medulla and the cortex. The adrenal medulla, related to the sympathetic nervous system, secretes the hormones epinephrine and norepinephrine. When stimulated, they cause constriction of blood vessels, increased activity of the heart, inhibitory effects on the GI tract, and dilation of the pupils. The adrenal cortex secretes corticosteroids, of which there are two major types: mineralocorticoids and glucocorticoids. Aldosterone, the principal mineralocorticoid, primarily affects electrolytes of the extracellular fluids. Cortisol, the principal glucocorticoid, affects glucose, protein, and fat metabolism.

Luteinizing Hormone (LH)

Luteinizing hormone plays an important role in ovulation and causes secretion of female sex hormones by the ovaries and testosterone by the testes.

Follicle-Stimulating Hormone (FSH)

Follicle-stimulating hormone causes growth of follicles in the ovaries before ovulation and promotes formation of sperm in the testes.

Ovarian sex hormones are estrogens and progestins. Estradiol is the most important estrogen; progesterone is the most important progestin.

Estrogens mainly promote proliferation and growth of specific cells in the body and are responsible for development of most of the secondary sex characteristics. Primarily cause cellular proliferation and growth of tissues of sex organs/other tissue related to reproduction. Ovaries, fallopian tubes, uterus, vagina increase in size. Estrogen initiates growth of breast and milk-producing apparatus, external appearance.

Progesterone stimulates secretion of the uterine endometrium during the latter half of the female sexual cycle, preparing the uterus for implantation of the fertilized ovum. Decreases the frequency of uterine contractions (helps prevent expulsion of the implanted ovum). Progesterone promotes development of breasts, causing alveolar cells to proliferate, enlarge, and become secretory in nature.

Testosterone is secreted by the testes and formed by the interstitial cells of Leydig. Testosterone production increases under the stimulus of the anterior pituitary gonadotropic hormones. It is responsible for distinguishing characteristics of the masculine body (stimulates the growth of male sex organs and promotes the development of male secondary sex characteristics, e.g., distribution of body hair, effect on voice, protein formation, and muscular development).

Prolactin

Prolactin promotes the development of breasts and secretion of milk.

POSTERIOR PITUITARY HORMONES

Antidiuretic Hormone (ADH) (Vasopressin)

ADH can cause antidiuresis (decreased excretion of water by the kidneys). In the presence of ADH, the permeability of the renal-collecting ducts and tubules to water increases, which allows water to be absorbed, conserving water in the body. ADH in higher concentrations is a very potent vasoconstrictor, constricting arterioles everywhere in the body, increasing B/P.

Oxytocin

Oxytocin contracts the uterus during the birthing process, esp. toward the end of the pregnancy, helping expel the baby. Oxytocin also contracts myoepithelial cells in the breasts, causing milk to be expressed from the alveoli into the ducts so that the baby can obtain it by suckling.

PANCREAS

The pancreas is composed of two tissue types: *acini* (secrete digestive juices in the duodenum) and *islets of Langerhans* (secrete insulin/glucagons directly into the blood). The islets of Langerhans contain three cells: alpha, beta, and delta. Alpha cells secrete glucagon, beta cells secrete insulin, and delta cells secrete somatostatin.

Insulin promotes glucose entry into most cells, thus controlling the rate of metabolism of most carbohydrates. Insulin also affects fat metabolism.

Glucagon effects are opposite those of insulin, the most important of which is increasing blood glucose concentration by releasing it from the liver into the circulating body fluids.

Somatostatin (same chemical as secreted by the hypothalamus) has multiple inhibitory effects: depresses secretion of insulin and glucagon, decreases GI motility, decreases secretions/absorption of the GI tract.

Human Immunodeficiency Virus (HIV) Infection

USES	ACTION	
Antiretroviral agents are used in the treatment of HIV infection.	Seven classes of antiretroviral agents are used in the treatment of HIV disease. *Nucleoside reverse transcriptase inhibitors (NRTIs)* compete with natural substrates for formation of proviral DNA by reverse transcriptase inhibiting viral replication. *Nucleotide reverse transcriptase inhibitors* (*NtRTIs*) inhibit reverse transcriptase by competing with the natural substrate deoxyadenosine triphosphate and by DNA chain termination. *Non-nucleoside reverse transcriptase inhibitors (NNRTIs)* directly bind to reverse transcriptase and block RNA-dependent and DNA-dependent DNA polymerase activities by disrupting the enzyme's catalytic site.	*Protease inhibitors (PIs)* bind to the active site of HIV-1 protease and prevent the processing of viral gag and gag-pol polyprotein precursors resulting in immature, noninfectious viral particles. *Fusion inhibitors* interfere with the entry of HIV-1 into cells by inhibiting fusion of viral and cellular membranes. *CCR5 co-receptor antagonist* selectively binds to human chemokine receptor CCR5 present on cell membrane preventing HIV-1 from entering cells. *Integrase inhibitor* inhibits catalytic activity of HIV-1 integrase, an HIV-1 encoded enzyme required for viral replication.

ANTIRETROVIRAL AGENTS FOR TREATMENT OF HIV INFECTION

Name	Availability	Dosage Range	Side Effects
Nucleoside Analogues			
Abacavir (Ziagen)	**T:** 300 mg **OS:** 20 mg/ml	**A:** 300 mg 2 times/day or 600 mg once daily	Nausea, vomiting, malaise, rash, fever, headaches, asthenia (loss of strength, energy), fatigue, hypersensitivity reactions
Abacavir/lamivudine (Epzicom)	**T:** 600 mg abacavir/ 300 mg lamivudine	**A:** 600 mg/300 mg once daily	Allergic reaction, insomnia, headaches, depression, dizziness, fatigue, diarrhea, fever, abdominal pain, anxiety
Didanosine (Videx EC)	**DR:** 125 mg, 200 mg, 250 mg, 400 mg **OS:** 2 g/bottle, 4 g/bottle	**DR (weighing 60 kg or more):** 400 mg once daily; **(weighing 25–59 kg):** 250 mg once daily; **(weighing 20–24 kg):** 200 mg once daily **OS (weighing more than 60 kg):** 200 mg q12h or 400 mg once daily; **(weighing less than 60 kg):** 125 mg q12h or 250 mg once daily	Peripheral neuropathy, pancreatitis, diarrhea, nausea, vomiting, headaches, insomnia, rash, hepatitis, seizures
Emtricitabine (Emtriva)	**C:** 200 mg **OS:** 10 mg/ml	**A:** 200 mg/day **(C)** 240 mg/day **(OS)**	Headaches, insomnia, depression, diarrhea, nausea, vomiting, rhinitis, asthenia (loss of strength, energy), rash
Emtricitabine/efavirenz/ tenofovir (Atripla)	**T:** 200 mg emtricitabine/ 600 mg efavirenz/ 300 mg tenofovir	**A:** 200 mg/600 mg/300 mg once daily	Lactic acidosis, headaches, dizziness, abdominal pain, nausea, vomiting, rash
Emtricitabine/rilpivirine/ tenofovir (Complera)	**T:** 200 mg emtricitabine/ 25 mg rilpivirine/300 mg tenofovir	**A:** 200 mg/25 mg/300 mg once daily with food	Insomnia, headache, diarrhea, nausea, fatigue, dizziness, depression, rash

Continued

ANTIRETROVIRAL AGENTS FOR TREATMENT OF HIV INFECTION—cont'd

Name	Availability	Dosage Range	Side Effects
Emtricitabine/tenofovir (Truvada)	**T:** 200 mg emtricitabine/ 300 mg tenofovir	**A:** 200 mg/300 mg once daily with food	Dizziness, diarrhea, headaches, rash, belching/ flatulence, skin discoloration
Emtricitabine/elvitegravir/ cobicistat/tenofovir (Stribild)	**T:** 200 mg emtricitabine 150 mg elvitegravir 150 mg cobicistat 300 mg tenofovir	**A:** 200 mg/150 mg/150 mg/300 mg once daily with food	Nausea, diarrhea
Lamivudine (Epivir)	**T:** 100 mg, 150 mg, 300 mg **OS:** 5 mg/ml, 10 mg/ml	**A:** 150 mg 2 times/day or 300 mg once daily **C:** 4 mg/kg 2 times/day	Diarrhea, malaise, fatigue, headaches, nausea, vomiting, abdominal pain, peripheral neuropathy, arthralgia, myalgia, skin rash
Stavudine (Zerit)	**C:** 15 mg, 20 mg, 30 mg, 40 mg **OS:** 1 mg/ml	**A (weighing more than 60 kg):** 40 mg 2 times/day (20 mg 2 times/day if peripheral neuropathy occurs); **(weighing 60 kg or less):** 30 mg 2 times/day (15 mg 2 times/day if peripheral neuropathy occurs)	Peripheral neuropathy, anemia, leukopenia, neutropenia
Zidovudine (Retrovir)	**C:** 100 mg **T:** 300 mg **Syrup:** 50 mg/5 ml, 10 mg/ml	**A:** 300 mg 2 times/day	Anemia, granulocytopenia, myopathy, nausea, malaise, fatigue, insomnia
Zidovudine/lamivudine (AZT/3TC) (Combivir)	**C:** 300 mg AZT/150 mg 3TC	**A:** 300 mg/150 mg 2 times/day	Myelosuppression, peripheral neuropathy, pancreatitis
Zidovudine/lamivudine/ abacavir (AZT/3TC/ABC) (Trizivir)	**C:** 300 mg AZT/150 mg 3TC/300 mg ABC	**A:** 300 mg/150 mg/300 mg 2 times/day	Myelosuppression, peripheral neuropathy, anaphylactic reaction

Nucleotide Analogues			
Tenofovir (Viread)	**T:** 300 mg	**A:** 300 mg once daily	Nausea, vomiting, diarrhea, headache, fatigue
Tenofovir/ elvitegravir/cobicistat/ emtricitabine (Stribild)	**T:** 300 mg tenofovir 150 mg elvitegravir 150 mg cobicistat 200 mg emtricitabine	**A:** 300 mg/150 mg/150 mg/200 mg once daily with food	Nausea, diarrhea
Non-nucleoside Analogues			
Delavirdine (Rescriptor)	**T:** 100 mg, 200 mg	**A:** 200 mg 3 times/day for 14 days, then 400 mg 3 times/day	Rash, nausea, headaches, elevated hepatic function tests
Efavirenz (Sustiva)	**C:** 50 mg, 200 mg **T:** 600 mg	**A:** 600 mg/day **C:** 200–600 mg/day based on weight	Headaches, dizziness, insomnia, fatigue, rash, nightmares
Etravirine (Intelence)	**T:** 100 mg, 200 mg	**A:** 200 mg 2 times/day	Skin reactions (e.g., Stevens-Johnson syndrome, erythema multiforme), nausea, abdominal pain, vomiting
Nevirapine (Viramune, Viramune XR)	**T:** 200 mg **T (ER):** 400 mg **S:** 50 mg/ml	**A:** 200 mg/day for 14 days, then (if no rash) 200 mg 2 times/day	Rash, nausea, fatigue, fever, headaches, abnormal hepatic function tests
Rilpivirine (Edurant)	**T:** 25 mg	**A:** 25 mg once daily with a meal	Depression, insomnia, headache, rash
Protease Inhibitors			
Atazanavir (Reyataz)	**C:** 100 mg, 150 mg, 200 mg, 300 mg	**A:** 400 mg/day or 300 mg (with 100 mg ritonavir) once daily	Headaches, diarrhea, abdominal pain, nausea, rash
Darunavir (Prezista)	**T:** 400 mg, 600 mg	**A:** 600 mg 2 times/day (with ritonavir 100 mg) or 800 mg once daily with ritonavir 100 mg	Diarrhea, nausea, vomiting, headaches, skin rash, constipation

Continued

ANTIRETROVIRAL AGENTS FOR TREATMENT OF HIV INFECTION—cont'd

Name	Availability	Dosage Range	Side Effects
Fosamprenavir (Lexiva)	**T:** 700 mg **OS:** 50 mg/ml	**A:** 1,400–2,800 mg/day with 100 mg ritonavir	Headaches, fatigue, rash, nausea, diarrhea, vomiting, abdominal pain
Indinavir (Crixivan)	**C:** 200 mg, 400 mg	**A:** 800 mg q8h or 800 mg 2 times/day with ritonavir 100 mg	Nephrolithiasis, hyperbilirubinemia, abdominal pain, asthenia (loss of strength, energy), fatigue, flank pain, nausea, vomiting, diarrhea, headaches, insomnia, dizziness, altered taste
Lopinavir/ritonavir (Kaletra)	**C:** 133/33 mg **OS:** 80/20 mg	**A:** 400 mg/100 mg 2 times/day or 800 mg/200 mg once daily **C (4–12 yrs):** 10–13 mg/kg 2 times/day	Diarrhea, nausea, vomiting, abdominal pain, headaches, rash
Nelfinavir (Viracept)	**T:** 250 mg **Oral Powder:** 50 mg/g	**A:** 750 mg q8h or 1,250 mg 2 times/day **C:** 20–25 mg/kg q8h	Diarrhea, fatigue, asthenia (loss of strength, energy), headaches, hypertension, impaired concentration
Ritonavir (Norvir)	**C:** 100 mg **OS:** 80 mg/ml	**A:** Titrate up to 800 mg/day based on protease inhibitor	Nausea, vomiting, diarrhea, altered taste, fatigue, elevated hepatic function tests and triglyceride levels
Saquinavir (Invirase)	**C:** 200 mg **T:** 500 mg	**A:** 1,000 mg 2 times/day with ritonavir 100 mg	Diarrhea, elevated hepatic function tests, hypertriglycerides, cholesterol, abnormal fat accumulation, hyperglycemia
Tipranavir (Aptivus)	**C:** 250 mg **OS:** 100 mg/ml	**A:** 500 mg (with 200 mg ritonavir) 2 times/day	Diarrhea, nausea, fatigue, headaches, vomiting

Fusion Inhibitors			
Enfuvirtide (Fuzeon)	**I:** 108 mg (90 mg when reconstituted)	**Subcutaneous:** 90 mg 2 times/day	Insomnia, depression, peripheral neuropathy, decreased appetite, constipation, asthenia (loss of strength, energy), cough
CCR5 Antagonists			
Maraviroc (Selzentry)	**T:** 150 mg, 300 mg	**A:** 300 mg 2 times/day **CYP3A4 inducers:** 600 mg 2 times/day **CYP3A4 inhibitors:** 150 mg 2 times/day	Cough, pyrexia, upper respiratory tract infections, rash, musculoskeletal symptoms, abdominal pain, dizziness
Integrase Inhibitor			
Raltegravir (Isentress)	**T:** 400 mg	**A:** 400 mg 2 times/day	Nausea, headache, diarrhea, pyrexia
Dolutegravir (Tivicay)	**T:** 50 mg	**A:** 50 mg once daily or 50 mg bid (with CYP3A inducers or resistance)	Insomnia, headache

A, Adults; ***C,*** capsules; ***C** (dosage),* children; ***DR,*** delayed-release; ***ER,*** extended-release; ***I,*** injection; ***OS,*** oral solution; ***S,*** suspension; ***T,*** tablets.

Immunosuppressive Agents

USES	ACTION
Improvement of both short- and long-term allograft survivals.	*Basiliximab:* An interleukin-2 (IL-2) receptor antagonist inhibiting IL-2 binding. This prevents activation of lymphocytes, and the response of the immune system to antigens is impaired. *Cyclosporine:* Inhibits production and release of IL-2. *Daclizumab:* An IL-2 receptor antagonist inhibiting IL-2 binding. *Mycophenolate:* A prodrug that reversibly binds and inhibits inosine monophosphate dehydrogenase (IMPD), resulting in inhibition of purine nucleotide synthesis, inhibiting DNA and RNA synthesis and subsequent synthesis of T and B cells. *Sirolimus:* Inhibits IL-2–stimulated T-lymphocyte activation and proliferation, which may occur through formation of a complex. *Tacrolimus:* Inhibits IL-2–stimulated T-lymphocyte activation and proliferation, which may occur through formation of a complex.

IMMUNOSUPPRESSIVE AGENTS

Name	Availability	Dosage	Side Effects
Basiliximab (Simulect)	**I:** 10 mg, 20 mg	20 mg for 2 doses (on day of transplant, then 4 days after transplantation)	Abdominal pain, asthenia (loss of strength, energy), cough, dizziness, dyspnea, dysuria, edema, hypertension, infection, tremors
Cyclosporine (Neoral, Sandimmune)	**C:** 25 mg, 50 mg, 100 mg **S:** 100 mg/ml **I:** 50 mg/ml	Dose dependent on type of transplant and formulation	Hypertension, hyperkalemia, nephrotoxicity, coarsening of facial features, hirsutism, gingival hyperplasia, nausea, vomiting, diarrhea, hepatotoxicity, hyperuricemia, hypertriglyceridemia, hypercholesterolemia, tremors, paresthesia, seizures, risk of infection/malignancy
Mycophenolate (CellCept)	**C:** 250 mg **I:** 500 mg **S:** 200 mg/ml **T:** 500 mg	1–1.5 g 2 times/ day based on type of transplant	Diarrhea, vomiting, leukopenia, neutropenia, infections
Sirolimus (Rapamune)	**S:** 1 mg/ml **T:** 0.5 mg, 1 mg, 2 mg	2–6 mg/day	Dyspnea, leukopenia, thrombocytopenia, hyperlipidemia, abdominal pain, acne, arthralgia, fever, diarrhea, constipation, headaches, vomiting, weight gain
Tacrolimus (Prograf)	**C:** 0.5 mg, 1 mg, 5 mg **I:** 5 mg/ml	**Heart:** 0.075 mg/ kg/day in 2 divided doses q12h **Kidney:** 0.1–0.2 mg/kg/day in 2 divided doses q12h **Liver:** 0.1–0.15 mg/ kg/day in 2 divided doses q12h	Nephrotoxicity, neurotoxicity, hyperglycemia, nausea, vomiting, photophobia, infections, hypertension, hyperlipidemia

C, Capsules; ***I,*** injection; ***S,*** oral solution or suspension; ***T,*** tablets.

Laxatives

USES

Short-term treatment of constipation; colon evacuation before rectal/bowel examination; prevention of straining (e.g., after anorectal surgery, MI); to reduce painful elimination (e.g., episiotomy, hemorrhoids, anorectal lesions); modification of effluent from ileostomy, colostomy; prevention of fecal impaction; removal of ingested poisons.

ACTION

Laxatives ease or stimulate defecation. Mechanisms by which this is accomplished include (1) attracting, retaining fluid in colonic contents due to hydrophilic or osmotic properties; (2) acting directly or indirectly on mucosa to decrease absorption of water and NaCl; or (3) increasing intestinal motility, decreasing absorption of water and NaCl by virtue of decreased transit time.

Bulk-forming: Act primarily in small/large intestine. Retain water in stool, may bind water, ions in colonic lumen (soften feces, increase bulk); may increase colonic bacteria growth (increases fecal mass). Produce soft stool in 1–3 days.

Osmotic agents: Act in colon. Similar to saline laxatives. Osmotic action may be enhanced in distal ileum/colon by bacterial metabolism to lactate, other organic acids. This decrease in pH increases motility, secretion. Produce soft stool in 1–3 days.

Saline: Acts in small/large intestine, colon (sodium phosphate). Poorly, slowly absorbed; causes hormone cholecystokinin release from duodenum (stimulates fluid secretion, motility); possesses osmotic properties; produces watery stool in 2–6 hrs (small doses produce semifluid stool in 6–12 hrs).

Stimulant: Acts in colon. Enhances accumulation of water/electrolytes in colonic lumen, enhances intestinal motility. May act directly on intestinal mucosa. Produces semifluid stool in 6–12 hrs.

◄**ALERT**► Bisacodyl suppository acts in 15–60 min.

Stool softener: Acts in small/large intestine. Hydrates and softens stools by its surfactant action, facilitating penetration of fat and water into stool. Produces soft stool in 1–3 days.

LAXATIVES

Name	Onset of Action	Uses	Side Effects/Precautions
Bulk-forming			
Methylcellulose (Citrucel)	12–24 hrs up to 3 days	Treatment of constipation for postpartum women, elderly, pts with diverticulosis, irritable bowel syndrome, hemorrhoids	Gas, bloating, esophageal obstruction, colonic obstruction, calcium and iron malabsorption
Psyllium (Metamucil)	Same as methylcellulose	Treatment of chronic constipation and constipation associated with rectal disorders; management of irritable bowel syndrome	Diarrhea, constipation, abdominal cramps, esophageal/colon obstruction, broncho-spasm
Stool Softener			
Docusate (Colace, Surfak)	1–3 days	Treatment of constipation due to hard stools, in painful anorectal conditions, and for those who need to avoid straining during bowel movements	Stomachache, mild nausea, cramping, diarrhea, irritated throat (with liquid and syrup dose forms)
Saline			
Magnesium citrate (Citrate of Magnesia, Citro-Mag)	30 min–3 hrs	Bowel evacuation prior to certain surgical and diagnostic procedures	Hypotension, abdominal cramping, diarrhea, gas formation, electrolyte abnormalities
Magnesium hydroxide	30 min–3 hrs	Short-term treatment of occasional constipation	Electrolyte abnormalities can occur; use caution in pts with renal or cardiac impairment; diarrhea, abdominal cramps, hypotension
Sodium phosphate (Fleet Phospho-Soda)	2–15 min	Relief of occasional constipation; bowel evacuation prior to certain surgical and diagnostic procedures	Electrolyte abnormalities; do not use for pts with HF, severe renal impairment, ascites, GI obstruction, active inflammatory bowel disease

Continued

LAXATIVES—cont'd

Name	Onset of Action	Uses	Side Effects/Precautions
Osmotic			
Lactulose (Kristalose)	24–48 hrs	Short-term relief of constipation	Nausea, vomiting, diarrhea, abdominal cramping, bloating, gas
Polyethylene glycol (MiraLax)	24–48 hrs	Short-term relief of constipation	Bitter taste, diarrhea
Stimulant			
Bisacodyl (Dulcolax)	**PO:** 6–12 hrs **Rectal:** 15–60 min	Short-term relief of constipation	Elecrolyte imbalance, abdominal discomfort, gas, potential for overuse/abuse
Senna (Senokot)	6–12 hrs	Short-term relief of constipation	Abdominal discomfort, cramps

Nitrates

USES	ACTION
Sublingual: Acute relief of angina pectoris. *Oral, topical:* Long-term prophylactic treatment of angina pectoris. *Intravenous:* Adjunctive treatment in HF associated with acute MI. Produce controlled hypotension during surgical procedures; control B/P in perioperative hypertension, angina unresponsive to organic nitrates or beta blockers.	Relaxes most smooth muscles, including arteries and veins. Effect is primarily on veins (decrease left/right ventricular end-diastolic pressure). In angina, nitrates decrease myocardial work and O_2 requirements (decrease preload by venodilation and afterload by arteriodilation). Nitrates also appear to redistribute blood flow to ischemic myocardial areas, improving perfusion without increasing coronary blood flow.

NITRATES

Name	Availability	Dosage Range	Side Effects
Isosorbide dinitrate (Isordil)	**T:** 5 mg, 10 mg, 20 mg, 30 mg, 40 mg **T (ER):** 40 mg **SL:** 2.5 mg, 5 mg **C (SR):** 40 mg	**SL:** 2.5–5 mg **PO:** 10–40 mg 2–3 times/day **PO (SR):** 40 mg 1–2 times/day	Flushing, headaches, nausea, vomiting, orthostatic hypotension, restlessness, tachycardia
Isosorbide mononitrate (Imdur, ISMO)	**T:** 30 mg, 60 mg, 120 mg	**PO:** 30–240 mg once daily	Same as isosorbide dinitrate

Continued

NITRATES—cont'd

Name	Availability	Dosage Range	Side Effects
Nitroglycerin (Minitran, Nitro-Bid, Nitro-Dur, Nitrostat)	**SL:** 0.4 mg **C (SR):** 2.5 mg, 6.5 mg, 9 mg **Topical:** 2% ointment **Trans:** 0.1 mg/hr, 0.2 mg/hr, 0.3 mg/hr, 0.4 mg/hr, 0.6 mg/hr, 0.8 mg/hr **I:** 5 mg/ml **Infusion:** 100 mcg/ml, 200 mcg/ml	**SL:** 0.4 mg up to 3 times q15min **SR:** 2.5–26 mg 3–4 times/day **Trans:** 0.1–0.8 mg/hr **T:** 1–2 inches up to 4–5 inches q4h	Flushing, hypotension, tachycardia, headache, dizziness, nausea, dyspnea

C, Capsules; ***ER,*** extended-release; ***I,*** injection; ***SL,*** sublingual; ***SR,*** sustained-release; ***T,*** tablets; ***Trans,*** transdermal.

Nonsteroidal Anti-Inflammatory Drugs (NSAIDs)

USES

Provide symptomatic relief from *pain/inflammation* in the treatment of musculoskeletal disorders (e.g., rheumatoid arthritis [RA], osteoarthritis, ankylosing spondylitis), *analgesic* for low to moderate pain, *reduction in fever* (many agents not suited for routine/prolonged therapy due to toxicity). By virtue of its action on platelet function, aspirin is used in treatment or prophylaxis of diseases associated with hypercoagulability (reduces risk of stroke/heart attack).

ACTION

Exact mechanism for anti-inflammatory, analgesic, antipyretic effects unknown. Inhibition of enzyme cyclo-oxygenase, the enzyme responsible for prostaglandin synthesis, appears to be a major mechanism of action. May inhibit other mediators of inflammation (e.g., leukotrienes). Direct action on hypothalamus heat-regulating center may contribute to antipyretic effect.

NSAIDs

Name	Availability	Dosage Range	Side Effects
Aspirin	**Caplet:** 500 mg **Suppository:** 300 mg, 600 mg **T:** 325 mg **T (EC):** 81 mg, 325 mg **T (chew):** 81 mg	**Analgesic/antipyretic:** 325–650 mg q4–6h prn **Anti-inflammatory:** 2.4–3.6 g/day	GI discomfort, dizziness, headaches, increased risk of bleeding
Celecoxib (Celebrex)	**C:** 50 mg, 100 mg, 200 mg, 400 mg	200 mg q12h (**Maximum:** 600 mg day 1, then 400 mg/day)	Diarrhea, back pain, dizziness, heartburn, headaches, nausea, abdominal pain
Diclofenac (Voltaren)	**T:** 25 mg, 50 mg, 75 mg	50 mg tid	Indigestion, constipation, diarrhea, nausea, headaches, fluid retention, abdominal cramps
Diflunisal (Dolobid)	**T:** 500 mg	**Arthritis:** 0.5–1 g/day in 2 divided doses **P:** 250–500 mg q8–12h	Headaches, abdominal cramps, indigestion, diarrhea, nausea
Etodolac (Lodine)	**T:** 400 mg, 500 mg **T (ER):** 400 mg, 500 mg, 600 mg **C:** 200 mg, 300 mg	**Arthritis:** 600–1,000 mg/day in divided doses **P:** 200–400 mg q6–8h as needed	Indigestion, dizziness, headaches, bloated feeling, diarrhea, nausea, weakness, abdominal cramps
Fenoprofen (Nalfon)	**C:** 200 mg, 400 mg **T:** 600 mg	**Arthritis:** 300–600 mg 3–4 times/day **P:** 200 mg q4–6h as needed	Nausea, indigestion, anxiety, constipation, shortness of breath, heartburn
Ibuprofen (Advil, Caldolor, Motrin)	**I:** 100 mg/ml **T:** 100 mg, 200 mg, 400 mg, 600 mg, 800 mg **T (chewable):** 50 mg, 100 mg **C:** 200 mg **S:** 100 mg/5 ml, 100 mg/2.5 ml	**Inflammatory disease:** 400–800 mg/dose 3–4 times/day **P:** 200–400 mg/dose q4–6h as needed	Dizziness, abdominal cramps, abdominal pain, heartburn, nausea

Nutrition: Enteral

Enteral nutrition (EN), also known as *tube feedings*, provides food/nutrients via the GI tract using special formulas, delivery techniques, and equipment. All routes of EN consist of a tube through which liquid formula is infused.

INDICATIONS

Tube feedings are used in pts with major trauma, burns; those undergoing radiation and/or chemotherapy; pts with hepatic failure, severe renal impairment, physical or neurologic impairment; preop and postop to promote anabolism; prevention of cachexia, malnutrition; dysphagia, pts requiring mechanical ventilation.

ROUTES OF ENTERAL NUTRITION DELIVERY

NASOGASTRIC (NG):

INDICATIONS: Most common for short-term feeding in pts unable or unwilling to consume adequate nutrition by mouth. Requires at least a partially functioning GI tract.

ADVANTAGES: Does not require surgical intervention and is fairly easily inserted. Allows full use of digestive tract. Decreases abdominal distention, nausea, vomiting that may be caused by hyperosmolar solutions.

DISADVANTAGES: Temporary. May be easily pulled out during routine nursing care. Has potential for pulmonary aspiration of gastric contents, risk of reflux esophagitis, regurgitation.

NASODUODENAL (ND), NASOJEJUNAL (NJ):

INDICATIONS: Pts unable or unwilling to consume adequate nutrition by mouth. Requires at least a partially functioning GI tract.

ADVANTAGES: Does not require surgical intervention and is fairly easily inserted. Preferred for pts at risk for aspiration. Valuable for pts with gastroparesis.

Continued

Nutrition: Enteral—cont'd

ROUTES OF ENTERAL NUTRITION DELIVERY—cont'd

DISADVANTAGES: Temporary. May be pulled out during routine nursing care. May be dislodged by coughing, vomiting. Small lumen size increases risk of clogging when medication is administered via tube, more susceptible to rupturing when using infusion device. Must be radiographed for placement, frequently extubated.

Gastrostomy:

INDICATIONS: Pts with esophageal obstruction or impaired swallowing; pts in whom NG, ND, or NJ not feasible; when long-term feeding indicated.

ADVANTAGES: Permanent feeding access. Tubing has larger bore, allowing noncontinuous (bolus) feeding (300–400 ml over 30–60 min q3–6h). May be inserted endoscopically using local anesthetic (procedure called *percutaneous endoscopic gastrostomy* [PEG]).

DISADVANTAGES: Requires surgery; may be inserted in conjunction with other surgery or endoscopically (see **ADVANTAGES**). Stoma care required. Tube may be inadvertently dislodged. Risk of aspiration, peritonitis, cellulitis, leakage of gastric contents.

Jejunostomy:

INDICATIONS: Pts with stomach or duodenal obstruction, impaired gastric motility; pts in whom NG, ND, or NJ not feasible; when long-term feeding indicated.

ADVANTAGES: Allows early postop feeding (small bowel function is least affected by surgery). Risk of aspiration reduced. Rarely pulled out inadvertently.

DISADVANTAGES: Requires surgery (laparotomy). Stoma care required. Risk of intraperitoneal leakage. Can be dislodged easily.

INITIATING ENTERAL NUTRITION

With continuous feeding, initiation of isotonic (about 300 mOsm/L) or moderately hypertonic feeding (up to 495 mOsm/L) can be given full strength, usually at a slow rate (30–50 ml/hr) and gradually increased (25 ml/hr q6–24h). Formulas with osmolality greater than 500 mOsm/L are generally started at half strength and gradually increased in rate, then concentration. Tolerance is increased if the rate and concentration are not increased simultaneously.

SELECTION OF FORMULAS

Protein: Has many important physiologic roles and is the primary source of nitrogen in the body. Provides 4 kcal/g protein. Sources of protein in enteral feedings: sodium caseinate, calcium caseinate, soy protein, dipeptides.

Carbohydrate (CHO): Provides energy for the body and heat to maintain body temperature. Provides 3.4 kcal/g carbohydrate. Sources of CHO in enteral feedings: corn syrup, cornstarch, maltodextrin, lactose, sucrose, glucose.

Fat: Provides concentrated source of energy. Referred to as *kilocalorie dense* or *protein sparing.* Provides 9 kcal/g fat. Sources of fat in enteral feedings: corn oil, safflower oil, medium-chain triglycerides.

Electrolytes, vitamins, trace elements: Contained in formulas (not found in specialized products for renal/hepatic insufficiency).

All products containing protein, fat, carbohydrate, vitamin, electrolytes, trace elements are nutritionally complete and designed to be used by pts for long periods.

COMPLICATIONS

MECHANICAL: Usually associated with some aspect of the feeding tube.

Aspiration pneumonia: Caused by delayed gastric emptying, gastroparesis, gastroesophageal reflux, or decreased gag reflex. May be prevented or treated by reducing infusion rate, using lower-fat formula, feeding beyond pylorus, checking residuals, using small-bore feeding tubes, elevating head of bed 30–45 degrees during and for 30–60 min after intermittent feeding, and regularly checking tube placement.

Esophageal, mucosal, pharyngeal irritation, otitis: Caused by using large-bore NG tube. Prevented by use of small bore whenever possible.

Irritation, leakage at ostomy site: Caused by drainage of digestive juices from site. Prevented by close attention to skin/stoma care.

Tube, lumen obstruction: Caused by thickened formula residue, formation of formula-medication complexes. Prevented by frequently irrigating tube with clear water (also before and after giving formulas/medication), avoiding instilling medication if possible.

GASTROINTESTINAL: Usually associated with formula, rate of delivery, unsanitary handling of solutions or delivery system.

Diarrhea: Caused by low-residue formulas, rapid delivery, use of hyperosmolar formula, hypoalbuminemia, malabsorption, microbial contamination, or rapid GI transit time. Prevented by using fiber supplemented formulas, decreasing rate of delivery, using dilute formula, and gradually increasing strength.

Cramps, gas, abdominal distention: Caused by nutrient malabsorption, rapid delivery of refrigerated formula. Prevented by delivering formula by continuous methods, giving formulas at room temperature, decreasing rate of delivery.

Nausea, vomiting: Caused by rapid delivery of formula, gastric retention. Prevented by reducing rate of delivery, using dilute formulas, selecting low-fat formulas.

Constipation: Caused by inadequate fluid intake, reduced bulk, inactivity. Prevented by supplementing fluid intake, using fiber-supplemented formula, encouraging ambulation.

Continued

Nutrition: Enteral—cont'd

COMPLICATIONS—cont'd

METABOLIC: Fluid/serum electrolyte status should be monitored. Refer to monitoring section. In addition, the very young and very old are at greater risk of developing complications such as dehydration or overhydration.

MONITORING

Daily: Estimate nutrient intake, fluid intake/output, weight of pt, clinical observations.

Weekly: Serum electrolytes (potassium, sodium, magnesium, calcium, phosphorus), blood glucose, BUN, creatinine, hepatic function tests (e.g., AST, ALT, alkaline phosphatase), 24-hr urea and creatinine excretion, total iron-binding capacity (TIBC) or serum transferrin, triglycerides, cholesterol.

Monthly: Serum albumin.

Other: Urine glucose, acetone (when blood glucose is greater than 250), vital signs (temperature, respirations, pulse, B/P) q8h.

DRUG THERAPY: DOSAGE FOR SELECTION/ADMINISTRATION:

Drug therapy should not have to be compromised in pts receiving enteral nutrition:

- Temporarily discontinue medications not immediately necessary.
- Consider an alternate route for administering medications (e.g., transdermal, rectal, intravenous).
- Consider alternate medications when current medication is not available in alternate dosage forms.

ENTERAL ADMINISTRATION OF MEDICATIONS:

Medications may be given via feeding tube with several considerations:

- Tube type
- Tube location in the GI tract
- Site of drug action
- Site of drug absorption
- Effects of food on drug absorption
- Use of liquid dosage forms is preferred whenever possible; many tablets may be crushed; contents of many capsules may be emptied and given through large-bore feeding tubes.
- Many oral products should not be crushed (e.g., sustained-release, enteric coated, capsule granules).
- Some medications should not be given with enteral formulas because they form precipitates that may clog the feeding tube and reduce drug absorption.
- Feeding tube should be flushed with water before and after administration of medications to clear any residual medication.

Nutrition: Parenteral

Parenteral nutrition (PN), also known as *total parenteral nutrition* (TPN) or *hyperalimentation* (HAL), provides required nutrients to pts by IV route of administration. The goal of PN is to maintain or restore nutritional status caused by disease, injury, or inability to consume nutrients by other means.

INDICATIONS

Conditions when pt is unable to use alimentary tract via oral, gastrostomy, or jejunostomy route. Impaired absorption of protein caused by obstruction, inflammation, or antineoplastic therapy. Bowel rest necessary because of GI surgery or ileus, fistulas, or anastomotic leaks. Conditions with increased metabolic requirements (e.g., burns, infection, trauma). Preserve tissue reserves (e.g., acute renal failure). Inadequate nutrition from tube feeding methods.

COMPONENTS OF PN

To meet IV nutritional requirements, six essential categories in PN are needed for tissue synthesis and energy balance.

Protein: In the form of crystalline amino acids (CAA), primarily used for protein synthesis. Several products are designed to meet specific needs for pts with renal failure (e.g., NephrAmine), hepatic disease (e.g., HepatAmine), stress/trauma (e.g., Aminosyn HBC), use in neonates and pediatrics (e.g., Aminosyn PF, TrophAmine). Calories: 4 kcal/g protein.

Energy: In the form of dextrose, available in concentrations of 5%–70%. Dextrose less than 10% may be given peripherally; concentrations greater than 10% must be given centrally. Calories: 3.4 kcal/g dextrose.

IV fat emulsion: Available in 10% and 20% concentrations. Provides a concentrated source of energy/calories (9 kcal/g fat) and is a source of essential fatty acids. May be administered peripherally or centrally.

Continued

Nutrition: Parenteral—cont'd

COMPONENTS OF PN—cont'd

Electrolytes: Major electrolytes (calcium, magnesium, potassium, sodium; also acetate, chloride, phosphate). Doses of electrolytes are individualized, based on many factors (e.g., renal/hepatic function, fluid status).

Vitamins: Essential components in maintaining metabolism and cellular function; widely used in PN.

Trace elements: Necessary in long-term PN administration. Trace elements include zinc, copper, chromium, manganese, selenium, molybdenum, iodine.

Miscellaneous: Additives include insulin, albumin, heparin, and H_2 blockers (e.g., cimetidine, ranitidine, famotidine). Other medication may be included, but compatibility for admixture should be checked on an individual basis.

ROUTE OF ADMINISTRATION

PN is administered via either peripheral or central vein.

Peripheral: Usually involves 2–3 L/day of 5%–10% dextrose with 3%–5% amino acid solution along with IV fat emulsion. Electrolytes, vitamins, trace elements are added according to pt needs. Peripheral solutions provide about 2,000 kcal/day and 60–90 g protein/day.

ADVANTAGES: Lower risks vs. central mode of administration.

DISADVANTAGES: Peripheral veins may not be suitable (esp. in pts with illness of long duration); more susceptible to phlebitis (due to osmolalities greater than 600 mOsm/L); veins may be viable only 1–2 wks; large volumes of fluid are needed to meet nutritional requirements, which may be contraindicated in many pts.

Central: Usually utilizes hypertonic dextrose (concentration range of 15%–35%) and amino acid solution of 3%–7% with IV fat emulsion. Electrolytes, vitamins, trace elements are added according to pt needs. Central solutions provide 2,000–4,000 kcal/day. Must be given through large central vein with high blood flow, allowing rapid dilution, avoiding phlebitis/thrombosis (usually through percutaneous insertion of catheter into subclavian vein, then advancement of catheter to superior vena cava).

ADVANTAGES: Allows more alternatives/flexibility in establishing regimens; allows ability to provide full nutritional requirements without need of daily fat emulsion; useful in pts who are fluid restricted (increased concentration), those needing large nutritional requirements (e.g., trauma, malignancy), or those for whom PN indicated more than 7–10 days.

DISADVANTAGES: Risk with insertion, use, maintenance of central line; increased risk of infection, catheter-induced trauma, and metabolic changes.

MONITORING

May vary slightly from institution to institution.

Baseline: CBC, platelet count, prothrombin time (PT), weight, body length/head circumference (in infants), serum electrolytes, glucose, BUN, creatinine, uric acid, total protein, cholesterol, triglycerides, bilirubin, alkaline phosphatase, lactate dehydrogenase (LDH), AST, albumin, prealbumin, other tests as needed.

Daily: Weight, vital signs (temperature, pulse, respirations [TPR]), nutritional intake (kcal, protein, fat), serum electrolytes (potassium, sodium chloride), glucose (serum, urine), acetone, BUN, osmolarity, other tests as needed.

2–3 times/wk: CBC, coagulation studies (PT, partial thromboplastin time [PTT]), serum creatinine, calcium, magnesium, phosphorus, acid-base status, other tests as needed.

Weekly: Nitrogen balance, total protein, albumin, prealbumin, transferrin, hepatic function tests (AST, ALT), serum alkaline phosphatase, LDH, bilirubin, Hgb, uric acid, cholesterol, triglycerides, other tests as needed.

COMPLICATIONS

Mechanical: Malfunction in system for IV delivery (e.g., pump failure; problems with lines, tubing, administration sets, catheter). Pneumothorax, catheter misdirection, arterial puncture, bleeding, hematoma formation may occur with catheter placement.

Infectious: Infections (pts often more susceptible to infections), catheter sepsis (e.g., fever, shaking, chills, glucose intolerance where no other site of infection is identified).

Metabolic: Includes hyperglycemia, elevated serum cholesterol and triglycerides, abnormal serum hepatic function tests.

Fluid, electrolyte, acid-base disturbances: May alter serum potassium, sodium, phosphate, magnesium levels.

Nutritional: Clinical effects seen may be due to lack of adequate vitamins, trace elements, essential fatty acids.

DRUG THERAPY/ADMINISTRATION METHODS: Compatibility of other intravenous medications pts may be administered while receiving parenteral nutrition is an important concern.

Intravenous medications usually are given as a separate admixture via piggyback to the parenteral nutrition line, but in some instances may be added directly to the parenteral nutrition solution. Because of the possibility of incompatibility when adding medication directly to the parenteral nutrition solution, specific criteria should be considered:

- Stability of the medication in the parenteral nutrition solution
- Properties of the medication, including pharmacokinetics that determine if the medication is appropriate for continuous infusion
- Documented chemical and physical compatibility with the parenteral nutrition solution

In addition, when medication is given via piggyback using the parenteral nutrition line, important criteria should include the following:

- Stability of the medication in the parenteral nutrition solution
- Documented chemical and physical compatibility with the parenteral nutrition solution

Obesity Management

USES	ACTIONS	
Adjunct to diet and physical activity in the treatment of chronic, relapsing obesity.	Two categories of medications are used for weight control. *Appetite suppressants:* Block neuronal uptake of norepinephrine, serotonin, dopamine, causing a feeling of fullness or satiety.	*Digestion inhibitors:* Reversible lipase inhibitors that block the breakdown and absorption of fats, decreasing appetite and reducing calorie intake.

ANOREXIANTS

Name	Availability	Dosage	Side Effects
Diethylpropion (Tenuate, Tenuate Dospan)	**T:** 25 mg, **T (CR):** 75 mg	25 mg 3–4 times/day or 75 mg once daily in midmorning	Headaches, insomnia, nervousness, anxiety, irritability, dry mouth, constipation, euphoria, palpitations, hypertension, pulmonary hypertension, valvular heart disease, seizures, bone marrow depression
Lorcaserin (BelViq)	**C:** 10 mg	10 mg 2 times/day	Nausea, headache, dizziness, fatigue, dry mouth, diarrhea, constipation, hypoglycemia, hallucinations, decreased white/red blood cells
Orlistat (Alli, Xenical)	**C:** 60 mg, 120 mg	**Alli:** 60 mg up to tid with meals **Xenical:** 120 mg tid with each meal containing fat	Flatulence, rectal incontinence, oily stools, cholelithiasis, abdominal/rectal pain, hepatitis, pancreatitis
Phenteramine (Apidex-P)	**C:** 15 mg, 30 mg, 37.5 mg **T:** 37.5 mg **T (ODT):** 15 mg, 30 mg	15–37.5 mg/day in 1 or 2 divided doses **ODT:** 15–30 mg once daily in morning	Headaches, insomnia, nervousness, anxiety, irritability, dry mouth, constipation, euphoria, palpitations, hypertension, pulmonary hypertension, valvular heart disease, tremor
Phenteramine/topiramate (Qsymia)	**C:** 13.75 mg/23 mg	3.75 mg/23 mg to 15 mg/92 mg once daily in the morning	Paresthesia, dizziness, insomnia, depression, tachycardia, cognitive impairment, angle-closure glaucoma, hypokalemia, metabolic acidosis

AS, Appetite suppressant; ***C,*** capsules; ***CR,*** controlled-release; ***DI,*** digestion inhibitor; ***ODT,*** orally disintegrating tablets; ***T,*** tablets.

Ophthalmic Medications for Allergic Conjunctivitis

Ophthalmic products used for allergic conjunctivitis include antihistamines, mast cell stabilizing agents, combination antihistamine/decongestants, and corticosteroids. **Antihistamines** selectively inhibit the H_1 histamine receptor, thus antagonizing histamine-stimulated vascular permeability in the conjunctiva.

Mast cell stabilizing agents block the release of mediators of hypersensitivity reactions from mast cells, eosinophils, neutrophils, macrophages, monocytes, and platelets. They inhibit the release of histamine from mast cells. **Combination antihistamine/decongestants** are used only for a short time because the regular use of a decongestant may cause rebound congestion.

Mast cell stabilizers/antihistamine combinations provide both the quick action of the antihistamine and more delayed action of the mast cell stabilizer. This latter combination is used for mild to moderately severe allergic conjunctivitis. **Corticosteroids,** although having no definite mechanism of action, exert their effect by controlling the biosynthesis of potent mediators of inflammation.

ANTIHISTAMINE

Names	Dosage	Comments/Side Effects
Alcaftadine 0.25% (Lastacaft)	One drop each eye once daily	Eye irritation, burning/stinging on instillation, eye redness/pruritus, nasopharyngitis, headache, influenza

ANTIHISTAMINE/DECONGESTANTS

Names	Dosage	Comments/Side Effects
Naphazoline/pheniramine (Naphcon-A, Opcon-A, Visine-A)	One or two drops into affected eye(s) up to 4 times/day	Remove contact lenses prior to using Do not use for more than 3 days Not for use in pts with heart disease, enlarged prostate, high blood pressure, and/or glaucoma Side effects: headache, mydriasis, pain in eye

MAST CELL STABILIZER

Names	Dosage	Comments/Side Effects
Lodoxamine 0.1% (Alomide)	One to two drops in affected eye(s) 4 times/day	Avoid wearing contact lenses during treatment Side effects: burning, stinging, or irritation of eyes; watery, itching eyes; blurred vision; headache; dizziness; nausea or stomach discomfort
Nedocromil 2% (Alocril)	One or two drops in affected eye(s) 2 times/day	Remove contact lenses prior to using; may reinsert after 15 min if eyes are not red Side effects: headache, dizziness, blurring sensation in eye, light intolerance
Pemirolast 0.1% (Alamast)	One or two drops in affected eye(s) 4 times/day	Avoid wearing contact lenses if eyes are red Remove contact lenses prior to using; may reinsert after 10 min if eyes are not red Side effects: foreign body sensation, headache, dry eyes, burning sensation

ANTIHISTAMINE/MAST CELL STABILIZER

Names	Dosage	Comments/Side Effects
Azelastine 0.05% (Optivar)	One drop in affected eye(s) 2 times/day	Avoid wearing contact lenses if eyes are red Remove soft contact lenses prior to using; may reinsert after 10 min if eyes are not red Side effects: headache, drowsiness, burning sensation in eye
Epinastine 0.05% (Elestat)	One drop in affected eye(s) 2 times/day	Avoid wearing contact lenses if eyes are red Remove soft contact lenses prior to using; may reinsert after 10 min if eyes are not red Side effects: headache, burning sensation in eye

Ketotifen 0.025% (Alaway, Zaditor)	One drop in affected eye(s) 2 times/day	Avoid wearing contact lenses if eyes are red Remove soft contact lenses prior to using; may reinsert after 10 min if eyes are not red Side effects: headache, dry eyes, eye irritation, pain in eye
Olopatadine 0.1% (Patanol)	One drop in affected eye(s) 2 times/day	Avoid wearing contact lenses if eyes are red Remove soft contact lenses prior to using; may reinsert after 10 min if eyes are not red Side effects: headache, burning sensation in eye

CORTICOSTEROIDS

Names	Dosage	Comments/Side Effects
Loteprednol 0.2% (Alrex)	One drop in affected eye(s) 4 times/day	Recommended for short-term use only Remove soft contact lenses prior to using; may reinsert after 10 min if eyes are not red Side effects: abnormal vision, blurred vision, burning sensation in eye, itching in eye, light intolerance
Loteprednol 0.5% (Lotemax)	One or two drops in affected eye(s) 4 times/day	Recommended for short-term use only Remove soft contact lenses prior to using; may reinsert after 10 min if eyes are not red Side effects: abnormal vision, blurred vision, burning sensation in eye, itching in eye, light intolerance
Prednisolone 1% (AK-Pred)	Two drops in affected eye(s) 2–4 times/day	Recommended for short-term use only Remove soft contact lenses prior to using; may reinsert after 10 min if eyes are not red Side effects: blurred vision, burning sensation or irritation in eye, pain in eye

Osteoporosis

HISTORY

Osteoporosis is a bone disease that can lead to fractures. Bone mineral density (BMD) is reduced, bone microarchitecture is disrupted, and the amount and variety of proteins in bone are altered. Osteoporosis primarily affects women after menopause (postmenopausal osteoporosis) but may develop in men, in anyone in the presence of particular hormonal disorders (e.g., parathyroid glands), after overconsumption of dietary proteins, or as a result of medications (e.g., glucocorticoids). Several pharmacologic options, along with lifestyle changes, that can be used to prevent and/or treat osteoporotic fractures include bisphosphonates, selective estrogen receptor modulator (SERM), parathyroid hormone (PTH), calcitonin, and monoclonal antibodies.

ACTION

Bisphosphonates: Inhibit bone resorption via actions on osteoclasts or osteoclast precursors, decrease rate of bone resorption, leading to an indirect increase in BMD.

Selective estrogen receptor modulator (SERM): Decreases bone resorption, increasing BMD and decreasing the incidence of fractures.

Parathyroid hormone: Stimulates osteoblast function, increasing gastrointestinal calcium absorption and increasing renal tubular reabsorption of calcium. This increases BMD, bone mass, and strength, resulting in a decrease in osteoporosis-related fractures.

Calcitonin: Inhibitor of bone resorption. Efficacy not observed in early postmenopausal women and is used only in women with osteoporosis who are at least 5 yrs beyond menopause.

Monoclonal antibody: Inhibits the RANK ligand (RANKL), a cytokine member of the tumor necrosis factor family. This inhibits osteoclast formation, function, and survival, which decreases bone resorption and increases bone mass and strength in cortical and trabecular bone.

BISPHOSPHONATES

Name	Availability	Dosage	Side Effects
Alendronate (Binosto, Fosamax)	**T:** 5 mg, 10 mg, 35 mg, 40 mg, 70 mg **S:** 70 mg/75ml	**Prevention:** 5 mg/day or 35 mg/wk **Treatment:** 10 mg/day or 70 mg/wk	Transient, mild hypocalcemia, hypophosphatemia, dysphagia, esophagitis, esophageal and gastric ulcer, abdominal pain, diarrhea, musculoskeletal pain
Ibandronate (Boniva)	**T:** 150 mg **I:** 1 mg/ml	**Prevention and treatment:** 150 mg/mo **IV Injection: Treatment:** 3 mg/3 mos	Dyspepsia, back pain, dysphagia, esophagitis, esophageal and gastric ulcer, abdominal pain, diarrhea, musculoskeletal pain

Risedronate (Actonel)	**T:** 5 mg, 30 mg, 35 mg, 150 mg **T (DR):** 35 mg	**Prevention and treatment:** 5 mg/day, 35 mg/wk, or 150 mg/mo	Hypertension, headache, rash, dysphagia, esophagitis, esophageal and gastric ulcer, abdominal pain, diarrhea, musculoskeletal pain
Zoledronic acid (Reclast)	**I:** 5 mg	**Prevention: IV:** 5 mg every 2 yrs **Treatment: IV:** 5 mg every yr	Hypertension, pain, fever, headache, chills, fatigue, nausea, musculoskeletal pain

SERM

Name	Availability	Dosage	Side Effects
Raloxifene (Evista)	**T:** 60 mg	**Prevention and treatment:** 60 mg/day	Peripheral edema, hot flashes, arthralgia, leg cramps, muscle spasms, flu syndrome, infection

PARATHYROID HORMONE

Name	Availability	Dosage	Side Effects
Teriparatide (Forteo)	**I:** 250 mcg/ml syringe delivers 20 mcg/dose	**Treatment:** 20 mcg subcutaneously once daily	Hypercalcemia, muscle cramps, nausea, dizziness, headache

CALCITONIN

Name	Availability	Dosage	Side Effects
Calcitonin (Fortical, Miacalcin)	**I (Miacalcin):** 200 units/ml **Nasal (Fortical, Miacalcin):** 200 units/activation	**Treatment: IM/Subcutaneous (Miacalcin):** 100 units every other day **Nasal:** 200 units in 1 nostril daily	Rhinitis, local nasal irritation. **Injection:** nausea, local inflammation, flushing of face, hands

MONOCLONAL ANTIBODY RANKL INHIBITOR

Name	Availability	Dosage	Side Effects
Denosumab (Prolia)	**I:** 60 mg/ml	**Subcutaneous:** 60 mg once every 6 mos	Back pain, pain in extremity, hypercholesterolemia, musculoskeletal pain, cystitis

DR, Delayed-release; ***I,*** injection; ***S,*** solution (oral); ***T,*** tablet.

Parkinson's Disease Treatment

USES	ACTION
To slow or stop clinical progression of Parkinson's disease and to improve function and quality of life in pts with Parkinson's disease, a progressive neurodegenerative disorder.	Normal motor function is dependent on the synthesis and release of dopamine by neurons projecting from the substantia nigra to the corpus striatum. In Parkinson's disease, disruption of this pathway results in diminished levels of the neurotransmitter dopamine. Medication is aimed at providing improved function using the lowest effective dose.

TYPES OF MEDICATIONS FOR PARKINSON'S DISEASE

DOPAMINE PRECURSOR

Levodopa/carbidopa:

Levodopa: Dopamine precursor supplementation to enhance dopaminergic neurotransmission. A small amount of levodopa crosses the blood-brain barrier and is decarboxylated to dopamine, which is then available to stimulate dopaminergic receptors.

Carbidopa: Inhibits peripheral decarboxylation of levodopa, decreasing its conversion to dopamine in peripheral tissues, which results in an increased availability of levodopa for transport across the blood-brain barrier.

COMT INHIBITORS

Entacapone, tolcapone: Reversible inhibitor of catechol-*O*-methyltransferase (COMT). COMT is responsible for catalyzing levodopa. In the presence of a decarboxylase inhibitor (carbidopa), COMT becomes the major metabolizing enzyme for levodopa in the brain and periphery. By inhibiting COMT, higher plasma levels of levodopa are attained, resulting in more dopaminergic stimulation in the brain and lessening the symptoms of Parkinson's disease.

DOPAMINE RECEPTOR AGONISTS

Bromocriptine: Stimulates postsynaptic dopamine type 2 receptors in the neostriatum of the CNS.

Pramipexole: Stimulates dopamine receptors in the striatum of the CNS.

Ropinirole: Stimulates postsynaptic dopamine D2 type receptors within the caudate putamen in the brain.

MONOAMINE OXIDASE B INHIBITORS

Rasagiline, Selegiline: Increase dopaminergic activity due to irreversible inhibition of monoamine oxidase type B (MAO B). MAO B is involved in the oxidative deamination of dopamine in the brain.

Parkinson's Disease Treatment

MEDICATIONS FOR TREATMENT OF PARKINSON'S DISEASE

Name	Type	Availability	Dosage	Side Effects
Bromocriptine (Parlodel)	Dopamine agonist	**T:** 2.5 mg **C:** 5 mg	1.25 mg bid, increase by 2.5 mg/dose in 2–4 wk intervals (**Maximum:** 100 mg/day)	Nausea, drowsiness, lower extremity edema, postural hypotension, confusion, toxic psychosis (avoid use in pts with dementia)
Carbidopa/levodopa (Parcopa, Sinemet, Sinemet CR)	Dopamine precursor	**OD (Parcopa):** 10/100 mg, 25/100 mg, 25/250 mg **Immediate-release (Sinemet):** 10/100 mg, 25/100 mg, 25/250 mg **Controlled-release (Sinemet CR):** 25/100 mg, 50/200 mg	**Parcopa:** 300–1,500 mg levodopa in divided doses **Sinemet:** 300–1,500 mg levodopa in divided doses **Sinemet CR:** 400–1,600 mg levodopa in divided doses	Anorexia, nausea, vomiting, orthostatic hypotension initially; vivid dreams, hallucinations, delusions, confusion, and sleep disturbances with chronic use
Entacapone (Comtan)	COMT inhibitor	**T:** 200 mg	200 mg 3–4 times/day up to **maximum** of 8 times/day (1,600 mg)	Dyskinesias, nausea, diarrhea, urine discoloration
Pramipexole (Mirapex, Mirapex ER)	Dopamine agonist	**T:** 0.125 mg, 0.25 mg, 0.5 mg, 1 mg, 1.5 mg **ER:** 0.375 mg, 0.75 mg, 1.5 mg, 2.25 mg, 3 mg, 3.75 mg, 4.5 mg	**T:** 0.5–1.5 mg 3 times/day **ER:** 0.375–4.5 mg/day	Nausea, drowsiness, lower extremity edema, postural hypotension, confusion, toxic psychosis (avoid use in pts with dementia)
Rasagiline (Azilect)	MAO B inhibitors	**T:** 0.5 mg, 1 mg	0.5–1 mg once daily	Nausea, orthostatic hypotension

Ropinirole (Requip, Requip XL)	Dopamine agonist	**T:** 0.25 mg, 0.5 mg, 1 mg, 2 mg, 3 mg, 4.5 mg **XL:** 2 mg, 4 mg, 6 mg, 8 mg, 12 mg	**T:** 3–8 mg 3 times/day **XL:** Up to 24 mg/day	Nausea, drowsiness, lower extremity edema, postural hypotension, confusion, toxic psychosis (avoid use in pts with dementia)
Selegiline (Eldepryl, Zelapar)	MAO B inhibitor	**C (Eldepryl):** 5 mg **OD (Zelapar):** 1.25 mg	**C:** 5 mg with breakfast and lunch **OD:** 1.25–2.5 mg daily in the morning	Nausea, orthostatic hypotension
Tolcapone (Tasmar)	COMT inhibitor	**T:** 100 mg, 200 mg	100–200 mg 3 times/day	Dyskinesias, nausea, diarrhea, urine discoloration

C, Capsules; ***COMT,*** catechol-*O*-methyltransferase; ***ER,*** extended-release; ***I,*** injection; ***MAO B,*** monoamine oxidase B; ***OD,*** orally disintegrating; ***T,*** tablets; ***XL,*** extended-release.

Proton Pump Inhibitors

USES	ACTION
Treatment of various gastric disorders, including gastric and duodenal ulcers, gastroesophageal reflex disease (GERD), pathologic hypersecretory conditions.	Suppresses gastric acid secretion by specific inhibition of the hydrogen-potassium-adenosine triphosphatase (H^+/K^+ ATPase) enzyme system, which transports the acid at the gastric parietal cells. These agents do not have anticholinergic or histamine receptor antagonistic properties.

PROTON PUMP INHIBITORS

Name	Availability	Indications	Usual Dosage	Side Effects
Dexlansoprazole (Dexilant)	**C:** 30 mg, 60 mg	Erosive esophagitis, heartburn associated with nonerosive GERD	30 mg/day	Diarrhea, abominal pain, nausea, upper respiratory tract infection, vomiting, flatulence
Esomeprazole (Nexium)	**C:** 20 mg, 40 mg **I:** 20 mg, 40 mg	*Helicobacter pylori* eradication, GERD, erosive esophagitis	20–40 mg/day	Headaches, diarrhea, abdominal pain, nausea
Lansoprazole (Prevacid)	**C:** 15 mg, 30 mg **T (ODT):** 15 mg, 30 mg	Duodenal ulcer, gastric ulcer, NSAID-associated gastric ulcer, hypersecretory conditions, *H. pylori* eradication, GERD, erosive esophagitis	15–30 mg/day	Diarrhea, skin rash, pruritus, headaches
Omeprazole (Prilosec)	**C:** 10 mg, 20 mg, 40 mg	Duodenal ulcer, gastric ulcer, hypersecretory conditions, *H. pylori* eradication, GERD, erosive esophagitis	20–40 mg/day	Headaches, diarrhea, abdominal pain, nausea
Omeprazole and Sodium Bicarbonate (Zegerid)	**P:** 20 mg, 40 mg	Duodenal ulcer, benign gastric ulcer, GERD, erosive esophagitis	20–40 mg/day	Headaches, abdominal pain, diarrhea, nausea
Pantoprazole (Protonix)	**T:** 20 mg, 40 mg **I:** 40 mg	Erosive esophagitis, hypersecretory conditions	40 mg/day	Diarrhea, headaches
Rabeprazole (Aciphex)	**T:** 20 mg **S:** 5 mg, 10 mg	Duodenal ulcer, hypersecretory conditions, *H. pylori* eradication, GERD, erosive esophagitis	20 mg/day	Headaches

C, Capsules; ***GERD,*** gastroesophageal reflux disease; ***I,*** injection; ***NSAID,*** nonsteroidal anti-inflammatory drug; ***ODT,*** orally disintegrating tablets; ***P,*** powder for suspension; ***S,*** sprinkles; ***T,*** tablets.

Sedative-Hypnotics

USES	ACTION
Treatment of insomnia (i.e., difficulty falling asleep initially, frequent awakening, awakening too early).	*Benzodiazepines* are the most widely used agents and largely replace barbiturates due to greater safety, lower incidence of drug dependence. Benzodiazepines nonselectively bind to at least three receptor subtypes accounting for sedative, anxiolytic, relaxant, and anticonvulsant properties. Benzodiazepines enhance the effect of the inhibitory neurotransmitter gamma-aminobutyric acid (GABA), which inhibits impulse transmission in the CNS reticular formation in brain. Benzodiazepines decrease sleep latency, number of nocturnal awakenings, and time spent in awake stage of sleep; increase total sleep time. The *nonbenzodiazepines* zaleplon and zolpidem preferentially bind with one receptor subtype, reducing sleep latency and nocturnal awakenings and increasing total sleep time. Ramelteon is a selective agonist of melatonin receptors (responsible for determining circadian rhythms and synchronizing sleep-wake cycles).

SEDATIVE-HYPNOTICS

Name	Availability	Dosage Range	Side Effects
Benzodiazepines			
Estazolam (ProSom)	**T:** 1 mg, 2 mg	**A:** 1–2 mg **E:** 0.5–1 mg	Daytime sedation, memory and psychomotor impairment, tolerance, withdrawal reactions, rebound insomnia, dependence
Flurazepam (Dalmane)	**C:** 15 mg, 30 mg	**A/E:** 15–30 mg	Headaches, unpleasant taste, dry mouth, dizziness, anxiety, nausea
Quazepam (Doral)	**T:** 15 mg	**A:** 7.5–15 mg **E:** 7.5 mg	Same as flurazepam
Temazepam (Restoril)	**C:** 7.5 mg, 15 mg, 30 mg	**A:** 15–30 mg **E:** 7.5–15 mg	Same as flurazepam

Continued

SEDATIVE-HYPNOTICS—cont'd

Name	Availability	Dosage Range	Side Effects
Nonbenzodiazepines			
Eszopiclone (Lunesta)	**T:** 1 mg, 2 mg, 3 mg	**A:** 2–3 mg **E:** 1–2 mg	Headaches, unpleasant taste, dry mouth, dizziness, anxiety, nausea
Ramelteon (Rozerem)	**T:** 8 mg	**A, E:** 8 mg	Headaches, dizziness, fatigue, nausea
Zaleplon (Sonata)	**C:** 5 mg, 10 mg	**A:** 5–20 mg **E:** 5 mg	Headaches, dizziness, myalgia, drowsiness, asthenia (loss of strength, energy), abdominal pain
Zolpidem (Ambien, Ambien CR, Edluar, Zolpimist)	**T:** 5 mg, 10 mg **CR:** 6.25 mg, 12.5 mg **SL:** 5 mg, 10 mg **OS:** 5 mg/actuation	**OS, T, SL:** 5 mg (females); 5–10 mg (males) **CR:** 6.25 mg (females); 6.25–12.5 mg (males)	Dizziness, daytime drowsiness, headaches, confusion, depression, hangover, asthenia (loss of strength, energy)

A, Adults; ***C,*** capsules; ***CR,*** controlled-release; ***E,*** elderly; ***OS,*** oral solution; ***SL,*** sublingual; ***T,*** tablets.

Skeletal Muscle Relaxants

USES	ACTION
Central acting muscle relaxants: Adjunct to rest, physical therapy for relief of discomfort associated with acute, painful musculoskeletal disorders (i.e., local spasms from muscle injury). *Baclofen, dantrolene, diazepam:* Treatment of spasticity characterized by heightened muscle tone, spasm, loss of dexterity caused by multiple sclerosis, cerebral palsy, spinal cord lesions, CVA.	*Central acting muscle relaxants:* Exact mechanism unknown. May act in CNS at various levels to depress polysynaptic reflexes; sedative effect may be responsible for relaxation of muscle spasm. *Baclofen, diazepam:* May mimic actions of gamma-aminobutyric acid on spinal neurons; do not directly affect skeletal muscles. *Dantrolene:* Acts directly on skeletal muscle, relieving spasticity.

SKELETAL MUSCLE RELAXANTS

Name	Indication	Dosage Range	Side Effects/Comments
Baclofen (Lioresal)	Spasticity associated with multiple sclerosis, spinal cord injury	Initially 5 mg 3 times/day Increase by 5 mg 3 times/day q3days **Maximum:** 20 mg 4 times/day	Drowsiness, dizziness, GI effects Caution with renal impairment, seizure disorders Withdrawal syndrome (e.g., hallucinations, psychosis, seizures)

Continued

SKELETAL MUSCLE RELAXANTS—cont'd

Name	Indication	Dosage Range	Side Effects/Comments
Carisoprodol (Rela)	Discomfort due to acute, painful, musculoskeletal conditions	250–350 mg 4 times/day	Drowsiness, dizziness, GI effects Hypomania at higher than recommended doses Withdrawal syndrome Hypersensitivity reaction (skin reaction, bronchospasm, weakness, burning eyes, fever) or idiosyncratic reaction (weakness, visual or motor disturbances, confusion) usually occurring within first 4 doses
Chlorzoxazone (Lorzone)	Discomfort due to acute, painful, musculoskeletal conditions	Initially 250–500 mg 3–4 times/day **Maximum:** 750 mg 3–4 times/day	Drowsiness, dizziness, GI effects, rare hepatotoxicity Hypersensitivity reaction (urticaria, itching) Urine discoloration to orange, red, or purple
Cyclobenzaprine (Flexeril)	Muscle spasm, pain, tenderness, restricted movement due to acute, painful, musculoskeletal conditions	Initially 5–10 mg 3 times/day	Drowsiness, dizziness, GI effects Anticholinergic effects (dry mouth, urinary retention) Quinidine-like effects on heart (QT prolongation) Long half-life
Dantrolene (Dantrium)	Spasticity associated with multiple sclerosis, cerebral palsy, spinal cord injury	Initially 25 mg/day for 1 week, then 25 mg 3 times/day for 1 week, then 50 mg 3 times/day for 1 week, then 100 mg 3 times/day **Maximum:** 100 mg 4 times/day	Drowsiness, dizziness, GI effects Contraindicated with hepatic disease Dose-dependent hepatotoxicity Diarrhea that is dose dependent and may be severe, requiring discontinuation
Diazepam (Valium)	Spasticity associated with cerebral palsy, spinal cord injury; reflex spasm due to muscle, joint trauma or inflammation	2–10 mg 3–4 times/day	Drowsiness, dizziness, GI effects Abuse potential

Metaxalone (Skelaxin)	Discomfort due to acute, painful, musculoskeletal conditions	800 mg 3–4 times/day	Drowsiness (low risk), dizziness, GI effects Paradoxical muscle cramps Mild withdrawal syndrome Contraindicated in serious hepatic or renal disease
Methocarbamol (Robaxin)	Discomfort due to acute, painful, musculoskeletal conditions	Initially 1,500 mg 4 times/day **Maintenance:** 1,000 mg 4 times/day	Drowsiness, dizziness, GI effects Urine discoloration to brown, brown-black, or green
Orphenadrine (Norflex)	Discomfort due to acute, painful, musculoskeletal conditions	100 mg 2 times/day	Drowsiness, dizziness, GI effects Long half-life Anticholinergic effects (dry mouth, urinary retention) Rare aplastic anemia Some products may contain sulfites
Tizanidine (Zanaflex)	Spasticity	Initially 4 mg q6–8h (**maximum** 3 times/day), may increase by 2–4 mg as needed/tolerated **Maximum:** 36 mg (limited information on doses greater than 24 mg)	Drowsiness, dizziness, GI effects Hypotension (20% decrease in B/P) Hepatotoxicity (usually reversible) Withdrawal syndrome (hypertension, tachycardia, hypertonia) Effect is short lived (3–6 hrs) Dose cautiously with creatinine clearance less than 25 ml/min

Smoking Cessation Agents

Tobacco smoking is associated with the development of lung cancer and chronic obstructive pulmonary disease. Smoking is harmful not just to the smoker but also to family members, coworkers, and others breathing cigarette smoke.

Quitting smoking decreases the risk of developing lung cancer, other cancers, heart disease, stroke, and respiratory illnesses. Several medications have proved useful as smoking cessation aids. Nausea and light-headedness are possible signs of overdose of nicotine warranting a reduction in dosage.

SMOKING CESSATION AGENTS

Name	Availability	Dose Duration	Cautions/Side Effects	Comments
Bupropion (Zyban)	**T:** 150 mg	150 mg every morning for 3 days, then 150 mg 2 times/day Start 1–2 wks before quit date **Duration:** 7–12 wks up to 6 mos for maintenance	History of seizure, eating disorder, use of MAOI within previous 14 days, bipolar disorder **Side Effects:** Insomnia, dry mouth, tremor, rash	Stop smoking during second wk of treatment and use counseling support services along with medication
Clonidine (Catapres, Catapres-TTS)	**T:** 0.1 mg, 0.2 mg **Patch:** 0.1 mg/24 hrs, 0.2 mg/24 hrs, 0.3 mg/24 hrs	**Oral:** 0.15–0.75 mg/day **Patch:** 0.1–0.2 mg daily **Duration:** 3–10 wks	Rebound hypertension. **Side Effects:** Dry mouth, drowsiness, dizziness, sedation, constipation	Abrupt discontinuation can result in anxiety, agitation, headaches, tremors accompanied or followed by rapid rise in B/P

Nicotine gum (Nicorette, Thrive)	**Squares:** 2 mg, 4 mg	1 gum q1–2h for 6 wks, then q2–4h for 3 wks then q4–8h for 3 wks **Maximum:** 24 pieces/day **Duration:** up to 12 wks	Recent MI (within 2 wks), serious arrhythmias, serious or worsening angina pectoris **Side Effects:** Dyspepsia, mouth soreness, hiccups	2 mg recommended for pts smoking less than 25 cigarettes/day, 4 mg for pts smoking 25 or more cigarettes/day Chew until a peppery or minty taste emerges and then "park" between cheek and gums to facilitate nicotine absorption through oral mucosa Chew slowly and intermittently to avoid jaw ache and achieve maximum benefit Only water should be taken 15 min before and during chewing
Nicotine inhaler (Nicotrol)	**Cartridge:** 10 mg (delivers 4 mg nicotine)	6–16 cartridges daily; taper frequency of use over the last 6–12 wks **Duration:** up to 6 mos	Recent MI (within 2 wks), serious arrhythmias, serious or worsening angina pectoris **Side Effects:** Local irritation of mouth and throat, coughing, rhinitis	Use at or above room temperature (cold temperatures decrease amount of nicotine inhaled)
Nicotine lozenge (Commit)	**Lozenges:** 2 mg, 4 mg	One lozenge q1–2h for 6 wks, then q2–4h for 3 wks, then q4–8h for 3 wks **Duration:** 12 wks	Recent MI (within 2 wks), serious arrhythmias, serious or worsening angina pectoris **Side Effects:** Local skin reaction, insomnia, nausea, sore throat	First cigarette smoked within 30 min of waking, use 4 mg; after 30 min of waking, use 2 mg Use at least 9 lozenges/day first 6 wks Only 1 lozenge at a time, 5 per 6 hrs and 20 per 24 hrs Do not chew or swallow
Nicotine nasal spray (Nicotrol NS)	10 mg/ml (delivers 0.5 mg/spray)	8–40 doses/day A dose consists of one 0.5 mg delivery to each nostril; initial dose is 1–2 sprays/hr, increasing as needed **Duration:** 3–6 mos	Recent MI (within 2 wks), serious arrhythmias, serious or worsening angina pectoris **Side Effects:** Nasal irritation	Do not sniff, swallow, or inhale through nose while administering nicotine doses (may increase irritation) Tilt head back slightly for best results

Continued

SMOKING CESSATION AGENTS—cont'd

Name	Availability	Dose Duration	Cautions/Side Effects	Comments
Nicotine patch (NicoDerm CQ)	**Nicoderm CQ:** 7 mg/24 hrs, 14 mg/24 hrs, 21 mg/24 hrs **Nicotrol:** 5 mg/16 hrs, 10 mg/16 hrs, 15 mg/16 hrs	Apply upon waking on quit date: **Nicoderm CQ (greater than 10 cigarettes/day):** 21 mg/24 hrs for 4 wks, then 14 mg/24 hrs for 2 wks, then 7 mg/24 hrs for 2 wks **(10 or fewer cigarettes/day):** 14 mg/24 hrs for 6 wks, then 7 mg/24 hrs for 2 wks	Recent MI (within 2 wks), serious arrhythmias, serious or worsening angina pectoris **Side Effects:** Local skin reaction, insomnia	The 16- and 24-hr patches are of comparable efficacy Begin with a lower-dose patch in pts smoking 10 or fewer cigarettes/day Place new patch on relatively hair-free location, usually between neck and waist, in the morning If insomnia occurs, remove the 24-hr patch prior to bedtime or use the 16-hr patch Rotate patch site to diminish skin irritation
Nortriptyline (Pamelor)	**T:** 25 mg, 50 mg, 75 mg, 100 mg	Initially 25 mg/day, increasing gradually to target dose of 75–100 mg/day 10–28 days prior to selected "quit" date, continue for 12 wks or more after "quit" day **Duration:** up to 12 wks	Risk of arrhythmias **Side Effects:** Sedation, dry mouth, blurred vision, urinary retention, lightheadedness, shaky hands	Initiate therapy 10–28 days before the quit date to allow steady state of nortriptyline at target dose
Varenicline (Chantix)	**T:** 0.5 mg, 1 mg	**Days 1–3:** 0.5 mg daily; **days 4–7:** 0.5 mg 2 times/day; **day 8 to end of treatment:** 1 mg 2 times/day **Duration:** begin 1 wk before set quit date, continue for 12 wks. May use additional 12 wks if failed to quit after first 12 wks	**Side Effects:** Nausea; sleep disturbances; headaches; may impair ability to drive, operate machinery; depressed mood; altered behavior; suicidal ideation reported	Use lower dosage if not able to tolerate nausea and vomiting Use counseling support services along with medication

MAOI, Monoamine oxidase inhibitor; ***MI,*** myocardial infarction; ***T,*** tablets.

Vitamins

INTRODUCTION

Vitamins are organic substances required for growth, reproduction, and maintenance of health and are obtained from food or supplementation in small quantities (vitamins cannot be synthesized by the body or the rate of synthesis is too slow/inadequate to meet metabolic needs). Vitamins are essential for energy transformation and regulation of metabolic processes. They are catalysts for all reactions using proteins, fats, carbohydrates for energy, growth, and cell maintenance.

WATER SOLUBLE

Water-soluble vitamins include vitamin C (ascorbic acid), B_1 (thiamine), B_2 (riboflavin), B_3 (niacin), B_5 (pantothenic acid), B_6 (pyridoxine), folic acid, B_{12} (cyanocobalamin). Water-soluble vitamins act as coenzymes for almost every cellular reaction in the body. B-complex vitamins differ from one another in both structure and function but are grouped together because they first were isolated from the same source (yeast and liver).

FAT SOLUBLE

Fat-soluble vitamins include vitamins A, D, E, and K. They are soluble in lipids and are usually absorbed into the lymphatic system of the small intestine and then into the general circulation. Absorption is facilitated by bile. These vitamins are stored in the body tissue when excessive quantities are consumed. May be toxic when taken in large doses (see sections on individual vitamins).

VITAMINS

Name	Uses	Deficiency	Side Effects
Vitamin A (Aquasol A)	Required for normal growth, bone development, vision, reproduction, maintenance of epithelial tissue	Dry skin, poor tooth development, night blindness	**High dosages:** Hepatotoxicity, cheilitis, facial dermatitis, photosensitivity, mucosal dryness
Vitamin B_1 (thiamine)	Important in red blood cell formation, carbohydrate metabolism, neurologic function, myocardial contractility, growth, energy production	Fatigue, anorexia, growth retardation	**Large parenteral doses:** May cause pain on injection
Vitamin B_2 (riboflavin)	Necessary for function of coenzymes in oxidation-reduction reactions, essential for normal cellular growth, assists in absorption of iron and pyridoxine	Numbness in extremities, blurred vision, photophobia, cheilosis	Orange-yellow discoloration in urine

Continued

VITAMINS—cont'd

Name	Uses	Deficiency	Side Effects
Vitamin B_3 (niacin)	Coenzyme for many oxidation-reduction reactions	Pellegra, headache, anorexia, memory loss, insomnia	**High dosages (more than 500 mg):** Nausea, vomiting, diarrhea, gastritis, hepatotoxicity, skin rash, facial flushing, headaches
Vitamin B_5 (pantothenic acid)	Precursor to coenzyme A, important in synthesis of cholesterol, hormones, fatty acids	Natural deficiency unknown	Occasional GI disturbances (e.g., diarrhea)
Vitamin B_6 (pyridoxine)	Enzyme cofactor for amino acid metabolism, essential for erythrocyte production, Hgb synthesis	Neuritis, anemia, lymphopenia	**High dosages:** May cause sensory neuropathy
Vitamin B_{12} (cyanocobalamin)	Coenzyme in cells, including bone marrow, CNS, and GI tract, necessary for lipid metabolism, formation of myelin	Gastrointestinal disorders, anemias, poor growth	Skin rash, diarrhea, pain at injection site
Vitamin C (ascorbic acid)	Cofactor in various physiologic reactions, necessary for collagen formation, acts as antioxidant	Poor wound healing, bleeding gums, scurvy	**High dosages:** May cause calcium oxalate crystalluria, esophagitis, diarrhea
Vitamin D (Calciferol)	Necessary for proper formation of bone, calcium, mineral homeostasis, regulation of parathyroid hormone, calcitonin, phosphate	Rickets, osteomalacia	Hypercalcemia, kidney stones, renal failure, hypertension, psychosis, diarrhea, nausea, vomiting, anorexia, fatigue, headaches, altered mental status
Vitamin E (Aquasol E)	Antioxidant, promotes formation, functioning of red blood cells, muscle, other tissues	Red blood cell breakdown	**High dosages:** GI disturbances, malaise, headaches

abacavir

a-**bak**-a-veer
(Ziagen)

■ **BLACK BOX ALERT** ■ Serious, sometimes fatal hypersensitivity reactions, lactic acidosis, severe hepatomegaly with steatosis (fatty liver) have occurred.

FIXED-COMBINATION(S)

Epzicom: abacavir/lamivudine (antiretroviral): 600 mg/300 mg. **Triumeq:** abacavir/dolutegravir (integrase inhibitor)/lamivudine (antiretroviral): 600 mg/50 mg/300 mg. **Trizivir:** abacavir/lamivudine (antiretroviral)/zidovudine (antiretroviral): 300 mg/150 mg/300 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiretroviral agent. **CLINICAL:** Antiviral.

USES

Treatment of HIV infection, in combination with at least two other antiretroviral agents.

PRECAUTIONS

Contraindications: Hypersensitivity to abacavir (do **not** rechallenge). Pts testing positive for the HLA-B *5701 allele are at increased risk for hypersensitivity reaction. Moderate or severe hepatic impairment. **Cautions:** Mild hepatic disease. Pts at risk for coronary heart disease (e.g., hypertension, hyperlipidemia, diabetes, smoking).

ACTION

Inhibits activity of HIV-1 reverse transcriptase by competing with natural substrate dGTP and by its incorporation into viral DNA. **Therapeutic Effect:** Inhibits/prevents HIV replication in infected cells.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 50%. Widely distributed, including to cerebrospinal fluid (CSF) and erythrocytes. Metabolized in liver to inactive metabolites. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 1.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if excreted in breast milk. Breastfeeding not recommended (may increase potential for HIV transmission, adverse effects). **Pregnancy Category C. Children:** Safety and efficacy not established in those less than 3 mos of age. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Alcohol** may increase concentration, risk of toxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, CPK, GGT, blood glucose, triglycerides. May decrease Hgb, leukocytes, lymphocytes.

AVAILABILITY (Rx)

Solution, Oral: 20 mg/ml. **Tablets:** 300 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food. • Oral solution may be refrigerated. Do not freeze.

INDICATIONS/ROUTES/DOSAGE

HIV Infection (in Combination with Other Antiretrovirals)

PO: ADULTS: 300 mg twice a day or 600 mg once a day. **CHILDREN 3 MOS–16 YRS:** 8 mg/kg twice a day. **Maximum:** 300 mg twice a day. **CHILDREN 14 KG OR GREATER:** 14–21 kg: 150 mg (½ tab) twice daily. 22–29 kg: 150 mg (½ tab) in AM 300 mg (1 tab) in PM. 30 kg or greater: 300 mg (1 tab) twice daily.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild impairment: 200 mg twice a day (oral solution recommended). **Moderate to severe impairment:** Not recommended (contraindicated by manufacturer).

SIDE EFFECTS

ADULT: Frequent (47%–11%): Nausea, nausea with vomiting, diarrhea, decreased appetite. **Occasional (39%–11%):** Insomnia (7%). **CHILDREN: Frequent:** Nausea with vomiting, fever, headache, diarrhea, rash. **Occasional:** Decreased appetite (9%).

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction may be life-threatening. Signs and symptoms include fever, rash, fatigue, intractable nausea/vomiting, severe diarrhea, abdominal pain, cough, pharyngitis, dyspnea. Life-threatening hypotension may occur. Lactic acidosis, severe hepatomegaly may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, LFT before beginning therapy and at periodic intervals during therapy. Question for possibility of pregnancy. Increased risk of sensitivity (cutaneous, GI, pulmonary) in those with positive HLA-B*5701 genotype status. Offer emotional support.

INTERVENTION/EVALUATION

Assess for nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Assess dietary pattern; monitor for weight loss. Monitor lab values, hepatic function. Stop abacavir if 3 or more of the following occur: rash, fever, GI disturbances (diarrhea, nausea, vomiting), flu-like symptoms, respiratory difficulty.

PATIENT/FAMILY TEACHING

- Do not take any medications, including OTC drugs, without consulting physician.
- Small, frequent meals may offset anorexia, nausea.
- Abacavir is not a cure for HIV infection, nor does it reduce risk of transmission to others.
- Pt must continue practices to prevent HIV transmission.

abatacept

TOP 100

a-**bay**-ta-sept
(Orencia)
Do not confuse Orencia with Oracea.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective T-cell costimulation modulator. **CLINICAL:** Rheumatoid arthritis agent.

USES

Reduction of signs and symptoms, progression of structural damage in adults with moderate to severe rheumatoid arthritis (RA) alone or in combination with other disease-modifying antirheumatic medications. Treatment of moderate to severe active polyarticular juvenile idiopathic arthritis in pts 6 yrs and older. May use alone or in combination with methotrexate. NOTE: Do not use with anakinra or tumor necrosis factor [TNF] antagonists.

PRECAUTIONS

Contraindications: None known. **Cautions:** Chronic, latent, or localized infection; conditions predisposing to infections; COPD (higher incidence of adverse effects); elderly; Hx recurrent infections.

ACTION

Inhibits T-lymphocyte activation, necessary in the inflammatory cascade leading to joint inflammation and destruction. Blocks production of inflammatory mediators. **Therapeutic Effect:** Induces positive clinical response in adult pts with moderate to severely active RA or juvenile idiopathic arthritis.

PHARMACOKINETICS

Higher clearance with increasing body weight. Age, gender do not affect clearance. **Half-life:** 8–25 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in pts younger than 6 yrs. **Elderly:** Cautious use due to increased risk of serious infection and malignancy.

INTERACTIONS

DRUG: May increase risk of infection, decrease efficacy of immune response associated with **live vaccines** (do not give concurrently or within 2 mos of stopping abatacept). **Tumor necrosis factor (TNF) antagonists (adalimumab, etanercept, infliximab)** may increase risk of infection. **HERBAL: Echinacea** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 250 mg. **Injection, Solution:** 125 mg/ml single-dose prefilled syringe.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each vial with 10 ml Sterile Water for Injection using the silicone-free syringe provided with each vial and an 18- to 21-gauge needle. • Rotate solution gently to prevent foaming until powder is completely dissolved. • From a 100-ml 0.9% NaCl infusion bag, withdraw and discard an amount equal to the volume of the reconstituted vials (for 2 vials remove 20 ml, for 3 vials remove 30 ml, for 4 vials remove 40 ml) resulting in final volume of 100 ml. • Slowly add the reconstituted solution from each vial into the infusion bag using the same syringe provided with each vial. • Concentration in the infusion bag will be 10 mg/ml or less abatacept.

Rate of Administration • Infuse over 30 min using a 0.2- to 1.2-micron low protein-binding filter.

Storage • Store vials in refrigerator. • Any reconstitution that has been prepared by using siliconized syringes will develop translucent particles and must be discarded. • Solution should appear clear and colorless to pale yellow. Discard if solution is discolored or contains precipitate. • Solution is stable for up to 24 hrs after reconstitution. • Reconstituted solution may be stored at room temperature or refrigerated.

Subcutaneous

• Store prefilled syringes in refrigerator. Allow to warm to room temperature (30–60 min). • Inject in front of thigh, outer areas of upper arms, or abdomen. • Avoid areas that are tender, bruised, red, scaly, or hard. • Do not rub injection site.

IV INCOMPATIBILITY

Do not infuse concurrently in same IV line as other agents.

INDICATIONS/ROUTES/DOSAGE

Note: Discontinue in pts developing serious infection.

Rheumatoid Arthritis (RA)

IV: BODY WEIGHT 101 KG OR MORE: 1 g (4 vials) given as a 30-min infusion. Following initial therapy, give at 2 wks and 4 wks after first infusion, then q4wks thereafter. **BODY WEIGHT 60–100 KG:** 750 mg (3 vials) given as a 30-min infusion. Following initial therapy, give at 2 wks and 4 wks after first infusion, then q4wks thereafter. **BODY WEIGHT 59 KG OR LESS:** 500 mg (2 vials) given as a 30-min infusion. Following initial therapy, give at 2 wks and 4 wks after first infusion, then q4wks thereafter.

Subcutaneous: Following a single IV infusion, 125 mg given within a day, then 125 mg once a week.

Juvenile Idiopathic Arthritis

IV: CHILDREN 6 YRS AND OLDER, WEIGHING LESS THAN 75 KG: 10 mg/kg. **CHILDREN WEIGHING 75 KG OR MORE:** Refer to adult dosing. **Maximum:** 1,000 mg. Following

initial therapy, give 2 wks and 4 wks after first infusion, then q4wks thereafter.

Dosage Adjustment for Toxicity
Discontinue in pts developing a serious infection.

Dosage in Renal/Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Frequent (18%): Headache. **Occasional (9%–6%):** Dizziness, cough, back pain, hypertension, nausea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Upper respiratory tract infection, nasopharyngitis, sinusitis, UTI, influenza, bronchitis occur in 5% of pts. Serious infections manifested as pneumonia, cellulitis, diverticulitis, acute pyelonephritis occur in 3% of pts. Hypersensitivity reaction (rash, urticaria, hypotension, dyspnea) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain/inflammation. Inspect appearance of affected joint for immobility, deformities, skin condition. Screen for latent TB infection prior to initiating therapy.

INTERVENTION/EVALUATION

Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength. Monitor for hypersensitivity reaction.

PATIENT/FAMILY TEACHING

• Consult physician if infection, hypersensitivity reaction, infusion-related reaction occurs. • Do not receive live vaccines during treatment or within 3 mos of its discontinuation. • COPD pts must report worsening of respiratory symptoms.

abciximab

HIGH ALERT

ab-**sik**-si-mab
(ReoPro)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Glycoprotein IIb/IIIa receptor inhibitor. **CLINICAL:** Antiplatelet; antithrombotic.

USES

Adjunct to aspirin and heparin therapy to prevent cardiac ischemic complications in pts undergoing percutaneous coronary intervention (PCI) and those with unstable angina not responding to conventional medical therapy when PCI is planned within 24 hrs. **OFF-LABEL:** Support PCI during ST-segment elevation myocardial infarction (STEMI).

PRECAUTIONS

Contraindications: Active internal bleeding, arteriovenous malformation or aneurysm, CVA with residual neurologic deficit, history of CVA (within the past 2 yrs) or oral anticoagulant use within the past 7 days unless PT is less than 1.2× control, history of vasculitis, hypersensitivity to murine proteins, intracranial neoplasm, prior IV dextran use before or during percutaneous transluminal coronary angioplasty (PTCA), recent surgery or trauma (within the past 6 wks), recent GI or GU bleeding (within the past 6 wks), thrombocytopenia (less than 100,000 cells/mcl), and severe uncontrolled hypertension. Concomitant use of another glycoprotein IIb/IIIa inhibitor. **Cautions:** Increased risk of bleeding in pts who weigh less than 75 kg; pts older than 65 yrs; those with history of GI disease; those receiving thrombolytics; PTCA in less than 12 hrs of onset of symptoms for acute MI; prolonged PTCA (longer than 70 min); failed PTCA.

ACTION

Rapidly inhibits platelet aggregation by preventing the binding of fibrinogen to GP IIb/IIIa receptor sites on platelets. **Therapeutic Effect:** Prevents occlusion of treated coronary arteries. Prevents acute cardiac ischemic complications.

PHARMACOKINETICS

Rapidly cleared from plasma. Initial-phase half-life is less than 10 min; second-phase half-life is 30 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Increased risk of major bleeding.

INTERACTIONS

DRUG: **Antiplatelet medications, heparin, other anticoagulants, thrombolytics, NSAIDs, direct factor Xa inhibitors, thrombin inhibitors** may increase risk of bleeding. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Increases activated clotting time (ACT), prothrombin time (PT), activated partial thromboplastin time (aPTT); decreases platelet count.

AVAILABILITY (Rx)

Injection Solution: 2 mg/ml (5-ml vial).

ADMINISTRATION/HANDLING

IV

Reconstitution • **Bolus dose:** Withdraw bolus dose into syringe using a 0.2- or 0.5-micron low protein-binding filter. • **Continuous infusion:** Withdraw dose through a 0.2- or 0.5-micron low protein-binding filter and further dilute into 250 ml D_5W or 0.9% NaCl.

Rate of Administration • Bolus given over 1 min.

Administration Precautions • Give in separate IV line; do not add any other medication to infusion. • For bolus injection and continuous infusion, use sterile, nonpyrogenic, low protein-binding 0.2- or 0.22-micron filter.

Storage • Store vials in refrigerator. • Solution appears clear, colorless. • Do not shake. • Prepared solution is stable for 12 hrs. Discard any unused portion left in vial or if preparation contains *any* opaque particles.

IV INCOMPATIBILITY

Administer in separate line; no other medication should be added to infusion solution.

IV COMPATIBILITIES

Adenosine (Adenocard), argatroban, atropine sulfate, bivalirudin (Angiomax), diphenhydramine (Benadryl), fentanyl (Sublimaze), metoprolol (Lopressor), midazolam (Versed).

INDICATIONS/ROUTES/DOSAGE

Percutaneous Coronary Intervention (PCI)

IV Bolus: ADULTS: 0.25 mg/kg 10–60 min before PCI, then 12-hr IV infusion of 0.125 mcg/kg/min. **Maximum:** 10 mcg/min.

PCI (Unstable Angina)

IV Bolus: ADULTS: 0.25 mg/kg, followed by 18- to 24-hr infusion of 10 mcg/min, ending 1 hr after procedure.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (16%–12%): Nausea, hypotension. **Occasional (9%):** Vomiting. **Rare (3%):** Bradycardia, confusion, dizziness, pain, peripheral edema, UTI.

ADVERSE EFFECTS/ TOXIC REACTIONS

Major bleeding complications may occur; stop infusion immediately. Hypersensitivity reaction may occur. Atrial fibrillation or flutter, pulmonary edema, complete AV block occur occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Heparin should be discontinued 4 hrs before arterial sheath removal. Maintain pt on bed rest for 6–8 hrs following sheath removal or drug discontinuation, whichever is later. Check platelet count, PT, aPTT, PFA, before infusion (assess for preexisting blood abnormalities), 2–4 hrs following treatment, and at 24 hrs or before discharge, whichever is first. Check insertion site, distal pulse of affected limb while femoral artery sheath is in place, and then routinely for 6 hrs following femoral artery sheath removal. Minimize need for injections, blood draws, catheters, other invasive procedures.

INTERVENTION/EVALUATION

Monitor ACT, PT, aPTT, platelet count, Hgb, Hct. Stop abciximab and/or heparin infusion if serious bleeding occurs that is uncontrolled by pressure. Observe for mental status changes. Assess skin for ecchymosis, petechiae, particularly at femoral arterial access, also at catheter insertion, arterial and venous puncture, cutdown, needle sites. Handle pt carefully and as infrequently as possible to prevent bleeding. Do not obtain B/P in lower extremities (possible deep vein thrombi). Assess for decrease in B/P, increase in pulse rate, complaint of abdominal or back pain, severe headache, evidence of GI hemorrhage. Question for increase in discharge during menses. Assess urinary output for hematuria. Monitor for hematoma. Use care in removing any dressing, tape.

PATIENT/FAMILY TEACHING

• Assess skin for bruising up to 3 days after infusion. • Report signs of bleeding.

abiraterone

TOP 100

a-bir-**a**-ter-one
(Zytiga)

Do not confuse Zytiga with Zetia or Zyrtec.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Androgen biosynthesis inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of metastatic castration-resistant prostate cancer in combination with prednisone.

◀ALERT▶ Must be given on empty stomach. No food is to be consumed 2 hrs before or 1 hr after each dose. Food may increase absorption up to 10 times normal limit. Sexually active men must wear condoms during and for 1 wk after treatment due to potential risks to fetus.

PRECAUTIONS

Contraindications: Use in women who are pregnant or may become pregnant. **Cautions:** History of cardiovascular disease (especially HF, recent MI, or ventricular arrhythmia) due to potential for hypertension, hypokalemia, or fluid retention; moderate hepatic impairment, adrenal insufficiency. Avoid use with strong CYP3A4 inducers.

ACTION

Inhibits androgen production in adrenal gland, testes, and prostate tumors. Inhibits formation of testosterone precursors. **Therapeutic Effect:** Lowers serum testosterone to castrate levels.

PHARMACOKINETICS

Protein binding: 99%. Primarily excreted in feces. **Peak plasma concentration:** 2 hrs. **Half-life:** 12 hrs (up to 19 hrs with hepatic impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in women who are or may become pregnant. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration/toxicity of **silodosin, tamoxifen, thioridazine, topotecan.** May decrease effect of **clopidogrel, tramadol. CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole)** may increase concentration. **CYP3A4 inducers (e.g., carbamazepine)** may decrease concentration. **HERBAL:** None significant. **FOOD:** Do not give with **food** (no **food** should be consumed for at least 2 hrs before or 1 hr after giving abiraterone). **LAB VALUES:** May increase serum ALT, AST, bilirubin, triglycerides. May decrease potassium, phosphorus.

AVAILABILITY (Rx)

Tablets: 250 mg.

ADMINISTRATION/HANDLING

PO

• Give on empty stomach only (at least 1 hr before or 2 hrs after food). • Give with water. • Swallow whole. Do not break, crush, dissolve, or divide tablets. Women who are or may become pregnant should wear gloves if handling the tablets.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Consider increased dosage of prednisone during unusual stress or infection. Interrupting prednisone therapy may induce adrenocorticoid insufficiency.

Metastatic Castration-Resistant Prostate Cancer

PO: ADULTS, ELDERLY: 1,000 mg once daily. Coadminister with prednisone, 5 mg PO twice daily.

Dosage Modification

Hepatic Enzymes Greater Than Upper Limit of Normal (ULN)

Lab Values	Recommendation
ALT, AST elevations greater than 5 × ULN or bilirubin greater than 3 × ULN with 1,000 mg	Interrupt treatment and restart at 750 mg once ALT, AST less than 2.5 × ULN or bilirubin less than 1.5 × ULN.
ALT, AST elevations greater than 5 × ULN or bilirubin greater than 3 × ULN with 750 mg	Interrupt treatment and restart at 500 mg once ALT, AST less than 2.5 × ULN or bilirubin less than 1.5 × ULN.

If hepatotoxicity occurs at reduced dose of 500 mg daily, discontinue treatment. **Mild hepatic impairment:** No dosage adjustment necessary. **Moderate hepatic impairment:** Reduce dose to 250 mg daily. Discontinue if ALT, AST greater than 5 times ULN or bilirubin greater than 3 times ULN. **Severe hepatic impairment:** Contraindicated.

Dosage in Renal Impairment

No dose adjustment.

Dosage Adjustment for Concomitant Strong CYP3A4 Inducers

Increase abiraterone dose to 1,000 mg twice daily.

SIDE EFFECTS

Frequent (30%–26%): Joint swelling/discomfort, peripheral edema, muscle spasm, musculoskeletal pain, hypokalemia. **Occasional (19%–6%):** Hot flashes, diarrhea, UTI, cough, hypertension, urinary frequency, nocturia. **Rare (less than 6%):** Heartburn, upper respiratory tract infection.

ADVERSE EFFECTS/ TOXIC REACTIONS

Mineralocorticoid excess (severe fluid retention, hypokalemia, hypertension) may compromise pts with prior cardiovascular history. Safety not established in pts with left ventricular ejection fraction

less than 50%. Tachycardia, atrial fibrillation, supraventricular tachycardia, atrial flutter, complete AV block, bradyarrhythmia reported in 7% of pts. Chest pain, unstable angina, HF reported in less than 4% of pts. Stress, infection, or interruption of daily steroids may cause adrenocortical insufficiency. Hepatotoxicity (ALT, AST greater than 5 times ULN) reported in 2% of pts. Pts with hepatic impairment are more likely to develop hepatotoxicity.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate history of HF, myocardial infarction, arrhythmias, angina pectoris, peripheral edema, hepatic impairment, adrenal or pituitary abnormalities, left ventricular ejection fraction if applicable. Obtain baseline ALT, AST, alkaline phosphatase, bilirubin, BMP. Question possibility of pregnancy before treatment (Pregnancy Category X). Question history of corticosteroid intolerance if applicable.

INTERVENTION/EVALUATION

Assess for peripheral edema behind medial malleolus (sacral area in bedridden patients). Monitor BMP, hepatic function. Monitor for mineralocorticoid excess (hypokalemia, hypertension, fluid retention) at least once monthly. Assess for cardiac arrhythmia if hypokalemia occurs. Obtain EKG for palpitations, dyspnea, dizziness. Monitor for signs and symptoms of adrenocortical insufficiency during prednisone interruption, periods of stress, infection. Measure ALT, AST, alkaline phosphatase, bilirubin every 2 wks for 3 mos, then monthly. If hepatotoxicity occurs, dosage modification will be necessary. Pts with moderate hepatic impairment must have hepatic function tests every wk for first month, then every 2 wks for 2 mos, then monthly. If ALT, AST above 5 times ULN or bilirubin above 3 times ULN, treatment should be discontinued.

PATIENT/FAMILY TEACHING

• Must be taken on empty stomach (no food 2 hrs before and 1 hr after dose). • If taken with food, toxic levels may result. • Sexually active men must wear condom during treatment and for 1 wk after treatment. • Women who are pregnant or are planning pregnancy may not touch medication without gloves. • Dizziness, palpitations, headache, confusion, muscle weakness, leg swelling/discomfort may become more apparent during periods of unusual stress, infection, or interruption of prednisone therapy. • Blood tests will be performed routinely. • Report signs of liver problems (yellowing of skin, bruising, light-colored stool, right upper quadrant pain), chest pain, palpitations. • An increase in urinary frequency or nocturia is expected as treatment becomes therapeutic. Do not chew, crush, dissolve, or divide.

acetaminophen TOP 100

a-**seet**-a-**min**-oh-fen

(Abenol, Acephen, Apo-Acetaminophen, Atasol, Feverall, Mapap, Ofirmev, Tempra, Tylenol, Tylenol Arthritis Pain, Tylenol Children's Meltaways, Tylenol Junior Meltaways, Tylenol Extra Strength)

■ **BLACK BOX ALERT** ■ Potential for severe liver injury. Acetaminophen injection associated with acute liver failure.

Do not confuse Acephen with Aciphex, Feverall with Fiberall, Fioricet with Fiorinal, Percocet with Percodan, Tylenol with atenolol, timolol, Tylenol PM, or Tylox, or Vicodin with Hycodan.

FIXED-COMBINATION(S)

Note: The amount of acetaminophen in combination products will be limited to no more than 325 mg per FDA mandate.

Capital with Codeine, Tylenol with Codeine: acetaminophen/codeine: 120 mg/12 mg per 5 ml. **Endocet:** acetaminophen/oxycodone: 325 mg/5 mg, 325 mg/7.5 mg, 325 mg/10 mg. **Fioricet:** acetaminophen/caffeine/butalbital: 325 mg/40 mg/50 mg. **Hycet:** acetaminophen/hydrocodone: 325 mg/7.5 mg per 15 ml. **Lortab:** acetaminophen/hydrocodone: 500 mg/5 mg, 500 mg/7.5 mg. **Lortab Elixir:** acetaminophen/hydrocodone: 167 mg/2.5 mg per 5 ml. **Magnacet:** acetaminophen/oxycodone: 400 mg/5 mg, 400 mg/10 mg. **Norco:** acetaminophen/hydrocodone: 325 mg/5 mg, 325 mg/7.5 mg, 325 mg/10 mg. **Percocet, Roxicet:** acetaminophen/oxycodone: 325 mg/5 mg. **Tylenol with Codeine:** acetaminophen/codeine: 300 mg/15 mg, 300 mg/30 mg, 300 mg/60 mg. **Ultracet:** acetaminophen/tramadol: 325 mg/37.5 mg. **Vicodin:** acetaminophen/hydrocodone: 300 mg/5 mg. **Vicodin ES:** acetaminophen/hydrocodone: 300 mg/7.5 mg. **Vicodin HP:** acetaminophen/hydrocodone: 300 mg/10 mg. **Xartemis XR:** acetaminophen/oxycodone: 325 mg/7.5 mg. **Xodol:** acetaminophen/hydrocodone: 300 mg/5 mg, 300 mg/7.5 mg, 300 mg/10 mg. **Zydone:** acetaminophen/hydrocodone: 400 mg/5 mg, 400 mg/7.5 mg, 400 mg/10 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Central analgesic. **CLINICAL:** Non-narcotic analgesic, antipyretic.

USES

Relief of mild to moderate pain, fever.
IV: (Additional) Management of moderate to severe pain when combined with opioid analgesia.

PRECAUTIONS

Contraindications: Severe hepatic impairment or severe active liver disease (Ofirmev). **Cautions:** Sensitivity to acetaminophen; severe renal impairment; alcohol dependency, hepatic impairment, or active hepatic disease; chronic malnutrition and hypovolemia (Ofirmev); G6PD deficiency (hemolysis may occur). Limit dose to less than 4 g/day.

ACTION

Appears to inhibit prostaglandin synthesis in the CNS and, to a lesser extent, block pain impulses through peripheral action. Acts centrally on hypothalamic heat-regulating center, producing peripheral vasodilation (heat loss, skin erythema, diaphoresis). **Therapeutic Effect:** Results in antipyresis. Produces analgesic effect.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	Less than 60 min	1–3 hrs	4–6 hrs

Rapidly, completely absorbed from GI tract; rectal absorption variable. Protein binding: 20%–50%. Widely distributed to most body tissues. Metabolized in liver; excreted in urine. Removed by hemodialysis. **Half-life:** 1–4 hrs (increased in pts with hepatic disease, elderly, neonates; decreased in children).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. Routinely used in all stages of pregnancy, appears safe for short-term use. **Pregnancy Category B. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Alcohol** (chronic use), **hepatotoxic medications (e.g., phenytoin), hepatic enzyme inducers (e.g., phenytoin, rifampin)** may increase risk of hepatotoxicity with prolonged high dose or single toxic dose. May increase risk of bleeding with **warfarin** with chronic, high-dose use. **HERBAL:** **St. John's wort** may decrease blood levels. **FOOD:** **Food**

may decrease rate of absorption. **LAB VALUES:** May increase serum ALT, AST, bilirubin, prothrombin levels (may indicate hepatotoxicity).

AVAILABILITY (OTC)

Caplets (Tylenol): 325 mg, 500 mg, 650 mg. **Elixir:** 160 mg/5 ml. **Injection, Solution (Ofirmev):** 1,000 mg/100 ml glass vial. **Liquid (Oral [Tylenol Extra Strength]):** 160 mg/5 ml, 500 mg/5 ml, 500 mg/15 ml. **Solution (Oral Drops [Mapap]):** 80 mg/0.8 ml. **Suppository (Acephen, Feverall):** 80 mg, 120 mg, 325 mg, 650 mg. **Suspension (Mapap):** 160 mg/5 ml. **Tablets (Mapap, Tylenol):** 325 mg, 500 mg. **Tablets (Chewable [Mapap]):** 80 mg. **Tablets (Orally Disintegrating):** 80 mg, 160 mg.

Caplets: (Extended-Release [Tylenol Arthritis Pain]): 650 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Does not require further dilution. • Store at room temperature. • Withdraw doses less than 1,000 mg. • Place in separate empty, sterile container.

Rate of Administration • Infuse over 15 min.

Stability • Once opened or transferred, stable for 6 hrs at room temperature.

PO

• Give without regard to meals. • Tablets may be crushed. • Do not crush extended-release caplets. • Suspension: Shake well before use. • Take with full glass of water.

Rectal

• Moisten suppository with cold water before inserting well up into rectum. • Do not freeze suppositories.

INDICATIONS/ROUTES/DOSAGE

Analgesia and Antipyresis

IV: ADULTS, ADOLESCENTS WEIGHING 50 KG OR MORE: 1,000 mg q6h or 650 mg q4h. **Maximum single dose:** 1,000 mg; **maximum total daily dose:** 4,000 mg. **ADULTS, ADOLESCENTS WEIGHING LESS THAN 50 KG:** 15 mg/kg q6h or 12.5 mg/kg q4h. **Maximum single dose:** 750 mg; **maximum total daily dose:** 75 mg/kg/day (3,750 mg). **CHILDREN 2–12 YRS:** 15 mg/kg q6h or 12.5 mg/kg q4h. **Maximum:** 75 mg/kg/day, not to exceed 3,750 mg/day. **INFANTS AND CHILDREN LESS THAN 2 YRS:** 7.5–15 mg/kg q6h. **Maximum:** 60 mg/kg/day. **NEONATES:** Loading dose: 20 mg/kg. P**MA 37 or greater than 37 wks:** 10 mg/kg/dose q6h. **Maximum:** 40 mg/kg/day. PMA 33–36 wks: 10 mg/kg/dose q8h. **Maximum:** 40 mg/kg/day. **PMA 28–32 wks:** 10 mg/kg/dose q12h. **Maximum:** 22.5 mg/kg/day.

PO: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 325–650 mg q4–6h or 1 g 3–4 times a day. **Maximum:** 4 g/day. **CHILDREN 12 YRS AND YOUNGER:** 10–15 mg/kg/dose q4–6h as needed. **Maximum:** 5 doses/24 hrs. **NEONATES:** Term: 10–15 mg/kg/dose q4–6h. **Maximum:** 90 mg/kg/day. **GA 33–37 wks or term less than 10 days:** 10–15 mg/kg/dose q6h. **Maximum:** 60 mg/kg/day. **GA:** 28–32 wks: 10–12 mg/kg/dose q6–8h. **Maximum:** 40 mg/kg/day.

Rectal: ADULTS: 325–650 mg q4–6h. **Maximum:** 4 g/24 hrs. **CHILDREN:** 10–20 mg/kg/dose q4–6h as needed. **Maximum:** 5 doses/24 hrs. **NEONATES:** Term: Initially, 30 mg/kg/once, then 20 mg/kg/dose q6–8h. **Maximum:** 90 mg/kg/day. **GA 33–37 wks or term less than 10 days:** Initially, 30 mg/kg once, then 15 mg/kg/dose q8h. **Maximum:** 60 mg/kg/day. **GA:** 28–32 wks: 20 mg/kg/dose q12h. **Maximum:** 40 mg/kg/day.

Dosage in Renal Impairment

Creatinine Clearance	Frequency
Oral	
10–50 ml/min	q6h
Less than 10 ml/min	q8h
Continuous renal replacement therapy	q8h
IV	
30 ml/min or less (use caution, decrease daily dose, extend dosing interval)	

Dosage in Hepatic Impairment
Use with caution. IV contraindicated with severe impairment.

SIDE EFFECTS

Rare: Hypersensitivity reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Early Signs of Acetaminophen Toxicity: Anorexia, nausea, diaphoresis, fatigue within first 12–24 hrs. **Later Signs of Toxicity:** Vomiting, right upper quadrant tenderness, elevated hepatic function tests within 48–72 hrs after ingestion. **Antidote:** Acetylcysteine (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

If given for analgesia, assess onset, type, location, duration of pain. Effect of medication is reduced if full pain response recurs prior to next dose. Assess for fever. Assess alcohol usage.

INTERVENTION/EVALUATION

Assess for clinical improvement and relief of pain, fever. **Therapeutic serum level:** 10–30 mcg/ml; **toxic serum level:** greater than 200 mcg/ml. Do not exceed maximum daily recommended dose: 4 g/day.

PATIENT/FAMILY TEACHING

- Consult physician for use in children younger than 2 yrs, oral use longer than 5 days (children) or longer than 10 days (adults), or fever lasting longer than 3 days. • Severe/recurrent pain or high/continuous fever may indicate serious illness. • Advise not to take more than 4 g/24-hr period. Many nonprescription combination products contain acetaminophen. Avoid alcohol.

*acetaZOLAMIDE

a-seet-a-**zole**-a-myde
(Acetazolam, Diamox, Diamox Sequels)
Do not confuse Diamox with Trimox.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Carbonic anhydrase inhibitor. **CLINICAL:** Antiglaucoma, anticonvulsant, diuretic, urinary alkalinizer.

USES

Treatment of glaucoma (chronic simple open-angle, secondary, acute angle-closure); control of IOP before surgery; adjunct in management of seizures; edema (drug-induced or associated with HF); decreases or prevents incidence/severity of symptoms associated with acute altitude sickness. **OFF-LABEL:** Respiratory stimulant in COPD, metabolic alkalosis.

PRECAUTIONS

Contraindications: Hypersensitivity to sulfonamides, severe renal/hepatic disease, adrenal insufficiency, hypochloremic acidosis, hypokalemia, hyponatremia, long-term administration in pts with chronic noncongestion angle-closure glaucoma. **Cautions:** Diabetes mellitus, gout, respiratory acidosis, moderate renal impairment. **Pregnancy Category C.**

ACTION

Reduces formation of hydrogen and bicarbonate ions by inhibiting the enzyme carbonic anhydrase. **Therapeutic Effect:** Increases excretion of sodium, potassium, bicarbonate, water in kidney; decreases formation of aqueous humor in eye; delays abnormal discharge from CNS neurons.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 90%. Excreted unchanged in urine. **Half-life:** Tablets: 10–15 hrs.

INTERACTIONS

DRUG: May increase levels/effects of **anticonvulsants (barbituates, hydantoins), antihypertensives, carbamazepine, memantine, cyclosporine, amphetamines. HERBAL: Licorice** may increase serum sodium, potassium. **FOOD:** None known. **LAB VALUES:** May increase serum ammonia, bilirubin, glucose, calcium, uric acid, chloride; may decrease serum bicarbonate, potassium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 500 mg. **Tablets:** 125 mg, 250 mg.

Capsules (Extended-Release [Diamox Sequels]): 500 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute with at least 5 ml Sterile Water for Injection to provide concentration not more than 100 mg/ml.

Rate of Administration • Maximum rate: 500 mg/min.

Storage • Following reconstitution, stable for 12 hrs at room temperature, 1 wk if refrigerated.

PO

• Give with food to decrease GI upset. • May crush tablets. • Do not break, crush, dissolve, or divide extended-release capsule. • May open, sprinkle on food.

IV INCOMPATIBILITY

Diltiazem (Cardizem).

IV COMPATIBILITIES

Pantoprazole (Protonix), ranitidine (Zantac).

INDICATIONS/ROUTES/DOSAGE

Open-Angle Glaucoma

PO, IV: ADULTS, ELDERLY: 250 mg 1–4 times/day or 500 mg extended-release capsule twice daily.

Secondary or Acute Glaucoma

PO, IV: ADULTS, ELDERLY: Initially, 250–500 mg, then 125–250 mg q4h.

Edema

PO, IV: ADULTS: 250–375 mg once daily. **CHILDREN:** 5 mg/kg/dose once a day.

Epilepsy

PO: ADULTS, ELDERLY, CHILDREN: 8–30 mg/kg/day in up to 4 divided doses. **Maximum:** 30 mg/kg/day or 1 g/day. Extended-release formulation not recommended for epilepsy.

Altitude Sickness

Prevention

PO: ADULTS: 125 mg twice daily. **CHILDREN:** 2.5 mg/kg q12h. **Maximum:** 125 mg/dose.

Treatment

PO: ADULTS: 250 mg twice daily. **CHILDREN:** 2.5 mg/kg q8–12h. **Maximum:** 250 mg/dose.

Dosage in Renal Impairment

Creatinine Clearance	Dosage Interval
10–50 ml/min	q12h
Less than 10 ml/min	Not recommended

Dosage in Hepatic Impairment

Contraindicated with cirrhosis, severe hepatic dysfunction.

SIDE EFFECTS

Frequent: Fatigue, diarrhea, increased urination/frequency, decreased appetite/weight, dysgeusia (metallic), nausea, vomiting, paresthesia, circumoral numbness. **Occasional:** Depression, drowsiness. **Rare:** Headache, photosensitivity, confusion, tinnitus, severe muscle weakness, loss of taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term therapy may result in acidotic state. Nephrotoxicity/hepatotoxicity occurs occasionally, manifested as dark urine/ stools, pain in lower back, jaundice, dysuria, crystalluria, renal colic/calculi. Bone marrow depression may occur manifested as aplastic anemia, thrombocytopenia, thrombocytopenic purpura, leukopenia, agranulocytosis, hemolytic anemia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Glaucoma: Assess affected pupil for dilation, response to light. Question potential for eye discomfort, decrease in visual acuity. **Epilepsy:** Obtain history of seizure disorder (length, intensity, duration of seizure, presence of aura, level of consciousness [LOC]).

INTERVENTION/EVALUATION

Monitor for acidosis (headache, lethargy progressing to drowsiness, CNS depression, Kussmaul's respiration).

PATIENT/FAMILY TEACHING

- Report tingling/tremor in hands or feet, unusual bleeding or bruising, unexplained fever, sore throat, flank pain.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Use sunscreen, wear protective clothing.

acetylcysteine (*N*-acetylcysteine)

a-**seet**-il-**sis**-teen
(Acetadote, Mucomyst, Parvolex)
Do not confuse acetylcysteine with acetylcholine, or Mucomyst with Mucinex.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Respiratory inhalant, intratracheal. **CLINICAL:** Mucolytic, antidote.

USES

Inhalation: Adjunctive treatment for abnormally viscid mucous secretions present in acute and chronic bronchopulmonary disease and pulmonary complications of cystic fibrosis and surgery, diagnostic bronchial studies. **Injection, PO:** Antidote in acute acetaminophen toxicity. **OFF-LABEL:** Prevention of contrast-induced renal dysfunction from dyes given during certain diagnostic tests (such as CT scans). Treatment of distal intestinal obstruction syndrome.

PRECAUTIONS

Contraindications: None known. **Cautions:** Pts with bronchial asthma; debilitated pts with severe respiratory insufficiency (increases risk of anaphylactoid reaction). **Pregnancy Category B.**

ACTION

Mucolytic splits linkage of mucoproteins, reducing viscosity of pulmonary secretions. Acetaminophen toxicity: Hepatoprotective by restoring heptic glutathione and enhancing nontoxic conjugation of acetaminophen. **Therapeutic Effect:** Facilitates removal of pulmonary secretions by coughing, postural drainage, mechanical means. Protects against acetaminophen overdose-induced hepatotoxicity.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Inhalation Solution (Mucomyst): 10% (100 mg/ml), 20% (200 mg/ml). **Injection Solution (Acetadote):** 20% (200 mg/ml).

ADMINISTRATION/HANDLING

IV

The total dose is 300 mg/kg administered over 21 hrs. Dose preparation is based on pt weight. Total volume administered should be adjusted for pts less than 40 kg and for those requiring fluid restriction.

Store unopened vials at room temperature. Following dilution in D_5W, stable for 24 hrs at room temperature. Color change of opened vials may occur (does not affect potency).

Three-Bag Method (as Antidote): Loading, Second, and Third Doses

Pts Greater Than or Equal to 40 kg:

Loading dose: 150 mg/kg in 200 ml of diluent administered over 60 min.
Second dose: 50 mg/kg in 500 ml of diluent administered over 4 hrs.
Third dose: 100 mg/kg in 1,000 ml of diluent administered over 16 hrs.

Pts Greater Than 20 kg but Less Than 40 kg:

Loading dose: 150 mg/kg in 100 ml of diluent administered over 60 min.
Second dose: 50 mg/kg in 250 ml of diluent administered over 4 hrs.
Third dose: 100 mg/kg in 500 ml of diluent administered over 16 hrs.

Pts Less Than or Equal to 20 kg:

Loading dose: 150 mg/kg in 3 ml/kg of body weight of diluent administered over 60 min.
Second dose: 50 mg/kg in 7 ml/kg of body weight of diluent administered over 4 hrs.
Third dose: 100 mg/kg in 14 ml/kg of body weight of diluent administered over 16 hrs.

PO

• For treatment of acetaminophen overdose. • Give as 5% solution. • Dilute 20% solution 1:3 with cola, orange juice, other soft drink. • Give within 1 hr of preparation.

Inhalation, Nebulization

• 20% solution may be diluted with 0.9% NaCl or sterile water; 10% solution may be used undiluted.

IV COMPATIBILITIES

Cefepime (Maxipime), ceftazidime (Fortaz).

INDICATIONS/ROUTES/DOSAGE

Bronchopulmonary Disease

Inhalation, Nebulization

◀ALERT▶ Bronchodilators should be given 10–15 min before acetylcysteine. **ADULTS, ELDERLY, CHILDREN:** 3–5 ml (20% solution) 3–4 times a day or 6–10 ml (10% solution) 3–4 times a day. Range: 1–10 ml (20% solution) q2–6h or 2–20 ml (10% solution) q2–6h. **INFANTS:** 1–2 ml (20%) or 2–4 ml (10%) 3–4 times a day.

Intratracheal: ADULTS, CHILDREN: 1–2 ml of 10% or 20% solution instilled into tracheostomy q1–4h.

Acetaminophen Overdose

◀ALERT▶ It is essential to initiate treatment as soon as possible after overdose and, in any case, within 24 hrs of ingestion.

PO ***(Oral Solution 5%)*: ADULTS, ELDERLY, CHILDREN:** Loading dose of 140 mg/kg, followed in 4 hrs by maintenance dose of 70 mg/kg q4h for 17 additional doses (or until acetaminophen assay reveals nontoxic level). Repeat dose if emesis occurs within 1 hr of administration.

IV: ADULTS, ELDERLY, CHILDREN: 150 mg/kg infused over 60 min, then 50 mg/kg infused over 4 hrs, then 100 mg/kg infused over 16 hrs (see Administration/Handling for dilution). **GREATER THAN 100 KG:** 15 g over 60 min; 5 g over 4 hrs; 10 g over 16 hrs. Duration of administration may vary depending on acetaminophen levels and hepatic function tests obtained during treatment. Pts who still have detectable levels of acetaminophen or elevated LFT results continue to benefit from additional acetylcysteine administration beyond 24 hrs.

Prevention of Contrast-Induced Nephropathy

PO: ADULTS, ELDERLY: 600–1,200 mg twice a day for 4 doses starting the day before the procedure. Hydrate pt with 0.9% NaCl concurrently.

Diagnostic Bronchial Studies

Inhalation, Nebulization: ADULTS: 1–2 ml of 20% solution or 2–4 ml of 10% solution 2–3 times before the procedure.

SIDE EFFECTS

IV: (10%): Nausea, vomiting. **(7%–6%):** Acute flushing, erythema. **(4%):** Pruritus. **Frequent: Inhalation:** Stickiness on face, transient unpleasant odor. **Occasional: Inhalation:** Increased bronchial secretions, throat irritation, nausea, vomiting, rhinorrhea. **Rare: Inhalation:** Rash. **PO:** Facial edema, bronchospasm, wheezing, nausea, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Large doses may produce severe nausea/vomiting. **(Less than 2%):** Serious anaphylactoid reactions including cough, wheezing, stridor, respiratory distress, bronchospasm, hypotension, and death have been known to occur with IV administration.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Mucolytic: Assess pretreatment respirations for rate, depth, rhythm. **IV antidote:** Obtain baseline labs and drug screen. For use as antidote, obtain acetaminophen level to determine need for treatment with acetylcysteine.

INTERVENTION/EVALUATION

If bronchospasm occurs, discontinue treatment, notify physician; bronchodilator may be added to therapy. Monitor rate, depth, rhythm, type of respiration (abdominal, thoracic). Observe sputum for color, consistency, amount. **IV antidote:** Administer within 8 hrs of acetaminophen ingestion for maximal hepatic protection; ideally, within 4 hrs after immediate-release and 2 hrs after liquid acetaminophen formulations.

PATIENT/FAMILY TEACHING

• Slight, disagreeable sulfuric odor from solution may be noticed during initial administration but disappears quickly. • Adequate hydration is important part of therapy. • Follow guidelines for proper coughing and deep breathing techniques.

aclidinium

a-kli-**din**-ee-um
(Tudorza)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Long-acting antimuscarinic, anticholinergic.
CLINICAL: Bronchodilator.

USES

Long-term maintenance treatment of airflow obstruction in pts with chronic obstructive pulmonary disease (COPD), including chronic bronchitis and emphysema.

PRECAUTIONS

◀ALERT▶ Not indicated for use as a rescue medication. Contact physician if paradoxical bronchospasm, worsening of narrow-angle glaucoma, urinary retention, or immediate hypersensitivity occurs. **Contraindications:** None known. **Cautions:** Prostatic hyperplasia, bladder-neck obstruction, narrow-angle glaucoma, hypersensitivity to milk proteins, atropine.

ACTION

Inhibits M_1 to M_5 muscarinic receptors in smooth muscle of airway, preventing acetylcholine-induced bronchospasm. **Therapeutic Effect:** Bronchodilation.

PHARMACOKINETICS

Peak plasma levels noted within 10 min following inhalation. Extensively metabolized via hydrolysis, both chemically and enzymatically by esterases. Primarily eliminated in urine, with a smaller

amount excreted in feces. **Half-life:** 5–8 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May produce teratogenic effects. May be excreted in breast milk; do not breastfeed. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase effects of **anticholinergic agents.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Powder for Inhalation: 400 mcg/inhalation.

ADMINISTRATION/HANDLING

Inhalation

• Remove inhaler from pouch; allows 60 doses for oral inhalation. • The inhaler is a white and green device with a dose indicator, a storage unit containing drug product formulation, and a mouthpiece covered by a green protective cap. • Each actuation delivers 375 mcg of medication from the mouthpiece. • Follow manufacturer guidelines for assembly of plastic dosing mechanism and proper use of inhaler.

Storage • Store pouch at room temperature; inhaler should be stored inside the sealed pouch and only be opened immediately before use. • Discard inhaler 45 days after opening the pouch, after the marking "0" with a red background shows in middle of dose indicator, or when the device locks out, whichever comes first.

INDICATIONS/ROUTES/DOSAGE

Maintenance Therapy:

Inhalation: ADULTS, ELDERLY: 400 mcg twice daily.

SIDE EFFECTS

Occasional (7%–3%): Headache, nasopharyngitis, cough, diarrhea. **Rare (2%–1%):** Sinusitis, rhinitis, toothache, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe dyspnea may indicate paradoxical bronchospasm. Acute narrow-angle glaucoma (eye pain or discomfort, blurred vision, visual halos, or colored images in association with red eyes from conjunctival congestion and corneal edema) occur rarely. Signs and symptoms of prostatic hyperplasia or bladder-neck obstruction (difficulty passing urine, painful urination) have been observed. Hypersensitivity reaction has been noted rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess rate, depth, rhythm, type of respirations. Monitor EKG, serum potassium, ABG determinations, O_2 saturation, pulmonary function test. Assess lung sounds for wheezing (bronchoconstriction), rales. Receive full medication history and screen for possible drug interactions.

INTERVENTION/EVALUATION

Monitor lung sounds. Observe for sudden shortness of breath, wheezing (pulmonary bronchospasm). Routinely monitor BMP, blood glucose, O_2 saturation. Evaluate EKG for palpitation, tachycardia. Monitor hypokalemia results. Monitor for acute urinary retention. Question for eye pain or discomfort, changes in vision, conjunctival congestion (worsening of narrow-angle glaucoma).

PATIENT/FAMILY TEACHING

• The inhaler contains 60 doses of medication, with the number 60 on dose indicator. • As each dose is used, the dose indicator will display down in intervals of 10. • The marking "0" with a red background shows in the middle of the dose indicator. • Discard pouch after 45 days, after the marking "0" with a red background shows in the middle of the dose indicator, or when device locks out, whichever comes first. • Increase fluid intake (decreases lung secretion

viscosity). • Report difficulty breathing, painful or difficulty passing urine, visual changes.

acyclovir

a-**sye**-klo-veer
(Apo-Acyclovir, Novo-Acyclovir, Zovirax)
Do not confuse acyclovir with ganciclovir, Retrovir, or valacyclovir, or Zovirax with Doribax, Valtrex, Zithromax, Zostrix, Zyloprim, or Zyvox.

FIXED-COMBINATION(S)

Liposivir: acyclovir/hydrocortisone (a steroid): 5%/1%.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic nucleoside. **CLINICAL:** Antiviral.

USES

Parenteral

Treatment of initial and prophylaxis of recurrent mucosal and cutaneous herpes simplex virus (HSV-1 and HSV-2) in immunocompromised pts. Treatment of severe initial episodes of herpes genitalis in immunocompetent pts. Treatment of herpes simplex encephalitis including neonatal herpes simplex virus. Treatment of varicella-zoster virus (VZV) infections in immunocompetent pts.

Oral

Treatment of initial episodes and prophylaxis of recurrent herpes simplex (HSV-2 genital herpes). Treatment of chickenpox (varicella). Acute treatment of herpes zoster (shingles). Management of initial genital herpes.
OFF-LABEL: (Parenteral/Oral): Prevention of HSV reactivation in HIV-positive pts; hematopoietic stem cell transplant (HSCT); during periods of neutropenia in pts with cancer; prevention of VZV reactivation in allogenic HSCT; treatment of disseminated HSC or VZV in immunocompromised pts with cancer; empiric treatment of suspected encephalitis in immunocompromised pts with cancer; treatment of initial and prophylaxis of recurrent mucosal and cutaneous herpes simplex infections in immunocompromised pts.

Topical

Cream: Treatment of recurrent herpes labialis (cold sores). **Ointment:** Treatment of mucocutaneous HSV in immunocompromised pts.

PRECAUTIONS

Contraindications: Use in neonates when acyclovir is reconstituted with Bacteriostatic Water for Injection containing benzyl alcohol. Hypersensitivity to valacyclovir. **Cautions:** Immunocompromised pts (thrombocytopenic purpura/hemolytic uremic syndrome reported); elderly, renal impairment. IV Use: Pts with underlying neurologic abnormalities, serious hepatic/electrolyte abnormalities, substantial hypoxia.

ACTION

Converts to acyclovir triphosphate, becoming part of DNA chain. **Therapeutic Effect:** Interferes with DNA synthesis and viral replication. Virustatic.

PHARMACOKINETICS

Poorly absorbed from GI tract; minimal absorption following topical application. Protein binding: 9%–36%. Widely distributed. Partially metabolized in liver. Excreted primarily in urine. Removed by hemodialysis. **Half-life:** 2.5 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in pts younger than 2 yrs (younger than 1 yr for IV use). **Elderly:** Age-related renal impairment

may require decreased dosage. May experience more neurologic effects (e.g., agitation, confusion, hallucinations).

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, creatinine concentrations, hepatic function tests.

AVAILABILITY (Rx)

Cream: 5%. **Injection, Powder for Reconstitution:** 500 mg, 1,000 mg. **Injection, Solution:** 50 mg/ml. **Ointment:** 5%. **Suspension, Oral:** 200 mg/5 ml. **Tablets:** 400 mg, 800 mg.

Capsules: 200 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Add 10 ml Sterile Water for Injection to each 500-mg vial (50 mg/ml). Do not use Bacteriostatic Water for Injection containing benzyl alcohol or parabens (will cause precipitate). • Shake well until solution is clear. • Further dilute with at least 100 ml D_5W or 0.9 NaCl. Final concentration should be 7 mg/ml or less. (Concentrations greater than 10 mg/ml increase risk of phlebitis.)

Rate of Administration • Infuse over at least 1 hr (nephrotoxicity due to crystalluria and renal tubular damage may occur with too-rapid rate). • Maintain adequate hydration during infusion and for 2 hrs following IV administration.

Storage • Store vials at room temperature. • Solutions of 50 mg/ml stable for 12 hrs at room temperature; may form precipitate if refrigerated. • IV infusion (piggyback) stable for 24 hrs at room temperature.

PO

• May give without regard to food. • Do not crush/break capsules. • Store capsules at room temperature.

Topical

(Ointment): • Avoid contact with eye. • Use finger cot/rubber glove to prevent autoinoculation.

(Cream): • Apply to only cover cold sores or area with symptoms. • Rub until it disappears.

IV INCOMPATIBILITIES

Aztreonam (Azactam), diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), levofloxacin (Levaquin), meropenem (Merrem IV), ondansetron (Zofran), piperacillin and tazobactam (Zosyn).

IV COMPATIBILITIES

Allopurinol (Alloprim), amikacin (Amikin), ampicillin, cefazolin (Ancef), cefotaxime (Claforan), ceftazidime (Fortaz), ceftriaxone (Rocephin), cimetidine (Tagamet), clindamycin (Cleocin), diphenhydramine (Benadryl), famotidine (Pepcid), fluconazole (Diflucan), gentamicin, heparin, hydromorphone (Dilaudid), imipenem (Primaxin), lorazepam (Ativan), magnesium sulfate, methylprednisolone (Solu-Medrol), metoclopramide (Reglan), metronidazole (Flagyl), morphine, multivitamins, potassium chloride, propofol (Diprivan), ranitidine (Zantac), vancomycin.

INDICATIONS/ROUTES/DOSAGE

Genital Herpes (Initial Episode)

IV: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 5 mg/kg q8h for 5–7 days.

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 200 mg q4h 5 times a day for 10 days or 400 mg 3 times a day for 7–10 days. **CHILDREN YOUNGER THAN 12 YRS:** 40–80 mg/kg/day in 3–4 divided doses for 5–10 days. **Maximum:** 1 g/day.

Topical: ADULTS: (Ointment) ½ inch for 4-inch square surface q3h (6 times a day) for 7 days.

Genital Herpes (Recurrent)

Intermittent Therapy

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 200 mg q4h 5 times a day for 5 days or 400 mg 3 times a day for 5–10 days.

Chronic Suppressive Therapy

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 400 mg twice a day or 200 mg 3–5 times a day for up to 12 mos. **CHILDREN YOUNGER THAN 12 YRS:** 80 mg/kg/day in 3 divided doses. **Maximum:** 1 g/day.

Herpes Simplex Mucocutaneous

PO: ADULTS, ELDERLY: 400 mg 5 times a day for 7–14 days.
IV: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 5 mg/kg/dose q8h for 7–14 days. **CHILDREN YOUNGER THAN 12 YRS:** 10 mg/kg q8h for 7 days.
Topical: ADULTS: (Ointment) ½ inch for 4-inch square surface q3h (6 times a day) for 7 days.

Herpes Simplex Encephalitis

IV: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 10 mg/kg q8h for 10 days. **CHILDREN 3 MOS–YOUNGER THAN 12 YRS:** 20 mg/kg q8h for 10 days.

Herpes Zoster (Shingles)

IV: ADULTS, CHILDREN 12 YRS AND OLDER: (immunocompromised) 10 mg/kg/dose q8h for 7 days. **CHILDREN YOUNGER THAN 12 YRS:** (immunocompromised) 20 mg/kg/dose q8h for 7 days.
PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 800 mg q4h 5 times a day for 7–10 days.

Herpes Labialis (Cold Sores)

Topical: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Apply to affected area 5 times a day for 4 days.

Varicella-Zoster (Chickenpox)

◀ALERT▶ Begin treatment within 24 hrs of onset of rash.
IV: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 10 mg/kg/dose q8h for 7 days. **CHILDREN LESS THAN 12 YRS:** 20 mg/kg/dose q8h for 7 days.
PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS AND CHILDREN 2–12 YRS, WEIGHING 40 KG OR MORE: 800 mg 4 times a day for 5 days. **CHILDREN 2–12 YRS, WEIGHING LESS THAN 40 KG:** 20 mg/kg 4 times a day for 5 days. **Maximum:** 800 mg/dose.

Usual Neonatal Dosage

HSV (treatment) (IV): 20 mg/kg/dose q8h for 14–21 days.
HSV (chronic suppression) (PO): 300 mg/m^2/dose q8h following IV therapy for 6 mos.
Varicella-Zoster (IV): 10–15 mg/kg/dose q8h for 5–10 days.

Dosage in Renal Impairment

Dosage and frequency are modified based on severity of infection and degree of renal impairment.
PO: Normal dose 200 mg q4h, 200 mg q8h, or 400 mg q12h.
Creatinine clearance 10 ml/min and less: 200 mg q12h.
PO: Normal dose 800 mg q4h.
Creatinine clearance greater than 25 ml/min: Give usual dose and at normal interval, 800 mg q4h. **Creatinine clearance 10–25 ml/min:** 800 mg q8h. **Creatinine clearance less than 10 ml/min:** 800 mg q12h.
IV:

Creatinine Clearance	Dosage
Greater than 50 ml/min	100% of normal q8h
25–50 ml/min	100% of normal q12h
10–24 ml/min	100% of normal q24h
Less than 10 ml/min	50% of normal q24h
Hemodialysis (HD)	2.5–5 mg/kg q24h (give after HD)
Peritoneal dialysis (PD)	50% normal dose q24h
Continuous renal replacement therapy (CRRT)	5–10 mg/kg q12–24h (q12h for viral meningoenphalitis/VZV infection)

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Parenteral (9%–7%): Phlebitis or inflammation at IV site, nausea, vomiting. **Topical (28%):** Burning, stinging. **Occasional: Parenteral (3%):** Pruritus, rash, urticaria. **PO (12%–6%):** Malaise, nausea. **Topical (4%):** Pruritus. **Rare: PO (3%–1%):** Vomiting, rash, diarrhea, headache. **Parenteral (2%–1%):** Confusion, hallucinations, seizures, tremors. **Topical (less than 1%):** Rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Rapid parenteral administration, excessively high doses, or fluid and electrolyte imbalance may produce renal failure (abdominal pain, decreased urination, decreased appetite, increased thirst, nausea, vomiting). Toxicity not reported with oral or topical use.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. to acyclovir. Assess herpes simplex lesions before treatment to compare baseline with treatment effect.

INTERVENTION/EVALUATION

Assess IV site for phlebitis (heat, pain, red streaking over vein). Evaluate cutaneous lesions. Ensure adequate ventilation. Manage chickenpox and disseminated herpes zoster with strict isolation. Provide analgesics and comfort measures; esp. exhausting to elderly. Encourage fluids.

PATIENT/FAMILY TEACHING

• Drink adequate fluids. • Do not touch lesions with bare fingers to prevent spreading infection to new site. • **Genital Herpes:** Continue therapy for full length of treatment. • Space doses evenly. • Use finger cot/rubber glove to apply topical ointment. • Avoid sexual intercourse during duration of lesions to prevent infecting partner. • Acyclovir does not cure herpes infections. • Pap smear should be done at least annually due to increased risk of cervical cancer in women with genital herpes.

adalimumab

TOP 100

a-da-**lim**-ue-mab
(Humira)

■ **BLACK BOX ALERT** ■ Increased risk for serious infections. Tuberculosis, invasive fungal infections, other opportunistic infections have occurred. Test for tuberculosis prior to and during treatment. Lymphoma, other malignancies reported in children/adolescents. Lymphoma, other malignancies reported primarily in pts with Crohn's disease or ulcerative colitis and concomitant azathioprine or mercaptopurine.

Do not confuse Humira with Humalog or Humulin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Rheumatoid arthritis agent.

USES

Reduces signs/symptoms, progression of structural damage and improves physical function in adults with moderate to severe RA. May be used alone or in combination with other disease-modifying antirheumatic drugs. First-line treatment of moderate to severe RA, treatment of psoriatic arthritis, treatment of ankylosing spondylitis, to induce/maintain remission of moderate to severe active Crohn's disease, moderate to severe plaque psoriasis in pts 6 yrs of age and older. Reduces signs and symptoms of moderate to severe active polyarticular juvenile rheumatoid arthritis in pts 2 yrs and older. Treatment of active ulcerative colitis in pts unresponsive to immunosuppressants.

PRECAUTIONS

Contraindications: (Canada labeling) Severe infections (e.g., sepsis, TB). **Cautions:** Pts with chronic infections, predisposition to infections, decreased left ventricular function, HF, demyelinating disorders, invasive fungal infections.

ACTION

Binds specifically to tumor necrosis factor (TNF) alpha cell, blocking its interaction with cell surface TNF receptors. **Therapeutic Effect:** Reduces inflammation, tenderness, swelling of joints; slows or prevents progressive destruction of joints in rheumatoid arthritis (RA).

PHARMACOKINETICS

Half-life: 10–20 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Cautious use due to increased risk of serious infection and malignancy.

INTERACTIONS

DRUG: **Abatacept, anakinra, immunosuppressive therapy** may increase risk of infections. May decrease efficacy of immune response with **live vaccines** (should not give concurrently). **HERBAL:** **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum cholesterol, other lipids, alkaline phosphatase.

AVAILABILITY (Rx)

Injection Solution: 20 mg/0.4 ml, 40 mg/0.8 ml in prefilled syringes.

ADMINISTRATION/HANDLING

Subcutaneous

• Refrigerate; do not freeze. • Discard unused portion. • Rotate injection sites. Give new injection at least 1 inch from an old site and never into area where skin is tender, bruised, red, or hard. • Give in thigh or lower abdomen. • Avoid areas within 2 inches of navel.

INDICATIONS/ROUTES/DOSAGE

Rheumatoid Arthritis (RA)

Subcutaneous: ADULTS, ELDERLY: 40 mg every other wk. Dose may be increased to 40 mg/wk in those not taking methotrexate.

Ankylosing Spondylitis, Psoriatic Arthritis

Subcutaneous: ADULTS, ELDERLY: 40 mg every other wk.

Crohn's Disease

Subcutaneous: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER WEIGHING 40 KG OR MORE: Initially, 160 mg given as 4 injections on day 1 or 2 injections/day over 2 days, then 80 mg 2 wks later (day 15). **Maintenance:** 40 mg every other wk beginning at day 29. **CHILDREN 6 YRS AND OLDER WEIGHING 17–39 KG:** 80 mg (2 40-mg injections on day 1), then 40 mg 2 wks later. **Maintenance:** 20 mg every other wk beginning at day 29.

Plaque Psoriasis

Subcutaneous: ADULTS, ELDERLY: Initially, 80 mg, then 40 mg every other wk starting 1 wk after initial dose.

Juvenile Rheumatoid Arthritis

Subcutaneous: CHILDREN 2 YRS AND OLDER, WEIGHING 10–14 KG: 10 mg every other wk. **WEIGHING 15–29 KG:** 20 mg every other wk. **WEIGHING 30 KG OR MORE:** 40 mg every other wk.

Ulcerative Colitis

Subcutaneous: ADULTS, ELDERLY: Initially, 160 mg (4 injections in 1 day or 2 injections over 2 days) then 80 mg 2 wks later (day 15), then 40 mg every other wk beginning on day 29.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (20%): Injection site erythema, pruritus, pain, swelling. **Occasional (12%–9%):** Headache, rash, sinusitis, nausea. **Rare (7%–5%):** Abdominal or back pain, hypertension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reactions (rash, urticaria, hypotension, dyspnea), infections (primarily upper respiratory tract, bronchitis, urinary tract) occur rarely. More serious infections (pneumonia, tuberculosis, cellulitis, pyelonephritis, septic arthritis) also occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain or inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition. If pt is to self-administer, instruct on subcutaneous injection technique, including areas of the body acceptable for injection sites.

INTERVENTION/EVALUATION

Monitor lab values, particularly CBC. Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Injection site reaction generally occurs in first month of treatment and decreases in frequency during continued therapy. • Do not receive live vaccines during treatment. Report rash, nausea.

adefovir

a-**def**-o-veer
(Hepsera)

■ **BLACK BOX ALERT** ■ May cause HIV resistance in unrecognized or untreated HIV infection. Lactic acidosis, severe hepatomegaly with steatosis (fatty liver), acute exacerbation of hepatitis have occurred. Use with caution in pts with renal dysfunction or in pts at risk for renal toxicity.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiviral.
CLINICAL: Hepatitis B agent.

USES

Treatment of chronic hepatitis B in adults with evidence of active viral replication based on persistent elevations of serum ALT or AST or histologic evidence.

PRECAUTIONS

Contraindications: None known. **Cautions:** Pts with known risk factors for hepatic disease (female gender, obesity, prolonged treatment), renal impairment, elderly. Concurrent administration with tenofovir-containing products.

ACTION

Inhibits DNA polymerase, an enzyme, causing DNA chain termination after its incorporation into viral DNA. **Therapeutic Effect:** Prevents viral cell replication.

PHARMACOKINETICS

Rapidly converted to adefovir in intestine. Binds to proteins after PO administration. Protein binding: less than 4%. Excreted in urine. **Half-life:** 7 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment, decreased cardiac function requires cautious use.

INTERACTIONS

DRUG: **Nephrotoxic agents, NSAIDs** may increase risk of renal toxicity. May alter effects of **tenofovir** (avoid concomitant use). **HERBAL:** None significant. **FOOD:** **Alcohol** may increase risk of hepatotoxicity. **LAB VALUES:** May increase serum ALT, AST, amylase.

AVAILABILITY (Rx)

Tablets: 10 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Chronic Hepatitis B (Normal Renal Function)

PO: ADULTS, ELDERLY: 10 mg once a day.

Chronic Hepatitis B (Impaired Renal Function)

PO: ADULTS, ELDERLY WITH CREATININE CLEARANCE 30–49 ML/MIN: 10 mg q48h. **ADULTS, ELDERLY WITH CREATININE CLEARANCE 10–29 ML/MIN:** 10 mg q72h. **ADULTS, ELDERLY ON HEMODIALYSIS:** 10 mg every 7 days following dialysis.

SIDE EFFECTS

Frequent (13%): Asthenia. **Occasional (9%–4%):** Headache, abdominal pain, nausea, flatulence. **Rare (3%):** Diarrhea, dyspepsia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Nephrotoxicity, characterized by increased serum creatinine and decreased serum phosphorus levels, is treatment-limiting toxicity of adefovir therapy. Lactic acidosis, severe hepatomegaly occur rarely, particularly in female pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline renal function lab values before therapy begins and routinely thereafter. Pts with renal insufficiency, preexisting or during treatment, may require dose adjustment. HIV antibody testing should be performed before therapy begins (unrecognized or untreated HIV infection may result in emergence of HIV resistance).

INTERVENTION/EVALUATION

Monitor I&O. Closely monitor for adverse reactions in those taking other medications that are excreted renally or with other drugs known to affect renal function.

PATIENT/FAMILY TEACHING

- Report nausea, vomiting, abdominal pain. • Avoid alcohol.

adenosine

ah-**den**-oh-seen
(Adenocard, Adenoscan)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Cardiac agent, diagnostic aid. **CLINICAL:** Antiarrhythmic.

USES

Adenocard: Treatment of paroxysmal supraventricular tachycardia (PSVT), including those associated with accessory bypass tracts (Wolff-Parkinson-White syndrome). **Adenoscan:** Adjunct in diagnosis in myocardial perfusion imaging or stress echocardiography. **OFF-LABEL:** Stable and unstable narrow complex regular tachycardia; stable regular monomorphic wide complex tachycardia; acute vasodilator testing in pulmonary artery hypertension.

PRECAUTIONS

Contraindications: Atrial fibrillation/flutter, second- or third-degree AV block, symptomatic bradycardia, sick sinus syndrome (except in pts with functioning pacemaker). Atrial fibrillation/flutter with underlying Wolff-Parkinson-White syndrome, bronchoconstrictive or bronchospastic lung disease, asthma. **Cautions:** Pts with first-degree AV block, bundle branch block; concurrent use of drugs that slow AV conduction (e.g., digoxin, verapamil); autonomic dysfunction, pericarditis, pleural effusion, carotid stenosis, uncorrected hypovolemia; elderly, pts with bronchoconstriction. **Pregnancy Category C.**

ACTION

Slows impulse formation in SA node and conduction time through AV node. Acts as a

diagnostic aid in myocardial perfusion imaging or stress echocardiography by causing coronary vasodilation and increased blood flow. **Therapeutic Effect:** Restores normal sinus rhythm.

INTERACTIONS

DRUG: **Methylxanthines (e.g., theophylline)** may decrease effect. **Dipyridamole, nicotine** may increase effect. **Carbamazepine** may increase degree of heart block caused by adenosine. **HERBAL:** None significant. **FOOD:** Avoid **caffeine** (may decrease effect). **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (Adenocard): 3 mg/ml in 2-ml, 4-ml vials. **Injection Solution (Adenoscan):** 3 mg/ml in 20-ml, 30-ml vials.

ADMINISTRATION/HANDLING

IV

Rate of Administration • Administer very rapidly (over 1–2 sec) undiluted directly into vein, or if using IV line, use closest port to insertion site. If IV line is infusing any fluid other than 0.9% NaCl, flush line first. • After rapid bolus injection, follow with 0.9% NaCl flush.

Storage • Store at room temperature. Solution appears clear. • Crystallization occurs if refrigerated; if crystallization occurs, dissolve crystals by warming to room temperature. • Discard unused portion.

IV INCOMPATIBILITIES

Any drug or solution other than 0.9% NaCl, D_5W, Ringer's lactate, or abciximab.

INDICATIONS/ROUTES/DOSAGE

Paroxysmal Supraventricular Tachycardia (PSVT) (Adenocard)

Rapid IV Bolus: ADULTS, ELDERLY, CHILDREN WEIGHING 50 KG OR MORE: Initially, 6 mg given over 1–2 sec. If first dose does not convert within 1–2 min, give 12 mg; may repeat 12-mg dose in 1–2 min if no response has occurred. Follow each dose with 20 ml 0.9% NaCl by rapid IV push. **CHILDREN WEIGHING LESS THAN 50 KG:** Initially 0.05–0.1 mg/kg. If first dose does not convert within 1–2 min, may increase dose by 0.05–0.1 mg/kg. May repeat until sinus rhythm is established or up to a maximum single dose of 0.3 mg/kg or 12 mg. Follow each dose with 5–10 ml 0.9% NaCl by rapid IV push.

Diagnostic Testing (Adenoscan)

IV Infusion: ADULTS: 140 mcg/kg/min for 6 min using syringe or infusion pump. Total dose: 0.84 mg/kg. Thallium is injected at midpoint (3 min) of infusion.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (18%–12%): Facial flushing, dyspnea. **Occasional (7%–2%):** Headache, nausea, light-headedness, chest pressure. **Rare (1% or less):** Paresthesia, dizziness, diaphoresis, hypotension, palpitations; chest, jaw, or neck pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Frequently produces transient, short-lasting heart block.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Identify arrhythmia per cardiac monitor, 12-lead EKG, and assess apical pulse.

INTERVENTION/EVALUATION

Assess cardiac performance per continuous EKG. Monitor B/P, apical pulse (rate, rhythm, quality). Auscultate pt breath sounds for clarity. Monitor respiratory rate. Monitor I&O; assess for fluid retention. Monitor serum electrolytes.

PATIENT/FAMILY TEACHING

• May induce feelings of impending doom, which resolves quickly.

• Flushing/headache may occur temporarily following administration. • Report continued chest pain, lightheadedness, head or neck pain, difficulty breathing.

ado-trastuzumab

ado-tras-**tooz**-oo-mab
(Kadcyla)

■ **BLACK BOX ALERT** ■ Do not substitute ado-trastuzumab for trastuzumab. Hepatotoxicity, hepatic failure may lead to death. Monitor hepatic function prior to each dose. May decrease left ventricular ejection fraction (LVEF). Embryo-fetal toxicity may result in birth defects and/or fetal demise.

Do not confuse ado-trastuzumab with trastuzumab.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: HER2-targeted antibody and microtubule inhibitor conjugate. **CLINICAL:** Antineoplastic.

USES

Treatment of HER2-positive, metastatic breast cancer in pts who have previously received trastuzumab and a taxane agent separately or in combination, or pts who have developed recurrence within 6 mos of completing adjuvant therapy.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of cardiomyopathy, HF, MI, arrhythmias, hepatic disease, thrombocytopenia, pulmonary disease, peripheral neuropathy, pregnancy.

ACTION

Inhibits proliferation of tumor cells that overexpress human epidermal growth factor receptor 2 (HER2). Promotes cellular death (apoptosis) by mediating release of cytotoxic catabolytes. Disrupts cellular microtubule networks.

Therapeutic Effect: Inhibits tumor cell survival in HER2-positive breast cancer.

PHARMACOKINETICS

Metabolized in liver. Protein binding: 93%. Peak plasma concentration: 30–90 min. **Half-life:** 4 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Use contraception during treatment and up to 6 mos after discontinuation. Unknown if distributed in breast milk. Do not breastfeed. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., ketoconazole, ritonavir) may increase concentration/effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, bilirubin. May decrease platelets, serum potassium.

AVAILABILITY (Rx)

Lyophilized Powder for Injection: 100-mg vial, 160-mg vial.

ADMINISTRATION/HANDLING

◀ALERT▶ Use 0.22-micron in-line filter. Do not administer IV push or bolus.

IV

Reconstitution • Use proper chemotherapy precautions. • Slowly inject 5 ml of Sterile Water for Injection into 100 mg vial or 8 ml Sterile Water for Injection for 160 mg vial. • Final concentration: 20 mg/ml. • Gently swirl until completely dissolved. • Do not shake. • Inspect for particulate matter/discoloration. • Calculate dose from 20 mg/ml vial. • Further dilute in 250 ml of 0.9% NaCl only. • Invert bag to mix (do not shake).

Rate of Administration • Infuse using 0.22-micron in-line filter. • Infuse

initial dose over 90 min. • Infuse subsequent doses over 30 min. • Slow or interrupt infusion rate if hypersensitivity reaction occurs.

Storage • Refrigerate unused vials. • Reconstituted vials, diluted solutions should be used immediately (may be refrigerated for up to 24 hrs).

IV INCOMPATIBILITIES

Do not use dextrose-containing solutions.

INDICATIONS/ROUTES/DOSAGE

Metastatic Breast Cancer

IV Infusion: ADULTS/ELDERLY: 3.6 mg/kg every 3 wks.

Dose Modification

Reduction Schedule for Adverse Effects:

Initial dose: 3.6 mg/kg. First reduction: 3 mg/kg. Second reduction: 2.4 mg/kg.

Increased ALT, AST: If less than 5 times upper limit normal (ULN), continue same dose. If 5–20 times ULN, hold until less than 5 times ULN and reduce by one dose level. If greater than 20 times ULN, discontinue. **Increased Bilirubin:** Hold until less than 1.5 times ULN, then continue same dose. If 3–10 times ULN, hold until less than 1.5 times ULN, then reduce by one dose level. If greater than 10 times ULN, discontinue. **Left Ventricular Dysfunction:** If LVEF greater than 45%, continue same dose. If LVEF 40%–45% with a decrease less than 10% from baseline, continue dose (or reduce) and repeat LVEF in 3 wks. If LVEF 40%–45% with decrease greater than 10% from baseline, hold and repeat assessment in 3 wks. Discontinue therapy if no recovery within 10% of baseline, LVEF less than 40%, or symptomatic HF. **Thrombocytopenia:** If platelet count is 25,000 mm^3–50,000 mm^3, hold until level greater than 75,000 mm^3 and then continue same dose. If platelet count is less than 25,000 mm^3, hold until level greater than 75,000 mm^3 and reduce one dose level.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (40%–21%): Nausea, fatigue, musculoskeletal pain, headache, constipation, diarrhea. **Occasional (19%–7%):** Abdominal pain, vomiting, pyrexia, arthralgia, asthenia, cough, dry mouth, stomatitis, myalgia, insomnia, rash, dizziness, dyspepsia, chills, dysgeusia, peripheral edema. **Rare (6%–3%):** Pruritus, blurry vision, dry eye, conjunctivitis, lacrimation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatotoxicity may include elevated transaminase, nodular regenerative hyperplasia, portal hypertension. Left ventricular dysfunction reported in 1.8% of pts. Interstitial lung disease (ILD), including pneumonitis, may lead to ARDS. Hypersensitivity reactions reported in 1.4% of pts. Thrombocytopenia (34% of pts) may increase risk of bleeding. Peripheral neuropathy observed rarely. Approx. 5.3% of pts tested positive for anti–ado-trastuzumab antibodies (immunogenicity).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, BMP, PT/INR if on anticoagulants. Confirm HER2-positive titer. Screen for baseline HF, hepatic impairment, peripheral edema, pulmonary disease, thrombocytopenia. Obtain negative pregnancy test before initiating treatment. Question current breastfeeding status. Obtain baseline echocardiogram for LVEF status.

INTERVENTION/EVALUATION

Observe for hypersensitivity reactions during infusion. Monitor LFT, potassium levels before and during treatment. Obtain LVEF q3mos or with any dose reduction regarding LVEF status. Assess for bruising, jaundice, right upper quadrant (RUQ) abdominal pain. Obtain anti–ado-trastuzumab antibody titer if immunogenicity suspected. Obtain stat EKG for

palpitations or irregular pulse, chest X-ray for difficulty breathing, cough, fever. Monitor for neurotoxicity (peripheral neuropathy).

PATIENT/FAMILY TEACHING

• Blood levels will be monitored routinely. • Avoid pregnancy. • Contraception should be used during treatment and up to 6 mos after discontinuation. • Report black/tarry stools, RUQ abdominal pain, nausea, bruising, yellowing of skin or eyes, difficulty breathing, palpitations, bleeding. • Avoid alcohol. • Treatment may reduce the heart's ability to pump; expect routine echocardiograms. • Report bleeding of any kind or extremity numbness, tingling, weakness, pain.

afatinib

a-**fa**-ti-nib
(Gilotrif)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

First-line treatment of metastatic non–small cell lung cancer (NSCLC) in pts with epidermal growth factor (EDGF) exon 19 deletions or exon 21 (L858R) substitution mutations.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment; severe renal impairment; pts with hx of keratitis, severe dry eye, ulcerative keratitis, or wearing contact lens; hypovolemia; pulmonary disease; ulcerative lesions.

ACTION

Highly selective blocker of ErbB family (e.g., HER2), irreversibly binds to intracellular tyrosine kinase domain. **Therapeutic Effect:** Inhibits tumor growth, causes tumor regression.

PHARMACOKINETICS

Readily absorbed following PO administration. Enzymatic metabolism is minimal. Protein binding: 95%. Peak plasma concentration: 2–5 hrs. Excreted in feces (85%), urine (4%). **Half-life:** 37 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. Contraception recommended during treatment and up to 2 wks after discontinuation. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **P-glycoprotein inhibitors (e.g., amiodarone, cyclosporine, ketoconazole)** may increase concentration/effect. **P-glycoprotein inducers (e.g., carbamazepine, rifampin)** may decrease concentration/effect. **HERBAL:** None known. **FOOD:** **High-fat meals** may decrease absorption. **LAB VALUES:** May increase serum ALT, AST. May decrease serum potassium.

AVAILABILITY (Rx)

Tablets: 20 mg, 30 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

• Give at least 1 hr before or 2 hrs after meal. Do not take missed dose within 12 hrs of next dose.

INDICATIONS/ROUTES/DOSAGE

Non–Small Cell Lung Cancer

PO: ADULTS/ELDERLY: Initially, 40 mg once daily until disease progression or no longer tolerated.

Dose Modification

Chronic Use of P-glycoprotein (P-gp) Inhibitors: Reduce daily dose by 10 mg if tolerated. Resume previous dose after discontinuation of inhibitor if

tolerated. **Chronic Use of P-glycoprotein Inducers:** Increase daily dose by 10 mg if tolerated. May resume initial dose 2–3 days after discontinuation of P-gp inducer. **Moderate to Severe Diarrhea (more than 48 hrs):** Withhold dose until resolution to mild diarrhea. **Moderate Cutaneous Skin Reaction (more than 7 days):** Withhold dose until reaction resolves, then reduce dose appropriately. **Suspected Keratitis:** Withhold until appropriately ruled out. If keratitis confirmed, continue only if benefits outweigh risks.

Permanent Discontinuation

Persistent severe diarrhea, respiratory distress, severe dry eye, or life-threatening bullous, blistering, exfoliating lesions, persistent ulcerative keratitis, interstitual lung disease.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (96%–58%): Diarrhea, rash, dermatitis, stomatitis, paronychia (nail infection). **Occasional (31%–11%):** Dry skin, decreased appetite, pruritus, epistaxis, weight loss, cystitis, pyrexia, cheilitis (lip inflammation), rhinorrhea, conjunctivitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Diarrhea may lead to severe, sometimes fatal, dehydration or renal impairment. Bullous and exfoliative skin lesions occur rarely. Rash, erythema, acneiform lesions occur in 90% of pts. Palmar-plantar erythrodysesthesia syndrome (PPES), a chemotherapy-induced skin condition that presents with redness, swelling, numbness, skin sloughing of the hands and feet, has been reported. Interstitial lung disease (ILD), including pulmonary infiltration, pneumonitis, ARDS, allergic alveolitis, reported in 2% of pts. Hepatotoxicity reported in 10% of pts. Keratitis such as eye inflammation, lacrimation, light sensitivity, blurred vision, red eye occur in 1% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, BMP, visual acuity. Obtain negative pregnancy test before initiating therapy. Question current breastfeeding status. Screen for history/co-morbidities, contact lens use. Receive full medication history including vitamins, herbal products. Assess skin for lesions, ulcers, open wounds.

INTERVENTION/EVALUATION

Monitor renal/hepatic function tests, urine output. Encourage PO intake. Assess for hydration status. Offer antidiarrheal medication for loose stool. Report oliguria, dark or concentrated urine. Immediately report skin lesions, vision changes, dry eye, severe diarrhea. Obtain chest X-ray if ILD suspected.

PATIENT/FAMILY TEACHING

• Most pts experience diarrhea and severe cases may lead to dehydration or kidney failure; maintain adequate hydration. • Avoid pregnancy; contraception should be used during treatment and up to 2 wks after discontinuation. • Report any yellowing of skin or eyes, abdominal pain, bruising, black/tarry stools, dark urine, decreased urine output. • Minimize exposure to sunlight. • Immediately report eye problems (pain, swelling, blurred vision, vision changes) or skin blistering/redness. • Do not eat 1 hr before or 2 hrs after dose. • Do not wear contact lenses (may increase risk of keratitis).

albiglutide

al-bi-**gloo**-tide
(Tanzeum)

■ **BLACK BOX ALERT** ■ Contraindicated in pts with a personal/family history of medullary thyroid

carcinoma (MTC) or in pts with multiple endocrine neoplasia syndrome type 2 (MEN2). Thyroid C-cell tumors have occurred in rodent studies with glucagon-like peptide-1 (GLP-1) receptor agonists; unknown if relevant in humans. Counsel pts regarding possible thyroid tumors.

Do not confuse albiglutide with exenatide, dulaglutide, or liraglutide.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Glucagon-like peptide-1 (GLP-1) receptor agonist. **CLINICAL:** Antidiabetic.

USES

Adjunct to diet and exercise to improve glycemic controls in pts with type 2 diabetes mellitus.

PRECAUTIONS

Contraindications: Personal/family history of medullary thyroid carcinoma. Pts with multiple endocrine neoplasia syndrome type 2. Prior hypersensitivity reaction to albiglutide. **Cautions:** Pts with hx pancreatitis, andioedema, alcohol abuse, colelithiasis, renal/hepatic impairment, mild to moderate gastroparesis. Not recommended in pts with severe GI disease, including diabetic ketoacidosis; type 1 diabetes mellitus; severe gastroparesis; pancreatitis; or as a first-line treatment regimen.

ACTION

Increases glucose-dependent insulin secretion, decreases inappropriate glucagon secretion. Slows gastric emptying. **Therapeutic Effect:** Improves glycemic control, lowers fasting glucose levels, reduces postprandial (postmeal) glucose excursions.

PHARMACOKINETICS

Metabolized by protein degradation into small peptides, amino acids by proteolytic enzymes. Protein binding: Not specified. Peak plasma concentration: 3–5 days. Steady state reached in 4–5 wks. **Half-life:** 5 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Likely distributed in breast milk; drug is albumin-based protein therapeutic. Must either discontinue drug or discontinue breastfeeding. Due to extended clearance period, recommend discontinuation of therapy at least 1 mo before planned pregnancy. **Pregnancy Category C. Children:** Safety and efficacy not established in pts younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Insulin, metformin, sulfonylureas** may increase hypoglycemic effect. May decrease effect of **PO drugs requiring rapid onset** due to delayed gastric emptying. **HERBAL:** Fenugreek, flaxseed, ginseng, gotu kola may increase risk of hypoglycemia. **FOOD:** None known. **LAB VALUES:** Expended to decrease serum glucose, Hgb A1c. May increase serum ALT, GGT.

AVAILABILITY (Rx)

Pre-filled Injector Pens: 30 mg, 50 mg.

ADMINISTRATION/HANDLING

Subcutaneous

• Administer any time of day, without regard to meals, on same day each week. May change administration day if last dose was given more than 4 days ago. If dose is missed, administer within 3 days of missed dose. If more than 3 days pass after missed dose, wait until next regularly scheduled dose. • If refrigerated, allow pen to sit at room temperature for 15 min before using.

Reconstitution • Hold pen body with clear cartridge pointing up to see the [1] in number window. • Check expiration date. • Twist clear cartridge on pen in direction of arrow until pen is felt/heard to "click" into place and the [2] is seen in number window; this will mix diluent and lyophilized powder.

Patient Instruction for Reconstitution • Slowly and gently rock pen side to side 5 times to mix. • Avoid shaking; may cause foaming and alter desired dose. • Wait 15 min for 30-mg pen or 30 min for 50-mg pen to ensure solution is mixed. • After waiting, slowly and gently rock pen side-to side 5 additional times to finalize full reconstitution. • Visually inspect solution for particulate matter in viewing window.

Professional Healthcare Instruction for Reconstitution: • Hold pen with clear cartridge pointing up and maintain upward orientation throughout reconstitution. • Gently swirl pen in small circular motion for at least 1 min. • Avoid shaking; may cause foaming and alter desired dose. • Inspect solution and, if needed, continue to gently swirl pen until fully dissolved and free of all particles (2–5 min for 30-mg pen or 7–10 min for 50-mg pen). • A small amount of foaming on top of solution at end of reconstitution is normal. • Verify solution is yellow in color.

Preparation

• Holding pen upright, attach needle • Gently tap clear cartridge to bring large bubbles to top. • Remove air bubbles by slowly twisting pen until the [3] is seen in number window. • At same time, injection button will automatically release from bottom of pen.

Administration

• Subcutaneously insert needle into abdomen, thigh, or upper arm region. • Press injection button until "click" is heard, then hold button for additional 5 sec to deliver full dose. • Do not reuse needle. • Rotate injection sites.

Storage

• Mixed solution should appear yellow; free of all particles. • Use within 8 hrs of reconstitution. • Once needle is attached, use immediately; product can clog needle if allowed to dry after priming. • Refrigerate unused pens; do not freeze. • Once dispensed, may store pen at room temperature up to 4 wks.

INDICATIONS/ROUTES/DOSAGE

Type 2 Diabetes Mellitus

Subcutaneous: ADULTS/ELDERLY: 30 mg once weekly into abdomen, thigh, or upper arm region. May increase to 50 mg once weekly if glycemic response inadequate.

Dose Modification

Concomitant Use with Insulin Secretagogue (e.g., Sulfonylurea) or Insulin: Consider reduced dose based on glycemic goal.

Dosage in Renal Impairment

No adjustment necessary for mild, moderate, or severe impairment.

Dosage in Hepatic Impairment

Not specified.

SIDE EFFECTS

Occasional (14%–5%): Upper respiratory tract infection, diarrhea, nausea, injection site reactions (hematoma, erythema, rash, cough, back pain, arthralgia, sinusitis, influenza). **Rare (3%–2%):** Dyspepsia, vomiting, gastric reflux.

ADVERSE EFFECTS/TOXIC REACTIONS

May increase risk of acute renal failure or worsening of chronic renal impairment (esp. with dehydration), severe gastroparesis, thyroid C-cell tumors. May increase risk of hypoglycemia when used with other hypoglycemic agents or insulin. Dyspnea, pruritus, rash may indicate hypersensitivity reaction. Other adverse events included appendicitis (0.3% of pts), atrial fibrillation/flutter (1% of pts), pancreatitis (0.3% of pts), pneumonia (1.8% of pts). Immunogenicity (anti-alglutide antibody formation) reported in 5.5% of pts. Some pts with antibody formation also tested positive for antibodies to GLP-1 and human albumin. May cause increase risk hepatic injury (elevated LFT).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline fasting glucose level, Hgb, A1c; BMP, LFT if applicable. Question history of medullary thyroid carcinoma, multiple neoplasia syndrome type 2, pancreatitis. Receive full medication history including herbal products. Screen for use of other hypoglycemic agents or insulin. Assess pt's understanding of diabetes management, routine home glucose monitoring. Assess hydration status.

INTERVENTION/EVALUATION

Monitor capillary blood glucose levels, Hgb A1c; hepatic/renal function in pts with renal impairment reporting severe gastrointestinal reactions including gastroparesis, vomiting, diarrhea. Screen for thyroid tumors (dysphagia, dyspnea, persistent hoarseness, neck mass). If tumor is suspected, consider endocrinologist consultation. Clinical significance of serum calcitonin level or thyroid ultrasound with GLP-1-associated thyroid tumors is debated/unknown. Assess for hypoglycemia, hyperglycemia, hypersensitivity/allergic reaction. Screen for glucose-altering conditions: fever, stress, surgical procedures, trauma. Obtain dietary consult for nutritional education. Encourage PO intake.

PATIENT/FAMILY TEACHING

• Diabetes mellitus requires lifelong control. Diet and exercise are principal parts of treatment; do not skip or delay meals. Test blood sugar regularly. • When taking additional medications to lower blood sugar or when glucose demands are altered (fever, infection, stress trauma), have low blood sugar treatment available (glucagon, oral dextrose). • Monitor daily calorie intake. • Report suspected pregnancy or plans of breastfeeding. • Therapy may increase risk of thyroid cancer; report lumps or swelling of the neck, hoarseness, trouble swallowing, shortness of breath. • Persistent, severe abdominal pain that radiates to the back (with or without vomiting) may indicate acute pancreatitis. • Rash, itching, hives may indicate allergic reaction.

albumin, human

al-**bue**-min
(Albuked-5, Albuked-25, Albuminar-5, Albuminar-25, AlbuRx, Albutein, Buminate, Flexbumin, Plasbumin-5, Plasbumin-25)
Do not confuse albumin with albuterol, or Buminate with bumetanide.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Plasma protein fraction. **CLINICAL:** Blood derivative.

USES

Used for plasma volume expansion, maintenance of cardiac output in treatment of shock or impending shock. May be useful in treatment of severe burns, adult respiratory distress syndrome (ARDS), cardiopulmonary bypass, hemodialysis. **OFF-LABEL:** Large-volume paracentesis. In cirrhotics, with diuretics to help facilitate diuresis; volume expansion in dehydrated, mildly hypotensive cirrhotics. Used for prevention of renal impairment; reduced mortality associated with spontaneous bacterial peritonitis.

PRECAUTIONS

Contraindications: HF, severe anemia. **Cautions:** Pts for whom sodium restriction is necessary, hepatic/renal failure (added protein load). Avoid 25% concentration in preterm infants (risk of intraventricular hemorrhage).

ACTION

Blood volume expander. **Therapeutic Effect:** Provides increase in intravascular oncotic pressure, mobilizes fluids into intravascular space.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	15 min (in well-hydrated pt)	N/A	Dependent on initial blood volume

Distributed throughout extracellular fluid. **Half-life:** 15–20 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase.

AVAILABILITY (Rx)

Injection Solution: (5%): 50 ml, 250 ml, 500 ml. **(25%):** 20 ml, 50 ml, 100 ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • A 5% solution may be made from 25% solution by adding 1 volume 25% to 4 volumes 0.9% NaCl (NaCl preferred). Do not use Sterile Water for Injection (life-threatening hemolysis, acute renal failure can result).

Rate of Administration • Give by IV infusion. Rate is variable, depending on use, blood volume, concentration of solute. 5%: Do not exceed 2–4 ml/min in pts with normal plasma volume, 5–10 ml/min in pts with hypoproteinemia. 25%: Do not exceed 1 ml/min in pts with normal plasma volume, 2–3 ml/min in pts with hypoproteinemia. 5% is administered undiluted; 25% may be administered undiluted or diluted in 0.9% NaCl. • May give without regard to pt blood group or Rh factor.

Storage • Store at room temperature. Appears as clear, brownish, odorless, moderately viscous fluid. • Do not use if solution has been frozen, appears turbid, contains sediment, or if not used within 4 hrs of opening vial.

IV INCOMPATIBILITIES

Lipids, micafungin (Mycamine), midazolam (Versed), vancomycin (Vancocin), verapamil (Isoptin).

IV COMPATIBILITIES

Diltiazem (Cardizem), lorazepam (Ativan).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ 5% should be used in hypovolemic or intravascularly depleted pts. 25% should be used in pts in whom fluid and sodium intake must be minimized.

Usual Dosage

IV: ADULTS, ELDERLY: Initially, 25 g; may repeat in 15–30 min. **Maximum:** 250 g within 48 hrs.

Hypovolemia

IV: ADULTS, ELDERLY: 5% albumin: 0.5–1 g/kg/dose, repeat as needed. **CHILDREN:** 0.5–1 g/kg/dose (10–20 ml/kg/dose of 5% albumin). **Maximum:** 6 g/kg/day.

Hemodialysis

IV: ADULTS, ELDERLY: 50–100 ml (12.5–25 g) of 25% albumin as needed.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: Hypotension. **Rare:** High dose in repeated therapy: altered vital signs, chills, fever, increased salivation, nausea, vomiting, urticaria, tachycardia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Fluid overload may occur, marked by increased B/P, distended neck veins. Pulmonary edema may occur, evidenced by labored respirations, dyspnea, rales, wheezing, coughing. Neurologic changes

that may occur include headache, weakness, blurred vision, behavioral changes, incoordination, isolated muscle twitching.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, pulse, respirations immediately before administration. Adequate hydration required before albumin is administered.

INTERVENTION/EVALUATION

Monitor B/P for hypotension/hypertension. Monitor Hgb, Hct, urine specific gravity. Assess frequently for evidence of fluid overload, pulmonary edema (see Adverse Effects/Toxic Reactions). Check skin for flushing, urticaria. Monitor I&O ratio (watch for decreased output). Assess for therapeutic response (increased B/P, decreased edema).

albuterol

TOP 100

al-**bue**-ter-ol
(AccuNeb, Airomir, Apo-Salvent, PMS-Salbutamol, ProAir HFA, Proventil HFA, Ventolin HFA, VoSpire ER)

Do not confuse albuterol with Albumin or atenolol, Proventil with Bentyl, Prilosec, or Prinivil, or Ventolin with Benylin or Vantin.

FIXED-COMBINATION(S)

Combivent Respimat: albuterol/ipratropium (a bronchodilator): 100 mcg/20 mcg per actuation. **DuoNeb:** albuterol/ipratropium 3 mg/0.5 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic (adrenergic agonist). **CLINICAL:** Bronchodilator.

USES

Treatment or prevention of bronchospasm due to reversible obstructive airway disease, prevention of exercise-induced bronchospasm.

PRECAUTIONS

Contraindications: History of hypersensitivity to sympathomimetics. **Cautions:** Hypertension, cardiovascular disease, hyperthyroidism, diabetes mellitus, HF, convulsive disorders, glaucoma, hypokalemia, arrhythmias.

ACTION

Stimulates beta$_2$-adrenergic receptors in lungs, resulting in relaxation of bronchial smooth muscle. **Therapeutic Effect:** Relieves bronchospasm and reduces airway resistance.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15–30 min	2–3 hrs	4–6 hrs
PO (extended-release)	30 min	2–4 hrs	12 hrs
Inhalation	5–15 min	0.5–2 hrs	2–5 hrs

Rapidly, well absorbed from GI tract; rapidly absorbed from bronchi after inhalation. Metabolized in liver. Primarily excreted in urine. **Half-life:** 3.8–6 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Appears to cross placenta; unknown if distributed in breast milk. May inhibit uterine contractility. **Pregnancy Category C. Children:** Safety and efficacy not established in pts younger than 2 yrs (syrup) or younger than 6 yrs (tablets). **Elderly:** May be more sensitive to tremor or tachycardia due to age-related increased sympathetic sensitivity.

INTERACTIONS

DRUG: Beta-adrenergic blocking agents (beta-blockers) antagonize effects. May produce bronchospasm. **Atomoxetine, MAOIs, tricyclic antidepressants** may

potentiate cardiovascular effects. May increase effects of **loop diuretics** (produce hypokalemia), **sympathomimetics** (increase CNS stimulation). **HERBAL:** **St. John's wort** may decrease level/effects. **Ephedra, yohimbe** may cause CNS stimulation. **FOOD:** Limit caffeine (may cause CNS stimulation). **LAB VALUES:** May increase blood glucose level. May decrease serum potassium level.

AVAILABILITY (Rx)

Inhalation Aerosol (ProAir HFA, Proventil HFA, Ventolin HFA): 90 mcg/spray. **Solution for Nebulization: AccuNeb:** 0.63 mg/3 ml (0.021%), 1.25 mg/3 ml (0.042%). **Proventil:** 2.5 mg/3 ml (0.084%), 5 mg/ml (0.5%). **Syrup:** 2 mg/5 ml. **Tablets (Proventil, Ventolin):** 2 mg, 4 mg.

Tablets (Extended-Release [VoSpire ER]): 4 mg, 8 mg.

ADMINISTRATION/HANDLING

PO

• Do not break, crush, dissolve, or divide extended-release tablets. • Administer with food.

Inhalation Aerosol

• Shake container well before inhalation. • Wait 2 min before inhaling second dose (allows for deeper bronchial penetration). • Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness).

Nebulization

• Administer over 5–15 min.

INDICATIONS/ROUTES/DOSAGE

Acute Bronchospasm

Inhalation: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: (Acute, Severe): 4–8 puffs q20min up to 4 hrs, then q1–4h as needed. **CHILDREN 12 YRS AND YOUNGER: (Acute, Severe):** 4–8 puffs q20min for 3 doses, then q1–4h as needed. **(Quick Relief):** 2 puffs q4–6h as needed.

Nebulization: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: (Acute, Severe): 2.5–5 mg q20min for 3 doses, then 2.5–10 mg q1–4h or 10–15 mg/hr continuously. **(Quick Relief):** 1.25–5 mg q4–8h as needed. **CHILDREN 12 YRS AND YOUNGER:** 0.15 mg/kg q20min for 3 doses (minimum: 2.5 mg), then 0.15–0.3 mg/kg q1–4h as needed. **Maximum:** 10 mg q1–4h as needed or 0.5 mg/kg/hr by continuous infusion. **CHILDREN 5–11 YRS: (Quick Relief):** 1.25–5 mg q4–8h as needed; **CHILDREN 4 YRS OR YOUNGER: (Quick Relief):** 0.63–2.5 mg q4–6hr as needed.

Chronic Bronchospasm

PO: ADULTS, CHILDREN OLDER THAN 12 YRS: 2–4 mg 3–4 times a day. **Maximum:** 8 mg 4 times a day. **ELDERLY:** 2 mg 3–4 times a day. **Maximum:** 8 mg 4 times a day. **CHILDREN 6–12 YRS:** 2 mg 3–4 times a day. **Maximum:** 24 mg/day. **CHILDREN 2–5 YRS:** 0.1–0.2 mg/kg/dose 3 times a day. **Maximum:** 4 mg 3 times a day.

PO *(Extended-Release)*: ADULTS, CHILDREN OLDER THAN 12 YRS: 4–8 mg q12h. **Maximum:** 32 mg/day. **CHILDREN 6–12 YRS:** 4 mg q12h. **Maximum:** 24 mg/day.

Nebulization: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2.5 mg 3–4 times/day as needed. Children 2–11 yrs: 0.63–1.25 mg 3–4 times/day as needed.

Inhalation: ADULTS, ELDERLY, CHILDREN 4 YRS AND OLDER: 1–2 puffs q4–6h. **Maximum:** 12 puffs per day.

Exercise-Induced Bronchospasm

Inhalation: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: 2 puffs 5–30 min before exercise. **CHILDREN 4 YRS AND YOUNGER:** 1–2 puffs 5 min before exercise.

Usual Neonatal Dosage

Nebulization: 1.25–2.5 mg q8h.

Inhalation: (mechanically ventilated) 90 mcg/spray, 1–2 sprays q6h.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (27%–4%): Headache; restlessness, nervousness, tremors; nausea; dizziness; throat dryness and irritation, pharyngitis; B/P changes, including hypertension; heartburn, transient wheezing. **Occasional (3%–2%):** Insomnia, asthenia, altered taste. **Inhalation:** Dry, irritated mouth or throat; cough; bronchial irritation. **Rare:** Drowsiness, diarrhea, dry mouth, flushing, diaphoresis, anorexia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive sympathomimetic stimulation may produce palpitations, exectopy, tachycardia, chest pain, slight increase in B/P followed by substantial decrease, chills, diaphoresis, blanching of skin. Too-frequent or excessive use may lead to decreased bronchodilating effectiveness and severe, paradoxical bronchoconstriction.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess lung sounds, pulse, B/P, color, character of sputum noted. Offer emotional support (high incidence of anxiety due to difficulty in breathing and sympathomimetic response to drug).

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respiration; quality and rate of pulse; EKG; serum potassium, glucose; ABG determinations. Assess lung sounds for wheezing (bronchoconstriction), rales.

PATIENT/FAMILY TEACHING

• Follow guidelines for proper use of inhaler. • Increase fluid intake (decreases lung secretion viscosity). • Do not take more than 2 inhalations at any one time (excessive use may produce paradoxical bronchoconstriction or decreased bronchodilating effect). • Rinsing mouth with water immediately after inhalation may prevent mouth/throat dryness. • Avoid excessive use of caffeine derivatives (chocolate, coffee, tea, cola, cocoa).

alemtuzumab

HIGH ALERT

al-em-**tooz**-ue-mab
(MabCampath)

■ **BLACK BOX ALERT** ■ Serious infections (bacterial, viral, fungal, protozoal) have been reported. Potentially fatal infusion-related reactions (respiratory distress, cardiac arrest, hypotension) may occur. Profound myelosuppression (autoimmune hemolytic anemia, thrombocytopenia) has occurred.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Antineoplastic.

USES

Treatment of B-cell chronic lymphocytic leukemia (B-CLL). **OFF-LABEL:** Treatment of refractory, cutaneous, peripheral T-cell leukemia; autoimmune; conditioning regimen for stem cell transplantation, relapsing-remitting multiple sclerosis.

PRECAUTIONS

Contraindications: None known. **Cautions:** Ischemic heart disease or pts taking antihypertensive medications.

ACTION

Binds to CD52, cell surface glycoprotein, found on surface of B- and T-lymphocytes, most monocytes, macrophages, natural killer cells, granulocytes. **Therapeutic Effect:** Produces cytotoxicity, reducing tumor size.

PHARMACOKINETICS

Half-life: About 12 days. Peak and trough levels rise during first few wks of therapy and approach steady state by about wk 6.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has potential to cause fetal B- and T-lymphocyte depletion. Breastfeeding not recommended during

treatment and for at least 3 mos after last dose. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase levels/effects of **clozapine, natalizumab, vaccines (live). Pimecrolimus, tacrolimus** may decrease level/effects. **HERBAL: Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, platelet count, WBC count.

AVAILABILITY (Rx)

Injection Solution: 30 mg/ml.

ADMINISTRATION/HANDLING

IV

◀ALERT▶ Do not give by IV push or bolus.

Reconstitution • Dilute for infusion in 100 ml 0.9% NaCl or D_5W. • Invert bag to mix; do not shake.

Rate of Administration • Give the 100 ml solution as a 2-hr IV infusion.

Storage • Refrigerate undiluted vials, do not freeze. (If frozen, may be thawed in refrigerator.) • Use within 8 hrs after dilution. Diluted solution may be stored at room temperature or refrigerated. • Discard if particulate matter is present or if solution is discolored.

IV INCOMPATIBILITIES

Do not mix with any other medications.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Pretreatment with acetaminophen 500–1,000 mg and diphenhydramine 50 mg before each infusion may prevent infusion-related side effects.

Chronic Lymphocytic Leukemia

◀ALERT▶ Dose escalation required. Do not exceed single doses greater than 30 mg or cumulative doses more than 90 mg/wk.

IV: ADULTS, ELDERLY: Initially, 3 mg/day as a 2-hr infusion. When tolerated (with only low-grade or no infusion-related toxicities), increase daily dose to 10 mg. When the 10 mg/day dose is tolerated, maintenance dose may be initiated. **Maintenance:** 30 mg/day 3 times a wk on alternate days (such as Monday, Wednesday, and Friday or Tuesday, Thursday, and Saturday) for up to 12 wks. The increase to 30 mg/day is usually achieved in 3–7 days. Adjust dosage for hematologic toxicity (severe neutropenia or thrombocytopenia).

Dose Modification

Hematologic Toxicities: ANC $<$ 250/mm^3 and/or Platelet Count $\leq$ 25,000/mm^3: When ANC $\geq$ 500/mm^3 and platelet count $\geq$ 50,000/mm^3: Resume at 30 mg per dose (1st occurrence); 10 mg per dose (2nd occurrence); discontinue (3rd occurrence). Baseline ANC $\leq$ 25,000/mm^3 and/or platelet count $\leq$ 25,000/mm^3 at initiation of therapy. If ANC and/or platelets decrease to $\leq$ 50% baseline value, upon return to baseline: Resume at 30 mg/dose (1st occurrence); 10 mg/dose (2nd occurrence); discontinue (3rd occurrence).

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (86%–20%): Rigors, tremors, fever, nausea, vomiting, rash, fatigue, hypotension, urticaria, pruritus, skeletal pain, headache, diarrhea, anorexia. **Occasional (less than 10%):** Myalgia, dizziness, abdominal pain, throat irritation, vomiting, neutropenia, rhinitis, bronchospasm, urticaria.

ADVERSE EFFECTS/ TOXIC REACTIONS

Neutropenia occurs in 85% of pts, anemia occurs in 80% of pts, and thrombocytopenia occurs in 72% of pts. Rash occurs in 40% of pts. Respiratory toxicity, manifested as dyspnea, cough, bronchitis, pneumonitis, and pneumonia, occurs in 26%–16% of pts. Serious, sometimes fatal bacterial, viral, fungal, and protozoan infections have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pretreatment with acetaminophen and diphenhydramine before each infusion may prevent infusion-related side effects. CBC, platelet count should be obtained frequently during and after therapy to assess for neutropenia, anemia, thrombocytopenia.

INTERVENTION/EVALUATION

Monitor for infusion-related symptoms complex consisting mainly of rigors, fever, chills, hypotension, generally occurring within 30 min–2 hrs of beginning of first infusion. Slowing infusion rate resolves symptoms. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bleeding/bruising from any site), symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with those who recently received live virus vaccine; do not receive vaccinations. • Report dyspnea, fever, chills, rash, nausea.

alendronate

a-**len**-dro-nate
(Apo-Alendronate, Binosto, Fosamax)
Do not confuse alendronate with risedronate, or Fosamax with Flomax.

FIXED-COMBINATION(S)

Fosamax Plus D: alendronate/cholecalciferol (vitamin D analogue): 70 mg/2,800 international units, 70 mg/5,600 international units.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Bisphosphonate. **CLINICAL:** Bone resorption inhibitor, calcium regulator.

USES

Fosamax: Treatment of osteoporosis in men. Treatment of glucocorticoid-induced osteoporosis in men and women with low bone mineral density who are receiving at least 7.5 mg prednisone (or equivalent), treatment and prevention of osteoporosis in postmenopausal women, treatment of Paget's disease. **Binosto:** Treatment of osteoporosis in postmenopausal women. Increase bone mass in men with osteoporosis.

PRECAUTIONS

Contraindications: Hypocalcemia, abnormalities of the esophagus, inability to stand or sit upright for at least 30 min, sensitivity to alendronate or other bisphosphonates; oral solution or effervescent tablet should not be used in pts at risk for aspiration. **Cautions:** Renal impairment, dysphagia, esophageal disease, gastritis, ulcers, or duodenitis.

ACTION

Inhibits bone resorption via actions on osteoclasts or osteoclast precusors. **Therapeutic Effect:** Leads to increased bone mineral density. **Paget's disease:** Decreases bone formation, but bone has a more normal architecture.

PHARMACOKINETICS

Poorly absorbed after PO administration. Protein binding: 78%. After PO administration, rapidly taken into bone, with uptake greatest at sites of active bone turnover. Excreted in urine, feces (as unabsorbed drug). **Terminal half-life:** Greater than 10 yrs (reflects release from skeleton as bone is resorbed).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Possible incomplete fetal ossification, decreased maternal weight gain, delay in delivery. Unknown if distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Calcium, antacids** may decrease absorption. **Aspirin, NSAIDs** may increase risk of ulcers, upper GI adverse effects. **HERBAL:** None significant. **FOOD:** Concurrent **beverages, dietary supplements, food** may interfere with absorption. **Caffeine** may reduce efficacy. **LAB VALUES:** Reduces serum calcium, phosphate concentrations. Significant decrease in serum alkaline phosphatase noted in pts with Paget's disease.

AVAILABILITY (Rx)

Solution, Oral: 70 mg/75 ml. **Tablets:** 5 mg, 10 mg, 35 mg, 40 mg, 70 mg. **Tablets, Effervescent:** **(Binosto):** 70 mg.

ADMINISTRATION/HANDLING

PO

• Give at least 30 min before first food, beverage, or medication of the day. • **Tablets:** Give with 6–8 oz plain water only (mineral water, coffee, tea, juice will decrease absorption). • **Tablets, Effervescent:** Dissolve in 4 oz water. Wait at least 5 min after effervescence stops. Stir for 10 sec and drink. **Oral Solution:** Follow with at least 2 oz of water.

INDICATIONS/ROUTES/DOSAGE

Osteoporosis (in Men)

PO: ADULTS, ELDERLY: 10 mg once a day in the morning or 70 mg weekly.

Glucocorticoid-Induced Osteoporosis

PO: ADULTS, ELDERLY: 5 mg once a day in the morning. **POSTMENOPAUSAL WOMEN NOT RECEIVING ESTROGEN:** 10 mg once a day in the morning.

Postmenopausal Osteoporosis

PO *(Treatment)*: ADULTS, ELDERLY: 10 mg once a day in the morning or 70 mg weekly.

PO *(Prevention)*: ADULTS, ELDERLY: 5 mg once a day in the morning or 35 mg weekly.

Paget's Disease

PO: ADULTS, ELDERLY: 40 mg once a day in the morning for 6 mos.

Dosage in Renal Impairment

Not recommended with creatinine clearance less than 35 ml/min.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (8%–7%): Back pain, abdominal pain. **Occasional (3%–2%):** Nausea, abdominal distention, constipation, diarrhea, flatulence. **Rare (less than 2%):** Rash; severe bone, joint, muscle pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces hypocalcemia, hypophosphatemia, significant GI disturbances. Esophageal irritation occurs if not given with 6–8 oz of plain water or if pt lies down within 30 min of administration.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Serum chemistries (esp. calcium, phosphorus, alkaline phosphatase serum levels). Hypocalcemia, vitamin D deficiency must be corrected before therapy.

INTERVENTION/EVALUATION

Monitor chemistries (esp. serum calcium, phosphorus, alkaline phosphatase levels).

PATIENT/FAMILY TEACHING

• Expected benefits occur only when medication is taken with full glass (6–8 oz) of plain water, first thing in the morning and at least 30 min before first food, beverage, or medication of the day is taken. Any other beverage (mineral water, orange juice, coffee) significantly reduces absorption of medication. • Do not lie down for at least 30 min after taking medication (potentiates delivery to stomach, reducing risk of esophageal irritation). • Report if

swallowing difficulties develop, pain when swallowing, chest pain, new/worsening heartburn. • Consider weight-bearing exercises, modify behavioral factors (e.g., cigarette smoking, alcohol consumption). • Supplemental calcium and vitamin D should be taken if dietary intake inadequate.

alfuzosin

al-fue-**zoe**-sin
(Apo-Alfuzosin, Uroxatral, Xatral)

CLASSIFICATION

PHARMACOTHERAPEUTIC: $Alpha_1$-adrenergic blocker. **CLINICAL:** Benign prostatic hyperplasia agent.

USES

Treatment of signs and symptoms of benign prostatic hyperplasia (BPH). **OFF-LABEL:** Facilitates expulsion of ureteral stones.

PRECAUTIONS

Contraindications: Moderate to severe hepatic impairment; concurrent use of strong CYP3A4 inhibitors (e.g., ketoconazole) or other alpha-adrenergic blockers. **Cautions:** Pts with known QT prolongation (congenital or acquired). Severe renal or mild hepatic impairment.

ACTION

Blocks adrenoreceptors of lower urinary tract (e.g., prostate, bladder neck). **Therapeutic Effect:** Relaxes smooth muscle; improves urinary flow, symptoms of prostatic hyperplasia.

PHARMACOKINETICS

Readily absorbed (decreased under fasting conditions). Protein binding: 90%. Metabolized in liver. Primarily excreted in urine. **Half-life:** 10 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not indicated for use in this pt population. **Pregnancy Category B. Children:** Not indicated for use in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Other alpha-blocking agents (doxazosin, prazosin, tamsulosin, terazosin) may have additive effect. **CYP3A4 inhibitors (e.g., ritonavir, ketoconazole) PDE5 inhibitors (e.g., sildenafil)** may increase level/effects. **HERBAL: St. John's wort** may decrease level/effects. **FOOD: Food** increases absorption. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets (Extended-Release): 10 mg.

ADMINISTRATION/HANDLING

PO

• Give immediately after the same meal each day. • Swallow whole; do not break, crush, dissolve, or divide extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

Benign Prostatic Hyperplasia

PO: ADULTS: 10 mg once a day, after same meal each day.

Dosage in Renal/Hepatic Impairment

See Precautions.

SIDE EFFECTS

Frequent (7%–6%): Dizziness, headache, malaise. **Occasional (4%):** Dry mouth. **Rare (3%–2%):** Nausea, dyspepsia (heartburn, epigastric discomfort), diarrhea, orthostatic hypotension, tachycardia, drowsiness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Ischemia-related chest pain may occur rarely (2% of pts). Priapism has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for sensitivity to alfuzosin, use of other alpha-blocking agents (doxazosin, prazosin, tamsulosin, terazosin). Obtain B/P.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Report headache. Monitor for hypotension. Question for improvement in urine flow, hesitancy.

PATIENT/FAMILY TEACHING

- Take after the same meal each day.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Do not chew, crush, dissolve, or divide extended-release tablets.

aliskiren

HIGH ALERT

a-lis-**kye**-ren
(Rasilez, Tekturna)

■ **BLACK BOX ALERT** ■ May cause fetal injury, mortality if used during second or third trimester of pregnancy.

Do not confuse Tekturna with Valturna.

FIXED-COMBINATION(S)

Amturnide: aliskiren/amlodipine (a calcium channel blocker)/hydrochlorothiazide (a diuretic): 150 mg/5 mg/12.5 mg, 300 mg/5 mg/12.5 mg, 300 mg/5 mg/25 mg, 300 mg/10 mg/12.5 mg, 300 mg/10 mg/25 mg. **Tekamlo:** aliskiren/amlodipine (a calcium channel blocker): 150 mg/5 mg, 150 mg/10 mg, 300 mg/5 mg, 300 mg/10 mg. **Tekturna HCT:** aliskiren/hydrochlorothiazide (a diuretic): 150 mg/12.5 mg, 150 mg/25 mg, 300 mg/12.5 mg, 300 mg/25 mg. **Valturna:** aliskiren/valsartan (an angiotensin II receptor antagonist): 150 mg/160 mg, 300 mg/320 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Renin-angiotensin system antagonist. **CLINICAL:** Antihypertensive.

USES

Treatment of hypertension. May be used alone or in combination with other antihypertensives.

PRECAUTIONS

Contraindications: Concurrent use with ACE inhibitor or Angiotensin II Receptor Blockers in pts with diabetes. **Cautions:** Severe renal impairment. History of angioedema, dialysis, nephrotic syndrome, renovascular hypertension. Concurrent use with P-glycoprotein inhibitors (e.g., cyclosporine).

ACTION

Direct renin inhibitor. Decreases plasma renin activity (PRA), inhibiting the conversion of angiotensinogen to angiotensin I, blocking the effect of increased renin levels. **Therapeutic Effect:** Reduces B/P.

PHARMACOKINETICS

Peak plasma concentration reached within 1–3 hrs. Protein binding: 49%. Metabolized in liver. Minimally excreted in urine. Peak plasma steady-state levels reached in 7–8 days. **Half-life:** 24 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Carcinogenic potential to fetus. May cause fetal/neonatal morbidity, mortality. Unknown if distributed in breast milk. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Cyclosporine, itraconazole may increase concentration/effect. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic, black**

cohosh may increase antihypertensive effect. **FOOD:** **High-fat meals** substantially decrease absorption. **Grapefruit products** may reduce antihypertensive effects. Separate by 4 hrs. **LAB VALUES:** May increase serum BUN, creatinine, uric acid, creatinine kinase, potassium. May decrease Hgb, Hct.

AVAILABILITY (Rx)

Tablets, Film-Coated: 150 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

• High-fat meals substantially decrease absorption. • Consistent administration with regard to meals is recommended. • Do not break, crush, dissolve, or divide film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 150 mg/day. May increase to 300 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Rare (2%–1%): Diarrhea, particularly in women, elderly (older than 65 yrs), gastroesophageal reflux, cough, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Angioedema, periorbital edema, edema of hands, generalized edema have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Correct hypovolemia in pts on concurrent diuretic therapy. Obtain B/P and apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated.

INTERVENTION/EVALUATION

Assess for edema. Monitor I&O; weigh daily. Monitor daily pattern of bowel activity, stool consistency. Monitor B/P, renal function tests, potassium, Hgb, Hct.

PATIENT/FAMILY TEACHING

• Pregnant pts should avoid second- and third-trimester exposure to aliskiren. • Report if diarrhea, swelling of face/lips/tongue, difficulty breathing occurs. • Avoid strenuous exercise during hot weather (risk of dehydration, hypotension). • Do not chew, crush, dissolve, or divide film-coated tablets.

allopurinol

al-oh-**pure**-i-nol
(Aloprim, Novo-Purol, Zyloprim)
Do not confuse allopurinol with Apresoline or haloperidol, or Zyloprim with Zorprin or Zovirax.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Xanthine oxidase inhibitor. **CLINICAL:** Antigout.

USES

PO: Management of primary or secondary gout (e.g., acute attack, nephropathy). Treatment of secondary hyperuricemia that may occur during cancer treatment. Management of recurrent uric acid and calcium oxalate calculi. **Injection:** Management of elevated uric acid in cancer treatment for leukemia, lymphoma, or solid tumor malignancies. **OFF-LABEL:** In mouthwash following fluorouracil therapy to prevent stomatitis.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment, pts taking diuretics, mercaptopurine or azathioprine, other drugs causing myelosuppression. Do not use in asymptomatic hyperuricemia.

ACTION

Decreases uric acid production by inhibiting xanthine oxidase, an enzyme responsible for converting xanthine to uric acid. **Therapeutic Effect:** Reduces uric acid concentrations in serum and urine.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO, IV	2–3 days	1–3 wks	1–2 wks

Well absorbed from GI tract. Widely distributed. Protein binding: less than 1%. Metabolized in liver. Excreted primarily in urine. Removed by hemodialysis. **Half-life:** 1–3 hrs; metabolite, 12–30 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Loop or thiazide diuretics** may increase level/effect. May increase effect of **oral anticoagulants.** May increase concentration, toxicity of **azathioprine, mercaptopurine. Amoxicillin, ampicillin** may increase incidence of rash. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, ALT, AST, creatinine.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Aloprim): 500 mg. **Tablets (Zyloprim):** 100 mg, 300 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 500-mg vial with 25 ml Sterile Water for Injection (concentration of 20 mg/ml). • Further dilute with 0.9% NaCl or D_5W (50–100 ml) to a concentration of 6 mg/ml or less.

Rate of Administration • Infuse over 15–60 min. Daily doses can be given as a single infusion or in equally divided doses at 6-, 8-, or 12-hr intervals. **Storage** • Solution should appear clear and colorless. • Store unreconstituted vials at room temperature. • Do not refrigerate reconstituted and/or diluted solution. Must administer within 10 hrs of preparation. • Do not use if precipitate forms or solution is discolored.

PO

• Give after meals with plenty of fluid. • Fluid intake should yield slightly alkaline urine and output of approximately 2 L in adults. • Dosages greater than 300 mg/day to be administered in divided doses.

IV INCOMPATIBILITIES

Amikacin (Amikin), carmustine (BiCNU), cefotaxime (Claforan), clindamycin (Cleocin), cytarabine (Ara-C), dacarbazine (DTIC), diphenhydramine (Benadryl), doxorubicin (Adriamycin), doxycycline (Vibramycin), gentamicin, haloperidol (Haldol), hydroxyzine (Vistaril), idarubicin (Idamycin), imipenem-cilastatin (Primaxin), methylprednisolone (Solu-Medrol), metoclopramide (Reglan), ondansetron (Zofran), streptozocin (Zanosar), tobramycin, vinorelbine (Navelbine).

IV COMPATIBILITIES

Bumetanide (Bumex), calcium gluconate, furosemide (Lasix), heparin, hydromorphone (Dilaudid), lorazepam (Ativan), morphine, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Doses greater than 300 mg given in divided doses.

Gouty Arthritis

PO: ADULTS, CHILDREN OLDER THAN 10 YRS: (Mild): 200–300 mg/day. **(Moderate to Severe):** 400–600 mg/day in 2–3 divided doses. **Maximum:** 800 mg/day.

Secondary Hyperuricemia Associated with Chemotherapy

PO: ADULTS, CHILDREN OLDER THAN 10 YRS: 600–800 mg/day in 2–3 divided doses for 2–3 days starting 1–2 days before chemotherapy. **CHILDREN 6–10 YRS:** 300 mg/day in 2–3 divided doses. **CHILDREN YOUNGER THAN 6 YRS:** 150 mg/day in 3 divided doses.

◀ALERT▶ **IV:** Daily dose can be given as single infusion or at 6-, 8-, or 12-hr intervals.

IV: ADULTS, ELDERLY, CHILDREN 10 YRS OR OLDER: 200–400 mg/m^2/day beginning 24–48 hrs before initiation of chemotherapy. **CHILDREN YOUNGER THAN 10 YRS:** 200 mg/m^2/day beginning 24–48 hrs before initiation of chemotherapy. **Maximum:** 600 mg/day.

Recurrent Uric Acid Calcium Oxalate Calculi

PO: ADULTS: 200–300 mg/day in single or divided doses.

Usual Elderly Dosage

PO: Initially, 100 mg/day; gradually increase until optimal uric acid level is reached.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance. **PO:** Removed by hemodialysis. Administer dose posthemodialysis or administer 50% supplemental dose.

IV/PO

Creatinine Clearance	Dosage
10–20 ml/min	200 mg/day
3–9 ml/min	100 mg/day
Less than 3 ml/min	100 mg at extended intervals
HD	100 mg q48h (increase cautiously to 300 mg)

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: PO: Drowsiness, unusual hair loss. **IV:** Rash, nausea, vomiting. **Rare:** Diarrhea, headache.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pruritic maculopapular rash, possibly accompanied by malaise, fever, chills, joint pain, nausea, vomiting, should be considered a toxic reaction. Severe hypersensitivity reaction may follow appearance of rash. Bone marrow depression, hepatotoxicity, peripheral neuritis, acute renal failure occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum chemistries, hepatic function tests. Instruct pt to drink minimum of 2,500–3,000 ml of fluid daily while taking medication.

INTERVENTION/EVALUATION

Discontinue medication immediately if rash or other evidence of allergic reaction occurs. Monitor I&O (output should be at least 2,000 ml/day). Assess serum chemistries, uric acid, hepatic function. Assess urine for cloudiness, unusual color, odor. **Gout:** Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

- May take 1 wk or longer for full therapeutic effect.
- Maintain adequate hydration; drink 2,500–3,000 ml of fluid daily while taking medication.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Avoid alcohol (may increase uric acid).

almotriptan

al-moe-**trip**-tan
(Axert)
Do not confuse almotriptan with alvimopan, or Axert with Antivert.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin receptor agonist (5-HT_{1B}). **CLINICAL:** Antimigraine.

USES

Acute treatment of migraine headache with or without aura in adults. Acute treatment of migraine headache in adolescents 12–17 yrs with history of migraine with or without aura and having attacks usually lasting 4 or more hrs when left untreated.

PRECAUTIONS

Contraindications: Cerebrovascular disease (e.g., stroke, transient ischemic attacks), peripheral vascular disease (e.g., ischemic bowel disease), hemiplegic or basilar migraine, ischemic heart disease (including angina pectoris, history of MI, silent ischemia, and Prinzmetal's angina), uncontrolled hypertension, use within 24 hrs of ergotamine-containing preparations or another 5-HT_{1B} agonist. **Cautions:** Mild to moderate renal or hepatic impairment, pt profile suggesting cardiovascular risks, controlled hypertension; history of CVA, sulfonamide allergy.

ACTION

Binds selectively to serotonin receptors in cranial arteries producing a vasoconstrictive effect. **Therapeutic Effect:** Produces relief of migraine headache.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 35%. Metabolized by liver. Primarily excreted in urine. **Half-life:** 3–4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Ergotamine-containing drugs** may produce vasospastic reaction. **MAOIs** may increase concentration. Combined use of **SSRIs** or **SNRIs (e.g., fluoxetine, fluvoxamine, paroxetine, sertraline)** may produce weakness, hyperreflexia, incoordination. **CYP3A4 inhibitors (e.g., erythromycin, itraconazole, ketoconazole, ritonavir)** may increase plasma concentration/effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 6.5 mg, 12.5 mg.

ADMINISTRATION/HANDLING

PO

- Swallow whole; do not break, crush, dissolve, or divide tablets.
- Take with full glass of water.
- May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Migraine Headache

PO: ADULTS, ELDERLY, ADOLESCENTS 12–17 YRS: Initially, 6.25–12.5 mg as a single dose. If headache returns, dose may be repeated after 2 hrs. **Maximum:** 2 doses/24 hrs (25 mg).

Dosage in Renal/Hepatic Impairment

ADULTS, ELDERLY: Recommended initial dose is 6.25 mg, maximum daily dose is 12.5 mg.

SIDE EFFECTS

Rare (2%–1%): Nausea, dry mouth, headache, dizziness, somnolence, paresthesia, flushing.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive dosage may produce tremor, redness of extremities, decreased respirations, cyanosis, seizures, chest pain. Serious arrhythmias occur rarely but particularly in pts with hypertension, diabetes, obesity, smokers, and those with strong family history of coronary artery disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of peripheral vascular disease, cardiac conduction disorders. Question pt regarding onset, location, duration of migraine, and possible precipitating factors.

INTERVENTION/EVALUATION

Evaluate for relief of migraine headache and associated photophobia, phonophobia (sound sensitivity), nausea, vomiting.

PATIENT/FAMILY TEACHING

• Take a single dose as soon as symptoms of an actual migraine attack appear. • Medication is intended to relieve migraine, not to prevent or reduce number of attacks. • Lie down in quiet, dark room for additional benefit after taking medication. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report immediately if palpitations, pain or tightness in chest or throat, or pain or weakness of extremities occurs. • Swallow whole; do not chew, crush, dissolve, or divide tablets.

alogliptin

al-oh-**glip**-tin
(Nesina)
Do not confuse alogliptin with linagliptin saxagliptin, or sitagliptin.

FIXED COMBINATION(S)

Kazano: alogliptin/metformin (an antidiabetic): 12.5 mg/500 mg, 12.5 mg, 1,000 mg. **Oseni:** alogliptin/pioglitazone (an antidiabetic): 12.5 mg/15 mg, 12.5 mg/30 mg, 12.5 mg/45 mg, 25 mg/15 mg, 25 mg/30 mg, 25 mg/45 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Dipeptidyl peptidase-4 (DDP-4) inhibitor. **CLINICAL:** Antidiabetic.

USES

Adjunctive treatment to diet and exercise to improve glycemic control in pts with type 2 diabetes mellitus.

PRECAUTIONS

Contraindications: Type I diabetes, diabetic ketoacidosis, history of hypersensitivity to DD4 inhibitors. **Cautions:** Concurrent use of other hypoglycemic medication, cholelithiasis, hepatic or renal impairment.

ACTION

Slows inactivation of incretin hormones by inhibiting DDP-4 enzyme. **Therapeutic Effect:** Incretin hormones increase insulin synthesis/release from pancreas and decrease glucagon secretion. Lowers serum glucose levels.

PHARMACOKINETICS

Rapidly absorbed following PO administration. Metabolized in liver. Protein binding: 20%. Minimal metabolism (60%–70% excreted unchanged). Peak plasma concentration: 1–2 hrs. Primarily excreted in urine. **Half-life:** 21 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** May have increased risk of hypoglycemia.

INTERACTIONS

DRUG: **Insulin, oral hypoglycemics** may increase risk of hypoglycemia. **HERBAL:** Herbal supplements having hypoglycemic effects may increase risk of hypoglycemia. **FOOD:** None known. **LAB VALUES:** May decrease serum glucose. May increase serum ALT, AST.

AVAILABILITY (Rx)

Tablets: 6.25 mg, 12.5 mg, 25 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Type 2 Diabetes Mellitus

PO: ADULTS/ELDERLY: 25 mg once daily.

Dosage in Renal Impairment

Creatinine clearance 30–59 ml/min: 12.5 mg once daily. **Creatinine clearance less than 30 ml/min:** 6.25 mg once daily.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (4%): Nasopharyngitis, cough, headache, upper respiratory tract infections.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypoglycemia reported in 1.5% of pts (5% specifically in elderly). Concomitant use of hypoglycemic medication may increase hypoglycemic risk. Pancreatitis reported in less than 1%. Hypersensitivity reactions including angioedema (tongue/lip swelling), urticaria, bronchospasm occur rarely. Hepatic failure (fatal vs. nonfatal) reported in less than 2% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum chemistries, capillary blood glucose, hemoglobin A1c level. Assess pt's understanding of diabetes management, routine home glucose monitoring. Receive full medication history, including vitamins, minerals, herbal products. Question history of co-morbidities, esp. alcohol dependency, renal or hepatic impairment.

INTERVENTION/EVALUATION

Monitor blood glucose, hemoglobin A1c level, hepatic/renal function tests. Assess for hypoglycemia (diaphoresis, tremors, anxiety, headache, tachycardia, perioral numbness, diplopia, difficulty concentrating), hyperglycemia (polyuria, polydipsia, fatigue, Kussmaul breathing), hypersensitivity reaction. Screen for glucose-altering conditions: fever, increased activity or stress, surgical procedures. Obtain dietary consult for nutritional education. Severe abdominal pain, nausea may indicate pancreatitis.

PATIENT/FAMILY TEACHING

• Diabetes mellitus requires lifelong control. Diet and exercise are principal parts of treatment; do not skip or delay meals. • Test blood glucose regularly. • When taking combination drug therapy or when glucose demands are altered (e.g., by fever, infection, trauma, stress, heavy physical activity), have hypoglycemic treatment (glucagon, oral dextrose) available. • Report suspected pregnancy or plans of breastfeeding. • Monitor daily calorie intake. • Avoid alcohol. • Report abdominal pain, yellowing of the skin or eyes, fatigue, loss of appetite, dark urine, or decreased urine output.

alprazolam

al-**praz**-oh-lam

(Alprazolam Intensol, Apo-Alpraz, Niravam, Xanax, Xanax XR)

Do not confuse alprazolam with lorazepam, or Xanax with Tenex, Tylox, Xopenex, Zantac, or Zyrtec.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine **(Schedule IV). CLINICAL:** Antianxiety.

USES

Management of anxiety disorders (with or without agoraphobia), anxiety associated with depression, panic disorder. **OFF-LABEL:** Anxiety in children.

PRECAUTIONS

Contraindications: Acute narrow angle-closure glaucoma, concurrent use with ketoconazole or itraconazole. **Cautions:** Renal/hepatic impairment, predisposition to urate nephropathy, obese pts. Concurrent CYP3A4 inhibitors/inducers and major CYP3A4 substrates; debilitated pts, respiratory disease, depression (esp. suicidal risk), elderly (increased risk of severe toxicity).

ACTION

Enhances the inhibitory effects of the neurotransmitter gamma-aminobutyric acid in the brain. **Therapeutic Effect:** Produces anxiolytic effect due to CNS depressant action.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 80%. Metabolized in liver. Primarily excreted in urine. Minimal removal by hemodialysis. **Half-life:** 6–27 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. Chronic ingestion during pregnancy may produce withdrawal symptoms, CNS depression in neonates. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Use small initial doses with gradual increase to avoid ataxia (muscular incoordination) or excessive sedation.

INTERACTIONS

DRUG: Potentiated effects when used with **other CNS depressants (including alcohol). CYP3A4 inhibitors: (e.g., antifungal agents [azole], olanzapine, protease inhibitors, SSRIs)** may increase CNS effect. **CYP3A4 inducers (e.g., carbamazepine, rifampin)** may decrease effect. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depressant effect. **St. John's wort, yohimbe** may decrease effectiveness. **FOOD: Grapefruit products** may increase level, effects. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Solution, Oral (Alprazolam Intensol): 1 mg/ml. **Tablets (Orally Disintegrating [Niravam]):** 0.25 mg, 0.5 mg, 1 mg, 2 mg. **Tablets (Immediate-Release [Xanax]):** 0.25 mg, 0.5 mg, 1 mg, 2 mg.

Tablets (Extended-Release [Xanax XR]): 0.5 mg, 1 mg, 2 mg, 3 mg.

ADMINISTRATION/HANDLING

PO, Immediate-Release

• May give without regard to meals. • Tablets may be crushed. • If oral intake is not possible, may be given sublingually.

PO, Extended-Release

• Administer once daily. • Do not break, crush, dissolve, or divide extended-release tablets. Swallow whole.

PO, Orally Disintegrating

• Place tablet on tongue, allow to dissolve. • Swallow with saliva. • Administration with water not necessary. • If using ½ tab, discard remaining ½ tab.

INDICATIONS/ROUTES/DOSAGE

Anxiety Disorders

PO *(Immediate-Release)*: ADULTS: Initially, 0.25–0.5 mg 3 times a day. May titrate q3–4days. **Maximum:** 4 mg/day in divided doses. **CHILDREN, YOUNGER THAN 18 YRS:** 0.125 mg 3 times a day. May increase by 0.125–0.25 mg/dose. **Maximum:** 0.06 mg/kg/day or 0.02 mg/kg/dose. **ELDERLY, DEBILITATED PTS, PTS WITH**

HEPATIC DISEASE OR LOW SERUM ALBUMIN: Initially, 0.25 mg 2–3 times a day. Gradually increase to optimum therapeutic response.

PO *(Orally Disintegrating)*: ADULTS: 0.25–0.5 mg 3 times a day. **Maximum:** 4 mg/day in divided doses.

Anxiety with Depression

PO: ADULTS: (average dose required) 2.5–3 mg/day in divided doses.

Panic Disorder

PO *(Immediate-Release)*: ADULTS: Initially, 0.5 mg 3 times a day. May increase at 3- to 4-day intervals in increments of 1 mg or less a day. Range: 5–6 mg/day. **Maximum:** 10 mg/day. **ELDERLY:** Initially, 0.125–0.25 mg twice a day. May increase in 0.125-mg increments until desired effect attained.

PO *(Extended-Release)*:

◀ALERT▶ To switch from immediate-release to extended-release form, give total daily dose (immediate-release) as a single daily dose of extended-release form.

ADULTS: Initially, 0.5–1 mg once a day. May titrate at 3- to 4-day intervals. Range: 3–6 mg/day. **Maximum:** 10 mg/day.

ELDERLY: Initially, 0.5 mg once a day.

PO *(Orally Disintegrating)*: ADULTS: Initially, 0.5 mg 3 times a day. May increase at 3- to 4-day intervals. Range: 5–6 mg/day. **Maximum:** 10 mg/day.

Dosage in Hepatic Impairment

Severe Disease: Immediate-Release: 0.25 mg 2–3 mg times/day. **Extended-Release:** 0.5 mg once daily.

SIDE EFFECTS

Frequent (41%–20%): Ataxia, lightheadedness, drowsiness, slurred speech (particularly in elderly or debilitated pts). **Occasional (15%–5%):** Confusion, depression, blurred vision, constipation, diarrhea, dry mouth, headache, nausea. **Rare (4% or less):** Behavioral problems such as anger, impaired memory; paradoxical reactions (insomnia, nervousness, irritability).

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt or too-rapid withdrawal may result in restlessness, irritability, insomnia, hand tremors, abdominal/muscle cramps, diaphoresis, vomiting, seizures. Overdose results in drowsiness, confusion, diminished reflexes, coma. Blood dyscrasias noted rarely. **Antidote:** Flumazenil (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess degree of anxiety; assess for drowsiness, dizziness, light-headedness. Assess motor responses (agitation, trembling, tension), autonomic responses (cold/clammy hands, diaphoresis).

INTERVENTION/EVALUATION

For pts on long-term therapy, perform hepatic/renal function tests, CBC periodically. Assess for paradoxical reaction, particularly during early therapy. Evaluate for therapeutic response: calm facial expression, decreased restlessness, insomnia. Monitor respiratory and cardiovascular status.

PATIENT/FAMILY TEACHING

• Drowsiness usually disappears during continued therapy. • If dizziness occurs, change positions slowly from recumbent to sitting position before standing. • Avoid tasks that require alertness, motor skills until response to drug is established. • Smoking reduces drug effectiveness. • Sour hard candy, gum, sips of water may relieve dry mouth. • Do not abruptly withdraw medication after long-term therapy. • Avoid alcohol. • Do not take other medications without consulting physician.

alprostadil (prostaglandin E_1; PGE_1)

al-**pros**-ta-dil
(Prostin VR Pediatric)

■ **BLACK BOX ALERT** ■ Apnea may occur in 10%–12% of neonates with congenital heart defects, esp. in those weighing less than 4.4 lb.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Prostaglandin. **CLINICAL:** Patent ductus arteriosus agent.

USES

Temporarily maintains patency of ductus arteriosus until surgery is performed in pts with congenital heart defects and dependent on patent ductus for survival (e.g., pulmonary atresia or stenosis). **OFF-LABEL:** Treatment of pulmonary hypertension in infants, children with congenital heart defects.

PRECAUTIONS

Contraindications: Respiratory distress syndrome (hyaline membrane disease). **Cautions:** Neonates with bleeding tendencies. **Pregnancy Category:** Not indicated for use in pregnant women.

ACTION

Direct effect on vascular and ductus arteriosus smooth muscle; relaxes trabecular smooth muscle. **Therapeutic Effect:** Causes vasodilation.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin. May decrease serum glucose, potassium.

AVAILABILITY (Rx)

Injection, Solution (Prostin VR Pediatric): 500 mcg/ml.

ADMINISTRATION/HANDLING

IV (Prostin VR Pediatric)

Reconstitution • Dilute 500-mcg ampule with D_5W or 0.9% NaCl to volume depending on infusion pump capabilities. • **Maximum concentration:** 20 mcg/ml.

Rate of Administration • Infuse into a large vein or through an umbilical artery catheter placed at ductal opening. • Infuse for shortest time, lowest dose possible. • If significant decrease in arterial pressure is noted via umbilical artery catheter, auscultation, or Doppler transducer, decrease infusion rate immediately. • Discontinue infusion immediately if apnea or bradycardia occurs (overdosage).

Storage • Store parenteral form in refrigerator. • Must dilute before use. • Prepare fresh solution q24h. • Discard unused portions.

IV INCOMPATIBILITIES

No information available.

INDICATIONS/ROUTES/DOSAGE

Maintain Patency of Ductus Arteriosus

IV Infusion: NEONATES: Initially, 0.05–0.1 mcg/kg/min. **Maintenance:** 0.01–0.4 mcg/kg/min. **Maximum:** 0.4 mcg/kg/min. Therapeutic response is indicated by increased pH in pts with acidosis or increase in oxygenation (usually seen within 30 min).

SIDE EFFECTS

Frequent: Systemic (greater than 1%): Fever, flushing, bradycardia, hypotension, tachycardia, diarrhea. **Occasional: Systemic (less than 1%):** Anxiety, lethargy, myalgia, arrhythmias, respiratory depression, anemia, bleeding, hematuria.

ADVERSE EFFECTS/ TOXIC REACTIONS

◄ALERT► Apnea experienced by 10%–12% of neonates with congenital heart defects.

Overdose manifested as apnea, flushing of the face/arms, bradycardia. Cardiac arrest, sepsis, seizures, thrombocytopenia occur rarely.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor arterial pressure by umbilical artery catheter, auscultation, Doppler transducer. Monitor for symptoms of hypotension. If significant decrease in arterial pressure occurs, decrease infusion rate immediately. Maintain continuous cardiac monitoring. Assess heart sounds, femoral pulse (circulation to lower extremities), arterial blood gases, respiratory status frequently. If apnea or bradycardia occurs, discontinue infusion and notify physician. In infants with restricted systemic blood flow, efficacy should be measured by monitoring improvement of systemic B/P and blood pH.

PATIENT/FAMILY TEACHING

- Therapy maintains patency of ductus arteriosus until surgery is performed.

alteplase

HIGH ALERT

al-te-plase
(Activase, Cathflo Activase)
Do not confuse alteplase or Activase with Altace, or Activase with Cathflo Activase.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Tissue plasminogen activator (tPA). **CLINICAL:** Thrombolytic.

USES

Treatment of acute MI for lysis of thrombi in coronary arteries, acute ischemic stroke, acute massive pulmonary embolism. Treatment of occluded central venous catheters. **OFF-LABEL:** Acute peripheral occlusive disease, prosthetic valve thrombosis. Acute ischemic stroke presenting 3–4½ hrs after onset of symptoms.

PRECAUTIONS

Contraindications: Active internal bleeding, AV malformation or aneurysm, bleeding diathesis CVA, intracranial neoplasm, intracranial or intraspinal surgery or trauma, recent (within past 2 mos), severe uncontrolled hypertension, suspected aortic dissection. **Cautions:** Recent (within 10 days) major surgery or GI bleeding, OB delivery, organ biopsy, recent trauma or CPR, left heart thrombus, endocarditis, severe hepatic disease, pregnancy, elderly, cerebrovascular disease, diabetic retinopathy, thrombophlebitis, occluded AV cannula at infected site.

ACTION

Binds to fibrin in a thrombus and converts entrapped plasminogen to plasmin, initiating fibrinolysis. **Therapeutic Effect:** Degrades fibrin clots, fibrinogen, other plasma proteins.

PHARMACOKINETICS

Rapidly metabolized in liver. Primarily excreted in urine. **Half-life:** 35 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Use only when benefit outweighs potential risk to fetus. Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** May have increased risk of bleeding; monitor closely.

INTERACTIONS

DRUG: Heparin, low molecular weight heparins, medications altering platelet function (e.g., clopidogrel, NSAIDs, thrombolytics), oral anticoagulants increase risk of hemorrhage. **HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginkgo, ginseng, green tea, horse chestnut, red clover** may increase risk of bleeding due to antiplatelet activity. **FOOD:** None known. **LAB VALUES:** Decreases plasminogen, fibrinogen levels

during infusion, decreases clotting time (confirms the presence of lysis). May decrease Hgb, Hct.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 2 mg (Cathflo Activase), 50 mg (Activase), 100 mg (Activase).

ADMINISTRATION/HANDLING

IV

Reconstitution • Activase: Reconstitute immediately before use with Sterile Water for Injection. • Reconstitute 100-mg vial with 100 ml Sterile Water for Injection (50-mg vial with 50 ml sterile water) without preservative to provide a concentration of 1 mg/ml. **Activase Cathflo:** Add 2.2 ml Sterile Water for Injection to provide concentration of 1 mg/ml. • Avoid excessive agitation; gently swirl or slowly invert vial to reconstitute.

Rate of Administration • Activase: Give by IV infusion via infusion pump (see Indications/Routes/Dosage). • If minor bleeding occurs at puncture sites, apply pressure for 30 sec; if unrelieved, apply pressure dressing. • If uncontrolled hemorrhage occurs, discontinue infusion immediately (slowing rate of infusion may produce worsening hemorrhage). • Avoid undue pressure when drug is injected into catheter (can rupture catheter or expel clot into circulation). **Activase Cathflo:** Instill dose into occluded catheter. • After 30 min, assess catheter function by attempting to aspirate blood. • If still occluded, let dose dwell an additional 90 min. • If function not restored, a second dose may be instilled.

Storage • Activase: Store vials at room temperature. • After reconstitution, solution appears colorless to pale yellow. • Solution is stable for 8 hrs after reconstitution. Discard unused portions. • **Activase Cathflo:** Refrigerate vials.

IV INCOMPATIBILITIES

Dobutamine (Dobutrex), dopamine (Intropin), heparin.

IV COMPATIBILITIES

Lidocaine, metoprolol (Lopressor), morphine, nitroglycerin, propranolol (Inderal).

INDICATIONS/ROUTES/DOSAGE

Acute MI

IV Infusion: ADULTS WEIGHING MORE THAN 67 KG: Total dose: 100 mg over 90 min, starting with 15-mg bolus over 1–2 min, then 50 mg over 30 min, then 35 mg over 60 min. **ADULTS WEIGHING 67 KG OR LESS: Total dose:** Start with 15-mg bolus over 1–2 min, then 0.75 mg/kg over 30 min (**maximum:** 50 mg), then 0.5 mg/kg over 60 min (**maximum:** 35 mg). **Maximum total dose:** 100 mg.

Acute Pulmonary Emboli

IV Infusion: ADULTS: 100 mg over 2 hrs. May give as a 10-mg bolus followed by 90 mg over 2 hrs. Institute or reinstitute heparin near end or immediately after infusion when activated partial thromboplastin time (aPTT) or thrombin time (TT) returns to twice normal or less.

Acute Ischemic Stroke

◀ALERT▶ Dose should be given within the first 3 hrs of the onset of symptoms. Recommended total dose: 0.9 mg/kg. **Maximum:** 90 mg.

IV Infusion: ADULTS WEIGHING 100 KG OR LESS: 0.09 mg/kg as IV bolus over 1 min, then 0.81 mg/kg as continuous infusion over 60 min. **WEIGHING GREATER THAN 100 KG:** 9 mg bolus over 1 min, then 81 mg as continuous infusion over 60 min.

Central Venous Catheter Clearance

IV: ADULTS, ELDERLY: Up to 2 mg; may repeat after 2 hrs. If catheter functional, withdraw 4–5 ml blood to remove drug and residual clot.

Usual Neonatal Dosage

Occluded IV Catheter: Use 1 mg/ml conc (**maximum:** 2 mg/2 ml) leave in lumen up to 2 hrs, then aspirate.

Systemic Thrombosis: 0.1–0.6 mg/kg/hr for 6 hrs.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Superficial bleeding at puncture sites, decreased B/P. **Occasional:** Allergic reaction (rash, wheezing, bruising).

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe internal hemorrhage may occur. Lysis of coronary thrombi may produce atrial or ventricular arrhythmias or stroke.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for contraindications to therapy. Obtain baseline B/P, apical pulse. Record weight. Evaluate 12-lead EKG, cardiac enzymes, electrolytes. Assess Hct, platelet count, thrombin time (TT), prothrombin time (PT), activated partial thromboplastin time (aPTT), fibrinogen level before therapy is instituted. Type, crossmatch, hold blood.

INTERVENTION/EVALUATION

Perform continuous cardiac monitoring for arrhythmias. Check B/P, pulse, respirations q15min until stable, then hourly. Check peripheral pulses, heart and lung sounds. Monitor for chest pain relief and notify physician of continuation or recurrence (note location, type, intensity). Assess for bleeding: overt blood, occult blood in any body substance. Monitor aPTT per protocol. Maintain B/P; avoid any trauma that might increase risk of bleeding (e.g., injections, shaving). Assess neurologic status frequently.

amantadine

a-**man**-ta-deen
(Dom-Amantadine, PMS-Amantadine)

Do not confuse amantadine with ranitidine or rimantadine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Dopaminergic agonist. **CLINICAL:** Antiviral, antiparkinson agent.

USES

Prevention, treatment of respiratory tract infections due to influenza virus, Parkinson's disease, drug-induced extrapyramidal reactions.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of seizures, orthostatic hypotension, HF, peripheral edema, hepatic disease, recurrent eczematoid dermatitis, cerebrovascular disease, renal dysfunction, those receiving CNS stimulants, uncontrolled psychosis. Untreated angle-closure glaucoma, severe psychoneurosis.

ACTION

Antiviral: Blocks uncoating of influenza A virus, preventing penetration into the host and inhibiting M2 protein in the assembly of progeny virions. **Antiparkinson:** Blocks reuptake of dopamine into presynaptic neurons and causes direct stimulation of postsynaptic receptors. **Therapeutic Effect:** Antiviral, antiparkinsonian activity.

PHARMACOKINETICS

Rapidly and completely absorbed from GI tract. Protein binding: 67%. Widely distributed. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 11–15 hrs (increased in elderly, decreased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted in pts older than 1 yr. **Elderly:** May exhibit increased sensitivity to anticholinergic effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Alcohol** may increase CNS effects. **Anticholinergics, antihistamines, phenothiazines, tricyclic antidepressants** may increase anticholinergic effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 100 mg. **Syrup:** 50 mg/5 ml. **Tablets:** 100 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.
- Administer nighttime dose several hrs before bedtime (prevents insomnia).

INDICATIONS/ROUTES/DOSAGE

Treatment of Influenza A

PO: ADULTS: 100 mg twice a day or 200 mg once/day. Initiate within 24–48 hrs after onset of symptoms; discontinue as soon as possible based on clinical response. **ELDERLY:** 100 mg once daily. **CHILDREN 10 YRS AND OLDER, WEIGHING 40 KG OR MORE:** 100 mg twice a day. **WEIGHING LESS THAN 40 KG:** 5 mg/kg/day in 2 divided doses. **Maximum:** 150 mg/day. **CHILDREN 1–9 YRS:** 5 mg/kg/day in 2 divided doses. **Maximum:** 150 mg/day.

Prevention of Influenza A

PO: ADULTS: 100 mg twice a day or 200 mg once/day. **CHILDREN:** Refer to treatment dosing above.

Parkinson's Disease, Extrapyramidal Symptoms

PO: ADULTS, ELDERLY: 100 mg twice a day. May increase up to 400 mg/day in divided doses (300 mg/day for extrapyramidal symptoms).

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance.

Creatinine Clearance	Dosage
30–50 ml/min	200 mg first day; 100 mg/day thereafter
15–29 ml/min	200 mg first day; 100 mg on alternate days
Less than 15 ml/min	200 mg every 7 days
Hemodialysis	200 mg every 7 days

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (10%–5%): Nausea, dizziness, poor concentration, insomnia, nervousness. **Occasional (5%–1%):** Orthostatic hypotension, anorexia, headache, livedo reticularis, blurred vision, urinary retention, dry mouth or nose, agitation, confusion, hallucinations. **Rare:** Vomiting, depression, irritation or swelling of eyes, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

HF, leukopenia, neutropenia occur rarely. Hyperexcitability, seizures, ventricular arrhythmias may occur. Neuroleptic malignant syndrome (NMS) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

When treating infections caused by influenza A virus, obtain specimens for viral diagnostic tests before giving first dose (therapy may begin before results are known).

INTERVENTION/EVALUATION

Monitor I&O, renal function tests; check for peripheral edema. Evaluate food tolerance, vomiting. Assess skin for mottling or rash. Assess for dizziness. **Parkinson's disease:** Assess for clinical reversal of symptoms (improvement of tremor of head/hands at rest, mask-like facial expression, shuffling gait, muscular rigidity).

PATIENT/FAMILY TEACHING

• Do not take any other medications without consulting physician. • Avoid alcohol. • Avoid tasks that require alertness, motor skills until response to drug is established (may cause dizziness, blurred vision). • Go from lying to standing slowly. • Report new symptoms, esp. blotching, rash, dizziness, blurred vision, nausea/vomiting, muscle rigidity. • Take nighttime dose several hours before bedtime to prevent insomnia.

ambrisentan

am-**bri**-sen-tan
(Letairis, Volibris)

■ **BLACK BOX ALERT** ■ Likely to produce serious birth defects if used by pregnant women.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Endothelin receptor antagonist. **CLINICAL:** Vasodilator.

USES

Treatment of pulmonary arterial hypertension (PAH) to improve exercise ability, decrease rate of clinical deterioration.

PRECAUTIONS

Contraindications: Pregnancy, women who may become pregnant, idiopathic pulmonary fibrosis. **Extreme Caution:** Moderate to severe hepatic impairment. **Cautions:** Mild hepatic impairment, low hemoglobin levels, clinically significant anemia.

ACTION

Blocks endothelin receptor subtypes ET_A and ET_B on vascular endothelium and smooth muscle, leading to vasodilation. **Therapeutic Effect:** Improves symptoms of pulmonary arterial hypertension (e.g., improves exercise ability), decreases rate of clinical deterioration.

PHARMACOKINETICS

Rapidly absorbed. Protein binding: 99%. Not eliminated by renal pathways. **Half-life:** 9 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause serious birth defects, including malformation of heart and great vessels, facial abnormalities. Breastfeeding not recommended. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** Age-related hepatic impairment requires strict monitoring.

INTERACTIONS

DRUG: **Cyclosporine** may increase plasma concentration. **FOOD:** **Grapefruit products** may increase level/effects. **HERBAL:** **St. John's wort** may decrease level/effect. **LAB VALUES:** May increase serum ALT, AST to at least 3 times upper limit of normal levels (ULN). May increase serum aminotransferase more than 3 times ULN. May increase serum bilirubin more than 2 times ULN. May cause marked decrease in Hgb, Hct.

AVAILABILITY (Rx)

Tablets, Film-Coated: 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• Swallow whole. Do not break, crush, dissolve, or divide tablets. • Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Pulmonary Arterial Hypertension (PAH)

PO: ADULTS, ELDERLY: Initially, 5 mg once a day. Dose may be increased to 10 mg once a day if 5 mg is tolerated. Dosage modification based on transaminase elevation.

Coadministration with cyclosporine: 5 mg/day maximum.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (17%–15%): Peripheral edema, headache. **Occasional (6%–3%):** Nasal congestion, palpitations, constipation, flushing, nasopharyngitis, dyspnea, abdominal pain, sinusitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Potential for serious hepatic injury has been noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain negative pregnancy test prior to initiation of treatment and monthly during treatment. Measure Hgb prior to therapy, at 1 mo, and periodically thereafter. Assess hepatic function prior to initiating therapy and monthly thereafter.

INTERVENTION/EVALUATION

If elevation in hepatic enzymes noted, changes in monitoring and treatment must be initiated. If bilirubin level increases, stop treatment. Monitor Hgb, Hct levels at 1 and 3 mos of treatment, then every 3 mos. Monitor Hgb, Hct levels for decrease. Monitor for signs/symptoms of hepatotoxicity.

PATIENT/FAMILY TEACHING

- Female pts should take measures to avoid pregnancy during treatment (Pregnancy Category X).
- Hepatic function tests, pregnancy test must be obtained before and every mo during treatment.
- Report nausea, vomiting, fever, abdominal pain, fatigue, jaundice immediately. Swallow whole; do not chew, crush, dissolve, or divide film-coated tablets.

amikacin

am-i-**kay**-sin

Amikin

■ **BLACK BOX ALERT** ■ May cause neurotoxicity, nephrotoxicity, and/or neuromuscular blockade and respiratory paralysis. Ototoxicity usually is irreversible; nephrotoxicity usually is reversible.

Do not confuse amikacin or Amikin with Amicar, or amikacin with anakinra.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Aminoglycoside. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *Pseudomonas,* other gram-negative organisms (*Proteus, Serratia,* other gram-negative bacilli) including biliary tract, bone and joint, CNS, intra-abdominal, skin and soft tissue, urinary tract. Treatment of bacterial pneumonia, septicemia. **OFF-LABEL:** *Mycobacterium avium* complex (MAC).

PRECAUTIONS

Contraindications: Hypersensitivity to amikacin, other aminoglycosides (cross-sensitivity), or their components. **Cautions:** Preexisting renal impairment, auditory or vestibular impairment, hypocalcemia, elderly, pts with neuromuscular disorder.

ACTION

Inhibits protein synthesis in susceptible bacteria by binding to 30S ribosomal unit. **Therapeutic Effect:** Interferes with protein synthesis of susceptible microorganisms.

PHARMACOKINETICS

Rapid, complete absorption after IM administration. Protein binding: 0%–10%. Widely distributed (penetrates blood-brain barrier when meninges are inflamed). Excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 2–4 hrs (increased in renal impairment, neonates; decreased in cystic fibrosis, burn pts, febrile pts).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; small amounts distributed in breast milk. May produce fetal nephrotoxicity. **Pregnancy Category D. Children:** Neonates, premature infants may be more susceptible to toxicity due to immature renal function. **Elderly:** Higher risk of toxicity due to age-related renal impairment, increased risk of hearing loss.

INTERACTIONS

DRUG: **Nephrotoxic and ototoxic medications** may increase toxicity. May increase effects of **cyclosporine, neuromuscular blocking agents.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, BUN, ALT, AST, bilirubin, LDH. May decrease serum calcium, magnesium, potassium, sodium. **Therapeutic levels:** Peak: life-threatening infections: 25–40 mcg/ml; serious infections: 20–25 mcg/ml; urinary tract infections: 15–20 mcg/ml. **Trough:** Less than 8 mcg/ml. **Toxic levels:** Peak: greater than 40 mcg/ml; **trough:** greater than 10 mcg/ml.

AVAILABILITY (Rx)

Injection Solution: 250 mg/ml (Amikin).

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute to concentration of 0.25–5 mg/ml in 0.9% NaCl or D_5W.

Rate of Administration • Infuse over 30–60 min.

Storage • Store vials at room temperature. • Solution appears clear but may become pale yellow (does not affect potency). • Intermittent IV infusion (piggyback) is stable for 24 hrs at room temperature, 2 days if refrigerated. • Discard if precipitate forms or dark discoloration occurs.

IM

• To minimize discomfort, give deep IM slowly. • Less painful if injected into gluteus maximus rather than in lateral aspect of thigh.

IV INCOMPATIBILITIES

Amphotericin, azithromycin (Zithromax), propofol (Diprivan).

IV COMPATIBILITIES

Amiodarone (Cordarone), aztreonam (Azactam), calcium gluconate, cefepime (Maxipime), cimetidine (Tagamet), ciprofloxacin (Cipro), clindamycin (Cleocin), dexmedetomidine (Precedex), diltiazem (Cardizem), diphenhydramine (Benadryl), enalapril (Vasotec), esmolol (BreviBloc), fluconazole (Diflucan), furosemide (Lasix), levofloxacin (Levaquin), lorazepam (Ativan), magnesium sulfate, midazolam (Versed), morphine, ondansetron (Zofran), potassium chloride, ranitidine (Zantac), vancomycin.

INDICATIONS/ROUTES/DOSAGE

Usual Parenteral Dosage

IV, IM: ADULTS, ELDERLY, CHILDREN, INFANTS: 5–7.5 mg/kg/dose q8h. **NEONATES:** 15 mg/kg/dose q12–48h (based on wgt).

Dosage in Renal Impairment

Dosage and frequency are modified based on degree of renal impairment and serum drug concentration. After a loading dose of 5–7.5 mg/kg, maintenance dose and frequency are based on serum creatinine levels and creatinine clearance.

Creatinine Clearance	Dosing Interval
60 ml/min or greater	q8h
40–59 ml/min	q12h
20–39 ml/min	q24h
Less than 20 ml/min	Loading dose, monitor levels
Hemodialysis	q48–72h (give after HD on dialysis days)
Continuous renal replacement therapy (CRRT)	Initially, 10 mg/kg, then 7.5 mg/kg q24–48h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Phlebitis, thrombophlebitis. **Occasional:** Rash, fever, urticaria, pruritus. **Rare:** Neuromuscular blockade (difficulty breathing, drowsiness, weakness).

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious reactions include nephrotoxicity (as evidenced by increased thirst, decreased appetite, nausea, vomiting, increased BUN and serum creatinine levels, decreased creatinine clearance); neurotoxicity (manifested as muscle twitching, visual disturbances, seizures, paresthesia); ototoxicity (as evidenced by tinnitus, dizziness, loss of hearing).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Dehydration must be treated prior to aminoglycoside therapy. Establish baseline hearing acuity before beginning therapy. Question for history of allergies, esp. to aminoglycosides and sulfite. Obtain specimen for culture, sensitivity before giving first dose (therapy may begin before results are known).

INTERVENTION/EVALUATION

Monitor I&O (maintain hydration), urinalysis. Monitor results of serum peak/trough levels. Be alert to ototoxic, neurotoxic, nephrotoxic symptoms (see Adverse Effects/Toxic Reactions). Check IM injection site for pain, induration. Evaluate IV site for phlebitis. Assess for skin rash, diarrhea, superinfection (particularly genital/anal pruritus), changes of oral mucosa. When treating pts with neuromuscular disorders, assess respiratory response carefully. **Therapeutic levels:** Peak: life-threatening infections: 25–40 mcg/ml; serious infections: 20–25 mcg/ml; urinary tract infections: 15–20 mcg/ml. **Trough:** Less than 8 mcg/ml. **Toxic levels:** Peak: greater than 40 mcg/ml; **trough:** greater than 10 mcg/ml.

PATIENT/FAMILY TEACHING

• Continue antibiotic for full length of treatment. • Space doses evenly. • IM injection may cause discomfort. • Report any hearing, visual, balance, urinary problems, even after therapy is completed. • Do not take other medications without consulting physician.

amiodarone

HIGH ALERT

a-mi-**oh**-da-rone
(Apo-Amiodarone, Cordarone, Nexterone, Novo-Amiodarone, Pacerone)

■ **BLACK BOX ALERT** ■ Pts should be hospitalized when amiodarone is initiated. Alternative therapies should be tried first before using amiodarone. Only indicated for pts with life-threatening arrhythmias due to risk of toxicity. Lung damage may occur without symptoms. Hepatotoxicity is common, usually mild (rarely possible). Can exacerbate arrhythmias.

Do not confuse amiodarone with amiloride, or Cordarone with Cardura.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Cardiac agent. **CLINICAL:** Antiarrhythmic.

USES

Management of life-threatening recurrent ventricular fibrillation, hemodynamically unstable ventricular tachycardia (VT) unresponsive to other therapy. **OFF-LABEL:** Treatment of atrial fibrillation, paroxysmal supraventricular tachycardia (SVT); ventricular tachyarrhythmias.

PRECAUTIONS

Contraindications: Bradycardia-induced syncope (except in the presence of a pacemaker), second- and third-degree AV block (except in presence of a pacemaker), severe sinus node dysfunction, cardiogenic shock. Hypersensitivity to iodine. **Cautions:** May prolong QT interval. Thyroid disease, electrolyte imbalance, hepatic disease, hypotension, left ventricular dysfunction, pulmonary disease. Pts taking warfarin, surgical pts.

ACTION

Prolongs duration of myocardial cell action potential and refractory period by acting directly on all cardiac tissue. Decreases AV and sinus node function. **Therapeutic Effect:** Suppresses arrhythmias.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	3 days–3 wks	1 wk–5 mos	7–50 days after discontinuation

Slowly, variably absorbed from GI tract. Protein binding: 96%. Extensively metabolized in liver. Excreted via bile; not removed by hemodialysis. **Half-life:** 26–107 days; metabolite, 61 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. May adversely affect fetal development. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to effects on thyroid function. May experience increased incidence of ataxia, other neurotoxic effects.

INTERACTIONS

DRUG: May increase **thioridazine** concentration and produce additive prolongation of QT interval. May increase cardiac effects with **other antiarrhythmics.** May increase effect of **beta-blockers, oral anticoagulants (e.g., warfarin).** May increase concentration, toxicity of **aripiprazole, colchicine, digoxin, phenytoin.** May increase risk of **simvastatin** toxicity, myopathy, rhabdomyolysis. **HERBAL:** **St. John's wort** may decrease effect. **Ephedra** may worsen arrhythmia. **FOOD:** **Grapefruit products** may alter effect. Avoid use during therapy. **LAB VALUES:** May increase serum ALT, AST, alkaline phosphatase, ANA titer. May cause changes in EKG, thyroid function test results. **Therapeutic serum level:** 0.5–2.5 mcg/ml; toxic serum level not established.

AVAILABILITY (Rx)

Infusion (Pre-Mix): Nexterone: 150 mg/100 ml; 360 mg/200 ml. **Injection, Solution (Cordarone IV):** 50 mg/ml. **Tablets:** 100 mg (Pacerone), 200 mg (Cordarone, Pacerone), 400 mg (Pacerone).

ADMINISTRATION/HANDLING

IV

Reconstitution • Infusions longer than 2 hrs must be administered/diluted in glass or polyolefin bottles. • Dilute loading dose (150 mg) in 100 ml D_5W (1.5 mg/ml). • Dilute maintenance dose (900 mg) in 500 ml D_5W (1.8 mg/ml). Concentrations greater than 3 mg/ml cause peripheral vein phlebitis.

Rate of Administration • Does not need protection from light during administration. • Administer through central venous catheter (CVC) if possible, using in-line filter. • Bolus over 10 min (15 mg/min) not to exceed 30 mg/min; then 1 mg/min over 6 hrs; then 0.5 mg/min over 18 hrs. • Infusions longer than 1 hr, concentration not to exceed 2 mg/ml unless CVC used.

Storage • Store at room temperature. • Stable for 24 hrs when diluted in glass or polyolefin containers; stable for 2 hrs when diluted in PVC containers.

PO

• Give consistently with regard to meals to reduce GI distress. • Tablets may be crushed • Do not give with grapefruit products.

IV INCOMPATIBILITIES

Cefazolin (Ancef), heparin, sodium bicarbonate.

IV COMPATIBILITIES

Dexmedetomidine (Precedex), dobutamine (Dobutrex), dopamine (Intropin), furosemide (Lasix), insulin (regular), labetalol (Normodyne), lidocaine, lorazepam (Ativan), midazolam (Versed), morphine, nitroglycerin, norepinephrine (Levophed), phenylephrine (Neo-Synephrine), potassium chloride, vancomycin.

INDICATIONS/ROUTES/DOSAGE

Ventricular Arrhythmias

PO: ADULTS, ELDERLY: Initially, 800–1,600 mg/day in 1–2 divided doses for 1–3 wks. After arrhythmia is controlled or side effects occur, reduce to 600–800 mg/day for 4 wks. **Maintenance:** 200–600 mg/day. **CHILDREN:** Initially, 10–15 mg/kg/day for 4–14 days, then 5 mg/kg/day for several wks. **Maintenance:** 5 mg/kg/day or lowest effective maintenance dose for 5–7 days/wk. **NEONATE:** 10–20 mg/kg/day in 2 divided doses for 7–10 days, then 5–10 mg/kg once daily.

IV Infusion: ADULTS: Initially, 1,050 mg over 24 hrs; 150 mg over 10 min, then 360 mg over 6 hrs; then 540 mg over 18 hrs. May continue at 0.5 mg/min. After first 24 hrs, infuse 720 mg/24 hrs (0.5 mg/min) with a concentration of 1–6 mg/ml. **CHILDREN, NEONATES:** Loading dose: 5 mg/kg over 60 min. May repeat loading dose. Then, if needed, IV infusion of 5 mcg/kg/min. May increase up to 15 mcg/kg/min.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Expected: Corneal microdeposits noted in almost all pts treated for more than 6 mos (can lead to blurry vision). **Occasional (greater than 3%): PO:** Constipation, headache, decreased appetite, nausea, vomiting, paresthesia, photosensitivity, muscular incoordination. **Parenteral:** Hypotension, nausea, fever, bradycardia. **Rare (less than 3%): PO:** Bitter or metallic taste, decreased libido, dizziness, facial flushing, blue-gray coloring of skin (face, arms, and neck), blurred vision, bradycardia, asymptomatic corneal deposits, rash, visual disturbances, halo vision.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious, potentially fatal pulmonary toxicity (alveolitis, pulmonary fibrosis, pneumonitis, acute respiratory distress syndrome) may begin with progressive dyspnea and cough with crackles, decreased breath sounds, pleurisy, HF, or hepatotoxicity. May worsen existing arrhythmias or produce new arrhythmias.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline ALT, AST, alkaline phosphatase, EKG; pulmonary function tests, CXR in pts with pulmonary disease. Assess B/P, apical pulse immediately before drug is administered (if pulse is 60/min or less or systolic B/P is less than 90 mm Hg, withhold medication, contact physician).

INTERVENTION/EVALUATION

Monitor for symptoms of pulmonary toxicity (progressively worsening dyspnea, cough). Dosage should be discontinued or reduced if toxicity occurs. Assess pulse for quality, rhythm, bradycardia. Monitor EKG for cardiac changes (e.g., widening of QRS, prolongation of PR and QT intervals). Notify physician of any

significant interval changes. Assess for nausea, fatigue, paresthesia, tremor. Monitor for signs of hypothyroidism (periorbital edema, lethargy, pudgy hands/feet, cool/pale skin, vertigo, night cramps) and hyperthyroidism (hot/dry skin, bulging eyes [exophthalmos], frequent urination, eyelid edema, weight loss, difficulty breathing). Monitor serum ALT, AST, alkaline phosphatase for evidence of hepatic toxicity. Assess skin, cornea for bluish discoloration in pts who have been on drug therapy longer than 2 mos. Monitor thyroid function test results. If elevated hepatic enzymes occur, dosage reduction or discontinuation is necessary. Monitor for therapeutic serum level (0.5–2.5 mcg/ml). Toxic serum level not established.

PATIENT/FAMILY TEACHING

• Protect against photosensitivity reaction on skin exposed to sunlight. • Bluish skin discoloration gradually disappears when drug is discontinued. • Report shortness of breath, cough. • Outpatients should monitor pulse before taking medication. • Do not abruptly discontinue medication. • Compliance with therapy regimen is essential to control arrhythmias. • Restrict salt, alcohol intake. • Avoid grapefruit products. • Recommend ophthalmic exams q6mos. • Report any vision changes, signs/symptoms of cardiac arrhythmias.

amitriptyline

a-mi-**trip**-ti-leen
(Elavil, Levate, Novo-Tryptyn)

■ **BLACK BOX ALERT** ■ Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse amitriptyline with aminophylline, imipramine, or nortriptyline, or Elavil with Eldepryl, enalapril, Equanil, or Mellaril.

FIXED-COMBINATION(S)

Limbitrol: amitriptyline/chlordiazepoxide (an antianxiety): 12.5 mg/5 mg, 25 mg/10 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tricyclic. **CLINICAL:** Antidepressant, antineuralgic, antibulimic.

USES

Treatment of various forms of depression, exhibited as persistent, prominent dysphoria (occurring nearly every day for at least 2 wks) manifested by 4 of 8 symptoms: appetite change, sleep pattern change, increased fatigue, impaired concentration, feelings of guilt or worthlessness, loss of interest in usual activities, psychomotor agitation or retardation, suicidal tendencies. **OFF-LABEL:** Relief of neuropathic pain, related to diabetic neuropathy or postherpetic neuralgia; treatment of migraine. Treatment of depression in children, post-traumatic stress disorder (PTSD).

PRECAUTIONS

Contraindications: Acute recovery period after MI, use within 14 days of MAOIs. **Cautions:** Prostatic hypertrophy, history of urinary retention or obstruction, narrow-angle glaucoma, diabetes mellitus, seizures, hyperthyroidism, cardiac/hepatic/renal disease, schizophrenia, xerostomia, visual problems, constipation or bowel obstruction, elderly, increased intraocular pressure (IOP), hiatal hernia.

ACTION

Blocks reuptake of neurotransmitters (norepinephrine, serotonin) at presynaptic membranes, increasing availability at postsynaptic receptor sites. Strong anticholinergic activity. **Therapeutic Effect:** Antidepressant effect.

PHARMACOKINETICS

Rapidly and well absorbed from GI tract. Protein binding: 90%. Metabolized in liver. Primarily excreted in urine. Minimal removal by hemodialysis. **Half-life:** 10–26 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; minimally distributed in breast milk. **Pregnancy Category C. Children:** More sensitive to increased dosage, toxicity, increased risk of suicidal ideation, worsening of depression. **Elderly:** Increased risk of toxicity. Increased sensitivity to anticholinergic effects. Caution in pts with cardiovascular disease.

INTERACTIONS

DRUG: **CNS depressants (e.g., alcohol, anticonvulsants, barbiturates, phenothiazines, sedative-hypnotics)** may increase sedation, respiratory depression, hypotensive effect. **Dronedarone, thioridazine, toremefine, ziprasidone** levels may be increased. **Quetiapine** may increase level/effect. May increase risk of hypertensive crisis, hyperpyresis, seizures with **MAOIs.** **HERBAL:** **St. John's wort** may decrease levels. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May alter EKG readings (flattened T wave), serum glucose (increase or decrease). **Therapeutic serum level:** Peak: 120–250 ng/ml; **toxic serum level:** greater than 500 ng/ml.

AVAILABILITY (Rx)

Tablets (Elavil): 10 mg, 25 mg, 50 mg, 75 mg, 100 mg, 150 mg.

ADMINISTRATION/HANDLING

PO

- Give with food or milk if GI distress occurs.

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS: 25–150 mg/day as a single dose at bedtime or in divided doses. May gradually increase up to 300 mg/day. Titrate to lowest effective dosage. **ELDERLY:** Initially, 10–25 mg at bedtime. May increase by 10–25 mg at weekly intervals. Range: 25–150 mg/day.

Pain Management

PO: ADULTS, ELDERLY: 25–100 mg at bedtime. **CHILDREN:** Initially, 0.1 mg/kg. May increase over 2 wks to 0.5–2 mg/kg at bedtime.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Dizziness, drowsiness, dry mouth, orthostatic hypotension, headache, increased appetite, weight gain, nausea, unusual fatigue, unpleasant taste. **Occasional:** Blurred vision, confusion, constipation, hallucinations, delayed micturition, eye pain, arrhythmias, fine muscle tremors, parkinsonian syndrome, anxiety, diarrhea, diaphoresis, heartburn, insomnia. **Rare:** Hypersensitivity, alopecia, tinnitus, breast enlargement, photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce confusion, seizures, severe drowsiness, changes in cardiac conduction, fever, hallucinations, agitation, dyspnea, vomiting, unusual fatigue, weakness. Abrupt withdrawal after prolonged therapy may produce headache, malaise, nausea, vomiting, vivid dreams. Blood dyscrasias, cholestatic jaundice occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Observe and record behavior. Assess psychological status, thought content, suicidal ideation, sleep patterns, appearance, interest in environment. For pts on

A

long-term therapy, hepatic/renal function tests, blood counts should be performed periodically.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess appearance, behavior, speech pattern, level of interest, mood. Monitor B/P for hypotension, pulse, arrhythmias. **Therapeutic serum level:** Peak: 120–250 ng/ml; **toxic serum level:** greater than 500 ng/ml.

PATIENT/FAMILY TEACHING

• Change positions slowly to avoid hypotensive effect. • Tolerance to postural hypotension, sedative and anticholinergic effects usually develop during early therapy. • Maximum therapeutic effect may be noted in 2–4 wks. • Sensitivity to sun may occur. • Report visual disturbances. • Do not abruptly discontinue medication. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Sips of water may relieve dry mouth.

amlodipine

TOP 100

am-**loe**-di-peen
(Apo-Amlodipine, Norvasc)
Do not confuse amlodipine with amiloride, or Norvasc with Navane or Vascor.

FIXED-COMBINATION(S)

Anturnide: amlodipine/aliskiren (a renin inhibitor)/hydrochlorothiazide (a diuretic): 5 mg/150 mg/12.5 mg, 5 mg/300 mg/12.5 mg, 5 mg/300 mg/25 mg, 10 mg/300 mg/12.5 mg, 10 mg/300 mg/25 mg. **Azor:** amlodipine/olmesartan (an angiotensin II receptor antagonist): 5 mg/20 mg, 10 mg/20 mg, 5 mg/40 mg, 10 mg/40 mg. **Caduet:** amlodipine/atorvastatin (hydroxamethylglutaryl-CoA [HMG-CoA] reductase inhibitor): 2.5 mg/10 mg, 2.5 mg/20 mg, 2.5 mg/40 mg, 5 mg/10 mg, 10 mg/10 mg, 5 mg/20 mg, 10 mg/20 mg, 5 mg/40 mg, 10 mg/40 mg, 5 mg/80 mg, 10 mg/80 mg. **Exforge:** amlodipine/valsartan (an angiotensin II receptor antagonist): 5 mg/160 mg, 10 mg/160 mg, 5 mg/320 mg, 10 mg/320 mg. **Exforge HCT:** amlodipine/valsartan/hydrochlorothiazide (a diuretic): 5 mg/160 mg/12.5 mg, 5 mg/160 mg/25 mg, 10 mg/160 mg/12.5 mg, 10 mg/160 mg/25 mg, 10 mg/320 mg/25 mg. **Lotrel:** amlodipine/benazepril (an angiotensin-converting enzyme [ACE] inhibitor): 2.5 mg/10 mg, 5 mg/10 mg, 5 mg/20 mg, 5 mg/40 mg, 10 mg/20 mg, 10 mg/40 mg. **Tekamlo:** amlodipine/aliskiren (a renin inhibitor): 5 mg/150 mg, 5 mg/300 mg, 10 mg/150 mg, 10 mg/300 mg. **Tribenzor:** amlodipine/olmesartan/hydrochlorothiazide: 5 mg/20 mg/12.5 mg, 5 mg/40 mg/12.5 mg, 5 mg/40 mg/25 mg, 10 mg/40 mg/12.5 mg, 10 mg/40 mg/25 mg. **Twynsta:** amlodipine/telmisartan (an angiotensin II receptor antagonist): 5 mg/40 mg, 5 mg/80 mg, 10 mg/40 mg, 10 mg/80 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium channel blocker. **CLINICAL:** Antihypertensive, antianginal.

USES

Management of hypertension, chronic stable angina, vasospastic (Prinzmetal's or variant) angina. May be used alone or with other antihypertensives or antianginals.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment, aortic stenosis, hypertophic cardiomyopathy with outflow tract obstruction.

ACTION

Inhibits calcium movement across cardiac and vascular smooth muscle cell membranes. **Therapeutic Effect:** Dilates coronary arteries, peripheral arteries/arterioles. Decreases total peripheral vascular resistance and B/P by vasodilation.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–1 hr	N/A	24 hrs

Slowly absorbed from GI tract. Protein binding: 95%–98%. Metabolized in liver. Excreted primarily in urine. Not removed by hemodialysis. **Half-life:** 30–50 hrs (increased in elderly, pts with hepatic cirrhosis).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Half-life may be increased, more sensitive to hypotensive effects.

INTERACTIONS

DRUG: May increase level of **simvastatin. Azole antifungals, cyclosporine protease inhibitors** may increase concentration. **Carbamazepine, rifampin** may decrease level/effect. **HERBAL:** **St. John's wort** may decrease concentration. **Ephedra, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** **Grapefruit products** may increase concentration, hypotensive effects. **LAB VALUES:** May increase hepatic enzyme levels.

AVAILABILITY (Rx)

Tablets: 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: Initially, 5 mg/day as a single dose. May increase by 2.5 mg/day every 7–14 days. **Maximum:** 10 mg/day. **SMALL-FRAME, FRAGILE, ELDERLY:** 2.5 mg/day as a single dose. **CHILDREN 6–17 YRS:** 2.5–5 mg/day.

Angina (Chronic Stable or Vasospastic)

PO: ADULTS: 5–10 mg/day as a single dose. **ELDERLY, PTS WITH HEPATIC INSUFFICIENCY:** 5 mg/day as a single dose.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

ADULTS, ELDERLY: (Hypertension) 2.5 mg/day. (Angina) 5 mg/day.

SIDE EFFECTS

Frequent (greater than 5%): Peripheral edema, headache, flushing. **Occasional (5%–1%):** Dizziness, palpitations, nausea, unusual fatigue or weakness (asthenia). **Rare (less than 1%):** Chest pain, bradycardia, orthostatic hypotension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce excessive peripheral vasodilation, marked hypotension with reflex tachycardia, syncopy.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline renal/hepatic function tests, B/P, apical pulse.

INTERVENTION/EVALUATION

Assess B/P (if systolic B/P is less than 90 mm Hg, withhold medication, contact physician). Assess for peripheral edema behind medial malleolus (sacral area in bedridden pts). Assess skin for flushing. Question for headache, asthenia.

A

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication. • Compliance with therapy regimen is essential to control hypertension. • Avoid tasks that require alertness, motor skills until response to drug is established. • Do not ingest grapefruit products.

amoxicillin

a-**mox**-i-sil-in
(Apo-Amoxi, Moxatag, Novamoxin)
Do not confuse amoxicillin with amoxapine or Atarax.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillin.
CLINICAL: Antibiotic.

USES

Treatment of susceptible infections due to streptococci, *E. coli, E. faecalis, P. mirabilis, H. influenzae, N. gonorrhoeae* including ear, nose, and throat; lower respiratory tract; skin and skin structure; UTIs; acute uncomplicated gonorrhea; *H. pylori*. **OFF-LABEL:** Treatment of Lyme disease and typhoid fever. Postexposure prophylaxis for anthrax exposure.

PRECAUTIONS

Contraindications: Hypersensitivity to any penicillin. **Cautions:** History of allergies (esp. cephalosporins), infectious mononucleosis, renal impairment, asthma.

ACTION

Inhibits bacterial cell wall synthesis. **Therapeutic Effect:** Bactericidal in susceptible microorganisms.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 20%. Partially metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 1–1.3 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta, appears in cord blood, amniotic fluid. Distributed in breast milk in low concentrations. May lead to allergic sensitization, diarrhea, candidiasis, skin rash in infant. **Pregnancy Category B. Children:** Immature renal function in neonate/young infant may delay renal excretion. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Allopurinol** may increase incidence of rash. **Probenecid** may increase concentration, toxicity risk. May decrease effect of **oral contraceptives.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, LDH, bilirubin, creatinine, BUN. May cause positive Coombs' test.

AVAILABILITY (Rx)

Capsules: 250 mg, 500 mg. **Powder for Oral Suspension:** 125 mg/5 ml, 200 mg/5 ml, 250 mg/5 ml, 400 mg/5 ml. **Tablets:** 500 mg, 875 mg. **Tablets (Chewable):** 125 mg, 250 mg. **Tablets, Extended-Release (Moxatag):** 775 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Instruct pt to chew/crush chewable tablets thoroughly before swallowing. • Oral suspension dose may be mixed with formula, milk, fruit juice, water, cold drink. • Give immediately after mixing. • After reconstitution, oral suspension is stable for 14 days at either room temperature or refrigerated. **Moxatag:** Take within 1 hr of finishing a meal.

INDICATIONS/ROUTES/DOSAGE

Susceptible Infections

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 250–500 mg q8h or 500–875 mg q12h or 775 mg (Moxatag) once daily. **CHILDREN OLDER THAN 3 MOS:** 20–100 mg/kg/day in divided

doses q8–12h. **CHILDREN 3 MOS AND YOUNGER:** 20–30 mg/kg/day in divided doses q12h. **NEONATE:** 20–30 mg/kg/day in divided doses q12h.

Lower Respiratory Tract Infection

PO: ADULTS, ELDERLY: 500 mg q8h or 875 mg q12h. **CHILDREN:** 45 mg/kg/day in divided doses q12h or 40 mg/kg/day in divided doses q8h.

H. Pylori Infection

PO: ADULTS, ELDERLY: 1 g twice a day in combination with at least 1 other antibiotic and an acid-suppressing agent (proton pump inhibitor or H_2 antagonist).

Otitis Media

PO: CHILDREN: 80–90 mg/kg/day in 2 divided doses.

Dosage in Renal Impairment

◀ALERT▶ Immediate-release 875-mg tablet or 775-mg extended-release tablet should not be used in pts with creatinine clearance less than 30 ml/min. Dosage interval is modified based on creatinine clearance. **Creatinine clearance 10–30 ml/min:** 250–500 mg q12h. **Creatinine clearance less than 10 ml/min:** 250–500 mg q24h.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: GI disturbances (mild diarrhea, nausea, vomiting), headache, oral/vaginal candidiasis. **Occasional:** Generalized rash, urticaria.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance of GI tract. Severe hypersensitivity reactions, including anaphylaxis, acute interstitial nephritis, occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. penicillins, cephalosporins, renal impairment.

INTERVENTION/EVALUATION

Hold medication and promptly report rash, diarrhea (fever, abdominal pain, mucus and blood in stool may indicate antibiotic-associated colitis). Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, black "hairy" tongue, oral mucosal changes (ulceration, pain, erythema). Monitor renal/hepatic function tests.

PATIENT/FAMILY TEACHING

• Continue antibiotic for full length of treatment. • Space doses evenly. • Take with meals if GI upset occurs. • Thoroughly crush or chew the chewable tablets before swallowing. • Report rash, diarrhea, other new symptoms.

amoxicillin/ clavulanate

a-**mox**-i-sil-in/**klav**-yoo-la-nate (Amoclan, Apo-Amoxi-Clav 🍁, Augmentin, Augmentin ES 600, Augmentin XR, Clavulin 🍁, Novo-Clavamoxin 🍁)

Do not confuse Augmentin with amoxicillin or Azulfidine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *streptococci, E. coli, E. faecalis, P. mirabilis,* beta-lactamase producing *H. influenzae, Klebsiella* spp., *M. catarrhalis*, and *S. aureus* (not methicillin-resistant *Staphylococcus aureus* [MRSA]) including lower respiratory,

skin and skin structure, UTIs, otitis media, sinusitis. **OFF-LABEL:** Chronic antimicrobial suppression of prosthetic joint infection.

PRECAUTIONS

Contraindications: Hypersensitivity to any penicillins, history of cholestatic jaundice or hepatic impairment with amoxicillin/clavulanate therapy. Augmentin XR: Severe renal impairment, hemodialysis pt. **Cautions:** History of allergies, esp. cephalosporins; renal impairment.

ACTION

Amoxicillin inhibits bacterial cell wall synthesis. Clavulanate inhibits bacterial beta-lactamase. **Therapeutic Effect:** Amoxicillin is bactericidal in susceptible microorganisms. Clavulanate protects amoxicillin from enzymatic degradation.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 20%. Partially metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 1–1.3 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta, appears in cord blood, amniotic fluid. Distributed in breast milk in low concentrations. May lead to allergic sensitization, diarrhea, candidiasis, skin rash in infant. **Pregnancy Category B. Children:** Immature renal function in neonate/young infant may delay renal excretion. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Allopurinol** may increase incidence of rash. **Probenecid** may increase concentration, toxicity risk. May decrease effect of **oral contraceptives.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST. May cause positive Coombs' test.

AVAILABILITY (Rx)

Powder for Oral Suspension (Amoclan, Augmentin): 125 mg–31.25 mg/5 ml, 200 mg–28.5 mg/5 ml, 250 mg–62.5 mg/5 ml, 400 mg–57 mg/5 ml, 600 mg–42.9 mg/5 ml. **Tablets (Augmentin):** 250 mg–125 mg, 500 mg–125 mg, 875 mg–125 mg. **Tablets (Chewable [Augmentin]):** 200 mg–28.5 mg, 400 mg–57 mg.

Tablets (Extended-Release [Augmentin XR]): 1,000 mg–62.5 mg.

ADMINISTRATION/HANDLING

PO

• Store tablets at room temperature. • After reconstitution, oral suspension is stable for 10 days but should be refrigerated. • May mix dose of suspension with milk, formula, or juice and give immediately. • Give without regard to meals. • Give with food to increase absorption, decrease stomach upset. • Instruct pt to chew/crush chewable tablets thoroughly before swallowing. • Do not break, crush, dissolve, or divide extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

Usual Adult Dosage

PO: ADULTS: 250–500 mg q8h or 875 mg q12h.

Usual Pediatric Dosage

PO: CHILDREN OLDER THAN 3 MOS, WEIGHING 40 KG OR LESS: 20–90 mg/kg/day divided q8–12h.

Otitis Media

PO: CHILDREN: 90 mg/kg/day (600 mg/5 ml suspension) in divided doses q12h for 10 days.

Usual Neonate Dosage

PO: NEONATES, CHILDREN YOUNGER THAN 3 MOS: 30 mg/kg/day (125 mg/5 ml suspension) in divided doses q12h.

Dosage in Renal Impairment

◀ALERT▶ Do not use 875-mg tablet or extended-release tablets for creatinine clearance less than 30 ml/min.

Dosage and frequency are modified based on creatinine clearance. **Creatinine clearance 10–30 ml/min:** 250–500 mg q12h. **Creatinine clearance less than 10 ml/min:** 250–500 mg q24h. **HD:** 250–500 mg q24h, give dose during and after dialysis. **PD:** 250 mg q12h

Dosage in Hepatic Impairment

No dose adjustment (see Contraindications).

SIDE EFFECTS

Occasional (9%–4%): Diarrhea, loose stools, nausea, skin rashes, urticaria. **Rare (less than 3%):** Vomiting, vaginitis, abdominal discomfort, flatulence, headache.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Severe hypersensitivity reactions, including anaphylaxis, acute interstitial nephritis, occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. penicillins, cephalosporins, renal impairment.

INTERVENTION/EVALUATION

Hold medication and promptly report rash, diarrhea (fever, abdominal pain, mucus and blood in stool may indicate antibiotic-associated colitis). Be alert for signs of superinfection including fever, vomiting, diarrhea, black "hairy" tongue, ulceration or changes of oral mucosa, anal/genital pruritus. Monitor renal/hepatic tests with prolonged therapy.

PATIENT/FAMILY TEACHING

• Continue antibiotic for full length of treatment. • Space doses evenly. • Take with meals if GI upset occurs. • Thoroughly crush or chew the chewable tablets before swallowing. • Notify physician if rash, diarrhea, other new symptoms occur.

amphotericin B

HIGH ALERT

am-foe-**ter**-i-sin

(Abelcet, AmBisome, Amphotec, Fungizone 🍁)

■ **BLACK BOX ALERT** ■ (Nonliposomal) To be used primarily for pts with progressive, potentially fatal fungal infection. Not to be used for noninvasive forms of fungal disease (oral thrush, vaginal candidiasis).

CLASSIFICATION

PHARMACOTHERAPEUTIC: Polyene antifungal. **CLINICAL:** Antifungal, antiprotozoal.

USES

Abelcet: Treatment of aspergillosis or any type of invasive fungal infections refractory or intolerant to Fungizone. **AmBisome:** Empiric treatment of fungal infection in febrile neutropenic pts. *Aspergillus, Candida* species, *Cryptococcus* infections refractory to Fungizone or pt with renal impairment or toxicity with Fungizone. Treatment of cryptococcal meningitis in HIV-infected pts. Treatment of visceral leishmaniasis. **Amphotec:** Treatment of invasive aspergillosis in pts with renal impairment or toxicity or prior treatment failure with Fungizone. **Fungizone:** Treatment of severe systemic and CNS infections caused by susceptible fungi including *Candida* spp., *Histoplasma, Cryptococcus, Aspergillus, Blastomyces.* Treatment of fungal peritonitis. **OFF-LABEL: Abelcet, Amphotec:** Serious *Candida* infections. **AmBisome:** Treatment of systemic histoplasmosis infection.

PRECAUTIONS

Contraindications: Hypersensitivity to amphotericin B. **Cautions:** Concomitant use

with other nephrotoxic drugs; renal impairment.

ACTION

Generally fungistatic but may become fungicidal with high dosages or very susceptible microorganisms. Binds to sterols in fungal cell membrane. **Therapeutic Effect:** Increases fungal cell membrane permeability, allowing loss of potassium, other cellular components, resulting in cell death.

PHARMACOKINETICS

Protein binding: 90%. Widely distributed. Metabolic fate unknown. Cleared by nonrenal pathways. Minimal removal by hemodialysis. Amphotec and Abelcet are not dialyzable. **Half-life:** Fungizone, 24 hrs (increased in neonates and children); Abelcet, 7.2 days; AmBisome, 100–153 hrs; Amphotec, 26–28 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established, but use the least amount for therapeutic regimen. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Antineoplastic agents** may increase potential for bronchospasm, renal toxicity, hypotension. **Steroids** may cause severe hypokalemia. May increase **digoxin** toxity (due to hypokalemia). **Nephrotoxic medications** may increase nephrotoxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, alkaline phosphatase, BUN, creatinine. May decrease serum calcium, magnesium, potassium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 50 mg (AmBisome, Amphotec, Fungizone), 100 mg (Amphotec). **Injection, Suspension (Abelcet):** 5 mg/ml.

ADMINISTRATION/HANDLING

IV

• Use strict aseptic technique; no bacteriostatic agent or preservative is present in diluent.

Reconstitution

ABELCET

• Shake 20-ml (100-mg) vial gently until contents are dissolved. Withdraw required dose using 5-micron filter needle (supplied by manufacturer). • Dilute with D_5W to 1–2 mg/ml.

AMBISOME

• Reconstitute each 50-mg vial with 12 ml Sterile Water for Injection to provide concentration of 4 mg/ml. • Shake vial vigorously for 30 sec. Withdraw required dose and inject syringe contents through a 5-micron filter into an infusion of D_5W to provide final concentration of 1–2 mg/ml (0.2–0.5 mg/ml for infants and small children).

AMPHOTEC

• Add 10 ml Sterile Water for Injection to each 50-mg vial to provide concentration of 5 mg/ml. Shake gently. • Further dilute **only** with D_5W to a concentration of 0.1–2 mg/ml.

FUNGIZONE

• Add 10 ml Sterile Water for Injection to each 50-mg vial. • Further dilute with 250–500 ml D_5W. • Final concentration should not exceed 0.1 mg/ml (0.25 mg/ml for central infusion).

Rate of Administration

• Give by slow IV infusion. Infuse conventional amphotericin over 4–6 hrs; Abelcet over 2 hrs (shake contents if infusion longer than 2 hrs); Amphotec over minimum of 2 hrs (avoid rate faster than 1 mg/kg/hr); AmBisome over 1–2 hrs.

Storage

ABELCET

• Refrigerate unreconstituted solution. Reconstituted solution is stable for 48 hrs if refrigerated, 6 hrs at room temperature.

AMBISOME

• Refrigerate unreconstituted solution. Reconstituted vials are stable for 24 hrs

when refrigerated. Concentration of 1–2 mg/ml is stable for 6 hrs.

AMPHOTEC

• Refrigerate intact vials. • Reconstituted solution is stable for 24 hrs if refrigerated.

FUNGIZONE

• Refrigerate intact vials. • Once reconstituted, vials stable for 24 hrs at room temperature, 7 days if refrigerated. • Diluted solutions stable for 24 hrs at room temperature, 2 days if refrigerated.

IV INCOMPATIBILITIES

Note: Abelcet, AmBisome, Amphotec: Do not mix with any other drug, diluent, or solution. Fungizone: Allopurinol (Aloprim), aztreonam (Azactam), calcium gluconate, cefepime (Maxipime), cimetidine (Tagamet), ciprofloxacin (Cipro), dexmedetomidine (Precedex), diphenhydramine (Benadryl), dopamine (Intropin), enalapril (Vasotec), filgrastim (Neupogen), fluconazole (Diflucan), foscarnet (Foscavir), magnesium sulfate, meropenem (Merrem IV), ondansetron (Zofran), piperacillin and tazobactam (Zosyn), potassium chloride, propofol (Diprivan).

IV COMPATIBILITY

Lorazepam (Ativan).

INDICATIONS/ROUTES/DOSAGE

Usual Abelcet Dose

IV Infusion *(Abelcet)*: ADULTS, CHILDREN: 2.5–5 mg/kg/day at rate of 2.5 mg/kg/hr.

Usual AmBisome Dose

IV Infusion *(Ambisome)*: ADULTS, CHILDREN: 3–6 mg/kg/day over 2 hrs.

Usual Amphotec Dose

IV Infusion *(Amphotec)*: ADULTS, CHILDREN: 3–4 mg/kg/day at rate no faster than 1 mg/kg/hr. **Maximum:** 6 mg/kg/day.

Fungizone, Usual Dose

IV Infusion: ADULTS, ELDERLY: Dosage based on pt tolerance and severity of infection. Initially, 1-mg test dose is given over 20–30 min. If tolerated, usual dose is 0.3–1.5 mg/kg/day. **Maximum:** 1.5 mg/kg/day. **CHILDREN:** Test dose of 0.1 mg/kg/dose (**maximum:** 1 mg) is infused over 20–60 min. If test dose is tolerated. **NEONATES:** Initially, 0.5 mg/kg/dose once daily. May increase to maximum of 1.5 mg/kg/day. **Maintenance dose:** 0.25–1 mg/kg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (greater than 10%): Abelcet: Chills, fever, increased serum creatinine, multiple organ failure. **AmBisome:** Hypokalemia, hypomagnesemia, hyperglycemia, hypocalcemia, edema, abdominal pain, back pain, chills, chest pain, hypotension, diarrhea, nausea, vomiting, headache, fever, rigors, insomnia, dyspnea, epistaxis, increased hepatic/renal function test results. **Amphotec:** Chills, fever, hypotension, tachycardia, increased serum creatinine, hypokalemia, bilirubinemia. **Amphocin:** Fever, chills, headache, anemia, hypokalemia, hypomagnesemia, anorexia, malaise, generalized pain, nephrotoxicity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Cardiovascular toxicity (hypotension, ventricular fibrillation), anaphylaxis occur rarely. Altered vision/hearing, seizures, hepatic failure, coagulation defects, multiple organ failure, sepsis may occur. Each alternative formulation is less nephrotoxic than conventional amphotericin (Amphocin).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline LFT, chemistries, ionized calcium, renal function test. Question for history of allergies, esp. to amphotericin B, sulfite. Avoid, if possible, other nephrotoxic medications. Obtain premedication

orders to reduce adverse reactions during IV therapy (antipyretics, antihistamines, antiemetics, corticosteroids).

INTERVENTION/EVALUATION

Monitor B/P, temperature, pulse, respirations; assess for adverse reactions (fever, tremors, chills, anorexia, nausea, vomiting, abdominal pain) q15min twice, then q30min for 4 hrs of initial infusion. If symptoms occur, slow infusion, administer medication for symptomatic relief. For severe reaction, stop infusion and notify physician. Evaluate IV site for phlebitis. Monitor I&O, renal function tests for nephrotoxicity. Monitor serum potassium and magnesium levels, hematologic and hepatic function test results.

PATIENT/FAMILY TEACHING

• Prolonged therapy (wks or mos) is usually necessary. • Fever reaction may decrease with continued therapy. • Muscle weakness may be noted during therapy (due to hypokalemia).

ampicillin

am-pi-**sil**-in
(Apo-Ampi, Novo-Ampicillin, Nu-Ampi)
Do not confuse ampicillin with aminophylline.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillin.
CLINICAL: Antibiotic.

USES

Treatment of susceptible infections due to streptococci, *S. pneumoniae,* staphylococci (non–penicillinase producing), meningococci, *Listeria*, some *Klebsiella*, *E. coli*, *H. influenzae*, *Salmonella*, *Shigella* including GI, GU, respiratory infections, meningitis, endocarditis prophylaxis. **OFF-LABEL:** Surgical prophylaxis for liver transplantation.

PRECAUTIONS

Contraindications: Hypersensitivity to any penicillin. **Cautions:** History of allergies, esp. cephalosporins, renal impairment, asthmatic pts, infectious mononucleosis.

ACTION

Inhibits cell wall synthesis in susceptible microorganisms. **Therapeutic Effect:** Bactericidal in susceptible microorganisms.

PHARMACOKINETICS

Moderately absorbed from GI tract. Protein binding: 15%–25%. Widely distributed. Partially metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 1–1.5 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; appears in cord blood, amniotic fluid. Distributed in breast milk in low concentrations. May lead to allergic sensitization, diarrhea, candidiasis, skin rash in infant. **Pregnancy Category B. Children:** Immature renal function in neonates/young infants may delay renal excretion. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Allopurinol** may increase incidence of rash. **Probenecid** may increase concentration, toxicity risk. May decrease effects of **oral contraceptives.** May increase level/effect of **methotrexate.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST. May cause positive Coombs' test.

AVAILABILITY (Rx)

Capsules: 250 mg, 500 mg. **Injection, Powder for Reconstitution:** 125 mg, 250 mg, 500 mg, 1 g, 2 g. **Powder for Oral Suspension:** 125 mg/5 ml, 250 mg/5 ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • For IV injection, dilute each vial with 5 ml Sterile Water for Injection or 0.9% NaCl (10 ml for 1- and 2-g vials). **Maximum concentration:** 100 mg/ml for IV push. • For intermittent IV infusion (piggyback), further dilute with 50–100 ml 0.9% NaCl. **Maximum concentration:** 30 mg/ml.

Rate of Administration • For IV injection, give over 3–5 min (125–500 mg) or over 10–15 min (1–2 g). For intermittent IV infusion (piggyback), infuse over 15–30 min. • Due to potential for hypersensitivity/anaphylaxis, start initial dose at few drops per min, increase slowly to ordered rate; stay with pt first 10–15 min, then check q10min.

Storage • IV solution, diluted with 0.9% NaCl, is stable for 8 hrs at room temperature or 2 days if refrigerated. • If diluted with D_5W, is stable for 2 hrs at room temperature or 3 hrs if refrigerated. • Discard if precipitate forms.

IM

• Reconstitute each vial with Sterile Water for Injection or Bacteriostatic Water for Injection (consult individual vial for specific volume of diluent). • Stable for 1 hr. • Give deeply in large muscle mass.

PO

• Oral suspension, after reconstitution, is stable for 7 days at room temperature, 14 days if refrigerated. • Shake oral suspension well before using. • Give orally 1–2 hrs before meals for maximum absorption.

IV INCOMPATIBILITIES

Diltiazem (Cardizem), midazolam (Versed), ondansetron (Zofran).

IV COMPATIBILITIES

Calcium gluconate, cefepime (Maxipime), dexmedetomidine (Precedex), dopamine (Intropin), famotidine (Pepcid), furosemide (Lasix), heparin, hydromorphone (Dilaudid), insulin (regular), levofloxacin (Levaquin), lipids, magnesium sulfate, morphine, multivitamins, potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY: 250–500 mg q6h. **CHILDREN:** 50–100 mg/kg/day in divided doses q6h. **Maximum:** 2–4 g/day.

IV, IM: ADULTS, ELDERLY: 1–2 g q4–6h. **Maximum:** 12 g/day. **CHILDREN: (Severe Infections):** 200–400 mg/kg/day in divided doses q6h. **Maximum:** 12 g/day. **NEONATES:** 50 mg/kg/dose q6–12h.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
10–50 ml/min	Administer q6–12h
Less than 10 ml/min	Administer q12–24h
Hemodialysis	1–2 g q12–24h
Peritoneal dialysis	250 mg q12h
Continuous renal replacement therapy (CRRT)	2g, then 1–2 g q6–8h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Pain at IM injection site, GI disturbances (mild diarrhea, nausea, vomiting), oral or vaginal candidiasis. **Occasional:** Generalized rash, urticaria, phlebitis, thrombophlebitis (with IV administration), headache. **Rare:** Dizziness, seizures (esp. with IV therapy).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance in GI tract. Severe hypersensitivity reactions, including anaphylaxis, acute interstitial nephritis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. penicillins, cephalosporins; renal impairment.

INTERVENTION/EVALUATION

Hold medication and promptly report rash (although common with ampicillin, may indicate hypersensitivity) or diarrhea (fever, abdominal pain, mucus and blood in stool may indicate antibiotic-associated colitis). Evaluate IV site for phlebitis. Check IM injection site for pain, induration. Monitor I&O, urinalysis, renal function tests. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue antibiotic for full length of treatment. • Space doses evenly. • More effective if taken 1 hr before or 2 hrs after food/beverages. • Discomfort may occur with IM injection. • Report rash, diarrhea, or other new symptoms.

ampicillin/ sulbactam

amp-i-**sil**-in/sul-**bak**-tam (Unasyn)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Penicillin.
CLINICAL: Antibiotic.

USES

Treatment of susceptible infections, including intra-abdominal, skin/skin structure, gynecologic infections, due to beta-lactamase-producing organisms including *H. influenzae, E. coli, Klebsiella, Acinetobacter, Enterobacter, S. aureus,* and *Bacteroides* spp. **OFF-LABEL:** Endocarditis, community-acquired pneumonia, surgical prophylaxis.

PRECAUTIONS

Contraindications: Hypersensitivity to any penicillins or sulbactam. **Cautions:** History of allergies, esp. cephalosporins, renal impairment, infectious mononucleosis, asthmatic pts.

ACTION

Ampicillin inhibits bacterial cell wall synthesis. Sulbactam inhibits bacterial beta-lactamase. **Therapeutic Effect:** Ampicillin is bactericidal in susceptible microorganisms. Sulbactam protects ampicillin from enzymatic degradation.

PHARMACOKINETICS

Protein binding: 28%–38%. Widely distributed. Partially metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 1–1.3 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; appears in cord blood, amniotic fluid. Distributed in breast milk in low concentrations. May lead to allergic sensitization, diarrhea, candidiasis, skin rash in infant. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 1 yr. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Allopurinol** may increase incidence of rash. **Probenecid** may increase concentration, toxicity risk. May decrease effect of **oral contraceptives.** May increase level/effect of **methotrexate.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, alkaline phosphatase, LDH, creatinine. May cause positive Coombs' test.

AVAILABILITY (Rx)

Injection, Powder for Reconsitution: 1.5 g (ampicillin 1 g/sulbactam 500 g), 3 g (ampicillin 2 g/sulbactam 1 g).

ADMINISTRATION/HANDLING

IV

Reconstitution • For IV injection, dilute with Sterile Water for Injection to provide concentration of 375 mg/ml. • For intermittent IV infusion (piggyback), further dilute with 50–100 ml 0.9% NaCl.

Rate of Administration • For IV injection, give slowly over minimum of 10–15 min. • For intermittent IV infusion (piggyback), infuse over 15–30 min. • Due to potential for hypersensitivity/anaphylaxis, start initial dose at few drops per min, increase slowly to ordered rate; stay with pt first 10–15 min, then check q10min.

Storage • IV solution, diluted with 0.9% NaCl, is stable for up to 72 hrs if refrigerated (4 hrs if diluted with D_5W). • Discard if precipitate forms.

IM

• Reconstitute each 1.5-g vial with 3.2 ml Sterile Water for Injection or lidocaine to provide concentration of 250 mg ampicillin/125 mg sulbactam/ml. • Give deeply into large muscle mass within 1 hr after preparation.

IV INCOMPATIBILITIES

Amiodarone (Cordarone), diltiazem (Cardizem), idarubicin (Idamycin), ondansetron (Zofran).

IV COMPATIBILITIES

Famotidine (Pepcid), heparin, insulin (regular), morphine.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IV, IM: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 1.5 g (1 g ampicillin/500 mg sulbactam) to 3 g (2 g ampicillin/1 g sulbactam) q6h. **Maximum:** 12 g/day (8 g ampicillin 4 g sulbactam) (Unasyn). **IV: CHILDREN 12 YRS AND YOUNGER:** 100–400 mg ampicillin/kg/day in divided doses q6h. **Maximum:** 12 g/day (Unasyn). 8 g/day (ampicillin). **NEONATES:** 100 mg/kg/day in divided doses q8–12h.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance and severity of infection.

Creatinine Clearance	Dosage
Greater than 30 ml/min	1.5–3 g q6–8h
15–30 ml/min	1.5–3 g q12h
5–14 ml/min	1.5–3 g q24h
Hemodialysis	1.5–3 g q12–24h
Peritoneal dialysis	3 g q24h
Continuous renal replacement therapy (CRRT)	3 g, then 1.5–3 g q6–12h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Diarrhea, rash (most common), urticaria, pain at IM injection site, thrombophlebitis with IV administration, oral or vaginal candidiasis. **Occasional:** Nausea, vomiting, headache, malaise, urinary retention.

ADVERSE EFFECTS/TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps; severe, watery diarrhea; fever) may result from altered bacterial balance in GI tract. Severe hypersensitivity reactions, including anaphylaxis, acute interstitial nephritis, blood dyscrasias may occur. High dosage may produce seizures.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. penicillins, cephalosporins; renal impairment.

A

INTERVENTION/EVALUATION

Hold medication and promptly report rash (although common with ampicillin, may indicate hypersensitivity) or diarrhea (fever, abdominal pain, mucus and blood in stool may indicate antibiotic-associated colitis). Evaluate IV site for phlebitis. Check IM injection site for pain, induration. Monitor I&O, urinalysis, renal function tests. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Take antibiotic for full length of treatment. • Space doses evenly. • Discomfort may occur with IM injection. • Report rash, diarrhea, or other new symptoms.

anakinra

an-a-**kin**-ra
(Kineret)
Do not confuse anakinra with amikacin or Ampyra.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Interleukin-1 receptor antagonist. **CLINICAL:** Anti-inflammatory.

USES

Treatment of signs and symptoms or to slow progression of structural damage of moderate to severely active rheumatoid arthritis (RA) in pts who have failed treatment with one or more disease-modifying antirheumatic drugs. May use alone or with other disease-modifying antirheumatic drugs (other than tumor necrosis factor blocking medications). Treatment of neonatal-onset multisystem inflammatory disease (NOMID).

PRECAUTIONS

Contraindications: Known hypersensitivity to *Escherichia coli*–derived proteins. **Cautions:** Renal impairment (risk of toxic reaction is increased), asthma (higher incidence of serious infection), elderly, history of significant hematologic abnormalities. Avoid use in pts with active infection.

ACTION

Blocks the binding of interleukin-1 (IL-1) receptor, a protein that is a major mediator of joint pathology, including degradation of cartilage, and is present in excess amounts in pts with rheumatoid arthritis. **Therapeutic Effect:** Inhibits inflammatory response.

PHARMACOKINETICS

No accumulation of anakinra in tissues or organs was observed after daily subcutaneous doses. Excreted in urine. **Half-life:** 4–6 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require caution.

INTERACTIONS

DRUG: Increased risk of infection with **etanercept. HERBAL: Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** May decrease WBC count, platelet count, absolute neutrophil count (ANC). May increase eosinophil count.

AVAILABILITY (Rx)

Injection Solution: 100-mg syringe.

ADMINISTRATION/HANDLING

Subcutaneous

• Store in refrigerator; do not freeze or shake. • Do not use if particulate or discoloration is noted. • Give by subcutaneous route (thigh, abdomen, upper arm).

INDICATIONS/ROUTES/DOSAGE

Rheumatoid Arthritis (RA)

Subcutaneous: ADULTS, ELDERLY: 100 mg/day, given at same time each day.

NOMID

Subcutaneous: ADULTS, ELDERLY, CHILDREN, INFANTS: Initially, 1–2 mg/kg daily in 1–2 divided doses. May increase in 0.5–1 mg/kg increments. **Maintenance:** 3–4 mg/kg daily. **Maximum:** 8 mg/kg daily.

Dosage in Renal Impairment

Creatinine clearance less than 30 ml/min and/or end-stage renal disease: 100 mg every other day.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: Injection site ecchymosis, erythema, inflammation. **Rare:** Headache, nausea, diarrhea, abdominal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Infections, including upper respiratory tract infection, sinusitis, flu-like symptoms, cellulitis, have been noted. Neutropenia may occur, particularly when anakinra is used in combination with tumor necrosis factor blocking agents.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess pt's range of motion, pain, swelling in joints.

INTERVENTION/EVALUATION

Monitor absolute neutrophil count before therapy begins, monthly for 3 mos while receiving therapy, then quarterly for up to 1 yr. Assess for hypersensitivity reaction, esp. during first 4 wks of therapy (uncommon after first mo of therapy).

PATIENT/FAMILY TEACHING

• Follow dosage and administration procedures carefully. • Dispose of syringes and needles properly. • Avoid live/inactive virus vaccines during therapy.

anastrozole

HIGH ALERT

an-**as**-troe-zole

Apo-Anastrozole*

(Arimidex)

Do not confuse anastrozole with letrozole, or Arimidex with Imitrex.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Aromatase inhibitor. **CLINICAL:** Antineoplastic hormone.

USES

Treatment of advanced breast cancer in postmenopausal women who have developed progressive disease while receiving tamoxifen therapy. First-line therapy in advanced or metastatic breast cancer in postmenopausal women. Adjuvant treatment in early breast cancer in postmenopausal women. **OFF-LABEL:** Treatment of recurrent or metastatic endometrial or uterine cancers; treatment of ovarian cancer.

PRECAUTIONS

Contraindications: Pregnancy, pts who may become pregnant. **Cautions:** Preexisting ischemic cardiac disease, osteopenia (higher risk of developing osteoporosis), hyperlipidemia.

ACTION

Decreases circulating estrogen level by inhibiting aromatase, the enzyme that catalyzes the final step in estrogen production. **Therapeutic Effect:** Inhibits growth of breast cancers that are stimulated by estrogens by lowering serum estradiol concentration.

PHARMACOKINETICS

Well absorbed into systemic circulation (absorption not affected by food). Protein binding: 40%. Extensively metabolized in liver. Eliminated by biliary system and, to a lesser extent, kidneys. **Mean half-life:** 50 hrs in postmenopausal women.

Steady-state plasma levels reached in about 7 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; may cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Estrogen therapies** may reduce concentration/effects. **Tamoxifen** may reduce plasma concentration. **HERBAL:** Avoid **black cohosh, dong quai, licorice, red clover.** **FOOD:** None known. **LAB VALUES:** May elevate serum GGT level in pts with liver metastases. May increase serum ALT, AST, alkaline phosphate, total cholesterol, LDL.

AVAILABILITY (Rx)

Tablets: 1 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Breast Cancer

PO: ADULTS, ELDERLY: 1 mg once a day (continue until tumor progresses).

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (16%–8%): Asthenia, nausea, headache, hot flashes, back pain, vomiting, cough, diarrhea. **Occasional (6%–4%):** Constipation, abdominal pain, anorexia, bone pain, pharyngitis, dizziness, rash, dry mouth, peripheral edema, pelvic pain, depression, chest pain, paresthesia. **Rare (2%–1%):** Weight gain, diaphoresis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Thrombophlebitis, anemia, leukopenia occur rarely. Vaginal hemorrhage occurs rarely (2%).

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor for asthenia, dizziness; assist with ambulation if needed. Assess for headache, pain. Offer antiemetic for nausea, vomiting. Monitor for onset of diarrhea; offer antidiarrheal medication.

PATIENT/FAMILY TEACHING

- Notify physician if nausea, asthenia (loss of strength, energy), hot flashes become unmanageable.

anidulafungin

a-**nid**-ue-la-**fun**-jin
(Eraxis)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Echinocandin. **CLINICAL:** Antifungal.

USES

Treatment of candidemia, other forms of *Candida* infections (intra-abdominal abscess, peritonitis), esophageal candidiasis.

PRECAUTIONS

Contraindications: Hypersensitivity to anidulafungin, other echinocandins. **Cautions:** Hepatic impairment.

ACTION

Inhibits synthesis of the enzyme glucan, (vital component of fungal cell formation), preventing fungal cell wall formation. **Therapeutic Effect:** Fungistatic.

PHARMACOKINETICS

Distributed in tissue. Moderately bound to albumin. Protein binding: 84%–99%.

Slow chemical degradation; 30% excreted in feces over 9 days. Not removed by hemodialysis. **Half-life:** 40–50 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May be embryotoxic. Crosses placental barrier. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, bilirubin, alkaline phosphatase, LDH, transferase, amylase, lipase, CPK, creatinine, calcium. May decrease serum albumin, bicarbonate, magnesium, protein, potassium, Hgb, Hct, WBCs, neutrophils, platelet count. May prolong prothrombin time (PT).

AVAILABILITY (Rx)

Injection, Powder for Reconsitution: 50-mg vial, 100-mg vial.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each 50-mg vial with 15 ml Sterile Water for Injection (100 mg with 30 ml). Swirl, do not shake. • Further dilute 50 mg with 50 ml D_5W or 0.9% NaCl (100 mg with 100 ml, 200 mg with 200 ml).

Rate of Administration • Do not exceed infusion rate of 1.1 mg/min. Not for IV bolus injection.

Storage • Refrigerate unreconstituted vials. Reconstituted vials are stable for 24 hrs at room temperature. Infusion solution is stable for 48 hrs at room temperature.

IV INCOMPATIBILITIES

Amphotericin B (Abelcet, AmBisome), ertapenem (Invanz), sodium bicarbonate.

IV COMPATIBILITIES

Dexamethasone (Decadron), famotidine (Pepcid), furosemide (Lasix), hydromorphone (Dilaudid), lorazepam (Ativan), methylprednisolone (Solu-Medrol), morphine. Refer to IV Compatibility Chart in front of book.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Duration of treatment based on pt's clinical response. In general, treatment is continued for at least 14 days after last positive culture.

Candidemia, Other Candida Infections

IV: ADULTS, ELDERLY: Give single 200-mg loading dose on day 1, followed by 100 mg/day thereafter for at least 14 days after last positive culture.

Esophageal Candidiasis

IV: ADULTS, ELDERLY: Give single 100-mg loading dose on day 1, followed by 50 mg/day thereafter for a minimum of 14 days and for at least 7 days following resolution of symptoms.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Rare (3%–1%): Diarrhea, nausea, headache, rigors, peripheral edema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypokalemia occurs in 4% of pts. Hypersensitivity reaction characterized by facial flushing, hypotension, pruritus, urticaria, rash occurs rarely. Hepatitis, elevated LFT, hepatic failure reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, serum chemistry, hepatic enzyme levels. Obtain specimens for fungal culture prior to therapy. Treatment may be instituted before results are known.

INTERVENTION/EVALUATION

Monitor for evidence of hepatic dysfunction, hypokalemia. Monitor daily pattern of bowel activity, stool consistency. Assess for rash, urticaria.

PATIENT/FAMILY TEACHING

- For esophageal candidiasis, maintain diligent oral hygiene.

antihemophilic factor (factor VIII, AHF)

an-tee-hee-moe-**fil**-ik **fak**-tor (**Antihemophilic Factor/von Willebrand Factor Complex:** Alphanate, Humate-P, Wilate. **Human:** Hemofil M, Koate-DVI, Monoclate-P. **Recombinant:** Advate, Hexilate FS, Kogenate FS, Recombinate, Xyntha)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antihemophilic agent. **CLINICAL:** Hemostatic.

USES

Human: Prevention/treatment of hemorrhagic episodes, perioperative management of hemophilia A. **Alphanate, Humate-P, Wilate:** Prevention/treatment of hemorrhagic episodes in pts with hemophilia A. Prophylaxis with surgical/invasive procedures, treatment of bleeding in pts with von Willebrand disease (vWD) when desmopressin is known or suspected to be inadequate. **Recombinant:** Management of hemophilia A, prevention and control of bleeding episodes, perioperative management of hemophilia A, prophylaxis of joint bleeding and reduce risk of joint damage in children with hemophilia A.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic disease, pts with blood types A, B, AB (progressive anemia, intravascular hemolysis may occur).

ACTION

Assists in conversion of prothrombin to thrombin, essential for blood coagulation. Replaces missing clotting factor VIII. **Therapeutic Effect:** Produces hemostasis; corrects or prevents bleeding episodes.

PHARMACOKINETICS

Half-life: 8–27 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Human: Injection, Powder for Reconsitution (Hemofil M, Koate-DVI, Monoclate-P): Actual number of units listed on each vial. **Alphanate:** 250 units, 500 units, 1,000 units, 1,500 units. **Humate-P:** 250 units, 500 units, 1,000 units. **Recombinant: Injection, Powder for Reconsitution: Advate:** 250 units, 500 units, 1,000 units, 1,500 units, 2,000 units, 3,000 units. **Hexilate, Kogenate, Recombinate:** 250 units, 500 units, 1,000 units. **Xyntha:** 250 units, 500 units, 1,000 units, 2,000 units.

ADMINISTRATION/HANDLING

IV

Reconstitution • Warm concentrate and diluent to room temperature. • Using needle supplied by the manufacturer, add diluent to powder to dissolve, gently agitate or rotate. Do not shake vigorously. Complete dissolution may take 5–10 min. • Use second filtered needle supplied by the manufacturer, and add to infusion bag.

Rate of Administration • **Advate:** Over 5 min or less. **Maximum:** 10 ml/min. • **Hexilate FS, Kogenate FS:** Over 1–15 min based on pt tolerance. • **Xyntha:** Over several min. • **Hemofil M, Koate-DVI:** Over 5–10 min. **Maximum:** 10 ml/min. • **Monoclate-P:** Infuse at 2 ml/min. • **Alphanate:** 10 ml/min. **Humate-P:** 4 ml/min.

Administration Precautions • Check pulse rate prior to and following administration. If pulse rate increases, reduce or stop administration. • After administration, apply prolonged pressure on venipuncture site. • Monitor IV site for oozing q5–15min for 1–2 hrs following administration.

Storage • May refrigerate or store at room temperature. • See individual products for specific storage durations.

IV INCOMPATIBILITIES

Do not mix with other IV solutions or medications.

INDICATIONS/ROUTES/DOSAGE

Hemophilia A, Von Willebrand Disease

IV: ADULTS, ELDERLY, CHILDREN: Dosage is highly individualized and is based on pt's weight, severity of bleeding, coagulation studies.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: Allergic reaction, including fever, chills, urticaria, wheezing, hypotension, nausea, feeling of chest tightness, stinging at injection site, dizziness, dry mouth, headache, altered taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Risk of transmitting viral hepatitis. Intravascular hemolysis may occur if large or frequent doses are used with blood group A, B, or AB.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

When monitoring B/P, avoid overinflation of cuff. Remove adhesive tape from any pressure dressing carefully and slowly.

INTERVENTION/EVALUATION

Following IV administration, apply prolonged pressure on venipuncture site. Monitor IV site for oozing q5–15 min for 1–2 hrs following administration. Assess for allergic reaction. Immediately report any evidence of hematuria or change in vital signs. Assess for decreases in B/P, increased pulse rate, complaint of abdominal or back pain, severe headache (may be evidence of hemorrhage). Question for increased discharge during menses. Assess skin for bruises, petechiae. Check for excessive bleeding from minor cuts, scratches. Assess gums for erythema, gingival bleeding. Assess urine for hematuria. Evaluate for therapeutic relief of pain, reduction of swelling, restricted joint movement.

PATIENT/FAMILY TEACHING

• Use electric razor, soft toothbrush to prevent bleeding. • Report any sign of bleeding, including red or dark urine, black/red stool, coffee-ground vomitus, blood-tinged mucus from cough. • Wear identification indicating a hemolytic condition. • Bring adequate supply of agent when traveling.

apixaban

a-**pix**-a-ban
(Eliquis)

Do not confuse apixaban with rivaroxaban, argatroban, or dabigatran.

■ **BLACK BOX ALERT** ■ Discontinuation in absence of alternative anticoagulation increases risk for thrombotic events. An increased rate of stroke noted following discontinuation in pts with non-valvular atrial fibrillation. If apixaban must be

discontinued based on other than pathologic bleeding, coverage with another anticoagulant should be strongly considered.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Factor Xa inhibitor. **CLINICAL:** Anticoagulant.

USES

Reduces risk for stroke, systemic embolism in pts with nonvalvular atrial fibrillation. Prophylaxis of DVT following hip or knee replacement surgery. Treatment of DVT and PE. Reduce risk of recurrent DVT/PE following initial therapy.

PRECAUTIONS

Contraindications: Active pathologic bleeding. **Cautions:** Mild to moderate hepatic impairment, severe renal impairment (may increase bleeding risk). Avoid use in pts with severe hepatic impairment, prosthetic heart valve.

ACTION

Selectively blocks active site of factor Xa, a key factor in the intrinsic and extrinsic pathway of blood coagulation cascade. Prevents new clot formation, secondary thromboembolic complications. **Therapeutic Effect:** Inhibits clot-induced platelet aggregation, fibrin clot formation.

PHARMACOKINETICS

Readily absorbed after PO administration. Peak plasma concentration: 3–4 hrs. Protein binding: 87%. Metabolized in liver. Excreted primarily in urine, feces. **Half-life:** 12 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., carbamazepine, rifampin) may decrease level/effect. **Aspirin, NSAIDs, warfarin, heparin, antiplatelet agents, CYP3A4 inhibitors, (e.g., ketoconazole, clarithromycin)** may increase concentration, bleeding risk. **HERBAL: St. John's wort** may decrease level/effect. **Flaxseed, garlic, ginger, ginko biloba, ginseng, Omega-3** may increase risk of bleeding. **FOOD: Grapefruit products** may increase level/adverse effects. **LAB VALUES:** May decrease platelet count, Hgb, LFT.

AVAILABILITY (Rx)

Tablets: 2.5 mg, 5 mg.

ADMINISTRATION/HANDLING

◄ALERT► Discontinuation in absence of alternative anticoagulation increases risk for thrombotic events.

PO

• Give without regard to meals. • If elective surgery or invasive procedures with moderate or high risk for bleeding, discontinue apixaban at least 24–48 hrs prior to procedure.

INDICATIONS/ROUTES/DOSAGE

Reduce Risk of Stroke/Systemic Embolism

PO: ADULTS, ELDERLY: 5 mg twice daily. In pts with at least 2 of the following characteristics: age 80 yrs or older, body weight 60 kg or less, serum creatinine 1.5 mg/dL or greater, concurrent use with CYP3A4, or P-gp inhibitors (e.g., ketoconazole, ritonavir); then reduce dose to 2.5 mg twice daily.

DVT/PE Treatment

PO: ADULTS/ELDERLY: 10 mg twice daily for 7 days, then 5 mg twice daily.

DVT Prophylaxis, Reduce Risk Recurrent DVT/PE

PO: ADULTS, ELDERLY: 2.5 mg twice daily.

Dosage in Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Rare (3%–1%): Nausea, ecchymosis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increased risk for bleeding/hemorrhagic events. May cause serious, potentially fatal, bleeding, accompanied by one or more of the following: a decrease in Hgb of 2 g/dL or more; a need for 2 or more units of packed RBCs; bleeding occurring at one of the following sites: intracranial, intraspinal, intraocular, pericardial, intra-articular, intramuscular with compartment syndrome, retroperitoneal. Serious reactions include jaundice, cholestasis, cytolytic hepatitis, Stevens-Johnson syndrome, hypersensitivity reaction, anaphylaxis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, PT/INR. Question history of bleeding disorders, recent surgery, spinal punctures, intracranial hemorrhage, bleeding ulcers, open wounds, anemia, hepatic impairment. Obtain full medication history including herbal products.

INTERVENTION/EVALUATION

Periodically monitor CBC, stool for occult blood. Be alert for complaints of abdominal/back pain, headache, confusion, weakness, vision change (may indicate hemorrhage). Question for increased menstrual bleeding/discharge. Assess for any sign of bleeding: bleeding at surgical site, hematuria, blood in stool, bleeding from gums, petechiae, ecchymosis.

PATIENT/FAMILY TEACHING

• Do not take/discontinue any medication except on advice from physician. • Avoid alcohol, aspirin, NSAIDs. • Consult physician before surgery, dental work. • Use electric razor, soft toothbrush to prevent bleeding. • Report blood-tinged mucus from coughing, heavy menstrual bleeding, headache, vision problems, weakness, abdominal pain, frequent bruising, bloody urine or stool, joint pain or swelling.

apremilast

a-**pre**-mi-last
(Otezla)
Do not confuse apremilast with roflumilast.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Phosphodiesterase 4 (PDE4) inhibitor. **CLINICAL:** Anti–psoriatic arthritis agent.

USES

Treatment of adult pts with active psoriatic arthritis, moderate to severe plaque psoriasis.

PRECAUTIONS

Contraindications: Prior hypersensitivity reaction to apremilast. **Cautions:** History of depression, severe renal impairment, suicidal ideation.

ACTION

Selectively inhibits PDE4, increasing cyclic AMP (cAMP)–metabolizing enzymes. Specific therapeutic action in arthritis is not well defined. **Therapeutic Effect:** Reduces psoriatic arthritis exacerbations.

PHARMACOKINETICS

Readily absorbed after PO administration. Protein binding: 68%. Peak plasma concentration: 2.5 hrs. Metabolized in liver. Eliminated in urine (58%), feces (39%). **Half-life:** 6–9 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Not recommended for nursing mothers. **Pregnancy Category C. Children:** Safety

and efficacy not established in pt younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP450 inducers (carbamazepine, phenobarbital, phenytoin, rifampin) may decrease concentration/effect. **HERBAL: St. John's wort** may decrease concentration/effect. **FOOD:** None significant. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets: 10 mg, 20 mg, 30 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meal. Administer whole; do not crush, cut, dissolve, or divide.

INDICATIONS/ROUTES/DOSAGE

Psoriatic Arthritis, Plaque Psoriasis

PO: ADULTS/ELDERLY: Initially, titrate dose from day 1–day 5. **Day 1:** 10 mg in AM only. **Day 2:** 10 mg in AM; 10 mg in PM. **Day 3:** 10 mg in AM; 20 mg in PM. **Day 4:** 20 mg in AM; 20 mg in PM. **Day 5:** 20 mg in AM; 30 mg in PM. **Day 6/Maintenance:** 30 mg twice daily.

Dosage in Renal Impairment (CrCl less than 30 ml/min)

Initially, titrate dose from day 1–day 5 using only AM schedule. **Day 6/Maintenance:** 30 mg once daily.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (9%–4%): Nausea, diarrhea, headache, upper respiratory tract infection. **Rare (3% or less):** Vomiting, nasopharyngitis, upper abdominal pain.

ADVERSE EFFECTS/TOXIC REACTIONS

Increased risk of depression reported in less than 1% of pts. Weight decrease of 5%–10% of body weight occurred in 10% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline weight, vital signs. Question history of depression, severe renal impairment, suicidal ideations. Screen for prior allergic reactions to drug class. Receive full medication history including herbal products. Assess degree of joint pain, range of motion, mobility.

INTERVENTION/EVALUATION

Be alert for worsening depression, suicidal ideation. Monitor for weight loss.

Assess for dehydration if diarrhea occurs. Assess improvement of joint pain, range of motion, mobility.

PATIENT/FAMILY TEACHING

• Report changes in mood or behavior, thoughts of suicide, self-destructive behavior. Report weight loss of any kind. • Increase fluid intake if dehydration suspected. • Immediately notify physician if pregnancy suspected. • Do not chew, crush, dissolve, or divide tablets.

aprepitant/fosaprepitant

a-**prep**-i-tant/fos-a-**prep**-i-tant (Emend)

Do not confuse fosaprepitant with aprepitant, fosamprenavir, or fospropofol.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective receptor antagonist. **CLINICAL:** Antinausea, antiemetic.

USES

PO/IV: Prevention of nausea, vomiting associated with repeat courses of moderate to high emetogenic cancer chemotherapy. **PO:** Prevention of postop nausea, vomiting.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe hepatic impairment. Concurrent use of medications metabolized through CYP3A4 **(e.g., docetaxol, etoposide, ifosfamide, imatinib, irinotecan, paclitaxel, vinbastine, vincristine, vinorelbine).**

ACTION

Inhibits substance P receptor, augments antiemetic activity of 5-HT_3 receptor antagonists. **Therapeutic Effect:** Prevents acute and delayed phases of chemotherapy-induced emesis.

PHARMACOKINETICS

Moderately absorbed from GI tract. Crosses blood-brain barrier. Extensively metabolized in liver. Protein binding: greater than 95%. Eliminated primarily by liver metabolism (not excreted renally). **Half-life:** 9–13 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., ketoconazole, clarithromycin) may increase concentration. **Strong CYP3A4 inducers (e.g., carbamazepine, rifampin)** may decrease concentration. May decrease effectiveness of **hormonal contraceptives, warfarin. HERBAL: St. John's wort** may decrease plasma concentration. **FOOD: Grapefruit products** may increase plasma concentration. **LAB VALUES:** May increase serum BUN, creatinine, glucose, alkaline phosphatase, ALT, AST. May produce proteinuria.

AVAILABILITY (Rx)

Capsules (Emend): 40 mg, 80 mg, 125 mg. **Emend (Combination):** 80 mg (2), 125 mg (1). **Injection, Powder for Reconstitution (Fosaprepitant):** 150 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

IV

Reconstitution • Reconstitute each vial with 5 ml 0.9% NaCl. • Add to 145 ml 0.9% NaCl to provide a final concentration of 1 mg/ml.

Rate of Administration • Infuse over 20–30 min 30 min prior to chemotherapy.

Storage • Refrigerate unreconstituted vials. • After reconstitution, solution is stable at room temperature for 24 hrs.

IV INCOMPATIBILITIES

Do not infuse with any solutions containing calcium or magnesium.

INDICATIONS/ROUTES/DOSAGE

Prevention of Chemotherapy-Induced Nausea, Vomiting

PO: ADULTS, ELDERLY: 125 mg 1 hr before chemotherapy on day 1 and 80 mg once a day in the morning on days 2 and 3.

IV: ADULTS, ELDERLY (SINGLE-DOSE REGIMEN): 150 mg over 20–30 min 30 min prior to chemotherapy (in combination with a 5-HT_3 antagonist on day 1 and dexamethasone on days 1 to 4).

Prevention of Postop Nausea, Vomiting

PO: ADULTS, ELDERLY: 40 mg once within 3 hrs prior to induction of anesthesia.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (17%–10%): Fatigue, nausea, hiccups, diarrhea, constipation, anorexia. **Occasional (8%–4%):** Headache, vomiting, dizziness, dehydration, heartburn. **Rare (3% or less):** Abdominal pain, epigastric discomfort, gastritis, tinnitus, insomnia.

A

ADVERSE EFFECTS/ TOXIC REACTIONS

Neutropenia, mucous membrane disorders occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for dehydration (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue).

INTERVENTION/EVALUATION

Monitor hydration, nutritional status, I&O. Assess bowel sounds for peristalsis. Assist with ambulation if dizziness occurs. Provide supportive measures. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Relief from nausea/vomiting generally occurs shortly after drug administration. • Report persistent vomiting, headache. • May decrease effectiveness of oral contraceptives.

argatroban

HIGH ALERT

ar-**gat**-roe-ban

Do not confuse argatroban with Aggrestat.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Thrombin inhibitor. **CLINICAL:** Anticoagulant.

USES

Prophylaxis or treatment of thrombosis in heparin-induced thrombocytopenia (HIT). Prevention of HIT during percutaneous coronary procedures. **OFF-LABEL:** Maintain extracorporeal circuit patency of continuous renal replacement therapy (CRRT) in pts with HIT.

PRECAUTIONS

Contraindications: Active major bleeding. **Cautions:** Severe hypertension, immediately following lumbar puncture, spinal anesthesia, major surgery, pts with congenital or acquired bleeding disorders, ulcerations, hepatic impairment, critically ill pts.

ACTION

Direct thrombin inhibitor that reversibly binds to thrombin-active sites. Inhibits thrombin-catalyzed or thrombin-induced reactions, including fibrin formation, activation of coagulant factors V, VIII, and XIII; inhibits protein C formation, platelet aggregation. **Therapeutic Effect:** Produces anticoagulation.

PHARMACOKINETICS

Distributed primarily in extracellular fluid. Protein binding: 54%. Metabolized in liver. Primarily excreted in the feces, presumably through biliary secretion. **Half-life:** 39–51 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if excreted in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in pts younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Antiplatelet agents, other anticoagulants, thrombolytics, NSAIDs may increase the risk of bleeding. **HERBAL: Dong quai, evening primrose oil, ginkgo, policosanol, willow bark** may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** Prolongs prothrombin time (PT), activated partial thromboplastin time (aPTT), international normalized ratio (INR). May decrease Hgb, Hct.

AVAILABILITY (Rx)

Infusion (Pre-Mix): 125 mg/125 ml 0.9% NaCl; 50 mg/50 ml Sterile Water for Injection. **Injection Solution:** 100 mg/ml (2.5 ml).

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute each 250-mg vial with 250 ml 0.9% NaCl, D_5W to provide a final concentration of 1 mg/ml.
Rate of Administration • Initial rate of administration is based on body weight at 2 mcg/kg/min (e.g., 50-kg pt infuse at 6 ml/hr). Dosage should not exceed 10 mcg/kg/min.
Storage • Discard if solution appears cloudy or an insoluble precipitate is noted. • Following reconstitution, stable for 96 hrs at room temperature or refrigerated. • Avoid direct sunlight.

IV INCOMPATIBILITY

Amiodarone (Cardarone).

IV COMPATIBILITIES

Diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), furosemide (Lasix), midazolam (Versed), morphine, vasopressin (Pitressin). Refer to IV Compatibility Chart in front of book.

INDICATIONS/ROUTES/DOSAGE

Heparin-Induced Thrombocytopenia (HIT)

IV Infusion: ADULTS, ELDERLY: Initially, 2 mcg/kg/min administered as a continuous infusion. After initial infusion, dose may be adjusted until steady-state aPTT is 1.5–3 times initial baseline value, not to exceed 100 sec. Dosage should not exceed 10 mcg/kg/min.

Percutaneous Coronary Intervention

IV Infusion: ADULTS, ELDERLY: Initially, administer bolus of 350 mcg/kg over 3–5 min, then infuse at 25 mcg/kg/min. Check ACT (activated clotting time) 5–10 min following bolus. If ACT is less than 300 sec, give additional bolus 150 mcg/kg, increase infusion to 30 mcg/kg/min. If ACT is greater than 450 sec, decrease infusion to 15 mcg/kg/min. Once ACT of 300–450 sec achieved, continue dose through duration of procedure.

Dosage in Hepatic Impairment

ADULTS, ELDERLY: Initially, 0.5 mcg/kg/min. **CHILDREN:** Initially, 0.2 mcg/kg/min. Adjust dose in increments of 0.05 mcg/kg/min or less.

SIDE EFFECTS

Frequent (8%–3%): Dyspnea, hypotension, fever, diarrhea, nausea, pain, vomiting, infection, cough.

ADVERSE EFFECTS/ TOXIC REACTIONS

Ventricular tachycardia, atrial fibrillation occur occasionally. Major bleeding, sepsis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, PT, aPTT. Determine initial B/P. Minimize need for multiple injection sites, blood draws, catheters.

INTERVENTION/EVALUATION

Assess for any sign of bleeding: bleeding at surgical site, hematuria, melena, bleeding from gums, petechiae, ecchymoses, bleeding from injection sites. Handle pt carefully and infrequently to prevent bleeding. Assess for decreased B/P, increased pulse rate, complaint of abdominal/back pain, severe headache (may indicate hemorrhage). Monitor ACT, PT, aPTT, platelet count, Hgb, Hct. Question for increase in discharge during menses. Assess for hematuria. Observe skin for any occurring ecchymoses, petechiae, hematoma. Use care in removing any dressing, tape.

PATIENT/FAMILY TEACHING

• Use electric razor, soft toothbrush to prevent cuts, gingival trauma. • Report any sign of bleeding, including red/dark urine, black/red stool, coffee-ground vomitus, blood-tinged mucus from cough.

aripiprazole

TOP 100

ar-i-**pip**-ra-zole
(Abilify, Abilify Discmelt, Abilify Maintena)

■ **BLACK BOX ALERT** ■ Increased risk of mortality in elderly pts with dementia-related psychosis, mainly due to pneumonia, heart failure. Risk may be increased by dehydration. Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse Abilify with Ambien, or aripiprazole with esomeprazole, omeprazole, pantoprazole, or rabeprazole (proton pump inhibitors).

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Dopamine agonist. **CLINICAL:** Antipsychotic agent.

USES

PO: Treatment of schizophrenia. Maintains stability in pts with schizophrenia. Treatment of bipolar disorder. Maintenance treatment of bipolar disorder as an adjunct to either lithium or valproate. Adjunct treatment in major depressive disorder. Treatment of irritability associated with autistic disorder in children 6–17 yrs of age. **IM: (Immediate):** Agitation associated with schizophrenia/bipolar disorder. **Abilify Maintenance: (Extended):** Treatment of schizophrenia in adults. **OFF-LABEL:** Schizoaffective disorder, depression with psychotic features, aggression, bipolar disorder (children), conduct disorder (children), Tourette's syndrome (children), psychosis/agitation related to Alzheimer's dementia.

PRECAUTIONS

Contraindications: None known. **Cautions:** Concurrent use of CNS depressants (including alcohol), disorders in which CNS depression is a feature, cardiovascular or cerebrovascular diseases (may induce hypotension), Parkinson's disease (potential for exacerbation), history of seizures or conditions that may lower seizure threshold (Alzheimer's disease), diabetes mellitus. Pts at risk for pneumonia. Elderly with dementia.

ACTION

Provides partial agonist activity at dopamine and serotonin ($5\text{-}HT_{1A}$) receptors and antagonist activity at serotonin ($5\text{-}HT_{2A}$) receptors. **Therapeutic Effect:** Diminishes schizophrenic behavior.

PHARMACOKINETICS

Well absorbed through GI tract. Protein binding: 99% (primarily albumin). Reaches steady levels in 2 wks. Metabolized in liver. Eliminated in feces (55%), urine (25%). Not removed by hemodialysis. **Half-life:** 75 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta. May be distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** May increase serum glucose. May decrease neutrophils, leukocytes.

INTERACTIONS

DRUG: **Alcohol** may potentiate cognitive and motor effects. **CYP3A4 inducers (e.g., carbamazepine)** may decrease concentration. **CYP3A4 inhibitors (e.g., itraconazole, ketoconazole)** may increase concentration. **HERBAL:** **St. John's wort** may decrease levels. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Solution (Abilify): 9.75 mg/1.3 ml (7.5 mg/ml). **Solution, Oral:** 1 mg/ml. **Tablets:** 2 mg, 5 mg, 10 mg, 15 mg, 20 mg, 30 mg. **Tablets, Orally Disintegrating:** 10 mg, 15 mg. **Injection, Powder for**

Reconstitution (Abilify Maintena): 300 mg, 400 mg.

ADMINISTRATION/HANDLING

IM (Abilify)

• For IM use only (inject slowly into deep muscle mass). Do not administer IV or subcutaneous.

IM (Abilify Maintena)

• Reconstitute 400-mg vial with 1.9 ml Sterile Water for Injection (300-mg vial with 1.5 ml) to provide a concentration of 100 mg/0.5 ml. Once reconstituted, administer in gluteal muscle. Do not administer via IV or subcutaneously.

PO

• Give without regard to food.

Orally Disintegrating Tablet

• Remove tablet, place entire tablet on tongue. • Do not break, split tablet. • May give without liquid.

INDICATIONS/ROUTES/DOSAGE

Note: May substitute oral solution/tablet mg per mg up to 25 mg. For 30-mg tablets, give 25 mg oral solution.

CYP3A4 Inducers: Aripiprazole dose should be doubled. **CYP3A4 Inhibitors:** Aripiprazole dose should be reduced by 50%.

Schizophrenia

PO: ADULTS, ELDERLY: Initially, 10–15 mg once a day. May increase up to 30 mg/day. Titrate dose at minimum of 2-wk intervals. **CHILDREN 13–17 YRS:** Initially, 2 mg/day for 2 days, then 5 mg/day for 2 days. May further increase to target dose of 10 mg/day. May then increase in increments of 5 mg up to maximum of 30 mg/day. **IM:** ***(Abilify Maintena):*** **ADULTS, ELDERLY:** Initially, 400 mg monthly (separate doses by at least 26 days).

Bipolar Disorder

PO: ADULTS, ELDERLY: Monotherapy: Initially, 15 mg once daily. **Adjunct to lithium or valproic acid:** Initially, 10–15 mg. May increase to 30 mg/day based on pt tolerance. **CHILDREN 10–17 YRS:** Initially, 2 mg/day for 2 days, then 5 mg/day for 2 days. May further increase to a target of 10 mg/day. Give subsequent dose increases of 5 mg/day. **Maximum:** 30 mg/day.

Major Depressive Disorder (Adjunct to Antidepressants)

PO: ADULTS, ELDERLY: ***(Abilify):*** Initially, 2–5 mg/day. May increase up to 15 mg/day. Titrate dose in 5-mg increments of at least 1-wk intervals.

Agitation with Schizophrenia/Bipolar Disorder

IM: ADULTS, ELDERLY ***(Abilify):*** 5.25–15 mg as a single dose. May repeat after 2 hrs. **Maximum:** 30 mg/day.

Irritability with Autistic Disorder

PO: CHILDREN 6–17 YRS: Initially, 2 mg/day for 7 days followed by increase to 5 mg/day. Subsequent increases made in 5-mg increments at intervals of at least 1 wk. **Maximum:** 15 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (11%–5%): Weight gain, headache, insomnia, vomiting. **Occasional (4%–3%):** Light-headedness, nausea, akathisia, drowsiness. **Rare (2% or less):** Blurred vision, constipation, asthenia (loss of strength, energy), anxiety, fever, rash, cough, rhinitis, orthostatic hypotension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Extrapyramidal symptoms, neuroleptic malignant syndrome, tardive dyskinesia, hyperglycemia, ketoacidosis, hyperosmolar coma, CVA, TIA occur rarely. Prolonged QT interval occurs rarely. May cause leukopenia, neutropenia, agranulocytosis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content. Correct dehydration, hypovolemia. Assess for suicidal tendencies.

INTERVENTION/EVALUATION

Periodically monitor weight. Monitor for extrapyramidal symptoms (abnormal movement), tardive dyskinesia (protrusion of tongue, puffing of cheeks, chewing/puckering of the mouth). Periodically monitor B/P, pulse (particularly in pts with preexisting cardiovascular disease). Assess for therapeutic response (greater interest in surroundings, improved self-care, increased ability to concentrate, relaxed facial expression).

PATIENT/FAMILY TEACHING

• Avoid alcohol. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report worsening depression, suicidal ideation, unusual changes in behavior, extrapyramidal effects.

armodafinil

HIGH ALERT

ar-moe-**daf**-i-nil
(Nuvigil)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: $Alpha_1$ agonist. **CLINICAL:** CNS stimulant.

USES

Treatment of excessive daytime sleepiness associated with obstructive sleep apnea–hypopnea syndrome, narcolepsy, shift-work sleep disorder.

PRECAUTIONS

Contraindications: History of sensitivity to modafinil. **Cautions:** History of mitral valve prolapse, left ventricular hypertrophy, hepatic impairment, recent history of MI, unstable angina, cardiac ischemia, drug abuse, psychosis, depression, mania, renal impairment, elderly.

ACTION

Exact mechanism unknown. May bind to dopamine reuptake carrier sites in the brain, increasing alpha activity, decreasing delta, theta, and beta activity. **Therapeutic Effect:** Improves wakefulness.

PHARMACOKINETICS

Well absorbed. Widely distributed. Mainly eliminated by hepatic metabolism with less than 10% excreted by kidneys. Unknown if removed by hemodialysis. **Half-life:** 15 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Use caution in pregnant women. **Pregnancy Category C. Children:** Safety and efficacy not established in pts younger than 17 yrs. **Elderly:** Age-related renal/hepatic impairment may require decreased dosage.

INTERACTIONS

DRUG: Carbamazine, erythromycin, ketoconazole, phenobarbital, rifampin may alter concentration/effect. May reduce effects of **cyclosporine, oral contraceptives.** May increase concentrations of **diazepam, omeprazole, phenytoin, propanolol, tricyclic antidepressants, warfarin. HERBAL:** None significant. **FOOD: Food** slows peak concentration by 2–4 hrs; may affect time of onset, length of drug action. **LAB VALUES:** May increase alkaline phosphatase, GGT. May decrease serum uric acid.

AVAILABILITY (Rx)

Tablets: 50 mg, 150 mg, 250 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Narcolepsy, Obstructive Sleep Apnea–Hypopnea Syndrome

PO: ADULTS, ELDERLY: 150 or 250 mg/day given as a single dose in the morning.

Shift-Work Sleep Disorder

PO: ADULTS, ELDERLY: 150 mg given daily approximately 1 hr prior to the start of work shift.

Dosage in Renal/Hepatic Impairment

See Cautions.

SIDE EFFECTS

Frequent (17%–7%): Headache, nausea. **Occasional (5%–4%):** Dizziness, insomnia, dry mouth, diarrhea, anxiety. **Rare (2%):** Depression, fatigue, palpitations, dyspepsia, rash, upper abdominal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Small risk of serious rash, including Stevens-Johnson syndrome.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline evidence of narcolepsy or other sleep disorders, including pattern, environmental situations, lengths of time of sleep episodes. Question for sudden loss of muscle tone (cataplexy) precipitated by strong emotional responses before sleep episode. Assess frequency/severity of sleep episodes prior to drug therapy.

INTERVENTION/EVALUATION

Monitor sleep pattern, evidence of restlessness during sleep, length of insomnia episodes at night. Assess for dizziness, anxiety; initiate fall precautions.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid or limit alcohol. • Use alternative contraceptives during therapy and 1 mo after discontinuing drug (reduces effectiveness of oral contraceptives). Report rash, depression, diarrhea, insomnia. • Sips of water may relieve dry mouth.

arsenic trioxide HIGH ALERT

ar-sen-ik tri-**ox**-ide

(Trisenox)

■ **BLACK BOX ALERT** ■ May prolong QT interval. May lead to multiform ventricular tachycardia (torsade de pointes) or complete AV block. May cause retinoic acid–acute promyelocytic leukemia (RA-APL) syndrome or acute promyelocytic leukemia.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antineoplastic. **CLINICAL:** Antineoplastic.

USES

Induction of remission and consolidations in pts with relapsed or refractory acute promyelocytic leukemia (APL). **OFF-LABEL:** Treatment of myelodysplastic syndrome; initial treatment of APL.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment, preexisting QT-interval prolongation, concomitant medications that prolong QT interval. HF, history of torsades de pointes, conditions causing hypokalemia/hypomagnesemia.

ACTION

Produces morphologic changes and DNA fragmentation in promyelocytic leukemia cells. **Therapeutic Effect:** Induces apoptosis is in APL cells.

PHARMACOKINETICS

Distributed in liver, kidneys, heart, lungs, hair, and nails. Metabolized in liver. Eliminated by kidneys. **Half-life:** Not available.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. May cause fetal harm. **Pregnancy Category D. Children:** Safety and efficacy not established in those younger than 5 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May prolong QT interval in pts taking **antiarrhythmics, moxifloxacin, thioridazine. Amphotericin B, cyclosporine, diuretics** may produce electrolyte abnormalities. **HERBAL: Bilberry, fenugreek, garlic, ginger, ginseng** may worsen hypoglycemia. **FOOD:** None known. **LAB VALUES:** May decrease WBC count, Hgb, platelet count, serum magnesium, calcium. May increase serum ALT, AST. Higher risk of hypokalemia than hyperkalemia, hyperglycemia than hypoglycemia.

AVAILABILITY (Rx)

Injection Solution: 1 mg/ml (10 ml).

ADMINISTRATION/HANDLING

IV

◄ALERT► Central venous line is not required for drug administration.

Reconstitution • After withdrawing drug from ampule, dilute with 100–250 ml D_5W or 0.9% NaCl.

Rate of Administration • Infuse over 1–2 hrs. • Duration of infusion may be extended up to 4 hrs if acute vasomotor reactions occur.

Storage • Store at room temperature. • Diluted solution is stable for 24 hrs at room temperature, 48 hrs if refrigerated.

IV INCOMPATIBILITIES

Do not mix with any other medications.

INDICATIONS/ROUTES/DOSAGE

Note: Obtain baseline 12-lead EKG, electrolytes, creatinine prior to treatment.

Acute Promyelocytic Leukemia

IV: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: Induction: 0.15 mg/kg/day until bone marrow remission. Do not exceed 60 induction doses. **Consolidation:** Beginning 3–6 wks after completion of induction therapy, 0.15 mg/kg/day for maximum 25 doses over a period of up to 5 wks.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Expected (75%–50%): Nausea, cough, fatigue, fever, headache, vomiting, abdominal pain, tachycardia, diarrhea, dyspnea. **Frequent (43%–30%):** Dermatitis, insomnia, edema, rigors, prolonged QT interval, sore throat, pruritus, arthralgia, paresthesia, anxiety. **Occasional (28%–20%):** Constipation, myalgia, hypotension, epistaxis, anorexia, dizziness, sinusitis. **(15%–8%):** Ecchymosis, nonspecific pain, weight gain, herpes simplex infections, wheezing, flushing, diaphoresis, tremor, hypertension, palpitations, dyspepsia, eye irritation, blurred vision, asthenia (loss of strength, energy), adventitious or diminished breath sounds (crackles). **Rare:** Confusion, petechiae, dry mouth, oral candidiasis, incontinence, pulmonary rhonchi.

ADVERSE EFFECTS/ TOXIC REACTIONS

Seizures, GI hemorrhage, renal impairment or failure, pleural or pericardial effusion, hemoptysis, sepsis occur rarely. Prolonged QT interval, complete AV block, unexplained fever, dyspnea, weight gain, effusion are evidence of arsenic toxicity. Treatment should be halted, steroid therapy instituted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess platelet count, Hgb, Hct, WBC, serum electrolytes, hepatic function, coagulation profiles before and frequently during treatment. Ask if pt is breastfeeding.

INTERVENTION/EVALUATION

Monitor hepatic function test results, CBC, serum values. Monitor for arsenic toxicity syndrome (fever, dyspnea, weight gain, confusion, muscle weakness, seizures).

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report high fever, vomiting, difficulty breathing, or rapid heart rate.

ascorbic acid (vitamin C)

a-**skor**-bic **as**-id
(Proflavanol C, Revitalose C-1000, Vita-C)

CLASSIFICATION

CLINICAL: Vitamin.

USES

Prevention and treatment of scurvy, acidification of urine, dietary supplement. **OFF-LABEL:** Prevention of common cold (large doses), urinary acidifier.

PRECAUTIONS

Contraindications: Large doses during pregnancy. **Cautions:** None significant.

ACTION

Assists in collagen formation, tissue repair, and is involved in oxidation reduction reactions, other metabolic reactions. **Therapeutic Effect:** Involved in carbohydrate utilization and metabolism, as well as synthesis of carnitine, lipids, proteins. Preserves blood vessel integrity.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 25%. Metabolized in liver. Excreted in urine. Removed by hemodialysis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; excreted in breast milk. Large doses during pregnancy may produce scurvy in neonates. **Pregnancy Category A (C if used in doses above recommended daily allowance).** **Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase level of **estrogen.** May decrease level of **cyclosporine.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum bilirubin, urinary pH. May increase serum uric acid, urinary oxalate.

AVAILABILITY

Capsules: 500 mg, 1,000 mg. **Crystals:** 4 g/tsp. **Injection, Solution:** 500 mg/ml. **Liquid, Oral:** 500 mg/5 ml. **Tablets:** 100 mg, 250 mg, 500 mg, 1,000 mg. **Tablets (Chewable):** 250 mg, 500 mg.

Capsules (Timed-Release): 500 mg. **Tablets (Timed-Release):** 500 mg, 1,000 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • May give undiluted or dilute in D_5W, 0.9% NaCl, lactated Ringer's solution. • For IV push, dilute with equal volume D_5W or 0.9% NaCl and infuse over 10 min.

Storage • Refrigerate. • Protect from freezing and light.

PO

• Give without regard to food but best given with meals. • Do not crush time-release formulations.

INDICATIONS/ROUTES/DOSAGE

Dietary Supplement

PO: ADULTS, ELDERLY: 50–200 mg/day. **CHILDREN:** 35–100 mg/day.

Acidification of Urine

PO: ADULTS, ELDERLY: 4–12 g/day in 3–4 divided doses. **CHILDREN:** 500 mg q6–8h.

Scurvy

PO: ADULTS, ELDERLY: 100–250 mg 1–2 times a day for at least 2 wks. **CHILDREN:** 100–300 mg/day in divided doses for at least 2 wks.

Prevention, Reduction of Severity of Colds

PO: ADULTS, ELDERLY: 1–3 g/day in divided doses.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Rare: Abdominal cramps, nausea, vomiting, diarrhea, increased urination with doses exceeding 1 g. **Parenteral:** Flushing, headache, dizziness, sleepiness or insomnia, soreness at injection site.

ADVERSE EFFECTS/ TOXIC REACTIONS

May acidify urine, leading to crystalluria. Large doses of IV ascorbic acid may lead to deep vein thrombosis. Prolonged use of large doses may produce rebound ascorbic acid deficiency when dosage is reduced to normal range.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Assess for clinical improvement (improved sense of well-being and sleep patterns). Observe for reversal of deficiency symptoms (improving gingivitis, bleeding gums, poor wound healing, digestive difficulties, joint pain).

PATIENT/FAMILY TEACHING

• Larger doses may cause diarrhea, nausea, abdominal cramping. • Foods rich in vitamin C include rose hips, guava, black currant jelly, Brussels sprouts, green peppers, spinach, watercress, strawberries, citrus fruits.

asparaginase

HIGH ALERT

as-par-**a**-jin-ace
(Elspar, Erwinaze, Kidrolase)
Do not confuse asparaginase with pegaspargase.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Enzyme.
CLINICAL: Antineoplastic.

USES

(Elspar): Treatment of acute lymphoblastic leukemia (ALL). **(Erwinase):** Treatment of ALL in pts with hypersensitivity to *E. coli*–derived asparaginase. **OFF-LABEL:** Treatment of chronic lymphoblastic leukemia (CLL).

PRECAUTIONS

Contraindications: History of hypersensitivity to asparaginase. History of serious thrombosis, pancreatitis, or hemorrhagic events with prior asparaginase therapy. **Cautions:** Underlying coagulopathy, preexisting hepatic impairment.

ACTION

Inhibits DNA, RNA, protein synthesis by breaking down asparagine, depriving tumor cells of this essential amino acid. Cell cycle–specific for G_1 phase of cell division. **Therapeutic Effect:** Toxic to leukemic cells.

PHARMACOKINETICS

Metabolized by reticuloendothelial system through slow sequestration. **Half-life: IM:** 39–49 hrs; **IV:** 8–30 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. Breastfeeding not recommended. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase level of **dexamethasone.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ammonia, BUN, uric acid, glucose, partial thromboplastin time (PTT), platelet count, prothrombin time (PT), thrombin time (TT), ALT, AST, alkaline phosphatase, bilirubin. May decrease blood clotting factors (plasma fibrinogen, antithrombin, plasminogen), serum albumin, calcium, cholesterol.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 10,000 international units.

ADMINISTRATION/HANDLING

◄ALERT► May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration. Handle voided urine as infectious waste. Powder, solution may irritate skin on contact. Wash area for 15 min if contact occurs.

IV

Reconstitute 10,000 international units vial with 5 ml Sterile Water for Injection or 0.9% NaCl to provide a concentration of 2,000 international units/ml. • Shake gently to ensure complete dissolution (vigorous shaking produces foam, some loss of potency). Further dilute in 50–250 ml D_5W or 0.9% NaCl.

Rate of Administration • Infuse over at least 30 min.

Storage • Refrigerate powder for reconstitution. • Reconstituted solution stable for 8 hrs if refrigerated. • Gelatinous fiber-like particles may develop (remove via 5-micron filter during administration).

IM

• Add 2 ml 0.9% NaCl injection to 10,000 international units vial to provide a concentration of 5,000 international units/ml. • Administer no more than 2 ml into large muscle mass.

IV COMPATIBILITIES

Methotrexate, sodium bicarbonate.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IV: ADULTS, ELDERLY, CHILDREN: (Elspar): 6,000 units/m^2/dose 3 times/wk for 6–9 doses or 1,000 units/kg/day for 10 days. **IM: ADULTS, ELDERLY, CHILDREN:** (Elspar): 6,000 units/m^2/dose 3 times/wk for 6–9 doses.

Erwinaze

IM: ADULTS, ELDERLY, CHILDREN: As a substitute for pegaspargase: 25,000 units/m^2 3 times/wk for 6 doses. As a substitute for Elspar: 25,000 units/m^2 for each planned Elspar dose.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Allergic reaction (rash, urticaria, arthralgia, facial edema, hypotension, respiratory distress), pancreatitis (severe abdominal pain, nausea and vomiting). **Occasional:** CNS effects (confusion, drowsiness, depression, anxiety, fatigue), stomatitis, hypoalbuminemia or uric acid nephropathy (manifested as pedal or lower extremity edema), hyperglycemia. **Rare:** Hyperthermia (including fever or chills), thrombosis, seizures.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatotoxicity usually occurs within 2 wks of initial treatment. Risk of allergic reaction, including anaphylaxis, increases after repeated therapy. Myelosuppression may be severe.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

CBC, comprehensive serum chemistry should be performed before therapy begins and when 1 or more wks have elapsed between doses. Before giving

medication, agents for adequate airway and allergic reaction (antihistamine, epinephrine, O_2, IV corticosteroid) should be readily available. Assess baseline CNS functions.

INTERVENTION/EVALUATION

Monitor vital signs, CBC, urinalysis, serum amylase, hepatic enzymes, coagulation profile, glucose, uric acid. Discontinue medication at first sign of renal dysfunction (oliguria, anuria), pancreatitis. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding), symptoms of anemia, hypersensitivity reaction.

PATIENT/FAMILY TEACHING

• Increase fluid intake (protects against renal impairment). • Nausea may decrease during therapy. • Do not have immunizations without physician's approval (drug lowers body's resistance). • Avoid contact with those who have recently received a live virus vaccine. • Notify physician if abdominal pain, rash, nausea, vomiting occurs.

aspirin (acetylsalicylic acid, ASA)

TOP 100 HIGH ALERT

as-pir-in
(Asaphen E.C., Ascriptin, Bayer, Bufferin, Ecotrin, Entrophen, Halfprin, Novasen)
Do not confuse aspirin or Ascriptin with Afrin, Aricept, or Ecotrin with Epogen.

FIXED-COMBINATION(S)

Aggrenox: aspirin/dipyridamole (an antiplatelet agent): 25 mg/200 mg. **Fiorinal:** aspirin/butalbital/caffeine (a barbiturate): 325 mg/50 mg/40 mg. **Lortab/ASA:** aspirin/hydrocodone (an analgesic): 325 mg/5 mg. **Percodan:** aspirin/oxycodone (an analgesic): 325 mg/2.25 mg, 325 mg/4.5 mg. **Pravigard:** aspirin/pravastatin (a cholesterol-lowering agent): 81 mg/20 mg, 81 mg/40 mg, 81 mg/80 mg, 325 mg/20 mg, 325 mg/40 mg, 325 mg/80 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonsteroidal salicylate. **CLINICAL:** Anti-inflammatory, antipyretic, anticoagulant.

USES

Treatment of mild to moderate pain, fever. Reduces inflammation related to rheumatoid arthritis (RA), juvenile arthritis, osteoarthritis, rheumatic fever. Used as platelet aggregation inhibitor in the prevention of transient ischemic attacks (TIAs), cerebral thromboembolism, MI or reinfarction. **OFF-LABEL:** Prevention of pre-eclampsia; alternative therapy for preventing thromboembolism associated with atrial fibrillation when warfarin cannot be used; pericarditis associated with MI; prosthetic valve thromboprophylaxis. Adjunctive treatment of Kawasaki's disease. Complications associated with autoimmune disorders; colorectal cancer.

PRECAUTIONS

Contraindications: Hypersensitivity to salicylates, NSAIDs. Asthma, rhinitis, nasal polyps; inherited or acquired bleeding disorders; use in children (younger than 16 yrs) for viral infections. **Cautions:** Platelet/bleeding disorders, severe renal/hepatic impairment, dehydration, erosive gastritis, peptic ulcer disease, sensitivity to tartrazine dyes, elderly (chronic use of doses 325 mg or greater). Avoid use in pregnancy, especially third trimester.

ACTION

Inhibits cyclo-oxygenase enzyme via acetylation. Inhibits formation of prostaglandin derivative thromboxane A. **Therapeutic Effect:** Reduces inflammatory

response, intensity of pain; decreases fever; inhibits platelet aggregation.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	2–4 hrs	4–6 hrs

Rapidly and completely absorbed from GI tract; enteric-coated absorption delayed; rectal absorption delayed and incomplete. Protein binding: High. Widely distributed. Rapidly hydrolyzed to salicylate. **Half-life:** 15–20 min (aspirin); 2–3 hrs (salicylate at low dose); more than 20 hrs (salicylate at high dose).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; distributed in breast milk. May prolong gestation and labor; decrease fetal birth weight; increase incidence of stillbirths, neonatal mortality, hemorrhage. Avoid use during last trimester (may adversely affect fetal cardiovascular system: premature closure of ductus arteriosus). **Pregnancy Category C (D if full dose used in third trimester of pregnancy). Children:** Caution in pts with acute febrile illness (Reye's syndrome). **Elderly:** May be more susceptible to toxicity; lower dosages recommended.

INTERACTIONS

DRUG: **Alcohol, NSAIDs** may increase risk of GI effects (e.g., ulceration). **Antacids, urinary alkalinizers** increase excretion. **Anticoagulants, heparin, thrombolytics, rivaroxaban, ticagrelor** increase risk of bleeding. **HERBAL:** Avoid **cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng, green tea, horse chestnut, red clover** (possess antiplatelet activity). **FOOD:** None known. **LAB VALUES:** May alter serum ALT, AST, alkaline phosphatase, uric acid; prolongs prothrombin time (PT), bleeding time. May decrease serum cholesterol, potassium, T_3, T_4.

AVAILABILITY (OTC)

Caplets (Bayer): 81 mg, 325 mg, 500 mg. **Suppositories:** 300 mg, 600 mg. **Tablets:** 325 mg. **Tablets (Chewable [Bayer, St. Joseph]):** 81 mg.

Tablets (Enteric-Coated [Bayer, Ecotrin, St. Joseph]): 81 mg, 325 mg, 500 mg, 650 mg.

ADMINISTRATION/HANDLING

PO

• Do not break, crush, dissolve, or divide enteric-coated tablets. • May give with water, milk, meals if GI distress occurs.

Rectal

• Refrigerate suppositories; do not freeze. • If suppository is too soft, chill for 30 min in refrigerator or run cold water over foil wrapper. • Moisten suppository with cold water before inserting well into rectum.

INDICATIONS/ROUTES/DOSAGE

Analgesia, Fever

PO, Rectal: ADULTS, ELDERLY: 325–650 mg q4–6h. **CHILDREN:** 10–15 mg/kg/dose q4–6h. **Maximum:** 4 g/day.

Anti-Inflammatory

PO: ADULTS, ELDERLY: Initially, 2.4–3.6 g/day in divided doses, then 3.6–5.4 g/day. **CHILDREN:** Initially, 60–90 mg/kg/day in divided doses, then 80–100 mg/kg/day.

Revascularization

PO: ADULTS, ELDERLY: 80–325 mg/day.

Kawasaki's Disease

PO: CHILDREN: 80–100 mg/kg/day in divided doses q6h up to 14 days (until fever resolves for at least 48 hrs). After fever resolves, 1–5 mg/kg once a day for at least 6–8 wks.

Dosage in Renal/Hepatic Impairment

See Cautions.

SIDE EFFECTS

Occasional: GI distress (including abdominal distention, cramping, heartburn,

mild nausea); allergic reaction (including bronchospasm, pruritus, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

High doses of aspirin may produce GI bleeding and/or gastric mucosal lesions. Dehydrated, febrile children may experience aspirin toxicity quickly. Reye's syndrome, characterized by persistent vomiting, signs of brain dysfunction, may occur in children taking aspirin with recent viral infection (chickenpox, common cold, or flu). Low-grade aspirin toxicity characterized by tinnitus, generalized pruritus (may be severe), headache, dizziness, flushing, tachycardia, hyperventilation, diaphoresis, thirst. Marked toxicity characterized by hyperthermia, restlessness, seizures, abnormal breathing patterns, respiratory failure, coma.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Do not give to children or teenagers who have or recently had viral infections (increases risk of Reye's syndrome). Do not use if vinegar-like odor is noted (indicates chemical breakdown). Assess type, location, duration of pain, inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition. **Therapeutic serum level for antiarthritic effect:** 20–30 mg/dL (toxicity occurs if level is greater than 30 mg/dL).

INTERVENTION/EVALUATION

Monitor urinary pH (sudden acidification, pH from 6.5 to 5.5, may result in toxicity). Assess skin for evidence of ecchymosis. If given as antipyretic, assess temperature directly before and 1 hr after giving medication. Evaluate for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Do not, chew, crush, dissolve, or divide enteric-coated tablets. • Avoid alcohol. • Report tinnitus or persistent abdominal GI pain, bleeding. • Therapeutic anti-inflammatory effect noted in 1–3 wks. • Behavioral changes, persistent vomiting may be early signs of Reye's syndrome; contact physician.

atazanavir

TOP 100

a-ta-**zan**-a-veer
(Reyataz)
Do not confuse Reyataz with Retavase.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiretroviral. **CLINICAL:** Protease inhibitor.

USES

Treatment of HIV-1 infection in combination with at least two other antiretroviral agents.

PRECAUTIONS

Contraindications: Concurrent use with alfuzosin, ergot derivatives, indinavir, lovastatin, midazolam (oral), pimozide, rifampin, sildenafil (for pulmonary arterial hypertension), St. John's wort, simvastatin, triazolam. **Cautions:** Preexisting conduction system defects (first-, second-, or third-degree AV block), diabetes mellitus, elderly, renal impairment, hemophilia A or B, hepatitis B or C. Do not use in pts younger than 3 mos (potential for kernicterus).

ACTION

Binds to HIV-1 protease, inhibiting cleavage of viral precursors into functional proteins. **Therapeutic Effect:** Prevents formation of mature HIV viral cells.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 86%. Extensively metabolized in liver. Eliminated in feces (79%), urine (13%). **Half-life:** 5–8 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or distributed in breast milk. Lactic acidosis syndrome, hyperbilirubinemia, kernicterus have been reported. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 3 mos. **Elderly:** Age-related hepatic impairment may require dose reduction.

INTERACTIONS

DRUG: May increase concentration, toxicity of **amiodarone, atorvastatin, bepridil, clarithromycin, cyclosporine, diltiazem, felodipine, lidocaine, lovastatin, nicardipine, nifedipine, rosuvastatin, sildenafil, simvastatin, sirolimus, tacrolimus, tadalafil, tricyclic antidepressants, vardenafil, verapamil, warfarin. H_2-receptor antagonists, proton pump inhibitors, rifampin** may decrease concentration/effects. **Ritonavir, voriconazole** may increase concentration. **HERBAL:** **St. John's wort** may decrease concentration/effects. **FOOD:** **High-fat meals** may decrease absorption. **LAB VALUES:** May increase serum bilirubin, ALT, AST, amylase, lipase. May decrease Hgb, neutrophil count, platelets. May alter LDL, triglycerides.

AVAILABILITY (Rx)

Capsules: 150 mg, 200 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

• Give with food. • Swallow whole; do not break or open capsules. • Administer at least 2 hrs before or 10 hrs after H_2 antagonist, 12 hrs after proton pump inhibitor.

INDICATIONS/ROUTES/DOSAGE

Note: Dosage adjustment may be necessary with colchicine, bosentin, H_2 antagonists, proton pump inhibitors, PDE5 inhibitors.

HIV-1 Infection

PO: ADULTS, ELDERLY (ANTIRETROVIRAL-NAIVE): 300 mg and ritonavir 100 mg, once a day, or 400 mg (2 capsules) once a day with food. **CHILDREN 6–17 YRS WEIGHING 39 KG OR MORE:** 300 mg and ritonavir 100 mg once daily. **WEIGHING 32–38 KG:** 250 mg and ritonavir 100 mg once daily. **WEIGHING 25–31 KG:** 200 mg and ritonavir 100 mg once daily. **WEIGHING 15–24 KG:** 150 mg and ritonavir 80 mg once daily. **ADULTS, ELDERLY (ANTIRETROVIRAL-EXPERIENCED):** Pregnant pts, children weighing 40 kg or more: 300 mg and ritonavir (Norvir) 100 mg once a day. **WEIGHING 20–39 KG:** 200 mg and ritonavir 100 mg once daily. **WEIGHING 15–19 KG:** 150 mg and ritonavir 100 mg once daily.

HIV-1 Infection (Concurrent Therapy with Efavirenz)

PO: ADULTS, ELDERLY: 400 mg atazanavir, 100 mg ritonavir (as a single dose given with food), and 600 mg efavirenz as a single daily dose on an empty stomach (preferably at bedtime).

HIV-1 Infection (Concurrent Therapy with Didanosine)

PO: ADULTS, ELDERLY: Give atazanavir with food 2 hrs before or 1 hr after didanosine.

HIV-1 Infection (Concurrent Therapy with Tenofovir)

PO: ADULTS, ELDERLY: 300 mg atazanavir, 100 mg ritonavir, and 300 mg tenofovir given as a single daily dose with food. **FOR TREATMENT-EXPERIENCED PREGNANT WOMEN DURING SECOND OR THIRD TRIMESTER:** 400 mg with ritonavir 100 mg once daily.

HIV-1 Infection (Concurrent Therapy with Maraviroc)

PO: ADULTS, ELDERLY: 300 mg atazanavir, 100 mg ritonavir once daily, and 150 mg maraviroc twice daily.

HIV-1 Infection in Pts with Mild to Moderate Hepatic Impairment

◀ALERT▶ Avoid use in pts with severe hepatic impairment.

PO: ADULTS, ELDERLY: 300 mg once a day with food.

Dosage in Renal Impairment
HD (Naive): 300 mg with ritonavir. (Experienced): Not recommended.

SIDE EFFECTS

Frequent (16%–14%): Nausea, headache. **Occasional (9%–4%):** Rash, vomiting, depression, diarrhea, abdominal pain, fever. **Rare (3% or less):** Dizziness, insomnia, cough, fatigue, back pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe hypersensitivity reaction (angioedema, chest pain), jaundice may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, serum chemistries, LFT before beginning therapy and at periodic intervals during therapy. Offer emotional support.

INTERVENTION/EVALUATION

Monitor lab results. Assess for nausea, vomiting; assess eating pattern. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Question for evidence of headache. Assess mood for evidence of depression.

PATIENT/FAMILY TEACHING

• Take with food. • Small, frequent meals may offset nausea, vomiting. • Swallow whole; do not break or open capsules. • Pt must continue practices to prevent HIV transmission. • Atazanavir is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Report dizziness, light-headedness, yellowing of skin or whites of eyes, flank pain or when urinating, blood in urine, skin rash.

atenolol

HIGH ALERT

a-**ten**-oh-lol
(Apo-Atenol, Tenormin)

■ **BLACK BOX ALERT** ■ Do not abruptly discontinue; taper gradually to avoid acute tachycardia, hypertension, ischemia.

Do not confuse atenolol with albuterol, timolol, or Tylenol, or Tenormin with Imuran, Norpramin, or thiamine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: $Beta_1$-adrenergic blocker. **CLINICAL:** Antihypertensive, antianginal, antiarrhythmic.

USES

Treatment of hypertension, alone or in combination with other agents; management of angina; secondary prevention of post-MI. **OFF-LABEL:** Acute alcohol withdrawal, arrhythmia (esp. supraventricular and ventricular tachycardia), prevention of migraine.

PRECAUTIONS

Contraindications: Cardiogenic shock, uncompensated heart failure, second- or third-degree heart block (except with functioning pacemaker), sinus bradycardia, sinus node dysfunction, pulmonary edema, pregnancy. **Cautions:** Renal impairment; peripheral vascular disease; diabetes; thyroid disease; bronchospastic disease; compensated HF; concurrent use with digoxin, verapamil, or diltiazem; myasthenia gravis; psychiatric disease. History of anaphylaxis to allergens.

ACTION

Blocks $beta_1$-adrenergic receptors in cardiac tissue. **Therapeutic Effect:** Slows sinus node heart rate, decreasing cardiac output, B/P. Decreases myocardial oxygen demand.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	2–4 hrs	24 hrs

Incompletely absorbed from GI tract. Protein binding: 6%–16%. Minimal liver metabolism. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 6–9 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; distributed in breast milk. Avoid use during first trimester. May produce bradycardia, apnea, hypoglycemia, hypothermia during delivery; low birth-weight infants. **Pregnancy Category D. Children:** No age-related precautions noted. **Elderly:** Age-related peripheral vascular disease, renal impairment require caution.

INTERACTIONS

DRUG: **Diuretics, other antihypertensives** may increase hypotensive effect. **Sympathomimetics, xanthines** may mutually inhibit effects. May mask symptoms of hypoglycemia, prolong hypoglycemic effect of **insulin, oral antidiabetic medications. NSAIDs** may decrease antihypertensive effect. **HERBAL:** **Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase serum ANA titer, serum BUN, creatinine, potassium, uric acid, lipoprotein, triglycerides.

AVAILABILITY (Rx)

Tablets: 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: Initially, 25–50 mg once a day. May increase dose up to 100 mg once a day. **ELDERLY:** Usual initial dose, 25 mg/day. **CHILDREN:** Initially, 0.5–1 mg/kg/dose given once a day. Range: 0.5–1.5 mg/kg/day. **Maximum:** 2 mg/kg/day up to 100 mg/day.

Angina Pectoris

PO: ADULTS: Initially, 50 mg once a day. May increase dose up to 200 mg once a day. **ELDERLY:** Usual initial dose, 25 mg/day.

Post-MI

PO: ADULTS: 100 mg once a day or 50 mg twice a day for 6–9 days post-MI.

Dosage in Renal Impairment

Dosage interval is modified based on creatinine clearance.

Creatinine Clearance	Maximum Dosage
15–35 ml/min	50 mg/day
Less than 15 ml/min	25 mg/day
Hemodialysis (HD)	Give dose post-HD or give 25–50 mg supplemental dose

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Atenolol is generally well tolerated, with mild and transient side effects. **Frequent:** Hypotension manifested as cold extremities, constipation or diarrhea, diaphoresis, dizziness, fatigue, headache, nausea. **Occasional:** Insomnia, flatulence, urinary frequency, impotence or decreased libido, depression. **Rare:** Rash, arthralgia, myalgia, confusion (esp. in the elderly), altered taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce profound bradycardia, hypotension. Abrupt withdrawal may result in diaphoresis, palpitations, headache, tremors. May precipitate HF, MI in pts with cardiac disease; thyroid storm in pts with thyrotoxicosis; peripheral ischemia in pts with existing peripheral vascular disease. Hypoglycemia may occur in previously controlled diabetes. Thrombocytopenia (unusual bruising, bleeding) occurs rarely. **Antidote:** Glucagon (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, apical pulse immediately before drug is administered (if pulse is 60/min or less, or systolic B/P is less than 90 mm Hg, withhold medication, contact physician). **Antianginal:** Record onset, quality (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain, precipitating factors (exertion, emotional stress). Assess baseline renal/hepatic function tests.

INTERVENTION/EVALUATION

Monitor B/P for hypotension, pulse for bradycardia, respiration for difficulty in breathing, EKG. Monitor daily pattern of bowel activity, stool consistency. Assess for evidence of HF: dyspnea (particularly on exertion or lying down), nocturnal cough, peripheral edema, distended neck veins. Monitor I&O (increased weight, decreased urinary output may indicate HF). Assess extremities for pulse quality, changes in temperature (may indicate worsening peripheral vascular disease). Assist with ambulation if dizziness occurs.

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication. • Compliance with therapy essential to control hypertension, angina. • To reduce hypotensive effect, go from lying to standing slowly. • Avoid tasks that require alertness, motor skills until response to drug is established. • Advise diabetic pts to monitor blood glucose carefully (may mask signs of hypoglycemia). • Report dizziness, depression, confusion, rash, unusual bruising/bleeding. • Outpatients should monitor B/P, pulse before taking medication, following correct technique. • Restrict salt, alcohol intake. • Therapeutic antihypertensive effect noted in 1–2 wks.

atomoxetine

at-oh-**mox**-e-teen

Apo-Atomoxetine* (Strattera)

■ **BLACK BOX ALERT** ■ Increased risk of suicidal thinking and behavior in children and adolescents with attention-deficit hyperactivity disorder (ADHD).

Do not confuse atomoxetine with atorvastatin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Norepinephrine reuptake inhibitor. **CLINICAL:** Psychotherapeutic agent.

USES

Treatment of ADHD.

PRECAUTIONS

Contraindications: Narrow-angle glaucoma, use within 14 days of MAOIs. Pheochromocytoma or history of pheochromocytoma. Severe cardiovascular disease. **Cautions:** Hypertension, tachycardia, cardiovascular disease (e.g., structural abnormalities, cardiomyopathy), urinary retention, moderate or severe hepatic impairment, suicidal ideation, emergent psychotic or manic symptoms, comorbid bipolar disorder, renal impairment, poor metabolizers of CYP2D6 metabolized drugs (e.g., fluoxetine, paroxetine).

ACTION

Enhances noradrenergic function by selective inhibition of the presynaptic norepinephrine transporter. **Therapeutic Effect:** Improves symptoms of ADHD.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 98% (primarily to albumin). Eliminated in urine (80%), feces (17%). Not removed by hemodialysis. **Half-life:** 4–5 hrs (increased in moderate to severe hepatic insufficiency).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in pts younger than 6 yrs. May produce suicidal thoughts in children and adolescents. **Elderly:** Age-related hepatic/renal impairment, cardiovascular or cerebrovascular disease may increase risk of adverse effects.

INTERACTIONS

DRUG: **MAOIs** may increase concentration/effect. **Fluoxetine, paroxetine** may increase concentration/effect. Avoid concurrent use of **medications that can increase heart rate or B/P.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase hepatic enzymes, serum bilirubin.

AVAILABILITY (Rx)

Capsules: 10 mg, 18 mg, 25 mg, 40 mg, 60 mg, 80 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Swallow capsules whole, do not break or open (powder in capsule is ocular irritant). Give as single daily dose in the morning or 2 evenly divided doses in morning and late afternoon/early evening.

INDICATIONS/ROUTES/DOSAGE

Attention-Deficit Hyperactivity Disorder (ADHD)

PO: ADULTS, CHILDREN 6 YRS AND OLDER WEIGHING 70 KG OR MORE: 40 mg once a day. May increase after at least 3 days to 80 mg daily. **Maximum:** 100 mg. **CHILDREN 6 YRS AND OLDER WEIGHING LESS THAN 70 KG:** Initially, 0.5 mg/kg/day. May increase after at least 3 days to 1.2 mg/kg/day. **Maximum:** 1.4 mg/kg/day or 100 mg, whichever is less.

Dosage in Hepatic Impairment

Expect to administer 50% of normal atomoxetine dosage to pts with moderate hepatic impairment and 25% of normal dosage to those with severe hepatic impairment.

Dosage in Renal Impairment

No dose adjustment.

Dosage with Strong CYP2D6 Inhibitors

ADULTS: Initially, 40 mg/day. May increase to 80 mg/day after minimum of 4 wks. **CHILDREN:** Initially, 0.5 mg/kg/day. May increase to 1.2 mg/kg/day only after minimum 4-wk interval.

SIDE EFFECTS

Frequent: Headache, dyspepsia, nausea, vomiting, fatigue, decreased appetite, dizziness, altered mood. **Occasional:** Tachycardia, hypertension, weight loss, delayed growth in children, irritability. **Rare:** Insomnia, sexual dysfunction in adults, fever.

ADVERSE EFFECTS/ TOXIC REACTIONS

Urinary retention, urinary hesitancy may occur. In overdose, gastric lavage, activated charcoal may prevent systemic absorption. Severe hepatic injury occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess pulse, B/P before therapy, following dose increases, and periodically during therapy. Assess attention span, interactions with others.

INTERVENTION/EVALUATION

Monitor urinary output; complaints of urinary retention/hesitancy may be a related adverse reaction. Monitor B/P, pulse periodically and following dose increases. Monitor for growth, attention span, hyperactivity, unusual changes in behavior, suicidal ideation. Assist with ambulation if dizziness occurs. Be alert to mood changes. Monitor fluid and electrolyte status in pts with significant vomiting.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Take last dose early in evening to avoid insomnia. • Report palpitations, fever, vomiting, irritability. • Monitor growth rate, weight. • Report changes in behavior, suicidal ideation, chest pain, palpitations, dyspnea.

atorvastatin

TOP 100

a-**tor**-va-sta-tin
(Apo-Atorvastatin, Lipitor, Novo-Atorvastatin)
Do not confuse atorvastatin with atomoxetine, lovastatin, nystatin, pitavastatin, pravastatin, or simvastatin, or Lipitor with labetalol, Levatol, lisinopril, or Zocor.

FIXED-COMBINATION(S)

Caduet: atorvastatin/amlodipine (calcium channel blocker): 10 mg/2.5 mg, 10 mg/5 mg, 10 mg/10 mg, 20 mg/2.5 mg, 20 mg/5 mg, 20 mg/10 mg, 40 mg/2.5 mg, 40 mg/5 mg, 40 mg/10 mg, 80 mg/5 mg, 80 mg/10 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Hydroxymethylglutaryl CoA (HMG-CoA) reductase inhibitor. **CLINICAL:** Antihyperlipidemic.

USES

Primary prevention of cardiovascular disease in high-risk pts. Reduces risk of stroke and heart attack in pts with type 2 diabetes with or without evidence of heart disease. Reduces risk of stroke in pts with or without evidence of heart disease with multiple risk factors other than diabetes. Adjunct to diet therapy in management of hyperlipidemias (reduces elevations in total cholesterol, LDL-C, apolipoprotein B triglycerides in pts with primary hypercholesterolemia), homozygous familial hypercholesterolemia, heterozygous familial hypercholesterolemia in pts 10–17 yrs of age, females more than 1 yr postmenarche. **OFF-LABEL:** Secondary prevention in pts who have experienced a noncardioembolic stroke/TIA or following an acute coronary syndrome (ACS) event.

PRECAUTIONS

Contraindications: Active hepatic disease, breastfeeding, pregnancy, unexplained elevated LFT results. **Cautions:** Anticoagulant therapy; history of hepatic disease; substantial alcohol consumption; pts with prior stroke/TIA; concomitant use of potent CYP3A4 inhibitors; elderly (predisposed to myopathy).

ACTION

Inhibits HMG-CoA reductase, the enzyme that catalyzes the early step in cholesterol synthesis. **Therapeutic Effect:** Decreases LDL and VLDL, plasma triglyceride levels; increases HDL concentration.

PHARMACOKINETICS

Poorly absorbed from GI tract. Protein binding: greater than 98%. Metabolized in liver. Primarily eliminated in feces (biliary). **Half-life:** 14 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. Contraindicated during pregnancy. May produce fetal skeletal malformation. **Pregnancy Category X.** **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4 inhibitors (e.g., clarithromycin, protease inhibitors, itraconazole) may increase concentration, risk of rhabdomyolysis. **Cyclosporine** may increase concentration. **Gemfibrozil, fibrates, niacin, colchicine** may increase risk of myopathy, rhabdomyolysis. **Strong CYP3A4 inducers (e.g., rifampin, efavirenz)**

may decrease concentration. **HERBAL: St. John's wort** may decrease level. **FOOD: Grapefruit products** in large quantities may increase serum concentrations. **Red yeast rice** may increase serum levels (2.4 mg lovastatin per 600 mg rice). **LAB VALUES:** May increase serum transaminase, creatinine kinase concentrations.

AVAILABILITY (Rx)

Tablets: 10 mg, 20 mg, 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food or time of day. • Do not break, crush, dissolve, or divide film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

Do not use in pts with active hepatic disease.

Note: Individualize dosage based on baseline LDL/cholesterol, goal of therapy, pt response. **Maximum dose with strong CYP3A4 inhibitors:** 20 mg/day.

Hyperlipidemias

PO: ADULTS, ELDERLY: Initially, 10–20 mg/day (40 mg in pts requiring greater than 45% reduction in LDL-C). Range: 10–80 mg/day.

Heterozygous Hypercholesterolemia

PO: CHILDREN 10–17 YRS: Initially, 10 mg/day. **Maximum:** 20 mg/day.

Dosage in Renal Impairment

No dose adjustment.

SIDE EFFECTS

Common: Atorvastatin is generally well tolerated. Side effects are usually mild and transient. **Frequent (16%):** Headache. **Occasional (5%–2%):** Myalgia, rash, pruritus, allergy. **Rare (less than 2%–1%):** Flatulence, dyspepsia, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Potential for cataracts, photosensitivity, myalgia, rhabdomyolysis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline cholesterol, triglycerides, LFT. Question for possibility of pregnancy before initiating therapy (Pregnancy Category X). Obtain dietary history.

INTERVENTION/EVALUATION

Monitor for headache. Assess for rash, pruritus, malaise. Monitor cholesterol, triglyceride lab values for therapeutic response. Monitor hepatic function tests, CPK.

PATIENT/FAMILY TEACHING

• Follow special diet (important part of treatment). • Periodic lab tests are essential part of therapy. • Do not take other medications without consulting physician. • Do not chew, crush, dissolve, or divide tablets. • Report dark urine, muscle fatigue, bone pain. • Avoid excessive alcohol intake, large quantities of grapefruit products.

atovaquone

a-**toe**-va-kwone
(Mepron)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Systemic anti-infective. **CLINICAL:** Antiprotozoal.

USES

Treatment or prevention of mild to moderate *Pneumocystis jiroveci* pneumonia (PCP) in those intolerant to trimethoprim-sulfamethoxazole (TMP-SMZ). **OFF-LABEL:** Treatment of babesiosis. Prophylaxis in HIV pts at high risk for developing *Toxoplasma gondii* encephalitis.

PRECAUTIONS

Contraindications: Development or history of potentially life-threatening allergic reaction to the drug. **Cautions:** Elderly, pts

A

with severe PCP, chronic diarrhea, malabsorption syndromes, severe hepatic impairment. **Pregnancy Category C.**

ACTION

Inhibits mitochondrial electron transport system at the cytochrome bc1 complex (Complex III) interrupting nucleic acid, adenosine triphosphate synthesis. **Therapeutic Effect:** Antiprotozoal, antipneumocystic activity.

INTERACTIONS

DRUG: **Rifabutin, rifampin** may decrease concentration. May increase **rifampin** concentration. **HERBAL:** **Bilberry, fenugreek, garlic, ginger, ginseng** may enhance risk of hypoglycemia. **FOOD:** **High-fat meals** increase absorption. **LAB VALUES:** May elevate serum ALT, AST, alkaline phosphatase, amylase. May decrease serum sodium.

AVAILABILITY (Rx)

Suspension, Oral: 750 mg/5 ml.

ADMINISTRATION/HANDLING

PO

• Must give with food or high-fat meals. Shake gently prior to using.

INDICATIONS/ROUTES/DOSAGE

***Pneumocystis Jiroveci* Pneumonia (PCP)**

PO: ADULTS, CHILDREN OLDER THAN 12 YRS: 750 mg twice a day with food for 21 days. **CHILDREN 4–24 MOS:** 45 mg/kg/day in 2 divided doses with food. **Maximum:** 1,500 mg/day. **CHILDREN 1–3 MOS OR OLDER THAN 24 MOS:** 30–40 mg/kg/day in 2 divided doses with food. **Maximum:** 1,500 mg/day.

Prevention of PCP

PO: ADULTS, CHILDREN OLDER THAN 12 YRS: 1,500 mg once a day with food. **CHILDREN 4–24 MOS:** 45 mg/kg/day as single dose. **Maximum:** 1,500 mg/day. **CHILDREN 1–3 MOS OR OLDER THAN 24 MOS:** 30 mg/kg/day as single dose. **Maximum:** 1,500 mg/day. **NEONATES:** 30–40 mg/kg/day in 2 divided doses.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (greater than 10%): Rash, nausea, diarrhea, headache, vomiting, fever, insomnia, cough. **Occasional (less than 10%):** Abdominal discomfort, thrush, asthenia (loss of strength, energy), anemia, neutropenia.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab studies, esp. hepatic function tests.

INTERVENTION/EVALUATION

Monitor renal function tests, CBC, LFT, serum chemisteries, amylase. Assess for GI discomfort, nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Monitor elderly closely for decreased hepatic, renal, cardiac function. Monitor I&O.

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Do not take any other medications unless approved by physician. • Report rash, diarrhea, or other new symptoms. • Must be taken with high-fat meal or food.

atropine

at-roe-peen
(AtroPen Auto Injector, Atropine-Care, Isopto Atropine, Sal-Tropine)

FIXED-COMBINATION(S)

Donnatal: atropine/hyoscyamine (anticholinergic)/phenobarbital (sedative)/scopolamine (anticholinergic): 0.0194 mg/0.1037 mg/16.2

mg/0.0065 mg. **Lomotil:** atropine/diphenoxylate (peristaltic inhibitor): 0.025 mg/2.5 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Acetylcholine antagonist. **CLINICAL:** Antiarrhythmic, antispasmodic, antidote, cycloplegic, antisecretory, anticholinergic.

USES

Injection: Preop to inhibit salivation/secretions; treatment of symptomatic sinus bradycardia; AV block; ventricular asystole; antidote for organophosphate pesticide poisoning. Adjuvant to decrease side effects during reversal of neuromuscular blockage. **Ophthalmic:** Produce mydriasis and cycloplegia for examination of retina and optic disc; uveitis.

PRECAUTIONS

Contraindications: Narrow-angle glaucoma, pyloric stenosis, prostatic hypertrophy. **Cautions:** Autonomic neuropathy, paralytic ileus, intestinal atony, severe ulcerative colitis, toxic megacolon, renal/hepatic impairment, myocardial ischemia, hyperthyroidism, hypertension, tachyarrhythmias, HF, coronary artery disease, esophageal reflux or hiatal hernia associated with reflux esophagitis; infants, children with spastic paralysis or brain damage; elderly; biliary tract disease, chronic pulmonary disease. **Ophthalmic:** Spastic paralysis, brain injury, Down syndrome.

ACTION

Competes with acetylcholine for common binding sites on muscarinic receptors located on exocrine glands, cardiac and smooth muscle ganglia, intramural neurons. **Therapeutic Effect:** Decreases GI motility, secretory activity, GU muscle tone (ureter, bladder); produces ophthalmic cycloplegia, mydriasis; abolishes various types of reflex vagal cardiac slowing or asystole.

PHARMACOKINETICS

Rapidly and well absorbed after IM administration. Widely distributed. Metabolized in liver. Excreted in urine (30%–50% as unchanged drug). **Half-life:** 2–3 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category C. Children/Elderly:** Increased susceptibility to atropine effects.

INTERACTIONS

DRUG: **Anticholinergics** may increase effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection (AtroPen): 0.25 mg/0.3 ml, 0.5 mg/0.7 ml, 1 mg/0.7 ml, 2 mg/0.7 ml. **Injection, Solution:** 0.4 mg/ml, 1 mg/ml. **Ophthalmic Ointment:** 1%. **Ophthalmic Solution:** 1%.

ADMINISTRATION/HANDLING

IV

- Must be given rapidly (prevents paradoxical slowing of heart rate).

IM

- May be given subcutaneously or IM.

IM, AtroPen

- Store at room temperature. • Give as soon as symptoms of organophosphate or carbamate poisoning appear. • Do not use more than three AtroPen autoinjectors for each person at risk for carbamate or organophosphate poisoning.

Ophthalmic

- Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Hold dropper above pocket and place prescribed number of drops or ¼–½ inch of ointment into pocket. • Instruct pt to close eye gently (so medication will not be

squeezed out of the sac). • For solution, apply digital pressure to lacrimal sac at inner canthus for 1 min to minimize systemic absorption. • For ointment, instruct pt to roll eyeball to increase contact area of drug to eye.

IV INCOMPATIBILITIES

None known.

IV COMPATIBILITIES

Diphenhydramine (Benadryl), droperidol (Inapsine), fentanyl (Sublimaze), glycopyrrolate (Robinul), heparin, hydromorphone (Dilaudid), midazolam (Versed), morphine, potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Preanesthetic

IV, IM, Subcutaneous: ADULTS, ELDERLY: 0.4–0.6 mg 30–60 min preop. **CHILDREN WEIGHING 5 KG OR MORE:** 0.01–0.02 mg/kg/dose to maximum of 0.4 mg/dose. Minimum dose: 0.1 mg. **CHILDREN WEIGHING LESS THAN 5 KG:** 0.02 mg/kg/dose 30–60 min preop.

Bradycardia

IV: ADULTS, ELDERLY: 0.5–1 mg q5min, not to exceed total of 3 mg or 0.04 mg/kg. **CHILDREN:** 0.02 mg/kg with a minimum of 0.1 mg to a maximum of 0.5 mg as a single dose. May repeat in 5 min. **Maximum total dose:** 1 mg.

Cycloplegic Refraction, Postop Mydriasis, Uveitis

Ophthalmic Solution: ADULTS, ELDERLY: Instill 1 drop in affected eye(s) up to 4 times a day.

Ophthalmic Ointment: ADULTS, ELDERLY: Apply ointment several hours prior to examination when used for refraction.

Antidote for Organophosphate or Carbamate Poisoning

IM: ADULTS, CHILDREN WEIGHING MORE THAN 90 LB: AtroPen 2 mg (green). May repeat in 10 min. **Maximum:** 3 doses. **CHILDREN WEIGHING 40–90 LB:** AtroPen 1 mg (dark red). **CHILDREN WEIGHING 15–39 LB:** AtroPen 0.5 mg (blue). **INFANTS WEIGHING LESS THAN 15 LB:** 0.05 mg/kg. Do not use AtroPen.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Dry mouth, nose, throat (may be severe); decreased sweating; constipation; irritation at subcutaneous or IM injection site. **Occasional:** Dysphagia, blurred vision, bloated feeling, impotence, urinary hesitancy. **Ophthalmic:** Mydriasis, blurred vision, photophobia, decreased visual acuity, tearing, dry eyes or dry conjunctiva, eye irritation, crusting of eyelid. **Rare:** Allergic reaction, including rash, urticaria; mental confusion or excitement, particularly in children; fatigue.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce tachycardia, palpitations, hot/dry/flushed skin, absence of bowel sounds, increased respiratory rate, nausea, vomiting, confusion, drowsiness, slurred speech, dizziness, CNS stimulation. Overdose may also produce psychosis as evidenced by agitation, restlessness, rambling speech, visual hallucinations, paranoid behavior, delusions, followed by depression. Ophthalmic form may rarely produce increased IOP.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Determine if pt is sensitive to atropine, homatropine, scopolamine. Treatment with AtroPen autoinjector may be instituted without waiting for lab results.

INTERVENTION/EVALUATION

Monitor changes in B/P, pulse, temperature. Observe for tachycardia if pt has cardiac abnormalities. Assess skin turgor, mucous membranes to evaluate hydration status (encourage adequate fluid intake unless NPO for surgery), bowel

sounds for peristalsis. Be alert for fever (increased risk of hyperthermia). Monitor I&O, palpate bladder for urinary retention. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/ FAMILY TEACHING

- For preop use, explain that warm flushing feeling may occur.

avanafil

a-**van**-a-fil
(Stendra)
Do not confuse Stendra with Stelara, avanafil with sildenafil, vardenafil, or tadalafil.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Phosphodiesterase inhibitor. **CLINICAL:** Erectile dysfunction adjunct.

USES

Treatment of male erectile dysfunction.

PRECAUTIONS

Contraindications: Concurrent use of nitrates in any form. **Cautions:** Renal/hepatic dysfunction; anatomical deformation of the penis; cardiovascular disease, particularly myocardial infarction, stroke, life-threatening arrhythmia, or coronary revascularization within the last 6 months; pts with resting hypotension or hypertension, unstable angina, New York Heart Association class 2 or greater HF; pts who may be predisposed to priapism (sickle cell anemia, multiple myeloma, leukemia); left ventricular outflow obstruction (e.g., aortic stenosis); concurrent use of alpha-adrenergic blockers.

ACTION

Inhibits PDE5, a phosphodiesterase type 5 enzyme responsible for degradation of cyclic GMP, predominant isoenzyme in human corpus cavernosum in the penis, resulting in smooth muscle relaxation, increased blood flow. **Therapeutic Effect:** Facilitates erection.

PHARMACOKINETICS

Onset: PO: 15–30 min. Rapidly absorbed. Protein binding: 99%. Extensively metabolized in liver. Excreted in feces (62%), urine (21%). **Half-life:** 5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not indicated for use in women, newborns. **Pregnancy Category C. Children:** Not indicated in this population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Nitrates, alpha-adrenergic blockers (alfuzosin, doxazosin, prazosin, tamsulosin, terazosin) may produce severe hypotension. **Strong CYP3A4 inhibitors (erythromycin, itraconazole, indinavir, ketoconazole, nelfinavir, ritonavir, saquinavir)** may significantly increase concentration; do not use. **Antihypertensives, esp. amlodipine, enalapril** may potentiate hypotension. **HERBAL:** None significant. **FOOD: High-fat meals** reduce rate of absorption. Avoid **grapefruit products. LAB VALUES:** May increase serum glucose.

AVAILABILITY (Rx)

Tablets: 50 mg, 100 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

- May take without regard to food.
- May take approximately 30 min before sexual activity.
- Use the lowest effective dose.

INDICATIONS/ROUTES/DOSAGE

Erectile Dysfunction

PO: ADULTS, ELDERLY: Initially, 100 mg 30 min prior to sexual activity. May increase to 200 mg. Range: 50–200 mg. **Maximum dosing frequency:** Once daily.

Dosage with Concurrent Alpha Blocker (e.g., Alfuzosin, Doxazosin, Prazosin, Terazosin)

PO: ADULTS, ELDERLY: Initially, 50 mg. **Maximum dosing frequency:** Once daily.

Dosage with Concurrent Moderate CYP3A4 Inhibitors (e.g., Amprenavir, Aprepitant, Diltiazem, Fluconazole, Fosamprenavir, Verapamil)

PO: ADULTS, ELDERLY: Initially, 50 mg. **Maximum dosing frequency:** Once daily.

Dosage in Renal/Hepatic Impairment

Use not recommended.

SIDE EFFECTS

Occasional (6%–4%): Headache, flushing. **Rare (3%–2%):** Nasal congestion, nasopharyngitis, back pain. **Less than 2%:** Dizziness, arthralgia, diarrhea, insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Sudden hearing decrease, sudden loss of vision in one or both eyes noted rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess cardiovascular status before initiating treatment for erectile dysfunction.

PATIENT/FAMILY TEACHING

• Medication has no effect in absence of sexual stimulation. • Seek treatment immediately if erection lasts longer than 4 hrs. • Avoid nitrate drugs while taking avanafil. • Report sudden decrease or loss of hearing or vision.

axitinib

ax-**i**-ti-nib
(Inlyta)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of advanced renal cell carcinoma after failure of one prior systemic chemotherapy.

PRECAUTIONS

Contraindications: None known. Do not use in pts with untreated brain metastasis or recent active GI bleeding. **Cautions:** Pts with increased risk or history of thrombotic events, GI perforation or fistula formation, renal/hepatic impairment, hypertension.

ACTION

Inhibits vascular endothilial growth factor receptors. **Therapeutic Effect:** Blocks tumor growth, inhibits angiogenesis.

PHARMACOKINETICS

Undergoes extensive hepatic metabolism. Protein binding: greater than 99%. Eliminated primarily in feces with a lesser amount excreted in urine. **Half-life:** 2.5–6 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown whether distributed in breast milk. **Pregnancy Category D.** **Children:** Safety and efficacy not established in children younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A4/5 inhibitors (e.g., erythromycin, itraconazole, ketoconazole, ritonavir) may significantly increase concentration; do not use concurrently. If used, reduce dose by 50%. Coadministration with **strong CYP3A4/5 inducers (e.g., rifampin, phenytoin, carbamazepine, phenobarbital)** may significantly decrease concentration; do not use concurrently. **HERBAL: St. John's wort** may decrease concentration. **FOOD: Grapefruit products** may increase concentration. **LAB VALUES:** May decrease Hgb, WBC count,

platelets, serum calcium, alkaline phosphatase, albumin, sodium. May increase serum ALT, AST, bilirubin, BUN, creatinine, serum potassium, lipase, amylase. May alter serum glucose.

AVAILABILITY (Rx)

Tablets film-coated: 1 mg, 5 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Swallow tablets whole with full glass of water.

INDICATIONS/ROUTES/DOSAGE

Renal Cell Carcinoma

PO: ADULTS, ELDERLY: Initially, 5 mg twice daily, given approximately 12 hrs apart. If tolerated, may increase to 7 mg twice daily, then 10 mg twice daily. For adverse effects, may decrease to 3 mg twice daily, then 2 mg twice daily.

Moderate Hepatic Impairment

PO: ADULTS, ELDERLY: Reduce initial dose by 50%. May be increased or decreased based on individual safety, tolerability. Not recommended in pts with severe hepatic impairment.

Dosage in Renal Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (55%–20%): Diarrhea, hypertension, fatigue, decreased appetite, nausea, dysphonia, palmar-plantar erythrodysesthesia (hand-foot) syndrome, weight loss, vomiting, asthenia, constipation. **Occasional (19%–11%):** Hypothyroidism, cough, stomatitis, arthralgia, dyspnea, abdominal pain, headache, peripheral pain, rash, proteinuria, dysgeusia. **Rare (10%–2%):** Dry skin, dyspepsia, dizziness, myalgia, pruritus, epistaxis, alopecia, hemorrhoids, tinnitus, erythema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Arterial and venous thrombotic events (MI, CVA), GI perforation, fistula have been observed and can be fatal. Hypothyroidism requiring thyroid hormone replacement has been noted. Reversible posterior leukoencephalopathy syndrome (RPLS) has been observed.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline EKG, CBC, serum chemistries, renal function, LFT before initiation of, and periodically throughout, treatment. Offer emotional support. Assess medical history, esp. hepatic function abnormalities. B/P should be well controlled prior to initiating treatment. Stop medication at least 24 hrs prior to scheduled surgery. Monitor thyroid function before and periodically throughout treatment.

INTERVENTION/EVALUATION

Monitor CBC, serum chemistries, urinalysis, thyroid tests. Monitor daily pattern of bowel activity, stool consistency. Assess for evidence of bleeding or hemorrhage. Assess for hypertension. For persistent hypertension despite use of antihypertensive medications, dose should be reduced. Permanently discontinue if signs or symptoms of RPLS occur (extreme lethargy, increased B/P from pt baseline, pyuria). Contact physician if changes in voice, redness of skin, or rash is noted.

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with anyone who recently received live virus vaccine; do not receive vaccinations. • Swallow tablet whole; do not chew, crush, dissolve, or divide. • Avoid grapefruit products. • Report persistent diarrhea, extreme fatigue, easy bruising, or unusual bleeding from any site.

azacitidine

HIGH ALERT

a-za-**sye**-ti-deen
(Vidaza)
Do not confuse azacitidine with azathioprine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: DNA demethylation agent. **CLINICAL:** Antineoplastic.

USES

Treatment of myelodysplastic syndromes (MDS). **OFF-LABEL:** Treatment of acute myelogenous leukemia.

PRECAUTIONS

Contraindications: Advanced malignant hepatic tumors, hypersensitivity to mannitol. **Cautions:** Hepatic disease, renal impairment.

ACTION

Promotes hypomethylation of DNA. **Therapeutic Effect:** Toxic to abnormal hematopoietic cells in bone marrow.

PHARMACOKINETICS

Rapidly absorbed after subcutaneous administration. Metabolized by liver. Eliminated in urine. **Half-life:** 4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May be embryotoxic; may cause developmental abnormalities of the fetus. Mothers should avoid breastfeeding. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may increase risk of renal toxicity.

INTERACTIONS

DRUG: **Bone marrow suppressants** may increase myelosuppression. May alter effects of **live virus vaccines.** May increase levels of **clozapine, natalizumab. Pimecrolimus, tacrolimus** (topical) may increase concentration. **HERBAL:** **Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, Hct, WBC, RBC, platelet counts. May increase serum creatinine, potassium, ALT, AST, alkaline phosphatase.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 100 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each vial with 10 ml Sterile Water for Injection to provide a concentration of 10 mg/ml. • Vigorously shake/roll vial until all solids are dissolved. • Solution should be clear. • Further dilute desired dose with 50–100 ml 0.9% NaCl.
Rate of Administration • Administer total dose over 10–40 min. • Administer within 1 hr of reconstitution of vial.
Stability • Store unreconstituted vial at room temperature. • Solution is stable for 1 hr following reconstitution.

Subcutaneous

Reconstitution • Reconstitute with 4 ml Sterile Water for Injection. • Reconstituted solution will appear cloudy.
Rate of Administration • Doses greater than 4 ml should be divided equally into 2 syringes. • Contents of syringe must be resuspended by inverting the syringe 2–3 times and rolling the syringe between the palms for 30 sec immediately before administration. • Rotate site for each injection (thigh, upper arm, abdomen). New injections should be administered at least 1 inch from the last site.
Storage • Store vials at room temperature. • Reconstituted solution may be stored for up to 1 hr at room temperature or up to 8 hrs if refrigerated. • Solution may be allowed to return to room temperature and used within 30 min.

IV INCOMPATIBILITIES

Dextrose, solutions containing sodium bicarbonate.

IV COMPATIBILITIES

Lactated Ringer's, sodium chloride.

INDICATIONS/ROUTES/DOSAGE

MDS

◀ALERT▶ Dosage adjustment based on hematology testing.

IV/Subcutaneous: ADULTS, ELDERLY: 75 mg/m²/day for 7 days repeated every 4 wks. Dosage may be increased to 100 mg/m² if initial dose is insufficient and toxicity is manageable. Treatment recommended for at least 4 cycles.

Dosage in Renal/Hepatic Impairment

Not studied; use caution.

SIDE EFFECTS

Frequent (71%–29%): IV/Subcutaneous: Nausea, vomiting, fever, diarrhea, fatigue, injection site erythema, constipation, ecchymosis, cough, dyspnea, weakness. **IV:** Petechiae, weakness, rigors, hypokalemia. **Occasional (26%–16%): IV/Subcutaneous:** Rigors, petechiae, injection site pain, pharyngitis, arthralgia, headache, limb pain, dizziness, peripheral edema, back pain, erythema, epistaxis, weight loss, myalgia. **Rare (13%–8%): IV/Subcutaneous:** Anxiety, abdominal pain, rash, depression, tachycardia, insomnia, night sweats, stomatitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hematologic toxicity, manifested as anemia, leukopenia, neutropenia, thrombocytopenia, occurs commonly.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, electrolytes, serum BUN, creatinine, hepatic enzyme levels routinely to monitor response and toxicity but particularly before each dosing cycle. Offer emotional support. Use strict aseptic technique; protect pt from infection.

INTERVENTION/EVALUATION

Monitor for hematologic toxicity (fever, sore throat, signs of local infections, unusual bruising/bleeding), symptoms of anemia. Assess response to medication; monitor and report nausea, vomiting, diarrhea. Avoid rectal temperatures, other traumas that may induce bleeding.

PATIENT/FAMILY TEACHING

• Do not receive vaccines without physician's approval (drug lowers body's resistance). • Avoid crowds, persons with known infections. • Report signs of infection (fever, flu-like symptoms) immediately. • Report if nausea/vomiting continues at home. • Men should use barrier contraception while receiving treatment.

azathioprine

a-za-**thy**-o-preen

(Apo-Azathioprine 🍁, Azasan, Imuran)

■ **BLACK BOX ALERT** ■ Chronic immunosuppression increases risk of neoplastic syndrome, serious infections.

Do not confuse azathioprine with Azulfidine, azacitidine, or azithromycin, or Imuran with Elmiron, Imdur, or Inderal.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Immunologic agent. **CLINICAL:** Immunosuppressant.

USES

Adjunct in prevention of rejection in kidney transplantation. Treatment of rheumatoid arthritis (RA) in pts unresponsive to conventional therapy. **OFF-LABEL:** Treatment of dermatomyositis, polymyositis. Adjunct in preventing rejection of solid organ (nonrenal) transplants.

Maintenance, remission, or reduction of steroid use in Crohn's disease, erythema multiforme, pemphigus vulgaris, lupus nephritis, chronic refractory immune thrombocytopenic purpura, relapsing/remitting multiple sclerosis.

PRECAUTIONS

Contraindications: Pregnant women with RA, pts previously treated for RA with alkylating agents (cyclophosphamide, chlorambucil, melphalan). **Cautions:** Immunosuppressed pts, pts with hepatic/renal impairment, active infection. Testing for genetic deficiency of thiopurine methyltransferase should be obtained. (Absence or reduced levels increase risk of myelosuppression.)

ACTION

Antagonizes purine metabolism, inhibits DNA, protein, and RNA synthesis. **Therapeutic Effect:** Suppresses cell-mediated hypersensitivities; alters antibody production, immune response in transplant recipients. Reduces symptoms of arthritis severity.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May depress spermatogenesis, reduction of sperm viability, count. May cause fetal harm. Do not breastfeed. **Pregnancy Category D.** **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Allopurinol, sulfamethoxazole/trimethoprim** may increase activity, toxicity. **Bone marrow depressants** may increase myelosuppression. **Other immunosuppressants** may increase risk of infection or development of neoplasms. May increase effects of **live virus vaccines.** **HERBAL:** Avoid **cat's claw, echinacea** (immunostimulant properties). **FOOD:** None known. **LAB VALUES:** May decrease Hgb, serum albumin, uric acid, leukocytes, platelet count. May increase serum ALT, AST, alkaline phosphatase, amylase, bilirubin.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Imuran): 100-mg vial. **Tablets:** 50 mg (Imuran), 75 mg (Azasan), 100 mg (Azasan).

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 100-mg vial with 10 ml Sterile Water for Injection to provide concentration of 10 mg/ml. • Swirl vial gently to mix and dissolve solution. • May further dilute in 50 ml D_5W or 0.9% NaCl.

Rate of Administration • Give IVP over 5 min at concentration not to exceed 10 mg/ml or as intermittent infusion over 30–60 min.

Storage • Store parenteral form at room temperature. • After reconstitution, IV solution stable for 24 hrs.

PO

• Give with food or in divided doses to reduce potential for GI disturbances. • Store oral form at room temperature.

IV INCOMPATIBILITIES

None known.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Reduce dose to 1/3 or 1/4 usual dose when used with allopurinol or in low/absent thiopurine methyltransfurase genetic deficiency.

Prevention of Renal Allograft Rejection

PO, IV: ADULTS, ELDERLY, CHILDREN: 3–5 mg/kg/day on day of transplant (or 1–3 days prior to transplant), then 1–3 mg/kg/day as maintenance dose.

Rheumatoid Arthritis (RA)

PO: ADULTS: Initially, 1 mg/kg/day (50–100 mg) as a single dose or in 2 divided doses for 6–8 wks. May increase by 0.5 mg/kg/day after 6–8 wks at 4-wk

intervals. **Maximum:** 2.5 mg/kg/day. **Maintenance:** Lowest effective dosage. May decrease dose by 0.5 mg/kg or 25 mg/day q4wks (while other therapies, such as rest, physiotherapy, and salicylates, are maintained). **ELDERLY:** Initially, 1 mg/kg/day (50–100 mg); may increase by 25 mg/day until response or toxicity.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance.

Creatinine Clearance	Dosage
10–50 ml/min	75% of normal
Less than 10 ml/min	50% of normal
Hemodialysis	50% of normal (Adults: additional 0.25 mg/kg)
Continuous renal replacement therapy (CRRT)	75% of normal

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Nausea, vomiting, anorexia (particularly during early treatment and with large doses). **Occasional:** Rash. **Rare:** Severe nausea/vomiting with diarrhea, abdominal pain, hypersensitivity reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increases risk of neoplasia (new abnormal growth tumors). Significant leukopenia and thrombocytopenia may occur, particularly in pts undergoing renal transplant rejection. Hepatotoxicity occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Arthritis: Assess onset, type, location, and duration of pain, fever, inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition.

INTERVENTION/EVALUATION

CBC, LFT should be performed weekly during first mo of therapy, twice monthly during second and third mos of treatment, then monthly thereafter. If WBC falls rapidly, dosage should be reduced or discontinued. Assess particularly for delayed myelosuppression. Routinely watch for any change from baseline. **Arthritis:** Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Contact physician if unusual bleeding/bruising, sore throat, mouth sores, abdominal pain, fever occurs. • Therapeutic response in rheumatoid arthritis may take up to 12 wks. • Women of childbearing age must avoid pregnancy.

azilsartan

a-zil-**sar**-tan
(Edarbi)

■ **BLACK BOX ALERT** ■ May cause fetal injury, mortality if used during second or third trimester of pregnancy.

FIXED-COMBINATION(S)

Edarbyclor: azilsartan/chlorthalidone, a diuretic: 40 mg/12.5 mg, 40 mg/25 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin II receptor blocker (ARB). **CLINICAL:** Antihypertensive.

USES

Treatment of hypertension alone or in combination with other antihypertensives. Lowers risk of stroke and myocardial infarction related to hypertension.

PRECAUTIONS

Contraindications: Concomitant use with aliskiren in pts with diabetes mellitus. **Cautions:** Renal/hepatic impairment, unstented renal artery stenosis, significant aortic/mitral stenosis, severe HF, volume depletion/salt-depleted pts.

ACTION

Inhibits vasoconstriction, aldosterone-secreting effects of angiotension II, blocking the binding of angiotension II to AT_1 receptors. **Therapeutic Effect:** Produces vasodilation, decreases peripheral resistance, decreases B/P.

PHARMACOKINETICS

Hydrolyzed to active metabolite in GI tract. Moderately absorbed (60%). Peak plasma concentration: 1.5–3 hrs. Metabolized in liver. Protein binding: greater than 99%. Eliminated in feces (55%), urine (42%). **Half-life:** 11 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm when administered during third trimester. Unknown if distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category C (D if used in second and third trimester).** **Children:** Safety and efficacy not established. **Elderly:** Elevated creatinine levels may occur in pts older than 75 yrs.

INTERACTIONS

DRUG: ACE inhibitors, potassium-sparing diuretics, potassium supplements may increase risk of hyperkalemia. **NSAIDs, COX-2 inhibitors (e.g., celecoxib)** may decrease effect. **Hypotensive agents** may increase hypotensive effects. **HERBAL: Yohimbe, ephedra, licorice, ginseng** may increase B/P. **Garlic** may enhance antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine. May decrease Hgb, Hct.

AVAILABILITY (Rx)

Tablets: 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: 80 mg once daily. Reduce to 40 mg once daily if giving high-dose diuretic concurrently.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (2%–0.4%): Diarrhea, orthostatic hypotension. **Rare (0.3%):** Nausea, fatigue, muscle spasm, cough.

ADVERSE EFFECTS/ TOXIC REACTIONS

Oliguria, acute renal failure may occur in pts with history of renal artery stenosis, severe HF, volume depletion.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline Hgb, Hct, serum chemistries, BUN, creatinine, ALT, AST, alkaline phosphatase, bilirubin. Obtain B/P, apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations). Question for possibility of pregnancy. Assess medication history (esp. diuretics). Question history of hepatic/renal impairment, renal artery stenosis, severe HF.

INTERVENTION/EVALUATION

Maintain hydration (offer fluids frequently). Monitor serum electrolytes, B/P, pulse, hepatic/renal function. Observe for symptoms of hypotension. If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated. Correct volume or salt depletion prior to treatment.

PATIENT/FAMILY TEACHING

- Take measures to avoid pregnancy. If pregnancy occurs, inform physician

immediately. • Low blood pressure is more likely to occur if pt takes diuretics or other medications to control hypertension, consumes low-salt diet, experiences vomiting or diarrhea, or becomes dehydrated. • Change positions slowly, particularly from lying to standing position. • Report lightheadedness or dizziness; lie down immediately. • Report swollen extremities or decreased urine output despite fluid intake.

azithromycin

a-**zith**-roe-**mye**-sin
(Apo-Azithromycin, AzaSite, Novo-Azithromycin, Zithromax, Zithromax TRI-PAK, Zithromax Z-PAK, Zmax)
Do not confuse azithromycin with azathioprine or erythromycin, or Zithromax with Fosamax or Zovirax.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Macrolide. **CLINICAL:** Antibiotic.

USES

IV/PO: Treatment of susceptible infections due to *Chlamydia pneumoniae, C. trachomatis, H. influenzae, Legionella, M. catarrhalis, Mycoplasma pneumoniae, N. gonorrhoeae, S. aureus., S. pneumoniae, S. pyogenes,* including mild to moderate infections of upper respiratory tract (pharyngitis, tonsillitis), lower respiratory tract (acute bacterial exacerbations, COPD, pneumonia), uncomplicated skin and skin-structure infections, sexually transmitted diseases (nongonococcal urethritis, cervicitis due to *C. trachomatis*), chancroid. Prevents disseminated *Mycobacterium avium* complex (MAC). Treatment of mycoplasma pneumonia, community-acquired pneumonia, pelvic inflammatory disease (PID). Prevention/treatment of MAC in pts with advanced HIV infection. **OFF-LABEL:** Prophylaxis of endocarditis. Prevention of pulmonary exacerbations in pts with cystic fibrosis. **Ophthalmic:** Treatment of bacterial conjunctivitis caused by susceptible infections due to *H. influenzae, S. aureus, S. mitis, S. pneumoniae.* Prevention of pulmonary exacerbations in pts with cystic fibrosis.

PRECAUTIONS

Contraindications: Hypersensitivity to other macrolide antibiotics. History of cholestatic jaundice/hepatic dysfunction associated with prior azithromycin therapy. **Cautions:** Hepatic/renal dysfunction; myasthenia gravis. Hepatocellular and/or cholestatic hepatitis (with or without jaundice), hepatic necrosis. May prolong QT interval (rare).

ACTION

Binds to ribosomal receptor sites of susceptible organisms, inhibiting RNA-dependent protein synthesis. **Therapeutic Effect:** Bacteriostatic or bactericidal, depending on drug dosage.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 7%–50%. Widely distributed. Metabolized in liver. Eliminated primarily by biliary excretion. **Half-life:** 68 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in pts younger than 16 yrs for IV use and younger than 6 mos for oral use. **Elderly:** No age-related precautions in those with normal renal function.

INTERACTIONS

DRUG: Aluminum/magnesium-containing antacids may decrease concentration (give 1 hr before or 2 hrs after antacid). May increase levels of **amiodarone, cyclosporine, dronedarone,**

QT-prolonging medications, thioridazine, toremifene, ziprasidone. Quetiapine may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum creatine phosphokinase (CPK), ALT, AST, bilirubin, LDH, potassium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Zithromax): 500 mg. **Ophthalmic Solution (AzaSite):** 1%. **Suspension, Oral (Zithromax):** 100 mg/5 ml, 200 mg/5 ml, 1-g single dose packet. **Suspension, Oral (Extended-Release [Zmax]):** 2-g single-dose packet. **Tablets:** 250 mg, 500 mg, 600 mg (Zithromax). Tri-Pak: 3 × 500 mg (Zithromax TRI-PAK). Z-PAK: 6 × 250 mg (Zithromax Z-PAK).

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each 500-mg vial with 4.8 ml Sterile Water for Injection to provide concentration of 100 mg/ml. • Shake well to ensure dissolution. • Further dilute with 250 or 500 ml 0.9% NaCl or D_5W to provide final concentration of 2 mg/ml with 250 ml diluent or 1 mg/ml with 500 ml diluent.
Rate of Administration • Infuse over 60 min (2 mg/ml). Infuse over 3 hrs (1 mg/ml).
Storage • Store vials at room temperature. • Following reconstitution, diluted solution is stable for 24 hrs at room temperature or 7 days if refrigerated.

PO (Immediate-Release Suspension)

• Give tablets without regard to food. • May store suspension at room temperature. Stable for 10 days after reconstitution.

PO (Extended-Release Suspension)

• Do not administer oral suspension with food. Give at least 1 hr before or 2 hrs after meals. • Give Zmax within 12 hrs of reconstitution. • Give tablets with food to decrease GI effects.

PO

• Tablets: May give with food to decrease GI effects.

Ophthalmic

• Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Place prescribed number of drops into pocket. • Instruct pt to close eye gently for 1 to 2 min (so medication will not be squeezed out of sac) and to apply digital pressure to lacrimal sac at inner canthus for 1 min to minimize systemic absorption.

IV INCOMPATIBILITIES

Ceftriaxone (Rocephin), ciprofloxacin (Cipro), famotidine (Pepcid), furosemide (Lasix), ketorolac (Toradol), levofloxacin (Levaquin), morphine, piperacillin/tazobactam (Zosyn), potassium chloride.

IV COMPATIBILITIES

Ceftaroline (Teflaro), doripenem (Doribax), ondansetron (Zofran), tigecycline (Tygacil), diphenhydramine (Benadryl).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO: ADULTS, ELDERLY: 250–600 mg once daily or 1–2 g as single dose. ***(Zmax):*** 2 g as a single dose. **CHILDREN 6 MOS AND OLDER:** 5–12 mg/kg (**maximum:** 500 mg) once daily or 30 mg/kg (**maximum:** 1,500 mg) as single dose. ***(Zmax):*** 60 mg/kg as a single dose. **NEONATES:** 10–20 mg/kg once daily.
IV: ADULTS, ELDERLY: 250–500 mg once daily **CHILDREN, NEONATES:** 10 mg/kg once daily.

MAC Prevention

PO: ADULTS, ELDERLY: 1,200 mg once weekly. **CHILDREN:** 20 mg/kg once weekly. **Maximum:** 1,200 mg/dose.

MAC Treatment

PO: ADULTS, ELDERLY: 600 mg/day with ethambutol. **CHILDREN:** 10–12 mg/kg/day (**maximum:** 500 mg) with ethambutol.

Otitis Media

PO: CHILDREN 6 MOS AND OLDER: 30 mg/kg as single dose (**maximum:** 1,500 mg) or 10 mg/kg/day for 3 days (**maximum:** 500 mg) or 10 mg/kg on day 1 (**maximum:** 500 mg), then 5 mg/kg on days 2–5 (**maximum:** 250 mg).

Pharyngitis, Tonsillitis

PO: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: 500 mg on day 1, then 250 mg on days 2–5. **CHILDREN 2–15 YRS:** 12 mg/kg daily for 5 days (**maximum:** 500 mg).

Pneumonia, Community-Acquired

PO ***(Zmax)*****: ADULTS, ELDERLY:** 2 g as single dose.

PO: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: 500 mg on day 1, then 250 mg on days 2–5 or 500 mg/day IV for 2 days, then 500 mg/day PO to complete course of therapy. **CHILDREN 6 MOS–15 YRS:** 10 mg/kg on day 1 (**maximum:** 500 mg), then 5 mg/kg (**maximum:** 250 mg) on days 2–5.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

Bacterial Conjunctivitis

Ophthalmic: ADULTS, ELDERLY: 1 drop in affected eye twice a day for 2 days, then 1 drop once a day for 5 days.

SIDE EFFECTS

Occasional: Systemic: Nausea, vomiting, diarrhea, abdominal pain. **Ophthalmic:** Eye irritation. **Rare: Systemic:** Headache, dizziness, allergic reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections may result from altered bacterial balance in GI tract. Acute interstitial nephritis, hepatotoxicity occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of hepatitis, allergies to azithromycin, erythromycins. Assess for infection (WBC count, appearance of wound, evidence of fever).

INTERVENTION/EVALUATION

Check for GI discomfort, nausea, vomiting. Monitor daily pattern of bowel activity and stool consistency. Monitor hepatic function tests, CBC. Assess for hepatotoxicity: malaise, fever, abdominal pain, GI disturbances. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Avoid concurrent administration of aluminum- or magnesium-containing antacids. • Bacterial conjunctivitis: Do not wear contact lenses.

aztreonam

az-**tree**-o-nam
(Azactam, Cayston)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monobactam. **CLINICAL:** Antibiotic.

USES

Injection: Treatment of infections caused by susceptible gram-negative microorganisms *P. aeruginosa, E. coli, S. marcescens, K. pneumoniae, P. mirabilis, H. influenzae, Enterobacter, Citrobacter* spp. including lower respiratory tract, skin/skin structure, intraabdominal, gynecologic, complicated/uncomplicated UTIs; septicemia; cystic fibrosis. **Cayston:** Improve respiratory symptoms in cystic fibrosis pts with *P. aeruginosa.* **OFF-LABEL:** Surgical prophylaxis.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of allergy, esp. cephalosporins, penicillins; renal impairment; bone marrow transplant pts with risk factors for toxic epidermal necrolysis (TEN).

ACTION

Binds to penicillin-binding proteins, which inhibits bacterial cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Completely absorbed after IM administration. Protein binding: 56%–60%. Partially metabolized by hydrolysis. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 1.4–2.2 hrs (increased in renal/hepatic impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta, distributed in amniotic fluid; low concentration in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in pts younger than 9 mos. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, creatinine, LDH, ALT, AST levels. Produces a positive Coombs' test. May prolong partial thromboplastin time (PTT), prothrombin time (PT).

AVAILABILITY (Rx)

Injection, Infusion Solution (Azactam): Premix 1 g/50 ml, 2 g/50 ml. **Injection, Powder for Reconstitution (Azactam):** 1 g, 2 g. **Oral Inhalation, Powder for Reconstitution (Cayston):** 75 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • For IV push, dilute each gram with 6–10 ml Sterile Water for Injection. • For intermittent IV infusion, further dilute with 50–100 ml D_5W or 0.9% NaCl. Final concentration not to exceed 20 mg/ml.

Rate of Administration • For IV push, give over 3–5 min. • For IV infusion, administer over 20–60 min.

Storage • Store vials at room temperature. • Solution appears colorless to light yellow. • Following reconstitution, solution is stable for 48 hrs at room temperature or 7 days if refrigerated. • Discard if precipitate forms. Discard unused portions.

IM

• Reconstitute with at least 3 ml diluent per gram of aztreonam. • Shake immediately, vigorously after adding diluent. • Inject deeply into large muscle mass. • Following reconstitution, solution is stable for 48 hrs at room temperature or 7 days if refrigerated.

Inhalation

• Administer only with an Altera nebulizer system. • Nebulize over 2–3 min. • Give bronchodilator 15 min–4 hrs (short-acting) or 30 min–12 hrs (long-acting) before administration. • Reconstituted solution must be used immediately.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), amphotericin (Fungizone), lorazepam (Ativan), metronidazole (Flagyl), vancomycin (Vancocin).

IV COMPATIBILITIES

Bumetanide (Bumex), calcium gluconate, cimetidine (Tagamet), diltiazem (Cardizem), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), famotidine (Pepcid), furosemide (Lasix), heparin, hydromorphone (Dilaudid), insulin (regular), magnesium sulfate, morphine, potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Severe Infections

IV: ADULTS, ELDERLY: 2 g q6–8h. **Maximum:** 8 g/day. **CHILDREN:** 30 mg/kg q6–8h. **Maximum:** 8 g/day.

Mild to Moderate Infections

IV: ADULTS, ELDERLY: 1–2 g q8–12h. **Maximum:** 8 g/day. **CHILDREN:** 30 mg/kg q8h. **Maximum:** 8 g/day.

Usual Neonatal Dosage

IV: 30 mg/kg/dose q6–12h.

Cystic Fibrosis

IV: CHILDREN: 50 mg/kg/dose q6–8h up to 200 mg/kg/day. **Maximum:** 8 g/day. **Inhalation (Nebulizer): ADULTS, CHILDREN 7 YRS OR OLDER:** 75 mg 3 times/day (at least 4 hrs apart) for 28 days, then off for 28-day cycle.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance and severity of infection:

Creatinine Clearance	Dosage
10–30 ml/min	50% usual dose at usual intervals
Less than 10 ml/min	25% usual dose at usual intervals
Hemodialysis	500 mg–2 g, then 25% of initial dose at usual interval
Continuous renal replacement therapy (CRRT)	2 g, then 1 g q8–12h or 2g q12h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (greater than 5%): Cayston: Cough, nasal congestion, wheezing, pharyngolaryngeal pain, pyrexia, chest discomfort, abdominal pain, vomiting. **Occasional (less than 3%):** Discomfort and swelling at IM injection site, nausea, vomiting, diarrhea, rash. **Rare (less than 1%):** Phlebitis or thrombophlebitis at IV injection site, abdominal cramps, headache, hypotension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections may result from altered bacterial balance. Severe hypersensitivity reactions, including anaphylaxis, occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. to aztreonam, other antibiotics.

INTERVENTION/EVALUATION

Evaluate for phlebitis, pain at IM injection site. Assess for GI discomfort, nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor renal/hepatic function.

PATIENT/FAMILY TEACHING

- Report nausea, vomiting, diarrhea, rash.

Generic Drugs B

baclofen	beractant	bortezomib
basiliximab	betamethasone	bosentan
beclomethasone	bethanechol	bosutinib
bedaquiline	bevacizumab	brentuximab vedotin
belatacept	bexarotene	bromocriptine
belimumab	bicalutamide	budesonide
belinostat	bisacodyl	bumetanide
benazepril	bisoprolol	buprenorphine
bendamustine	bivalirudin	buPROPion
benzonatate	bleomycin	busPIRone
benztropine	boceprevir	busulfan

baclofen

bak-loe-fen
(Apo-Baclofen, Gablofen, Lioresal, Novo-Baclofen, Nu-Baclo)

■ **BLACK BOX ALERT** ■ Abrupt withdrawal of intrathecal form has resulted in severe hyperpyrexia, obtundation, rebound or exaggerated spasticity, muscle rigidity, leading to organ failure, death.

Do not confuse baclofen with Bactroban or Beclovent, or Lioresal with lisinopril or Lotensin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Skeletal muscle relaxant. **CLINICAL:** Antispastic, analgesic in trigeminal neuralgia.

USES

Treatment of cerebral spasticity, reversible spasticity associated with multiple sclerosis, spinal cord lesions. **Intrathecal:** For pts unresponsive to oral therapy or exhibiting intolerable side effects. **OFF-LABEL:** Treatment of bladder spasms, cerebral palsy, intractable hiccups or pain, Huntington's chorea, trigeminal neuralgia.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal impairment, seizure disorder, elderly.

ACTION

Inhibits transmission of reflexes at spinal cord level. **Therapeutic Effect:** Relieves muscle spasticity.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 30%. Partially metabolized in liver. Primarily excreted in urine. **Half-life:** 2.5–4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if crosses placenta or distributed in breast milk. **Pregnancy Category C.**

Children: Safety and efficacy not established in pts younger than 12 yrs. Limited published data in children. **Elderly:** Increased risk of CNS toxicity (hallucinations, sedation, confusion, mental depression); age-related renal impairment may require decreased dosage.

INTERACTIONS

DRUG: Potentiated effects when used with other **CNS depressants (including alcohol). HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS sedation. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, alkaline phosphatase, glucose.

AVAILABILITY (Rx)

Intrathecal Injection Solution: 50 mcg/ml, 500 mcg/ml, 1,000 mcg/ml, 2,000 mcg/ml. **Tablets:** 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

• Give with food or milk. • Tablets may be crushed.

Intrathecal

• For screening, a 50 mcg/ml concentration should be used for injection. • For maintenance therapy, solution should be diluted for pts who require concentrations other than 500 mcg/ml or 2,000 mcg/ml.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Avoid abrupt withdrawal.

Spasticity

PO: ADULTS: Initially, 5 mg 3 times a day. May increase by 15 mg/day (5 mg/dose) at 3-day intervals. Range: 40–80 mg/day. **Maximum:** 80 mg/day. **ELDERLY:** Initially, 5 mg 2–3 times a day. May gradually increase dosage. **CHILDREN 8 YRS AND OLDER:** 30–40 mg/day in divided doses q8h. May increase dose by 5–15 mg/day q3days. **Maximum:** 120 mg/day. **CHILDREN 2–7 YRS:** 20–30 mg/day in divided doses q8h. May increase dose by 5–15 mg/day q3 days. **Maximum:** 60 mg/day. **CHILDREN**

YOUNGER THAN 2 YRS: 10–20 mg/day in divided doses q8h. May increase dose by 5–15 mg/day. **Maximum:** 40 mg/day.

Intrathecal Dose

ADULTS, ELDERLY, CHILDREN: Test dose: 50–100 mcg. Dose greater than 50 mcg given in 25-mcg increments, separated by 24 hrs. Following positive response to test dose, maintenance infusion can be given via implanted intrathecal pump. Initial dose is twice the test dose.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (greater than 10%): Transient drowsiness, asthenia, dizziness, nausea, vomiting. **Occasional (10%–2%):** Headache, paresthesia, constipation, anorexia, hypotension, confusion, nasal congestion. **Rare (less than 1%):** Paradoxical CNS excitement or restlessness, slurred speech, tremor, dry mouth, diarrhea, nocturia, impotence.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt discontinuation may produce hallucinations, seizures. Overdose results in blurred vision, seizures, myosis, mydriasis, severe muscle weakness, strabismus, respiratory depression, vomiting.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type, location, duration of muscular spasm. Check for immobility, stiffness, swelling.

INTERVENTION/EVALUATION

For pts on long-term therapy, hepatic/renal function tests, blood counts should be performed periodically. Assess for paradoxical reaction. Observe for drowsiness, dizziness, ataxia. Assist with ambulation at all times. Evaluate for therapeutic response: decreased intensity of skeletal muscle spasm, pain.

PATIENT/FAMILY TEACHING

• Drowsiness usually diminishes with continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Do not abruptly withdraw medication after long-term therapy (may result in muscle rigidity, rebound spasticity, high fever, altered mental status). • Avoid alcohol, CNS depressants.

basiliximab

ba-si-**lik**-si-mab
(Simulect)

■ **BLACK BOX ALERT** ■ Must be prescribed by a physician experienced in immunosuppression therapy and organ transplant management.

Do not confuse basiliximab with daclizumab.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Immunosuppressive.

USES

Adjunct with cyclosporine, corticosteroids in prevention of acute organ rejection in pts receiving renal transplant. **OFF-LABEL:** Treatment of refractory graft-vs-host disease, prevention of liver or cardiac transplant rejection.

PRECAUTIONS

Contraindications: Hypersensitivity to basiliximab. **Cautions:** Anemia, HF, chronic wounds, diabetes mellitus, dehydration, electrolyte imbalance, generalized/peripheral edema, HTN.

ACTION

Binds to and blocks receptor of interleukin-2, a protein that stimulates proliferation of T-lymphocytes, which play a major role in organ transplant

B

rejection. **Therapeutic Effect:** Impairs response of immune system to antigens, prevents acute renal transplant rejection.

PHARMACOKINETICS

Half-life: 4–10 days (adults); 5–17 days (children).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if crosses placenta or distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category B. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Tacrolimus** (topical), **trastuzumab** may increase concentration. **HERBAL:** **Echinacea** may decrease therapeutic effect. **Bilberry, garlic, ginger, ginseng** may increase hypoglycemic effect. **FOOD:** None known. **LAB VALUES:** May alter serum calcium, glucose, potassium; Hgb, Hct. May increase serum cholesterol, BUN, creatinine, uric acid. May decrease serum magnesium, phosphate, platelet count.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 10 mg, 20 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 10-mg vial with 2.5 ml or 20-mg vial with 5 ml Sterile Water for Injection. • Shake gently to dissolve. • May further dilute with 25–50 ml 0.9% NaCl or D_5W to a final concentration of 0.4 mg/ml. • Gently invert to avoid foaming. • Do not shake. **Rate of Administration** • IV bolus over 10 min. • IV infusion over 20–30 min. **Storage** • Refrigerate unused vials. • After reconstitution, use within 4 hrs (24 hrs if refrigerated). • Discard if precipitate forms.

IV INCOMPATIBILITIES

Specific information not available. Do not add other medications simultaneously through same IV line.

INDICATIONS/ROUTES/DOSAGE

Prophylaxis of Organ Rejection

IV: ADULTS, ELDERLY, CHILDREN WEIGHING 35 KG OR MORE: 20 mg within 2 hrs before transplant surgery and 20 mg 4 days after transplant. **CHILDREN WEIGHING LESS THAN 35 KG:** 10 mg within 2 hrs before transplant surgery and 10 mg 4 days after transplant.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (greater than 10%): GI disturbances (constipation, diarrhea, dyspepsia), CNS effects (dizziness, headache, insomnia, tremor), respiratory tract infection, dysuria, acne, leg or back pain, peripheral edema, hypertension. **Occasional (10%–3%):** Angina, neuropathy, abdominal distention, tachycardia, rash, hypotension, urinary disturbances (urinary frequency, genital edema, hematuria), arthralgia, hirsutism, myalgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe, acute hypersensitivity reactions including anaphylaxis characterized by hypotension, tachycardia, HF, dyspnea, wheezing, bronchospasm, pulmonary edema, respiratory failure, urticaria, rash, pruritus, sneezing, capillary leak syndrome, cytokine release syndrome have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum BUN, CBC, serum creatinine, potassium, uric acid, glucose, calcium, phosphate; vital signs, particularly B/P, pulse rate. Question current breastfeeding status.

INTERVENTION/EVALUATION

Diligently monitor CBC, electrolytes, renal function. Assess B/P for hypertension/hypotension; pulse for evidence of tachycardia. Question for GI disturbances, CNS effects, urinary changes. Monitor for presence of wound infection, signs of infection (fever, sore throat, unusual bleeding/bruising), hypersensitivity reaction.

PATIENT/FAMILY TEACHING

• Report difficulty in breathing or swallowing, palpitations, bruising/bleeding, rash, itching, swelling of lower extremities, weakness. • Female pts should take measures to avoid pregnancy; avoid breastfeeding.

beclomethasone

be-kloe-**meth**-a-sone
(Apo-Beclomethasone, Beconase AQ, QNASL, QVAR, Rivanase AQ)
Do not confuse Beconase with baclofen.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenocorticosteroid. **CLINICAL:** Anti-inflammatory, immunosuppressant.

USES

Inhalation: Maintenance and prophylactic treatment of asthma. **Intranasal:** Relief of seasonal/perennial rhinitis; prevention of nasal polyp recurrence after surgical removal; treatment of nonallergic rhinitis. **QNASL:** Treatment of seasonal and perennial allergic rhinitis in adults and adolescents 12 yrs and older. **OFF-LABEL:** Prevention of seasonal rhinitis (nasal form).

PRECAUTIONS

Contraindications: Hypersensitivity to beclomethasone. **Oral inhalation:** Acute exacerbation of asthma, status asthmaticus. **Cautions:** Thyroid disease, hepatic impairment, renal impairment, cardiovascular disease, diabetes, glaucoma, cataracts, myasthenia gravis, seizures, risk for osteoporosis, peptic ulcer, ulcerative colitis, elderly; following acute MI. Avoid use in pts with untreated viral, fungal, or bacterial systemic infections.

ACTION

Controls or prevents inflammation by altering rate of protein synthesis; depresses migration of polymorphonuclear leukocytes, fibroblasts; reverses capillary permeability. **Therapeutic Effect: Inhalation:** Inhibits bronchoconstriction, produces smooth muscle relaxation, decreases mucus secretion. **Intranasal:** Decreases response to seasonal, perennial rhinitis.

PHARMACOKINETICS

Rapidly absorbed from pulmonary, nasal, GI tissue. Hydrolyzed by pulmonary esterase prior to absorption. Metabolized in liver. Protein binding: 87%. Primarily eliminated in feces. **Half-life:** 15 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if crosses placenta or distributed in breast milk. **Pregnancy Category C. Children:** Prolonged treatment/high dosages may decrease short-term growth rate, cortisol secretion. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effects of **antidiabetic agents.** **HERBAL:** **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Inhalation, Oral (Qvar): 40 mcg/inhalation, 80 mcg/inhalation. **Nasal Inhalation (Beconase AQ):** 42 mcg/inhalation. **QNASL:** 80 mcg/actuation.

ADMINISTRATION/HANDLING

Inhalation

• Shake container well. • Instruct pt to exhale completely, place mouthpiece

B

between lips, inhale, hold breath as long as possible before exhaling. • Allow at least 1 min between inhalations. • Rinsing mouth after each use (decreases dry mouth, hoarseness, thrush).

Intranasal

• Instruct pt to clear nasal passages as much as possible before use. • Tilt pt's head slightly forward. • Insert spray tip into nostril, pointing toward nasal passages, away from nasal septum. • Spray into one nostril while pt holds the other nostril closed, concurrently inhaling through nose to permit medication as high into nasal passages as possible.

INDICATIONS/ROUTES/DOSAGE

Long-Term Control of Bronchial Asthma

Oral Inhalation *(QVAR):* ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 40–160 mcg twice a day. **Maximum:** 320 mcg twice a day. **CHILDREN 5–11 YRS:** 40 mcg twice a day. **Maximum:** 80 mcg twice a day.

Rhinitis, Prevention of Recurrence of Nasal Polyps

Nasal Inhalation *(QNASL):* ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: 1–2 sprays in each nostril twice a day.

Allergic Rhinitis

Nasal Inhalation *(QNASL):* ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2 sprays in each nostril daily.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Inhalation (14%–4%): Throat irritation, dry mouth, hoarseness, cough. **Intranasal:** Nasal burning, mucosal dryness. **Occasional: Inhalation (3%–2%):** Localized fungal infection (thrush). **Intranasal:** Nasal-crusting epistaxis, sore throat, ulceration of nasal mucosa. **Rare: Inhalation:** Transient bronchospasm, esophageal candidiasis. **Intranasal:** Nasal and pharyngeal candidiasis, eye pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Acute hypersensitivity reaction (urticaria, angioedema, severe bronchospasm) occurs rarely. Change from systemic to local steroid therapy may unmask previously suppressed bronchial asthma condition.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline history for asthma, rhinitis. Question for hypersensitivity to corticosteroids.

INTERVENTION/EVALUATION

Monitor respiratory status, lung sounds; observe for signs of oral candidiasis. In pts receiving bronchodilators by inhalation concomitantly with inhaled steroid therapy, advise to use bronchodilator several minutes before corticosteroid aerosol (enhances penetration of steroid into bronchial tree).

PATIENT/FAMILY TEACHING

• Do not change dose schedule or stop taking drug; must taper off gradually under medical supervision. • **Inhalation:** Maintain diligent oral hygiene. • Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness, fungal infection of mouth). • Report sore throat or mouth. • **Intranasal:** Report symptoms that do not improve; or if sneezing, nasal irritation occurs. • Clear nasal passages prior to use. • Improvement noted after several days.

bedaquiline

bed-**ak**-wi-leen
(Sirturo)

Do not confuse bedaquiline with quinidine or quetiapine.

■ **BLACK BOX ALERT** ■ QT prolongation may occur. Concurrent use with other drugs that prolong QT

interval may produce additive QT prolongation. To be used only when current treatment regimen is ineffective. Placebo-controlled trial: increased risk of death (11.4% bedaquiline vs. 2.5% placebo).

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Diarylquinoline antimycobacterial. **CLINICAL:** Antitubercular.

USES

Treatment of pulmonary multidrug-resistant TB in adults 18 yrs and older when other alternations are not available. Not recommended for pts with extrapulmonary TB (e.g., central nervous system), latent or drug-sensitive TB.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment, history of or risk of QT prolongation (e.g., torsades de pointes, bradyarrhythmias, hypothyroidism).

ACTION

Inhibits mycobacterial adenosine triphosphate (ATP) synthase; an enzyme essential for energy generation in mycobacterium tuberculosum. **Therapeutic Effect:** Treatment of multidrug-resistant mycobacterium tuberculosis (TB).

PHARMACOKINETICS

Absorbed from GI tract. Metabolized in liver. Peak plasma concentration: 5 hrs. Protein binding: 99.9%. Primarily eliminated in feces. **Half-life:** 5.5 mos.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in pts younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inducers (e.g., carbamazepine, rifampin) may reduce concentration/effect. **CYP3A4 inhibitors (e.g., ketoconazole)** may increase concentration/effect. **Macrolide antibacterial (e.g., clarithromycin), fluoroquinolones (e.g., levofloxacin), clofazimine** may increase risk of prolonged QT interval. **HERBAL: St. John's wort** may decrease concentration/effect. **FOOD: Food** enhances bioavailability. **LAB VALUES:** May increase serum ALT, AST, alkaline phosphatase, amylase.

AVAILABILITY (Rx)

Tablets: 100 mg.

ADMINISTRATION/HANDLING

PO

• Give with food (increases bioavailability). • Swallow tablet whole with water.

INDICATIONS/ROUTES/DOSAGE

Tuberculosis

PO: ADULTS 18 YRS AND OLDER, ELDERLY: Note: Initiate medication with at least 3 other antitubercular drugs. **Weeks 1–2:** 400 mg (4 tablets of 100 mg) once daily with food. **Weeks 3–24:** 200 mg (2 tablets of 100 mg) 3 times per week with food (at least 48 hrs between doses) for a total dose of 600 mg per wk. Total duration of treatment: 24 wks.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (33%–28%): Arthralgia, nausea, headache. **Occasional (9%–8%):** Anorexia, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hemoptysis, chest pain occur in 18% and 11% of pts, respectively. May prolong QT interval.

B

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline LFT; BMP, ionized calcium, magnesium. Correct abnormal electrolyte levels prior to starting therapy (QT prolongation may occur). Obtain EKG and assess for prolonged QT. Screen for viral hepatitis.

INTERVENTION/EVALUATION

Monitor serum chemistries monthly, or more frequently if QT prolongation occurs. If follow up EKG detects QT prolongation, monitor EKG frequently to confirm QT interval has returned to baseline (monitor for syncope). LFT 3 × ULN or greater should be followed by repeat testing within 48 hrs. Diligently monitor bleeding, fatigue, anorexia, nausea, jaundice, melanuria, hepatic tenderness.

PATIENT/FAMILY TEACHING

• Avoid alcohol. • Report fatigue, loss of appetite, nausea, yellowing of skin or eyes, dark colored urine, abdominal tenderness; dizziness or fainting. • Strict compliance with drug regimen is essential. • Swallow tablets whole with water.

belatacept

bel-**at**-a-sept
(Nulojix)

■ **BLACK BOX ALERT** ■ Must be administered by personnel trained in administration/handling of therapy at appropriate medical facility. Increased risk of malignancies, tuberculosis, other opportunistic infection. Test for tuberculosis prior to and during treatment, regardless of initial result. Increased risk of post-transplant lymphoproliferative disorder (PTLD), mainly in central nervous system. JC virus-associated progressive multifocal leukoencephalopathy (PML) and polyoma virus nephropathy may lead to graft loss, deteriorated renal function, or death. Pts who are Epstein-Barr virus (EBV) antibody negative are at increased risk of developing PTLD. Cytomegalovirus and pneumocystitis prophylaxis are recommended after transplantation. Not recommended for hepatic transplants due to increased risk of graft loss, death.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective T-cell costimulation blocker. **CLINICAL:** Immunosuppressive agent.

USES

Prevention of acute organ rejection in pts receiving renal transplants (in combination with basiliximab induction, mycophenolate mofetil, corticosteroids). For use in Epstein-Barr virus (EBV) seropositive renal transplant recipients.

PRECAUTIONS

Contraindications: Transplant pts who are Epstein-Barr virus (EBV) seronegative or unknown sero-status. **Cautions:** History of opportunistic infections: bacterial, mycobacterial, invasive fungal, viral, protozoal, (histoplasmosis, aspergillosis, candidiasis, coccidioidomycosis, listeriosis, HIV, tuberculosis, pneumocystosis). Recent open wounds, ulcerations. Not recommended in liver transplants. Avoid use of live vaccines.

ACTION

Inhibits T-lymphocyte proliferation and production of cytokines including interleukin-2 (IL-2), interferon-γ, interleukin-4 (IL-4), TNF-α; a critical pathway in cellular immune response involved in allograft rejection. **Therapeutic Effect:** Prevents renal transplant rejection. Decreases production of antidonor antibodies.

PHARMACOKINETICS

Half-life: 8–10 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if crosses placenta or distributed in breast milk. Must either discontinue breastfeeding or discontinue drug. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration/effects of **belimumab, mycophenolate. Pimecrolimus, tacrolimus** (topical) may increase concentration/effect. **Live vaccines** not recommended. **HERBAL: Echinacea** may reduce effect. **FOOD:** None known. **LAB VALUES:** May increase serum potassium, cholesterol, uric acid; glucose, urine protein. May decrease serum calcium, magnesium, phosphate, potassium; Hgb, Hct, WBC.

AVAILABILITY (Rx)

Lyophilized Powder for Injection: 250 mg per vial.

ADMINISTRATION/HANDLING

◀ALERT▶ Use only silicone-free disposable syringe provided. Using different syringe may produce translucent particles. Must infuse with sterile, nonpyrogenic, low-protein-binding filter (pore size 0.2–1.2 μm). Administer via dedicated line only.

IV

Reconstitution • Calculate number of vials required (solution will equal 25 mg/ml after mixing). • Reconstitute vial with 10.5 ml of suitable diluent (0.9% NaCl, D_5W, or Sterile Water for Injection) using provided syringe, 18- to 20-gauge needle. • Direct stream to glass wall (avoids foaming). • Swirl gently (do not shake). • Discard if opaque particles, discoloration, or foreign particles are present. • Infusion bag must match diluent (0.9% NaCl with 0.9% NaCl, D_5W with D_5W; may use Sterile Water for Injection with NaCl or D_5W). • To mix infusion bag, withdraw and discard volume equal to the volume of reconstituted solution. • Using same silicone-free disposable syringe, gently inject reconstituted solution into 100- to 250-ml bag (based on concentration). • Final concentration of infusion bag should range from 2 mg/ml to 10 mg/ml. • IV infusion stable for 24 hrs at room temperature.

Rate of Administration • Infuse over 30 min using infusion set with a 0.2- to 1.2-micron low-protein-binding filter.

Storage • Refrigerate vials. • Solution should be clear to slightly opalescent and colorless to slightly yellow. • May refrigerate solution up to 24 hrs. • Discard if reconstituted solution remains at room temperature longer than 24 hrs.

INDICATIONS/ROUTES/DOSAGE

Note: Dosage based on actual body weight at time of transplantation.

Prophylaxis of Acute Renal Transplant Rejection (in Combination with an Immunosuppressant)

IV: ADULTS, ELDERLY: 10 mg/kg on day 1 (day of transplantation, prior to implantation), day 5, end of wk 2, 4, 8, and 12 after transplantation. 5 mg/kg end of wk 16 and q4wks thereafter.

Dosage Modification

Infusion is based on actual body weight at the time of transplantation; modify dose for weight changes greater than 10% during treatment. Prescribed dose must be evenly divisible by 12.5 to match closest increment (0, 12.5, 25, 37.5, 50, 62.5, 75, 87.5, 100) in mg. For example, the actual dose for a 64-kg pt is 637.5 mg, not 640 mg.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (45%–20%): Anemia, diarrhea, UTI, peripheral edema, constipation, hypertension, pyrexia, nausea, cough, vomiting, headache. **Occasional (19%–5%):** Abdominal pain, hypotension, arthralgia, hematuria, upper respiratory infection, insomnia, nasopharyngitis,

B

back pain, dyspnea, influenza, dysuria, bronchitis, stomatitis, anxiety, dizziness, abdominal pain, muscle tremor, acne, alopecia, hyperhidrosis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious conditions including malignancies (esp. skin cancer), progressive multifocal leukoencephalopathy (caused by JC virus), cytomegalovirus, polyoma virus nephropathy, viral reactivation (herpes zoster, hepatitis) may occur. Other opportunistic infections (bacterial, fungal, viral, protozoal) may cause tuberculosis, cryptococcal meningitis, Chagas' disease, West Nile encephalitis, Guillain-Barré syndrome, cerebral aspergillosis. Additional complications including chronic allograft nephropathy, renal tubular necrosis, renal artery necrosis, atrial fibrillation, hematoma at incision site, wound dehiscence, lymphocele, arteriovenous fistula thrombosis, hydronephrosis, urinary incontinence, anti-belatacept antibody formation were reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, serum chemistries, renal function, glomerular filtration rate (GFR), magnesium, ionized calcium, phosphate, lipid panel, urinalysis. Evaluate pt for active tuberculosis or latent infection prior to initiating treatment and periodically during therapy. Induration of 5 mm or greater with tuberculin skin test should be considered a positive result when assessing whether treatment for latent tuberculosis is necessary. Assess baseline mental status to compare any worsening cognitive symptoms. Obtain Epstein-Barr virus (EBV) serology prior to treatment (contraindicated in pts who are EBV seronegative). Note any skin discoloration, ulcers, excoriation, lesions. Question history of hypertension/hypotension, arrhythmia, diabetes, HIV. Receive full medication history. Question possibility of pregnancy.

INTERVENTION/EVALUATION

Monitor B/P, vital signs, I&O, weight. Diligently monitor CBC, renal function, serum electrolytes (hypokalemia may result in changes in muscle strength, muscle cramps, altered mental status, cardiac arrhythmias). Routinely monitor serum glucose levels for new-onset diabetes after transplantation, corticosteroid use. Monitor for fever, tenderness over transplantation site, skin lesions, changing characteristics of moles, neurologic deterioration related to PTLD or PML.

PATIENT/FAMILY TEACHING

• Therapy may increase risk of malignancies and life-threatening infections. • Detail concomitant immunosuppressive therapy with basiliximab induction, corticosteroids. • Report history of HIV, opportunistic infections, hepatitis, coughing of blood, or close relatives with active tuberculosis. • Avoid sunlight, sunlamps. • Seek immediate attention if adverse reactions occur. • Do not receive live vaccines. • Report pregnancy or plans of becoming pregnant. • Adhere to strict dosing schedule. • Report chest pain, palpitations, edema, fever, night sweats, weight loss, swollen glands, flu-like symptoms, stomach pain, vomiting, diarrhea, weakness, or urinary changes (color, frequency, odor, concentration, burning, blood).

belimumab

be-**lim**-oo-mab
(Benlysta)
Do not confuse belimumab with bevacizumab.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Immunosuppressant, anti-lupus agent.

USES

Treatment for active, autoantibody-positive, systemic lupus erythematosus, in addition to standard therapy.

PRECAUTIONS

Contraindications: Prior anaphylaxis with belimumab. **Cautions:** Severe, active infections. Depression, pts at risk for suicide, other mood changes. Avoid live vaccines.

ACTION

Blocks binding of human B-lymphocyte stimulator protein to receptors on B-lymphocyte. **Therapeutic Effect:** Reduces activity of B-cell–mediated immunity and autoimmune response.

PHARMACOKINETICS

Half-life: 19 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if crosses placenta or distributed in breast milk. Contraception recommended during therapy and for at least 4 wks after final treatment. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Abatacept, belatacept, etanercept, pimecrolimus, tacrolimus** (topical) may increase concentration/effect. **Cyclophosphamide** not recommended concomitantly. **HERBAL:** **Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** May decrease WBC.

AVAILABILITY (Rx)

Lyophilized Powder for Injection: 120 mg, 400 mg.

ADMINISTRATION/HANDLING

Reconstitution • Remove vials from refrigerator and let stand until room temperature (10–15 min). • Reconstitute 120-mg vial with 1.5 ml Sterile Water for Injection or 400-mg vial with 4.8 ml Sterile Water for Injection (both vials will equal final concentration of 80 mg/ml). • Direct stream toward glass wall to avoid foaming. • Gently swirl for 60 sec every 5 min until fully dissolved (usually 10–30 min). • If mechanical reconstitution device used, do not swirl greater than 30 min or exceed 500 rpm. • Small air bubbles expected, acceptable. • Dilute in 250 ml 0.9% NaCl only. • From infusion bag, withdraw and discard volume equal to the volume of reconstituted solution. • Invert bag and gently inject solution to mix. • Infuse within 8 hrs of reconstitution.

Rate of Administration • Infuse over 1 hr.

Storage • Refrigerate vials/infusion bag until time of use. • Solution should be opalescent and colorless to pale yellow with no particles present. • Discard solution if particulate matter or discoloration observed. • Protect from sunlight.

IV INCOMPATIBILITIES

Do not infuse with dextrose-based solution. Use dedicated line only.

INDICATIONS/ROUTES/DOSAGE

Active Systemic Lupus Erythematosus

IV: ADULTS: 10 mg/kg at 2-wk intervals for 3 doses, then every 4 wks thereafter.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (15%–12%): Nausea, diarrhea. **Occasional (10%–5%):** Pyrexia, nasopharyngitis, bronchitis, insomnia, extremity pain, depression, migraine, pharyngitis. **Rare (less than 4%):** Cystitis, viral gastroenteritis.

ADVERSE EFFECTS/ TOXIC REACTIONS

May increase risk of mortality. Anti-belimumab antibody formation reported in less than 1%. Hypersensitivity reaction including anaphylactic reaction may

B

include urticaria, pruritus, erythema, dyspnea, angioedema, hypotension (13% of pts). Infusion reactions such as nausea, headaches, flushing occur more frequently. Serious infections related to immunosuppression including respiratory tract infection, pneumonia, nasopharyngitis, sinusitis, influenza, UTI, cellulitis, bronchitis, viral reactivation may occur. Mental health issues including psychiatric events (16%) and depression (6%) have been noted. Life-threatening psychiatric events and depression (including suicide) reported in less than 1%. Pts who experienced life-threatening episodes had prior psychiatric history.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC with differential, serum chemistries, IgG level, vital signs. Assess history of recent immunizations, malignancies, open sores, ulcerations, weight loss, HIV, chronic infection. Assess psychiatric history including insomnia, anxiety, depression, impulsiveness, suicidal ideations, mood changes. Question possibility of pregnancy, current breastfeeding.

INTERVENTION/EVALUATION

Monitor vital signs, CBC. If hypersensitivity reaction occurs, immediately notify physician. Premedication with antihistamines, antipyretics, and/or corticosteroids may prevent subsequent reactions. Discontinue treatment if anaphylactic reaction occurs; initiate appropriate medical treatment. Routinely inspect skin, paying close attention to areas that are discolored, irregular, or have ill-defined borders (may indicate malignancies). Obtain anti-belimumab antibody titer if immunogenicity suspected. Consider interrupting therapy if acute infection occurs.

PATIENT/FAMILY TEACHING

- Report any signs of allergic reaction (see Adverse Effects/Toxic Reactions).
- If anaphylactic reaction occurs, pt may require rapid sequence intubation.
- Allergic reactions include itching, hives, dizziness, or difficulty breathing.
- Notify physician if pregnant or plan on becoming pregnant.
- Contraception recommended during treatment and at least 4 mos after treatment.
- Report suicidal ideation, mood changes, or worsening depression.
- Do not receive live vaccines 30 days before or during treatment.
- Report any fever, cough, night sweats, flu-like symptoms, skin changes, or painful/burning urination.

belinostat

beh-**lih**-noh-**stat**
(Beleodaq)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Histone deacetylase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of relapsed or refractory peripheral T-cell lymphoma (PTCL).

PRECAUTIONS

Contraindications: None known. **Cautions:** Avoid use in pts with active infection. Monitor pts with high tumor burden. Pts with hx of hepatic/renal impairment, thrombocytopenia, peripheral edema.

ACTION

Inhibits enzymatic activity of histone deacetylases by catalyzing removal of acetyl groups from lysine residues of histones and nonhistone proteins. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis; causes tumor cellular death (apoptosis).

PHARMACOKINETICS

Limited tissue distribution. Metabolized in liver. Protein binding: 93%–95%. Eliminated primarily in urine as metabolites. **Half-life:** 1.1 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has teratogenic effects; may cause fetal harm/demise. Not recommended in nursing mothers. Unknown if distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong UGT1A1 inhibitors (e.g., atazanavir, lopinavir, ritonavir) may increase concentration/effect. **HERBAL:** None known. **FOOD:** None significant. **LAB VALUES:** May decrease ANC, Hgb/Hct, lymphocytes, platelets, WBC; serum potassium. May increase blood lactic dehydrogenase, creatinine.

AVAILABILITY (Rx)

Lyophilized Powder for Injection: 500 mg vial.

ADMINISTRATION/HANDLING

IV

ALERT Use 0.22-micron in-line filter for administration.

Reconstitution • Maintain standard chemotherapy preparation and handling precautions. • Reconstitute each vial with 9 ml of Sterile Water for Injection, using suitable syringe for final concentration of 50 mg/ml. • Gently swirl contents until completely dissolved. • Visually inspect for particulate matter. • Do not use if cloudiness or particulate matter observed. • Withdraw required dosage and mix into infusion bag containing 250 ml of 0.9% NaCl.

Rate of Administration • Infuse over 30 min using 0.22-micron in-line filter. • May extend infusion time to 45 min if infusion site pain or other infusion-related symptoms occur.

Storage • Reconstituted vial may be stored at room temperature (max 77°F/ 25°C) for up to 12 hrs. • Infusion bag may be stored at room temperature (max 77°F/ 25°C) for up to 36 hrs.

INDICATIONS/ROUTES/DOSAGE

Peripheral T-Cell Lymphoma

IV INFUSION: ADULTS/ELDERLY: 1,000 mg/m^2 once daily on days 1–5 of a 21-day cycle. Cycles may be repeated every 21 days until disease progression or unacceptable toxicity.

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE). ANC should be greater than or equal to 1,000 cells/mm^3 and platelet count greater than or equal to 50,000 mm^3 prior to start of each cycle or prior to resuming treatment following toxicity. Discontinue treatment if ANC nadir less than 500 cells/mm^3 or recurrent platelet count nadir less than 25,000 mm^3 after two dose reductions. Other toxicities must be CTCAE grade 2 or less prior to resuming treatment.

Hematologic Toxicities:

Platelet count greater than 25,000 mm^3 or ANC greater than 500 cell/mm^3: No change. **Platelet count less than 25,000 mm^3** or **ANC less than 500 cells/mm^3:** Decrease dose by 25% (750 mg/m^2).

Nonhematologic Toxicities Including Hepatic/Renal Impairment:

Any CTCAE Grade 3 or 4: Decrease dose by 25% (750 mg/m^2). **Recurrence of CTCAE Grade 3 or 4 Adverse Reaction After Two Dosage Reductions:** Discontinue treatment. **Events for Nausea, Vomiting, Diarrhea:** Only modify dose if duration is greater than 7 days with supportive management. **Pts with Reduced UGT1A1 Activity:** Reduce starting dose to 750 mg/m^2 in pts known to be homozygous for UGT1A1*28 allele.

SIDE EFFECTS

Frequent (47%–29%): Nausea, fatigue, pyrexia, vomiting, anemia, vomiting.

B

Occasional (23%–10%): Constipation, diarrhea, dyspepsia, rash, peripheral edema, cough, pruritus, chills, decreased appetite, headache, infusion site pain, abdominal pain, hypotension, phlebitis, dizziness.

ADVERSE EFFECTS/TOXIC REACTIONS

Anemia, lymphopenia, neutropenia, thrombocytopenia are expected responses to therapy. Serious and sometimes fatal infections including pneumonia, sepsis have occurred. May cause hepatotoxicity, LFT abnormalities, tumor lysis syndrome. GI toxicities including severe diarrhea, nausea, vomiting may require use of antiemetic and antidiarrheal medication or result in dosage reduction. Nineteen percent of pts required treatment discontinuation related to toxic anemia, febrile neutropenia, multiorgan failure, ventricular fibrillation (rare).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline ANC, CBC, BMP, LFT, vital signs; urine pregnancy in women of reproductive potential. Question history of anemia, arrhythmias, hepatic impairment, peripheral edema, or if pt homozygous for UGT1A1 allele (may require reduced starting dose). Question possibility of pregnancy, current breastfeeding status. Receive full medication history including herbal products.

INTERVENTION/EVALUATION

Diligently monitor blood counts (esp. ANC, Hgb/Hct, WBC, platelet count) weekly; hepatic/renal function prior to start of first dose of each cycle, vital signs. Monitor for symptoms of hypokalemia. Screen for tumor lysis syndrome (electrolyte imbalance, uric acid nephropathy, acute renal failure). Obtain EKG if arrhythmia, palpitations occur. Notify physician if any CTCAE toxicities occur (see Appendix N). Offer antiemetics if nausea vomiting occurs.

PATIENT/FAMILY TEACHING

• Blood levels will be routinely monitored. • Avoid pregnancy; treatment may cause birth defects or miscarriage. Do not breastfeed. • Report any abdominal pain, black/tarry stools, bruising, yellowing of skin or eyes; dark urine, decreased urine output. • Severe diarrhea may lead to dehydration. • Body aches, burning with urination, chills, cough, difficulty breathing, fever may indicate an acute infection.

benazepril

ben-**ay**-ze-pril
(Lotensin)

■ **BLACK BOX ALERT** ■ May cause fetal injury, mortality if used during second or third trimester of pregnancy.

Do not confuse benazepril with Benadryl, or Lotensin with Lioresal.

FIXED-COMBINATION(S)

Lotensin HCT: benazepril/hydrochlorothiazide (a diuretic): 5 mg/625 mg, 10 mg/12.5 mg, 20 mg/12.5 mg, 20 mg/25 mg. **Lotrel:** benazepril/amlodipine (a calcium blocker): 2.5 mg/10 mg, 5 mg/10 mg, 5 mg/20 mg, 5 mg/40 mg, 10 mg/20 mg, 10 mg/40 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin-converting enzyme (ACE) inhibitor. **CLINICAL:** Antihypertensive.

USES

Treatment of hypertension. Used alone or in combination with other antihypertensives.

PRECAUTIONS

Contraindications: History of angioedema with or without previous treatment with ACE inhibitors. Use with aliskiren in pts with diabetes. **Cautions:** Renal impairment; hypertrophic cardiomyopathy without flow tract obstruction; severe

aortic stenosis; before, during, or immediately following major surgery; unstented renal artery stenosis; diabetes mellitus. Concomitant use of potassium-sparing diuretics, potassium supplements.

ACTION

Decreases rate of conversion of angiotensin I to angiotensin II, a potent vasoconstrictor. Reduces peripheral arterial resistance. **Therapeutic Effect:** Lowers B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	2–4 hrs	24 hrs

Partially absorbed from GI tract. Protein binding: 97%. Metabolized in liver. Primarily excreted in urine. Minimal removal by hemodialysis. **Half-life:** 35 min; metabolite, 10–11 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Unknown if distributed in breast milk. May cause fetal, neonatal mortality or morbidity. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive effects.

INTERACTIONS

DRUG: **Diuretics, hypotensive agents** may increase effect. **NSAIDs, sympathomimetics** may decrease effect. **Potassium-sparing diuretics, potassium supplements** may cause hyperkalemia. May increase **cyclosporine, lithium** concentration/effect. **HERBAL:** **Ephedra, ginseng, licorice** may worsen hypertension. **Black cohosh, periwinkle** may have increased antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase serum potassium, ALT, AST, alkaline phosphatase, bilirubin, BUN, creatinine, glucose. May decrease serum sodium, Hgb, Hct. May cause positive ANA titer.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg, 20 mg, 40 mg.

ADMINISTRATION/HANDLING

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Hypertension (Monotherapy)

PO: ADULTS: Initially, 10 mg/day. **Maintenance:** 20–40 mg/day as single dose or in 2 divided doses. **Maximum:** 80 mg/day. **ELDERLY:** Initially, 5–10 mg/day. Range: 20–40 mg/day. **CHILDREN 6 YRS AND OLDER:** Initially, 0.2 mg/kg/day (up to 10 mg/day). Range: 0.1–0.6 mg/kg/day. **Maximum:** 40 mg/day.

Hypertension (Combination Therapy)

PO: ADULTS: Discontinue diuretic 2–3 days prior to initiating benazepril, then dose as noted above. If unable to discontinue diuretic, begin benazepril at 5 mg/day.

Dosage in Renal Impairment

ADULTS: Creatinine clearance less than 30 ml/min: Initially, 5 mg/day titrated up to maximum of 40 mg/day.

HD: Give dose post-HD or administer 25–35% supplemental dose.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (6%–3%): Cough, headache, dizziness. **Occasional (2%):** Fatigue, drowsiness, nausea. **Rare (less than 1%):** Rash, fever, myalgia, diarrhea, loss of taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive hypotension ("first-dose syncope") may occur in pts with HF, severe salt or volume depletion. Angioedema, hyperkalemia occur rarely. Agranulocytosis, neutropenia may be noted in pts with renal impairment, collagen vascular disease (scleroderma, systemic lupus erythematosus). Nephrotic syndrome may occur in pts with history of renal disease.

B

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC before therapy begins and q2wks for 3 mos, then periodically thereafter. Obtain B/P immediately before each dose, in addition to regular monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position with legs elevated. Monitor pt with renal impairment, autoimmune disease, or taking drugs that affect leukocytes or immune response.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Monitor B/P, renal function, urinary protein, serum potassium. Monitor CBC with differential if pt has collagen vascular disease or renal impairment.

PATIENT/FAMILY TEACHING

• To reduce hypotensive effect, go from lying to standing slowly. • Full therapeutic effect may take 2–4 wks. • Skipping doses or noncompliance with drug therapy may produce severe, rebound hypertension. • Report dizziness, persistent cough.

bendamustine

ben-da-**mus**-teen
(Treanda)
Do not confuse bendamustine with carmustine or lomustine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent. **CLINICAL:** Antineoplastic.

USES

Treatment of chronic lymphocytic leukemia (CLL). Treatment of indolent B-cell non-Hodgkin's lymphoma (NHL) that has progressed during or within 6 mos of treatment with rituximab or a rituximab-containing regimen. **OFF-LABEL:** Treatment of mantle cell lymphoma, relapsed multiple myeloma. First-line treatment for follicular lymphoma. Treatment of Waldenström's macroglobulinemia.

PRECAUTIONS

Contraindications: Known hypersensitivity to bendamustine or mannitol. **Cautions:** Myelosuppression (may increase risk of infection), renal/hepatic impairment, dehydration, HF.

ACTION

Alkylates and cross-links macromolecules, resulting in DNA, RNA, and protein synthesis inhibition. **Therapeutic Effect:** Inhibits tumor cell growth, causes cell death.

PHARMACOKINETICS

Metabolized via hydrolysis to metabolites. Protein binding: 64%–95%. Eliminated primarily in feces. **Half-life:** 40 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D.** Impaired spermatogenesis, azoospermia have been reported in male pts. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Ciprofloxacin, fluvoxamine** may increase concentration, decrease plasma concentrations of active metabolites. **CYP1A2 inducers (e.g., omeprazole), nicotine** may decrease concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum AST, bilirubin, creatinine, glucose, uric acid. May decrease WBCs, neutrophils, Hgb, platelets; serum potassium, sodium, calcium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 25 mg, 100 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each 100-mg vial with 20 ml Sterile Water for Injection (25-mg vial with 5 ml) for final concentration of 5 mg/ml. • Powder should completely dissolve in 5 min. • Discard if particulate matter is observed. • Withdraw volume needed for required dose (based on 5 mg/ml concentration) and immediately transfer to 500-ml infusion bag of 0.9% NaCl for final concentration of 0.2–0.6 mg/ml. • Reconstituted solution must be transferred to infusion bag within 30 min of reconstitution. • After transferring, thoroughly mix contents of infusion bag.

Rate of Administration • Infuse over 30 min for CLL or 60 min for NHL.

Storage • Reconstituted solution should appear clear and colorless to pale yellow. • Final solution is stable for 24 hrs if refrigerated or 3 hrs at room temperature. • Administration must be completed within these stability time frames.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ During first few wks of treatment, allopurinol should be given as a preventive measure in pts at risk for tumor lysis syndrome.

Chronic Lymphocytic Leukemia

IV Infusion: ADULTS/ELDERLY: 100 mg/m^2 given over 30 min daily on days 1 and 2 of a 28-day cycle, up to 6 cycles.

Non-Hodgkin's Lymphoma

IV Infusion: ADULTS/ELDERLY: 120 mg/m^2 on days 1 and 2 of a 21-day cycle, up to 8 cycles.

Dose Modification

Hematologic Toxicity: grade 4 or greater: Withhold until ANC 1,000/mm^3 or greater, platelet 75,000/mm^3 or greater. **CLL: Toxicity grade 3 or greater:** Reduce dose to 50 mg/m^2 on days 1 and 2 of each treatment cycle. **Recurrence:** Reduce dose to 25 mg/m^2 on days 1 and 2 of each cycle. **NHL: Hematologic toxicity grade 4 or nonhematologic toxicity grade 3 or greater:** Reduce dose to 90 mg/m^2 on days 1 and 2 of each cycle; **Recurrence:** Reduce dose to 60 mg/m^2 on days 1 and 2 of each treatment cycle.

Dosage in Renal Impairment

Not recommended in pts with creatinine clearance less than 40 ml/min.

Dosage in Hepatic Impairment

Use with caution.

SIDE EFFECTS

Frequent (24%–16%): Fever, nausea, vomiting. **Occasional (9%–8%):** Diarrhea, fatigue, asthenia (loss of strength, energy), rash, decreased weight, nasopharyngitis. **Rare (6%–3%):** Chills, pruritus, cough, herpes simplex infections.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression characterized as neutropenia (75% of pts), thrombocytopenia (77% of pts), anemia (89% of pts), leukopenia (61% of pts) is an expected response to therapy. Infection, including pneumonia, sepsis may occur. Tumor lysis syndrome may lead to acute renal failure. Worsening hypertension occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy. Offer emotional support. Obtain baseline CBC, serum chemistries, LFT before treatment begins and routinely thereafter.

INTERVENTION/EVALUATION

Offer antiemetics to control nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Assess skin for evidence of rash. Monitor for signs of infection (fever, chills, cough, flu-like symptoms). Monitor for hypertension. Hematologic nadirs occur in 3rd week of therapy and may require dose delays if recovery to recommended values has not occurred by day 28.

B

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with anyone who recently received live virus vaccine. • Do not have immunizations without physician's approval (drug lowers body resistance). • Promptly report fever, chills, flu-like symptoms, sore throat, unusual bruising/bleeding from any site. • Male pts should be warned of potential risk to their reproductive capacities.

benzonatate

ben-**zoe**-na-tate
(Tessalon Perles, Zonatuss)
Do not confuse benzonatate with benazepril, benzocaine, benztropine, or Tessalon with Tussionex.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonnarcotic antitussive. **CLINICAL:** Cough suppressant.

USES

Relief of nonproductive cough, including acute cough of minor throat/bronchial irritation.

PRECAUTIONS

Contraindications: Allergy to topical anesthetic medicines (tetracaine, procaine). **Cautions:** Productive cough.

ACTION

Anesthetizes stretch or cough receptors in alveoli of lungs, bronchi, and pleura, suppressing the cough reflex. **Therapeutic Effect:** Reduces cough production.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15–20 min	—	3–8 hrs

Metabolized in liver. Primarily excreted in urine. **Half-life:** Unknown.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C.** **Children:** Safety and efficacy not established in pts younger than 10 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **CNS depressants** may increase effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules, Liquid Filled (Tessalon Perles): 100 mg, 200 mg. **Capsules (Zonatuss):** 150 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Administer whole; do not break, crush, or allow pt to dissolve in mouth (may produce temporary local anesthesia of oral mucosa). • Give with full glass of water.

INDICATIONS/ROUTES/DOSAGE

Antitussive

PO *(Tessalon Perles)*: **ADULTS, ELDERLY, CHILDREN OLDER THAN 10 YRS:** 100–200 mg 3 times a day, or every 4 hrs up to 600 mg/day. ***(Zonatuss)*:** 150 mg 3 times a day. **Maximum:** 600 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (10%–5%): Mild drowsiness, mild dizziness, constipation, nausea, skin eruptions, nasal congestion.

ADVERSE EFFECTS/ TOXIC REACTIONS

Paradoxical reaction (restlessness, insomnia, euphoria, nervousness, tremors) has been noted. Chest pain or numbness, choking feeling, sense of faintness, confusion, hallucinations may result from chewing or sucking on capsule.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess type, severity, frequency of cough. Monitor amount, color, consistency of sputum.

INTERVENTION/EVALUATION

Initiate deep breathing and coughing exercises, particularly in pts with impaired pulmonary function. Monitor for paradoxical reaction. Increase fluid intake and environmental humidity to lower viscosity of lung secretions. Assess for clinical improvement and record onset of cough relief.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Dry mouth, drowsiness, dizziness may be expected responses to drug. • Sucking or chewing on capsule may cause numbness of mouth or throat.

benztropine

benz-**trow**-peen

(Apo-Benztropine, Cogentin)

Do not confuse benztropine with bromocriptine or benzonatate.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic. **CLINICAL:** Antiparkinson agent.

USES

Treatment of Parkinson's disease, drug-induced extrapyramidal reactions (except tardive dyskinesia).

PRECAUTIONS

Contraindications: Children younger than 3 yrs. **Cautions:** Glaucoma, heart disease, hypertension, hypotension; pts with tachycardia, arrhythmias, prostatic hypertrophy, hepatic/renal impairment, obstructive diseases of GI/GU tract, urinary retention, elderly, myasthenia gravis, use during hot weather or during exercise.

ACTION

Selectively blocks central cholinergic receptors, assists in balancing cholinergic/dopaminergic activity. **Therapeutic Effect:** Reduces incidence/severity of akinesia, rigidity, tremor.

PHARMACOKINETICS

Well absorbed following PO and IM administration. Metabolized in liver. PO onset of action: 1–2 hrs, IM onset of action: minutes. Pharmacologic effects may not be apparent until 2–3 days after initiation of therapy and may persist for up to 24 hrs after discontinuation of drug. **Half-life:** Extended (no specific determination).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in pts younger than 3 yrs. **Elderly:** Increased risk for adverse reactions.

INTERACTIONS

DRUG: **Alcohol, CNS depressants** may increase sedation. May increase effects of **anticholinergics.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Solution: 1 mg/ml. **Tablets:** 0.5 mg, 1 mg, 2 mg.

ADMINISTRATION/HANDLING

IM

• Inject slow, deep IM.

PO

• Give without regard to food. • Give with food if GI upset occurs.

INDICATIONS/ROUTES/DOSAGE

Parkinsonism

PO: ADULTS: 0.5–6 mg/day as a single dose or in 2–4 divided doses (usual dose: 1–2 mg/day). Titrate by 0.5 mg at 5–6 day intervals. **ELDERLY:** Initially, 0.5 mg once

or twice a day. Titrate by 0.5 mg at 5–6 day intervals. **Maximum:** 4 mg/day.

Drug-Induced Extrapyramidal Symptoms
PO, IM, IV: ADULTS: 1–4 mg once or twice a day or 1–2 mg 2–3 times/day. **CHILDREN OLDER THAN 3 YRS:** 0.02–0.05 mg/kg/dose once or twice a day.

Acute Dystonic Reactions
IV, IM: ADULTS: Initially, 1–2 mg as a single dose.

Dosage in Renal/Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Frequent: Drowsiness, dry mouth, blurred vision, constipation, urinary retention, GI upset, photosensitivity. **Occasional:** Headache, memory loss, muscle cramps, anxiety, peripheral paresthesia, orthostatic hypotension, abdominal cramps. **Rare:** Rash, confusion, eye pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce severe anticholinergic effects (drowsiness, tachycardia, paralytic ileus, malignant hyperthermia, urinary retention, dyspnea, skin flushing, dryness of mouth/nose/throat). Severe paradoxical reactions (hallucinations, tremor, seizures, toxic psychosis) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess mental status for confusion, disorientation, agitation, psychotic-like symptoms (medication frequently produces such side effects in pts older than 60 yrs). Note severity of baseline rigidity, tremors.

INTERVENTION/EVALUATION

Be alert to neurologic effects: headache, drowsiness, mental confusion, agitation. Assess for clinical reversal of symptoms (improvement of tremor of head and hands at rest, mask-like facial expression, shuffling gait, muscular rigidity). Monitor daily pattern of bowel activity, stool consistency, esp. constipation. Monitor I/O. Assess for urinary retention.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Dry mouth, drowsiness, dizziness may be an expected response to drug. • Drowsiness tends to diminish or disappear with continued therapy. • Avoid alcohol. • Report sudden muscle weakness or stiffness.

beractant

ber-**ak**-tant
(Survanta)
Do not confuse Survanta with Sufenta.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Natural bovine lung extract. **CLINICAL:** Pulmonary surfactant.

USES

Prevention and treatment (rescue therapy) of respiratory distress syndrome (RDS—hyaline membrane disease) in premature infants. **Prevention:** Body weight less than 1,250 g in infants at risk for developing or with evidence of surfactant deficiency (give within 15 min of birth). **Rescue Therapy:** Treatment of infants with RDS confirmed by X-ray, requiring mechanical ventilation (give within 8 hrs of birth).

PRECAUTIONS

Contraindications: None known. **Cautions:** Pts at risk for circulatory overload. This drug is for use only in neonates. **Pregnancy Category:** Not indicated for use in pregnant women.

ACTION

Lowers alveolar surface tension during respiration, stabilizing alveoli. **Therapeutic Effect:** Improves lung compliance, respiratory gas exchange.

PHARMACOKINETICS

Not absorbed systemically.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Suspension, Intratracheal: 25 mg/ml (4 ml, 8 ml).

ADMINISTRATION/HANDLING

Intratracheal

Rate of Administration • Instill through a 5-French end hole catheter inserted into infant's endotracheal tube. Do not instill into main-stem bronchus. • Administer dose in quarter dose aliquots over 2–3 sec with infant in different positions. • Monitor for bradycardia, decreased O_2 saturation during administration. Stop dosing procedure if these effects occur; begin appropriate measures before reinstituting therapy.

Storage • Refrigerate vials. • Warm by standing vial at room temperature for 20 min or warm in hand 8 min. • If settling occurs, gently swirl vial (do not shake) to redisperse. • After warming, may return to refrigerator within 24 hrs one time only. • Each vial should be entered with needle only one time; discard unused portions. • Color appears off-white to light brown.

INDICATIONS/ROUTES/DOSAGE

Prevention and Treatment (Rescue Therapy) of RDS or Hyaline Membrane Disease in Premature Infants

Intratracheal: INFANTS: 100 mg of phospholipids/kg birth weight (4 ml/kg). Give within 15 min of birth if infant weighs less than 1,250 g and has evidence of surfactant deficiency; give within 8 hrs when RDS is confirmed by X-ray and pt requires mechanical ventilation. May repeat in 6 hrs or longer after preceding dose. **Maximum:** 4 doses in the first 48 hrs of life.

SIDE EFFECTS

Frequent: Transient bradycardia, oxygen (O_2) desaturation, carbon dioxide (CO_2) retention. **Occasional:** Endotracheal tube reflux. **Rare:** Apnea, endotracheal tube blockage, hypotension or hypertension, pallor, vasoconstriction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Life-threatening nosocomial sepsis may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Drug must be administered in highly supervised setting. Clinicians caring for neonate must be experienced with intubation, ventilator management. Offer emotional support to parents.

INTERVENTION/EVALUATION

Monitor infant with arterial or transcutaneous measurement of systemic O_2, CO_2. Assess for adventitious breath sounds (rales, rhonchi).

betamethasone

bay-ta-**meth**-a-sone
(Betaderm, Betaject, Betnesol, Betnovate, Celestone, Celestone Soluspan, Diprolene, Diprolene AF, Ectosone, Luxiq)
Do not confuse betamethasone with dexamethasone or Luxiq with Lasix.

FIXED-COMBINATION(S)

Lotrisone: betamethasone/clotrimazole (an antifungal): 0.05%/1%.

B

Taclonex: betamethasone/calcipotriene (an antipsoriatic): 0.064%/.005%.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenocorticosteroid. **CLINICAL:** Anti-inflammatory, immunosuppressant.

USES

Systemic: Inflammatory dermatoses (e.g., atopic dermatitis, psoriasis. **Topical:** Relief of inflammatory and pruritic dermatoses. **Foam:** Relief of inflammation, itching associated with dermatosis. **OFF-LABEL:** Accelerate fetal lung maturation in pts with preterm labor.

PRECAUTIONS

Contraindications: Systemic fungal infections; IM administration in idiopathic thrombocytopenia purpura. **Cautions:** Hypothyroidism, hepatic/renal impairment, cardiovascular disease, diabetes, glaucoma, cataracts, myasthenia gravis, pts at risk for osteoporosis/seizures/GI disease, following acute MI, elderly.

ACTION

Controls rate of protein synthesis, depresses migration of polymorphonuclear leukocytes/fibroblasts, reverses capillary permeability, prevents or controls inflammation. **Therapeutic Effect:** Decreases tissue response to inflammatory process.

PHARMACOKINETICS

Rapidly absorbed following PO administration. Protein binding: 64%. After topical application, limited absorption systemically. Metabolized in liver. Excreted in urine. **Half-life:** 6.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta, distributed in breast milk. **Pregnancy Category C (D if used in first trimester).** **Children:** Prolonged treatment, high-dose therapy may decrease short-term growth rate, cortisol secretion. **Elderly:** Higher risk for developing hypertension, osteoporosis.

INTERACTIONS

DRUG: **Amphotericin** may increase risk of hypokalemia. May decrease effects of **insulin, oral hypoglycemics, potassium supplements.** May increase **digoxin** toxicity (due to hypokalemia). **Hepatic enzyme inducers** may decrease effect. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Cat's claw, echinacea** possess immunostimulant effects. **FOOD:** None known. **LAB VALUES:** May decrease serum calcium, potassium, thyroxine. May increase serum cholesterol, lipids, glucose, sodium, amylase.

AVAILABILITY (Rx)

Cream (Diprolene AF): 0.05%. **Foam (Luxiq):** 0.12%. **Gel:** 0.05%. **Injection, Suspension (Celestone Soluspan):** 3 mg/ml. **Lotion (Diprolene):** 0.05%. **Ointment:** 0.05%, 0.1%. **Solution, Oral:** 0.6 mg/5 ml.

ADMINISTRATION/HANDLING

IM

• Inject slowly, deep IM into large muscle mass.

PO

• Give with milk or food (decreases GI upset). • Give single doses in the morning; give multiple doses at evenly spaced intervals.

Topical

• Gently cleanse area before application. • Apply sparingly and rub into area thoroughly. • Do not apply to face, groin, axillae, or inguinal areas. Not for use on broken skin, areas of infection, or in diaper area. • Do not dispense foam directly into hands; use fingers to apply small amounts.

INDICATIONS/ROUTES/DOSAGE

Anti-Inflammation, Immunosuppression, Corticosteroid Replacement Therapy

PO: ADULTS, ELDERLY: 0.6–7.2 mg/day. **CHILDREN:** 0.0175–0.25 mg/kg/day in 3–4 divided doses.

IM: ADULTS, ELDERLY: 0.6–9 mg/day in 2 divided doses. **CHILDREN:** 0.0175–0.125 mg/kg/day in 3–4 divided doses.

Relief of Inflamed and Pruritic Dermatoses

Topical: ***(Cream/Ointment):*** **ADULTS, ELDERLY:** 1–3 times a day. **Foam:** Apply twice a day (morning and night).

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent: Systemic: Increased appetite, abdominal distention, nervousness, insomnia, false sense of well-being. **Topical:** Burning, stinging, pruritus. **Occasional: Systemic:** Dizziness, facial flushing, diaphoresis, decreased or blurred vision, mood swings. **Topical:** Allergic contact dermatitis, purpura or blood-containing blisters, thinning of skin with easy bruising, telangiectases, raised dark red spots on skin, angiomas.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may cause systemic hypercorticism, adrenal suppression.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to any corticosteroid, sulfite. Obtain baseline values for height, weight, B/P, serum glucose, electrolytes. Obtain baseline results of initial tests (tuberculosis [TB] skin test, X-rays, EKG).

INTERVENTION/EVALUATION

Monitor B/P, blood glucose, electrolytes. Apply topical preparation sparingly. Do not use on broken skin or in areas of infection. Do not apply to wet skin, face, inguinal areas.

PATIENT/FAMILY TEACHING

• Take with food, milk. • Take single daily dose in the morning. • Do not stop abruptly. • Apply topical preparations in a thin layer. • Do not receive smallpox vaccination during or immediately after therapy.

bethanechol

be-**than**-e-kole

(Duvoid, Urecholine)

Do not confuse bethanechol with betaxolol.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Parasympathomimetic choline ester. **CLINICAL:** Cholinergic.

USES

Treatment of acute postoperative and postpartum nonobstructive urinary retention, retention due to neurogenic bladder. **OFF-LABEL:** Treatment of gastroesophageal reflux.

PRECAUTIONS

Contraindications: Mechanical obstruction of GI/GU tract, GI or bladder wall instability, hyperthyroidism, epilepsy, bronchial asthma, coronary artery disease, hypotension, parkinsonism, peptic ulcer, pronounced bradycardia, vasomotor instability. **Cautions:** None known.

ACTION

Acts directly at cholinergic receptors in smooth muscle of urinary bladder, GI tract. Increases detrusor muscle tone. **Therapeutic Effect:** May initiate urination, bladder emptying. Stimulates gastric, intestinal motility.

B

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30–90 min	60 min	6 hrs

Poorly absorbed following PO administration. Does not cross blood-brain barrier. **Half-life:** Unknown.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if crosses placenta or distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Beta-blockers, anticholinesterase inhibitors may increase effect/toxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase, ALT, AST.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg, 25 mg, 50 mg.

ADMINISTRATION/HANDLING

PO

- Administer 1 hr before or 2 hrs after meals.

INDICATIONS/ROUTES/DOSAGE

Nonobstructive Urinary Retention, Atony of Bladder

PO: ADULTS, ELDERLY: 10–50 mg 3–4 times a day. Minimum effective dose determined by giving 5–10 mg initially, repeating same amount at 1-hr intervals until desired response is achieved. **CHILDREN:** 0.3–0.6 mg/kg/day in 3–4 divided doses.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: Belching, changes in vision, blurred vision, diarrhea, urinary urgency or frequency. **Rare:** Shortness of breath, chest tightness, bronchospasm.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces CNS stimulation (insomnia, anxiety, orthostatic hypotension), cholinergic stimulation (headache, increased salivation/diaphoresis, nausea, vomiting, flushed skin, abdominal pain, seizures).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Ensure pt has emptied bladder prior to procedure.

INTERVENTION/EVALUATION

Monitor urine output. Palpate bladder for evidence of urinary retention.

PATIENT/FAMILY TEACHING

- Report nausea, vomiting, diarrhea, diaphoresis, increased salivary secretions, irregular heartbeat, muscle weakness, severe abdominal pain, difficulty breathing.

bevacizumab

TOP 100 HIGH ALERT

be-va-**siz**-ue-mab
(Avastin)

■ **BLACK BOX ALERT** ■ May result in development of GI perforation, presented as intra-abdominal abscess, fistula, wound dehiscence, wound healing complications. Severe, sometimes fatal, hemorrhagic events including central nervous system/GI/vaginal bleeding, epistaxis, hemoptysis, pulmonary hemorrhage has occurred.

Do not confuse Avastin with Astelin, or bevacizumab with cetuximab or rituximab.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Antineoplastic.

USES

Combination chemotherapy with 5-fluorouracil (5-FU) for treatment of pts with colorectal cancer. Treatment with carboplatin and paclitaxel for nonsquamous, non–small-cell lung cancer (NSCLC). Treatment of renal cell carcinoma (metastatic) with interferon alfa, brain cancer (glioblastoma) that has progressed following prior therapy. **OFF-LABEL:** Adjunctive therapy in malignant mesothelioma, ovarian cancer, prostate cancer, age-related macular degeneration. Treatment of metastatic breast cancer.

PRECAUTIONS

Contraindications: None known. **Cautions:** Cardiovascular disease, acquired coagulopathy, preexisting hypertension, pts at risk of thrombocytopenia. Pts with CNS metastasis. Do not administer within 28 days of major surgery or active bleeding.

ACTION

Binds to and inhibits vascular endothelial growth factor, a protein that plays a major role in formation of new blood vessels to tumors. **Therapeutic Effect:** Inhibits metastatic disease progression.

PHARMACOKINETICS

Clearance varies by body weight, gender, tumor burden. **Half-life:** 20 days (range: 11–50 days).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Possess teratogenic effects. Potential for fertility impairment. May decrease maternal and fetal body weight; increase risk of skeletal fetal abnormalities. Breastfeeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Higher incidence of severe adverse reactions in pts older than 65 yrs.

INTERACTIONS

DRUG: **Sunitinib** may increase concentration/effect. May increase levels of **clozapine, sorafenib, sunitinib.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, Hct, platelet count, WBC; serum potassium, sodium. May increase urine protein.

AVAILABILITY (Rx)

Injection, Solution: 25-mg/ml vial.

ADMINISTRATION/HANDLING

IV

◀ALERT▶ Do not give by IV push or bolus.

Reconstitution • Dilute prescribed dose in 100 ml 0.9% NaCl. • Avoid dextrose-containing solutions. • Discard any unused portion.

Rate of Administration • Usually given following other chemotherapy. Infuse initial dose over 90 min. • If first infusion is well tolerated, second infusion may be administered over 60 min. • If 60-min infusion is well tolerated, all subsequent infusions may be administered over 30 min.

Storage • Refrigerate vials. • Diluted solution may be stored for up to 8 hrs if refrigerated.

IV INCOMPATIBILITIES

Do not mix with dextrose solutions.

INDICATIONS/ROUTES/DOSAGE

Colorectal Cancer

IV: ADULTS, ELDERLY: 5–10 mg/kg once every 14 days (with fluorouracil-based chemotherapy).

Non–Small-Cell Lung Cancer (NSCLC)

IV: ADULTS, ELDERLY: 15 mg/kg every 3 wks (in combination with carboplatin and paclitaxel).

Metastatic Renal Cell Carcinoma

IV: ADULTS, ELDERLY: 10 mg/kg once every 2 wks (with interferon alfa).

Brain Cancer

IV: ADULTS, ELDERLY: 10 mg/kg every 2 wks (as monotherapy).

B

Dose Adjustment for Toxicity

Temporary suspension: Mild to moderate proteinuria, severe hypertension not controlled with medical management. **Permanent discontinuation:** Wound dehiscence requiring intervention, GI perforation, hypertensive crises, serious bleeding, nephrotic syndrome.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (73%–25%): Asthenia (loss of strength, energy), vomiting, anorexia, hypertension, epistaxis, stomatitis, constipation, headache, dyspnea. **Occasional (21%–15%):** Altered taste, dry skin, exfoliative dermatitis, dizziness, flatulence, excessive lacrimation, skin discoloration, weight loss, myalgia. **Rare (8%–6%):** Nail disorder, skin ulcer, alopecia, confusion, abnormal gait, dry mouth.

ADVERSE EFFECTS/ TOXIC REACTIONS

UTI, manifested as urinary frequency/urgency, proteinuria, occurs frequently. Most serious adverse effects include HF, deep vein thrombosis, GI perforation, wound dehiscence, hypertensive crisis, nephrotic syndrome, severe hemorrhage. Anemia, neutropenia, thrombocytopenia occur occasionally. Hypersensitivity reactions occur rarely. May increase risk of tracheoesophageal fistula development.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, serum potassium, sodium levels and at regular intervals during therapy. Assess for proteinuria with urinalysis. For pts with 2+ or greater urine dipstick reading, a 24-hr urine collection is advised.

INTERVENTION/EVALUATION

Monitor B/P regularly for hypertension. Assess for asthenia. Assist with ambulation if asthenia occurs. Monitor for fever, chills, abdominal pain, epistaxis. Offer antiemetic if nausea, vomiting occurs. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Report abdominal pain, vomiting, constipation, headache. • Do not receive immunizations without physician's approval (lowers body's resistance). • Avoid contact with anyone who recently received a live virus vaccine. • Avoid crowds, those with infection. • Female pts should take measures to avoid pregnancy during treatment.

bexarotene

HIGH ALERT

beks-**ar**-oh-teen
(Targretin)

■ **BLACK BOX ALERT** ■ Do not administer to pregnant women (high risk of birth defects).

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Retinoid.
CLINICAL: Antineoplastic.

USES

PO: Treatment of cutaneous T-cell lymphoma (CTCL) in pts refractory to at least one prior systemic therapy. **Topical:** Treatment of cutaneous lesions in pts with refractory CTCL (stage 1A and 1B) or not tolerant of other therapies.

PRECAUTIONS

Contraindications: Pregnancy. **Cautions:** Hepatic impairment, diabetes mellitus, lipid abnormalities, excessive alcohol consumption, biliary tract disease.

ACTION

Binds to and activates retinoid X receptor subtypes that regulate the genes controlling cellular differentiation and proliferation. **Therapeutic Effect:** Inhibits growth of tumor cell lines of hematopoietic and squamous cell origin, induces tumor regression.

PHARMACOKINETICS

Moderately absorbed from GI tract. Protein binding: greater than 99%. Metabolized in liver. Primarily eliminated through the hepatobiliary system. **Half-life:** 7 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Bone marrow depressants, medications causing blood dyscrasias** may have adverse additive effects. **CYP3A4 inducers (e.g., phenobarbital, phenytoin, rifampin)** may decrease plasma concentration. **CYP3A4 inhibitors (e.g., erythromycin, gemfibrozil, itraconazole, ketoconazole)** may increase plasma concentration. May reduce **tamoxifen** concentration. **HERBAL:** **Dong quai, St. John's wort** may decrease plasma concentration/cause photosensitization. **FOOD:** **Grapefruit products** may increase concentration/toxicity. **LAB VALUES:** May increase serum bilirubin, ALT, AST, cholesterol, glucose, potassium, triglycerides, total cholesterol, LDL. May decrease HDL. CA-125 in ovarian cancer may be increased.

AVAILABILITY (Rx)

Capsules (Soft Gelatin [Targretin]): 75 mg. **Topical Gel (Targretin):** 1%.

ADMINISTRATION/HANDLING

PO

- Give following a high-fat meal. Swallow whole. Do not chew or dissolve.

Topical

- Generously coat lesions with gel. • Allow to dry before covering. • Avoid applying gel to normal skin surrounding lesions or near mucosal surfaces. • Use of occlusive dressings not recommended.

INDICATIONS/ROUTES/DOSAGE

Cutaneous T-Cell Lymphoma Refractory to at Least One Prior Systemic Therapy

PO: ADULTS: 300 mg/m^2/day. If no tumor response after 8 wks and initial dose is well tolerated, may be increased to 400 mg/m^2/day. If not tolerated, may be decreased to 200 mg/m^2/day, then to 100 mg/m^2/day, or temporarily suspended to manage toxicity. **Topical: ADULTS:** Initially, apply once every other day for first wk. May increase at weekly intervals to once a day, then twice a day, then 3 times a day, up to 4 times a day based on tolerance.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (79%–20%): Hyperlipidemia, headache, hypothyroidism, asthenia (loss of strength, energy). **Occasional (17%–7%):** Rash, nausea, peripheral edema, dry skin, abdominal pain, chills, exfoliative dermatitis, diarrhea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pancreatitis, hepatic failure, pneumonia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline lipid profile, WBC, hepatic function, thyroid function. Question for possibility of pregnancy (Pregnancy Category X).

INTERVENTION/EVALUATION

Monitor serum cholesterol, triglycerides, CBC, hepatic, thyroid function tests.

PATIENT/FAMILY TEACHING

- Do not use medicated, drying, abrasive soaps; wash with gentle, bland soap. • Inform physician if pregnant or planning to become pregnant (Pregnancy

B

Category X). • Warn women of childbearing age about potential fetal risk if pregnancy occurs. • Instruct on need for use of 2 reliable forms of contraceptives concurrently during therapy and for 1 mo after discontinuation of therapy, even in infertile, premenopausal women.

bicalutamide

HIGH ALERT

bye-ka-**loo**-ta-mide
(Apo-Bicalutamide, Casodex, Novo-Bicalutamide)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiandrogen hormone. **CLINICAL:** Antineoplastic.

USES

Treatment of advanced metastatic prostatic carcinoma (in combination with luteinizing hormone-releasing hormone [LHRH] agonist analogues, e.g., leuprolide). Treatment with both drugs must be started at same time. **OFF-LABEL:** Monotherapy for locally advanced prostate cancer.

PRECAUTIONS

Contraindications: Women, esp. those who are or may become pregnant. **Cautions:** Moderate to severe hepatic impairment, diabetes.

ACTION

Competitively inhibits androgen action by binding to androgen receptors in target tissue. **Therapeutic Effect:** Decreases growth of prostatic carcinoma.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 96%. Metabolized in liver. Excreted in urine and feces. Not removed by hemodialysis. **Half-life:** 5.8–7 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May inhibit spermatogenesis in males. Not used in women. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase effects of **aripiprazole, budesonide, colchicine, fentanyl, salmeterol, saxagliptin.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, alkaline phosphatase, creatinine, bilirubin, BUN, glucose. May decrease WBC, Hgb.

AVAILABILITY (Rx)

Tablets: 50 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Give at same time each day.

INDICATIONS/ROUTES/DOSAGE

Prostatic Carcinoma

PO: ADULTS, ELDERLY: 50 mg once a day in morning or evening, given concurrently with an LHRH analogue or after surgical castration.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (49%–10%): Hot flashes, breast pain, muscle pain, constipation, asthenia, diarrhea, nausea. **Occasional (9%–8%):** Nocturia, abdominal pain, peripheral edema. **Rare (7%–3%):** Vomiting, weight loss, dizziness, insomnia, rash, impotence, gynecomastia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Sepsis, HF, hypertension, iron deficiency anemia, interstitial pneumonitis, pulmonary fibrosis may occur. Severe hepatotoxicity

occurs rarely within the first 3–4 mos after treatment initiation.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, LFT, PSA, serum testosterone, leuteinizing hormone (LH) levels.

INTERVENTION/EVALUATION

Monitor lab studies for changes from baseline. Perform periodic hepatic function tests. If ALT, AST increase over 2 times the upper limit of normal (ULN) or jaundice is noted, discontinue treatment. Monitor for diarrhea, nausea, vomiting.

PATIENT/FAMILY TEACHING

• Do not stop taking either medication (both drugs must be continued). • Take medications at same time each day. • Explain possible expectancy of frequent side effects. • Report persistent nausea, vomiting, diarrhea or yellowing of skin or eyes.

bisacodyl

bis-**ak**-oh-dil
Apo-Bisacodyl ✱, Dulcolax, Fleet Bisacodyl Enema

CLASSIFICATION

PHARMACOTHERAPEUTIC: GI stimulant. **CLINICAL:** Laxative.

USES

Treatment of constipation, colonic evacuation before examinations or procedures.

PRECAUTIONS

Contraindications: Abdominal pain, appendicitis, intestinal obstruction, nausea, undiagnosed rectal bleeding, vomiting, pregnancy, lactation. **Cautions:** Long-term use may lead to laxative dependence, loss of normal bowel function.

ACTION

Direct effect on colonic smooth musculature by stimulating intramural nerve plexi. **Therapeutic Effect:** Promotes fluid and electrolyte accumulation in colon, increasing peristalsis, producing laxative effect.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	6–12 hrs	N/A	N/A
Rectal	15–60 min	N/A	N/A

Minimal absorption following PO and rectal administration. Absorbed drug is excreted in urine; remainder is eliminated in feces.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Use with caution in pts younger than 6 yrs (usually unable to describe symptoms or more severe side effects). **Elderly:** Repeated use may cause weakness, orthostatic hypotension due to fluid, electrolyte imbalance.

INTERACTIONS

DRUG: **Antacids** may decrease effect, cause premature dissolution of enteric coating and possible gastric irritation. **HERBAL:** None significant. **FOOD:** **Milk** may cause rapid dissolution of bisacodyl. **LAB VALUES:** May increase serum glucose concentration. May decrease serum potassium (due to fluid loss).

AVAILABILITY (OTC)

Rectal Enema (Fleet Bisacodyl Enema): 10 mg/30 ml. **Suppositories (Dulcolax):** 10 mg.

Tablets (Enteric-Coated [Dulcolax]): 5 mg.

ADMINISTRATION/HANDLING

PO

• Give on empty stomach (faster action). • Offer 6–8 glasses of water a day (aids stool softening). • Administer tablets whole; do not break, crush, dissolve, or divide. • Avoid giving within 1 hr of antacids, milk, other oral medication.

B

Rectal, Enema

• Shake bottle, and remove orange protective shield from tip. • Position pt on left side with left knee slightly bent and right leg drawn up, or in knee-chest position. • Insert tip into rectum, aiming at pt's umbilicus.

Rectal, Suppository

• If suppository is too soft, chill for 30 min in refrigerator or run cold water over foil wrapper. • Moisten suppository with cold water before inserting well into rectum.

Storage • Store rectal enema, suppositories at room temperature.

INDICATIONS/ROUTES/DOSAGE

Treatment of Constipation

PO: ADULTS, CHILDREN OLDER THAN 12 YRS: 5–15 mg as needed. **Maximum:** 30 mg. **CHILDREN 3–12 YRS:** 5–10 mg or 0.3 mg/kg at bedtime or after breakfast. **ELDERLY:** Initially, 5 mg/day.

Rectal, Enema: ADULTS, CHILDREN OLDER THAN 12 YRS: One 1.25-oz bottle as a single daily dose.

Rectal, Suppository: ADULTS, CHILDREN OLDER THAN 12 YRS: 10 mg to induce bowel movement. **CHILDREN 2–12 YRS:** 5–10 mg as a single dose. **CHILDREN YOUNGER THAN 2 YRS:** 5 mg. **ELDERLY:** 5–10 mg/day.

SIDE EFFECTS

Frequent: Some degree of abdominal discomfort, nausea, mild cramps, faintness.
Occasional: Rectal administration: burning of rectal mucosa, mild proctitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term use may result in laxative dependence, chronic constipation, loss of normal bowel function. Overdose may result in electrolyte or metabolic disturbances (hypokalemia, hypocalcemia, metabolic acidosis, alkalosis), persistent diarrhea, vomiting, muscle weakness, malabsorption, weight loss.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Observe for evidence of constipation. Assess pattern of bowel activity, stool consistency.

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency; record time of evacuation. Assess for abdominal disturbances. Monitor serum electrolytes in those exposed to prolonged, frequent, or excessive use of medication.

PATIENT/FAMILY TEACHING

• Institute measures to promote defecation: increase fluid intake, exercise, high-fiber diet. • Do not take antacids, milk, or other medication within 1 hr of taking medication (decreased effectiveness). • Report unrelieved constipation, rectal bleeding, muscle pain or cramps, dizziness, weakness. • Do not chew, crush, dissolve, or divide tablets.

bisoprolol

HIGH ALERT

bi-**soe**-proe-lol
(Apo-Bisoprolol, Novo-Bisoprolol, Zebeta)
Do not confuse Zebeta with DiaBeta or Zetia.

FIXED-COMBINATION(S)

Ziac: bisoprolol/hydrochlorothiazide (a diuretic): 2.5 mg/6.25 mg, 5 mg/6.25 mg, 10 mg/6.25 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Beta-adrenergic blocker. **CLINICAL:** Antihypertensive.

USES

Management of hypertension, alone or in combination with other medications.

OFF-LABEL: Chronic stable angina pectoris, premature ventricular contractions, supraventricular arrhythmias, HF.

PRECAUTIONS

Contraindications: Cardiogenic shock, marked sinus bradycardia, overt cardiac failure, second- or third-degree heart block (except in pts with pacemaker). **Cautions:** Concurrent use of digoxin, verapamil, diltiazem, HF, history of severe anaphylaxis to allergens, renal/hepatic impairment, hyperthyroidism, diabetes, bronchospastic disease, myasthenia gravis, psychiatric disease.

ACTION

Blocks beta$_1$-adrenergic receptors in cardiac tissue. **Therapeutic Effect:** Slows sinus heart rate, decreases B/P.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 26%–33%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 9–12 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; distributed in breast milk. Avoid use during first trimester. May produce bradycardia, apnea, hypoglycemia, hypothermia during delivery, low birthweight infants. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** Age-related peripheral vascular disease may increase risk of decreased peripheral circulation.

INTERACTIONS

DRUG: Diuretics, other antihypertensives may increase hypotensive effect. May mask symptoms of hypoglycemia, prolong hypoglycemic effect of **insulin, oral hypoglycemics. NSAIDs** may decrease antihypertensive effect. **Verapamil, diltiazem, digoxin** may increase risk of bradycardia or heart block. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may have increased antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase ANA titer, serum BUN, creatinine, potassium, uric acid, lipoproteins, triglycerides.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: Initially, 2.5–5 mg/day. May increase up to 20 mg/day. **ELDERLY:** Initially, 2.5 mg/day. May increase by 2.5–5 mg/day. **Maximum:** 20 mg/day.

Dosage in Renal Impairment

ADULTS, ELDERLY: Creatinine clearance less than 40 ml/min: Initially, give 2.5 mg.

Dosage in Hepatic Impairment

Cirrhosis, Hepatitis: Initially, 2.5 mg.

SIDE EFFECTS

Frequent (11%–8%): Fatigue, headache. **Occasional (4%–2%):** Dizziness, arthralgia, peripheral edema, URI, rhinitis, pharyngitis, diarrhea, nausea, insomnia. **Rare (less than 2%):** Chest pain, asthenia, dyspnea, vomiting, bradycardia, dry mouth, diaphoresis, decreased libido, impotence.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce profound bradycardia, hypotension. Abrupt withdrawal may result in diaphoresis, palpitations, headache, tremors. May precipitate HF, MI in pts with cardiac disease, thyroid storm in pts with thyrotoxicosis, peripheral ischemia in those with existing peripheral vascular disease. Hypoglycemia may occur in previously controlled diabetes. Thrombocytopenia, unusual bruising/bleeding occur rarely.

B

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline renal/hepatic function tests. Assess B/P, apical pulse immediately before drug is administered (if pulse is 60/min or less or systolic B/P is less than 90 mm Hg, withhold medication, contact physician).

INTERVENTION/EVALUATION

Monitor B/P, pulse for quality, irregular rate, bradycardia. Assist with ambulation if dizziness occurs. Assess for peripheral edema (usually, first area of lower extremity swelling is behind medial malleolus in ambulatory, sacral area in bedridden). Monitor daily pattern of bowel activity, stool consistency. Assess neurologic status.

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication. • Compliance with therapy regimen is essential to control hypertension. • If dizziness occurs, sit or lie down immediately. • Avoid tasks that require alertness, motor skills until response to drug is established. • Take pulse properly before each dose and report excessively slow pulse rate (less than 60 beats/min). Report numbness of extremities, dizziness. • Do not use nasal decongestants, OTC cold preparations (stimulants) without physician's approval. • Restrict salt, alcohol intake.

bivalirudin

HIGH ALERT

bye-**val**-i-rue-din
(Angiomax)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Thrombin inhibitor. **CLINICAL:** Anticoagulant.

USES

Anticoagulant in pts with unstable angina undergoing percutaneous transluminal coronary angioplasty (PTCA) in conjunction with aspirin. Pts with heparin-induced thrombocytopenia (HIT) and thrombosis syndrome (HITTS) while undergoing percutaneous coronary intervention (PCI) (in conjunction with aspirin). **OFF-LABEL:** HIT; ST-segment elevation MI (STEMI) undergoing PCI.

PRECAUTIONS

Contraindications: Active major bleeding. **Cautions:** Renal impairment, conditions associated with increased risk of bleeding (e.g., bacterial endocarditis, recent major bleeding, CVA, stroke, intracerebral surgery, hemorrhagic diathesis, severe hypertension, severe renal/hepatic impairment, recent major surgery).

ACTION

Specifically and reversibly inhibits thrombin by binding to its receptor sites. **Therapeutic Effect:** Decreases acute myocardial ischemic complications in pts with unstable angina pectoris.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	Immediate	N/A	1 hr

Primarily eliminated by kidneys. Twenty-five percent removed by hemodialysis. **Half-life:** 25 min (increased in moderate to severe renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Antiplatelets, NSAIDs, salicylates, thrombolytics may increase effect. **HERBAL: Ginkgo biloba,** other herbs with anticoagulant/antiplatelet properties may increase risk of bleeding. **FOOD:** None known. **LAB VALUES:** Prolongs activated

partial thromboplastin time (aPTT), prothrombin time (PT).

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 250 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • To each 250-mg vial add 5 ml Sterile Water for Injection. • Gently swirl until fully dissolved. • Dilute each vial in 50 ml D_5W or 0.9% NaCl bag to yield final concentration of 5 mg/ml (1 vial in 50 ml, 2 vials in 100 ml, 5 vials in 250 ml). • If low-rate infusion is used after initial infusion, reconstitute the 250-mg vial with added 5 ml Sterile Water for Injection. • Gently swirl until fully dissolved. • Dilute each vial in 500 ml D_5W or 0.9% NaCl bag to yield final concentration of 0.5 mg/ml. • Produces a clear, colorless solution (do not use if cloudy or contains a precipitate).

Rate of Administration • Adjust IV infusion based on aPTT or pt's body weight.

Storage • Store unreconstituted vials at room temperature. • Reconstituted solution may be refrigerated for up to 24 hrs. • Final dilution with a concentration of 0.5–5 mg/ml is stable at room temperature for up to 24 hrs.

IV INCOMPATIBILITIES

Alteplase (Activase), amiodarone (Cordarone), amphotericin B (AmBisome, Abelcet), diazepam (Valium), dobutamine (Dobutrex), reteplase (Retavase), streptokinase (Streptase), vancomycin (Vancocin).

IV COMPATIBILITIES

Refer to chart in front of book.

INDICATIONS/ROUTES/DOSAGE

Anticoagulant in Pts with Unstable Angina, HIT, or HITTS Undergoing PTCA

IV: ADULTS, ELDERLY: 0.75 mg/kg as IV bolus, followed by IV infusion at rate of 1.75 mg/kg/hr for duration of procedure and up to 4 hrs postprocedure. IV infusion may be continued beyond initial 4 hrs at rate of 0.2 mg/kg/hr for up to 20 hrs.

Dosage in Renal Impairment

◀ALERT▶ Initial bolus dose remains unchanged.

Creatinine Clearance	Dosage
30 ml/min or greater	1.75 mg/kg/hr
10–29 ml/min	1 mg/kg/hr
Dialysis	0.25 mg/kg/hr

Dosage in Hepatic Impairment

No dosage adjustment.

SIDE EFFECTS

Frequent (42%): Back pain. **Occasional (15%–12%):** Nausea, headache, hypotension, generalized pain. **Rare (8%–4%):** Injection site pain, insomnia, hypertension, anxiety, vomiting, pelvic or abdominal pain, bradycardia, nervousness, dyspepsia, fever, urinary retention.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hemorrhagic events occur rarely, characterized by significant fall in B/P or Hct.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess CBC, PT/INR, aPTT, renal function. Determine initial B/P.

INTERVENTION/EVALUATION

Monitor aPTT, CBC, urine and stool specimen for occult blood, renal function studies. Monitor for evidence of bleeding. Assess for decrease in B/P, increase in pulse rate. Question for increase in vaginal bleeding during menses.

bleomycin HIGH ALERT

blee-oh-**mye**-sin

(Blenoxane*)

B

■ **BLACK BOX ALERT** ■ Pulmonary fibrosis (commonly presenting as pneumonitis) occurs more often in elderly, pts receiving more than 400 units total lifetime dose or single dose more than 30 units, smokers, prior radiation treatment, or receiving concurrent oxygen. Severe reactions (hypotension, mental confusion, fever, chills, wheezing) is reported rarely.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Glycopeptide antibiotic. **CLINICAL:** Antineoplastic, sclerosing agent.

USES

Treatment of Hodgkin's and non-Hodgkin's lymphoma, sclerosing agent for malignant pleural effusions, squamous cell carcinoma (e.g., head, neck, penis, cervix, vulva), testicular carcinoma. **OFF-LABEL:** Ovarian tumors, germ cell tumors.

PRECAUTIONS

Contraindications: Previous allergic reaction to bleomycin. **Cautions:** Severe renal or pulmonary impairment.

ACTION

Binds to portions of DNA, producing DNA single-strand and double-strand breaks. Inhibits RNA, protein synthesis. **Therapeutic Effect:** Inhibits cell replication.

PHARMACOKINETICS

Protein binding: Low (1%). Metabolism varies. Excreted in urine as unchanged drug. **Half-life:** 115 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Breastfeeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Increased risk of pulmonary toxicity.

INTERACTIONS

DRUG: May alter effects of **live vaccines. Pimecrolimus, tacrolimus** (topical) may increase concentration/effect. **HERBAL:** **Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Blenoxane): 15 units, 30 units.

ADMINISTRATION/HANDLING

◀ALERT▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

IV

Reconstitution • Reconstitute 15-unit vial with at least 5 ml (30-unit vial with at least 10 ml) 0.9% NaCl to provide a concentration no greater than 3 units/ml. **Rate of Administration** • Administer over at least 10 min for IV injection. **Storage** • Refrigerate vials. Unused vials are stable for 4 wks at room temperature. • After reconstitution with 0.9% NaCl, solution is stable for 24 hrs at room temperature.

IM, Subcutaneous

Reconstitution • Reconstitute 15-unit vial with 1–5 ml (30-unit vial with 2–10 ml) Sterile Water for Injection, 0.9% NaCl, or Bacteriostatic Water for Injection to provide concentration of 3–15 units/ml. Do not use D_5W. **Storage** • Refrigerate vials. • After reconstitution, solution is stable for 24 hrs at room temperature.

IV INCOMPATIBILITIES

Diazepam (Valium), hydrocortisone sodium succinate (Solu-Cortef).

IV COMPATIBILITIES

Furosemide (Lasix), cefepime (Maxipime), dacarbazine (DTIC), dexamethasone (Decadron), diphenhydramine (Benadryl), fludarabine (Fludara), gemcitabine (Gemzar), ondansetron (Zofran), paclitaxel (Taxol), piperacillin/tazobactam (Zosyn), vinblastine (Velban), vinorelbine (Navelbine).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Maximum lifetime dose: 400 units.

Usual Dosage

(Refer to individual protocols)

IV, IM, Subcutaneous: ADULTS, ELDERLY: 10–20 units/m^2 (0.25–0.5 units/kg) 1–2 times a wk.

Sclerosing Agent

ADULTS, ELDERLY: 60 units as a single instillation (mix with 50–100 ml 0.9% NaCl). May repeat at intervals of several days if fluid continues to accumulate.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
40–50 ml/min	70% of normal
30–39 ml/min	60% of normal
20–29 ml/min	55% of normal
10–19 ml/min	45% of normal
5–9 ml/min	40% of normal

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Anorexia, weight loss, erythematous skin swelling, urticaria, rash, striae, vesiculation, hyperpigmentation (particularly at areas of pressure, skin folds, cuticles, IM injection sites, scars), stomatitis (usually evident 1–3 wks after initial therapy); may be accompanied by decreased skin sensitivity followed by skin hypersensitivity, nausea, vomiting, alopecia. With parenteral form, fever, chills typically occurring a few hrs after large single dose, lasting 4–12 hrs occur frequently.

ADVERSE EFFECTS/ TOXIC REACTIONS

Interstitial pneumonitis occurs in 10% of pts, occasionally progresses to pulmonary fibrosis. Appears to be dose-, age-related (older than 70 yrs, those receiving total dose greater than 400 units). Nephrotoxicity, hepatotoxicity occur infrequently.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline pulmonary function test, renal function tests. Obtain baseline chest X-ray.

INTERVENTION/EVALUATION

Adventitious breath sounds may indicate pulmonary toxicity (rales, rhonchi). Observe for dyspnea. Monitor hematologic, pulmonary, hepatic, renal function tests. Assess skin daily for cutaneous toxicity (erythema, rash, vesiculation). Monitor for stomatitis, hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding), symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• Report fever, chills, wheezing, difficulty breathing, prolonged nausea, vomiting, oral pain, or lesions. • Fever or chills reaction occurs less frequently with continued therapy. • Improvement of Hodgkin's disease, testicular tumors noted within 2 wks, squamous cell carcinoma within 3 wks. • Do not have immunizations without physician's approval (drug lowers body's resistance). • Avoid contact with those who have recently received live virus vaccine or had a viral infection (e.g., cold virus, herpetic infection).

boceprevir

boe-**sep**-re-veer
(Victrelis)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protease inhibitor. **CLINICAL:** Antiviral.

USES

Treatment of chronic hepatitis C genotype 1 in combination with peginterferon alfa and ribavirin. Indicated for compensated liver disease, including cirrhosis, in pts who are previously untreated or who

B

have failed previous interferon and ribavirin therapy.

PRECAUTIONS

◀ ALERT ▶ Safety and efficacy not established in decompensated cirrhosis, organ transplant, coinfection with HIV, hepatitis B, previous failed therapies with protease inhibitors.

Contraindications: Pregnancy, breastfeeding, male partners of pregnant women, drugs utilizing CYP3A4/5 for clearance, concomitant use of CYP3A4/5 inducers (e.g., rifampin, carbamazepine), contraindications to peginterferon alfa or ribavirin. **Cautions:** Anemia, neutropenia, thrombocytopenia, HIV.

ACTION

Inhibits hepatitis C virus (HCV) protease needed for cleavage of HCV-encoded polyproteins by binding to active serine protease sites. **Therapeutic Effect:** Inhibits viral replication of hepatitis C virus.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 75%. Metabolized in liver. Excreted primarily in feces. Minimal removal by hemodialysis. **Half-life:** 3.4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Strictly avoid pregnancy. May cause birth defects or fetal demise. **Pregnancy Category B (X when used in ribavirin).** Women of childbearing age must use two different forms of birth control: intrauterine device and barrier methods during treatment and for at least 6 mos after treatment. Hormonal contraceptives may have decreased effectiveness. Do not initiate therapy until negative pregnancy test confirmed. Unknown if crosses placenta or excreted in breast milk. Breastfeeding contraindicated. **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Contraindicated with **alfuzosin, carbamazepine, dihydroergotamine, ergonovine, ergotamine, lovastatin, methylergonovine, midazolam, phenobarbital, phenytoin, pimozide, rifampin, sildenafil, simvastatin, tadalafil, triazolam.** May increase concentrations of **antiarrhythmics (e.g., amiodarone, digoxin, quinidine), antifungals (e.g., itraconazole, ketoconazole), atorvastatin, budesonide, calcium channel blockers (e.g., felodipine, nifedipine), colchicine, clarithromycin, desipramine, dexamethasone, fluticasone, HIV non-nucleoside reverse transcriptase inhibitors, immunosuppressants, opioid analgesics, oral contraceptives, rifabutin, salmeterol, sildenafil, trazadone, warfarin.** May alter therapeutic levels of **buprenorphine, ethinyl estradiol, HIV protease inhibitors, methadone, warfarin. Dexamethasone, HIV non-nucleoside reverse transcriptase inhibitors, rifabutin** may decrease antiviral effectiveness. **HERBAL: St. John's wort** may decrease effect (contraindicated). **FOOD:** None known. **LAB VALUES:** May decrease RBC, Hgb, Hct, neutrophils, platelets.

AVAILABILITY (Rx)

Capsules: 200 mg.

ADMINISTRATION/HANDLING

- Give with food. Administer doses about every 7–9 hrs.

INDICATIONS/ROUTES/DOSAGE

Chronic Hepatitis C with Non-Cirrhosis, Previously Untreated or Previous Partial Responders or Relapsers

PO: ADULTS, ELDERLY: 800 mg 3 times a day with food. Begin after 4 wks of peginterferon alfa, ribavirin therapy. Duration based on Response-Guided Therapy (RGT) guidelines. **Response-Guided Therapy Guidelines with HCV-RNA**

Level Based on prior treatment and HCV-RNA results at wks 8, 12, 24. For previously untreated pts, if HCV-RNA undetectable at wk 8 to wk 24, complete three-medicine regimen at wk 28. If HCV-RNA detectable at wk 8 but undetectable at wk 24, continue three-medicine regimen until wk 36, then finish with peginterferon alfa, ribavirin until wk 48. For previous partial responders or relapsers, if HCV-RNA undetectable at wk 8 to wk 24, complete three-medicine regimen at wk 36. If HCV-RNA detectable at wk 8 but undetectable at wk 24, continue three-medicine regimen until wk 36, then finish with peginterferon alfa, ribavirin until wk 48. **Treatment Futility** Discontinue treatment if HCV-RNA viral load greater than or equal to 100 international units/ml at wk 12, or HCV-RNA detectable at wk 24.

Chronic Hepatitis C with Cirrhosis, or Poor Responders to Interferon

PO: ADULTS, ELDERLY: 800 mg 3 times a day with food for 44 wks. Start after 4 wks with peginterferon alfa, ribavirin therapy.

Dosage Modification

Do not reduce boceprevir dose during treatment. If adverse reaction or neutropenia occurs, recommend reduction/discontinuation of peginterferon alfa and/or ribavirin. If Hgb less than 10 g/dL, reduce or interrupt ribavirin. If Hgb less than 8.5 g/dL, discontinue ribavirin.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (58%–25%): Fatigue, anemia, nausea, dysgeusia, chills, insomnia, alopecia, decreased appetite, diarrhea. **Occasional (22%–8%):** Irritability, vomiting, arthralgia, dizziness, dry skin, rash, asthenia, dry mouth, exertional dyspnea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increased risk of thromboembolic events associated with peginterferon alfa, erythropoiesis-stimulating agent. Life-threatening infections related to neutropenia. Simultaneous use of contraindicated medications use may result in hypertension/hypotension, peripheral vasospasm/ischemia (ergot toxicity), arrhythmias, rhabdomyolysis (statins), hyperkalemia (oral contraception), visual abnormalities, syncope, increased sedation or respiratory depression (sedative/hypnotics), loss of virologic response.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain vital signs, O_2 saturation. Obtain CBC, HCV-RNA level, INR if on warfarin. Receive full medication history including vitamins, minerals, herbal products and screen contraindications. Confirm negative pregnancy test before initiating treatment. Question history of anemia, HIV, hepatitis B, organ transplant.

INTERVENTION/EVALUATION

Assess vital signs, O_2 saturation routinely. Monitor CBC with differential (wk 4, 8, 12), and HCV-RNA levels (wk 4, 8, 12, 24), urine pregnancy every month and for 6 mos after final treatment. Assess for anemia-related dizziness, exertional dyspnea, fatigue, weakness, syncope. Report decreases in Hgb, Hct, platelets, neutrophils. Monitor INR if on warfarin. Monitor for acute infection, bloody stools, bruising, hematuria, DVT, pulmonary embolism. Encourage nutritional intake and assess anorexia, weight loss. Obtain EKG for hypokalemia, palpitations, tachycardia. Reinforce birth control compliance.

PATIENT/FAMILY TEACHING

• Must be used in combination with peginterferon alfa, ribavirin. • Inform of side effects/contraindications of

B

three-medication regimen. • Blood levels will be drawn routinely. • Immediately report any newly prescribed medications. • Women of childbearing age must use two different forms of birth control: intrauterine device including barrier methods during treatment and for at least 6 mos after treatment. • Hormonal birth control (oral, vaginal rings, injections) may be ineffective. • Immediately notify physician if partner becomes pregnant. • May alter taste of food or decrease appetite. • Report bloody stool/urine, bruising, difficulty breathing, weakness, dizziness, palpitations, weight loss. • Avoid alcohol. • Take with meals.

bortezomib HIGH ALERT

bor-**tez**-oh-mib
(Velcade)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protease inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of relapsed or refractory mantle cell lymphoma. Initial treatment of multiple myeloma. **OFF-LABEL:** Treatment of Waldenström's macroglobulinemia; peripheral or cutaneous T-cell lymphoma; systemic light-chain amyloidosis.

PRECAUTIONS

Contraindications: Hypersensitivity to boron or mannitol, intrathecal administration. **Cautions:** Strong CYP3A4 inhibitors may increase concentration/toxicity. History of syncope, pts receiving medication known to be associated with hypotension; dehydration, diabetes, hepatic impairment, preexisting cardiac disease.

ACTION

Inhibits proteasomes (enzyme complexes regulating protein homeostasis within the cell). **Therapeutic Effect:** Produces cell-cycle arrest, apoptosis.

PHARMACOKINETICS

Widely distributed. Protein binding: 83%. Primarily metabolized by enzymatic action. Significant biliary excretion, with lesser amount excreted in urine. **Half-life:** 9–15 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May induce degenerative effects in ovary, degenerative changes in testes. May affect male/female fertility. Breastfeeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Increased incidence of grades 3 or 4 thrombocytopenia.

INTERACTIONS

DRUG: **CYP3A4 inhibitors (e.g., itraconazole, ketoconazole)** may increase concentration/toxicity. **CYP3A4 inducers (e.g., rifampin)** may decrease concentration/effect (avoid use). **HERBAL:** **Green tea, green tea extracts** may diminish effect. **St. John's wort** may decrease level/effect. **FOOD:** **Grapefruit products** may increase concentration. **LAB VALUES:** May significantly decrease WBC, Hgb, Hct, platelet count, neutrophils.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 3.5 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute vial with 3.5 ml 0.9% NaCl to provide a concentration of 1 mg/ml.
Rate of Administration • Give as bolus IV injection over 3–5 sec.
Storage • Store unopened vials at room temperature. • Once reconstituted, solution may be stored at room temperature for up to 3 days or for 5 days if refrigerated.

SUBCUTANEOUS

Reconstitution • Reconstitute vial with 1.4 ml 0.9% NaCl to provide a concentration of 2.5 mg/ml.

INDICATIONS/ROUTES/DOSAGE

Relapsed or Refractory Mantle Cell Lymphoma

IV: Subcutaneous: ADULTS, ELDERLY: Treatment cycle consists of 1.3 mg/m^2 twice weekly on days 1, 4, 8, and 11 for 2 wks followed by a 10-day rest period on days 12 to 21. Consecutive doses separated by at least 72 hrs.

Multiple Myeloma (Initial Treatment)

IV: Subcutaneous: ADULTS, ELDERLY: (with melphalan and prednisone) 1.3 mg/m^2 on days 1, 4, 8, 11, 22, 29, 32 of a 42-day cycle for 4 cycles, then 1.3 mg/m^2 on days 1, 8, 22, 29 of a 42-day cycle for 5 cycles.

Dosage Adjustment Guidelines

Therapy is withheld at onset of grade 3 nonhematologic or grade 4 hematologic toxicities, excluding neuropathy. When symptoms resolve, therapy is restarted at a 25% reduced dosage.

Dosage Adjustment Guidelines with Neuropathic Pain, Peripheral Sensory Neuropathy

For grade 1 toxicity with pain or grade 2 (interfering with function but not activities of daily living [ADL]), 1 mg/m^2. For grade 2 toxicity with pain or grade 3 (interfering with ADL), withhold drug until toxicity is resolved, then reinitiate with 0.7 mg/m^2. For grade 4 toxicity (permanent sensory loss that interferes with function), discontinue bortezomib.

SIDE EFFECTS

Expected (65%–36%): Fatigue, malaise, asthenia, nausea, diarrhea, anorexia, constipation, fever, vomiting. **Frequent (28%–21%):** Headache, insomnia, arthralgia, limb pain, edema, paresthesia, dizziness, rash. **Occasional (18%–11%):** Dehydration, cough, anxiety, bone pain, muscle cramps, myalgia, back pain, abdominal pain, taste alteration, dyspepsia, pruritus, hypotension (including orthostatic hypotension), rigors, blurred vision.

ADVERSE EFFECTS/ TOXIC REACTIONS

Thrombocytopenia occurs in 40% of pts. Platelet count peaks at day 11, returns to baseline by day 21. GI, intracerebral hemorrhage are associated with drug-induced thrombocytopenia. Anemia occurs in 32% of pts. New onset or worsening of existing neuropathy occurs in 37% of pts. Symptoms may improve in some pts upon drug discontinuation. Pneumonia occurs occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC. Ensure adequate hydration prior to initiation of therapy. Antiemetics, antidiarrheals may be effective in preventing, treating nausea, vomiting, diarrhea.

INTERVENTION/EVALUATION

Routinely assess B/P; monitor pt for orthostatic hypotension. Maintain strict I&O. Monitor CBC, esp. platelet count, throughout treatment. Monitor renal, hepatic, pulmonary function throughout therapy. Encourage adequate fluid intake to prevent dehydration. Monitor temperature and be alert to high potential for fever. Monitor for peripheral neuropathy (burning sensation, neuropathic pain, paresthesia, hyperesthesia). Avoid IM injections, rectal temperatures, other traumas that may induce bleeding.

PATIENT/FAMILY TEACHING

• Report new/worsening vomiting, bruising/bleeding, breathing difficulties. • Discuss importance of pregnancy testing, avoidance of pregnancy, measures to prevent pregnancy. • Increase fluid intake. • Avoid tasks that require mental alertness, motor skills until response to drug is established.

B

bosentan

boe-sen-tan
(Tracleer)

■ **BLACK BOX ALERT** ■ Do not use in pregnancy (may cause birth defects) or in moderate to severe hepatic impairment (may cause hepatotoxicity).

Do not confuse Tracleer with Tricor.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Endothelin receptor antagonist. **CLINICAL:** Vasodilator, neurohormonal blocker.

USES

Treatment of PAH World Health Organization group I in pts with NYHA class II, III, or IV symptoms to improve exercise ability and to decrease clinical worsening.

PRECAUTIONS

Contraindications: Administration with cyclosporine or glyburide, pregnancy. **Extreme Caution:** Moderate to severe hepatic impairment. **Cautions:** Mild hepatic impairment, anemia.

ACTION

Blocks endothelin receptors on vascular endothelium and smooth muscle that constrict pulmonary arteries. **Therapeutic Effect:** Improves exercise ability, slows clinical worsening of pulmonary arterial hypertension (PAH).

PHARMACOKINETICS

Protein binding: greater than 98%. Metabolized in liver. Eliminated by biliary excretion. **Half-life:** Approximately 5 hrs (increased in HF).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May induce male infertility, atrophy of seminiferous tubules of testes; reduce sperm count. Expected to cause fetal harm, teratogenic effects, including malformations of head, mouth, face, large vessels. Breastfeeding not recommended. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** Use with caution. May have increased frequency of decreased hepatic, renal, cardiac function.

INTERACTIONS

DRUG: May decrease concentrations of **atorvastatin, glyburide, hormonal contraceptives (oral, injectable, implantable), simvastatin, warfarin. Cyclosporine, ketoconazole** may increase plasma concentration. **Clarithromycin** may increase risk of hepatotoxicity. **PDE5 inhibitors (e.g., sildenafil)** may increase concentration/effect. **HERBAL: St. John's wort** may decrease concentration. **FOOD: Grapefruit products** may increase concentration/effect. **LAB VALUES:** May increase serum bilirubin, ALT, AST. May decrease Hgb, Hct.

AVAILABILITY (Rx)

Tablets: 62.5 mg, 125 mg.

ADMINISTRATION/HANDLING

• Give in morning and evening, with or without food. • Swallow whole; do not crush tablets. • Avoid grapefruit products.

INDICATIONS/ROUTES/DOSAGE

Pulmonary Arterial Hypertension

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS AND WEIGHING 40 KG OR GREATER: 62.5 mg twice a day for 4 wks; then increase to maintenance dosage of 125 mg twice a day. **ADULTS, ELDERLY, CHILDREN WEIGHING LESS THAN 40 KG:** 62.5 mg twice a day.

◄ALERT► When discontinuing adult/elderly dosage, reduce dosage to 62.5 mg twice a day for 3–7 days to avoid clinical deterioration.

Dosage Based on Hepatic Enzyme Elevations

Any elevation accompanied by symptoms of hepatic injury or serum bilirubin 2 or more times upper limit of normal (ULN),

stop treatment. ALT, AST greater than 3 or less than 6 times ULN, reduce dose or interrupt treatment. ALT, AST greater than 5 and up to 8 times ULN, confirm with additional test and, if confirmed, stop treatment. ALT, AST greater than 8 times ULN, stop treatment.

Dosage in Renal Impairment
No dose adjustment.

SIDE EFFECTS

Frequent (22%–11%): Headache, nasopharyngitis. **Occasional (9%–5%):** Flushing, peripheral edema, palpitations. **Rare (less than 5%):** Fatigue, dyspepsia, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious hepatic injury has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pregnancy must be excluded before starting treatment and prevented thereafter. A negative pregnancy test performed during the first 5 days of a normal menstrual period and at least 11 days after the last act of sexual intercourse must be obtained. Obtain, assess baseline lab tests, esp. hepatic function.

INTERVENTION/EVALUATION

Assess hepatic enzyme levels before initiating therapy, then monthly thereafter. If elevation in hepatic enzymes is noted, changes in monitoring and treatment must be initiated. If clinical symptoms of hepatic injury (nausea, vomiting, fever, abdominal pain, fatigue, jaundice) occur or if serum bilirubin level increases to 2 or more times ULN, stop treatment. Monthly follow-up pregnancy tests must be maintained. Assess for peripheral edema. Monitor Hgb levels at 1 mo and 3 mos of treatment, then q3mos for decrease.

PATIENT/FAMILY TEACHING

- Discuss importance of pregnancy testing, avoidance of pregnancy, measures to prevent pregnancy. • Report palpitations, extremity swelling, unusual weight gain, fatigue, yellowing of skin or eyes, change in color of stool, urine. • Do not chew, crush, dissolve, or divide film-coated tablets. • Avoid grapefruit products.

bosutinib

boe-**sue**-ti-nib
(Bosulif)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of chronic, accelerated, or blast phase Ph^+ chronic myelogenous leukemia with resistance or intolerance to prior therapy.

PRECAUTIONS

Contraindications: Hypersensitivity to bosutinib. **Cautions:** Baseline anemia, thrombocytopenia, neutropenia; hepatic impairment, recent history of diarrhea, pulmonary edema, HF, fluid retention. Avoid concurrent use of CYP3A4 inducers/ inhibitors.

ACTION

Inhibits Bcr-Abl tyrosine kinase, a translocation-created enzyme, created by the Philadelphia chromosome (Ph^1) abnormality noted in chronic myelogenous leukemia (CML). Inhibits Src-family kinase including Src, Lyn, and Hck. **Therapeutic Effect:** Inhibits tumor cell growth and proliferation in chronic, accelerated, or blast phase CML.

PHARMACOKINETICS

Well absorbed following oral administration. Protein binding: 94%. Metabolized in liver. Eliminated in feces (91%), urine (3%). **Half-life:** 22.5 hrs.

B

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Potential for embryo/fetal toxicity. Avoid pregnancy. Must use effective contraception during, and for at least 30 days after treatment. Unknown if distributed in breast milk. Avoid breastfeeding. **Pregnancy Category D. Children:** Safety and efficacy not established in pts younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A inhibitors and/or P-glycoprotein (P-gp) inhibitors (e.g., clarithromycin, ketoconazole, ritonavir, misoprostol, nafcillin, salmeterol) and **moderate CYP3A4 inhibitors (e.g., ciprofloxacin, diltiazem, erythromycin, verapamil)** may increase concentration/effect. **Strong CYP3A4 inducers (e.g., rifampin, phenytoin, phenobarbital)** and **moderate CYP3A4 inducers (e.g., bosentan, nafcillin, modafinil)** may decrease concentration/effect. **Proton pump inhibitors (e.g., omeprazole, pantoprazole)** may reduce absorption, concentration. **HERBAL: St. John's wort** may decrease effectiveness. **FOOD: Grapefruit products** may decrease bosutinib concentration. **LAB VALUES:** May decrease Hgb, platelets, WBCs, serum phosphorous. May increase ALT, AST, bilirubin, lipase.

AVAILABILITY (Rx)

Tablets: 100 mg, 500 mg.

ADMINISTRATION/HANDLING

PO

- Give with food. Do not break, crush, dissolve, or divide tablets.

INDICATIONS/ROUTES/DOSAGE

Chronic Myelogenous Leukemia (CML)

PO: ADULTS: 500 mg once daily with food. May increase to 600 mg once daily for poor responders without high-grade adverse reactions.

CML with Baseline Renal Impairment

CrCl less than 30 ml/min: 300 mg once daily.

CML with Baseline Hepatic Impairment

PO: ADULTS: 200 mg once daily with food.

Dosage Modification

Hepatotoxicity: Withhold treatment until ALT, AST less than or equal to 2.5× ULN. Then, resume at 400 mg once daily with food. Discontinue if recovery lasts longer than 4 wks or hepatotoxicity including elevated bilirubin levels are greater than 2× ULN. **Severe Diarrhea:** Withhold until recovery to low-grade diarrhea. Then, resume at 400 mg once daily with food. **Myelosuppression:** Withhold until absolute neutrophil count greater than 1000 mm^3 and platelet count greater than 50,000 mm^3. Then, resume at same dose if recovery occurs within 2 wks. May reduce dose to 400 mg for recovery lasting greater than 2 wks.

SIDE EFFECTS

Frequent (82%–35%): Diarrhea, nausea, vomiting, abdominal pain, rash. **Occasional (26%–10%):** Pyrexia, fatigue, headache, cough, peripheral edema, arthralgia, anorexia, upper respiratory infection, asthenia (loss of strength, energy), back pain, nasopharyngitis, dizziness, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe fluid retention may result in pleural effusion, pericardial effusion, pulmonary edema, ascites. Neutropenia, thrombocytopenia, or anemia is an expected response of drug therapy. Severe diarrhea may result in fluid loss, electrolyte imbalance, hypotension. Hepatotoxicity occurred in 7%–9% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support. Assess baseline weight, serum chemistries, particularly renal, hepatic function. Confirm negative pregnancy test before initiating treatment. Obtain full medication history including vitamins, minerals, herbal products. Screen for peripheral edema, signs/symptoms of HF, anemia.

INTERVENTION/EVALUATION

Weigh daily and monitor for unexpected rapid weight gain, edema. Monitor for changes in serum chemistry tests, LFT during treatment. Offer antiemetics for nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Monitor CBC for neutropenia, thrombocytopenia, anemia. Assess for bruising, hematuria, jaundice, right upper abdominal pain, weight loss, or acute infection (fever, diaphoresis, lethargy, productive cough).

PATIENT/FAMILY TEACHING

• Blood levels will be drawn routinely. • Take medication with meals. • Drink plenty of fluids (diarrhea may result in dehydration). • Swallow whole; do not break, chew, crush, dissolve, or divide tablets. • Strictly avoid pregnancy. • Use contraception during treatment and for at least 30 days after treatment. • Report urine changes, bloody or clay-colored stools, upper abdominal pain, nausea, vomiting, bruising, persistent diarrhea, fever, cough, difficulty breathing, chest pain. • Immediately report any newly prescribed medications. • Avoid alcohol, grapefruit products. • Discuss using antacids for indigestion, heartburn, upset stomach (omeprazole, lansoprazole, pantoprazole may reduce absorption, concentration of bosutinib). • Separate antacid dosing by more than 2 hrs before and after medication.

brentuximab vedotin

bren-**tux**-i-mab ve-**doe**-tin (Adcetris)

■ **BLACK BOX ALERT** ■ JC virus infection resulting in progressive multifocal leukoencephalopathy and death can occur.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody, antimitotic. **CLINICAL:** Antineoplastic.

USES

Treatment of Hodgkin's lymphoma after failure of autologous stem cell transplant or after failure of at least two prior multiagent chemotherapy regimens in pts who are not transplant candidates. Treatment of systemic anaplastic large-cell lymphoma after failure of at least one prior multiagent chemotherapy regimen.

PRECAUTIONS

Contraindications: Avoid use with bleomycin (increased risk for pulmonary toxicity). **Cautions:** Peripheral neuropathy, infusion reactions, neutropenia, tumor lysis syndrome, Stevens-Johnson syndrome, pregnancy.

ACTION

Binds to CD30-expressing cells, allowing the antibody to direct the drug to a target on lymphoma cells, disrupting the microtubule network within the cell. **Therapeutic Effect:** Induces cell cycle arrest, cell death.

PHARMACOKINETICS

Minimally metabolized. Protein binding: 68%–82%. Eliminated primarily in feces (72%). **Half-life:** 4–6 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm (embryo-fetal toxicities). Unknown

B

if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Safety and efficacy not established.

INTERACTIONS

DRUG: **Strong CYP3A4 inhibitors (e.g., atazanavir, clarithromycin, ketoconazole)** increase concentration/effect. **CYP3A4 inducers (e.g., rifampin)** may reduce concentration/effect. **FOOD:** None known. **HERBAL:** **Echinacea** may decrease effect. **LAB VALUES:** May decrease Hgb, Hct, WBC, RBC, platelets. May increase serum bicarbonate, lactate dehydrogenase, glucose, albumin, magnesium, sodium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 50-mg single-use vial.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each 50-mg vial with 10.5 ml Sterile Water for Injection, directing the stream toward wall of vial and not at powder. • Gently swirl (do not shake). • This will yield a concentration of 5 mg/ml. • The dose for pts weighing over 100 kg should be calculated for 100 kg. • Reconstituted solution must be transferred to infusion bag with a minimum 100 ml diluent, yielding a final concentration range of 0.4 mg/ml to 1.8 mg/ml brentuximab. • Gently invert bag to mix solution.

Rate of Administration • Infuse over 30 min.

Storage • Discard if solution contains particulate or is discolored; solution should appear clear to slightly opalescent, colorless. • May store solution at 36°–46°F. • Use within 24 hrs after reconstitution.

IV COMPATIBILITIES

0.9% NaCl, D_5W, lactated Ringer's.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Do not give by IV bolus or IV push.

Hodgkin's Lymphoma

IV Infusion: ADULTS/ELDERLY: 1.8 mg/kg IV infused over 30 min every 3 wks. Continue treatment until a maximum of 16 cycles, disease progression, or unacceptable toxicity occurs.

Systemic Anaplastic Large-Cell Lymphoma

IV Infusion: ADULTS/ELDERLY: 1.8 mg/kg IV infused over 30 min every 3 wks. Continue treatment until a maximum of 16 cycles, disease progression, or unacceptable toxicity occurs.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

◀ALERT▶ Effects present as mild, manageable.

Frequent (52%–22%): Peripheral neuropathy, fatigue, respiratory tract infection, nausea, diarrhea, fever, rash, abdominal pain, cough, vomiting. **Occasional (19%–11%):** Headache, dizziness, constipation, chills, bone/muscle pain, insomnia, peripheral edema, alopecia. **Rare (10%–5%):** Anxiety, muscle spasm, decreased appetite, dry skin.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression characterized as neutropenia (54% of pts), peripheral neuropathy (52% of pts), thrombocytopenia (28% of pts), anemia (19% of pts) have occurred. Infusion reactions (including anaphylaxis), Stevens-Johnson syndrome have been reported. Tumor lysis syndrome may lead to acute renal failure. Progressive multifocal leukoencephalopathy (changes in mood, confusion, loss of memory, changes in speech, walking, and vision, decreased strength or weakness on one side of body) has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for evidence of peripheral neuropathy (hypoesthesia, hyperesthesia, paresthesia, burning sensation, neuropathic pain or weakness). Pts experiencing new or worsening neuropathy may require a delay, dose change, or discontinuation of treatment. Obtain baseline CBC before treatment begins and as needed to monitor response and toxicity but particularly prior to each dosing cycle.

INTERVENTION/EVALUATION

Offer antiemetics to control nausea, vomiting. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, bruising, unusual bleeding), symptoms of anemia (excessive fatigue, weakness). Assess response to medication; monitor and report nausea, vomiting, diarrhea. Monitor daily pattern of bowel activity, stool consistency. Assess skin for evidence of rash.

PATIENT/FAMILY TEACHING

• Avoid crowds, persons with known infections. • Report signs of infection at once (fever, flu-like symptoms). • Avoid contact with those who recently received live virus vaccine. • Do not receive immunizations without physician's approval (drug lowers body resistance). • Promptly report fever, easy bruising or unusual bleeding from any site. • Male pts should be warned of potential risk to their reproductive capacities.

bromocriptine

broe-moe-**krip**-teen
(PMS-Bromocriptine, Cycloset, Parlodel)
Do not confuse bromocriptine with benztropine, Cycloset with Glyset, or Parlodel with pindolol or Provera.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Dopamine agonist. **CLINICAL:** Infertility therapy adjunct, antihyperprolactinemic, lactation inhibitor, antidyskinetic, growth hormone suppressant.

USES

Treatment of pituitary prolactinomas, conditions associated with hyperprolactinemia (amenorrhea, galactorrhea, hypogonadism, infertility), parkinsonism, acromegaly. **Cycloset:** Control of blood glucose in type 2 diabetes. **OFF-LABEL:** Neuroleptic malignant syndrome.

PRECAUTIONS

Contraindications: Hypersensitivity to ergot alkaloids; peripheral vascular disease, pregnancy, severe ischemic heart disease, uncontrolled hypertension. **Cycloset:** Syncopal migraine, breastfeeding. **Cautions:** Impaired hepatic, renal, or cardiac function; hypertension, dementia, peptic ulcer disease.

ACTION

Activates dopamine receptors in tuberoinfundibular process (inhibits prolactin secretion), stimulates dopamine receptors in corpus striatum (benefits Parkinson's disease). Mechanism for type 2 diabetes unknown. **Therapeutic Effect:** Improves symptoms of parkinsonism, suppresses galactorrhea, reduces glucose production/decreases insulin resistance.

PHARMACOKINETICS

Indication	Onset	Peak	Duration
Prolactin lowering	1–2 hrs	5–10 hrs	8–12 hrs

Minimally absorbed from GI tract. Protein binding: 90%–96%. Metabolized in liver. Excreted in feces by biliary secretion. **Half-life:** 15 hrs.

B

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not recommended during pregnancy or breastfeeding. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** CNS effects may occur more frequently.

INTERACTIONS

DRUG: May increase concentration/effect of **salicylates, sulfonamides, probenecid. Phenothiazines, thioxanthenes** may decrease effect. May increase **ergot-related drugs** side effects (e.g., nausea, vomiting), reduce effect of ergot drugs. **CYP3A4 inhibitors** may increase concentration; **CYP3A4 inducers** may decrease concentration/effect. **HERBAL:** **St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase plasma concentration of growth hormone.

AVAILABILITY (Rx)

Capsules: 5 mg. **Tablets:** 2.5 mg. **(Cycloset):** 0.8 mg.

ADMINISTRATION/HANDLING

PO

• Give with food (decreases incidence of nausea). • **Cycloset:** Take in morning, within 2 hrs of awakening.

INDICATIONS/ROUTES/DOSAGE

Hyperprolactinemia

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 15 YRS: Initially, 1.25–2.5 mg at bedtime. May increase by 2.5 mg q3–7 days up to 5–7.5 mg/day in divided doses. **Maintenance:** 2.5 mg 2–3 times a day. Range: 2.5–15 mg/day. **CHILDREN, 11–15 YRS:** Initially, 1.25–2.5 mg daily. May increase up to 10 mg/day. Range: 2.5–10 mg/day.

Parkinsonism

PO: ADULTS, ELDERLY: Initially, 1.25 mg 1–2 times a day. May take single doses at bedtime. May increase by 2.5 mg/day at 14- to 28-day intervals. **Maintenance:** 2.5–40 mg/day in divided doses. Range: 30–90 mg/day in 3 divided doses. **Maximum:** 100 mg/day.

Acromegaly

PO: ADULTS, ELDERLY: Initially, 1.25–2.5 mg at bedtime. May increase by 1.25–2.5 mg q3–7days up to 30 mg/day in divided doses. **Maintenance:** 20–30 mg/day in divided doses. **Maximum:** 100 mg/day.

Type 2 Diabetes (Cycloset)

PO: ADULTS, ELDERLY: Initially, 0.8 mg once daily (within 2 hrs of waking). Increase by 0.8 mg/day weekly up to maximum of 4.8 mg/day. Range: 1.6–4.8 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Cycloset: Somnolence, hypotension, syncope during initiation and dose titration. **Frequent (49%–17%):** Nausea, headache, dizziness. **Occasional (7%–3%):** Fatigue, light-headedness, vomiting, abdominal cramps, diarrhea, constipation, nasal congestion, drowsiness, dry mouth. **Rare:** Muscle cramps, urinary hesitancy.

ADVERSE EFFECTS/ TOXIC REACTIONS

Visual or auditory hallucinations in pts with Parkinson's disease have been reported. Long-term, high-dose therapy may produce syncope, GI hemorrhage, peptic ulcer, severe abdominal pain, chronic rhinorrhea.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluation of pituitary gland (rule out tumor) should be done before treatment for hyperprolactinemia with amenorrhea or galactorrhea, infertility. Obtain baseline lab tests including CBC, LFT, prolactin level, pregnancy test.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness is noted after administration. Assess for therapeutic response (decrease in engorgement, parkinsonism symptoms). Monitor daily pattern of bowel activity, stool consistency. Monitor cardiac function.

PATIENT/FAMILY TEACHING

• To diminish light-headedness, slowly go from lying to standing. • Avoid sudden changes in posture. • Avoid tasks that require alertness, motor skills until response to drug is established. • Use contraceptive measures (other than oral) during treatment. • Report watery nasal discharge. • Avoid alcohol intake.

budesonide

TOP 100

bue-**des**-oh-nide
(Entocort EC, Pulmicort Flexhaler, Pulmicort Respules, Rhinocort Aqua, Uceris)
Do not confuse budesonide with Budeprion.

FIXED-COMBINATION(S)

Symbicort: budesonide/formoterol (bronchodilator): 80 mcg/4.5 mcg, 160 mcg/4.5 mcg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Glucocorticosteroid. **CLINICAL:** Anti-inflammatory, antiallergy.

USES

Nasal: Management of seasonal or perennial allergic rhinitis, nonallergic rhinitis. **Nebulization:** Maintenance or prophylaxis therapy for bronchial asthma. **PO: (Entocort EC):** Treatment of mild to moderate active Crohn's disease. Maintenance of clinical remission of mild to moderate Crohn's disease. **(Uceris):** Induction of remission in active, mild to moderate ulcerative colitis. **Oral Inhalation:** Maintenance and prophylactic treatment of asthma. **OFF-LABEL:** Treatment of vasomotor rhinitis.

PRECAUTIONS

Contraindications: Hypersensitivity to any corticosteroid or its components, primary treatment of status asthmaticus, acute episodes of asthma. Not for relief of acute bronchospasms. **Cautions:** Thyroid disease, hepatic impairment, renal impairment, cardiovascular disease, diabetes, glaucoma, cataracts, myasthenia gravis, pts at risk for osteoporosis, seizures, GI disease, post acute MI, elderly.

ACTION

Inhibits accumulation of inflammatory cells, decreases and prevents tissues from responding to inflammatory process (reverses capillary permeability and lysosomal stabilization at cellular level). **Therapeutic Effect:** Relieves symptoms of allergic rhinitis, asthma, Crohn's disease.

PHARMACOKINETICS

Form	Onset	Peak	Duration
Pulmicort Respules	2–8 days	4–6 wks	—
Rhinocort Aqua	10 hrs	2 wks	—

Minimally absorbed from nasal tissue; moderately absorbed from inhalation. Protein binding: 88%. Primarily metabolized in liver. **Half-life:** 2–3 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B (Inhalation); C (PO). Children:** Prolonged treatment or high dosages may decrease short-term growth rate, cortisol secretion. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., itraconazole, ketoconazole) may increase

B

concentration. **HERBAL:** **Echinacea** may decrease effects. **FOOD:** **Grapefruit products** may increase systemic exposure of budesonide. **LAB VALUES:** May decrease serum potassium.

AVAILABILITY (Rx)

Oral Inhalation Powder (Pulmicort Flexhaler): 90 mcg per inhalation; 180 mcg per inhalation. **Inhalation Suspension for Nebulization (Pulmicort Respules):** 0.25 mg/2 ml; 0.5 mg/2 ml; 1 mg/2 ml. **Nasal Spray (Rhinocort Aqua):** 32 mcg/spray.

Capsules, Enteric-Coated (Entocort EC): 3 mg. **Tablets, Extended-Release: (Uceris):** 9 mg.

ADMINISTRATION/HANDLING

Inhalation

• Shake container well. Instruct pt to exhale completely, place mouthpiece between lips, inhale, hold breath as long as possible before exhaling. • Allow at least 1 min between inhalations. • Rinsing mouth after each use decreases dry mouth, hoarseness.

Intranasal

• Instruct pt to clear nasal passages before use. • Tilt pt's head slightly forward. • Insert spray tip into nostril, pointing toward nasal passages, away from nasal septum. • Spray into one nostril while pt holds other nostril closed and concurrently inspires through nostril to allow medication as high into nasal passages as possible.

Nebulization

• Shake well before use. • Administer with mouthpiece or face mask. • Rinse mouth following treatment.

PO

• May take with or without food. Swallow whole. Do not break, crush, dissolve, or divide capsule or tablet.

INDICATIONS/ROUTES/DOSAGE

Rhinitis

Intranasal: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: 1 spray (32 mcg) in each nostril once a day. **Maximum:** 8 sprays (256 mcg)/day for adults and children 12 yrs and older; 4 sprays (128 mcg)/day for children younger than 12 yrs.

Bronchial Asthma

Nebulization: CHILDREN 12 MOS–8 YRS: ***(Previous therapy with bronchodilators alone):*** 0.5 mg/day as single dose or 2 divided doses. **Maximum:** 0.5 mg/day. ***(Previous therapy with inhaled corticosteroids):*** 0.5 mg/day as single dose or 2 divided doses. **Maximum:** 1 mg/day. ***(Previous therapy of oral corticosteroids):*** 1 mg/day as single dose in 2 divided doses. **Maximum:** 1 mg/day.

Oral Inhalation: ***(Pulmicort Flexhaler):*** **ADULTS, ELDERLY:** Initially, 360 mcg 2 times/day. **Maximum:** 720 mcg 2 times/day. **CHILDREN, 6 YRS AND OLDER:** 180 mcg 2 times/day. **Maximum:** 360 mcg 2 times/day.

Crohn's Disease

PO: ADULTS, ELDERLY: 9 mg once a day for up to 8 wks. Recurring episodes may be treated with a repeat 8-wk course of treatment. Maintenance of remission: 6 mg once daily for 3 mos.

Ulcerative Colitis

PO: ADULTS, ELDERLY: 9 mg once daily in morning for up to 8 wks.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (greater than 3%): **Nasal:** Mild nasopharyngeal irritation, burning, stinging, dryness; headache, cough. **Inhalation:** Flu-like symptoms, headache, pharyngitis. **Occasional (3%–1%):** **Nasal:** Dry mouth, dyspepsia, rebound congestion, rhinorrhea, loss of taste. **Inhalation:** Back pain, vomiting, altered taste, voice changes, abdominal pain, nausea, dyspepsia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Acute hypersensitivity reaction (urticaria, angioedema, severe bronchospasm) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to any corticosteroids, components.

INTERVENTION/EVALUATION

Monitor for relief of symptoms.

PATIENT/FAMILY TEACHING

• Improvement noted in 24 hrs, but full effect may take 3–7 days. • Report if no improvement in symptoms, sneezing, nasal irritation occurs.

bumetanide

bue-**met**-a-nide
(Burinex ✱)

■ **BLACK BOX ALERT** ■ Excess dosage can lead to profound diuresis with fluid and electrolyte loss.
Do not confuse bumetanide with Buminate.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Loop diuretic. **CLINICAL:** Diuretic.

USES

Management of edema associated with HF, renal, or hepatic disease. **OFF-LABEL:** Treatment of hypertension.

PRECAUTIONS

Contraindications: Anuria, hepatic coma, severe electrolyte depletion (until condition improves or is corrected). **Cautions:** Severe hypersensitivity to sulfonamides; hypotension.

ACTION

Enhances excretion of sodium, chloride, and, to lesser degree, potassium, by direct action at ascending limb of loop of Henle and in proximal tubule. **Therapeutic Effect:** Produces diuresis.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30–60 min	60–120 min	4–6 hrs
IV	Rapid	15–30 min	2–3 hrs

Completely absorbed from GI tract (absorption decreased in HF, nephrotic syndrome). Protein binding: 94%–96%. Partially metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 1–1.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category C (D if used in pregnancy-induced hypertension). Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotension/electrolyte effects. Increased risk for circulatory collapse or thrombolytic episode. Age-related renal impairment may require reduced or extended dosage interval.

INTERACTIONS

DRUG: Agents inducing hypokalemia (e.g., metolazone, hydrochlorothiazide) may increase risk of hypokalemia. May increase risk of **lithium** toxicity. **NSAIDs** may increase effect. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may have increased antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, BUN, uric acid, urinary phosphate. May decrease serum calcium, chloride, magnesium, potassium, sodium.

AVAILABILITY (Rx)

Injection Solution: 0.25 mg/ml. **Tablets:** 0.5 mg, 1 mg, 2 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • May give undiluted but is compatible with D_5W, 0.9% NaCl, or lactated Ringer's solution. • Administer IV push over 1–2 min. • May give

B

through Y tube or 3-way stopcock. • May give as continuous infusion.
Storage • Store at room temperature. • Stable for 24 hrs if diluted.

PO
• Give with food to avoid GI upset, preferably with breakfast (may prevent nocturia).

IV INCOMPATIBILITY
Midazolam (Versed).

IV COMPATIBILITIES
Aztreonam (Azactam), cefepime (Maxipime), dexmedetomidine (Precedex), diltiazem (Cardizem), dobutamine (Dobutrex), furosemide (Lasix), lorazepam (Ativan), milrinone (Primacor), morphine, piperacillin and tazobactam (Zosyn), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Edema
PO: ADULTS: 0.5–2 mg as a single dose in the morning. May repeat q4–5h. **Maximum:** 10 mg/day. **ELDERLY:** 0.5 mg/day, increased as needed.
IV, IM: ADULTS, ELDERLY: 0.5–1 mg/dose; may repeat in 2–3 hrs (**maximum:** 10 mg/day) or 0.5–2 mg/hr by continuous IV infusion.

Hypertension
PO: ADULTS, ELDERLY: Initially, 0.5 mg/day. Range: 0.5–2 mg/day in 2 divided doses. **Maximum:** 5 mg/day. Larger doses may be given 2–3 doses/day.

Usual Pediatric Dosage
IV, IM, PO: CHILDREN: 0.015–0.1 mg/kg/dose q6–24h. **Maximum:** 10 mg/day. **NEONATES:** 0.01–0.05 mg/kg/dose q12–48h.

SIDE EFFECTS
Expected: Increased urinary frequency and urine volume. **Frequent (5%):** Muscle cramps, dizziness, hypotension, headache, nausea. **Occasional (3%–1%):** Impaired hearing, pruritus, EKG changes, weakness, hives, abdominal pain, dyspepsia, musculoskeletal pain, rash, nausea, vomiting. **Rare (less than 1%):** Chest pain, ear pain, fatigue, dry mouth, premature ejaculation, impotence, nipple tenderness.

ADVERSE EFFECTS/ TOXIC REACTIONS
Vigorous diuresis may lead to profound water and electrolyte depletion, resulting in hypokalemia, hyponatremia, dehydration, coma, circulatory collapse. Ototoxicity manifested as deafness, vertigo, tinnitus may occur, esp. in pts with severe renal impairment or those taking other ototoxic drugs. Blood dyscrasias, acute hypotensive episodes have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT
Obtain baseline vital signs, esp. B/P for hypotension, before administration. Assess baseline electrolytes, particularly for hypokalemia, hyponatremia. Assess for edema. Observe skin turgor, mucous membranes for hydration status. Initiate I&O, obtain baseline weight.

INTERVENTION/EVALUATION
Continue to monitor B/P, vital signs, electrolytes, I&O, weight. Note extent of diuresis. Watch for changes from initial assessment (hypokalemia may result in muscle weakness, tremor, muscle cramps, altered mental status, cardiac arrhythmias; hyponatremia may result in confusion, thirst, cold/clammy skin).

PATIENT/FAMILY TEACHING
• Expect increased urinary frequency/volume. • Report auditory abnormalities (e.g., sense of fullness in ears, tinnitus). • Eat foods high in potassium such as whole grains (cereals), legumes, meat, bananas, apricots, orange juice, potatoes (white, sweet), raisins. • Rise slowly from sitting/lying position.

buprenorphine TOP 100

bue-pre-**nor**-feen
(Buprenex, Butrans, Suboxone, Subutex)

■ **BLACK BOX ALERT** ■ **Transdermal:** Potential for abuse, misuse, and diversion. Do not exceed dose of one 20 mcg/hr patch due to risk of QT interval prolongation. May cause potentially life-threatening respiratory depression.

Do not confuse Buprenex with Bumex, or buprenorphine with bupropion.

FIXED-COMBINATION(S)

Suboxone: buprenorphine/naloxone (narcotic antagonist): 2 mg/0.5 mg, 8 mg/2 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid agonist, antagonist injection **(Schedule V);** tablet **(Schedule III).** **CLINICAL:** Opioid dependence adjunct, analgesic.

USES

Sublingual Tablet: Treatment of opioid dependence. **Injection:** Relief of moderate to severe pain. **Transdermal:** Moderate to severe chronic pain requiring continuous around-the-clock opioid analgesic for extended period. **OFF-LABEL:** Injection: Heroin/opioid withdrawal in hospitalized pts.

PRECAUTIONS

Contraindications: **Transdermal patch:** Significant respiratory depression, severe asthma, paralytic ileus. **Cautions:** Hepatic/renal impairment, elderly, debilitated, pediatric pts, head injury/increased intracranial pressure, pts at risk for respiratory depression, hyperthyroidism, myxedema, adrenal cortical insufficiency (e.g., Addison's disease), urethral stricture, CNS depression, morbid obesity, toxic psychosis, prostatic hypertrophy, delirium tremens, kyphoscoliosis, biliary tract dysfunction, acute pancreatitis, acute abdominal conditions, acute alcoholism, pts with prolonged QT syndrome, concurrent use of antiarrhythmics, hypovolemia, cardiovascular disease, ileus, bowel obstruction, hx of seizure disorder.

ACTION

Binds to opioid receptors within CNS. **Therapeutic Effect:** Suppresses opioid withdrawal symptoms, cravings. Alters pain perception, emotional response to pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Sublingual	15 min	1 hr	6 hrs
IV	Less than 15 min	Less than 1 hr	6 hrs
IM	15 min	1 hr	6 hrs

Excreted primarily in feces with lesser amount eliminated in urine. Protein binding: High. **Half-life:** **Parenteral:** 2–3 hrs; **Sublingual:** 37 hrs (increased in hepatic impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. Breastfeeding not recommended. Neonatal withdrawal noted in infant if mother was treated with buprenorphine during pregnancy with onset of withdrawal symptoms generally noted on day 1, manifested as hypertonia, tremor, agitation, myoclonus. Apnea, bradycardia, seizures occur rarely. **Pregnancy Category C. Children:** Safety and efficacy of injection form not established in those 2–12 yrs. Safety and efficacy of tablet, fixed-combination form not established in those 16 yrs or younger. **Elderly:** Age-related hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: **CNS depressants, MAOIs** may increase CNS or respiratory depression, hypotension. **CYP3A4 inhibitors (e.g., azole antifungals, macrolide**

B

antibiotics, protease inhibitors) may increase plasma concentration. **CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin)** may cause increased clearance of buprenorphine. May decrease effects of **other opioid analgesics.** **HERBAL:** **St. John's wort, kava kava, gotu kola, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Injection Solution (Buprenex): 0.3 mg/1 ml. **Tablets, Sublingual (Fixed-Combination [Suboxone]):** 2 mg/0.5 mg, 8 mg/2 mg. **Transdermal (Butrans):** 5 mcg/hr, 10 mcg/hr, 15 mcg/hr, 20 mcg/hr.

ADMINISTRATION/HANDLING

IV

Reconstitution • May be diluted with lactated Ringer's solution, D_5W, 0.9% NaCl.

Rate of Administration • If given as IV push, administer over at least 2 min.

IM

• Give deep IM into large muscle mass.

Sublingual

• Instruct pt to dissolve tablet(s) under tongue; avoid swallowing (reduces drug bioavailability). • For doses greater than 2 tablets, either place all tablets at once or 2 tablets at a time under the tongue.

Storage • Store parenteral form at room temperature. • Protect from prolonged exposure to light. • Store tablets at room temperature.

Transdermal

• Apply to clean, dry, intact skin of upper outer arm, upper chest, upper back, or side of chest. • Wear for 7 days. • Wait minimum of 21 days before reapplying to same site. • If patch falls off during 7-day dosing interval, apply new patch to a different skin site.

IV INCOMPATIBILITIES

Diazepam (Valium), furosemide (Lasix), lorazepam (Ativan).

IV COMPATIBILITIES

Allopurinol (Aloprim, Zyloprim), aztreonam (Azactam), cefepime (Maxipime), diphenhydramine (Benadryl), granisetron (Kytril), haloperidol (Haldol), heparin, linezolid (Zyvox), midazolam (Versed), piperacillin/tazobactam (Zosyn), promethazine (Phenergan), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Opioid Dependence

Sublingual: ADULTS, CHILDREN 13 YRS AND OLDER: 8 mg on day 1, then 16 mg on day 2 and subsequent induction days. Range: 12–16 mg/day of Subutex used as induction with switch to Suboxone for maintenance.

Moderate to Severe Pain

IM/IV: ADULTS, CHILDREN 13 YRS AND OLDER: 0.3 mg (1 ml) q6–8h prn; may repeat once 30–60 min after initial dose. Range: 0.15–0.6 mg q4–8h prn. **ELDERLY:** 0.15 mg q6h prn. **CHILDREN 2–12 YRS:** 2–6 mcg/kg q4–6h prn.

Transdermal: ADULTS, ELDERLY: (OPIOID NAIVE): Initial dose always 5 mcg/hr once q7days. **THOSE ALREADY RECEIVING OPIOIDS:** Refer to conversion chart in package insert. Do not increase dose until pt exposed to previous dose for 72 hrs.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (67%–10%): Sedation, dizziness, nausea. **Butrans (more than 5%):** Nausea, headache, pruritus at application site, dizziness, rash, vomiting, constipation, dry mouth. **Occasional (5%–1%):** Headache, hypotension, vomiting, miosis, diaphoresis. **Rare (less than 1%):** Dry mouth, pallor, visual abnormalities, injection site reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdosage results in cold, clammy skin, weakness, confusion, severe respiratory depression, cyanosis, pinpoint pupils, seizures, extreme drowsiness progressing to stupor, coma.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline B/P, pulse rate. Assess mental status, alertness. Assess type, location, intensity of pain. Obtain history of pt's last opioid use. Assess for early signs of withdrawal symptoms before initiating therapy.

INTERVENTION/EVALUATION

Monitor for change in respirations, B/P, rate/quality of pulse, mental status. Assess lab results. Initiate deep breathing, coughing exercises, particularly in those with pulmonary impairment. Assess for clinical improvement; record onset of relief of pain.

PATIENT/FAMILY TEACHING

• Change positions slowly to avoid dizziness, orthostatic hypotension. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol, sedatives, antidepressants, tranquilizers.

*buPROPion

bue-**proe**-pee-on
(Aplenzin, Budeprion SR, Buproban, Forfivo XL, Wellbutrin, Wellbutrin SR, Wellbutrin XL, Zyban)

■ **BLACK BOX ALERT** ■ Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders. Agitation, hostility, depressed mood also reported. Use in smoking cessation may cause serious neuropsychiatric events.

Do not confuse Aplenzin with Relenza, bupropion with buspirone, Wellbutrin SR with Wellbutrin XL, or Zyban with Diovan or Zagam.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Aminoketone. **CLINICAL:** Antidepressant, smoking cessation aid.

USES

Treatment of depression, including seasonal affective disorder (SAD). Zyban assists in smoking cessation. **OFF-LABEL:** Treatment of ADHD in adults, children. Depression associated with bipolar disorder.

PRECAUTIONS

Contraindications: Current or prior diagnosis of anorexia nervosa or bulimia, seizure disorder, use within 14 days of MAOIs; concomitant use of other bupropion products; pts undergoing abrupt discontinuation of alcohol or sedatives. Initiation of bupropion in pt receiving linezolid. **Aplenzin (additional):** Conditions increasing seizure risk, severe head injury, stroke, CNS tumor/infection, abrupt discontinuation of barbiturates or antiepileptics. **Cautions:** History of seizure, cranial or head trauma, cardiovascular disease, history of hypertension or coronary artery disease, elderly, pts at high risk for suicide, renal/hepatic impairment. Concurrent use of antipsychotics, antidepressants, theophylline, steroids, stimulants, hypoglycemic agents, excessive use of alcohol, sedatives/hypnotics, opioids.

ACTION

Blocks reuptake of neurotransmitters, (dopamine, norepinephrine) at CNS presynaptic membranes. **Therapeutic Effect:** Relieves depression. Eliminates nicotine withdrawal symptoms.

B

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 84%. Crosses the blood-brain barrier. Metabolized in liver. Primarily excreted in urine. **Half-life:** 14 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C.** **Children:** More sensitive to increased dosage, toxicity; increased risk of suicidal ideation, worsening of depression. Safety and efficacy not established in pts younger than 18 yrs. **Elderly:** More sensitive to anticholinergic, sedative, cardiovascular effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Ritonavir, efavirenz** may reduce concentration. **Carbamazepine, phenobarbital, phenytoin** may decrease effectiveness. **MAOIs** may increase risk of toxicity. **Levodopa, amantadine** may increase risk of side effects. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May decrease WBC.

AVAILABILITY (Rx)

Tablets (Wellbutrin): 75 mg, 100 mg. **Tablets, Extended-Release:** 174 mg, 348 mg, 522 mg **(Aplenzin)**; 150 mg **(Budeprion SR)**; 450 mg **(Forfivo XL)**; 150 mg, 300 mg **(Wellbutrin XL). Tablets (Sustained-Release):** 100 mg, 150 mg, 200 mg **(Wellbutrin SR),** 150 mg **(Zyban).**

ADMINISTRATION/HANDLING

PO

• Give without regard to food (give with food if GI irritation occurs). • Give at least 4-hr interval for immediate onset and 8-hr interval for sustained-release tablet to avoid seizures. • Give Aplenzin once daily in the morning. • Avoid bedtime dosage (decreases risk of insomnia). • Do not break, crush, dissolve, or divide sustained-, extended-release preparations.

INDICATIONS/ROUTES/DOSAGE

Depression

PO *(Immediate-Release)*: ADULTS: Initially, 100 mg twice a day. May increase to 100 mg 3 times a day no sooner than 3 days after beginning therapy. **Maximum:** 150 mg 3 times/day. **ELDERLY:** Initially, 50–100 mg/day. May increase by 50–100 mg/day q3–4 days. **Maintenance:** Lowest effective dosage.

PO *(Sustained-Release)*: ADULTS: Initially, 150 mg/day as a single dose in the morning. May increase to 150 mg twice a day as early as day 4 after beginning therapy. **Maximum:** 400 mg/day in 2 divided doses.

PO *(Extended-Release)*: ADULTS: 150 mg once a day. May increase to 300 mg once a day. **Maximum:** 450 mg/day. ***(Forfivo XL):*** Use only after initial dose titration. ***(Aplenzin)*:** Initially, 174 mg once daily in morning; may increase as soon as 4 days to 348 mg/day. **Maximum:** 522 mg/day.

Smoking Cessation

PO: ADULTS: (Zyban): Initially, 150 mg a day for 3 days, then 150 mg twice a day for 7–12 wks.

SAD

PO: ADULTS, ELDERLY: (Wellbutrin XL): 150 mg/day for 1 wk, then 300 mg/day. Begin in autumn (Sept–Nov). End of treatment begins in spring (Mar–Apr) by decreasing dose to 150 mg/day for 2 wks before discontinuation. **(Aplenzin):** 174 mg once daily. May increase after 1 wk to 348 mg once daily.

Dosage in Renal Impairment

Use caution.

Dosage in Hepatic Impairment

Mild to moderate: Use caution, reduce dosage. **Severe:** Use extreme cau-

tion. **Maximum dose:** Aplenzin: 174 mg every other day. Wellbutrin: 75 mg/day. Wellbutrin SR: 100 mg/day or 150 mg every other day. Wellbutrin XL: 150 mg every other day. Zyban: 150 mg every other day.

SIDE EFFECTS

Frequent (32%–18%): Constipation, weight gain or loss, nausea, vomiting, anorexia, dry mouth, headache, diaphoresis, tremor, sedation, insomnia, dizziness, agitation. **Occasional (10%–5%):** Diarrhea, akinesia, blurred vision, tachycardia, confusion, hostility, fatigue.

ADVERSE EFFECTS/ TOXIC REACTIONS

Risk of seizures increases in pts taking more than 150 mg/dose; in pts with history of bulimia, seizure disorders, discontinuing drugs that may lower seizure threshold.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess psychological status, thought content, suicidal tendencies, appearance. For pts on long-term therapy, hepatic/renal function tests should be performed periodically.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy and dose changes (as depression lessens, energy level improves, increasing suicide potential). Assess appearance, behavior, speech pattern, level of interest, mood changes.

PATIENT/FAMILY TEACHING

• Full therapeutic effect may be noted in 4 wks. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report signs/symptoms of seizure, worsening depression, suicidal ideation, unusual behavioral changes. • Avoid alcohol. • Do not chew, crush, dissolve, or divide sustained-, extended-release tablets.

*busPIRone

bue-**spye**-rone
(Apo-Buspirone, BuSpar, Bustab, Novo-Buspirone)
Do not confuse buspirone with bupropion.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonbarbiturate. **CLINICAL:** Antianxiety.

USES

Short-term management (up to 4 wks) of generalized anxiety disorder (GAD). **OFF-LABEL:** Augmenting medication for antidepressants.

PRECAUTIONS

Contraindications: None known. **Cautions:** Concurrent use of MAOIs, severe hepatic/renal impairment (not recommended).

ACTION

Exact mechanism of action unknown. Binds to serotonin, dopamine at presynaptic neurotransmitter receptors in CNS. **Therapeutic Effect:** Produces anxiolytic effect.

PHARMACOKINETICS

Rapidly and completely absorbed from GI tract. Protein binding: 95%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2–3 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** potentiate effect, may increase sedation. **CYP3A4 inhibitors (e.g.,**

B

erythromycin, ketoconazole) may increase concentration/effect. **CYP3A4 inducers (e.g., rifampin)** may decrease concentration/effect. May increase effects of **MAOIs.** **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** **Grapefruit products** may increase concentration, risk of toxicity. **LAB VALUES:** May produce false positive urine metanephrine/catecholamine assay test.

AVAILABILITY (Rx)

Tablets: 5 mg, 7.5 mg, 10 mg, 15 mg, 30 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Short-Term Management (up to 4 wks) of Anxiety Disorders

PO: ADULTS, ELDERLY: 7.5 mg twice a day. May increase by 5 mg/day every 2–4 days. **Maintenance:** 15–30 mg/day in 2–3 divided doses. **Maximum:** 60 mg/day.

SIDE EFFECTS

Frequent (12%–6%): Dizziness, drowsiness, nausea, headache. **Occasional (5%–2%):** Nervousness, fatigue, insomnia, dry mouth, light-headedness, mood swings, blurred vision, poor concentration, diarrhea, paresthesia. **Rare:** Muscle pain/stiffness, nightmares, chest pain, involuntary movements.

ADVERSE EFFECTS/ TOXIC REACTIONS

No evidence of drug tolerance, psychological or physical dependence, withdrawal syndrome. Overdose may produce severe nausea, vomiting, dizziness, drowsiness, abdominal distention, excessive pupil constriction.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess degree/manifestations of anxiety. Offer emotional support. Assess motor responses (agitation, trembling, tension), autonomic responses (cold, clammy hands; diaphoresis).

INTERVENTION/EVALUATION

For pts on long-term therapy, CBC, hepatic/renal function tests should be performed periodically. Assist with ambulation if drowsiness, dizziness occur. Evaluate for therapeutic response: calm facial expression, decreased restlessness, lessened insomnia, mental status.

PATIENT/FAMILY TEACHING

- Improvement may be noted in 7–10 days, but optimum therapeutic effect generally takes 3–4 wks. • Drowsiness usually disappears during continued therapy. • If dizziness occurs, go from lying to standing slowly. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol, grapefruit products.

busulfan

HIGH ALERT

bue-**sul**-fan
(Busulfex, Myleran)

■ **BLACK BOX ALERT** ■ Must be administered by certified chemotherapy personnel. Major effect characterized by severe bone marrow suppression.

Do not confuse Myleran with Alkeran, Leukeran, or Mylicon.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent. **CLINICAL:** Antineoplastic.

USES

PO: Palliative treatment of chronic myelogenous leukemia (CML). **IV:** Conditioning regimen prior to allogeneic hematopoietic progenitor cell transplantation for chronic myelogenous leukemia. **OFF-LABEL:** Conditioning regimen prior to hematopoietic stem cell transplant (PO); polycythemia vera; essential thrombocytosis.

PRECAUTIONS

Contraindications: PO treatment without a definitive diagnosis of CML. **Caution:** Compromised bone marrow reserve. History of seizure disorder, head trauma.

ACTION

Interferes with DNA replication, and RNA transcription. **Therapeutic Effect:** Interferes with normal DNA function.

PHARMACOKINETICS

Completely absorbed from GI tract. Protein binding: 33%. Metabolized in liver. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 2.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid use during pregnancy, esp. first trimester. May cause fetal harm. Unknown if distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category D. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Cytotoxic agents** may increase cytotoxicity. **Bone marrow depressants** may increase risk of myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease antibody response to vaccine. **HERBAL:** **St. John's wort** may decrease concentration. **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May decrease serum magnesium, potassium, phosphate, sodium. May increase serum glucose, calcium, bilirubin, ALT, AST, creatinine, alkaline phosphatase, BUN.

AVAILABILITY (Rx)

Injection Solution (Busulfex): 6 mg/ml. **Tablets (Myleran):** 2 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during administration. Use of gloves recommended. If contact occurs with skin/mucosa, wash thoroughly with water.

IV

Reconstitution • Dilute with 0.9% NaCl or D_5W only. Diluent quantity must be 10 times the volume of busulfan (e.g., 9.3 ml busulfan must be diluted with 93 ml diluent). • Add busulfan to calculated diluent. • Use infusion pump to administer busulfan.

Rate of Administration • Infuse over 2 hrs. • Before and after infusion, flush catheter line with 5 ml 0.9% NaCl or D_5W.

Storage • Refrigerate ampules. • Following dilution, stable for 8 hrs at room temperature, 12 hrs if refrigerated when diluted with 0.9% NaCl. • Infusion must be completed within 8- or 12-hr time frame.

PO

• May give without regard to meals. • To give high doses, insert multiple tablets into clear gelatin capsules.

IV INCOMPATIBILITIES

Do not mix busulfan with any other medications.

INDICATIONS/ROUTES/DOSAGE

Remission Induction in CML

PO: ADULTS, ELDERLY: Induction: 4–8 mg/day or 0.06 mg/kg/day. **Maintenance:** 1–3 mg/day. **CHILDREN:** 0.06 mg/kg/day. **Maintenance:** 1–3 mg/day.

B

Marrow Ablative Conditioning and Bone Marrow Transplantation

IV: ADULTS, ELDERLY, CHILDREN WEIGHING MORE THAN 12 KG: 0.8 mg/kg/dose q6h for total of 16 doses. (Use ideal body weight [IBW] or actual body weight [ABW], whichever is lower.) **CHILDREN WEIGHING 12 KG OR LESS:** 1.1 mg/kg/dose (IBW) q6h for 16 doses.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Expected (98%–72%): Nausea, stomatitis, vomiting, anorexia, insomnia, diarrhea, fever, abdominal pain, anxiety. **Frequent (69%–44%):** Headache, rash, asthenia (loss of strength, energy), infection, chills, tachycardia, dyspepsia. **Occasional (38%–16%):** Constipation, dizziness, edema, pruritus, cough, dry mouth, depression, abdominal enlargement, pharyngitis, hiccups, back pain, alopecia, myalgia. **Rare (13%–5%):** Injection site pain, arthralgia, confusion, hypotension, lethargy.

ADVERSE EFFECTS/ TOXIC REACTIONS

Major adverse effect is myelosuppression resulting in hematologic toxicity (anemia, leukopenia, thrombocytopenia). Very high dosages may produce blurred vision, muscle twitching, tonic-clonic seizures. Long-term therapy (more than 4 yrs) may produce pulmonary syndrome ("busulfan lung"), characterized by persistent cough, congestion, adventitious breath sounds (rales, crackles), dyspnea. Hyperuricemia may produce uric acid nephropathy, renal calculi, acute renal failure.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

CBC with differential, hepatic/renal function studies should be performed weekly (dosage based on hematologic values).

INTERVENTION/EVALUATION

Monitor lab values diligently for evidence of bone marrow depression. Assess oral cavity for onset of stomatitis. Initiate antiemetics to prevent nausea/vomiting. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Educate pt/family regarding expected effects of therapy. • Maintain adequate daily fluid intake (may protect against renal impairment). • Report persistent cough, congestion, difficulty breathing. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site. • Report signs of abrupt weakness, fatigue, weight loss, nausea, vomiting. • Do not have immunizations without physician's approval (drug lowers body's resistance). • Avoid contact with those who have recently received live virus vaccine. • Take medication at same time each day. • Contraception is recommended during therapy.

cabazitaxel

ka-**baz**-i-**tax**-el
(Jevtana)

■ **BLACK BOX ALERT** ■ All pts should be premedicated with a corticosteroid, an antihistamine, and an H_2 antagonist prior to infusion. Severe hypersensitivity reaction has occurred. Immediately discontinue infusion and give appropriate treatment if hypersensitivity reaction occurs. Neutropenic deaths reported. CBC, particularly ANC, should be obtained prior to and during treatment. Do not administer with neutrophil count 1,500 cells/mm^3 or less.

Do not confuse cabazitaxel with paclitaxel or Paxil, or Jevtana with Januvia, Levitra, or Sentra.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Microtubule inhibitor. **CLINICAL:** Antineoplastic.

USES

Used in combination with prednisone for treatment of hormone-refractory metastatic prostate cancer previously treated with a docetaxel-containing regimen.

PRECAUTIONS

Contraindications: Those with neutrophil count of 1,500/mm^3 or less, history of hypersensitivity to polysorbate 80. **Caution:** Severe hepatic impairment (bilirubin equal to or greater than ULN or ALT and/or AST over 1.5 times ULN), elderly, pregnancy, renal impairment (creatinine clearance less than 50 ml/min). Avoid concurrent use of strong CYP3A4 inhibitors (e.g., atazanavir, clarithromycin, indinavir, itraconazole, ketoconazole, nelfinavir, ritonavir, saquinavir, voriconazole). Concurrent use of moderate CYP3A4 inhibitors (e.g., diltiazem, erythromycin, fluconazole, fosamprenavir, verapamil), or strong CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin).

ACTION

Binds to tubulin to promote assembly into microtubules and inhibits disassembly, which inhibits microtubules depolymerization/cell division. **Therapeutic Effect:** Blocks cells in mitotic phase of cell cycle, inhibiting tumor proliferation.

PHARMACOKINETICS

Widely distributed. Metabolized in liver. Protein binding: 89%–92%. Excreted in feces (76%), urine (3.7%). **Half-life:** 95 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Crosses placental barrier. Breastfeeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Pts 65 yrs and older have 5% greater risk of developing neutropenia, fatigue, dizziness, fever, urinary tract infection, dehydration.

INTERACTIONS

DRUG: Concurrent use of **strong CYP3A4 inhibitors (atazanavir, clarithromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir, voriconazole)** may increase concentration of cabazitaxel and is not recommended. **Strong CYP3A4 inducers (carbamazepine, phenobarbital, phenytoin, rifabutin, rifampin, rifapentine)** may decrease cabazitaxel concentration effects. **Live virus vaccine** may potentiate virus replication, increase vaccine's side effects, decrease response to vaccine. **HERBAL: St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease concentration, effect. **FOOD: Grapefruit products** may increase concentration/effects. **LAB VALUES:** May increase serum bilirubin. May decrease Hgb, Hct, neutrophils, platelets.

AVAILABILITY (Rx)

Injection, Single-Use Vials, 2 per Kit: 60 mg/1.5 ml polysorbate 80 vial and one vial containing 13% ethanol (in diluent).

C

ADMINISTRATION/HANDLING

◀ALERT▶ Wear gloves during preparation, handling. Two-step dilution process must be performed under aseptic conditions to prepare second (final) infusion solution. Medication undergoes two dilutions. After second dilution, administration should be initiated within 30 min.

Reconstitution

Step 1, First Dilution: • Each vial of cabazitaxel contains 60 mg/1.5 ml; must first be mixed with entire contents of supplied diluent. • Once reconstituted, resultant solution contains 10 mg/ml of cabazitaxel. • When transferring diluent, direct needle onto inside vial wall and inject slowly to limit foaming. • Remove syringe and needle, then gently mix initial diluted solution by repeated inversions for at least 45 sec to ensure full mixing of drug and diluent. • Do not shake. • Allow any foam to dissipate.

Step 2, Final Dilution: • Withdraw recommended dose and further dilute with 250 ml 0.9% NaCl or D_5W. • If dose greater than 65 mg is required, use larger volume of 0.9% NaCl or D_5W so that concentration of 0.26 mg/ml is not exceeded. • Concentration of final infusion should be between 0.10 and 0.26 mg/ml.

Rate of Administration • Infuse over 1 hr using in-line 0.22 micron filter.

Storage • Store vials at room temperature. • First dilution solution stable for 30 min. • Final dilution solution stable for 8 hrs at room temperature or 24 hrs if refrigerated.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Antihistamine (dexchlorpheniramine 5 mg, diphenhydramine 25 mg, or equivalent antihistamine), corticosteroid (dexamethasone 8 mg or equivalent steroid), and H_2 antagonist (ranitidine 50 mg or equivalent H_2 antagonist) should be given at least 30 min prior to each dose to reduce risk/severity of hypersensitivity.

Hormone-Refractory Metastatic Prostate Cancer

◀ALERT▶ Monitoring of CBC is essential on weekly basis during cycle 1 and before each treatment cycle thereafter so that the dose can be adjusted.

IV Infusion: ADULTS, ELDERLY: 25 mg/m^2 given as 1-hr infusion every 3 wks in combination with 10 mg prednisone daily throughout treatment. **Dose Modification: grade 3 neutropenia, febrile neutropenia, grade 3 or persistent diarrhea, neuropathy:** Reduce dosage to 20 mg/m^2 after treatment interruption.

Dosage in Renal Impairment

CrCl less than 30 ml/min: Use with caution.

Dosage in Hepatic Impairment

Total bilirubin greater than or equal to ULN or ALT and/or AST greater than or equal to 1.5 times ULN: Not recommended.

SIDE EFFECTS

Frequent (47%–16%): Diarrhea, fatigue, nausea, vomiting, constipation, esthesia (decreased sensitivity to touch), abdominal pain, anorexia, back pain. **Occasional (13%–5%):** Peripheral neuropathy, fever, dyspnea, cough, arthralgia, dysgeusia, dyspepsia, alopecia, peripheral edema, weight decrease, urinary tract infection, dizziness, headache, muscle spasm, dysuria, hematuria, mucosal inflammation, dehydration.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction may include generalized rash, erythema, hypotension, bronchospasm. 94% of pts develop grade 1–4 neutropenia and associated complications including anemia, thrombocytopenia, sepsis. GI abnormalities, hypertension, arrhythmias, renal failure may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support. Obtain baseline EKG, electrolytes, CBC, LFT, testosterone levels prior to initiation of therapy.

INTERVENTION/EVALUATION

Assess CBC, ANC prior to each infusion. Monitor CBC, ANC on weekly basis during cycle 1 and before each treatment cycle thereafter; do not administer if ANC less than 1,500 cells/mm^3. Monitor ALT, AST/renal function. Monitor for hypersensitivity reaction (rash, erythema, dyspnea). Encourage adequate fluid intake. Monitor daily pattern of bowel activity, stool consistency. Offer antiemetics if nausea, vomiting occur. Closely monitor for signs/symptoms of neutropenia.

PATIENT/FAMILY TEACHING

• Report fever, chills, persistent sore throat, unusual bruising/bleeding, pale skin, fatigue. • Avoid tasks that require alertness, motor skills until response to drug is established. • Maintain strict oral hygiene. • Do not have immunizations without physician approval (drug lowers body's resistance). • Avoid those who have received a live virus vaccine. • Avoid crowds, those with cough, sneezing.

cabozantinib

ka-boe-**zan**-ti-nib
(Cometriq)

■ **BLACK BOX ALERT** ■ Complications including GI perforation and fistula formation have occurred. Severe and sometimes fatal hemorrhaging including hemoptysis, GI bleeding occurred in 3% of pts. Discontinue if visceral perforation, fistula formation (GI, tracheal/esophageal), severe hemorrhaging occurs.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of progressive, metastatic medullary thyroid cancer.

PRECAUTIONS

Contraindications: None known. **Cautions:** Moderate to severe hepatic impairment; baseline thrombocytopenia, anemia, neutropenia; recent surgery or dental procedures, open wounds, chronic electrolyte imbalance, dehydration, diarrhea, hypertension, recent history of hemorrhage or hemoptysis.

ACTION

Inhibits tyrosine kinase activity in tumor cells. Inhibits cell migration, proliferation, survival, and angiogenesis (new blood vessel formation). **Therapeutic Effect:** Inhibits thyroid tumor cell growth and metastasis.

PHARMACOKINETICS

Well absorbed after PO administration. Metabolized in liver. Protein binding: greater than 99%. Peak plasma concentration: 2–5 hrs. Excreted in feces (54%), urine (27%). **Half-life:** 55 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Not recommended in nursing mothers. Must either discontinue drug or discontinue breastfeeding. Unknown if distributed in breast milk. Contraception recommended during treatment and up to 4 mos after discontinuation. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., atazanavir, clarithromycin, itraconazole, ketoconazole, saquinavir, voriconazole) may increase concentration. **CYP3A4 inducers (e.g., carbamazepine, phenobarbital, phenytoin, rifampin)** may decrease concentration. **HERBAL: St. John's wort** may decrease effect. **FOOD: Grapefruit products** may

C

increase concentration. **High-fat meals** may increase absorption/exposure. **LAB VALUES:** May decrease lymphocytes, neutrophils, platelets; serum calcium, magnesium, phosphorus, potassium, sodium. May increase serum ALT, AST, alkaline phosphatase, bilirubin, lipase, TSH, urine protein.

AVAILABILITY (Rx)

Capsules: 20 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

• Give on empty stomach only; do not eat for at least 2 hrs before or 1 hr after administration. • Give with water. • Avoid grapefruit products. • Do not break, crush, dissolve, or divide capsules.

INDICATIONS/ROUTES/DOSAGE

Metastatic Medullary Thyroid Cancer

PO: ADULTS: 140 mg once daily.

Dosage Modification

Hematologic/Nonhematologic Reaction, Drug Intolerance: Interrupt treatment and restart at 100 mg once daily (if previously taking 140 mg), or 60 mg once daily (if previously taking 100 mg). If previously taking 60 mg/day, resume 60 mg once daily once effects resolve.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Not recommended in moderate to severe impairment.

SIDE EFFECTS

Frequent (63%–34%): Diarrhea, stomatitis, weight loss, decreased appetite, nausea, fatigue, oral pain, dysgeusia. **Occasional (27%–7%):** Constipation, abdominal pain, vomiting, asthenia, dysphonia, dry skin, headache, alopecia, dizziness, arthralgia, dysphagia, muscle spasms, erythema, dyspepsia, anxiety, musculoskeletal pain, paresthesia, peripheral neuropathy, hyperkeratosis.

ADVERSE EFFECTS/ TOXIC REACTIONS

May cause GI perforation (3%), GI fistula formation (1%), severe GI hemorrhaging (3%). Malignant hypertension may occur despite continued medical management. Thromboembolic events including venous/arterial thromboembolism, cerebral infarction, myocardial infarction have been reported. May cause ineffective wound healing or wound dehiscence requiring medical intervention. Osteonecrosis of the jaw may include mandibular pain, jaw bone erosion, periodontal/gingival infection or ulceration, osteomyelitis, impaired healing of the mouth after dental procedures. Palmar-plantar erythrodysesthesia syndrome (PPES), a chemotherapy-induced skin condition that presents as redness, swelling, numbness, skin sloughing of the hands and feet, has been reported. Reversible posterior leukoencephalopathy syndrome (RPLS) was reported in less than 1% of pts. Proteinuria may indicate nephrotic syndrome.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, BMP, magnesium, phosphate, ionized calcium, urinalysis; vital signs. Assess for recent surgeries, dental procedures. Question for possibility of pregnancy, current breastfeeding status. Obtain negative urine pregnancy before initiating treatment. Obtain full medication history including vitamins, supplements, herbal products. Question for history of hypertension, hepatic impairment.

INTERVENTION/EVALUATION

Monitor CBC, electrolytes, urinalysis. Routinely assess vital signs and report any change in blood pressure. Persistent diastolic hypertension may indicate hypertensive crisis. Reversible posterior leukoencephalopathy syndrome should be considered in pts with seizure, headache, visual disturbances, confusion, altered mental status. Assess hydration status; encourage PO intake. Monitor daily pattern

of bowel activity, stool consistency. Immediately report hemorrhaging, bloody stools, abdominal pain, hemoptysis (may indicate GI perforation/fistula formation). Obtain EKG for palpitations, chest pain, hypokalemia, hyperkalemia, hypocalcemia, bradycardia, ventricular arrhythmias.

PATIENT/FAMILY TEACHING

• Blood levels will be routinely monitored. • Strictly avoid pregnancy. • Contraception should be utilized during treatment and up to 4 mos after discontinuation. • Report any yellowing of skin or eyes, abdominal pain, bruising, black/tarry stools, dark urine, decreased urine output, skin changes. • Report neurologic changes including altered mental status, seizures, headache, blurry vision, difficulty speaking, one-sided weakness (may indicate stroke, high blood pressure crisis, or life-threatening brain swelling). • Do not take herbal supplements. • Report any jaw pain or oral lesions, skin changes including skin sloughing or rash. • Notify physician before any planned surgeries or dental procedures. • Do not ingest grapefruit products. • Do not take with food; wait at least 2 hrs before or 1 hr after any dose. • Do not chew, crush, dissolve, or divide capsules.

caffeine citrate

kaf-een **sit**-rate
(Cafcit)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Citrate salt of caffeine. **CLINICAL:** Bronchial smooth muscle relaxant.

USES

Short-term treatment of apnea in premature infants from 28 wks to younger than 33 wks gestational age.

PRECAUTIONS

Contraindications: None known. **Cautions:** Avoid in pts with symptomatic cardiac arrhythmias. **Pregnancy Category C.**

ACTION

Stimulates medullary respiratory center. Appears to increase sensitivity of respiratory center to stimulatory effects of CO_2. **Therapeutic Effect:** Increases alveolar ventilation, reducing severity, frequency of apneic episodes.

INTERACTIONS

DRUG: CNS stimulants may cause excessive CNS stimulation (e.g., nervousness, insomnia, seizures, arrhythmias). **CYP1A2 inhibitors (e.g., cimetidine, ciprofloxacin)** may increase concentration, risk of side effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May alter serum glucose.

AVAILABILITY (Rx)

Injection Solution: 20 mg/ml. **Oral Solution:** 20 mg/ml.

ADMINISTRATION/HANDLING

PO

• May give without regard to feedings. • May administer injectable solution orally.

IV

• Infuse loading dose over at least 30 min; maintenance dose over at least 10 min. • May give without further dilution.

IV COMPATIBILITIES

Alprostadil, calcium gluconate, cefotoxime, dexamethasone, dobutamine, dopamine, gentamicin, heparin, vancomycin.

IV INCOMPATIBILITIES

Acyclovir, furosemide.

INDICATIONS/ROUTES/DOSAGE

Apnea

PO, IV: Loading dose: 10–20 mg/kg as caffeine citrate (5–10 mg/kg as caffeine base). If theophylline given within previous 72 hrs, a modified dose (50%–75%) may be given. **Maintenance:** 5 mg/kg/day as caffeine citrate (2.5 mg/kg/day as caffeine base) starting 24 hrs

after loading dose. Dosage adjusted based on pt response.

C

SIDE EFFECTS

Frequent (10%–5%): Feeding intolerance, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Sepsis, necrotizing enterocolitis may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Baseline serum caffeine levels should be measured in infants previously treated with theophylline (preterm infants metabolize theophylline to caffeine).

INTERVENTION/EVALUATION

Diligently monitor respirations. Assess skin for rash. Monitor heart rate, number/severity of apnea spells, serum caffeine levels.

calcitonin

kal-si-**toe**-nin
(Apo-Calcitonin, Calcimar, Caltine, Fortical, Miacalcin)
Do not confuse calcitonin with calcitriol, or Miacalcin with Micatin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic hormone. **CLINICAL:** Calcium regulator, bone resorption inhibitor.

USES

Parenteral: Treatment of Paget's disease, hypercalcemia, postmenopausal osteoporosis. **Intranasal**: Postmenopausal osteoporosis.

PRECAUTIONS

Contraindications: Hypersensitivity to salmon protein. **Cautions:** None known.

ACTION

Antagonizes effects of parathyroid hormone. Increases jejunal secretion of water, sodium, potassium, chloride. Inhibits osteoclast bone resorption, increases excretion of calcium, phosphate, sodium, magnesium, potassium. **Therapeutic Effect:** Regulates serum calcium concentrations.

PHARMACOKINETICS

Nasal form rapidly absorbed. Injection form rapidly metabolized primarily in kidneys. Primarily excreted in urine. **Half-life: Nasal:** 43 min; **Injection:** 70–90 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Does not cross placenta; unknown if distributed in breast milk. Safe usage during lactation not established (inhibits lactation in animals). **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease **lithium** concentration/effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (Miacalcin): 200 international units/ml (calcitonin-salmon). **Nasal Spray (Fortical, Miacalcin Nasal):** 200 international units/activation (calcitonin-salmon).

ADMINISTRATION/HANDLING

IM, Subcutaneous

- IM route preferred if injection volume greater than 2 ml. Subcutaneous injection for outpatient self-administration unless volume greater than 2 ml.
- Skin test should be performed before therapy in pts suspected of sensitivity to calcitonin.
- Bedtime administration may reduce nausea, flushing.

Intranasal

- Refrigerate unopened nasal spray. Store at room temperature after initial use.

• Instruct pt to clear nasal passages. • Tilt head slightly forward. • Insert spray tip into nostril, pointing toward nasal passages, away from nasal septum. • Spray into one nostril while pt holds other nostril closed and concurrently inspires through nose to deliver medication as high into nasal passage as possible. Spray into one nostril daily. • Discard after 30 doses.

INDICATIONS/ROUTES/DOSAGE

Skin Testing before Treatment in Pts with Suspected Sensitivity to Calcitonin-Salmon

Intracutaneous: ADULTS, ELDERLY: Prepare a 10-international units/ml dilution; withdraw 0.05 ml from a 200-international units/ml vial in a tuberculin syringe; fill up to 1 ml with 0.9% NaCl. Give 0.1 ml intradermally on inner aspect of forearm. Observe after 15 min; a positive response is the appearance of more than mild erythema or wheal.

Paget's Disease

IM, Subcutaneous: ADULTS, ELDERLY: Initially, 100 international units/day. **Maintenance:** 50 international units q1–2 days.

Postmenopausal Osteoporosis

IM, Subcutaneous: ADULTS, ELDERLY: 100 international units every other day with adequate calcium and vitamin D intake.
Intranasal: ADULTS, ELDERLY: 200 international units/day as a single spray, alternating nostrils daily.

Hypercalcemia

IM, Subcutaneous: ADULTS, ELDERLY: Initially, 4 international units/kg q12h; may increase to 8 international units/kg q12h if no response in 2 days; may further increase to 8 international units/kg q6h if no response in another 2 days.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: IM, Subcutaneous (10%): Nausea (may occur soon after injection; usually diminishes with continued therapy), inflammation at injection site. **Nasal (12%–10%):** Rhinitis, nasal irritation, redness, mucosal lesions. **Occasional: IM, Subcutaneous (5%–2%):** Flushing of face, hands. **Nasal (5%–3%):** Back pain, arthralgia, epistaxis, headache. **Rare: IM, Subcutaneous:** Epigastric discomfort, dry mouth, diarrhea, flatulence. **Nasal:** Itching of earlobes, pedal edema, rash, diaphoresis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pts with a protein allergy may develop a hypersensitivity reaction (rash, dyspnea, hypotension, tachycardia).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum electrolyte levels.

INTERVENTION/EVALUATION

Ensure rotation of injection sites; check for inflammation. Assess vertebral bone mass (document stabilization/improvement). Assess for allergic response: rash, urticaria, swelling, dyspnea, tachycardia, hypotension. Monitor serum electrolytes, calcium, alkaline phosphatase.

PATIENT/FAMILY TEACHING

• Instruct pt/family on aseptic technique, proper injection method of subcutaneous medication, including rotation of sites, proper administration of nasal medication. • Nausea is transient and usually decreases over time. • Immediately report rash, itching, shortness of breath, significant nasal irritation. • Improvement in biochemical abnormalities and bone pain usually occurs in the first few months of treatment. • Improvement of neurologic lesions may take more than a year.

calcium acetate

(Eliphos, PhosLo)

C

calcium carbonate

(Apo-Cal, Caltrate 600, OsCal, Titralac, Tums)

calcium chloride

calcium citrate

(Cal-Citrate, Citracal, Osteocit)

calcium glubionate

calcium gluconate

kal-si-um

Do not confuse Citracal with Citrucel, OsCal with Asacol, or PhosLo with ProSom.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Electrolyte replenisher. **CLINICAL:** Antacid, antihypocalcemic, antihyperkalemic, antihypermagnesemic, antihyperphosphatemic.

USES

Parenteral (calcium chloride, calcium gluconate): Acute hypocalcemia (e.g., neonatal hypocalcemic tetany, alkalosis), electrolyte depletion, cardiac arrest (strengthens myocardial contractions), hyperkalemia (reverses cardiac depression), hypermagnesemia (aids in reversing CNS depression). **Calcium carbonate:** Antacid, treatment/prevention of calcium deficiency, hyperphosphatemia. **Calcium citrate:** Antacid, treatment/prevention of calcium deficiency, hyperphosphatemia. **Calcium acetate:** Controls hyperphosphatemia in end-stage renal disease. **OFF-LABEL (Calcium chloride):** Calcium channel blocker overdose, severe hyperkalemia, malignant arrhythmias associated with hypermagnesemia.

PRECAUTIONS

Contraindications: All preparations: Calcium-based renal calculi, hypercalcemia, ventricular fibrillation. **Calcium chloride:** Digoxin toxicity. **Calcium gluconate: Neonates:** Concurrent IV use with ceftriaxone. **Cautions:** Chronic renal impairment, hypokalemia, concurrent use with digoxin.

ACTION

Essential for function, integrity of nervous, muscular, skeletal systems. Plays an important role in normal cardiac/renal function, respiration, blood coagulation, cell membrane and capillary permeability. Assists in regulating release/storage of hormones/neurotransmitters. Neutralizes/reduces gastric acid (increases pH). **Calcium acetate:** Binds with dietary phosphate, forming insoluble calcium phosphate. **Therapeutic Effect:** Replaces calcium in deficiency states; controls hyperphosphatemia in end-stage renal disease; relieves heartburn, indigestion.

PHARMACOKINETICS

Moderately absorbed from small intestine (absorption depends on presence of vitamin D metabolites, pH). Primarily eliminated in feces.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. Unknown whether calcium chloride or calcium gluconate is distributed in breast milk. **Pregnancy Category C. Children:** Extreme irritation, possible tissue necrosis or sloughing with IV calcium preparations. Restrict IV use due to small vasculature. **Elderly:** Oral absorption may be decreased.

INTERACTIONS

DRUG: Hypercalcemia may increase **digoxin** toxicity. Oral form may decrease absorption of **biphosphonates (e.g., risedronate), calcium channel blockers, tetracycline derivatives, thyroid products.** **HERBAL:** None significant.

FOOD: **Food** may increase calcium absorption. **LAB VALUES:** May increase serum pH, calcium, gastrin. May decrease serum phosphate, potassium.

AVAILABILITY

CALCIUM ACETATE
Gelcap (PhosLo): 667 mg. **Tablets (Eliphos):** 667 mg.
CALCIUM CARBONATE
Tablets: 1,250 mg, 1,500 mg (Caltrate 600). **Tablets (Chewable):** 500 mg (Tums); 1,250 mg.
CALCIUM CHLORIDE
Injection Solution: 10% (100 mg/ml) equivalent to 27.2 mg elemental calcium per ml.
CALCIUM GLUBIONATE
Syrup: 1.8 g/5 ml.
CALCIUM GLUCONATE
Injection Solution: 10%.

ADMINISTRATION/HANDLING

IV

Dilution

Calcium Chloride • May give undiluted or may dilute with 0.9% NaCl or Sterile Water for Injection.

Calcium Gluconate • May give undiluted or may dilute with 100 ml 0.9% NaCl or D_5W.

Rate of Administration

Calcium Chloride • **Note:** Rapid administration may produce bradycardia, metallic/chalky taste, hypotension, sensation of heart, peripheral vasodilation. • **IV push:** Infuse slowly at maximum rate of 50–100 mg/min (in cardiac arrest, may administer over 10–20 sec). • **IV infusion:** Dilute to maximum final concentration of 20 mg/ml and infuse over 1 hr or no faster than 45–90 mg/kg/hr. Give via a central line. Do **NOT** use scalp, small hand or foot veins. Stop infusion if pt complains of pain or discomfort.

Calcium Gluconate • **Note:** Rapid administration may produce vasodilation, hypotension, arrhythmias, syncope, cardiac arrest. • **IV push:** Infuse slowly over 3–5 min or at maximum rate of 50–100 mg/min (in cardiac arrest, may administer over 10–20 sec). • **IV infusion:** Dilute 1–2 g in 100 ml 0.9% NaCl or D_5W and infuse over 1 hr.

Storage • Store at room temperature. • Once diluted, stable for 24 hrs at room temperature.

PO

Calcium Acetate • Administer with plenty of fluids during meals to optimize effectiveness.

Calcium Carbonate • Administer with or immediately following meals with plenty of water (give with meals if used for phosphate binding). Thoroughly chew chewable tablets before swallowing.

Calcium Citrate • Give without regard to food (give with food when used to treat hyperphosphatemia).

Calcium Glucobionate • Give with or following meals (give on empty stomach before meals when used to treat hyperphosphatemia).

IV INCOMPATIBILITIES

Calcium chloride: Amphotericin B complex (Abelcet, AmBisome, Amphotec), pantoprazole (Protonix), phosphate-containing solutions, propofol (Diprivan), sodium bicarbonate. **Calcium gluconate:** Amphotericin B complex (Abelcet, AmBisome, Amphotec), fluconazole (Diflucan).

IV COMPATIBILITIES

Calcium chloride: Amikacin (Amikin), dobutamine (Dobutrex), lidocaine, milrinone (Primacor), morphine, norepinephrine (Levophed). **Calcium gluconate:** Ampicillin, aztreonam (Azactam), cefazolin (Ancef), cefepime (Maxipime), ciprofloxacin (Cipro), dobutamine (Dobutrex), enalapril (Vasotec), famotidine (Pepcid), furosemide (Lasix), heparin, lidocaine, lipids, magnesium sulfate, meropenem (Merrem IV), midazolam (Versed), milrinone (Primacor), norepinephrine (Levophed), piperacillin and tazobactam (Zosyn), potassium chloride, propofol (Diprivan).

C

INDICATIONS/ROUTES/DOSAGE

Hyperphosphatemia

PO *(Calcium Acetate)*: ADULTS, ELDERLY: 2 tablets 3 times a day with meals. May increase gradually up to 4 tablets 3 times a day to decrease serum phosphate level to less than 6 mg/dL as long as hypercalcemia does not develop.

PO *(Calcium Carbonate)*: ADULTS, ELDERLY, CHILDREN: 1 g with each meal. **Maximum:** 4–7 g/day.

Hypocalcemia

PO *(Calcium Carbonate)*: ADULTS, ELDERLY: 1–2 g/day in 3–4 divided doses. **CHILDREN:** 45–65 mg/kg/day in 3–4 divided doses. **NEONATES:** 50–150 mg/kg/day in 4–6 divided doses. **Maximum:** 1 g/day.

PO *(Calcium Glubionate)*: ADULTS, ELDERLY: 6–18 g/day in 4–6 divided doses. **CHILDREN, INFANTS:** 0.6–2 g/kg/day in 4 divided doses. **NEONATES:** 1.2 g/kg/day in 4–6 divided doses.

IV *(Calcium Gluconate)*: ADULTS, ELDERLY: 1–2 g over 2 hrs. May repeat q60 min until level resolved. **CHILDREN:** 200–500 mg/kg/day in 4 divided doses. **NEONATES:** 200–800 mg/kg/day in 4 divided doses.

Antacid

PO *(Calcium Carbonate)*: ADULTS, ELDERLY: 1–2 tabs (5–10 ml) q2h as needed. **CHILDREN 6–11 YRS:** 2 tabs (800 mg). **Maximum:** 6 tabs/day. **CHILDREN 2–5 YRS:** 1 tab (400 mg). **Maximum:** 3 tabs/day.

Osteoporosis

PO *(Calcium Carbonate)*: ADULTS, ELDERLY: 1,200 mg/day.

Cardiac Arrest

IV *(Calcium Chloride)*: ADULTS, ELDERLY: 500–1,000 mg over 2–5 min. May repeat as necessary. **CHILDREN, NEONATES:** 20 mg/kg. May repeat in 10 min as necessary.

Hypocalcemia Tetany

IV *(Calcium Chloride)*: CHILDREN, NEONATES: 10 mg/kg over 5–10 min. May repeat q6–8h. **Maximum:** 200 mg/kg/day.

IV *(Calcium Gluconate)*: ADULTS, ELDERLY: 1–3 g over 10–30 min; may repeat after 6 hrs. **CHILDREN, NEONATES:** 100–200 mg/kg/dose over 5–10 min. May repeat after 6 hrs. **Maximum:** 500 mg/kg/day.

Supplement

PO *(Calcium Citrate)*: ADULTS, ELDERLY: 0.5–2 g 2–4 times a day. **CHILDREN:** 45–65 mg/kg/day in 4 divided doses.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: PO: Chalky taste. **Parenteral:** Pain, rash, redness, burning at injection site; flushing, nausea, vomiting, diaphoresis, hypotension. **Occasional: PO:** Mild constipation, fecal impaction, peripheral edema, metabolic alkalosis (muscle pain, restlessness, slow respirations, altered taste). **Calcium carbonate:** Milk-alkali syndrome (headache, decreased appetite, nausea, vomiting, unusual fatigue). **Rare:** Urinary urgency, painful urination.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypercalcemia: Early signs: Constipation, headache, dry mouth, increased thirst, irritability, decreased appetite, metallic taste, fatigue, weakness, depression. **Later signs:** Confusion, drowsiness, hypertension, photosensitivity, arrhythmias, nausea, vomiting, painful urination.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, EKG and cardiac rhythm, renal function, serum magnesium, phosphate, potassium.

INTERVENTION/EVALUATION

Monitor serum BMP, calcium, ionized calcium, magnesium, phosphate; B/P, cardiac rhythm, renal function. Monitor for signs of hypercalcemia.

PATIENT/FAMILY TEACHING

- Do not take within 1–2 hrs of other oral medications, fiber-containing foods.
- Avoid excessive use of alcohol, tobacco, caffeine.

calfactant

cal-**fak**-tant
(Infasurf)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Natural lung extract. **CLINICAL:** Pulmonary surfactant.

USES

Prevention of respiratory distress syndrome (RDS) in premature infants younger than 29 wks of gestational age; treatment of premature infants younger than 72 hrs of age who develop RDS and require endotracheal intubation.

PRECAUTIONS

Contraindications: None known. **Cautions:** None known.

ACTION

Reduces alveolar surface tension, stabilizing the alveoli. **Therapeutic Effect:** Restores surface activity to infant lungs, improves lung compliance, respiratory gas exchange.

PHARMACOKINETICS

No studies have been performed.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not indicated in this pt population. **Pregnancy Category:** Not indicated for use in pregnant women. **Children:** Used only in neonates. No age-related precautions noted. **Elderly:** Not indicated in this pt population.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Intratracheal Suspension: 35-mg/ml vials.

ADMINISTRATION/HANDLING

Intratracheal

- Refrigerate. • Unused vials may be returned to refrigerator within 24 hrs for future use. Avoid repeated warming to room temperature. • Do not shake. • Enter vial only once, discard unused suspension.

INDICATIONS/ROUTES/DOSAGE

Respiratory Distress Syndrome (RDS)

Intratracheal: NEONATES: 3 ml/kg of birth weight administered as soon as possible after birth in 2 doses of 1.5 ml/kg. Repeat 3-ml/kg doses, up to a total of 3 doses given 12 hrs apart.

SIDE EFFECTS

Frequent (65%–16%): Cyanosis, airway obstruction, bradycardia, reflux of surfactant into endotracheal tube, need for manual ventilation. **Occasional (3%):** Need for reintubation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Airway, bradycardia, cyanosis, reflux of calfactant into endotracheal tube have occurred.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Must be administered in highly supervised setting. Clinicians must be experienced with intubation, ventilator management. Offer emotional support to parents.

C

INTERVENTION/EVALUATION

Monitor infant with arterial or transcutaneous measurement of systemic O_2, CO_2. Auscultate lungs for adventitious breath sounds (baseline serum BMP, calcium, ionized calcium, magnesium, phosphate; B/P, cardiac rhythm, renal function). Frequent ABG sampling necessary to prevent post-dosing hyperoxia and hypocarbia.

canagliflozin

kan-a-gli-**floe**-zin
(Invokana)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Sodium-glucose co-transporter 2 (SGLT2) inhibitor. **CLINICAL:** Antidiabetic.

FIXED-COMBINATION(S)

Invokamet: canagliflozin/metformin (an antidiabetic): 50 mg/500 mg, 50 mg/1,000 mg, 150 mg/500 mg, 150 mg/1,000 mg.

USES

Adjunctive treatment to diet and exercise to improve glycemic controls in pts with type 2 diabetes mellitus.

PRECAUTIONS

Contraindications: History of hypersensitivity to SGLT2 inhibitors, severe renal impairment, end-stage renal disease, dialysis. **Cautions:** Not recommended in type 1 diabetes, diabetic ketoacidosis. Concurrent use of diuretics, ACE inhibitors, angiotensin receptor blockers (ARB), other hypoglycemic or nephrotoxic medications; mild to moderate renal impairment, hypovolemia (dehydration/anemia), elderly, episodic hypotension, hyperkalemia, genital mycotic infection.

ACTION

Increases excretion of urinary glucose by inhibiting reabsorption of filtered glucose in kidney. Inhibits SGLT2 in proximal renal tubule. **Therapeutic Effect:** Lowers serum glucose levels.

PHARMACOKINETICS

Readily absorbed following PO administration. Metabolized in liver. Peak plasma concentration: 1–2 hrs. Protein binding: 99%. Excreted in feces (42%), urine (33%). **Half-life:** 11–13 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. **Pregnancy Category C. Children:** Safety and efficacy not established in pts younger than 18 yrs of age. **Elderly:** May have increased risk for adverse reactions (e.g., hypotension, syncope, dehydration).

INTERACTIONS

DRUG: **Phenytoin, rifampin** may decrease concentration/effect. **Potassium-sparing diuretics** may increase serum potassium level. **ACE inhibitors, angiotension receptor blockers, calcium channel blockers, diuretics** may increase risk of hypotension. **Insulin, oral hypoglycemics** may increase risk of hypoglycemia. May increase concentration/effects of **digoxin.** **HERBAL:** Herbs with hypoglycemic properties **(e.g., fenugreek, garlic, ginger, ginseng, gotu)** may increase risk of hypoglycemia. **FOOD:** None known. **LAB VALUES:** May increase serum low-density lipoprotein-cholesterol (LDL-C), Hgb, creatinine, magnesium, phosphate, potassium. May decrease glomerular filtration rate.

AVAILABILITY (Rx)

Tablets: 100 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food. Give before first meal of the day.

INDICATIONS/ROUTES/DOSAGE

Type 2 Diabetes Mellitus

PO: ADULTS/ELDERLY: 100 mg daily before first meal. May increase to 300 mg daily if glomerular filtration rate (GFR) greater than 60 ml/min.

Dosage in Renal Impairment

GFR 45–60 ml/min: 100 mg daily (maximum). **GFR less than 40 ml/min:** Discontinue.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (5%): Increased urination. **Rare (3%–2%):** Thirst, nausea, constipation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Symptomatic hypotension (postural dizziness, orthostatic hypotension, syncope) may occur. Genital myocotic (yeast) infections reported in 10% of pts. Hypoglycemic events reported in 1.5% of pts (5% in elderly). Concomitant use of hypoglycemic medications may increase hypoglycemic risk. Hypersensitivity reactions including angioedema, urticaria, rash, pruritus, erythema occurred in 3%–4% of pts. May cause hyperkalemia (muscle weakness, palpitation, EKG changes).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess hydration status. Obtain serum chemistries, capillary blood glucose, hemoglobin A1c, LDL-C, digoxin level (if applicable). Assess pt's understanding of diabetes management, routine blood glucose monitoring. Receive full medication history including minerals, herbal products. Question history of co-morbidities, esp. renal or hepatic impairment.

INTERVENTION/EVALUATION

Monitor serum potassium, cholesterol, capillary blood glucose, hepatic/renal function tests. Assess for hypoglycemia (diaphoresis, tremors, dizziness, anxiety, headache, tachycardia, perioral numbness, hunger, diplopia, difficulty concentrating), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, fatigue, Kussmaul respirations), hypersensitivity reaction. Monitor for signs of hyperkalemia (palpitations, muscle weakness). Screen for glucose-altering conditions: fever, increased activity or stress, surgical procedures. Obtain dietary consult for nutritional education. Encourage PO intake.

PATIENT/FAMILY TEACHING

• Diabetes mellitus requires lifelong control. • Diet and exercise are principal parts of treatment; do not skip or delay meals. • Test blood sugar regularly. • When taking combination drug therapy or when glucose demands are altered (fever, infection, trauma, stress), have low blood sugar treatment available (glucagon, oral dextrose). • Report suspected pregnancy or plans of breastfeeding. • Monitor daily calorie intake. • Go from lying to standing slowly to prevent dizziness. • Genital itching may indicate yeast infection. • Therapy may increase risk for dehydration/low blood pressure. • Report any palpitations or muscle weakness.

candesartan

kan-de-**sar**-tan
(Apo-Candesartan, Atacand)

■ **BLACK BOX ALERT** ■ May cause fetal injury, mortality if used during second or third trimester of pregnancy.

FIXED-COMBINATION(S)

Atacand HCT: candesartan/hydrochlorothiazide (a diuretic): 16 mg/12.5 mg, 32 mg/12.5 mg.

C

CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin II receptor antagonist. **CLINICAL:** Antihypertensive.

USES

Treatment of hypertension alone or in combination with other antihypertensives, HF: NYHA class II–IV.

PRECAUTIONS

Contraindications: Concomitant use with aliskiren in pts with diabetes mellitus. **Cautions:** Significant aortic/mitral stenosis, renal/hepatic impairment, unstented (unilateral/bilateral) renal artery stenosis.

ACTION

Blocks vasoconstriction, aldosterone-secreting effects of angiotensin II, inhibiting binding of angiotensin II to AT_1 receptors. **Therapeutic Effect:** Produces vasodilation; decreases peripheral resistance, B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	2–3 hrs	6–8 hrs	Greater than 24 hrs

Rapidly, completely absorbed. Protein binding: greater than 99%. Undergoes minor hepatic metabolism to inactive metabolite. Excreted unchanged in urine and in feces through biliary system. Not removed by hemodialysis. **Half-life:** 9 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. May cause fetal/neonatal morbidity/mortality. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established in pts younger than 1 yr. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase risk of **lithium** toxicity. **NSAIDs** may decrease effects. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, ALT, AST. May decrease Hgb, Hct.

AVAILABILITY (Rx)

Tablets: 4 mg, 8 mg, 16 mg, 32 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 16 mg. Titrate to response. Range: 8–32 mg/day in 1–2 divided doses. **CHILDREN 6–16 YRS, GREATER THAN 50 KG:** Initially, 8–16 mg/day in 1–2 divided doses. Range: 4–32 mg. **Maximum:** 32 g/day. **50 KG OR LESS:** Initially, 4–8 mg in 1–2 divided doses. Range: 2–16 mg/day. **Maximum:** 32 mg/day. **CHILDREN 1–5 YRS:** Initially, 0.2 mg/kg/day in 1–2 divided doses. Range: 0.05–0.4 mg/kg/day.

Heart Failure

PO: ADULTS, ELDERLY: Initially, 4 mg once daily. May double dose at approximately 2-wk intervals up to a target dose of 32 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (6%–3%): Upper respiratory tract infection, dizziness, back/leg pain. **Rare (2%–1%):** Pharyngitis, rhinitis, headache, fatigue, diarrhea, nausea, dry cough, peripheral edema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdosage may manifest as hypotension, tachycardia. Bradycardia occurs less often. May increase risk of renal failure, hyperkalemia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations). Question for possibility of pregnancy. Assess medication history (esp. diuretic). Question for history of hepatic/renal impairment, renal artery stenosis. Obtain serum BUN, creatinine, ALT, AST, alkaline phosphatase, bilirubin; Hgb, Hct.

INTERVENTION/EVALUATION

Maintain hydration (offer fluids frequently). Assess for evidence of upper respiratory infection. Assist with ambulation if dizziness occurs. Monitor electrolytes, renal function, urinalysis. Assess B/P for hypertension/hypotension. If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated.

PATIENT/FAMILY TEACHING

• Hypertension requires lifelong control. • Inform female pts regarding potential for fetal injury, mortality with second- and third-trimester exposure to candesartan. • Report suspected pregnancy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report any sign of infection (sore throat, fever). • Do not stop taking medication. • Caution against exercising during hot weather (risk of dehydration, hypotension).

capecitabine

TOP 100 HIGH ALERT

kap-e-**sye**-ta-bine
(Xeloda)

■ **BLACK BOX ALERT** ■ May increase anticoagulant effect of warfarin.

Do not confuse Xeloda with Xenical.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic.

USES

Treatment of metastatic breast cancer, metastatic colorectal cancer. Adjuvant (postsurgical) treatment of Dukes C colon cancer. **OFF-LABEL:** Gastric cancer, pancreatic cancer, esophageal cancer, ovarian cancer, metastatic renal cell cancer, metastatic CNS lesions, neuroendocrine tumors.

PRECAUTIONS

Contraindications: Severe renal impairment (creatinine clearance less than 30 ml/min), dihydropyrimidine dehydrogenase (DPD) deficiency, hypersensitivity to 5-fluorouracil (5-FU). **Cautions:** Existing bone marrow depression, hepatic impairment, moderate renal impairment, previous cytotoxic therapy/radiation therapy, elderly (60 yrs of age or older).

ACTION

Enzymatically converted to 5-fluorouracil (5-FU). Inhibits enzymes necessary for synthesis of essential cellular components. **Therapeutic Effect:** Interferes with DNA synthesis, RNA processing, protein synthesis.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: less than 60%. Metabolized in liver. Primarily excreted in urine. **Half-life:** 45 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** May be more sensitive to GI side effects.

INTERACTIONS

DRUG: May increase concentration, toxicity of **warfarin, phenytoin.** Myelosuppression may be enhanced when given concurrently with **bone marrow depressants. Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody

response to vaccine. **HERBAL:** **Echinacea** may decrease level/effects. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, ALT, AST. May decrease Hgb, Hct, WBC count. May increase PT/INR.

AVAILABILITY (Rx)

Tablets: 150 mg, 500 mg.

ADMINISTRATION/HANDLING

• Give within 30 min after meals with water. • Swallow whole; do not cut, crush.

INDICATIONS/ROUTES/DOSAGE

Metastatic Breast Cancer, Colorectal Cancer, Adjuvant (Postsurgery) Treatment of Dukes C Colon Cancer

PO: ADULTS, ELDERLY: Initially, 2,500 mg/m^2/day in 2 equally divided doses approximately q12h apart for 2 wks. Follow with a 1-wk rest period; given in 3-wk cycles.

Dosage in Renal Impairment

Creatinine clearance 50–80 ml/min: No adjustment. **Creatinine clearance 30–49 ml/min:** 75% of normal dose. **Creatinine clearance less than 30 ml/min:** Contraindicated.

Dosage in Hepatic Impairment

No dose adjustment at start of therapy; interrupt therapy for grade 3 or 4 hyperbilirubinemia until bilirubin is 3 × or less ULN.

SIDE EFFECTS

Frequent (55%–25%): Diarrhea, nausea, vomiting, stomatitis, palmar-plantar erythrodysesthesia syndrome (PPES) presenting as redness, swelling, numbness, skin sloughing of hands and feet; fatigue, anorexia, dermatitis. **Occasional (24%–10%):** Constipation, dyspepsia, headache, dizziness, insomnia, edema, myalgia, pyrexia, dehydration, dyspnea, back pain. **Rare (less than 10%):** Mood changes, depression, sore throat, epistaxis, cough, visual abnormalities.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious reactions include myelosuppression (neutropenia, thrombocytopenia, anemia), cardiovascular toxicity (angina, cardiomyopathy, deep vein thrombosis), respiratory toxicity (dyspnea, epistaxis, pneumonia), lymphedema.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess sensitivity to capecitabine or 5-fluorouracil. Obtain baseline Hgb, Hct, serum chemistries, renal function.

INTERVENTION/EVALUATION

Monitor for severe diarrhea, nausea, vomiting; if dehydration occurs, fluid and electrolyte replacement therapy should be initiated. Assess hands/feet for PPES. Monitor CBC for evidence of bone marrow depression. Monitor renal/hepatic function. Monitor for blood dyscrasias (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• Report nausea, vomiting, diarrhea, hand-and-foot syndrome, stomatitis. • Do not have immunizations without physician's approval (drug lowers body's resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever higher than 100.5°F, sore throat, signs of local infection, unusual bruising/bleeding from any site.

captopril

kap-toe-pril
(Apo-Capto, Capoten)

■ **BLACK BOX ALERT** ■ May cause injury/death to developing fetus. Discontinue as soon as possible once pregnancy is detected.

Do not confuse captopril with calcitriol, Capitrol, or carvedilol.

FIXED-COMBINATION(S)

Capozide: captopril/hydrochlorothiazide (a diuretic): 25 mg/15 mg, 25 mg/25 mg, 50 mg/15 mg, 50 mg/25 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin-converting enzyme (ACE) inhibitor.
CLINICAL: Antihypertensive, vasodilator.

USES

Treatment of hypertension, HF, diabetic nephropathy, post-MI for prevention of ventricular failure. **OFF-LABEL:** Delays progression of nephropathy and reduces risk of cardiovascular events in hypertensive pts with type 1 and type 2 diabetes. Treatment of hypertensive crisis, rheumatoid arthritis; hypertension secondary to scleroderma renal crisis; diagnosis of aldosteronism; diagnosis of renal artery stenosis; idiopathic edema; Bartter's syndrome; increases circulation in Raynaud's syndrome.

PRECAUTIONS

Contraindications: History of angioedema from previous treatment with ACE inhibitors, concomitant use with aliskiren in pts with diabetes mellitus. **Cautions:** Renal impairment. Hypertrophic cardiomyopathy with outflow obstruction, before, during, or immediately after major surgery. Unstented unilateral/bilateral renal artery stenosis.

ACTION

Suppresses renin-angiotensin-aldosterone system (prevents conversion of angiotensin I to angiotensin II, a potent vasoconstrictor; may inhibit angiotensin II at local vascular and renal sites). Decreases plasma angiotensin II, increases plasma renin activity, decreases aldosterone secretion. **Therapeutic Effect:** Reduces peripheral arterial resistance, pulmonary capillary wedge pressure; improves cardiac output, exercise tolerance.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.25 hr	0.5–1.5 hrs	Dose-related

Rapidly, well absorbed from GI tract (absorption decreased in presence of food). Protein binding: 25%–30%. Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** Less than 3 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. May cause fetal/neonatal mortality/morbidity. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive effects.

INTERACTIONS

DRUG: **Antihypertensives, diuretics** may increase hypotensive effects. May increase **lithium** concentration, toxicity. **NSAIDs** may decrease antihypertensive effect. **Potassium-sparing diuretics, potassium supplements** may cause hyperkalemia. **HERBAL:** **Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** **Licorice** may cause sodium and water retention, hypokalemia. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, potassium, ALT, AST. May decrease serum sodium. May cause positive ANA titer.

AVAILABILITY (Rx)

Tablets: 12.5 mg, 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• Administer 1 hr before or 2 hrs after meals for maximum absorption (food may decrease drug absorption). • Tablets may be crushed.

C

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 12.5–25 mg 2–3 times a day. May increase by 12.5–25 mg/dose at 1–2 wk intervals up to 50 mg 3 times/day. Add diuretic before further increase in dose. **Maximum:** 450 mg/day in 3 divided doses. **CHILDREN:** 0.3–0.5 mg 3 times a day. **Maximum:** 6 mg/kg/day in 2–4 divided doses. **INFANTS:** 0.15–0.3 mg/kg/dose. May titrate up to maximum of 6 mg/kg/day in 1–4 divided doses. Usual range: 2.5–6 mg/kg/day. **NEONATES:** 0.01–0.1 mg/kg/dose q8–24h. **Maximum:** 0.5 mg/kg/dose q6–24h.

HF

PO: ADULTS, ELDERLY: Initially, 6.25–25 mg 3 times a day. **Target dose:** 50 mg 3 times/day.

Post-MI

PO: ADULTS, ELDERLY: Initially, 6.25 mg, then 12.5 mg 3 times a day. Increase to 25 mg 3 times a day over several days, up to 50 mg 3 times a day over several wks.

Diabetic Nephropathy, Prevention of Renal Failure

PO: ADULTS, ELDERLY: 25 mg 3 times a day.

Dosage in Renal Impairment

Creatinine clearance 10–50 ml/min: 75% of normal dosage. **Creatinine clearance less than 10 ml/min:** 50% of normal dosage.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (7%–4%): Rash. **Occasional (4%–2%):** Pruritus, dysgeusia (altered taste). **Rare (less than 2%):** Headache, cough, insomnia, dizziness, fatigue, paresthesia, malaise, nausea, diarrhea or constipation, dry mouth, tachycardia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypotension ("first-dose syncope") may occur in pts with HF and in those who are severely sodium/volume depleted. Angioedema (swelling of face/tongue/lips), hyperkalemia occur rarely. Agranulocytosis, neutropenia noted in those with collagen vascular disease (scleroderma, systemic lupus erythematosus), renal impairment. Nephrotic syndrome noted in those with history of renal disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P immediately before each dose, in addition to regular monitoring (be alert to fluctuations). If hypotension occurs, place pt in supine position with legs elevated. In pts with prior renal disease or receiving dosages greater than 150 mg/day, test urine for protein by dipstick method with first urine of day before therapy begins and periodically thereafter. In pts with renal impairment, autoimmune disease, or taking drugs that affect leukocytes or immune response, obtain CBC before beginning therapy, q2wks for 3 mos, then periodically thereafter.

INTERVENTION/EVALUATION

Assess skin for rash, pruritus. Assist with ambulation if dizziness occurs. Monitor urinalysis for proteinuria. Monitor serum potassium levels in those on concurrent diuretic therapy. Monitor B/P, serum BUN, creatinine, CBC. Discontinue medication, contact physician if angioedema occurs.

PATIENT/FAMILY TEACHING

• Full therapeutic effect of B/P reduction may take several wks. • Skipping doses or voluntarily discontinuing drug may produce severe rebound hypertension. • Limit alcohol intake. • Immediately report if swelling of face, lips, or tongue; difficulty breathing, vomiting, diarrhea, excessive perspiration, dehydration, persistent cough, sore throat, fever occur. • Inform physician if pregnant or planning to become

pregnant. • Rise slowly from sitting/lying position.

carbamazepine

kar-ba-**maz**-e-peen
(Apo-Carbamazepine 🍁, Carbatrol, Epitol, Equetro, Tegretol, Tegretol XR)

■ **BLACK BOX ALERT** ■ Potentially fatal aplastic anemia, agranulocytosis reported. Potentially fatal, severe dermatologic reactions (e.g., Stevens-Johnson syndrome, toxic epidermal necrolysis) may occur. Risk increased in pts with the variant HLA-β* 1502 allele, almost exclusively in pts of Asian ancestry. **Do not confuse carbamazepine with oxcarbazepine, or Tegretol with Mebaral, Toprol XL, Toradol, or Trental.**

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Iminostilbene derivative. **CLINICAL:** Anticonvulsant, antineuralgic, antimanic, antipsychotic.

USES

Carbatrol, Epitol, Tegretol, Tegretol XR: Treatment of partial seizures with complex symptomatology, generalized tonic-clonic seizures, mixed seizure patterns, pain relief of trigeminal neuralgia. **Equetro:** Acute manic and mixed episodes associated with bipolar disorder. **OFF-LABEL:** Post-traumatic stress disorder, restless legs syndrome.

PRECAUTIONS

Contraindications: Concomitant use or within 14 days of use of MAOIs, myelosuppression. Concomitant use of delavirdine or other NNRT inhibitors, hypersensitivity to tricyclic antidepressants. **Cautions:** High risk of suicide, increased IOP, concurrent use of strong CYP3A4 inhibitors or inducers, hepatic or renal impairment, history of cardiac impairment, EKG abnormalities.

ACTION

Decreases sodium ion influx into neuronal membranes, reducing post-tetanic potentiation at synapses. **Therapeutic Effect:** Produces anticonvulsant effect.

PHARMACOKINETICS

Slowly, completely absorbed from GI tract. Protein binding: 75%–90%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 25–65 hrs (decreased with chronic use).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. Accumulates in fetal tissue. **Pregnancy Category D. Children:** Behavioral changes more likely to occur. **Elderly:** More susceptible to confusion, agitation, AV block, bradycardia, syndrome of inappropriate antidiuretic hormone (SIADH).

INTERACTIONS

DRUG: **CYP3A4 inhibitors (e.g., cimetidine, clarithromycin, azole antifungals, protease inhibitors)** may increase concentration. **CYP3A4 inducers (e.g., rifampin, phenytoin)** may decrease concentration/effects. May decrease concentration/effects of **hormonal contraceptives, warfarin, trazodone.** **HERBAL:** **Evening primrose** may decrease seizure threshold. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** **Grapefruit products** may increase absorption, concentration. **LAB VALUES:** May increase serum BUN, glucose, alkaline phosphatase, bilirubin, ALT, AST, cholesterol, HDL, triglycerides. May decrease serum calcium, thyroid hormone (T_3, T_4 index) levels. **Therapeutic serum level:** 4–12 mcg/ml; **toxic serum level:** greater than 12 mcg/ml.

AVAILABILITY (Rx)

Suspension (Tegretol): 100 mg/5 ml. **Tablets (Epitol, Tegretol):** 200 mg. **Tablets (Chewable [Tegretol]):** 100 mg.

Capsules (Extended-Release [Carbatrol, Equetro]): 100 mg, 200 mg, 300 mg. **Tablets (Extended-Release [Tegretol XR]):** 100 mg, 200 mg, 400 mg.

ADMINISTRATION/HANDLING

PO

• Store oral suspension, tablets at room temperature. • Give with meals to reduce GI distress. • May give extended-release capsules without regard to food. • Extended-release tablets should be given with meals. • Shake oral suspension well. Do not administer simultaneously with other liquid medicine. • Do not crush or open extended-release capsules or tablets. • Extended-release capsules may be opened and sprinkled over food (e.g., applesauce).

INDICATIONS/ROUTES/DOSAGE

◄ALERT► Suspension must be given on a 3–4 times/day schedule; tablets on a 2–4 times/day schedule; extended-release capsules 2 times/day.

Seizure Control

PO: ADULTS, CHILDREN OLDER THAN 12 YRS: Initially, 200 mg twice a day. May increase dosage by 200 mg/day at weekly intervals. Range: 400–1,200 mg/day in 2–4 divided doses. **Maximum: ADULTS:** 1.6–2.4 g/day. **ELDERLY:** Initially, 100 mg 1–2 times a day. May increase by 100 mg/day at weekly intervals. Usual dose 400–1,000 mg/day. **CHILDREN OLDER THAN 15 YRS:** 1,200 mg/day; **CHILDREN 13–15 YRS:** 1,000 mg/day. **CHILDREN 6–12 YRS:** Initially, 100 mg twice a day (tablets) or 4 times/day (oral suspension). May increase by 100 mg/day at weekly intervals. Range: 400–800 mg/day. **Maximum:** 1,000 mg/day. **CHILDREN YOUNGER THAN 6 YRS:** Initially, 10–20 mg/kg/day 2–3 times/day (tablets) or 4 times/day (suspension). May increase at weekly intervals until optimal response and therapeutic levels are achieved. **Maximum:** 35 mg/kg/day.

Trigeminal Neuralgia, Diabetic Neuropathy

PO: ADULTS: Initially, 100 mg twice a day (tablets) or 4 times/day (oral suspension). May increase by 100 mg twice a day up to 400–800 mg/day. **Maximum:** 1,200 mg/day. **ELDERLY:** Initially 100 mg 1–2 times/day. May increase by 100 mg/day at weekly intervals. Usual dose 400–1,000 mg/day.

Bipolar Disorder

PO: ADULTS, ELDERLY (Equetro): Initially, 400 mg/day in 2 divided doses (tablets) or 4 times/day (oral suspension). May adjust dose in 200-mg increments. **Maximum:** 1,600 mg/day in divided doses.

Dosage in Renal Impairment

CrCl less than 10 ml/min: 75% of normal dose. **HD:** 75% of normal dose. **CRRT:** 75% of normal dose.

Dosage in Hepatic Impairment

Use with caution.

SIDE EFFECTS

Frequent (greater than 10%): Vertigo, somnolence, ataxia, fatigue, leucopenia, rash, urticaria, nausea, vomiting. **Occasional (10%–1%):** Headache, diplopia, blurred vision, thrombocytopenia, dry mouth, edema, fluid retention, increased weight. **Rare (less than 1%):** Tremors, visual disturbances, lymphadenopathy, jaundice, involuntary muscle movements, nystagmus, dermatitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Toxic reactions appear as blood dyscrasias (aplastic anemia, agranulocytosis, thrombocytopenia, leukopenia, leukocytosis, eosinophilia), cardiovascular disturbances (HF, hypotension/hypertension, thrombophlebitis, arrhythmias), dermatologic effects (rash, urticaria, pruritus, photosensitivity). Abrupt withdrawal may precipitate status epilepticus.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

CBC, serum iron determination, urinalysis, BUN should be performed before therapy begins and periodically during therapy. **Seizures:** Review history of seizure disorder (intensity, frequency, duration, level of consciousness [LOC]). Initiate seizure precautions. **Neuralgia:** Assess facial pain, stimuli that may cause facial pain. **Bipolar:** Assess mental status, cognitive abilities.

INTERVENTION/EVALUATION

Seizures: Observe frequently for recurrence of seizure activity. Monitor for therapeutic levels. Assess for clinical improvement (decrease in intensity, frequency of seizures). Assess for clinical evidence of early toxicity (fever, sore throat, mouth ulcerations, unusual bruising/bleeding, joint pain). **Neuralgia:** Avoid triggering tic douloureux (draft, talking, washing face, jarring bed, hot/warm/cold food or liquids). **Bipolar:** Monitor for suicidal ideation, behavioral changes. Observe for excessive sedation. **Therapeutic serum level:** 4–12 mcg/ml; **toxic serum level:** greater than 12 mcg/ml.

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication after long-term use (may precipitate seizures). • Strict maintenance of therapy is essential for seizure control. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report visual disturbances. • Blood tests should be repeated frequently during first 3 mos of therapy and at monthly intervals thereafter for 2–3 yrs. • Do not take oral suspension simultaneously with other liquid medicine. • Do not ingest grapefruit products. • Report serious skin reactions.

carbidopa/levodopa

kar-bi-doe-pa/**lee**-voe-doe-pa (Apo-Levocarb, Parcopa, Sinemet, Sinemet CR)

Do not confuse Sinemet with Serevent.

FIXED-COMBINATION(S)

Stalevo: carbidopa/levodopa/entacapone (antiparkinson agent): 12.5 mg/50 mg/200 mg, 18.75 mg/75 mg/200 mg, 25 mg/100 mg/200 mg, 31.25 mg/125 mg/200 mg, 37.5 mg/150 mg/200 mg, 50 mg/200 mg/200 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Dopamine precursor. **CLINICAL:** Antiparkinson agent.

USES

Treatment of idiopathic Parkinson's disease (paralysis agitans), postencephalitic parkinsonism, symptomatic parkinsonism following CNS injury by CO_2 poisoning, manganese intoxication. **OFF-LABEL:** Restless legs syndrome.

PRECAUTIONS

Contraindications: Narrow-angle glaucoma, use within 14 days of MAOIs, undiagnosed skin lesions, history of melanoma. **Cautions:** History of MI, arrhythmias, bronchial asthma, emphysema, severe cardiac, pulmonary, renal/hepatic impairment; active peptic ulcer, treated open-angle glaucoma, seizure disorder, elderly.

ACTION

Converted to dopamine in basal ganglia, increasing dopamine concentration in brain, inhibiting hyperactive cholinergic activity. Carbidopa prevents peripheral breakdown of levodopa, making more levodopa available for transport into brain. **Therapeutic Effect:** Reduces tremor.

C

PHARMACOKINETICS

Rapidly and completely absorbed from GI tract. Widely distributed. Excreted primarily in urine. Levodopa is converted to dopamine. Excreted primarily in urine. **Half-life:** 1–2 hrs (carbidopa); 1–3 hrs (levodopa).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. May inhibit lactation. Breastfeeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** More sensitive to effects of levodopa. Anxiety, confusion, nervousness more common when receiving anticholinergics.

INTERACTIONS

DRUG: **Isoniazid, antipsychotics, phenytoin, pyridoxine** may decrease effects. **MAOIs** may increase concentration, effects of orthostatic hypotension. **Selegiline, antihypertensives** may increase risk of orthostatic hypotension. **HERBAL:** **Kava kava** may decrease effect. **FOOD:** **High-protein** diets may cause decreased or erratic response to levodopa. **LAB VALUES:** May increase serum BUN, LDH, alkaline phosphatase, bilirubin, ALT, AST. May decrease Hgb, Hct, WBC.

AVAILABILITY (Rx)

Tablets (Immediate-Release [Sinemet]): 10 mg carbidopa/100 mg levodopa, 25 mg carbidopa/100 mg levodopa, 25 mg carbidopa/250 mg levodopa. **Tablets (Orally-Disintegrating [Parcopa], Immediate-Release):** 10 mg carbidopa/100 mg levodopa, 25 mg carbidopa/100 mg levodopa, 25 mg carbidopa/250 mg levodopa.

Tablets (Extended-Release [Sinemet CR]): 25 mg carbidopa/100 mg levodopa, 50 mg carbidopa/200 mg levodopa.

ADMINISTRATION/HANDLING

Note: Space doses evenly over waking hours.

PO

• Scored tablets may be crushed. • Give with meals to decrease GI upset. • Do not crush or chew extended-release tablets.

PO (Parcopa)

• Place orally-disintegrating tablet on top of tongue. Tablet will dissolve in seconds, pt to swallow with saliva. Not necessary to administer with liquid.

INDICATIONS/ROUTES/DOSAGE

Parkinsonism

PO: ADULTS (IMMEDIATE-RELEASE ORALLY-DISINTEGRATING TABLET): Initially, 25/100 mg 3 times a day. May increase every other day by 1 tablet up to 200/2,000 mg daily. **Elderly:** Initially, 25/100 mg twice a day. May increase as necessary. **(EXTENDED-RELEASE):** 50/200 mg 2 times a day at least 6 hrs apart. Intervals between doses of Sinemet CR should be 4–8 hrs while awake, with smaller doses at end of day if doses are not equal. May adjust q3 days. **Maximum:** 8 tablets/day.

Dosage in Renal/Hepatic Impairment

Use with caution.

SIDE EFFECTS

Frequent (80%–50%): Involuntary movements of face, tongue, arms, upper body; nausea/vomiting; anorexia. **Occasional:** Depression, anxiety, confusion, nervousness, urinary retention, palpitations, dizziness, light-headedness, decreased appetite, blurred vision, constipation, dry mouth, flushed skin, headache, insomnia, diarrhea, unusual fatigue, darkening of urine and sweat. **Rare:** Hypertension, ulcer, hemolytic anemia (marked by fatigue).

ADVERSE EFFECTS/ TOXIC REACTIONS

High incidence of involuntary choreiform, dystonic, dyskinetic movements in those on

long-term therapy. Numerous mild to severe CNS and psychiatric disturbances may occur (reduced attention span, anxiety, nightmares, daytime drowsiness, euphoria, fatigue, paranoia, psychotic episodes, depression, hallucinations).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess symptoms of Parkinson's disease (e.g., rigidity, pill rolling, gait).

INTERVENTION/EVALUATION

Be alert to neurologic effects (headache, lethargy, mental confusion, agitation). Monitor for evidence of dyskinesia (difficulty with movement). Assess for clinical reversal of symptoms (improvement of tremor of head and hands at rest, mask-like facial expression, shuffling gait, muscular rigidity). Monitor B/P (standing, sitting, supine).

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Sugarless gum, sips of tepid water may relieve dry mouth. • Take with food to minimize GI upset. • Effects may be delayed from several wks to mos. • May cause darkening of urine or sweat (not harmful). • Report any uncontrolled movement of face, eyelids, mouth, tongue, arms, hands, legs; mental changes; palpitations; severe or persistent nausea/vomiting; difficulty urinating. • Report exacerbations of asthma, underlying depression, psychosis.

carboplatin HIGH ALERT

kar-boe-**plat-in**
(Carboplatin Injection 🍁)

■ **BLACK BOX ALERT** ■ Must be administered by personnel trained in administration/handling of chemotherapeutic agents (high potential for severe reactions, including anaphylaxis [may occur within minutes of administration] and sudden death). Profound myelosuppression (anemia, thrombocytopenia) has occurred.

Do not confuse carboplatin with Cisplatin or oxaliplatin, or with Platinol.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Platinum coordination complex. **CLINICAL:** Antineoplastic.

USES

Treatment of ovarian carcinoma. Palliative treatment of recurrent ovarian cancer. **OFF-LABEL:** Brain tumors, Hodgkin's and non-Hodgkin's lymphomas, malignant melanoma, retinoblastoma; treatment of breast, bladder, cervical, endometrial, esophageal, small-cell lung, non–small-cell lung, head and neck, testicular carcinomas; germ cell tumors, osteogenic sarcoma.

PRECAUTIONS

Contraindications: History of severe allergic reaction to cisplatin, platinum compounds, mannitol; severe bleeding, severe myelosuppression. **Cautions:** Moderate bone marrow depression, renal impairment, elderly.

ACTION

Inhibits DNA synthesis by cross-linking with DNA strands, preventing cell division. **Therapeutic Effect:** Interferes with DNA function.

PHARMACOKINETICS

Protein binding: Low. Hydrolyzed in solution to active form. Primarily excreted in urine. **Half-life:** 2.6–5.9 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Unknown if distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category D.** **Children:** Safety and efficacy not established. **Elderly:** Peripheral neurotoxicity

C

increased, myelotoxicity may be more severe. Age-related renal impairment may require decreased dosage, careful monitoring of blood counts.

INTERACTIONS

DRUG: **Bone marrow depressants** may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **Nephrotoxic, ototoxic medications** may increase risk of toxicity. **HERBAL:** Avoid **black cohosh, dong quai** in estrogen-dependent tumors. **Echinacea** may decrease level/effects. **FOOD:** None known. **LAB VALUES:** May decrease serum calcium, magnesium, potassium, sodium. May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, AST.

AVAILABILITY (Rx)

Injection Solution: 10 mg/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

IV

Reconstitution • Dilute with D_5W or 0.9% NaCl to a final concentration as low as 0.5 mg/ml.

Rate of Administration • Infuse over 15–60 min. • Rarely, anaphylactic reaction occurs minutes after administration. Use of epinephrine, corticosteroids alleviates symptoms.

Storage • Store vials at room temperature. •After dilution, solution is stable for 8 hrs.

IV INCOMPATIBILITY

Amphotericin B complex (Abelcet, AmBisome, Amphotec).

IV COMPATIBILITIES

Etoposide (VePesid), granisetron (Kytril), ondansetron (Zofran), paclitaxel (Taxol), palonosetron (Aloxi).

INDICATIONS/ROUTES/DOSAGE

Note: Doses commonly calculated by target AUC.

Ovarian Carcinoma (Monotherapy)

IV: ADULTS: 360 mg/m^2 on day 1, every 4 wks (as single agent), or 300 mg/m^2 q4 wks (in combination with cyclophosphamide) or target AUC 4–6 (single agent). Do not repeat dose until neutrophil and platelet counts are within acceptable levels.

Ovarian Carcinoma (Combination Therapy)

IV: ADULTS: 300 mg/m^2 (with cyclophosphamide) on day 1, every 4 wks. Do not repeat dose until neutrophil and platelet counts are within acceptable levels.

Dose Modification

Platelets less than 50,000 cells/mm^3 or ANC less than 500 cells/mm^3: Give 75% of dose.

Dosage in Renal Impairment

Initial dosage is based on creatinine clearance; subsequent dosages are based on pt's tolerance, degree of myelosuppression.

Creatinine Clearance	Dosage Day 1
60 ml/min or greater	360 mg/m^2
41–59 ml/min	250 mg/m^2
16–40 ml/min	200 mg/m^2

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (80%–65%): Nausea, vomiting. **Occasional (17%–4%):** Generalized pain, diarrhea/constipation, peripheral neuropathy. **Rare (3%–2%):** Alopecia, asthenia, hypersensitivity reaction (erythema, pruritus, rash, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression may be severe, resulting in anemia, infection (sepsis, pneumonia), major bleeding. Prolonged treatment may result in peripheral neurotoxicity.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain EKG, CBC, serum chemistries with renal function tests. Offer emotional support. Do not repeat treatment until WBC recovers from previous therapy. Transfusions may be needed in those receiving prolonged therapy (myelosuppression increased in those with previous therapy, renal impairment).

INTERVENTION/EVALUATION

Monitor hematologic status, pulmonary function studies, hepatic/renal function tests, CBC, serum electrolytes. Monitor for fever, sore throat, signs of local infection, unusual bruising/bleeding from any site, symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• Nausea, vomiting generally abate within 24 hrs. • Do not have immunizations without physician's approval (drug lowers body's resistance). • Avoid contact with those who have recently received live virus vaccine.

carfilzomib

kar-**fil**-zoh-mib
(Kyprolis)
Do not confuse carfilzomib with crizotinib, pazopanib.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Proteasome inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of pts with multiple myeloma who have received at least 2 prior therapies including bortezomib and an immunomodulatory agent and have demonstrated disease progression on or within 60 days of completion of last therapy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Preexisting HF, decreased left ventricular ejection fraction, myocardial abnormalities, complications of pulmonary hypertension (e.g., dyspnea), hepatic impairment, thrombocytopenia.

ACTION

Blocks action of proteasomes, intracellular proteins to induce cell death in rapidly dividing cells. **Therapeutic Effect:** Produces cell cycle arrest and apoptosis.

PHARMACOKINETICS

Protein Binding: 97%. Rapidly, extensively metabolized. Excreted primarily extrahepatically. Minimal removal by hemodialysis. **Half-life:** Equal to or less than 1 hr on day 1 of cycle 1. Proteasome inhibition was maintained for 48 hrs or longer following first dose of carfilzomib for each week of dosing.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy. May cause fetal harm. Unknown if excreted in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, glucose, creatinine, ALT, AST, bilirubin, calcium. May decrease RBC, Hgb, Hct, absolute neutrophil count (ANC), platelet count; serum magnesium, phosphate, potassium, sodium.

AVAILABILITY (Rx)

Injection Powder for Reconstitution (Single-Use Vial): 60 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Slowly inject 29 ml Sterile Water for Injection, directing solution to inside wall of vial (minimizes foaming). • Swirl and invert vial slowly for

C

1 min or until completely dissolved. • Do not shake. • If foaming occurs, rest vial for 2–5 min until subsided. • Withdraw calculated dose from vial and dilute into 50 ml D_5W. • Final concentration of reconstituted solution: 2 mg/ml.

Rate of administration • Infuse over 2–10 min. Flush line before and after with NaCl or D_5W. • Do not administer as a bolus.

Storage • Refrigerate undiluted vial. • Reconstituted solution may be refrigerated up to 24 hrs. • At room temperature, use diluted solution within 4 hrs.

IV INCOMPATIBILITIES

Do not mix with other IV medications or additives. Infuse via dedicated line. Flush IV administration line with NaCl or D_5W immediately before and after carfilzomib administration.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dose is calculated using pts' actual body surface area at baseline. Pts with a body surface area greater than 2.2 m^2 should receive dose based on a body surface area of 2.2 m^2. No dose adjustment needed for weight changes of less than or equal to 20%.

◀ALERT▶ Prior to each dose in cycle 1, give 250 ml to 500 ml NaCl bolus. Give an additional 250 ml to 500 ml IV fluid following administration. Continue IV hydration in subsequent cycles (reduces risk of renal toxicity, tumor lysis syndrome).

Premedicate with dexamethasone 4 mg PO or IV prior to all doses during cycle 1 and prior to all doses during first cycle of dose escalation to 27 mg/m^2 (reduces incidence, severity of infusion reactions). Reinstate dexamethasone premedication (4 mg PO or IV) if symptoms develop or reappear during subsequent cycles.

Multiple Myeloma

IV Infusion: ADULTS, ELDERLY: 20 mg/m^2, given on 2 consecutive days, each wk for 3 wks (days 1, 2, 8, 9, 15, and 16), followed by a 12-day rest period (days 17 to 28). Each 28-day period is considered one treatment cycle. If tolerated in cycle 1, escalate dose to 27 mg/m^2 beginning in cycle 2 and continue at 27 mg/m^2 in subsequent cycles. Treatment may be continued until disease progression or unacceptable toxicity occurs.

Dosage Modification for Toxicity

Hematologic

Grade 3 or 4 Neutropenia: Withhold dose. Continue at same dose if fully recovered prior to next scheduled dose. If recovered to grade 2, reduce dose by one dose level. If dose tolerated, may escalate to previous dose. **Grade 4 Thrombocytopenia:** Withhold dose. Continue at same dose if fully recovered prior to next scheduled dose. If recovered to grade 3, reduce dose by one dose level. If dose tolerated, may escalate to previous dose.

Cardiac

Grade 3 or 4, New Onset or Worsening of HF, Decreased LVF, Myocardial Ischemia: Withhold dose until resolved or at baseline. After resolution, restart at reduced dose level. If dose tolerated, may escalate to previous dose.

Hepatic

Grade 3 or 4 Elevation of Bilirubin, transaminases: Withhold dose until resolved or at baseline. After resolution, restart at reduced dose level. If dose tolerated, may escalate to previous dose.

Peripheral Neuropathy

Grade 3 or 4: Withhold dose until resolved or at baseline. After resolution, restart at reduced dose level. If dose tolerated, may escalate to previous dose.

Pulmonary Toxicity

Pulmonary Hypertension: Withhold dose until resolved or at baseline. After resolution, restart at reduced dose level. If dose tolerated, may escalate to previous dose. **Grade 3 or 4 Pulmonary Complications:** Withhold dose until resolved or at baseline. After resolution, restart at reduced dose level. If dose tolerated, may escalate to previous dose.

Renal

Serum Creatinine 2 times or Greater from Baseline: Withhold dose until renal function improves to grade 1 or baseline. Withhold dose until resolved or at baseline. After resolution, restart at reduced dose level. If dose tolerated, may escalate to previous dose.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (56%–20%): Fatigue, anemia, nausea, exertional dyspnea, diarrhea, fever, headache, cough, peripheral edema, vomiting, constipation, back pain. **Occasional (18%–14%):** Insomnia, chills, arthralgia, muscle spasms, hypertension, asthenia, extremity pain, dizziness, hypoesthesia (decreased sensitivity to touch), anorexia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pneumonia (10%), acute renal failure (4%), pyrexia (3%), and HF (3%) were reported. Adverse reactions leading to discontinuation occurred in 15% of pts. Upper respiratory tract infection was seen in 28% of pts. HF, pulmonary edema, decrease in ejection fraction were reported in 7% of pts. Infusion reaction characterized by chills, fever, wheezing, facial flushing, dyspnea, vomiting, chest tightness can occur immediately following or up to 24 hrs after administration. Tumor lysis syndrome occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain full history of home medications including vitamins, minerals, herbal products. Ensure hydration status and maintain throughout treatment. Obtain CBC, serum chemistries. Assess vital signs, O_2 saturation. Obtain ALT, AST, bilirubin for evidence of hepatotoxicity. Platelet nadirs occur around day 8 of each 28-day cycle and recover to baseline by start of the next 28-day cycle.

INTERVENTION/EVALUATION

Monitor for fluid overload. Monitor platelet count frequently; adjust dose according to grade of thrombocytopenia. Monitor vital signs, O_2 saturation routinely. Monitor cardiac function and manage as needed. Assess for palpitations, tachycardia. Assess for anemia-related dizziness, exertional dyspnea, fatigue, weakness, syncope. Report decreases in Hgb, Hct, platelets, neutrophils. Monitor for acute infection (fever, diaphoresis, lethargy, oral mucosal changes, productive cough), bloody stools, bruising, hematuria, DVT, pulmonary embolism. Encourage nutritional intake and assess anorexia, weight loss. Reinforce birth control compliance. Monitor daily pattern of bowel activity, stool consistency. Offer antiemetics if nausea, vomiting occur. Monitor for symptoms of neutropenia.

PATIENT/FAMILY TEACHING

• Blood tests will be drawn routinely. • Immediately report any newly prescribed medications. • May alter taste of food or decrease appetite. • Report bloody stool/ urine, increased bruising, difficulty breathing, weakness, dizziness, palpitations, weight loss. • Maintain strict oral hygiene. • Do not have immunizations without physician approval (drug lowers body's resistance). • Avoid those who have recently taken live virus vaccine. • Avoid crowds, those with symptoms of viral illness.

carisoprodol

kar-eye-soe-**proe**-dole
(Soma)

Do not confuse carisoprodol with carbamazepine, or Soma with senna.

FIXED-COMBINATION(S)

Soma Compound: carisoprodol/ aspirin (a nonsteroidal salicylate): 200 mg/325 mg.

C

CLASSIFICATION

PHARMACOTHERAPEUTIC: Carbamic acid ester. **CLINICAL:** Skeletal muscle relaxant.

USES

Short-term (2–3 wks) treatment of acute musculoskeletal pain.

PRECAUTIONS

Contraindications: Acute intermittent porphyria, hypersensitivity to meprobamate. **Cautions:** History of seizures, addiction-prone pts, elderly, debilitated pts, pts who are poor CYP2C19 metabolizers, renal/hepatic impairment.

ACTION

Skeletal muscle relaxant action may be related to its central depressant properties. May produce muscle relaxation by altering interneuronal activity in the descending reticular formation of the brain and spinal cord. Does not directly affect skeletal muscle. **Therapeutic Effect:** Relieves musculoskeletal pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	—	4–6 hrs

Readily absorbed from GI tract. Distributed throughout CNS. Protein binding: 60%. Metabolized in liver; excreted in urine. Removed by hemodialysis, peritoneal dialysis. **Half-life:** 2 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk; decreases milk production. Crosses placenta. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 16 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CNS depressants, including **alcohol, benzodiazepines, tricyclic antidepressants, opiates** may increase CNS effects. **CYP2C19 inhibitors (e.g., omeprazole)** may increase concentration. **CYP2C19 inducers (e.g., rifampin)** may decrease concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 250 mg, 350 mg.

ADMINISTRATION/HANDLING

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 16 YRS: 250–350 mg 4 times daily with last dose at bedtime.

Dosage in Renal/Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Frequent (17%–13%): Drowsiness. **Occasional (8%–3%):** Dizziness, headache.

ADVERSE EFFECTS/ TOXIC REACTIONS

Idiosyncratic reactions and/or severe allergic reactions may occur within min or hr of first dose (severe weakness, transient quadriplegia, euphoria, temporary vision loss). Prolonged use at high dosage can lead to tolerance, dependence, withdrawal symptoms. Abrupt withdrawal following long-term use results in anxiety, abdominal cramps, insomnia, nausea, vomiting, confusion, and occasionally chills, seizures, hallucinations. Onset of withdrawal occurs 12–48 hrs following cessation and can last another 12–48 hrs. Overdose may result in tachycardia, facial flushing, ataxia, tremors, agitation, irritability. Overdose has resulted in stupor, coma, shock, respiratory depression, death.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type, location, duration of musculoskeletal pain, inflammation.

Inspect appearance of affected joints for immobility, stiffness, swelling.

INTERVENTION/EVALUATION

Assist with ambulation. Initiate fall precautions. Evaluate for therapeutic response: relief of pain, stiffness, swelling; improved mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Should only be used for short periods (2–3 wks). • Report withdrawal symptoms (syncope, tachyarrhythmia or excessive fatigue, unusual mental status changes).

carmustine HIGH ALERT

kar-**mus**-teen
(BiCNU, Gliadel Wafer)

■ **BLACK BOX ALERT** ■ Profound myelosuppression (leukopenia, thrombocytopenia) is major toxicity. High risk of pulmonary toxicity. Must be administered by personnel trained in administration/handling of chemotherapeutic agents (high potential for severe reactions, including anaphylaxis, sudden death). **Do not confuse carmustine with bendamustine or lomustine.**

CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent, nitrosourea. **CLINICAL:** Antineoplastic.

USES

BiCNU: Treatment of brain tumors, Hodgkin's lymphomas, non-Hodgkin's lymphomas, multiple myeloma. **Gliadel Wafer:** Adjunct to surgery to prolong survival in recurrent glioblastoma multiforme. **OFF-LABEL:** Treatment of mycosis fungoides (topical).

PRECAUTIONS

Contraindications: None known. **Cautions:** Thrombocytopenia, leukopenia, anemia, renal/hepatic impairment.

ACTION

Inhibits DNA, RNA synthesis by cross-linking with DNA, RNA strands, preventing cell division. Cell cycle–phase nonspecific. **Therapeutic Effect:** Interferes with DNA, RNA function.

PHARMACOKINETICS

Crosses blood-brain barrier. Metabolized in liver. Excreted in urine. **Half-life:** 15–30 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy, particularly first trimester; may cause fetal harm. Unknown if distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Bone marrow depressants, cimetidine** may enhance myelosuppressive effect. **Hepatotoxic, nephrotoxic medications** may increase risk of hepatotoxicity, nephrotoxicity. **Live-virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, ALT, AST.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (BiCNU): 100 mg. **Implant Device (Gliadel Wafer):** 7.7 mg.

ADMINISTRATION/HANDLING

◄ALERT► May be carcinogenic, mutagenic, teratogenic. Wear protective gloves during preparation of drug; may cause transient burning, brown staining of skin.

C

IV

Reconstitution • Reconstitute 100-mg vial with 3 ml sterile dehydrated (absolute) alcohol, followed by 27 ml Sterile Water for Injection to provide concentration of 3.3 mg/ml. • Further dilute with 50–250 ml D_5W to final concentration of 0.2–1 mg/ml.
Rate of Administration • Infuse over 1–2 hrs (shorter duration may produce intense burning pain at injection site, intense flushing of skin, conjunctiva). • Flush IV line with 5–10 ml 0.9% NaCl or D_5W before and after administration to prevent irritation at injection site.
Storage • Refrigerate unused vials. • Reconstituted vials are stable for 8 hrs at room temperature or 24 hrs if refrigerated. • Solutions further diluted with D_5W are stable for 8 hrs at room temperature. • Solutions appear clear, colorless to yellow. • Discard if precipitate forms, color change occurs, or oily film develops on bottom of vial. **Gliadel Wafers:** Store at or below −20°C (−4°F). Unopened pouches may be kept at room temperature for maximum of 6 hrs.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), sodium bicarbonate.

IV COMPATIBILITIES

Granisetron (Kytril), ondansetron (Zofran).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Refer to individual oncology protocols.

Usual Dosage (Refer to Individual Protocols)

IV ***(BiCNU)*****: ADULTS, ELDERLY:** 150–200 mg/m² as a single dose q6wks or 75–100 mg/m² on 2 successive days q6wks. **CHILDREN:** 200–250 mg/m² q4–6wks as a single dose.
◀ALERT▶ Next dosage is based on clinical and hematologic response to previous dose (platelets greater than 100,000/mm³ and leukocytes greater than 4,000/mm³).
Implantation ***(Gliadel Wafer)*****: ADULTS, ELDERLY, CHILDREN:** Up to 8 wafers (62.6 mg) may be placed in resection cavity.

Dosage Modification

Leukocytes 2,000–2,999/mm³ or platelets 25,000–74,999/mm³: Give 70% of dose. **Leukocytes less than 2,000/mm³ or platelets less than 25,000/mm³:** Give 50% of dose.

Dosage in Renal Impairment

Creatinine Clearance (ml/min)	Dosage
46–60	80% of dose
31–45	75% of dose
Less than 31	Not recommended

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent: Nausea, vomiting (may last up to 6 hrs). **Occasional:** Diarrhea, esophagitis, anorexia, dysphagia, hyperpigmentation. **Rare:** Thrombophlebitis, burning sensation, pain at injection site.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hematologic toxicity due to myelosuppression occurs frequently. Thrombocytopenia occurs approximately 4 wks after treatment begins and lasts 1–2 wks. Leukopenia is evident 5–6 wks after treatment begins and lasts 1–2 wks. Anemia occurs less frequently. Mild, reversible hepatotoxicity occurs frequently. Prolonged, high-dose therapy may produce impaired renal function, pulmonary toxicity (pulmonary infiltrate/fibrosis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, renal/hepatic function studies before initiation and periodically thereafter.

INTERVENTION/EVALUATION

Monitor renal/hepatic function tests. Obtain CBC weekly during and for at least 6 wks after therapy ends. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Monitor for pulmonary toxicity; observe for dyspnea, adventitious breath sounds (rales, rhonchi, crackles).

PATIENT/FAMILY TEACHING

• Maintain adequate hydration (may protect against renal impairment). • Do not have immunizations without physician's approval (drug lowers body's resistance). • Avoid contact with those who have recently received live virus vaccine. • Report nausea, vomiting, fever, sore throat, chills, unusual bleeding/bruising.

carvedilol

TOP 100 HIGH ALERT

kar-**ve**-dil-ole
(Apo-Carvedilol, Coreg, Coreg CR, Novo-Carvedilol)

Do not confuse carvedilol with atenolol or carteolol, or Coreg with Corgard, Cortef, or Cozaar.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Beta-adrenergic blocker. **CLINICAL:** Antihypertensive.

USES

Treatment of mild to severe HF, left ventricular dysfunction following MI, hypertension. **OFF-LABEL:** Treatment of angina pectoris, idiopathic cardiomyopathy.

PRECAUTIONS

Contraindications: Bronchial asthma or related bronchospastic conditions, cardiogenic shock, decompensated HF requiring intravenous inotropic therapy, severe hepatic impairment, second- or third-degree AV block, severe bradycardia, or sick sinus syndrome (except in pts with pacemaker). **Cautions:** Concurrent use of digoxin, diltiazem, or verapamil; diabetes, myasthenia gravis, psychiatric disease, mild to moderate hepatic impairment. Withdraw gradually to avoid acute tachycardia, hypertension, and/or ischemia.

ACTION

Possesses nonselective beta-blocking and alpha-adrenergic blocking activity. Causes vasodilation. **Therapeutic Effect: Hypertension:** Reduces cardiac output, exercise-induced tachycardia, reflex orthostatic tachycardia; reduces peripheral vascular resistance. **HF:** Decreases pulmonary capillary wedge pressure, heart rate, systemic vascular resistance; increases stroke volume index.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	1–2 hrs	24 hrs

Rapidly, extensively absorbed from GI tract. Protein binding: 98%. Metabolized in liver. Excreted primarily via bile into feces. Minimally removed by hemodialysis. **Half-life:** 7–10 hrs. Food delays rate of absorption.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. May produce bradycardia, apnea, hypoglycemia, hypothermia during delivery; may contribute to low birthweight infants. **Pregnancy Category C (D if used in the second or third trimester). Children:** Safety and efficacy not established. **Elderly:** Incidence of dizziness may be increased.

INTERACTIONS

DRUG: Calcium channel blockers, digoxin, beta-blockers, CYP2C9 inhibitors (e.g., amiodarone, fluconazole) increase risk of cardiac conduction disturbances. **Diuretics, other**

C

antihypertensives may potentiate hypotensive effects. **Cimetidine** may increase concentration. May increase concentration of **cyclosporine, digoxin. CYP2D6 inhibitors (e.g., fluoxetine, paroxetine)** may increase concentration/side effects; may enhance slowing of HR or cardiac conduction. May increase effects of **insulin, oral hypoglycemics. Rifampin** decreases concentration. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUE:** May increase serum creatinine, bilirubin, ALT, AST, PT.

AVAILABILITY (Rx)

Tablets (Immediate-Release): 3.125 mg, 6.25 mg, 12.5 mg, 25 mg.

Capsules (Extended-Release [Coreg CR]): 10 mg, 20 mg, 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

• Give with food (slows rate of absorption, reduces risk of orthostatic effects). • Do not crush or cut extended-release capsules. • Capsules may be opened and sprinkled on applesauce for immediate use.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO ***(Immediate-Release)*: ADULTS, ELDERLY:** Initially, 6.25 mg twice a day. May double at 1–2 wk intervals. **Maximum:** 25 mg twice daily. ***(Extended-Release)*:** Initially, 20 mg once daily. May increase to 40 mg once daily after 1–2 wks. **Maximum:** 80 mg once daily.

HF

PO ***(Immediate-Release)*: ADULTS, ELDERLY:** Initially, 3.125 mg twice a day. May double at 2-wk intervals to highest tolerated dosage. **Maximum: Greater than 85 kg:** 50 mg twice a day; **Less than 85 kg:** 25 mg twice a day. ***(Extended-Release)*:** Initially, 10 mg once daily for 2 wks. May increase to 20 mg, 40 mg, and 80 mg over successive intervals of at least 2 wks.

Left Ventricular Dysfunction Following MI

PO ***(Immediate-Release)*: ADULTS, ELDERLY:** Initially, 3.125–6.25 mg twice a day. May increase at intervals of 3–10 days up to 25 mg twice a day. ***(Extended-Release)*:** Initially, 10–20 mg once daily. May increase to 40 mg and 80 mg once daily in intervals of 3–10 days.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Contraindicated in severe impairment.

SIDE EFFECTS

Frequent (6%–4%): Fatigue, dizziness. **Occasional (2%):** Diarrhea, bradycardia, rhinitis, back pain. **Rare (less than 2%):** Orthostatic hypotension, drowsiness, UTI, viral infection.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce profound bradycardia, hypotension, bronchospasm, cardiac insufficiency, cardiogenic shock, cardiac arrest. Abrupt withdrawal may result in diaphoresis, palpitations, headache, tremors. May precipitate HF, MI in pts with cardiac disease; thyroid storm in pts with thyrotoxicosis; peripheral ischemia in pts with existing peripheral vascular disease. Hypoglycemia may occur in pts with previously controlled diabetes.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, apical pulse immediately before drug is administered (if pulse is 60 beats/min or less or systolic B/P is less than 90 mm Hg, withhold medication, contact physician).

INTERVENTION/EVALUATION

Monitor B/P for hypotension, respirations for dyspnea. Take standing systolic

B/P 1 hr after dosing as guide for tolerance. Assess pulse for quality, regularity, rate; monitor for bradycardia. Monitor EKG for cardiac arrhythmias. Assist with ambulation if dizziness occurs. Assess for evidence of HF: dyspnea (particularly on exertion or lying down), night cough, peripheral edema, distended neck veins. Monitor I&O (increase in weight, decrease in urine output may indicate HF). Monitor renal/hepatic function tests.

PATIENT/FAMILY TEACHING

• Full antihypertensive effect noted in 1–2 wks. • Contact lens wearers may experience decreased lacrimation. • Take with food. • Do not abruptly discontinue medication. • Compliance with therapy regimen is essential to control hypertension. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report excessive fatigue, prolonged dizziness. • Do not use nasal decongestants, OTC cold preparations (stimulants) without physician's approval. • Monitor B/P, pulse before taking medication. • Restrict salt, alcohol intake.

caspofungin

kas-poe-**fun**-jin
(Cancidas)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Echinocandin antifungal. **CLINICAL:** Antifungal.

USES

Treatment of invasive aspergillosis, candidemia, *Candida* infection (intra-abdominal abscess, peritonitis, esophageal, pleural space). Empiric therapy for presumed fungal infections in febrile neutropenia.

PRECAUTIONS

Contraindications: None known. **Cautions:** Concurrent use of cyclosporine, hepatic impairment.

ACTION

Inhibits synthesis of glucan, a vital component of fungal cell wall formation, damaging fungal cell membrane. **Therapeutic Effect:** Fungistatic.

PHARMACOKINETICS

Distributed in tissue. Protein binding: 97%. Metabolized in liver to active metabolite. Excreted in urine (50%), feces (30%). Not removed by hemodialysis. **Half-life:** 40–50 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May be embryotoxic. Crosses placental barrier. Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related moderate renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Cyclosporine** may increase concentration. **Rifampin** may decrease concentration. May decrease concentration/effects of **tacrolimus.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, creatinine, ALT, AST, urine protein; RBCs. May decrease serum albumin, bicarbonate, potassium, magnesium; Hgb, Hct.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 50-mg, 70-mg vials.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 50-mg or 70-mg vial with 0.9% NaCl, Sterile Water for Injection, or Bacteriostatic Water for Injection. Further dilute in 0.9% NaCl or D_5W to maximum concentration of 0.5 mg/ml.

Rate of Administration • Infuse over 60 min.

Storage • Refrigerate vials but warm to room temperature before preparing with

C

diluent. • Reconstituted solution, prior to preparation of pt infusion solution, may be stored at room temperature for 1 hr before infusion. • Final infusion solution can be stored at room temperature for 24 hrs or 48 hrs if refrigerated. • Discard if solution contains particulate or is discolored.

IV COMPATIBILITIES

Aztreonam (Azactam), daptomycin (Cubicin), fluconazole (Diflucan), linezolid (Zyvox), meropenem (Merrem IV), piperacillin/tazobactam (Zosyn), vancomycin.

IV INCOMPATIBILITIES

Cefepime (Maxipime), ceftaroline (Teflaro), ceftazidime (Fortaz), ceftriaxone (Rocephin), furosemide (Lasix).

INDICATIONS/ROUTES/DOSAGE

Aspergillosis

IV: ADULTS, ELDERLY: Give single 70-mg loading dose on day 1, followed by 50 mg/day thereafter. For pts with moderate hepatic insufficiency, reduce daily dose to 35 mg. **CHILDREN 3 MOS–17 YRS:** 70 mg/m^2 on day 1, then 50 mg/m^2 daily. **Maximum:** 70-mg loading dose, 50-mg daily dose.

Invasive Candidiasis

IV: ADULTS, ELDERLY: Initially, 70 mg followed by 50 mg daily. **CHILDREN 3 MOS–17 YRS:** 70 mg/m^2 on day 1, then 50 mg/m^2 daily. **Maximum:** 70-mg loading dose, 50-mg daily dose.

Esophageal Candidiasis

IV: ADULTS, ELDERLY: 50 mg a day. **CHILDREN 3 MOS–17 YRS:** 50 mg/m^2 daily. **Maximum:** 50 mg.

Empiric Therapy

IV: ADULTS, ELDERLY: Initially, 70 mg then 50 mg/day. May increase to 70 mg/day. **CHILDREN 3 MOS–17 YRS:** 70 mg/m^2 on day 1, then 50 mg/m^2 daily. **Maximum:** 70 mg.

Usual Dosage Neonatal—Less Than 3 mos

IV: 25 mg/mm^2/dose once daily.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild: No adjustment. **Moderate: Child-Pugh score 7–9:** 35 mg/day. **Severe:** No clinical experience.

SIDE EFFECTS

Frequent (26%): Fever. **Occasional (11%–4%):** Headache, nausea, phlebitis. **Rare (3% or less):** Paresthesia, vomiting, diarrhea, abdominal pain, myalgia, chills, tremor, insomnia.

ADVERSE EFFECTS/TOXIC REACTIONS

Hypersensitivity reaction (rash, facial edema, pruritus, sensation of warmth) including anaphylaxis may occur. May cause hepatic dysfunction, hepatitis (drug-induced), or hepatic failure.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, BMP, LFT, magnesium. Determine baseline temperature. Assess for allergic or hypersensitivity reactions.

INTERVENTION/EVALUATION

Assess for signs/symptoms of hepatic dysfunction. Monitor LFT in pts with preexisting hepatic impairment. Monitor CBC, serum potassium. Monitor for fever, chills, hypersensitivity reaction.

PATIENT/FAMILY TEACHING

• Report rash, facial swelling, itching, difficulty breathing, abdominal pain, yellowing of skin or eyes, dark colored urine, nausea.

cefaclor

sef-a-klor
(Apo-Cefaclor, Ceclor, Novo-Cefaclor)
Do not confuse Cefaclor with cephalexin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation cephalosporin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *S. pneumoniae, S. pyogenes, S. aureus, H. influenzae, E. coli, M. catarrhalis, Klebsiella* spp., *P. mirabilis,* including acute otitis media, bronchitis, pharyngitis/tonsillitis, respiratory tract, skin/skin structure, UTIs.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** Severe renal impairment, history of penicillin allergy. Extended release not approved in children younger than 16 yrs.

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 25%. Widely distributed. Partially metabolized in liver. Primarily excreted in urine. Moderately removed by hemodialysis. **Half-life:** 0.6–0.9 hr (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted in pts older than 1 mo. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, LDH, ALT, AST. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Capsules: 250 mg, 500 mg. **Powder for Oral Suspension:** 125 mg/5 ml, 250 mg/5 ml, 375 mg/5 ml.

Tablets (Extended-Release): 500 mg.

ADMINISTRATION/HANDLING

PO

• After reconstitution, oral solution is stable for 14 days if refrigerated. • Shake oral suspension well before using. • **Extended-Release:** Swallow whole; do not cut, crush, or divide. • Give without regard to food; if GI upset occurs, give with food, milk.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY: 250–500 mg q8h. **CHILDREN:** 20–40 mg/kg/day divided q8–12h. **Maximum:** 1 g/day.

Otitis Media

PO: CHILDREN: 40 mg/kg/day divided q12h. **Maximum**: 1 g/day.

Pharyngitis

CHILDREN: 20 mg/kg/day divided q12h. **Maximum:** 1 g/day.

Dosage in Renal Impairment

Creatinine

Clearance	Dosage
10–50 ml/min	50%–100% of normal
Less than 10 ml/min	50% of normal

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Oral candidiasis, mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (pruritus, rash, urticaria).

C

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other (abdominal cramps, severe watery diarrhea, fever) superinfections may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with history of penicillin allergy are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, renal function tests. Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Doses should be evenly spaced. • May cause GI upset (may take with food, milk). • Chewable tablets must be chewed; do not swallow whole. • Refrigerate oral suspension. • Report persistent diarrhea.

cefadroxil

sef-a-**drox**-il
(Apo-Cefadroxil)

CLASSIFICATION

PHARMACOTHERAPEUTIC: First-generation cephalosporin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to group A streptococci, staphylococci, *S. pneumoniae, H. influenzae, Klebsiella* spp., *E. coli, P. mirabilis,* including impetigo, pharyngitis/tonsillitis, skin/skin structure, UTIs. **OFF-LABEL:** Chronic suppression of prosthetic joint infection.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** Severe renal impairment, history of penicillin allergy. History of GI disease (colitis).

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 15%–20%. Widely distributed. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 1.2–1.5 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, LDH, ALT, AST. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Capsules: 500 mg. **Powder for Oral Suspension:** 250 mg/5 ml, 500 mg/5 ml. **Tablets:** 1 g.

ADMINISTRATION/HANDLING

PO

• After reconstitution, oral solution is stable for 14 days if refrigerated. • Shake oral suspension well before using. • Give without regard to meals; if GI upset occurs, give with food, milk.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY: 1–2 g/day in 2 divided doses. **CHILDREN:** 30 mg/kg/day in 2 divided doses. **Maximum:** 2 g/day.

Dosage in Renal Impairment

After initial 1-g dose, dosage and frequency are modified based on creatinine clearance and severity of infection.

Creatinine Clearance	Dosage
10–25 ml/min	q24h
Less than 10 ml/min	q36h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Oral candidiasis, mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, unusual bruising/bleeding, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria), thrombophlebitis (pain, redness, swelling at injection site).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with history of penicillin allergy are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, renal function tests. Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Doses should be evenly spaced. • May cause GI upset (may take with food, milk). • Refrigerate oral suspension. • Report persistent diarrhea.

cefazolin

sef-a-**zoe**-lin
(Ancef)

Do not confuse cefazolin with cefoxitin, cefprozil, ceftriaxone, or cephalexin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: First-generation cephalosporin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *S. aureus, S. epidermidis,* group A beta-hemolytic streptococci, *S. pneumoniae, E. coli, P. mirabilis, Klebsiella* spp., *H. influenzae* including biliary tract, bone and joint, genital, respiratory tract, skin/skin structure infections; UTIs, endocarditis, perioperative prophylaxis, septicemia. **OFF-LABEL:** Prophylaxis against infective endocarditis.

C

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** Severe renal impairment, history of penicillin allergy, history of seizures.

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Widely distributed. Protein binding: 85%. Primarily excreted unchanged in urine. Moderately removed by hemodialysis. **Half-life:** 1.4–1.8 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require reduced dosage.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, LDH, ALT, AST. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 500 mg, 1 g. **Ready-to-Hang Infusion:** 1 g/50 ml, 2 g/100 ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each 1 g with at least 10 ml Sterile Water for Injection or 0.9% NaCl. • May further dilute in 50–100 ml D_5W or 0.9% NaCl (decreases incidence of thrombophlebitis).

Rate of Administration • For IV push, administer over 3–5 min (**maximum concentration:** 100 mg/ml). • For intermittent IV infusion (piggyback), infuse over 30–60 min (**maximum concentration:** 20 mg/ml).

Storage • Solution appears light yellow to yellow. • Reconstituted solution stable for 24 hrs at room temperature or for 10 days if refrigerated. • IV infusion (piggyback) stable for 48 hrs at room temperature or for 14 days if refrigerated.

IM

• To minimize discomfort, inject deep IM slowly. • Less painful if injected into gluteus maximus rather than lateral aspect of thigh.

IV INCOMPATIBILITIES

Amikacin (Amikin), amiodarone (Cordarone), hydromorphone (Dilaudid).

IV COMPATIBILITIES

Calcium gluconate, dexamethasone (Decadron), diltiazem (Cardizem), famotidine (Pepcid), heparin, insulin (regular), lidocaine, lorazepam (Ativan), magnesium sulfate, meperidine (Demerol), metoclopramide (Reglan), midazolam (Versed), morphine, multivitamins, ondansetron (Zofran), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IV, IM: ADULTS: 250 mg to 1.5 g q6–12h (usually q8h). **Maximum:** 12 g/day. **CHILDREN OLDER THAN 1 MO:** 25–100 mg/kg/day divided q6–8h. **Maximum:** 6 g/day. **NEONATES OLDER THAN 7 DAYS:** 25 mg/kg/dose q8h. **NEONATES 7 DAYS AND YOUNGER:** 25 mg/kg/dose q12h.

Dosage in Renal Impairment

Dosing frequency is modified based on creatinine clearance.

Creatinine Clearance	Dosage
11–34 ml/min	50% usual dose q12h
10 ml/min or less	50% usual dose q18–24h

Dosage in Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Frequent: Discomfort with IM administration, oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria), thrombophlebitis (pain, redness, swelling at injection site).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with history of penicillin allergy are at increased risk for developing severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, renal function tests. Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Evaluate IM site for induration and tenderness. Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

- Discomfort may occur with IM injection.

cefdinir

sef-di-neer

CLASSIFICATION

PHARMACOTHERAPEUTIC: Third-generation cephalosporin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *S. pyogenes, S. pneumoniae, H. influenzae, H. parainfluenzae, M. catarrhalis* including community-acquired pneumonia, acute exacerbation of chronic bronchitis, acute maxillary sinusitis, pharyngitis, tonsillitis, uncomplicated skin/skin structure infections, otitis media.

PRECAUTIONS

Contraindications: History of anaphylactic reaction to cephalosporins. **Cautions:** Hypersensitivity to penicillins; renal impairment.

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Moderately absorbed from GI tract. Protein binding: 60%–70%. Widely distributed. Not appreciably metabolized. Primarily excreted unchanged in urine. Minimally removed by hemodialysis. **Half-life:** 1–2 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Not detected in breast milk. **Pregnancy Category B. Children:** Newborns, infants

C

may have lower renal clearance. **Elderly:** Age-related renal impairment may require decreased dosage or increased dosing interval.

INTERACTIONS

DRUG: Antacids, iron preparations may interfere with absorption. **Probenecid** increases concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May produce false-positive reaction for urine ketones. May increase serum alkaline phosphatase, bilirubin, LDH, ALT, AST.

AVAILABILITY (Rx)

Capsules: 300 mg. **Powder for Oral Suspension:** 125 mg/5 ml, 250 mg/5 ml.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. Give at least 2 hrs before or after antacids or iron supplements. • Twice daily doses should be given 12 hrs apart. • Shake oral suspension well before administering. • Store mixed suspension at room temperature for 10 days.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO: ADULTS, ELDERLY: 300 mg q12h or 600 mg once daily. **CHILDREN 6 MOS–12 YRS:** 7 mg/kg q12h or 14 mg/kg once daily. **Maximum:** 600 mg/day.

Dosage in Renal Impairment

Creatinine clearance less than 30 ml/min: 300 mg/day or 7 mg/kg as single daily dose. **Hemodialysis pts:** 300 mg or 7 mg/kg/dose every other day.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Oral candidiasis, mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with history of penicillin allergy are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, renal function tests. Question for hypersensitivity to cefdinir or other cephalosporins, penicillins.

INTERVENTION/EVALUATION

Observe for rash. Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor hematology reports.

PATIENT/FAMILY TEACHING

• Take antacids 2 hrs before or following medication. • Continue medication for full length of treatment; do not skip doses. • Doses should be evenly spaced. • Report persistent severe diarrhea, rash, muscle aches, fever, enlarged lymph nodes, joint pain.

cefepime

sef-e-**peem**
(Maxipime)
Do not confuse cefepime with cefixime or ceftazidime.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Fourth-generation cephalosporin. **CLINICAL:** Antibiotic.

USES

Susceptible infections due to aerobic gram-negative organisms including *P. aeruginosa,* gram-positive organisms including *S. aureus.* Treatment of empiric febrile neutropenia, intra-abdominal infections, skin/skin structure infections, UTIs, pneumonia. **OFF-LABEL:** Brain abscess, malignant otitis externa, septic lateral/cavernous sinus thrombus.

PRECAUTIONS

Contraindications: History of anaphylactic reaction to penicillins, hypersensitivity to cephalosporins. **Cautions:** Renal impairment, history of seizure disorder, GI disease (colitis).

ACTION

Binds to bacterial cell wall membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Well absorbed after IM administration. Protein binding: 20%. Widely distributed. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 2–2.3 hrs (increased in renal impairment, elderly pts).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted in those older than 2 mos. **Elderly:** Age-related renal impairment may require reduced dosage or increased dosing interval.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. May increase **aminoglycoside** concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, LDH, ALT, AST. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 1 g, 2 g. **Injection, Premix:** 1 g (50 ml), 2 g (50 ml).

ADMINISTRATION/HANDLING

IV

Reconstitution • Add 10 ml of diluent for 1-g and 2-g vials. • Further dilute with 50–100 ml 0.9% NaCl or D_5W.
Rate of Administration • For intermittent IV infusion (piggyback), infuse over 30 min. For direct IV, administer over 5 min.
Storage • Solution is stable for 24 hrs at room temperature, 7 days if refrigerated.

IM

• Add 2.4 ml Sterile Water for Injection, 0.9% NaCl, or D_5W to 1-g and 2-g vials. • Inject into a large muscle mass (e.g., upper gluteus maximus).

IV INCOMPATIBILITIES

Acyclovir (Zovirax), amphotericin (Fungizone), cimetidine (Tagamet), ciprofloxacin (Cipro), cisplatin (Platinol), dacarbazine (DTIC), daunorubicin (Cerubidine), diazepam (Valium), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), doxorubicin (Adriamycin), droperidol (Inapsine), famotidine (Pepcid), ganciclovir (Cytovene), haloperidol (Haldol), magnesium, magnesium sulfate, mannitol, metoclopramide (Reglan), morphine, ofloxacin (Floxin), ondansetron (Zofran), vancomycin (Vancocin).

IV COMPATIBILITIES

Bumetanide (Bumex), calcium gluconate, furosemide (Lasix), hydromorphone (Dilaudid), lorazepam (Ativan), propofol (Diprivan).

C

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IV: ADULTS, ELDERLY: 1–2 g q8–12h. **CHILDREN:** 50 mg/kg q8–12h not to exceed adult dosing. **NEONATES:** 30 mg/kg/dose q12h.

IM: ADULTS, ELDERLY: 0.5–1 g q12h. **CHILDREN:** 50 mg/kg/dose q8–12h not to exceed adult dosing. **NEONATES:** 30 mg/kg/dose q12h.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance and severity of infection.

Creatinine Clearance	Dosage
30–60 ml/min	500 mg q24h–2 g q12h
11–29 ml/min	500 mg–2 g q24h
10 ml/min or less	250 mg–1 g q24h
Hemodialysis	Initially, 1 g, then 0.5–1 g q24h or 1–2 g q48–72h.
Peritoneal dialysis	Normal dose q48h
Continuous renal replacement therapy	Initially, 2 g, then 1 g q8h or 2 g q12h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Discomfort with IM administration, oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria), thrombophlebitis (pain, redness, swelling at injection site).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with history of penicillin allergy are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, renal function tests. Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Evaluate IM site for induration and tenderness. Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, CBC, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Discomfort may occur with IM injection. • Continue therapy for full length of treatment. • Doses should be evenly spaced. • Report persistent diarrhea.

cefixime

sef-**ix**-eem
(Suprax)
Do not confuse cefixime with cefepime, or Suprax with Sporanox or Surbex.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Third-generation cephalosporin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *S. pneumoniae, S. pyogenes, M. catarrhalis, H. influenzae, E. coli, P. mirabilis* including otitis media, acute bronchitis,

acute exacerbations of chronic bronchitis, pharyngitis, tonsillitis, uncomplicated UTI.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** History of penicillin allergy, renal impairment.

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Moderately absorbed from GI tract. Protein binding: 65%–70%. Widely distributed. Primarily excreted unchanged in urine. Minimally removed by hemodialysis. **Half-life:** 3–4 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not recommended during labor and delivery. Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 6 mos. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. May increase **aminoglycoside** concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, LDH, ALT, AST. May cause a positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Oral Suspension: 100 mg/5 ml, 200 mg/5 ml, 500 mg/5 ml. **Tablets:** 400 mg. **Tablets (Chewable):** 100 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • After reconstitution, oral suspension is stable for 14 days at room temperature or refrigerated. • Shake oral suspension well before administering. Chewable tablets must be chewed or crushed before swallowing.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER WEIGHING MORE THAN 45 KG: 400 mg/day as a single dose or in 2 divided doses. **CHILDREN 6 MOS–12 YRS WEIGHING 45 KG OR LESS:** 8 mg/kg/day as a single dose or in 2 divided doses. **Maximum:** 400 mg.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance.

Creatinine Clearance	Dosage
21–60 ml/min	75% of usual dose
20 ml/min or less	50% of usual dose

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (arthralgia, fever; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with history of penicillin allergy are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

C

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, renal function tests. Question for hypersensitivity to cefixime or other cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor renal function tests for evidence of nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue medication for full length of treatment; do not skip doses. • Doses should be evenly spaced. • May cause GI upset (may take with food or milk). • Report persistent diarrhea.

cefotaxime

sef-oh-**tax**-eem
(Claforan)
Do not confuse cefotaxime with cefoxitin, ceftizoxime, or cefuroxime, or Claforan with Claritin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Third-generation cephalosporin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections (active vs. most gram-negative [not *Pseudomonas*] and gram-positive cocci [not *Enterococcus*]) including bone, joint, GU, gynecologic, intra-abdominal, lower respiratory tract, skin/skin structure infections; septicemia, meningitis, perioperative prophylaxis. **OFF-LABEL:** Surgical prophylaxis.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** History of penicillin allergy, renal impairment with creatinine clearance less than 30 ml/min.

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Widely distributed to CSF. Protein binding: 30%–50%. Partially metabolized in liver to active metabolite. Primarily excreted in urine. Moderately removed by hemodialysis. **Half-life:** 1 hr (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Probenecid may increase concentration. May increase **aminoglycoside** concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May cause positive direct/indirect Coombs' test. May increase serum BUN, creatinine, ALT, AST, alkaline phosphatase.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 500 mg, 1 g, 2 g. **Intravenous Solution (Premix):** 1 g/50 ml, 2 g/50 ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute with 10 ml Sterile Water for Injection or 0.9% NaCl to provide a maximum concentration of 100 mg/ml. • May further dilute with 50–100 ml 0.9% NaCl or D_5W.

Rate of Administration • For IV push, administer over 3–5 min. • For intermittent IV infusion (piggyback), infuse over 15–30 min.

Storage • Solution appears light yellow to amber. • IV infusion (piggyback) is stable for 24 hrs at room temperature, 5 days if refrigerated. • Discard if precipitate forms.

IM

• Reconstitute with Sterile Water for Injection or Bacteriostatic Water for Injection to provide a concentration of 230–330 mg/ml. • To minimize discomfort, inject deep IM slowly. Less painful if injected into gluteus maximus than lateral aspect of thigh. For 2-g IM dose, give at 2 separate sites.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), filgrastim (Neupogen), fluconazole (Diflucan), vancomycin (Vancocin).

IV COMPATIBILITIES

Diltiazem (Cardizem), famotidine (Pepcid), hydromorphone (Dilaudid), lorazepam (Ativan), magnesium sulfate, midazolam (Versed), morphine, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IV, IM: ADULTS, ELDERLY, CHILDREN WEIGHING 50 KG OR MORE: 1–2 g q4–12h. **CHILDREN 1 MO–12 YRS WEIGHING LESS THAN 50 KG:** 50–200 mg/kg/day in divided doses q6–8h. **NEONATES:** 50 mg/kg/dose q8–12h.

Dosage in Renal Impairment

Creatinine Clearance	Dosage Interval
10–50 ml/min	8–12 hrs
Less than 10 ml/min	24 hrs
Hemodialysis	q24h
Peritoneal dialysis	q24h
Continuous renal replacement therapy	q12h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Discomfort with IM administration, oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria), thrombophlebitis (pain, redness, swelling at injection site).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with history of penicillin allergy are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Check IM injection sites for induration, tenderness. Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Discomfort may occur with IM injection. • Doses should be evenly spaced. • Continue antibiotic therapy for full length of treatment.

C

cefoxitin

sef-**ox**-i-tin
(Mefoxin)
Do not confuse cefoxitin with cefazolin, cefotaxime, ceftazidime, ceftriaxone, or Cytoxan, or Mefoxin with Lanoxin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation cephalosporin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *S. pneumoniae, S. aureus,* gram-negative enteric bacilli, anaerobes (e.g., *Bacteroides* spp.) including bone, joint, gynecologic, intra-abdominal, lower respiratory, skin/skin structure infections; UTIs, perioperative prophylaxis.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** Renal impairment, history of penicillin allergy.

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Well distributed. Protein binding: 65%–79%. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 0.8–1 hr.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, creatinine, ALT, AST. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 1 g, 2 g. **Intravenous Solution:** 1 g/50 ml, 2 g/50 ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute with Sterile Water for Injection, Bacteriostatic Water for Injection, 0.9% NaCl, or D_5W to provide a maximum concentration of 100 mg/ml. • May further dilute with 50–100 ml 0.9% NaCl or D_5W.
Rate of Administration • For IV push, administer over 3–5 min. • For intermittent IV infusion (piggyback), infuse over 10–60 min.
Storage • IV infusion (piggyback) is stable for 24 hrs at room temperature, 48 hrs if refrigerated. • Discard if precipitate forms.

IM

• Reconstitute each 1 g with 2 ml Sterile Water for Injection or lidocaine to provide concentration of 400 mg/ml. • To minimize discomfort, inject deep IM slowly. Less painful if injected into gluteus maximus than lateral aspect of thigh.

IV INCOMPATIBILITY

Vancomycin (Vancocin).

IV COMPATIBILITIES

Diltiazem (Cardizem), famotidine (Pepcid), heparin, hydromorphone (Dilaudid), magnesium sulfate, morphine, multivitamins, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IM, IV: ADULTS, ELDERLY: 1–2 g q6–8h. **Maximum:** 12 g/day. **CHILDREN OLDER THAN 3 MOS:** 80–160 mg/kg/day in divided doses q4–6h. **Maximum:** 12 g/day. **NEONATES:** 90–100 mg/kg/day in divided doses q8h.

Dosage in Renal Impairment

After a loading dose of 1–2 g, dosage and frequency are modified based on creatinine clearance and severity of infection.

Creatinine Clearance	Dosage
30–50 ml/min	1–2 g q8–12h
10–29 ml/min	1–2 g q12–24h
5–9 ml/min	500 mg–1 g q12–24h
Less than 5 ml/min	500 mg–1 g q24–48h
Hemodialysis	Loading dose of 1–2 g after each HD. Maintenance dose based on creatinine clearance.
Continuous renal replacement therapy	1–2 g q8–24h.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Discomfort with IM administration, oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (pruritus, rash, urticaria), thrombophlebitis (pain, redness, swelling at injection site).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with history of penicillin allergy are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, renal function tests. Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Evaluate IV site for phlebitis (heat, pain, red streaking over vein). Assess IM injection sites for induration, tenderness. Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Discomfort may occur with IM injection. • Doses should be evenly spaced. • Continue antibiotic therapy for full length of treatment.

cefpodoxime

sef-poe-**dox**-eem

CLASSIFICATION

PHARMACOTHERAPEUTIC: Third-generation cephalosporin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *S. pneumoniae, S. pyogenes, S. aureus, H. influenzae, M. catarrhalis, E. coli, Proteus, Klebsiella* spp., including acute maxillary sinusitis, chronic bronchitis,

community-acquired pneumonia, gonorrhea, otitis media, pharyngitis, tonsillitis, skin/skin structure infections, UTIs.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** Renal impairment, history of penicillin allergy.

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Well absorbed from GI tract (food increases absorption). Protein binding: 18%–23%. Widely distributed. Primarily excreted unchanged in urine. Partially removed by hemodialysis. **Half-life:** 2.3 hrs (increased in renal impairment, elderly pts).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 6 mos. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: High doses of **antacids containing aluminum, H_2 antagonists** may decrease absorption. **Probenecid** may increase concentration. **HERBAL:** None significant. **FOOD:** **Food** enhances absorption. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, LDH, ALT, AST. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Oral Suspension: 50 mg/5 ml, 100 mg/5 ml. **Tablets:** 100 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

• Administer tablet with food (enhances absorption). • Administer suspension without regard to food. • After reconstitution, oral suspension is stable for 14 days if refrigerated.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 100–400 mg q12h. **CHILDREN 2 MOS–12 YRS:** 10 mg/kg/day in 2 divided doses. **Maximum:** 200 mg/dose.

Chronic Bronchitis, Pneumonia

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 200 mg q12h for 10–14 days.

Dosage in Renal Impairment

For pts with creatinine clearance less than 30 ml/min, usual dose is given q24h. For pts on hemodialysis, usual dose is given 3 times a wk after dialysis.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (pruritus, rash, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with history of penicillin allergy are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, renal function tests. Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Doses should be evenly spaced. • Shake oral suspension well before using. • Take tablets with food (enhances absorption). • Continue antibiotic therapy for full length of treatment. • Refrigerate oral suspension. • Report persistent diarrhea.

cefprozil

sef-proe-zil
(Apo-Cefprozil 🍁, Cefzil 🍁)
Do not confuse cefprozil with cefazolin, or Cefzil with Cefol, Ceftin, or Kefzol.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation cephalosporin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *S. pneumoniae, S. pyogenes, S. aureus, H. influenzae, M. catarrhalis* including pharyngitis, tonsillitis, otitis media, secondary bacterial infection of acute bronchitis, acute bacterial exacerbation of chronic bronchitis, uncomplicated skin/skin structure infections, acute sinusitis.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** Severe renal impairment, history of penicillin allergy.

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 36%–45%. Widely distributed. Primarily excreted unchanged in urine. Moderately removed by hemodialysis. **Half-life:** 1.3 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 6 mos. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. May increase **aminoglycoside** concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May cause positive direct/indirect Coombs' test. May increase serum BUN, creatinine, alkaline phosphatase, ALT, AST.

AVAILABILITY (Rx)

Oral Suspension: 125 mg/5 ml, 250 mg/5 ml. **Tablets:** 250 mg, 500 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food; if GI upset occurs, give with food, milk. • After reconstitution, oral suspension is stable for 14 days if refrigerated. • Shake oral suspension well before using.

C

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 250–500 mg q12h or 500 mg q24h. **CHILDREN OLDER THAN 6 MOS–12 YRS:** 7.5–15 mg/kg/day in 2 divided doses. Do not exceed adult dose.

Dosage in Renal Impairment

Creatinine clearance less than 30 ml/min: 50% of usual dose at usual interval. **Hemodialysis:** Administer dose after completion of dialysis.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (pruritus, rash, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with history of penicillin allergy are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, renal function tests. Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for evidence of stomatitis. Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (but increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Doses should be evenly spaced. • Continue antibiotic therapy for full length of treatment. • May cause GI upset (may take with food or milk). • Report persistent diarrhea.

ceftaroline

sef-**tar**-o-leen
(Teflaro)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fifth-generation cephalosporin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to gram-positive and gram-negative organisms including *S. pneumoniae, S. aureus* (methicillin susceptible only), *H. influenzae, Klebsiella pneumoniae, E. coli* including acute bacterial skin and skin structure infections, community-acquired bacterial pneumonia.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** History of allergy to penicillin, severe renal impairment with creatinine clearance less than 50 ml/min.

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Protein binding: 20%. Widely distributed in plasma. Not metabolized. Primarily excreted unchanged in urine. Hemodialyzable. **Half-life:** 1.6 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Age-related renal impairment may require dose adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May cause positive direct/indirect Coombs' test. May increase serum BUN, creatinine. May decrease serum potassium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 400-mg, 600-mg single-use vial.

ADMINISTRATION/HANDLING

◀ALERT▶ Give by intermittent IV infusion (piggyback). Do not give IV push.

Reconstitution • Reconstitute either 400-mg or 600-mg vial with 20 ml Sterile Water for Injection. • Mix gently to dissolve powder. • Further dilute with 50–250 ml D_5W, 0.9% NaCl.

Rate of Administration • Infuse over 60 min.

Storage • Discard if particulate is present. • Following reconstitution, solution should appear clear, light to dark yellow. • Solution is stable for 6 hrs at room temperature or 24 hrs if refrigerated.

IV INCOMPATIBILITIES

Fluconazole (Diflucan), vancomycin (Vancocin).

IV COMPATIBILITIES

Famotidine (Pepcid), hydromorphone (Dilaudid), lorazepam (Ativan), magnesium sulfate, midazolam (Versed), morphine, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Acute Bacterial Skin/Skin Structure Infections

IV Infusion: ADULTS, ELDERLY: 600 mg every 12 hrs for 5–14 days.

Community-Acquired Bacterial Pneumonia

IV Infusion: ADULTS, ELDERLY: 600 mg every 12 hrs for 5–7 days.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
30–50 ml/min	400 mg q12h
15–29 ml/min	300 mg q12h
End-stage renal disease, hemodialysis	200 mg every 12 hrs (give after dialysis)

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (5%–4%): Diarrhea, nausea. **Rare (3%–2%):** Allergic reaction (rash, pruritus, urticaria), phlebitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other super infections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. with preexisting renal disease. Pts with history of penicillin allergy are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, renal function tests. Question for hypersensitivity to other cephalosporins, penicillins. For pts on hemodialysis, administer medication after dialysis.

C

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable, but increasing severity may indicate onset of antibiotic-associated colitis. Monitor I&O, renal function tests for evidence of nephrotoxicity. Be alert for superinfection: fever, vomiting, severe genital/anal pruritus, moderate to severe diarrhea, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue medication for full length of treatment. • Doses should be evenly spaced.

ceftazidime

sef-**taz**-i-deem
(Fortaz, Tazicef)
Do not confuse ceftazidime with cefazolin, cefepime, or ceftriaxone.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Third-generation cephalosporin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to gram-negative organisms (including *Pseudomonas* and *Enterobacteriaceae*) including bone, joint, CNS (including meningitis), gynecologic, intra-abdominal, lower respiratory tract, skin/skin structure infections; UTI, septicemia. Treatment of CNS infections due to *H. influenzae, N. meningitidis,* including meningitis. **OFF-LABEL:** Bacterial endophthalmitis.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** Severe renal impairment, history of penicillin allergy, seizure disorder.

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Widely distributed including to CSF. Protein binding: 5%–17%. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 2 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. May increase **aminoglycoside** concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, creatinine, LDH, ALT, AST. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Fortaz, Tazicef): 500 mg, 1 g, 2 g. **Injection, Premix:** 1 g/50 ml, 2 g/50 ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Give by IM injection, direct IV injection (IV push), or intermittent IV infusion (piggyback).

IV

Reconstitution • Add 10 ml Sterile Water for Injection to each 1 g to provide concentration of 90 mg/ml. • May further dilute with 50–100 ml 0.9% NaCl, D_5W, or other compatible diluent.

Rate of Administration • For IV push, administer over 3–5 min (**maximum concentration:** 180 mg/ml). • For intermittent IV infusion (piggyback), infuse over 15–30 min.

Storage • Solution appears light yellow to amber, tends to darken (color change does not indicate loss of potency). • IV infusion (piggyback) stable for 12 hrs at room temperature or 3 days if refrigerated. • Discard if precipitate forms.

IM

• For reconstitution, add 1.5 ml Sterile Water for Injection or lidocaine 1% to 500-mg vial or 3 ml to 1-g vial to provide a concentration of 280 mg/ml. • To minimize discomfort, inject deep IM slowly. Less painful if injected into gluteus maximus than lateral aspect of thigh.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), fluconazole (Diflucan), idarubicin, midazolam (Versed), vancomycin (Vancocin).

IV COMPATIBILITIES

Diltiazem (Cardizem), famotidine (Pepcid), heparin, hydromorphone (Dilaudid), lipids, morphine, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IV, IM: ADULTS, ELDERLY: 500 mg–2 g q8–12h.

IV: CHILDREN 1 MO–12 YRS: 90–150 mg/kg/day in divided doses q8h. **Maximum:** 6 g/day. **NEONATES 0–4 WKS:** 50 mg/kg/dose q8–12h.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance and severity of infection.

Creatinine Clearance	Dosage
31–50 ml/min	q12h
10–30 ml/min	q24h
Less than 10 ml/min	q48–72h
Hemodialysis	0.5–1 g q24h or 1–2 g q48–72h (give post hemodialysis on dialysis days)
Peritoneal dialysis	Initially, 1 g, then 0.5 g q24h
Continuous renal replacement therapy	Initially, 2 g, then 1 g q8h or 2 g q12h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Discomfort with IM administration, oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (pruritus, rash, urticaria), thrombophlebitis (pain, redness, swelling at injection site).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with history of penicillin allergy are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, renal function tests. Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Evaluate IV site for phlebitis (heat, pain, red streaking over vein). Assess IM injection sites for induration, tenderness. Check oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Discomfort may occur with IM injection. • Doses should be evenly spaced. • Continue antibiotic therapy for full length of treatment.

ceftibuten

sef-tye-**bue**-ten
(Cedax)
Do not confuse Cedax with Cidex.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Third-generation cephalosporin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *S. pneumoniae, S. pyogenes, H. influenzae, M. catarrhalis* including chronic bronchitis, acute bacterial otitis media, pharyngitis, tonsillitis.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** History of penicillin allergy, moderate to severe renal impairment, history of GI diseases, colitis.

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 65%–77%. Excreted primarily unchanged in urine. **Half-life:** 2–3 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 6 mos. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. May increase **aminoglycoside** concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, LDH, ALT, AST. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Capsules: 400 mg. **Oral Suspension:** 90 mg/5 ml, 180 mg/5 ml.

ADMINISTRATION/HANDLING

Capsules: Administer without regard to food. **Suspension:** Shake well, give 2 hrs before or 1 hr after meals.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

PO: ADULTS, ELDERLY: 400 mg once daily for 10 days. **CHILDREN 6 MOS–11 YRS:** 9 mg/kg/day for 10 days. **Maximum:** 400 mg/day.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance.

Creatinine Clearance	Dosage
50 ml/min and higher	400 mg or 9 mg/kg q24h
30–49 ml/min	200 mg or 4.5 mg/kg q24h
Less than 30 ml/min	100 mg or 2.25 mg/kg q24h
Hemodialysis	400 mg or 9 mg/kg (**maximum:** 400 mg) after each dialysis session.

Dosage in Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Frequent: Oral candidiasis (thrush), mild diarrhea (discharge, itching). **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with history of penicillin allergy are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, renal function tests. Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, serum renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue medication for full length of treatment; do not skip doses. • May cause GI upset (may take with food or milk). • Report persistent diarrhea.

ceftriaxone

sef-trye-**ax**-own
(Rocephin)
Do not confuse ceftriaxone with cefazolin, cefoxitin, or ceftazidine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Third-generation cephalosporin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to gram-negative aerobic organisms, some gram-positive organisms including respiratory tract, GU tract, skin and skin structure, bone and joint, intra-abdominal, pelvic inflammatory disease (PID), biliary tract/urinary tract infections; bacterial septicemia, meningitis, perioperative prophylaxis, acute bacterial otitis media. **OFF-LABEL:** Complicated gonococcal infections, STDs, Lyme disease, salmonellosis, shigellosis, atypical community-acquired pneumonia.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. Hyperbilirubinemic neonates, esp. premature infants, should not be treated with ceftriaxone (can displace bilirubin from its binding to serum albumin, causing bilirubin encephalopathy). Do not administer

with calcium-containing IV solutions, including continuous calcium-containing infusion such as parenteral nutrition (in neonates) due to the risk of precipitation of ceftriaxone-calcium salt. **Cautions:** Hepatic impairment, history of GI disease (esp. ulcerative colitis, antibiotic-associated colitis). Severe renal impairment, history of penicillin allergy.

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Widely distributed including to CSF. Protein binding: 83%–96%. Primarily excreted unchanged in urine. Not removed by hemodialysis. **Half-life: IV:** 4.3–4.6 hrs; **IM:** 5.8–8.7 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** May displace bilirubin from serum albumin. Contraindicated in hyperbilirubinemic neonates. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase excretion. May increase **aminoglycoside** concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, LDH, ALT, AST. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Rocephin): 250 mg, 500 mg, 1 g, 2 g. **Intravenous Solution (Rocephin):** 1 g/50 ml, 2 g/50 ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Add 2.4 ml Sterile Water for Injection to each 250 mg to provide concentration of 100 mg/ml. • May further dilute with 50–100 ml 0.9% NaCl, D_5W.

Rate of Administration • For IV push, administer over 1–4 min (**maximum concentration:** 40 mg/ml). • For intermittent IV infusion (piggyback), infuse over 30 min.

Storage • Solution appears light yellow to amber. • IV infusion (piggyback) is stable for 2 days at room temperature, 10 days if refrigerated. • Discard if precipitate forms.

IM

• Add 0.9 ml Sterile Water for Injection, 0.9% NaCl, D_5W, or lidocaine to each 250 mg to provide concentration of 250 mg/ml. • To minimize discomfort, inject deep IM slowly. Less painful if injected into gluteus maximus than lateral aspect of thigh.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), famotidine (Pepcid), fluconazole (Diflucan), labetalol (Normodyne), vancomycin (Vancocin).

IV COMPATIBILITIES

Diltiazem (Cardizem), heparin, lidocaine, metronidazole (Flagyl), morphine, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IM/IV: ADULTS, ELDERLY: 1–2 g q12–24h. **CHILDREN:** 50–100 mg/kg/day in 1–2 divided doses. **Maximum:** 4 g/day (meningitis), 2 g/day (other). **NEONATES:** 50 mg/kg/dose given once daily.

Dosage in Renal/Hepatic Impairment

Dosage modification is usually unnecessary but hepatic/renal function test results should be monitored in pts with renal

and hepatic impairment or severe renal impairment.

SIDE EFFECTS

Frequent: Discomfort with IM administration, oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness-like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria), thrombophlebitis (pain, redness, swelling at injection site).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with history of penicillin allergy are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, renal function tests. Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity, CBC. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

- Discomfort may occur with IM injection.
- Doses should be evenly spaced.
- Continue antibiotic therapy for full length of treatment.

cefuroxime

sef-ue-**rox**-eem
(Apo-Cefuroxime, Ceftin, Zinacef)
Do not confuse Ceftin with Cefzil or Cipro, cefuroxime with cefotaxime, cefprozil, or deferoxamine, or Zinacef with Zithromax.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation cephalosporin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to group B streptococci, pneumococci, staphylococci, *H. influenzae, E. coli, Enterobacter, Klebsiella* including acute/chronic bronchitis, gonorrhea, impetigo, early Lyme disease, otitis media, pharyngitis/tonsillitis, sinusitis, skin/skin structure, UTI, perioperative prophylaxis.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** Severe renal impairment, history of penicillin allergy.

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 33%–50%. Widely distributed including to CSF. Primarily excreted unchanged in urine. Moderately removed by hemodialysis. **Half-life:** 1.3 hrs (increased in renal impairment).

C

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. **Antacids, H_2-receptor antagonists (e.g, cimetidine, famotidine)** may decrease absorption. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, creatinine, alkaline phosphatase, bilirubin, LDH, ALT, AST. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 750 mg, 1.5 g. **Injection, Solution:** 1.5 g/50 ml. **Oral Suspension (Ceftin):** 125 mg/5 ml, 250 mg/5 ml. **Tablets (Ceftin):** 250 mg, 500 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 750 mg in 8 ml (1.5 g in 14 ml) Sterile Water for Injection to provide a concentration of 100 mg/ml. • For intermittent IV infusion (piggyback), further dilute with 50–100 ml 0.9% NaCl or D_5W.

Rate of Administration • For IV push, administer over 3–5 min. • For intermittent IV infusion (piggyback), infuse over 15–30 min.

Storage • Solution appears light yellow to amber (may darken, but color change does not indicate loss of potency). • IV infusion (piggyback) is stable for 24 hrs at room temperature, 7 days if refrigerated. • Discard if precipitate forms.

IM

• To minimize discomfort, inject deep IM slowly in large muscle mass.

PO

• Give tablets without regard to food (give 400-mg dose with food). • If GI upset occurs, give with food, milk. • Avoid crushing tablets due to bitter taste. • Suspension must be given with food. • Suspension stable at room temperature or refrigerated for 10 days.

IV INCOMPATIBILITIES

Fluconazole (Diflucan), midazolam (Versed), vancomycin (Vancocin).

IV COMPATIBILITIES

Diltiazem (Cardizem), hydromorphone (Dilaudid), morphine, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IV, IM: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 750 mg–1.5 g q8h. **CHILDREN: 3 MOS TO OLDER THAN 12 YRS:** 75–150 mg/kg/day divided q8h. **Maximum:** 6 g/day. **NEONATES:** 50 mg/kg/dose q8–12h. **PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER:** 250–500 mg twice a day. **CHILDREN 3 MOS TO OLDER THAN 12 YRS:** 20–30 mg/kg/day in 2 divided doses. **Maximum:** 1 g/day.

Dosage in Renal Impairment

Adult dosage frequency is modified based on creatinine clearance and severity of infection.

Creatinine Clearance	Dosage
Greater than 20 ml/min	q8h
10–20 ml/min	q12h
Less than 10 ml/min	q24h
Peritoneal dialysis	Dose q24h
Continuous renal replacement therapy	1 g q12h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Discomfort with IM administration, oral candidiasis (thrush), mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness–like reaction (fever, joint pain;

usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria), thrombophlebitis (pain, redness, swelling at injection site).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with history of penicillin allergy are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, renal function tests. Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Discomfort may occur with IM injection. • Doses should be evenly spaced. • Continue antibiotic therapy for full length of treatment. • May cause GI upset (may take with food, milk).

celecoxib

TOP 100

sel-e-**kox**-ib
(Celebrex)

■ **BLACK BOX ALERT** ■ Increased risk of serious cardiovascular thrombotic events, including MI, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation of stomach, intestines.

Do not confuse Celebrex with Celexa, Cerebyx, or Clarinex.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID.
CLINICAL: Anti-inflammatory.

USES

Relief of signs/symptoms of osteoarthritis, rheumatoid arthritis (RA) in adults. Treatment of acute pain, primary dysmenorrhea. Relief of signs/symptoms associated with ankylosing spondylitis. Treatment of juvenile rheumatoid arthritis (JRA).

PRECAUTIONS

◀ALERT▶ May increase cardiovascular risk when high doses given to prevent colon cancer.

Contraindications: Hypersensitivity to aspirin, NSAIDs, sulfonamides. Treatment of perioperative pain in coronary artery bypass graft (CABG) surgery. **Cautions:** History of GI disease (bleeding/ulcers); concurrent use with aspirin, anticoagulants; smoking, alcohol, elderly, debilitated pts, asthma, renal/hepatic impairment. Pts with edema, cerebrovascular disease, ischemic heart disease, HF, known or suspected deficiency of cytochrome P450 isoenzyme 2C9.

ACTION

Inhibits cyclooxygenase-2, the enzyme responsible for prostaglandin synthesis. **Therapeutic Effect:** Reduces inflammation, relieves pain.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Widely distributed. Protein binding: 97%. Metabolized in liver. Primarily eliminated in feces. **Half-life:** 11.2 hrs.

C

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Avoid use during third trimester (may adversely affect fetal cardiovascular system: premature closure of ductus arteriosus). **Pregnancy Category C (D if used in third trimester or near delivery). Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease antihypertensive effect of **ACE inhibitors and angiotensin II antagonists. Fluconazole** may significantly increase concentration. May increase **lithium** concentration. **Warfarin** may increase risk of bleeding. **Aspirin** may increase risk of celecoxib-induced GI ulceration, other GI complications. **HERBAL:** Avoid herbs with anticoagulant or antiplatelet activity **(e.g., evening primrose, garlic, ginger, ginseng).** **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, alkaline phosphatase, creatinine, BUN. May decrease serum phosphate.

AVAILABILITY (Rx)

Capsules: 50 mg, 100 mg, 200 mg, 400 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to meals.
- Capsules may be swallowed whole or opened and mixed with applesauce.

INDICATIONS/ROUTES/DOSAGE

Osteoarthritis

PO: ADULTS, ELDERLY: 200 mg/day as a single dose or 100 mg twice a day.

Rheumatoid Arthritis (RA)

PO: ADULTS, ELDERLY: 100–200 mg twice a day.

Juvenile Rheumatoid Arthritis (JRA)

PO: CHILDREN 2 YRS AND OLDER, WEIGHING MORE THAN 25 KG: 100 mg twice a day. **WEIGHING 10–25 KG:** 50 mg twice a day.

Acute Pain, Primary Dysmenorrhea

PO: ADULTS, ELDERLY: Initially, 400 mg with additional 200 mg on day 1, if needed. **Maintenance:** 200 mg twice a day as needed.

Ankylosing Spondylitis

PO: ADULTS, ELDERLY: 200 mg/day as a single dose or in 2 divided doses. May increase to 400 mg/day if no effect is seen after 6 wks.

Dosage in Renal Impairment

Not recommended in severe renal impairment.

Dosage in Hepatic Impairment

Decrease dose by 50% in pts with moderate hepatic impairment. Not recommended in severe hepatic impairment.

SIDE EFFECTS

Frequent (16%–5%): Diarrhea, dyspepsia, headache, upper respiratory tract infection. **Occasional (less than 5%):** Abdominal pain, flatulence, nausea, back pain, peripheral edema, dizziness, insomnia, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increased risk of cardiovascular events, (MI, CVA), serious, potentially life-threatening GI bleeding.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain/inflammation. Inspect appearance of affected joints for immobility, deformity, skin condition. Assess for allergy to sulfa, aspirin, or NSAIDs (contraindicated).

INTERVENTION/EVALUATION

Assess for therapeutic response: pain relief; decreased stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength. Observe for bleeding, bruising, weight gain.

PATIENT/FAMILY TEACHING

• If GI upset occurs, take with food. • Avoid aspirin, alcohol (increases risk of GI bleeding). • Immediately report chest pain, jaw pain, sweating, confusion, difficulty speaking, one sided weakness (may indicate heart attack or stroke).

cephalexin

sef-a-**lex**-in
(Apo-Cephalex, Keflex, Novo-Lexin)
Do not confuse cephalexin with cefaclor, cefazolin, or ciprofloxacin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: First-generation cephalosporin. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to staphylococci, group A *streptococcus, K. pneumoniae, E. coli, P. mirabilis, H. influenzae, M. catarrhalis* including respiratory tract, genitourinary tract, skin, soft tissue, bone infections; otitis media; rheumatic fever prophylaxis; follow-up to parenteral therapy. **OFF-LABEL:** Suppression of prosthetic joint infection.

PRECAUTIONS

Contraindications: History of hypersensitivity/anaphylactic reaction to cephalosporins. **Cautions:** Renal impairment, history of GI disease (esp. ulcerative colitis, antibiotic-associated colitis), history of penicillin allergy.

ACTION

Binds to bacterial cell membranes, inhibits cell wall synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Rapidly absorbed from GI tract (delayed in young children). Protein binding: 10%–15%. Widely distributed. Primarily excreted unchanged in urine. Moderately removed by hemodialysis. **Half-life:** 0.9–1.2 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, creatinine, alkaline phosphatase, bilirubin, LDH, ALT, AST. May cause positive direct/indirect Coombs' test.

AVAILABILITY (Rx)

Capsules: 250 mg, 500 mg, 750 mg. **Powder for Oral Suspension:** 125 mg/5 ml, 250 mg/5 ml. **Tablets:** 250 mg, 500 mg.

ADMINISTRATION/HANDLING

PO

• After reconstitution, oral suspension is stable for 14 days if refrigerated. • Shake oral suspension well before using. • Give without regard to food. If GI upset occurs, give with food, milk.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO: ADULTS, ELDERLY: 250–1,000 mg q6h. **Maximum:** 4 g/day. **CHILDREN:** 25–100 mg/kg/day in 3–4 divided doses. **Maximum:** 4 g/day.

C

Dosage in Renal Impairment
After usual initial dose, dosing frequency is modified based on creatinine clearance and severity of infection.

Creatinine Clearance	Dosage
10–50 ml/min	500 mg q8–12h
Less than 10 ml/min	250–500 mg q12–24h
Hemodialysis	250 mg q12–24h

Dosage in Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Frequent: Oral candidiasis, mild diarrhea, mild abdominal cramping, vaginal candidiasis. **Occasional:** Nausea, serum sickness–like reaction (fever, joint pain; usually occurs after second course of therapy and resolves after drug is discontinued). **Rare:** Allergic reaction (rash, pruritus, urticaria).

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Nephrotoxicity may occur, esp. in pts with preexisting renal disease. Pts with history of penicillin allergy are at increased risk for developing a severe hypersensitivity reaction (severe pruritus, angioedema, bronchospasm, anaphylaxis).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, renal function tests. Question for history of allergies, particularly cephalosporins, penicillins.

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable (increasing severity may indicate onset of antibiotic-associated colitis). Monitor I&O, renal function tests for nephrotoxicity. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). With prolonged therapy, monitor renal/hepatic function tests.

PATIENT/FAMILY TEACHING

• Doses should be evenly spaced. • Continue therapy for full length of treatment. • May cause GI upset (may take with food, milk). • Refrigerate oral suspension. • Report persistent diarrhea.

ceritinib

se-**ri**-ti-nib
(Zykadia)
Do not confuse ceritinib with crizotinib, gefitinib, imatinib, or lapatinib.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of pts with anaplastic lymphoma kinase (ALK)–positive metastatic non–small cell lung cancer (NSCLC) who have progressed or are intolerant to crizotinib.

PRECAUTIONS

Contraindications: None known. **Cautions:** Anemia, bradyarrhythmias/ventricular arrhythmias, diabetes, dehydration, electrolyte imbalance (e.g., hypomagnesemia, hypokalemia), hepatic impairment, HF, ocular disease, pulmonary disease. Concurrent use of CYP3A inducers or inhibitors, medications that prolong QT interval. Not recommended in pts with congenital long QT syndrome.

ACTION

Inhibits tyrosine kinase activity and tumor cell proliferation. Inhibits autophosphorylation of ALK and ALK-dependent signaling proteins. **Therapeutic Effect:** Inhibits lung cancer growth and metastasis.

PHARMACOKINETICS

Well absorbed after PO administration. Metabolized in liver. Peak plasma concentration: 4–6 hrs. Protein binding: 97%. Eliminated in feces (92%), urine (1.3%). **Half-life:** 41 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy; may cause fetal harm. Do not initiate therapy until pregnancy status confirmed. Contraception recommended during treatment and for at least 2 wks after discontinuation. Unknown if crosses placenta or distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Strong CYP3A inhibitors (e.g., ketoconazole, ritonavir) may increase concentration/effect; avoid use. **Strong CYP3A inducers (e.g., carbamazepine, phenobarbital, phenytoin, rifampin)** may decrease concentration/effect; avoid use. **HERBAL: St. John's wort** may decrease effectiveness. **FOOD: All food** may increase absorption/effect. **Grapefruit products** may increase concentration/effect; avoid use. **LAB VALUES:** May decrease Hgb, phosphate. May increase serum ALT, AST, bilirubin, creatinine, glucose, lipase.

AVAILABILITY (Rx)

Capsules: 150 mg.

ADMINISTRATION/HANDLING

PO

Give on empty stomach only. Do not administer within 2 hrs of meal. Administer whole; do not break, cut, or open.

INDICATIONS/ROUTES/DOSAGE

Non–Small Cell Lung Cancer

PO: ADULTS/ELDERLY: 750 mg once daily until disease progression or unacceptable toxicity.

Dosage in Renal Impairment

Not specified; use caution.

Dosage in Hepatic Impairment

Mild impairment: No adjustment. **Moderate to severe impairment:** Not specified; use caution.

Dosage Modification

Cardiac

QTc Interval Greater Than 500 msec on at Least 2 Separate EKGs: Withhold until QTc interval is less than 481 msec, or recovery to baseline (if baseline QTc interval is greater than or equal to 481 msec), then resume with a 150-mg dose reduction.

QTc Prolongation in Combination with Torsades de Pointes or Polymorphic Ventricular Tachycardia or Serious Arrhythmia: Permanently discontinue.

Severe or Intolerable Diarrhea, Nausea, Vomiting Despite Optimal Antiemetic or Antidiarrheal Therapy: Withhold until improved, then resume with a 150-mg dose reduction.

Symptomatic, Non–Life-Threatening Bradycardia: Withhold until recovery to asymptomatic bradycardia or heart rate of 60 beats/min or greater. Evaluate concomitant medications known to cause bradycardia and adjust dose as tolerated (reduction not specified).

Clinically Significant, Life-Threatening Bradycardia Requiring Intervention or Life-Threatening Bradycardia in Pts Taking Concomitant Medications Known to Cause Bradycardia or Hypotension: Withhold until recovery to asymptomatic bradycardia or heart rate of 60 beats/min or greater. If concomitant medication can be adjusted or discontinued, then resume with a 150-mg dose reduction.

Life-threatening Bradycardia in Pts Who Are Not Taking Concomitant Medications Known to Cause Bradycardia or Hypotension: Permanently discontinue.

C

Concomitant Use of Strong CYP3A Inhibitors: If concomitant use unavoidable, reduce ceritinib dose by one third, rounded to the nearest 150-mg dose strength. After discontinuation of a strong CYP3A inhibitor, resume ceritinib dose that was taken prior to initiating strong CYP3A inhibitor.

Endocrine

Persistent Hyperglycemia Greater Than 250 ml/dL Despite Optimal Antihyperglycemic Therapy: Withhold until hyperglycemia is adequately controlled, then resume with a 150-mg dose reduction. If adequate control cannot be achieved with optimal medical management, then permanently discontinue.

Hepatic

ALT, AST Greater Than 5 Times Upper Limit Normal (ULN) with Total Bilirubin Elevation Less Than or Equal to 2 Times ULN: Withhold until recovery to baseline or less than or equal to 2 times ULN, then resume with a 150-mg dose reduction.

ALT, AST Greater Than 3 Times ULN with Total Bilirubin Elevation Greater Than or Equal to 2 Times ULN in the Absence of Cholestasis or Hemolysis: Permanently discontinue.

Pulmonary

Any Grade Treatment Related to Interstitial Lung Disease/Pneumonitis: Permanently discontinue.

Intolerability/Toxicity

If Unable to Tolerate 300-mg Dose: Permanently discontinue.

SIDE EFFECTS

Frequent (86%–52%): Diarrhea, nausea, vomiting, abdominal pain, fatigue, asthenia.
Occasional (34%–9%): Decreased appetite, constipation, paresthesia, muscular weakness, gait disturbance, peripheral motor/sensory neuropathy, hypotonia, polyneuropathy, dyspepsia, gastric reflux disease, dysphagia, rash, maculopapular rash, acneiform dermatitis, vision impairment, blurred vision, photopsia, presbyopia, reduced visual acuity.

ADVERSE EFFECTS/TOXIC REACTIONS

Approximately 60% of pts required at least one dose reduction. Median time to first dose reduction was approximately 7 wks. Decreased Hgb levels reported in 84% of pts. Severe or persistent GI toxicity including nausea, vomiting, diarrhea occurred in 96% of pts; severe cases reported in 14% of pts. Drug-induced hepatotoxicity with elevation of ALT 5 times ULN occurred in 27% of pts. Bradycardia, severe interstitial lung disease (ILD), QT interval prolongation, ILD reported in 3% of pts. Common Terminology Criteria for Adverse Events (CTCAE) grade 3–4 hyperglycemia reported in 13% of pts; diabetics have a sixfold increase in risk; pts receiving corticosteroids have twofold increase in risk. Fatal adverse reactions including pneumonia, respiratory failure, ILD/pneumonitis, pneumothorax, gastric hemorrhage, general physical health deterioration, tuberculosis, cardiac tamponade, sepsis occurred in 5% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, BMP, LFT; serum ionized calcium, magnesium, phosphate; capillary blood glucose, O_2 saturation, urine pregnancy, vital signs. Obtain baseline EKG in pts with history of arrhythmias, HF, electrolyte imbalance, or concurrent use of medications known to prolong QTc interval. Question possibility of pregnancy or plans of breastfeeding. Assess hydration status. Screen for history/co-morbidities. Receive full medication history including herbal products; esp. CYP3A inhibitors or inducers, medications that prolong QT interval. Assess visual acuity. Verify ALK-positive NSCLC test prior to initiation.

INTERVENTION/EVALUATION

Monitor CBC routinely; LFT monthly (or more frequently in pts with elevated

hepatic enzymes). Obtain BMP, serum ionized calcium, magnesium if arrhythmia or dehydration occurs. Monitor vital signs (esp. heart rate). Obtain EKG for bradycardia, electrolyte imbalance, chest pain, dyspnea; chest X-ray if ILD, pneumonitis, pneumothorax suspected. Worsening cough, fever, or shortness of breath may indicate pneumonitis. Monitor for hepatic dysfunction, hyperglycemia, sepsis, vision changes. Assess hydration status. Encourage PO intake. Offer antidiarrheal medication for loose stool, antiemetic for nausea, vomiting.

PATIENT/FAMILY TEACHING

• Blood levels, EKGs will be monitored routinely. • Most pts experience diarrhea, nausea, vomiting, which may lead to dehydration; drink plenty of fluids. • Report history of heart problems, including extremity swelling, HF, congenital long QT syndrome, palpitations, syncope. Therapy may decrease your heart rate; report dizziness, chest pain, palpitations, or fainting. • Worsening cough, fever, or shortness of breath may indicate severe lung inflammation. • Avoid pregnancy; contraception recommended during treatment and up to 2 wks after discontinuation. Do not breastfeed. • Blurry vision, confusion, frequent urination, increased thirst, fruity breath may indicate high blood sugar levels. • Report any yellowing of skin or eyes, upper abdominal pain, bruising, black/tarry stools, dark urine. • Immediately report any newly prescribed medications. • Take on empty stomach only; do not eat 2 hrs before or 2 hrs after any dose. • Avoid alcohol. Do not consume grapefruit products.

certolizumab

ser-toe-**liz**-ue-mab
(Cimzia)

■ **BLACK BOX ALERT** ■ Serious, sometimes fatal, cases of tuberculosis, other fungal infections, or other opportunistic infections including viral and bacterial events have been reported. Lymphoma reported in children/adolescents receiving other TNF-blocking medications.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tumor necrosis factor (TNF) blocker. **CLINICAL:** Crohn's disease agent.

USES

Treatment of moderate to severe active rheumatoid arthritis, moderate to severe active Crohn's disease, active ankylosing spondylitis, active psoriatic arthritis.

PRECAUTIONS

Contraindications: None known. **Cautions:** Chronic, latent, or localized infection; preexisting or recent-onset CNS demyelinating disorders, HF, underlying hematologic disorders, elderly. May increase risk of malignancies (e.g., lymphoma). Pts who have resided in regions where TB is endemic, pts who are hepatitis B virus carriers. Use of live vaccines.

ACTION

Binds specifically to TNF-alpha cell, a protein in the immune system that causes inflammation. **Therapeutic Effect:** Reduces signs and symptoms of Crohn's disease and joint destruction associated with rheumatoid arthritis.

PHARMACOKINETICS

Higher clearance with increasing body weight. Peak plasma concentrations: 54–171 hrs. **Half-life:** 14 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Use cautiously due to higher rate of infection.

C

INTERACTIONS

DRUG: **Anakinra, other TNF antagonists (e.g., adalimumab, etanercept, infliximab)** may increase risk of infection**. Live virus vaccines** may decrease immune response. **HERBAL:** **Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, bilirubin; aPTT.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 200 mg. **Injection, Solution:** 200 mg/ml in a single-use prefilled syringe.

ADMINISTRATION/HANDLING

Subcutaneous

Reconstitution • Bring to room temperature before reconstitution. • Reconstitute with 1 ml Sterile Water for Injection. • Gently swirl without shaking, using syringe with 20-gauge needle. • Leave undisturbed to fully reconstitute (may take as long as 30 min). • Using a new 20-gauge needle, withdraw reconstituted solution into syringe for final concentration of 1 ml (200 mg). Use separate syringes for multiple vials. • Switch each 20-gauge needle to a 23-gauge needle and inject full contents of each syringe subcutaneously into separate sites on the abdomen or thigh.

Storage • Store vial in refrigerator. • Once powder reconstituted, solution should appear clear to opalescent, colorless to pale yellow. • Discard if solution is discolored or contains precipitate. • Reconstituted solution is stable for up to 2 hrs at room temperature or 24 hrs if refrigerated.

INDICATIONS/ROUTES/DOSAGE

Note: Each 400-mg dose is given as two injections of 200 mg each.

Crohn's Disease

Subcutaneous: Initially, 400 mg (given as 2 subcutaneous injections of 200 mg) and at weeks 2 and 4. **Maintenance:** In pts who obtain a therapeutic response, 400 mg every 4 wks.

Rheumatoid Arthritis, Ankylosing Spondylitis, Psoriatic Arthritis

Subcutaneous: ADULTS, ELDERLY: Initially, 400 mg and at weeks 2 and 4. **Maintenance:** 200 mg q2wks or 400 mg q4wks.

Dosage Modification

Discontinue for hypersensitivity reaction, lupus-like syndrome, serious infection, sepsis, hepatitis B reactivation.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (6%): Arthralgia. **Rare (less than 1%):** Abdominal pain, diarrhea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Upper respiratory tract infection occurs in 20% of pts. UTI occurs in 7% of pts. Serious infections such as pneumonia, pyelonephritis occur in 3% of pts. Hypersensitivity reaction (rash, urticaria, hypotension, dyspnea) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Do not initiate treatment in pts with active infections, including chronic or localized infection. TB test should be obtained before initiation. Obtain baseline WBC count, urinalysis, C-reactive protein.

INTERVENTION/EVALUATION

Monitor pts for infection during and after treatment. Monitor temperature. If pt develops an infection, treatment should be discontinued. Monitor lab results, especially WBC count, urinalysis, C-reactive protein for evidence of infection.

PATIENT/FAMILY TEACHING

• Report cough, fever, flu-like symptoms. • Do not receive live virus vaccine during treatment or within 3 months of its discontinuation.

cetirizine

se-**teer**-i-zeen
(Apo-Cetirizine ✱, Reactine ✱, Zyrtec)
Do not confuse cetirizine with levocetirizine, or Zyrtec with Xanax, Zantac, Zocor, or Zyprexa.

FIXED-COMBINATION(S)

Zyrtec D 12 Hour Tablets: cetirizine/pseudoephedrine: 5 mg/120 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation piperazine. **CLINICAL:** Antihistamine.

USES

Relief of symptoms (sneezing, rhinorrhea, postnasal discharge, nasal pruritus, ocular pruritus, tearing) of seasonal and perennial allergic rhinitis (hay fever). Treatment of chronic urticaria (hives).

PRECAUTIONS

Contraindications: Hypersensitivity to cetirizine, hydroxyzine. **Cautions:** Elderly, hepatic/renal impairment.

ACTION

Competes with histamine for H_1-receptor sites on effector cells in GI tract, blood vessels, respiratory tract. **Therapeutic Effect:** Prevents allergic response, produces mild bronchodilation, blocks histamine-induced bronchitis.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	Less than 1 hr	4–8 hrs	Less than 24 hrs

Well absorbed from GI tract. Protein binding: 93%. Undergoes low first-pass metabolism; not extensively metabolized. Primarily excreted in urine (more than 80% as unchanged drug). **Half-life:** 6.5–10 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not recommended during first trimester of pregnancy. Distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category B. Children:** Less likely to cause anticholinergic effects. **Elderly:** More sensitive to anticholinergic effects (e.g., dry mouth, urinary retention). Dizziness, sedation, confusion may occur.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS depression. **Anticholinergics** may increase anticholinergic effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May suppress wheal and flare reactions to antigen skin testing unless drug is discontinued 4 days before testing.

AVAILABILITY (Rx)

Capsule: 10 mg. **Oral solution:** 5 mg/5 ml. **Syrup:** 5 mg/5 ml. **Tablets:** 5 mg, 10 mg. **Tablets (Chewable):** 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ May cause drowsiness at dosage greater than 10 mg/day.

Allergic Rhinitis, Urticaria

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 5 YRS: Initially, 5–10 mg/day as single dose. **CHILDREN 2–5 YRS:** 2.5 mg/day. May increase up to 5 mg/day as a single dose or in 2 divided doses. **CHILDREN 12–23 MOS:** Initially, 2.5 mg/day. May increase up to 5 mg/day in 2 divided doses. **CHILDREN 6–11 MOS:** 2.5 mg once a day.

Dosage in Renal/Hepatic Impairment

Adult/elderly pts with renal impairment (creatinine clearance 11–31 ml/min), pts receiving hemodialysis

C

(creatinine clearance less than 7 ml/min), pts with hepatic impairment: Dosage is decreased to 5 mg once a day. **CHILDREN 6–11 YRS:** Less than 2.5 mg once daily. **CHILDREN YOUNGER THAN 6 YRS:** Not recommended.

SIDE EFFECTS

Occasional (10%–2%): Pharyngitis, dry mucous membranes, nausea, vomiting, abdominal pain, headache, dizziness, fatigue, thickening of mucus, drowsiness, photosensitivity, urinary retention.

ADVERSE EFFECTS/ TOXIC REACTIONS

Children may experience paradoxical reaction (restlessness, insomnia, euphoria, nervousness, tremor). Dizziness, sedation, confusion more likely to occur in elderly.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess lung sounds. Assess severity of rhinitis, urticaria, other symptoms.

INTERVENTION/EVALUATION

For upper respiratory allergies, increase fluids to maintain thin secretions and offset thirst. Monitor symptoms for therapeutic response.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol.

cetuximab

HIGH ALERT

se-**tux**-i-mab
(Erbitux)

■ **BLACK BOX ALERT** ■ Severe infusion reactions (bronchospasm, stridor, urticaria, hypotension, cardiac arrest) have occurred, especially with first infusion in pts with head and neck cancer, cardiopulmonary arrest reported in pts receiving radiation in combination with cetuximab.

Do not confuse cetuximab with bevacizumab.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Antineoplastic.

USES

As a single agent or in combination with irinotecan for treatment of EGFR-expressing, metastatic colorectal carcinoma in pts who are refractory or intolerant to irinotecan-based chemotherapy. Treatment of advanced squamous cell cancer of head/neck (with radiation). Treatment of recurrent or metastasized squamous cell carcinoma of head/neck progressing after platinum-based therapy. First-line treatment of squamous cell carcinoma of head and neck in combination with platinum-based therapy with 5-FU. **OFF-LABEL:** EGFR-expressing advanced non–small-cell lung cancer (NSCLC). Treatment of unresectable squamous cell skin cancer.

PRECAUTIONS

Contraindications: None known. **Cautions:** Preexisting IgE antibodies to cetuximab, coronary artery disease, HF, arrythmias, pulmonary disease.

ACTION

Binds to the epidermal growth factor receptor (EGFR), a glycoprotein on normal and tumor cells. **Therapeutic Effect:** Inhibits tumor cell growth, inducing apoptosis (cell death).

PHARMACOKINETICS

Reaches steady-state levels by the third weekly infusion. Clearance decreases as dose increases. **Half-life:** 114 hrs (range: 75–188 hrs).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placental barrier; may cause fetal harm, abortifactant.

Breastfeeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease WBCs; serum calcium, magnesium, potassium.

AVAILABILITY (Rx)

Injection Solution: 2 mg/ml (50 ml, 100 ml).

ADMINISTRATION/HANDLING

IV

◀ALERT▶ Do not give by IV push or bolus.

Reconstitution • Does not require reconstitution. • Solution should appear clear, colorless; may contain a small amount of visible, white particulates. • Do not shake or dilute. • Infuse with a low protein-binding 0.22-micron in-line filter.

Rate of Administration • First dose should be given as a 120-min infusion. • Maintenance infusion should be infused over 60 min. • Maximum infusion rate should not exceed 5 ml/min.

Storage • Refrigerate vials. • Infusion containers are stable for up to 12 hrs if refrigerated, up to 8 hrs at room temperature. • Discard unused portions.

IV COMPATIBILITY

Irinotecan (Camptosar).

INDICATIONS/ROUTES/DOSAGE

Head/Neck Cancer, Metastatic Colorectal Carcinoma

IV: ADULTS, ELDERLY: Initially, 400 mg/m^2 as a loading dose. **Maintenance:** 250 mg/m^2 infused over 60 min weekly.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (90%–25%): Acneiform rash, malaise, fever, nausea, diarrhea, constipation, headache, abdominal pain, anorexia, vomiting. **Occasional (16%–10%):** Nail disorder, back pain, stomatitis, peripheral edema, pruritus, cough, insomnia. **Rare (9%–5%):** Weight loss, depression, dyspepsia, conjunctivitis, alopecia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Anemia occurs in 10% of pts. Severe infusion reaction (rapid onset of airway obstruction, hypotension, severe urticaria) occurs rarely. Dermatologic toxicity, pulmonary embolus, leukopenia, renal failure occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Monitor Hgb, Hct, serum potassium, magnesium. Assess for evidence of anemia. Question possibility of pregnancy.

INTERVENTION/EVALUATION

Monitor for evidence of infusion reaction (rapid onset of bronchospasm, stridor, hoarseness, urticaria, hypotension) during infusion and for at least 1 hr postinfusion. Pts may experience first severe infusion reaction during later infusions. Assess skin for evidence of dermatologic toxicity (development of inflammatory sequelae, dry skin, exfoliative dermatitis, rash). Monitor serum electrolytes, acute onset or worsening pulmonary symptoms.

PATIENT/FAMILY TEACHING

• Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with anyone who recently received a live virus vaccine. • Avoid crowds, those with infection. • Wear sunscreen, limit sun exposure (sunlight can exacerbate skin reactions). • Avoid pregnancy. • Report cardiac or pulmonary symptoms, severe rash.

C

chlorambucil

HIGH ALERT

klor-**am**-bue-sil
(Leukeran)

■ **BLACK BOX ALERT** ■ May cause myelosuppression. Affects fertility; potential for carcinogenic, mutagenic, teratogenic effects. May cause azoospermia.

Do not confuse Leukeran with Alkeran, Leukine, or Myleran.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent, nitrogen mustard. **CLINICAL:** Antineoplastic.

USES

Treatment of chronic lymphocytic leukemia (CLL), Hodgkin's and non-Hodgkin's lymphomas (NHL). **OFF-LABEL:** Nephrotic syndrome in children, Waldenström's macroglobulinemia.

PRECAUTIONS

Contraindications: Previous allergic reaction to other alkylating agents, prior resistance to chlorambucil, pregnancy. **Extreme Cautions:** Treatment within 4 wks after full-course radiation therapy or myelosuppressive drug regimen. **Cautions:** History of bone marrow suppression, head trauma, hepatic impairment, nephrotic syndrome, seizure disorder; administration of live vaccines to immunocompromised pts.

ACTION

Inhibits DNA, RNA synthesis by cross-linking with DNA, RNA strands. **Therapeutic Effect:** Interferes with nucleic acid function.

PHARMACOKINETICS

Rapidly, completely absorbed from GI tract. Protein binding: 99%. Metabolized in liver to active metabolite. Not removed by hemodialysis. **Half-life:** 1.5 hrs; metabolite, 2.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. Breastfeeding not recommended. **Pregnancy Category D. Children:** No age-related precautions noted. When taken for nephrotic syndrome, may increase risk of seizures. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Bone marrow depressants may increase myelosuppression. **Other immunosuppressants (e.g., steroids)** may increase risk of infection or development of neoplasms. **Live virus vaccines** may potentiate virus replication, decrease antibody response to vaccine. **HERBAL: Echinacea** may decrease effects. **FOOD: Acidic foods, spicy foods** may delay absorption. **LAB VALUES:** May increase serum alkaline phosphatase, AST, uric acid.

AVAILABILITY (Rx)

Tablets: 2 mg.

ADMINISTRATION/HANDLING

PO

- Give 30–60 min before food.

INDICATIONS/ROUTES/DOSAGE

Chronic Lymphocytic Leukemia (CLL)

PO: ADULTS, ELDERLY: 0.1 mg/kg/day for 3–6 wks or 0.4 mg/kg pulsed doses administered intermittently, biweekly or monthly.

Hodgkin's Lymphoma (HL)

PO: ADULTS, ELDERLY: 0.2 mg/kg/day for 3–6 wks.

Non-Hodgkin's Lymphoma (NHL)

PO: ADULTS, ELDERLY: 0.1 mg/kg/day for 3–6 wks.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Expected: GI effects (nausea, vomiting, anorexia, diarrhea, abdominal distress) generally mild, last less than 24 hrs, occur only if single dose exceeds 20 mg. **Occasional:** Rash, dermatitis, pruritus, oral ulcerations. **Rare:** Alopecia, urticaria, erythema, hyperuricemia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hematologic toxicity due to severe myelosuppression occurs frequently, manifested as neutropenia, anemia, thrombocytopenia. After discontinuation of therapy, thrombocytopenia, neutropenia usually last for 1–2 wks, but may persist for 3–4 wks. Neutrophil count may continue to decrease for up to 10 days after last dose. Toxicity appears to be less severe with intermittent drug administration. Overdosage may produce seizures in children. Excessive serum uric acid level, hepatotoxicity occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC before therapy and each wk during therapy, WBC count 3–4 days following each weekly, CBC during first 3–6 wks of therapy (4–6 wks if pt on intermittent dosing schedule).

INTERVENTION/EVALUATION

Monitor CBC, platelet count, serum uric acid, LFT. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Assess skin for rash, pruritus, urticaria.

PATIENT/FAMILY TEACHING

• Increase fluid intake (may protect against hyperuricemia). • Avoid acidic or spicy foods; may delay absorption of medication. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site, nausea, vomiting, rash.

chlordiazepoxide

klor-dye-az-e-**pox**-ide
(Librium)
Do not confuse Librium with Librax.

FIXED-COMBINATION(S)

Limbitrol: amitriptyline/chlordiazepoxide: 5 mg/12.5 mg, 10 mg/25 mg. **Librax:** chlordiazepoxide-clidinium: 5 mg/2.5 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine **(Schedule IV). CLINICAL:** Antianxiety.

USES

Management of anxiety disorders, acute alcohol withdrawal symptoms; short-term relief of symptoms of anxiety, preop anxiety.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment, elderly, debilitated pts, respiratory disease, impaired gag reflex, porphyria, other CNS depressants, pts at risk for falls/traumatic injury, history of drug dependence, high risk of suicidal ideation.

ACTION

Enhances action of inhibitory neurotransmitter gamma-aminobutyric acid in CNS. **Therapeutic Effect:** Produces anxiolytic effect.

PHARMACOKINETICS

Widely distributed. Protein binding: 90%–98%. Metabolized in liver. Primarily excreted in urine. **Half-life:** 6.6–25 hrs.

C

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category D. Children/Elderly:** Reduce initial dose, increase dosage gradually (prevents excessive sedation).

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS depression. **Azole antifungals (e.g., ketoconazole), CYP3A4 inhibitors (e.g., fluconazole, diltiazem)** may increase serum concentration, increase risk of toxicity. **CYP3A4 inducers (e.g., rifampin)** may decrease concentration/effect. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease effectiveness. **FOOD:** None known. **LAB VALUES:** **Therapeutic serum level:** 0.1–3 mcg/ml; **toxic serum level:** greater than 23 mcg/ml.

AVAILABILITY (Rx)

Capsules: 5 mg, 10 mg, 25 mg.

ADMINISTRATION/HANDLING

PO

- May take without regard to food.

INDICATIONS/ROUTES/DOSAGE

Alcohol Withdrawal Symptoms

PO: ADULTS, ELDERLY: 50–100 mg. May repeat q2–4h as necessary. **Maximum:** 300 mg/24 hrs.

Anxiety

PO: ADULTS: 15–100 mg/day in 3–4 divided doses. **ELDERLY:** 5 mg 2–4 times a day. **CHILDREN 6 YRS AND OLDER:** 5 mg 2–4 times/day or 10 mg 2–3 times/day.

Dosage in Renal/Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent: Drowsiness, ataxia, dizziness, confusion (particularly in elderly or debilitated pts). **Occasional:** Rash, peripheral edema, GI disturbances. **Rare:** Paradoxical CNS reactions (hyperactivity, nervousness in children; excitement, restlessness in the elderly, generally noted during first 2 wks of therapy, particularly in presence of uncontrolled pain).

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt or rapid withdrawal may result in pronounced restlessness, irritability, insomnia, tremors, abdominal/muscle cramps, diaphoresis, vomiting, seizures. Overdose results in drowsiness, confusion, diminished reflexes, coma.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse, respirations immediately before administration. Note severity of alcohol withdrawal symptoms before each dose.

INTERVENTION/EVALUATION

Monitor vital signs, esp. B/P, for changes. Assess motor responses (agitation, tremors, tension), autonomic responses (cold/clammy hands, diaphoresis). Assess children, elderly for paradoxical reaction, particularly during early therapy. Assist with ambulation if drowsiness, ataxia occur. **Therapeutic serum level:** 0.1–3 mcg/ml; **toxic serum level:** greater than 23 mcg/ml.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established or drowsiness has diminished. • Drowsiness usually disappears during continued therapy. • If dizziness occurs, go from lying to standing slowly. • Smoking reduces drug effectiveness. • Do not abruptly discontinue medication after long-term therapy. • Avoid alcohol.

*chlorproMAZINE

klor-**pro**-ma-zeen
(Largactil, Teva-Chlorpromazine)

■ **BLACK BOX ALERT** ■ Increased risk of mortality in elderly pts with dementia-related psychosis.
Do not confuse chlorpromazine with clomipramine, prochlorperazine, or promethazine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Phenothiazine. **CLINICAL:** Antipsychotic, antiemetic, antianxiety, antineuralgia adjunct.

USES

Management of psychotic disorders (control of mania, treatment of schizophrenia), severe nausea/vomiting, severe behavioral disturbances in children. Relief of intractable hiccups, acute intermittent porphyria. **OFF-LABEL:** Management of psychotic disorders, behavioral symptoms associated with dementia, agitation related to Alzheimer's dementia.

PRECAUTIONS

Contraindications: Comatose states, severe CNS depression, phenothiazine hypersensitivity. **Cautions:** Respiratory/hepatic/renal/cardiac impairment; history of alcohol withdrawal, subcortical brain damage, seizures, urinary retention, prostatic hypertrophy, hypocalcemia (increases susceptibility to dystonias), myasthenia gravis, cerebrovascular disease, pts with prolonged QT interval. Pts with hemodynamic instability, risk for aspiration pneumonia, decreased GI motility, visual problems (e.g., narrow-angle glaucoma).

ACTION

Blocks dopamine neurotransmission at postsynaptic receptor sites. Possesses strong anticholinergic, sedative, antiemetic effects; moderate extrapyramidal effects; slight antihistamine action. **Therapeutic Effect:** Improves psychotic conditions; relieves nausea/vomiting; controls intractable hiccups, porphyria.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 92%–97%. Metabolized in liver. Excreted in urine. **Half-life:** Initial 2 hrs; **terminal:** 30 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category C. Children:** Pts with acute illnesses (chickenpox, measles, gastroenteritis, CNS infection) are at risk for developing neuromuscular, extrapyramidal symptoms (EPS), particularly dystonias. **Elderly:** Susceptible to anticholinergic, neuromuscular effects; EPS.

INTERACTIONS

DRUG: **Rifampin** may decrease effects, **Alcohol, CNS depressants** may increase respiratory depression, hypotensive effects. **MAOIs, tricyclic antidepressants** may increase sedative, anticholinergic effects. **HERBAL:** **St. John's wort** may decrease concentration; increase photosensitization, sedative effect. **Dong quai** may increase photosensitization. **Gotu kola, kava kava, valerian** may increase sedative effect. **FOOD:** None known. **LAB VALUES:** May produce false-positive pregnancy test, phenylketonuria (PKU) test. EKG changes may occur, including QT-interval and T-wave disturbances.

AVAILABILITY (Rx)

Injection Solution: 25 mg/ml. **Tablets:** 10 mg, 25 mg, 50 mg, 100 mg, 200 mg.

ADMINISTRATION/HANDLING

IM

ALERT Do not give chlorpromazine by SQ route (risk for severe tissue necrosis).

• Dilute solution as prescribed with Sodium Chloride for Injection. • Slowly inject drug deep into large muscle, such as gluteus maximus rather than lateral aspect of the thigh, to minimize discomfort.

IV

• For direct IV injection, dilute with 0.9% NaCl to maximum concentration of 1 mg/ml. • Administer slowly: 0.5 mg/min in children, 1 mg/min in adults. • Protect from light. • A slightly yellow solution does not indicate potency loss. • Discard markedly discolored solutions.

PO

Administer with food or milk to decrease GI effects.

INDICATIONS/ROUTES/DOSAGE

Severe Nausea/Vomiting

PO: ADULTS, ELDERLY: 10–25 mg q4–6h. **CHILDREN:** 0.5–1 mg/kg q4–6h.
IV, IM: ADULTS, ELDERLY: 25–50 mg q––6h. **CHILDREN:** 0.5–1 mg/kg q6–8h. **Maximum:** 40 mg/day for children less than 5 yrs; 75 mg/day for children 5–12 yrs.

Psychotic Disorders

PO: ADULTS, ELDERLY: 30–800 mg/day in 1–4 divided doses (usual dose: 200–600 mg/day). **CHILDREN OLDER THAN 6 MOS:** 0.5–1 mg/kg q4–6h.
IV, IM: ADULTS, ELDERLY: Initially, 25 mg; may repeat in 1–4 hrs. May gradually increase to 400 mg/dose. Usual dose: 300–800 mg/day. **CHILDREN OLDER THAN 6 MOS:** 0.5–1 mg/kg q6–8h. **Maximum:** 75 mg/day for children 5–12 yrs; 40 mg/day for children younger than 5 yrs.

Intractable Hiccups

PO, IM: ADULTS: 25–50 mg 3–4 times a day. **IV:** 25–50 mg by slow IV infusion.

Porphyria

PO, IM: ADULTS, ELDERLY: 25–50 mg 3–4 times a day.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Avoid use in severe impairment.

SIDE EFFECTS

Frequent: Drowsiness, blurred vision, hypotension, color vision or night vision disturbances, dizziness, decreased diaphoresis, constipation, dry mouth, nasal congestion. **Occasional:** Urinary retention, photosensitivity, rash, decreased sexual function, swelling/pain in breasts, weight gain, nausea, vomiting, abdominal pain, tremors.

ADVERSE EFFECTS/ TOXIC REACTIONS

Extrapyramidal symptoms appear to be dose related (particularly high dosage) and may include: akathisia (inability to sit still, tapping of feet), parkinsonian symptoms (mask-like face, tremors, shuffling gait, hypersalivation), acute dystonias (torticollis [neck muscle spasm], opisthotonos [rigidity of back muscles], and oculogyric crisis [rolling back of eyes]). Dystonic reaction may produce diaphoresis, pallor. Tardive dyskinesia (tongue protrusion, puffing of cheeks, puckering of the mouth) occurs rarely (may be irreversible). Abrupt discontinuation after long-term therapy may precipitate nausea, vomiting, gastritis, dizziness, tremors. Blood dyscrasias, particularly agranulocytosis, mild leukopenia, may occur. May decrease seizure threshold.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Avoid skin contact with solution (contact dermatitis). **Antiemetic:** Assess for dehydration (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue). **Antipsychotic:** Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content.

INTERVENTION/EVALUATION

Monitor B/P for hypotension. Assess for EPS. Monitor WBC, differential count for blood dyscrasias, fine tongue movement (may be early sign of tardive dyskinesia).

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression). **Therapeutic serum level:** 50–300 ng/ml; **toxic serum level:** greater than 750 ng/ml.

PATIENT/FAMILY TEACHING

• Full therapeutic response may take up to 6 wks. • Urine may darken. • Do not abruptly withdraw from long-term drug therapy. • Report visual disturbances. • Avoid tasks that require alertness, motor skills until response to drug is established. • Drowsiness generally subsides with continued therapy. • Avoid alcohol, exposure to sunlight.

cholestyramine

koe-lee-**stye**-ra-meen
(Novo-Cholamine ✱, Prevalite, Questran, Questran Lite)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Bile acid sequestrant. **CLINICAL:** Antihyperlipoproteinemic.

USES

Adjunct to diet to decrease elevated serum cholesterol levels in pts with primary hypercholesterolemia. Relief of pruritus associated with elevated levels of bile acids. Regression of arteriosclerosis. **OFF-LABEL:** Treatment of diarrhea (due to bile acids), binding toxicologic agents.

PRECAUTIONS

Contraindications: Complete biliary obstruction. **Cautions:** GI dysfunction (esp. constipation), recent abdominal surgery, renal impairment, dehydration, concurrent spironolactone therapy.

ACTION

Binds with bile acids in intestine, forming insoluble complex. Binding results in partial removal of bile acid from enterohepatic circulation. **Therapeutic Effect:** Removes LDL cholesterol from plasma.

PHARMACOKINETICS

Not absorbed from GI tract. Decreases in serum LDL apparent in 5–7 days and in serum cholesterol in 1 mo. Serum cholesterol returns to baseline about 1 mo after drug discontinuation.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not systemically absorbed. May interfere with maternal absorption of fat-soluble vitamins. **Pregnancy Category B. Children:** No age-related precautions noted. Limited experience in pts younger than 10 yrs. **Elderly:** Increased risk of GI side effects, adverse nutritional effects.

INTERACTIONS

DRUG: May increase effects of **anticoagulants** by decreasing vitamin K level. May decrease **warfarin** absorption. May bind with, decrease absorption of **digoxin, folic acid, penicillins, propranolol, tetracyclines, thiazides, thyroid hormones, oral vancomycin.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, magnesium, ALT, AST. May decrease serum calcium, potassium, sodium. May prolong PT.

AVAILABILITY (Rx)

Powder for Oral Suspension: 4 g.

ADMINISTRATION/HANDLING

PO

• Give other drugs at least 1 hr before or 4–6 hrs following cholestyramine (capable of binding drugs in GI tract). • Do not give in dry form (highly irritating). Mix with 3–6 oz water, milk, fruit juice, soup. • Place powder on surface for 1–2 min (prevents lumping), then mix thoroughly. • Excessive foaming

with carbonated beverages reported; use extra large glass, stir slowly. • Administer with meals.

C

INDICATIONS/ROUTES/DOSAGE

Hypercholesterolemia

PO: ADULTS, ELDERLY: Initially, 4 g 1–2 times a day. Gradually increase over at least 1-mo intervals. **Maintenance:** 8–16 g/day in divided doses. **Maximum:** 24 g/day, 6 doses/day. **CHILDREN:** 80 mg/kg 3 times a day. **Maximum:** 8 g/day.

Pruritis

PO: ADULTS, ELDERLY: Initially, 4 g 1–2 times a day. **Maintenance:** 4–16 g/day in divided doses. **Maximum:** 24 g/day.

SIDE EFFECTS

Frequent: Constipation (may lead to fecal impaction), nausea, vomiting, abdominal pain, indigestion. **Occasional:** Diarrhea, belching, bloating, headache, dizziness. **Rare:** Gallstones, peptic ulcer disease, malabsorption syndrome.

ADVERSE EFFECTS/ TOXIC REACTIONS

GI tract obstruction, hyperchloremic acidosis, or osteoporosis secondary to calcium excretion may occur. High dosage may interfere with fat absorption, resulting in steatorrhea.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of hypersensitivity to cholestyramine, tartrazine, aspirin. Obtain baseline serum cholesterol, triglycerides, electrolytes, LFT.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Evaluate food tolerance, abdominal discomfort, flatulence. Monitor cholesterol, triglycerides, PT, LFT, CBC, serum electrolytes. Encourage several glasses of water between meals.

PATIENT/FAMILY TEACHING

• Complete full course of therapy; do not stop or change doses. • Take other drugs at least 1 hr before or 4–6 hrs after cholestyramine. • Never take in dry form; mix with 3–6 oz water, milk, fruit juice, soup (place powder on surface for 1–2 min to prevent lumping, then mix well). • Use extra-large glass, stir slowly when mixing with carbonated beverages due to foaming. • Take with meals, drink several glasses of water between meals. • Eat high-fiber foods (whole-grain cereals, fruits, vegetables) to reduce potential for constipation.

ciclesonide

sye-**kles**-oh-nide
(Alvesco HFA, Omnaris, Zetonna)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Glucocorticoid. **CLINICAL:** Anti-inflammatory.

USES

Intranasal: Management of seasonal or perennial allergic rhinitis. **Oral Inhalation:** Prophylactic management of bronchial asthma. **OFF-LABEL: Nasal:** Adjunct to antibiotics in empiric treatment of acute bacterial rhinosinusitis.

PRECAUTIONS

Contraindications: Acute asthma or status asthmaticus, moderate to severe bronchiectasis. **Cautions:** Cataracts, severe hepatic impairment, seizures, osteoporosis, glaucoma, thyroid disease, psychiatric disturbance, cardiovascular disease, myasthenia gravis, elderly, chronic wounds.

ACTION

Inhibits accumulation of inflammatory cells, decreases and prevents tissues from responding to inflammatory process. **Therapeutic Effect:** Relieves symptoms of allergic rhinitis, asthma.

PHARMACOKINETICS

Minimally absorbed from nasal tissue, moderately absorbed from inhalation. Protein binding: 99%. Metabolized in liver. Excreted in feces (66%), urine (20% or less). **Half-life:** 2–3 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in pts younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Ketoconazole** may increase concentration/effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Inhalation (Alvesco HFA): 80 mcg/spray, 160 mcg/spray. **Nasal Spray (Omnaris):** 50 mcg/spray. **(Zetonna):** 37 mcg/spray.

ADMINISTRATION/HANDLING

Inhalation

• Shaking not necessary. • Wait 2 min before inhaling second dose (allows for deeper bronchial penetration). • Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness).

Intranasal

• Instruct pt to clear nasal passages before use. • Tilt head slightly forward. • Insert spray tip into nostril, pointing toward nasal passages, away from nasal septum. • Spray into one nostril while pt holds other nostril closed, concurrently inspires through nose to permit medication as high into nasal passages as possible.

INDICATIONS/ROUTES/DOSAGE

Perennial Allergic Rhinitis

Intranasal: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: (Omnaris): 2 sprays (100 mcg) in each nostril once a day. **Maximum:** 200 mcg/day. **(Zetonna):** 1 spray (37 mcg) in each nostril daily. **Maximum:** 74 mcg/day.

Seasonal Allergic Rhinitis

Intranasal: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: (Omnaris): 2 sprays (100 mcg) in each nostril once a day. **Maximum:** 200 mcg/day. **(Zetonna):** 1 spray (37 mcg) in each nostril daily.. **Maximum:** 74 mcg/day.

Asthma

Inhalation: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER (PREVIOUS THERAPY WITH BRONCHODILATORS ALONE): Initially, 80 mcg 2 times daily. **Maximum:** 320 mcg 2 times daily. **(PREVIOUS THERAPY WITH INHALED STEROIDS):** Initially, 80 mcg twice daily. **Maximum:** 640 mcg/day. **(PREVIOUS THERAPY WITH ORAL STEROIDS):** Initially, 320 mcg twice daily. **Maximum:** 640 mcg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (6%–4%): Headache, epistaxis, nasopharyngitis. **Rare (2%):** Ear pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive doses over prolonged periods may result in systemic hypercortisolism.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to any corticosteroids. Establish baseline history of asthma, rhinitis.

INTERVENTION/EVALUATION

Monitor for relief of symptoms. Monitor rate, depth, rhythm, type of respiration. Assess lung sounds for rhonchi, wheezing, rales. Assess oral mucous membranes for candidiasis.

C

PATIENT/FAMILY TEACHING

• Improvement noted in 24–48 hrs, but full effect may take 1–2 wks for seasonal allergic rhinitis, 5 wks for perennial allergic rhinitis. • Improvement in asthma may take 4 wks or longer. • Oral inhalation not indicated for acute asthma attacks. • Report if no improvement in symptoms, sneezing or nasal irritation occurs.

cidofovir

sye-**dof**-o-veer
(Vistide)

■ **BLACK BOX ALERT** ■ Dose-dependent nephrotoxicity requires dose adjustment, discontinuation if changes in renal function occur (renal lab tests, urinalysis). May cause hypospermia. May be embryotoxic, teratogenic. Neutropenia reported: monitor neutrophil count.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Anti-infective. **CLINICAL:** Antiviral.

USES

Treatment of CMV retinitis in those with HIV. Should be given with probenecid.

PRECAUTIONS

Contraindications: Direct intraocular injection, history of clinically severe hypersensitivity to probenecid or other sulfa-containing drugs, renal impairment (serum creatinine level greater than 1.5 mg/dL, creatinine clearance 55 ml/min or less, or urine protein level greater than 100 mg/dL). Use with or within 7 days of nephrotoxic agent. **Caution:** History of hepatic impairment, metabolic acidosis, pancreatitis, dehydration.

ACTION

Inhibits viral DNA synthesis by incorporating itself into viral DNA chain. **Therapeutic Effect:** Suppresses replication of cytomegalovirus (CMV).

PHARMACOKINETICS

Protein binding: less than 6%. Excreted primarily unchanged in urine. Effect of hemodialysis unknown. **Elimination Half-life:** 1.4–3.8 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Nephrotoxic medications (e.g., aminoglycosides, amphotericin B, foscarnet, IV pentamidine) increase risk of nephrotoxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease neutrophil count; serum bicarbonate, phosphate, uric acid. May elevate serum creatinine.

AVAILABILITY (Rx)

Injection Solution: 75 mg/ml (5-ml ampule).

ADMINISTRATION/HANDLING

◀ALERT▶ Do not exceed recommended dosage, frequency, infusion rate.

IV

Reconstitution • Dilute in 100 ml 0.9% NaCl.

Rate of Administration • Infuse over 1 hr. • IV hydration with 0.9% NaCl (1,000 ml prior to and after infusion). Probenecid therapy **must** be used with each cidofovir infusion (minimizes risk of nephrotoxicity). • Ingestion of food before each dose of probenecid may reduce nausea/vomiting.

Storage • Store at room temperature. • Admixtures may be refrigerated for no more than 24 hrs. • Allow refrigerated admixtures to warm to room temperature before use.

IV INCOMPATIBILITIES

None known.

INDICATIONS/ROUTES/DOSAGE

Note: Give 2 g of PO probenecid 3 hrs before cidofovir dose, then give 1 g 2 hrs and 8 hrs after completion of the 1-hr cidofovir infusion (total of 4 g). In addition, give 1 L of 0.9% NaCl over 1–2 hrs immediately before cidofovir infusion. If tolerated, a second liter may be infused over 1–3 hrs at start of infusion or immediately afterward.

Cytomegalovirus (CMV) Retinitis in Pts with HIV (in Combination with Probenecid)

IV Infusion: ADULTS: Induction: Usual dosage, 5 mg/kg at constant rate over 1 hr once weekly for 2 consecutive wks. **Maintenance: ADULTS, ELDERLY:** 5 mg/kg once every 2 wks.

Dosage in Renal Impairment

Changes during Therapy: If creatinine increases by 0.3–0.4 mg/dL, reduce dose to 3 mg/kg; if creatinine increases by 0.5 mg/dL or greater, or proteinuria 3+ or greater develops, discontinue therapy. **Preexisting Renal Impairment:** (See contraindications.)

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (65%–17%): Nausea, vomiting, fever, asthenia, rash, diarrhea, headache, alopecia, chills, anorexia, dyspnea, abdominal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious adverse effects include proteinuria (80%), nephrotoxicity (53%), neutropenia (31%), elevated serum creatinine (29%), infection (24%), anemia (20%), decrease in intraocular pressure (IOP) (12%), pneumonia (9%). Concurrent use of probenecid may produce a hypersensitivity reaction characterized by rash, fever, chills, anaphylaxis. Acute renal failure occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline WBC, renal function tests prior to beginning therapy. For those taking zidovudine, temporarily discontinue zidovudine administration or decrease zidovudine dose by 50% on days of infusion (probenecid reduces metabolic clearance of zidovudine). Assess hydration status.

INTERVENTION/EVALUATION

Monitor WBC; BMP (esp. serum BUN, creatinine), LFT, urine protein before each dose. Proteinuria may be early indicator of dose-dependent nephrotoxicity. Periodically monitor visual acuity, ocular symptoms.

PATIENT/FAMILY TEACHING

• Obtain regular follow-up ophthalmologic exams. • Pts of childbearing age should use effective contraception during and for 1 mo after treatment. • Men should wear condoms during and for 3 mos after treatment. • Breastfeeding not recommended. • Must complete full course of probenecid with each cidofovir dose. • Report rash immediately.

cilostazol

sil-**o**-sta-zol
(Pletal)

■ **BLACK BOX ALERT** ■ Contraindicated in pts with HF of any severity, active bleeding.

Do not confuse Pletal with Plendil.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Phosphodiesterase enzyme inhibitor. **CLINICAL:** Antiplatelet.

USES

Management of peripheral vascular disease, primarily intermittent claudication. **OFF-LABEL:** Adjunct with aspirin and clopidogrel for prevention of stent

thrombosis and restenosis after coronary stent placement.

C

PRECAUTIONS

Contraindications: HF of any severity, hemostatic disorders or active bleeding (bleeding peptic ulcer, intracranial bleeding). **Cautions:** Severe underlying heart disease, thrombocytopenia, pts receiving other platelet aggregation inhibitors, moderate to severe hepatic impairment, severe renal impairment.

ACTION

Inhibits platelet aggregation. Dilates vascular beds with greatest dilation in femoral beds. **Therapeutic Effect:** Improves walking distance in pts with intermittent claudication.

PHARMACOKINETICS

Moderately absorbed from GI tract. Protein binding: 95%–98%. Metabolized in liver. Excreted in urine (74%), feces (20%). Not removed by hemodialysis. **Half-life:** 11–13 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Aspirin** may potentiate inhibition of platelet aggregation. **CYP3A4 inhibitors (e.g., clarithromycin, diltiazem, fluconazole), CYP2C19 inhibitors (e.g., omeprazole)** may increase concentration/effect. **HERBAL:** **St. John's wort** may decrease effect. Avoid herbs with antiplatelet activity **(e.g., garlic, ginger, ginkgo).** **FOOD:** **Grapefruit products** may increase concentration, toxicity. **LAB VALUES:** May increase serum BUN, glucose, uric acid. May decrease platelet count, WBC.

AVAILABILITY (Rx)

Tablets: 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• Give at least 30 min before or 2 hrs after meals. • Do not give with grapefruit products.

INDICATIONS/ROUTES/DOSAGE

Peripheral Vascular Disease

PO: ADULTS, ELDERLY: 100 mg twice a day at least 30 min before or 2 hrs after meals. Decrease to 50 mg twice a day during concurrent therapy with CYP3A4 or CYP2C19 inhibitors (e.g., clarithromycin, diltiazem, erythromycin, fluconazole, fluoxetine, omeprazole, sertraline).

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (34%–10%): Headache, diarrhea, palpitations, dizziness, pharyngitis. **Occasional (7%–3%):** Nausea, rhinitis, back pain, peripheral edema, dyspepsia, abdominal pain, tachycardia, cough, flatulence, myalgia. **Rare (2%–1%):** Leg cramps, paresthesia, rash, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose noted as severe headache, diarrhea, hypotension, cardiac arrhythmias. May increase risk of endocardial hemorrhage, fibrosis of left ventricle, intimal thickening of coronary artery.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess CBC (esp. platelet count), BMP, LFT before treatment and periodically during treatment.

INTERVENTION/EVALUATION

Monitor for improvement of symptoms (e.g., improved walking distance). Monitor lab tests periodically. Monitor for bleeding events, cardiovascular toxicity or lesions.

PATIENT/FAMILY TEACHING

• Take on an empty stomach (at least 30 min before or 2 hrs after meals). • Do not take with grapefruit products.

cimetidine

sye-**met**-i-deen
(Apo-Cimetidine, Novo-Cimetidine, Tagamet HB 200)
Do not confuse cimetidine with simethicone.

CLASSIFICATION

PHARMACOTHERAPEUTIC: H_2-receptor antagonist. **CLINICAL:** Antiulcer, gastric acid secretion inhibitor.

USES

Short-term treatment of active duodenal ulcer. Prevention of duodenal ulcer recurrence. Treatment of benign gastric ulcer, pathologic GI hypersecretory conditions, gastroesophageal reflux disease (GERD). **OTC use**: Heartburn, acid indigestion. **OFF-LABEL:** *H. pylori* eradication to reduce risk of duodenal ulcer recurrence.

PRECAUTIONS

Contraindications: Hypersensitivity to other H_2 antagonists. **Cautions:** Renal/hepatic impairment, elderly. Concurrent administration of medications utilizing P450 system.

ACTION

Inhibits histamine action at histamine-2 (H_2)-receptor sites of gastric parietal cells. **Therapeutic Effect:** Reduces gastric acid secretion, gastric volume, hydrogen ion concentration.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 15%–20%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. Possible adverse effects on fetal development. **Pregnancy Category B. Children:** Long-term use may induce cerebral toxicity, affect hormonal system. **Elderly:** More likely to experience confusion, esp. pts with renal impairment.

INTERACTIONS

DRUG: May increase concentration, decrease metabolism of **warfarin, phenytoin, propranolol, tricyclic antidepressants.** May decrease absorption of **itraconazole, ketoconazole.** **HERBAL:** **St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** Interferes with skin tests using allergen extracts. May increase serum prolactin, creatinine, ALT, AST. May decrease parathyroid hormone concentration.

AVAILABILITY (Rx)

Liquid, Oral: 300 mg/5 ml. **Tablets:** 200 mg (OTC), 300 mg, 400 mg, 800 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Best given with meals and at bedtime. • Do not administer within 1 hr of antacids.

INDICATIONS/ROUTES/DOSAGE

Active Duodenal Ulcer

PO: ADULTS, ELDERLY: 300 mg 4 times a day or 400 mg twice a day or 800 mg at bedtime for up to 8 wks.

Prevention of Duodenal Ulcer

PO: ADULTS, ELDERLY: 400 mg at bedtime.

Gastric Hypersecretory Secretions

PO: ADULTS, ELDERLY: 300–600 mg q6h. **Maximum:** 2,400 mg/day.

Gastroesophageal Reflux Disease (GERD)

PO: ADULTS, ELDERLY: 800 mg twice a day or 400 mg 4 times a day for 12 wks.

OTC Use

PO: ADULTS, ELDERLY: 200 mg up to 30 min before meals. **Maximum:** 2 doses/day.

Usual Pediatric/Neonatal Dosage

CHILDREN: 20–40 mg/kg/day in divided doses q6h. **INFANTS:** 10–20 mg/kg/day in divided doses q6–12h. **NEONATES:** 5–10 mg/kg/day in divided doses q8–12h.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance.

Creatinine Clearance	Dosage
Greater than 50 ml/min	No change
10–50 ml/min	50% of normal dose
Less than 10 ml/min	25% of normal dose

Give after hemodialysis and q12h between dialysis sessions.

Dosage in Hepatic Impairment

Caution in severe impairment.

SIDE EFFECTS

Occasional (4%–2%): Headache. **Elderly, pts with renal impairment, severely ill pts:** Confusion, agitation, psychosis, depression, anxiety, disorientation, hallucinations. Effects reverse 3–4 days after discontinuance. **Rare (less than 2%):** Diarrhea, dizziness, drowsiness, nausea, vomiting, gynecomastia, rash, impotence.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, PT, aPTT, BUN, creatinine.

INTERVENTION/EVALUATION

Assess for GI bleeding: hematemesis, blood in stool. Monitor for changes in mental status in elderly, severely ill, those with renal impairment.

PATIENT/FAMILY TEACHING

• Do not take antacids within 1 hr of cimetidine administration. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid smoking, excessive amounts of caffeine. • Report any blood in vomitus/stool, or dark, tarry stool.

cinacalcet

TOP 100

sin-a-**kal**-set
(Sensipar)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium receptor agonist. **CLINICAL:** Calcimimetic.

USES

Treatment of hypercalcemia in pts with parathyroid carcinoma. Treatment of secondary hyperparathyroidism in pts with chronic renal disease on dialysis. Treatment of severe hypercalcemia in pts with hyperparathyroidism unable to undergo parathyroidectomy.

PRECAUTIONS

Contraindications: Hypocalcemia. **Cautions:** Cardiovascular disease, moderate to severe hepatic disorder, seizure disorder.

ACTION

Increases sensitivity of calcium-sensing receptor on parathyroid gland to activation by extracellular calcium, thus lowering parathyroid hormone (PTH) levels. **Therapeutic Effect:** Decreases serum calcium, PTH levels.

PHARMACOKINETICS

Extensively distributed after PO administration. Protein binding: 93%–97%. Metabolized in liver. Excreted in urine (80%), feces (15%). **Half-life:** 30–40 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cross placental barrier; unknown if distributed in breast milk. Safe usage during lactation not established (potential adverse reaction in infants). **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Strong CYP3A4 inhibitors (e.g., erythromycin, itraconazole, ketoconazole)** increase concentration/effects. Concurrent administration of drugs metabolized by **CYP2D6 enzyme (e.g., flecainide, tricyclic antidepressants, metoprolol, carvedilol),** may require dosage adjustment. **HERBAL:** None significant. **FOOD:** **High-fat meals** increase plasma concentration. **LAB VALUES:** May decrease serum calcium, phosphorus.

AVAILABILITY (Rx)

Tablets: 30 mg, 60 mg, 90 mg.

ADMINISTRATION/HANDLING

PO

• Store at room temperature. • Do not break, crush, dissolve, or divide film-coated tablets. • Administer with food or shortly after a meal.

INDICATIONS/ROUTES/DOSAGE

Hypercalcemia in Parathyroid Carcinoma; Primary Hyperparathyroidism

PO: ADULTS, ELDERLY: Initially, 30 mg twice a day. Titrate dosage sequentially (60 mg twice a day, 90 mg twice a day, and 90 mg 3–4 times a day) every 2–4 wks as needed to normalize serum calcium level. **Maximum:** 360 mg/day (as 90 mg 4 times/day).

Secondary Hyperparathyroidism in Pts on Dialysis

PO: ADULTS, ELDERLY: Initially, 30 mg once a day. Titrate dosage sequentially (60, 90, 120, and 180 mg once a day) every 2–4 wks to maintain iPTH level between 150 and 300 pg/ml. **Maximum:** 180 mg/day.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (31%–21%): Nausea, vomiting, diarrhea. **Occasional (15%–10%):** Myalgia, dizziness. **Rare (7%–5%):** Asthenia, hypertension, anorexia, noncardiac chest pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may lead to hypocalcemia, seizures, worsening of HF.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline serum electrolyte levels (esp. serum calcium, phosphorus, ionized calcium).

INTERVENTION/EVALUATION

Monitor serum calcium, phosphorus, ionized calcium for hyperparathyroidism. Monitor daily pattern of bowel activity, stool consistency. Obtain order for antidiarrhea, antiemetic medication to prevent serum electrolyte imbalance. Assess for evidence of dizziness, institute fall risk precautions.

PATIENT/FAMILY TEACHING

• Take with food or shortly after a meal. • Do not chew, crush, dissolve, divide film-coated tablets. • Notify physician immediately if vomiting, diarrhea, cramping, muscle pain, numbness occurs.

C

ciprofloxacin

sip-roe-**flox**-a-sin
(Apo-Ciproflox, Cetraxal, Ciloxan, Cipro, Cipro XR, Novo-Ciprofloxacin)

■ **BLACK BOX ALERT** ■ May increase risk of tendonitis, tendon rupture. May exacerbate myasthenia gravis.

Do not confuse Ciloxan with Cytoxan, or Cipro with Ceftin, or ciprofloxacin with cephalexin.

FIXED-COMBINATION(S)

Cipro HC Otic: ciprofloxacin/hydrocortisone (a steroid): 0.2%/1%. **CiproDex Otic:** ciprofloxacin/dexamethasone (a corticosteroid): 0.3%/0.1%.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Fluoroquinolone. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *E. coli, K. pneumoniae, E. cloacae, P. mirabilis, P. vulgaris, P. aeruginosa, H. influenzae, M. catarrhalis, S. pneumoniae, S. aureus* (methicillin susceptible), *S. epidermidis, S. pyogenes, C. jejuni, Shigella* spp., *S. typhi* including intra-abdominal, bone, joint, lower respiratory tract, skin/skin structure infections; UTIs, infectious diarrhea, prostatitis, sinusitis, typhoid fever, febrile neutropenia. **Ophthalmic:** Treatment of superficial ocular infections. **OTIC:** Treatment of acute otitis externa due to susceptible strains of *P. aeruginosa* or *S. aureus*. **OFF-LABEL:** Treatment of chancroid. Acute pulmonary exacerbations in cystic fibrosis, disseminated gonococcal infections, prophylaxis to *Neisseria meningitidis* following close contact with infected person. Infectious diarrhea (children); periodontitis.

PRECAUTIONS

Contraindications: Hypersensitivity to any fluoroquinolones, other quinolones. Concurrent use of tizanidine. **Cautions:** Renal impairment, CNS disorders, seizures, rheumatoid arthritis, history of QT prolongation, uncorrected hypokalemia, hypomagnesemia, myasthenia gravis. Suspension not used through feeding or gastric tubes. Use in children (due to adverse events to joints/surrounding tissue).

ACTION

Inhibits enzyme, DNA gyrase, in susceptible bacteria, interfering with bacterial cell replication. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 20%–40%. Widely distributed including to CSF. Metabolized in liver. Primarily excreted in urine. Minimal removal by hemodialysis. **Half-life:** 3–5 hrs (increased in renal impairment, elderly).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. If possible, do not use during pregnancy/lactation (risk of arthropathy to fetus/infant). **Pregnancy Category C. Children:** Arthropathy may occur if given to children younger than 18 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Antacids, iron preparations, sucralfate may decrease absorption. May increase effects of **caffeine, oral anticoagulants (e.g., warfarin).** May decrease concentration of **fosphenytoin, phenytoin.** May increase concentration, toxicity of **theophylline.** Decreases **theophylline** clearance. **HERBAL: Dong quai, St. John's wort** may increase photosensitization. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, creatine kinase (CK), LDH, ALT, AST.

AVAILABILITY (Rx)

Infusion Solution: 200 mg/100 ml, 400 mg/200 ml. **Injection, Solution (Cipro):** 10 mg/ml. **Ophthalmic Ointment (Ciloxan):** 0.3%. **Ophthalmic Solution (Ciloxan):** 0.3%. **Otic Solution (Cetraxal):** 0.2%. **Suspension, Oral:** 250 mg/5 ml, 500 mg/5 ml. **Tablets (Cipro):** 100 mg, 250 mg, 500 mg, 750 mg.

Tablets (Extended-Release): 500 mg, 1,000 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Available prediluted in infusion container ready for use. Final concentration not to exceed 2 mg/ml.

Rate of Administration • Infuse over 60 min (reduces risk of venous irritation).

Storage • Store at room temperature. • Solution appears clear, colorless to slightly yellow.

PO

• May be given with food to minimize GI upset. • Give at least 2 hrs before or 6 hrs after antacids, calcium, iron, zinc-containing products. • **Tablets, extended-release:** Swallow whole; do not break, crush, cut, or divide. • Do not administer suspension through feeding or gastric tubes. • **NG tube:** Crush immediate-release tablet and mix with water. Flush tube before/after administration.

Ophthalmic

• Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Place ointment or drops into pocket. • Instruct pt to close eye gently for 1–2 min (so medication will not be squeezed out of the sac). • Instruct pt using ointment to roll eyeball to increase contact area of drug to eye. • Instruct pt using solution to apply digital pressure to lacrimal sac at inner canthus for 1 min to minimize systemic absorption. • Do not use ophthalmic solution for injection.

IV INCOMPATIBILITIES

Ampicillin and sulbactam (Unasyn), cefepime (Maxipime), dexamethasone (Decadron), furosemide (Lasix), heparin, hydrocortisone (Solu-Cortef), methylprednisolone (Solu-Medrol), phenytoin (Dilantin), sodium bicarbonate.

IV COMPATIBILITIES

Calcium gluconate, diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), lidocaine, lorazepam (Ativan), magnesium, midazolam (Versed), potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Note: Not recommended as first choice in pregnancy/lactation or children younger than 18 yrs due to adverse events related to joints/surrounding tissue.

Usual Dosage Range

PO: ADULTS, ELDERLY: 250–750 mg q12h. **CHILDREN:** 20–30 mg/kg/day in 2 divided doses. **Maximum:** 1.5 g/day.
IV: ADULTS, ELDERLY: 200–400 mg q12h. **CHILDREN:** 20–30 mg/kg/day in divided doses q12h. **Maximum:** 800 mg/day.

Hemodialysis

PO: ADULTS, ELDERLY: 250–500 mg q24h (after dialysis). **IV:** 200–400 mg q24h.

Peritoneal Dialysis

PO: ADULTS, ELDERLY: 250–500 mg q24h (after dialysis).

Continuous Renal Replacement Therapy

IV: ADULTS, ELDERLY: 200–400 mg q12–24h.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance and the severity of the infection.

Creatinine Clearance	Dosage
30–50 ml/min	PO: 250–500 mg q12h
Less than 30 ml/min	PO (extended-release): 500 mg q24h

C

Creatinine Clearance	Dosage
Less than 30 ml/min	PO (immediate-release): 250–500 mg q18h IV: 200–400 mg q18–24h

Dosage in Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Frequent (5%–2%): Nausea, diarrhea, dyspepsia, vomiting, constipation, flatulence, confusion, crystalluria. **Ophthalmic:** Burning, crusting in corner of eye. **Occasional (less than 2%):** Abdominal pain/discomfort, headache, rash. **Ophthalmic:** Altered taste, sensation of foreign body in eye, eyelid redness, itching. **Rare (less than 1%):** Dizziness, confusion, tremors, hallucinations, hypersensitivity reaction, insomnia, dry mouth, paresthesia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Superinfection (esp. enterococcal, fungal), nephropathy, cardiopulmonary arrest, cerebral thrombosis may occur. Hypersensitivity reaction (rash, pruritus, blisters, edema, burning skin), photosensitivity have occurred. Sensitization to ophthalmic form may contraindicate later systemic use of ciprofloxacin.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of hypersensitivity to ciprofloxacin, quinolones.

INTERVENTION/EVALUATION

Obtain urinalysis for microscopic analysis for crystalluria prior to and during treatment. Evaluate food tolerance. Monitor daily pattern of bowel activity, stool consistency. Encourage hydration (reduces risk of crystalluria). Monitor for dizziness, headache, visual changes, tremors. Assess for chest, joint pain. **Ophthalmic:** Observe therapeutic response.

PATIENT/FAMILY TEACHING

• Do not skip doses; take full course of therapy. • Maintain adequate hydration to prevent crystalluria. • Do not take antacids within 2 hrs of ciprofloxacin (reduces/destroys effectiveness). • Shake suspension well before using; do not chew microcapsules in suspension. • Sugarless gum, hard candy may relieve bad taste. • Avoid caffeine. • Report tendon pain or swelling. • Avoid exposure to sunlight/artificial light (may cause photosensitivity reaction). • Report persistent diarrhea. • **Ophthalmic:** Crystal precipitate may form, usual resolution in 1–7 days.

cisplatin

HIGH ALERT

sis-**pla**-tin
(Platinol-AQ)

■ **BLACK BOX ALERT** ■ Cumulative renal toxicity may be severe. Dose-related toxicities include myelosuppression, nausea, vomiting. Ototoxicity, especially pronounced in children, noted by tinnitus, loss of high-frequency hearing, deafness. Must be administered by personnel trained in administration/handling of chemotherapeutic agents. Anaphylactic reaction can occur within minutes of administration. Avoid confusion between cisplatin and carboplatin.

Do not confuse cisplatin with carboplatin or oxaliplatin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Platinum coordination complex. **CLINICAL:** Antineoplastic.

USES

Treatment of metastatic testicular tumors, metastatic ovarian tumors, advanced bladder carcinoma. **OFF-LABEL:** Breast, cervical, endometrial, esophageal, gastric, head and neck, lung (small-cell, non–small-cell) carcinomas; Hodgkin's and non-Hodgkin's lymphomas; malignant

melanoma, neuroblastoma, osteosarcoma, soft tissue sarcoma, Wilms tumor.

PRECAUTIONS

Contraindications: Hearing impairment, myelosuppression, preexisting renal impairment. **Cautions:** Elderly, renal impairment.

ACTION

Inhibits DNA and, to a lesser extent, RNA protein synthesis by cross-linking with DNA strands. Cell cycle–phase nonspecific. **Therapeutic Effect:** Prevents cellular division.

PHARMACOKINETICS

Widely distributed. Protein binding: greater than 90%. Undergoes rapid nonenzymatic conversion to inactive metabolite. Excreted in urine. Removed by hemodialysis. **Half-life:** 58–73 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. Breastfeeding not recommended. **Pregnancy Category D. Children:** Ototoxic effects may be more severe. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May decrease effects of **anticonvulsant medications. Bone marrow depressants (e.g., paclitaxel)** may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **Nephrotoxic, ototoxic agents (e.g., aminoglycosides)** may increase risk of toxicity. **HERBAL:** Avoid **black cohosh, dong quai** with estrogen-dependent tumors. **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, creatinine, uric acid, AST. May decrease creatinine clearance, serum calcium, magnesium, phosphate, potassium, sodium. May cause positive Coombs' test.

AVAILABILITY (Rx)

Injection Solution: 1 mg/ml (50 ml, 100 ml, 200 ml).

ADMINISTRATION/HANDLING

◀ALERT▶ Wear protective gloves during handling. May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

IV

Dilution • Dilute desired dose in 250–1,000 ml 0.9% NaCl, D_5/0.45% NaCl, or D_5/0.9% NaCl to concentration of 0.05–2 mg/ml. Solution should have final NaCl concentration of 0.2% or greater.

Rate of Administration • Infuse over 6–8 hrs (per protocol). • Avoid rapid infusion (increases risk of nephrotoxicity, ototoxicity). • Monitor for anaphylactic reaction during first few minutes of infusion.

Storage • Protect from sunlight. • Do not refrigerate (may precipitate). Discard if precipitate forms. IV infusion: Stable for 72 hrs at 39°F–77°F.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), piperacillin and tazobactam (Zosyn), sodium bicarbonate.

IV COMPATIBILITIES

Etoposide (VePesid), granisetron (Kytril), heparin, hydromorphone (Dilaudid), lipids, lorazepam (Ativan), magnesium sulfate, mannitol, morphine, ondansetron (Zofran), palonosetron (Aloxi).

INDICATIONS/ROUTES/DOSAGE

Note: Pretreatment hydration with 1–2 liters of fluid recommended. Adequate hydration, urine output greater than 100 ml/hr should be maintained for 24 hrs after administration.

Bladder Carcinoma

IV: ADULTS, ELDERLY: (Single agent): 50–70 mg/m^2 q3–4wks.

C

Ovarian Tumors

IV: ADULTS, ELDERLY: 75–100 mg/m² q3–4wks (combination therapy) or 100 mg/m² q4wks (single agent).

Testicular Tumors

IV: ADULTS, ELDERLY: 20 mg/m² daily for 5 days repeated q3wks.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance, BUN.

◄ALERT► Repeated courses of cisplatin should not be given until serum creatinine is less than 1.5 mg/100 ml and/or BUN is less than 25 mg/100 ml.

Creatinine Clearance	Dosage
10–50 ml/min	75% of normal dose
Less than 10 ml/min	50% of normal dose
Hemodialysis	50% of dose post dialysis
Peritoneal dialysis	50% of dose
Continuous renal replacement therapy	75% of dose

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Nausea, vomiting (occurs in more than 90% of pts, generally beginning 1–4 hrs after administration and lasting up to 24 hrs); myelosuppression (affecting 25%–30% of pts, with recovery generally occurring in 18–23 days). **Occasional:** Peripheral neuropathy (with prolonged therapy [4–7 mos]). Pain/redness at injection site, loss of taste, appetite. **Rare:** Hemolytic anemia, blurred vision, stomatitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Anaphylactic reaction (angioedema, wheezing, tachycardia, hypotension) may occur in first few minutes of administration in pt previously exposed to cisplatin. Nephrotoxicity occurs in 28%–36% of pts treated with a single dose, usually during second wk of therapy. Ototoxicity (tinnitus, hearing loss) occurs in 31% of pts treated with a single dose (more severe in children). Symptoms may become more frequent, severe with repeated doses.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, serum chemistry tests, urinalysis prior to initiation. Pts should be well hydrated before and 24 hrs after medication to ensure adequate urinary output (100 ml/hr), decrease risk of nephrotoxicity.

INTERVENTION/EVALUATION

Measure all emesis, urine output (general guideline requiring immediate notification of physician: 750 ml/8 hrs, urinary output less than 100 ml/hr). Monitor I&O q1–2h beginning with pretreatment hydration, continue for 48 hrs after dose. Assess vital signs q1–2h during infusion. Monitor urinalysis, serum electrolytes, LFT, renal function tests, CBC, platelet count for changes from baseline.

PATIENT/FAMILY TEACHING

• Report signs of ototoxicity (tinnitus, hearing loss). • Do not have immunizations without physician's approval (lowers body's resistance). • Avoid contact with those who have recently taken oral polio vaccine. • Report if nausea/vomiting continues at home. • Report signs of peripheral neuropathy.

citalopram

sye-**tal**-o-pram
(Apo-Citalopram, Celexa)

■ **BLACK BOX ALERT** ■ Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse Celexa with Celebrex, Cerebyx, Ranexa, or Zyprexa.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin reuptake inhibitor. **CLINICAL:** Antidepressant.

USES

Treatment of depression. **OFF-LABEL:** Treatment of alcohol abuse, diabetic neuropathy, obsessive-compulsive disorder, smoking cessation.

PRECAUTIONS

Contraindications: Sensitivity to citalopram, use within 14 days of MAOIs, concurrent use with linezolid. **Cautions:** Elderly, hepatic/renal impairment, seizure disorder. Not recommended in pts with congenital long QT syndrome, bradycardia, recent MI, uncompensated HF, hypokalemia, or hypomagnesemia. Pts at high risk of suicide.

ACTION

Blocks uptake of the neurotransmitter serotonin at CNS presynaptic neuronal membranes, increasing its availability at postsynaptic receptor sites. **Therapeutic Effect:** Relieves depression.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 80%. Extensively metabolized in liver. Excreted in urine. **Half-life:** 35 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category C. Children:** May cause increased anticholinergic effects, hyperexcitability. **Elderly:** More sensitive to anticholinergic effects (e.g., dry mouth), more likely to experience dizziness, sedation, confusion, hypotension, hyperexcitability.

INTERACTIONS

DRUG: **CYP2C19 inhibitors (e.g., fluconazole), other medications prolonging QT** interval may increase risk of QT prolongation. **Linezolid, MAOIs, triptans** may cause serotonin syndrome (excitement, diaphoresis, rigidity, hyperthermia, autonomic hyperactivity, coma). **HERBAL:** **Gotu kola, kava kava, SAMe, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may increase risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** May decrease serum sodium.

AVAILABILITY (Rx)

Oral Solution: 10 mg/5 ml. **Tablets:** 10 mg, 20 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Note: Doses greater than 40 mg not recommended.

Depression

PO: ADULTS: Initially, 20 mg once a day in the morning or evening. May increase in 20-mg increments at intervals of no less than 1 wk. **Maximum:** 40 mg/day. **ELDERLY, PTS WITH HEPATIC IMPAIRMENT: Concomitant Use in Poor Metabolizers of CYP2C19, Concurrent use of CYP2C19 Inhibitors:** 20 mg/day. **Maximum:** 20 mg/day.

Dosage in Renal Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (21%–11%): Nausea, dry mouth, drowsiness, insomnia, diaphoresis. **Occasional (8%–4%):** Tremor, diarrhea, abnormal ejaculation, dyspepsia, fatigue, anxiety, vomiting, anorexia. **Rare (3%–2%):** Sinusitis, sexual dysfunction, menstrual disorder, abdominal pain, agitation, decreased libido.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose manifested as dizziness, drowsiness, tachycardia, confusion, seizures, Torsades de Pointes, ventricular tachycardia, sudden death.

C

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Hepatic/renal function tests, blood counts should be performed periodically for pts on long-term therapy. Observe, record behavior. Assess psychological status, thought content, sleep pattern, appearance, interest in environment. Screen for bipolar disorder.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess appearance, behavior, speech pattern, level of interest, mood.

PATIENT/FAMILY TEACHING

• Do not stop taking medication or increase dosage. • Avoid alcohol. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report worsening depression, suicidal ideation, unusual changes in behavior.

cladribine

HIGH ALERT

klad-ree-bine

■ **BLACK BOX ALERT** ■ Must be administered by personnel trained in administration/handling of chemotherapeutic agents. Myelosuppression, neurologic toxicity, acute nephrotoxicity have been reported.

Do not confuse cladribine with clevidipine, clofarabine, or fludarabine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic.

USES

Treatment of active hairy cell leukemia defined by clinically significant anemia, neutropenia, thrombocytopenia. **OFF-LABEL:** Treatment of chronic lymphocytic leukemia, non-Hodgkin's lymphoma, acute myeloid leukemia.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment. Preexisting hematologic or immunologic abnormalities; those with high tumor burden. Use of live vaccines.

ACTION

Disrupts cellular metabolism by incorporating into DNA of dividing cells. Cytotoxic to both actively dividing and quiescent lymphocytes, monocytes. **Therapeutic Effect:** Prevents DNA synthesis.

PHARMACOKINETICS

Protein binding: 20%. Metabolized in liver. Primarily excreted in urine. **Half-life:** 5.4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May produce fetal harm; may be embryotoxic, fetotoxic; potential for serious reactions in breastfed infants. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Bone marrow depressants** may increase myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** May decrease platelets, Hgb, Hct, neutrophils during initial dose of therapy. Resolution of anemia, neutropenia, thrombocytopenia indicates disease progression.

AVAILABILITY (Rx)

Injection Solution: 1 mg/ml (10 ml).

ADMINISTRATION/HANDLING

IV

◄ALERT► • Wear gloves, protective clothing during handling; if contact with skin, rinse with copious amounts of water.

Reconstitution • Must dilute before administration. • Add calculated dose (0.09 mg/kg) to 500 ml 0.9% NaCl.
Rate of Administration • Infuse over 0.5–2 hrs.
Storage • Refrigerate unopened vials. • May refrigerate diluted solution for no more than 8 hrs. • Diluted solution is stable for at least 24 hrs at room temperature. • Discard unused portion.

IV INCOMPATIBILITIES

None known.

IV COMPATIBILITIES

Dexamethasone (Decadron), granisetron (Kytril), ondansetron (Zofran).

INDICATIONS/ROUTES/DOSAGE

Hairy Cell Leukemia

IV Infusion: ADULTS, CHILDREN: 0.09–0.1 mg/kg/day as continuous infusion for 7 days. May repeat every 28–35 days.

Dosage in Renal Impairment

	Children	Adults
CrCl 10–50	50% of dose	75% of dose
CrCl less than 10	30% of dose	50% of dose
Hemodialysis	30% of dose	—
Peritoneal dialysis	—	50% of dose
Continuous renal replacement therapy	50% of dose	—

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (69%–13%): Fever, fatigue, nausea, rash, headache, injection site reactions, anorexia, vomiting. **Occasional (10%–5%):** Diarrhea, cough, purpura, chills, diaphoresis, constipation, dizziness, petechiae, myalgia, shortness of breath, malaise, pruritus, erythema, insomnia, edema, tachycardia, abdominal/trunk pain, epistaxis, arthralgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression characterized as severe neutropenia (WBC less than 500 cells/mm^3), severe anemia (Hgb less than 8.5 g/dL), thrombocytopenia occur commonly. High-dose treatment may produce acute nephrotoxicity (increased serum BUN, creatinine levels), neurotoxicity (irreversible motor weakness of upper/lower extremities).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support. Perform neurologic exam before chemotherapy. Use strict asepsis; protect pt from infection. Obtain baseline CBC, serum chemistries.

INTERVENTION/EVALUATION

Monitor vital signs during infusion, esp. during first hour. Observe for hypotension, bradycardia (both do not usually occur during same course). Immediately discontinue if severe hypersensitivity reaction occurs. Monitor for and report fever promptly. Assess for signs of infection. Assess skin for evidence of rash, purpura, petechiae. Monitor CBC, serum creatinine, potassium, sodium.

PATIENT/FAMILY TEACHING

• There is a narrow margin between therapeutic and toxic response. • Avoid crowds, persons with known infections; report signs of infection at once (fever, flu-like symptoms). • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Avoid pregnancy.

clarithromycin

kla-**rith**-roe-**mye**-sin
(Apo-Clarithromycin, Biaxin, Biaxin XL, PMS-Clarithromycin)

C

Do not confuse clarithromycin with Claritin, clindamycin, or erythromycin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Macrolide.
CLINICAL: Antibiotic.

USES

Treatment of susceptible infections due to *C. pneumoniae, H. influenzae, H. parainfluenzae, H. pylori, M. catarrhalis, M. avium, M. pneumoniae, S. aureus, S. pneumoniae, S. pyogenes,* including bacterial exacerbation of bronchitis, otitis media, acute maxillary sinusitis, *Mycobacterium avium* complex (MAC), pharyngitis, tonsillitis, *H. pylori* duodenal ulcer, community acquired pneumonia, skin and soft tissue infections. Prevention of MAC disease. **OFF-LABEL:** Prophylaxis of infective endocarditis, pertussis, Lyme disease.

PRECAUTIONS

Contraindications: Hypersensitivity to other macrolide antibiotics. History of QT prolongation or ventricular arrhythmias including torsades de pointes. History of cholestatic jaundice or hepatic impairment with prior clarithromycin use. Concomitant use with colchicine (in pts with renal/hepatic impairment), lovastatin, simvastatin. **Cautions:** Hepatic/renal impairment, elderly with severe renal impairment, myasthenia gravis, coronary artery disease.

ACTION

Binds to ribosomal receptor sites of susceptible organisms, inhibiting protein synthesis of bacterial cell wall. **Therapeutic Effect:** Bacteriostatic; may be bactericidal with high dosages or very susceptible microorganisms.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 65%–75%. Widely distributed (except CNS). Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 3–7 hrs; metabolite, 5–9 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 6 mos. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May increase concentrations, toxicity of **carbamazepine, colchicine, digoxin, ergotamine, theophylline, sildenafil, tadalafil, vardenafil. Rifabutin, rifampin, atorvastatin, efavirenz** may decrease plasma concentration. May increase effect of **warfarin**. May decrease concentration of **zidovudine. Atazanavir, ritonavir** may increase concentration of clarithromycin. **HERBAL: St. John's wort** may decrease plasma concentration. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, ALT, AST, alkaline phosphatase, LDH, creatinine, PT. May decrease WBC.

AVAILABILITY (Rx)

Oral Suspension (Biaxin): 125 mg/5 ml, 250 mg/5 ml. **Tablets (Biaxin):** 250 mg, 500 mg.

Tablets (Extended-Release [Biaxin XL]): 500 mg.

ADMINISTRATION/HANDLING

PO

• Give immediate-release tablets, oral suspension without regard to food. • Give q12h (rather than twice daily). • Shake suspension well before each use. • Extended-release tablets should be given with food. • Do not break, crush, dissolve, or divide extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO: ADULTS, ELDERLY: 250–500 mg q12h or 500–1,000 mg once daily (extended-release tablets). **CHILDREN 6 MOS AND OLDER:** 7.5 mg/kg q12h. **Maximum:** 500 mg.

Dosage in Renal Impairment

Creatinine clearance less than 30 ml/min: Reduce dose by 50% and administer once or twice a day. **HD:** Administer dose after dialysis complete.

Combination with atazanavir

CrCl 30–60 ml/min	Decrease dose by 50%
CrCl <30 ml/min	Decrease dose by 75%

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (6%–3%): Diarrhea, nausea, altered taste, abdominal pain. **Rare (2%–1%):** Headache, dyspepsia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance in GI tract. Hepatotoxicity, thrombocytopenia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question pt for allergies to clarithromycin, erythromycins.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable, but increasing severity may indicate onset of antibiotic-associated colitis. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor CBC, serum BUN, creatinine.

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Doses should be evenly spaced. • Biaxin may be taken without regard to food. Take Biaxin XL with food. • Report severe diarrhea.

clindamycin

klin-da-**mye**-sin
(Apo-Clindamycin, Cleocin, Cleocin T, Cleocin Vaginal, Clindagel, Clindamax, Clindesse)

■ **BLACK BOX ALERT** ■ May cause severe, potentially fatal colitis characterized by severe, persistent diarrhea, severe abdominal cramps, passage of blood and mucus.

Do not confuse Cleocin with Clinoril or Cubicin, or clindamycin with clarithromycin, Claritin, or vancomycin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Lincosamide. **CLINICAL:** Antibiotic.

USES

Systemic: Treatment of aerobic gram-positive staphylococci and streptococci (not enterococci), *Fusobacterium, Bacteroides* spp., and *Actinomyces* for treatment of respiratory tract infections, skin/soft tissue infections, sepsis, intra-abdominal infections, infections of female pelvis and genital tract, bacterial endocarditis prophylaxis for dental and upper respiratory procedures in penicillin-allergic pts, perioperative prophylaxis. **Topical:** Treatment of acne vulgaris. **Intravaginal:** Treatment of bacterial vaginosis. **OFF-LABEL:** Treatment of actinomycosis, babesiosis, erysipelas, malaria, otitis media, *Pneumocystis jiroveci* pneumonia (PCP), sinusitis, toxoplasmosis. **PO:** Bacterial vaginosis.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe hepatic dysfunction; history of GI disease.

C

ACTION

Inhibits protein synthesis of bacterial cell wall by binding to bacterial ribosomal receptor sites. Topically, decreases fatty acid concentration on skin. **Therapeutic Effect:** Bacteriostatic or bacteriocidal.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Protein binding: 92%–94%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 1.6–5.3 hrs (increased in renal impairment, premature infants).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. **Topical/vaginal:** Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Caution in pts younger than 1 mo. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Adsorbent antidiarrheals** may delay absorption. **Erythromycin** may increase effect. May increase effects of **neuromuscular blockers.** **HERBAL:** **St. John's wort** may decrease concentration/effect. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST.

AVAILABILITY (Rx)

Capsules: 75 mg, 150 mg, 300 mg. **Cream, Vaginal (Cleocin, Clindesse):** 2%. **Gel, Topical (Cleocin T, Clindagel, Clindamax):** 1%. **Infusion, Premix (Cleocin):** 300 mg/50 ml, 600 mg/50 ml, 900 mg/50 ml. **Injection Solution (Cleocin):** 150 mg/ml. **Lotion (Cleocin T, Clindamax):** 1%. **Oral Solution (Cleocin Pediatric):** 75 mg/5 ml. **Suppositories, Vaginal (Cleocin):** 100 mg. **Swabs, Topical (Cleocin T):** 1%.

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute 300–600 mg with 50 ml D_5W or 0.9% NaCl (900–1,200 mg with 100 ml).

Rate of Administration • Infuse over at least 10–60 min at rate not exceeding 30 mg/min. Severe hypotension, cardiac arrest can occur with rapid administration. • No more than 1.2 g should be given in a single infusion.

Storage • Reconstituted IV infusion (piggyback) is stable for 16 days at room temperature, 32 days if refrigerated.

IM

• Do not exceed 600 mg/dose. • Administer deep IM.

PO

• Store capsules at room temperature. • After reconstitution, oral solution is stable for 2 wks at room temperature. • Do not refrigerate oral solution (avoids thickening). • Give with at least 8 oz water (minimizes esophageal ulceration). • Give without regard to food.

Topical

• Wash skin, allow to completely dry before application. • Shake topical lotion well before each use. • Apply liquid, solution, or gel in thin film to affected area. • Avoid contact with eyes or abraded areas.

Vaginal, Cream or Suppository

• Use one applicatorful or suppository at bedtime. • Fill applicator that comes with cream or suppository to indicated level. • Instruct pt to lie on back with knees drawn upward and spread apart. • Insert applicator into vagina and push plunger to release medication. • Withdraw, wash applicator with soap and warm water. • Wash hands promptly to avoid spreading infection.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), fluconazole (Diflucan).

IV COMPATIBILITIES

Amiodarone (Cordarone), diltiazem (Cardizem), heparin, hydromorphone (Dilaudid), magnesium sulfate, midazolam

(Versed), morphine, multivitamins, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IV, IM: ADULTS, ELDERLY: 1.2–2.7 g/day in 2–4 divided doses. **Maximum:** 4.8 g/day. **CHILDREN 1 MO–16 YRS:** 20–40 mg/kg/day in 3–4 divided doses. **Maximum:** 2,700 mg. **CHILDREN YOUNGER THAN 1 MO:** 5 mg/kg/dose q6–12h.
PO: ADULTS, ELDERLY: 150–450 mg q6h. **Maximum:** 1.8 g/day. **CHILDREN 1 MO–16 YRS:** 8–40 mg/kg/day in divided doses q6–8h. **CHILDREN YOUNGER THAN 1 MO:** 5 mg/kg/dose q6–12h.

Bacterial Vaginosis

Intravaginal *(Cream)*: ADULTS: One applicatorful at bedtime for 3–7 days or 1 suppository at bedtime for 3 days. ***(Clindesse)*: ADULTS:** One applicatorful once daily.

Acne Vulgaris

Topical: ADULTS: Apply thin layer to affected area twice a day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Systemic: Abdominal pain, nausea, vomiting, diarrhea. **Topical:** Dry, scaly skin. **Vaginal:** Vaginitis, pruritus. **Occasional: Systemic:** Phlebitis; pain, induration at IM injection site, allergic reaction, urticaria, pruritus. **Topical:** Contact dermatitis, abdominal pain, mild diarrhea, burning, stinging. **Vaginal:** Headache, dizziness, nausea, vomiting, abdominal pain. **Rare: Vaginal:** Hypersensitivity reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may occur during and several wks after clindamycin therapy (including topical form). Blood dyscrasias (leukopenia, thrombocytopenia), nephrotoxicity (proteinuria, azotemia, oliguria) occur rarely. Thrombophlebitis with IV administration.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline WBC. Question pt for history of allergies. Avoid, if possible, concurrent use of neuromuscular blocking agents.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Report diarrhea promptly due to potential for serious colitis (even with topical or vaginal administration). Assess skin for rash (dryness, irritation) with topical application. With all routes of administration, be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Doses should be evenly spaced. • Take oral doses with at least 8 oz water. • Use caution when applying topical clindamycin concurrently with peeling or abrasive acne agents, soaps, alcohol-containing cosmetics to avoid cumulative effect. • Do not apply topical preparations near eyes, abraded areas. • Report severe persistent diarrhea, cramps, bloody stool. • **Vaginal:** In event of accidental contact with eyes, rinse with large amounts of cool tap water. • Do not engage in sexual intercourse during treatment. • Wear sanitary pad to protect clothes against stains. Tampons should not be used.

clobazam

kloe-**ba**-zam
(Apo-Clobazam 🍁, Onfi)
Do not confuse clobazam with clonazepam or clozapine.

C

CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine **(Schedule IV). CLINICAL:** Anticonvulsant.

USES

Adjunctive treatment of seizures associated with Lennox-Gastaut syndrome in pts 2 yrs of age and older. **OFF-LABEL:** Catamenial epilepsy; epilepsy (monotherapy).

PRECAUTIONS

Contraindications: None known. **Cautions:** Elderly, debilitated, mild to moderate hepatic impairment, preexisting muscle weakness or ataxia, concomitant CNS depressants, impaired gag reflex, respiratory disease, sleep apnea, concomitant poor CYP2C19 metabolizers, pts at risk for falls, myasthenia gravis, narrow-angle glaucoma.

ACTION

Potentiates neurotransmission of gamma-aminobutyric acid (GABA) by binding to GABA receptor. Depresses nerve impulse transmission in motor cortex. **Therapeutic Effect:** Decreases seizure activity.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Peak plasma concentration: 0.5–4 hrs. Protein binding: 80–90%. Metabolized in liver. Primarily excreted in urine. Unknown if removed by dialysis. **Half-life:** 36–42 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Excreted in breast milk. Hormonal contraceptives may have decreased effectiveness. Nonhormonal contraception recommended. **Pregnancy Category C. Children:** Safety and efficacy not established in pts younger than 2 yrs. **Elderly:** May have decreased clearance levels (initial dose 5 mg/day).

INTERACTIONS

DRUG: CYP2C19 inhibitors (e.g., fluconazole, fluvoxamine, omeprazole, ticlopidine) may increase concentration/effects. **Alcohol, other CNS depressants** may increase CNS depression. May decrease effects of **hormonal contraceptives. HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Suspension, Oral: 2.5 mg/ml. **Tablets:** 5 mg, 10 mg, 20 mg.

ADMINISTRATION/HANDLING

• May give without regard to food. • Tablets may be crushed and mixed with applesauce. • Shake suspension well. Use oral syringe supplied with suspension.

INDICATIONS/ROUTES/DOSAGE

Seizure Control (Lennox-Gastaut Syndrome)

PO: ADULTS, CHILDREN WEIGHING 30 KG OR LESS: Initially, 5 mg once daily. Increase to 5 mg twice daily on day 7, then increase to 10 mg twice daily on day 14. **Maximum:** 20 mg/day. **ADULTS, CHILDREN WEIGHING MORE THAN 30 KG:** Initially, 5 mg twice daily. Increase to 10 mg twice daily on day 7, then increase to 20 mg twice daily on day 14. **Maximum:** 40 mg/day.

ELDERLY WEIGHING MORE THAN 30 KG, HEPATIC IMPAIRMENT: Initially, 5 mg once daily for 1 wk, then increase to 5 mg twice daily for 1 wk, then increase to 10 mg twice daily. After 1 wk, may increase to 20 mg twice daily.

ELDERLY WEIGHING 30 KG OR LESS, HEPATIC IMPAIRMENT: Initially, 5 mg once daily for 2 wks, then 5 mg twice daily for 1 wk, then 10 mg twice daily.

Dosage in Renal Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (26%–10%): Sleepiness, URI, lethargy. **Occasional (9%–5%):** Drooling,

nausea, vomiting, constipation, irritability, ataxia, insomnia, cough, fatigue. **Rare (4%–2%):** Psychomotor hyperactivity, UTI, decreased/increased appetite, dysarthria, pyrexia, dysphagia, bronchitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

May increase risk of suicidal behavior/ideation (less than 1%). Physical dependence can increase with higher doses or concomitant alcohol/drug abuse. Abrupt benzodiazepine withdrawal may present as profuse sweating, cramping, nausea, vomiting, muscle pain, convulsions, psychosis, hallucinations, aggression, tremor, anxiety, insomnia. Overdose may result in confusion, lethargy, diminished reflexes, respiratory depression, coma. **Antidote:** Flumazenil (see Appendix K for dosage). Decreased mobility may potentiate higher risk of pneumonia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support. Review history of seizure disorder (frequency, duration, intensity, level of consciousness [LOC]). Question history of alcohol use. Obtain baseline vital signs. Assess history of depression/suicidal ideation.

INTERVENTION/EVALUATION

Monitor for excess sedation, respiratory depression, suicidal ideation. Implement seizure precautions, observe frequently for seizure activity. Assist with ambulation if drowsiness, dizziness occurs. Evaluate for therapeutic response. Encourage turning, coughing, deep breathing for pts with decreased mobility or who are bedridden.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Do not abruptly discontinue medication. • If tapering, monitor for drug withdrawal symptoms. • Avoid alcohol. • Report depression, aggression, thoughts of suicide/self-harm, excessive drowsiness.

clofarabine

kloe-**far**-a-bine
(Clolar)
Do not confuse clofarabine with cladribine or clevidipine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic.

USES

Treatment of pediatric pts (1–21 yrs) with relapsed or refractory acute lymphoblastic leukemia (ALL). **OFF-LABEL:** Acute myeloid leukemia (AML) in adults 60 yrs or older. Treatment of relapsed/refractory ALL.

PRECAUTIONS

Contraindications: None known. **Cautions:** Dehydration, hypotension, concomitant nephrotoxic or hepatotoxic medications, renal/hepatic impairment.

ACTION

Metabolized intracellularly to ribonucleotide reductase. Alters mitochondrial membrane necessary in DNA synthesis. **Therapeutic Effect:** Decreases cell replication, inhibits cell repair. Produces cell death.

PHARMACOKINETICS

Protein binding: 47%. Metabolized intracellularly. Primarily excreted in urine (40%–60% unchanged). **Half-life:** 5.2 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Breastfeeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established in pts younger than 1 yr. **Elderly:** No age-related precautions noted.

C

INTERACTIONS

DRUG: **Hepatotoxic, nephrotoxic medications** may increase risk of hepatic/renal toxicity. **HERBAL:** **Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** May increase serum creatinine, uric acid, ALT, AST, bilirubin.

AVAILABILITY (Rx)

Injection, Solution: 1 mg/ml (20-ml vial).

ADMINISTRATION/HANDLING

IV

Reconstitution • Filter clofarabine through sterile, 0.2-micrometer syringe filter prior to dilution with D_5W or 0.9% NaCl to final concentration of 0.15–0.4 mg/ml.

Rate of Administration • Administer over 1–2 hrs. • Continuously infuse IV fluids to decrease risk of tumor lysis syndrome, other adverse events.

Storage • Store undiluted or diluted solution at room temperature. • Use diluted solution within 24 hrs.

IV INCOMPATIBILITIES

Do not administer any other medication through same IV line.

INDICATIONS/ROUTES/DOSAGE

Acute Lymphoblastic Leukemia (ALL)

IV: CHILDREN 1–21 YRS: 52 mg/m^2 over 2 hrs once daily for 5 consecutive days; repeat q2–6wks following recovery or return to baseline organ function. (Subsequent cycles should begin no sooner than 14 days from day 1 of previous cycle.)

Dosage in Renal Impairment

CrCl	
30–60 ml/min	Decrease dose by 50%
<30 ml/min	Use with caution

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (83%–20%): Vomiting, nausea, diarrhea, pruritus, headache, fever, dermatitis, rigors, abdominal pain, fatigue, tachycardia, epistaxis, anorexia, petechiae, limb pain, hypotension, anxiety, constipation, edema. **Occasional (19%–11%):** Cough, mucosal inflammation, erythema, flushing, hematuria, dizziness, gingival bleeding, injection site pain, respiratory distress, pharyngitis, back pain, palmar-plantar erythrodysesthesia syndrome, myalgia, oral candidiasis, hypertension, depression, irritability, arthralgia, anorexia. **Rare (10%):** Tremor, weight gain, drowsiness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Neutropenia occurs in 57% of pts; pericardial effusion in 35%; left ventricular systolic dysfunction in 27%; hepatomegaly, jaundice in 15%; pleural effusion, pneumonia, bacteremia in 10%; capillary leak syndrome in less than 10%.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question possibility of pregnancy. Obtain CBC, serum BUN, creatinine, ALT, AST, bilirubin, creatinine clearance levels prior to therapy.

INTERVENTION/EVALUATION

Monitor B/P, LFT, renal function tests, cardiac function, respiratory status, CBC, platelets, uric acid. Monitor daily pattern of bowel activity, stool consistency. Assess for GI disturbances. Assess skin for pruritus, dermatitis, petechiae, erythema on palms of hands and soles of feet. Assess for fever, sore throat; obtain blood cultures to detect evidence of infection. Ensure adequate hydration.

PATIENT/FAMILY TEACHING

• Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with anyone

who recently received a live virus vaccine. • Avoid crowds, those with infection. • Avoid pregnancy; pts of childbearing potential should use effective contraception. • Maintain strict oral hygiene and frequent handwashing. • Report fever, respiratory distress, prolonged nausea, vomiting, diarrhea, easy bruising.

*clomiPRAMINE

kloe-**mip**-rah-meen
(Anafranil, Apo-Clomipramine, Novo-Clomipramine)

■ **BLACK BOX ALERT** ■ Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse Anafranil with enalapril, or clomipramine with chlorpromazine, clevidipine, clomiphene, or desipramine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Tricyclic.
CLINICAL: Antidepressant.

USES

Treatment of obsessive-compulsive disorder. **OFF-LABEL:** Depression, panic attacks.

PRECAUTIONS

Contraindications: Acute recovery period after MI, use within 14 days of MAOIs. Concurrent use with linezolid. **Cautions:** Pts at high risk for suicide, prostatic hypertrophy, history of urinary retention/obstruction, narrow-angle glaucoma, seizures, cardiovascular/hepatic/renal disease, hyperthyroidism, alcoholism, xerostomia, visual problems, elderly, constipation, history of bowel obstruction.

ACTION

Blocks reuptake of neurotransmitters (norepinephrine, serotonin) at CNS presynaptic membranes, increasing availability at postsynaptic receptor sites. **Therapeutic Effect:** Reduces obsessive-compulsive behavior.

PHARMACOKINETICS

Rapidly absorbed. Metabolized in liver. Eliminated in urine (51%–60%), feces (24%–32%). **Half-life:** 20–30 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category D. Children:** Increased risk of suicidal ideation, behavior noted in children, adolescents. Safety and effectiveness in those younger than 10 yrs not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS, respiratory depression, hypotensive effect. **Cimetidine, haloperidol** may increase concentration, risk of toxicity. May decrease effects of **clonidine. Phenobarbital** may decrease concentration, antidepressant effect. **MAOIs** may increase risk of neuroleptic malignant syndrome, seizures, hyperpyresis, hypertensive crisis. **Phenothiazines** may increase anticholinergic, sedative effects. **Sympathomimetics** may increase the risk of cardiac effects. **HERBAL:** **Gota kola, kava kava, SAMe, St. John's wort, valerian** may increase CNS depression. **FOOD:** **Grapefruit products** may increase concentration, toxicity. **LAB VALUES:** May alter serum glucose, ECG readings.

AVAILABILITY (Rx)

Capsules: 25 mg, 50 mg, 75 mg.

ADMINISTRATION/HANDLING

PO

• May give with food to decrease risk of GI disturbance. • Recommend bedtime administration.

C

INDICATIONS/ROUTES/DOSAGE

Obsessive-Compulsive Disorder (OCD)

PO: ADULTS, ELDERLY: Initially, 25 mg/day. May gradually increase to 100 mg/day in the first 2 wks. **Maximum:** 250 mg/day. **CHILDREN 10 YRS AND OLDER:** Initially, 25 mg/day. May gradually increase up to maximum of 3 mg/kg/day or 100 mg, whichever is lowest. **Maintenance:** May further increase to 200 mg/day.

SIDE EFFECTS

Frequent (30%–15%): Ejaculatory failure, dry mouth, somnolence, tremors, dizziness, headache, constipation, fatigue, nausea. **Occasional (14%–5%):** Impotence, diaphoresis, dyspepsia, sexual dysfunction, dysmenorrhea, nervousness, weight gain, pharyngitis. **Rare (less than 5%):** Diarrhea, myalgia, rhinitis, increased appetite, paresthesia, memory impairment, anxiety, rash, pruritus, anorexia, abdominal pain, vomiting, flatulence, flushing, UTI, back pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce seizures, cardiovascular effects (severe orthostatic hypotension, dizziness, tachycardia, palpitations, arrhythmias), altered temperature regulation (hyperpyrexia, hypothermia). Abrupt discontinuation after prolonged therapy may produce headache, malaise, nausea, vomiting, vivid dreams. Anemia, agranulocytosis have been noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess psychological status, thought content, level of interest, mood, behavior, suicidal ideation.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess appearance, behavior, speech pattern, level of interest, mood.

PATIENT/FAMILY TEACHING

• May cause dry mouth, constipation, blurred vision. Avoid tasks that require alertness, motor skills until response to drug is established. • Tolerance to postural hypotension, sedative, anticholinergic effects usually develop during early therapy. • Maximum therapeutic effect may be noted in 2–4 wks. • Do not abruptly discontinue medication. • Daily dose may be given at bedtime to minimize daytime sedation. • Avoid alcohol. • Report worsening depression, suicidal ideation, change in behavior.

clonazepam

kloe-**naz**-e-pam
(Apo-Clonazepam, Clonapam, Klonopin, Rivotril)

Do not confuse clonazepam or Klonopin with clobazam, clonidine, clozapine, or lorazepam.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine **(Schedule IV). CLINICAL:** Anticonvulsant, antianxiety.

USES

Adjunct in treatment of Lennox-Gastaut syndrome (petit mal variant epilepsy); akinetic, myoclonic seizures; absence seizures (petit mal). Treatment of panic disorder. **OFF-LABEL:** Restless legs syndrome, neuralgia, multifocal tic disorder, parkinsonian dysarthria, bipolar disorder, adjunct therapy for schizophrenia, stomatitis, essential tremor.

PRECAUTIONS

Contraindications: Narrow-angle glaucoma, severe hepatic disease, pregnancy. **Cautions:** Renal/hepatic impairment, impaired gag reflex, chronic respiratory disease, elderly, debilitated pts, depression, pts at suicidal risk, or drug dependence.

ACTION

Depresses all levels of CNS; depresses nerve impulse transmission in motor cortex. Suppresses abnormal discharge in petit mal seizures. **Therapeutic Effect:** Produces anxiolytic, anticonvulsant effects.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	20–60 min	—	12 hrs or less

Well absorbed from GI tract. Protein binding: 85%. Metabolized in liver. Excreted in urine. Not removed by hemodialysis. **Half-life:** 18–50 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. May be distributed in breast milk. Chronic ingestion during pregnancy may produce withdrawal symptoms, CNS depression in neonates. **Pregnancy Category D. Children:** Long-term use may adversely affect physical/mental development. **Elderly:** Usually more sensitive to CNS effects (e.g., ataxia, dizziness, oversedation). Use low dosage, increase gradually.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS depressant effect. **CYP3A4 inhibitors (e.g., azole antifungals)** may increase concentration, toxicity. **HERBAL:** **Gotu kola, kava kava, SAMe, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets (Klonopin): 0.5 mg, 1 mg, 2 mg. **Tablets (Orally Disintegrating):** 0.125 mg, 0.25 mg, 0.5 mg, 1 mg, 2 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Swallow whole with water.

Orally Disintegrating Tablet

• Open pouch, peel back foil; do not push tablet through foil. • Remove tablet with dry hands, place in mouth. • Swallow with or without water. • Use immediately after removing from package.

INDICATIONS/ROUTES/DOSAGE

Seizures

PO: ADULTS, ELDERLY, CHILDREN 10 YRS AND OLDER: Initial dose not to exceed 1.5 mg/day in 3 divided doses; may be increased in 0.5- to 1-mg increments every 3 days until seizures are controlled or adverse effects occur. **Maintenance:** 0.05–0.2 mg/kg/day. **Maximum:** 20 mg/day. **INFANTS, CHILDREN YOUNGER THAN 10 YRS OR WEIGHING LESS THAN 30 KG:** 0.01–0.03 mg/kg/day in 2–3 divided doses; may be increased by no more than 0.5 mg every 3 days until seizures are controlled or adverse effects occur. Do not exceed maintenance dosage of 0.2 mg/kg/day in 3 divided doses.

Panic Disorder

PO: ADULTS, ELDERLY: Initially, 0.25 mg twice a day. Increase in increments of 0.125–0.25 mg twice a day every 3 days. **Target dose:** 1 mg/day. **Maximum:** 4 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (37%–11%): Mild, transient drowsiness; ataxia, behavioral disturbances (aggression, irritability, agitation), esp. in children. **Occasional (10%–5%):** Dizziness, ataxia, URI, fatigue. **Rare (4% or less):** Impaired memory, dysarthria, nervousness, sinusitis, rhinitis, constipation, allergic reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt withdrawal may result in pronounced restlessness, irritability, insomnia, hand tremors, abdominal/muscle cramps, diaphoresis, vomiting, status

epilepticus. Overdose results in drowsiness, confusion, diminished reflexes, coma. **Antidote:** Flumazenil (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (frequency, duration, intensity, level of consciousness [LOC]). For panic attack, assess motor responses (agitation, trembling, tension), autonomic responses (cold/clammy hands, diaphoresis).

INTERVENTION/EVALUATION

Observe for excess sedation, respiratory depression, suicidal ideation. Assess children, elderly for paradoxical reaction, particularly during early therapy. Initiate seizure precautions, observe frequently for recurrence of seizure activity. Assist with ambulation if drowsiness, ataxia occur. For pts on long-term therapy, obtain LFT, renal function tests, blood counts should be performed periodically. Evaluate for therapeutic response: decreased intensity and frequency of seizures or, if used in panic attack, calm facial expression, decreased restlessness.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Do not abruptly discontinue medication after long-term therapy. • Strict maintenance of drug therapy is essential for seizure control. • Avoid alcohol. • Report depression, thoughts of suicide/self-harm, excessive drowsiness, GI symptoms, worsening or loss of seizure control.

clonidine

klon-i-deen
(Apo-Clonidine, Catapres, Catapres-TTS, Dixarit, Duraclon, Kapvay, Novo-Clonidine)

■ **BLACK BOX ALERT** ■ **Epidural:** Not to be used for perioperative, obstetric, or postpartum pain.
Do not confuse Catapres with Cataflam, or clonidine with clomiphene, clorazepam, Klonopin, or quinidine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiadrenergic, sympatholytic. **CLINICAL:** Antihypertensive.

USES

Immediate-Release: Transdermal Patch: Treatment of hypertension alone or in combination with other antihypertensive agents. **Kapvay:** Treatment of attention-deficit hyperactivity disorder (ADHD). **Epidural:** Combined with opiates for relief of severe pain. **OFF-LABEL:** Opioid or nicotine withdrawal, prevention of migraine headaches, treatment of diarrhea in diabetes mellitus, treatment of dysmenorrhea, menopausal flushing, alcohol dependence, glaucoma, clozapine-induced sialorrhea, Tourette's syndrome, insomnia in children.

PRECAUTIONS

Contraindications: Epidural: Contraindicated in pts with bleeding diathesis or infection at the injection site; pts receiving anticoagulation therapy. **Cautions:** Depression, elderly. Severe coronary insufficiency, recent MI, cerebrovascular disease, chronic renal impairment, preexisting bradycardia, sinus node dysfunction, conduction disturbances; concurrent use with digoxin, diltiazem, metoprolol, verapamil.

ACTION

Stimulates alpha-adrenergic receptors, reducing sympathetic CNS response. **Epidural:** Prevents pain signal transmission to brain and produces analgesia at pre- and post-alpha-adrenergic receptors in spinal cord. **ADHD:** Mechanism of action unknown. **Therapeutic**

Effect: Reduces peripheral resistance; decreases B/P, heart rate. Produces analgesia.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–1 hr	2–4 hrs	6–10 hrs

Well absorbed from GI tract. Transdermal best absorbed from chest and upper arm; least absorbed from thigh. Protein binding: 20%–40%. Metabolized in liver. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 6–20 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** More sensitive to effects; use caution. **Elderly:** May be more sensitive to hypotensive effect. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Discontinuation of concurrent **beta-blocker** therapy may increase risk of clonidine-withdrawal hypertensive crisis. **Tricyclic antidepressants** may decrease effect (may require increased dose of clonidine). **Digoxin, diltiazem, metoprolol, verapamil** may increase risk of serious bradycardia. **HERBAL: Gotu kola, kava kava, SAMe, St. John's wort, valerian** may increase CNS depression. **Ephedra, ginseng, yohimbe** may decrease antihypertensive effect. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution (Duraclon): 100 mcg/ml, 500 mcg/ml. **Tablets (Catapres):** 0.1 mg, 0.2 mg, 0.3 mg. **Transdermal Patch (Catapres-TTS):** 2.5 mg (release at 0.1 mg/24 hrs), 5 mg (release at 0.2 mg/24 hrs), 7.5 mg (release at 0.3 mg/24 hrs).

Extended-Release Tablets: (Kapvay): 0.1 mg. **(Nexiclon XR):** 0.17 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Tablets may be crushed. • Give last oral dose just before bedtime. • Swallow extended-release tablets whole; do not break, crush, dissolve, or divide.

Transdermal

• Apply transdermal system to dry, hairless area of intact skin on upper arm or chest. • Rotate sites (prevents skin irritation). • Do not trim patch to adjust dose.

Epidural

• Must be administered only by medical personnel trained in epidural management.

IV INCOMPATIBILITIES

None known.

IV COMPATIBILITIES

Bupivacaine (Marcaine, Sensorcaine), fentanyl (Sublimaze), heparin, ketamine (Ketalar), lidocaine, lorazepam (Ativan).

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: Initially, 0.1 mg twice a day. Increase by 0.1–0.2 mg q2–4days. **Maintenance:** 0.2–1.2 mg/day in 2–4 divided doses up to maximum of 2.4 mg/day. **ELDERLY:** Initially, 0.1 mg at bedtime. May increase gradually. **CHILDREN 12 YRS AND OLDER:** Initially, 0.2 mg/day in 2 divided doses. May increase gradually at 5- to 7-day intervals in 0.1 mg/day increments. **Maximum:** 2.4 mg/day.

Transdermal: ADULTS, ELDERLY: System delivering 0.1 mg/24 hrs up to 0.6 mg/24 hrs q7days. Usual dosage range: 0.1–0.3 mg once weekly.

Acute Hypertension

PO: ADULTS: Initially, 0.1–0.2 mg followed by 0.1 mg every hr if necessary, up to maximum total dose of 0.7 mg.

C

Attention-Deficit Hyperactivity Disorder (ADHD)

PO: CHILDREN 45 KG OR LESS: Initially 0.05 mg/day at bedtime. May increase in increments of 0.05 mg/day q3–7days up to 0.2 mg/day (27–40.5 kg), 0.3 mg/day (40.5–45 kg). **GREATER THAN 45 KG:** 0.1 mg at bedtime. May increase 0.1 mg/day q3–7 days. **Maximum:** 0.4 mg/day. **Extended-Release Tablet *(Kapvay)*: CHILDREN 6 YRS AND OLDER:** Initially, 0.1 mg daily at bedtime. May increase in increments of 0.1 mg/day at weekly intervals (**Maximum:** 0.4 mg/day). Doses should be taken twice daily with higher split dose given at bedtime.

Severe Pain

Epidural: ADULTS, ELDERLY: 30–40 mcg/hr. **CHILDREN:** Range: 0.5–2 mcg/kg/hr, not to exceed adult dose.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (40%–10%): Dry mouth, drowsiness, dizziness, sedation, constipation. **Occasional (5%–1%): Tablets, Injection:** Depression, pedal edema, loss of appetite, decreased sexual function, itching eyes, dizziness, nausea, vomiting, nervousness. **Transdermal:** Pruritus, redness or darkening of skin. **Rare (less than 1%):** Nightmares, vivid dreams, feeling of coldness in distal extremities (esp. the digits).

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces profound hypotension, irritability, bradycardia, respiratory depression, hypothermia, miosis (pupillary constriction), arrhythmias, apnea. Abrupt withdrawal may result in rebound hypertension associated with nervousness, agitation, anxiety, insomnia, paresthesia, tremor, flushing, diaphoresis. May produce sedation in pts with acute CVA.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P immediately before each dose is administered, in addition to regular monitoring (be alert to B/P fluctuations).

INTERVENTION/EVALUATION

Monitor B/P, pulse, mental status. Monitor daily pattern of bowel activity, stool consistency. If clonidine is to be withdrawn, discontinue concurrent beta-blocker therapy several days before discontinuing clonidine (prevents clonidine withdrawal hypertensive crisis). Slowly reduce clonidine dosage over 2–4 days.

PATIENT/FAMILY TEACHING

• Sugarless gum, sips of tepid water may relieve dry mouth. • Avoid tasks that require alertness, motor skills until response to drug is established. • To reduce hypotensive effect, rise slowly from lying to standing. • Skipping doses or voluntarily discontinuing drug may produce severe, rebound hypertension. • Avoid alcohol. • If patch loosens during 7-day application period, secure with adhesive cover.

clopidogrel

TOP 100 HIGH ALERT

kloe-**pid**-oh-grel
(Apo-Clopidogrel, Plavix)

■ **BLACK BOX ALERT** ■ Diminished effectiveness in CYP2C19 metabolizers increases risk for cardiovascular events. Pts with CYP2C19*2 and/or CYP2C19*3 alleles may have reduced platelet inhibition.

Do not confuse Plavix with Elavil or Paxil.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Thienopyridine derivative. **CLINICAL:** Antiplatelet.

USES

Unstable angina/non–ST-segment elevation MI. ST-segment elevation, acute MI. Recent MI, stroke, or established peripheral arterial disease. **OFF-LABEL:** Graft patency (saphenous vein), stable coronary artery disease (in combination with aspirin). Initial treatment of acute coronary syndrome in pts allergic to aspirin.

PRECAUTIONS

Contraindications: Active bleeding (e.g., peptic ulcer, intracranial hemorrhage). **Cautions:** Severe hepatic/renal impairment, pts at risk of increased bleeding (e.g., trauma), concurrent use of anticoagulants. Avoid concurrent use of CYP2C19 inhibitors, omeprazole.

ACTION

Inhibits binding of enzyme adenosine phosphate (ADP) to its platelet receptor and subsequent ADP-mediated activation of a glycoprotein complex. **Therapeutic Effect:** Inhibits platelet aggregation.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	2 hrs	5–7 days (with repeated doses of 75 mg/day)	5 days after last dose

Rapidly absorbed. Protein binding: 98%. Extensively metabolized by liver. Eliminated equally in the urine and feces. **Half-life:** 8 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Aspirin, NSAIDs, warfarin** may increase risk of bleeding. **Proton pump inhibitors (e.g., omeprazole)** may decrease efficacy, increase risk of cardiovascular events. **HERBAL:** **Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng, green tea, red clover** may have additive antiplatelet effects. **FOOD:** **Grapefruit products** may decrease effects. **LAB VALUES:** May increase serum bilirubin, ALT, AST, cholesterol, uric acid. May decrease neutrophil count, platelet count.

AVAILABILITY (Rx)

Tablets: 75 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Avoid grapefruit products.

INDICATIONS/ROUTES/DOSAGE

Reduction of Atherosclerotic Events (Pts with Recent MI, Stroke, PAD)

PO: ADULTS, ELDERLY: 75 mg once a day.

Acute Coronary Syndrome (ACS), Unstable Angina/NSTEMI

PO: ADULTS, ELDERLY: Initially, 300 mg loading dose, then 75 mg once a day (in combination with aspirin).

ACS (STEMI)

PO: ADULTS, ELDERLY 75 YRS OR YOUNGER: Initially 300-mg loading dose, then 75 mg once a day. **ELDERLY OLDER THAN 75 YRS:** 75 mg once daily.

ACS (PCI)

PO: ADULTS, ELDERLY: Initially, 600 mg, then 75 mg once daily.

SIDE EFFECTS

Frequent (15%): Skin disorders. **Occasional (8%–6%):** Upper respiratory tract infection, chest pain, flu-like symptoms, headache, dizziness, arthralgia. **Rare (5%–3%):** Fatigue, edema, hypertension, abdominal pain, dyspepsia, diarrhea, nausea, epistaxis, dyspnea, rhinitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Agranulocytosis, aplastic anemia/ pancytopenia, thrombotic thrombocytopenic purpura (TTP) occur rarely. Hepatitis, hypersensitivity reaction, anaphylactoid reaction have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline chemistries, platelet count, PFA level. Perform platelet counts before drug therapy, q2days during first wk of treatment, and weekly thereafter until therapeutic maintenance dose is reached. Abrupt discontinuation of drug therapy produces elevated platelet count within 5 days.

INTERVENTION/EVALUATION

Monitor platelet count for evidence of thrombocytopenia. Assess Hgb, Hct, WBC; serum ALT, AST, bilirubin, BUN, creatinine; signs/symptoms of hepatic insufficiency during therapy.

PATIENT/FAMILY TEACHING

• It may take longer to stop bleeding during drug therapy. • Report any unusual bleeding. • Inform physicians, dentists if clopidogrel is being taken, esp. before surgery is scheduled or before taking any new drug.

clorazepate

klor-**az**-e-pate
(Apo-Clorazepate ✱, Novo-Clopate ✱, Tranxene T-Tab)
Do not confuse clorazepate with clofibrate or clonazepam.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine **(Schedule IV). CLINICAL:** Antianxiety, anticonvulsant.

USES

Management of generalized anxiety disorders, short-term relief of anxiety symptoms, partial seizures, acute alcohol withdrawal symptoms.

PRECAUTIONS

Contraindications: Narrow-angle glaucoma. **Cautions:** Renal/hepatic impairment, depression, high risk of suicidal ideation, history of drug dependence, elderly, debilitated pts, pts with respiratory disease, sleep apnea.

ACTION

Depresses all levels of CNS, including limbic and reticular formation, by binding to benzodiazepine receptor sites on gamma-aminobutyric acid (GABA) receptor complex. Modulates GABA, a major inhibitory neurotransmitter in the brain. **Therapeutic Effect:** Produces anxiolytic effect, suppresses seizure activity.

PHARMACOKINETICS

Readily absorbed from GI tract. Metabolized in liver. (**Half-life:** 48–96 hrs) and oxazepam (**Half-life:** 6–8 hrs). Excreted primarily in urine.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category D. Children:** May experience paradoxical excitement. **Elderly:** Increased risk of dizziness, sedation, confusion, hypotension, hyperexcitability.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS depressant effect. **CYP3A4 inhibitors (e.g., azole antifungals)** may increase concentration, toxicity. **HERBAL: Gotu kola, kava kava, SAMe, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, creatinine, ALT, AST, alkaline phosphatase. May decrease Hct. **Therapeutic serum level:** 0.12–1 mcg/ml;

toxic serum level: greater than 5 mcg/ml.

AVAILABILITY (Rx)

Tablets (Tranxene T-Tab): 3.75 mg, 7.5 mg, 15 mg.

ADMINISTRATION/HANDLING

ALERT If pt requires change to another anticonvulsant, decrease dosage gradually as low-dose therapy begins with replacement drug.

PO

- May administer with food/water to decrease risk of GI disturbance.

INDICATIONS/ROUTES/DOSAGE

Anxiety

PO: ADULTS, ELDERLY: 7.5–15 mg 2–4 times a day.

Partial Seizures

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: Initially, up to 7.5 mg 2–3 times a day. May increase by 7.5 mg at weekly intervals. **Maximum:** 90 mg/day. **CHILDREN 9–12 YRS:** Initially, 3.75–7.5 mg twice a day. May increase by 3.75 mg at weekly intervals. **Maximum:** 60 mg/day in 2–3 divided doses.

Alcohol Withdrawal

PO: ADULTS, ELDERLY: Initially, 30 mg, then 15 mg 2–4 times a day on first day. Gradually decrease dosage over subsequent days. **Maximum:** 90 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Drowsiness. **Occasional:** Dizziness, GI disturbances, anxiety, blurred vision, dry mouth, headache, confusion, ataxia, rash, irritability, slurred speech. **Rare:** Paradoxical CNS reactions (hyperactivity, nervousness in children; excitement, restlessness in elderly, debilitated, generally noted during first 2 wks of therapy, particularly in presence of uncontrolled pain).

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt or rapid withdrawal may result in pronounced restlessness, irritability, insomnia, hand tremors, abdominal/muscle cramps, diaphoresis, vomiting, seizures. Overdose results in drowsiness, confusion, diminished reflexes, coma. May increase risk of suicidal ideation or behavior.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Anxiety: Assess autonomic response (cold/clammy hands, diaphoresis), motor response (agitation, trembling, tension). Offer emotional support. **Seizures:** Review history of seizure disorder (intensity, frequency, duration, level of consciousness [LOC]). Initiate seizure precautions.

INTERVENTION/EVALUATION

Assess for paradoxical reaction, particularly during early therapy. Assist with ambulation if drowsiness, dizziness occur. Observe for seizure activity. Evaluate for therapeutic response: **Anxiety:** Assess for calm facial expression; decreased restlessness. Monitor for signs/symptoms of depression, anxiety (loss of interest, mood swings, suicidal ideation or behavior). **Seizures:** Assess for decrease in intensity/frequency of seizures. **Therapeutic serum level:** 0.12–1 mcg/ml; **toxic serum level:** greater than 5 mcg/ml.

PATIENT/FAMILY TEACHING

- Do not abruptly discontinue medication after long-term use (may precipitate seizures).
- Strict maintenance of drug therapy is essential for seizure control.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Drowsiness usually disappears during continued therapy.
- Go from lying to standing slowly.
- Smoking reduces drug effectiveness.
- Avoid alcohol.
- Report thoughts of suicide, worsening depression, or loss of seizure control.

C

clozapine

kloe-za-peen
(Apo-Clozapine, Clozaril, FazaClo, Versacloz)

■ **BLACK BOX ALERT** ■ Significant risk of life-threatening agranulocytosis, increased risk of potentially fatal cardiovascular events, particularly myocarditis, in elderly pts with dementia-related psychosis. May cause severe orthostatic hypotension, dose-dependent seizures.
Do not confuse clozapine with clonazepam, clonidine, or Klonopin, or Clozaril with Clinoril or Colazal.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Dibenzodiazepine derivative. **CLINICAL:** Antipsychotic.

USES

Management of severely ill schizophrenic pts who have failed to respond to other antipsychotic therapy. Treatment of recurrent suicidal behavior. **OFF-LABEL:** Schizoaffective disorder, bipolar disorder, childhood psychosis, obsessive-compulsive disorder, agitation related to Alzheimer's dementia.

PRECAUTIONS

Contraindications: History of clozapine-induced agranulocytosis or severe granulocytopenia. **Cautions:** History of seizures, cardiovascular disease, myocarditis, respiratory/hepatic/renal impairment, alcohol withdrawal, high risk of suicide, paralytic ileus, myasthenia gravis, pts at risk for aspiration pneumonia, urinary retention, narrow-angle glaucoma, prostatic hypertrophy, xerostomia, visual disturbances, constipation, history of bowel obstruction, diabetes mellitus. History of long QT prolongation/ventricular arrhythmias; concomitant use of medications that prolong QT interval; hypokalemia, hypomagnesemia. **Pregnancy Category B.**

ACTION

Interferes with binding of dopamine and serotonin receptor sites. **Therapeutic Effect:** Diminishes schizophrenic behavior.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 97%. Metabolized in liver. Excreted in urine. **Half-life:** 12 hrs.

INTERACTIONS

DRUG: Antihypertensive medications may increase risk of hypotension. **Alcohol, other CNS depressants** may increase CNS depressant effects. **Bone marrow depressants** may increase myelosuppression. **Cimetidine, citalopram, ciprofloxacin, erythromycin** may increase concentration, risk of adverse effects. **SSRIs (e.g., paroxetine)** may increase concentration. **Lithium** may increase risk of confusion, dyskinesia, seizures. **Medications prolonging QT interval** may increase risk of QT prolongation. **CYP3A4 inducers (e.g., phenytoin, carbamazepine, rifampin)** may decrease concentration/effects. **HERBAL: St. John's wort** may decrease concentration/therapeutic effects. **Kava kava, gotu kola, valerian, St. John's wort** may increase risk of CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, cholesterol (rare), triglycerides (rare).

AVAILABILITY (Rx)

Suspension, Oral (Versacloz): 50 mg/ml (100 ml). **Tablets (Clozaril):** 25 mg, 50 mg, 100 mg, 200 mg. **Tablets (Orally Disintegrating [FazaClo]):** 12.5 mg, 25 mg, 100 mg, 150 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • **Suspension:** Use oral syringes (provided). Shake well, administer dose immediately after preparing. Suspension stable for 100 days after initial bottle opening.

Orally Disintegrating Tablets

• Remove from foil blister; do not push tablet through foil. • Remove tablet with dry hands, place in mouth. • Allow to dissolve in mouth, swallow with saliva. • If dose requires splitting tablet, discard unused portion.

INDICATIONS/ROUTES/DOSAGE

Schizophrenic Disorders

◀ALERT▶ For initiation of therapy, must have WBC equal to or greater than 3,500 mm^3 and ANC equal to or greater than 2,000 mm^3.

PO: ADULTS: Initially, 12.5 mg once or twice a day. May increase by 25–50 mg/day over 2 wks until dosage of 300–450 mg/day is achieved. May further increase by 50–100 mg/day no more than once or twice a week. Range: 200–600 mg/day. **Maximum:** 900 mg/day. **ELDERLY:** Initially, 12.5 mg/day for 3 days, then 25 mg/day for 3 days. May further increase in increments of 12.5–25 mg daily q3days. **Maximum:** 300 mg/day.

Suicidal Behavior in Schizophrenia

PO: ADULTS: Initially, 12.5 mg 1–2 times/day. May increase in increments of 25–50 mg/day to a target dose of 300–450 mg/day after 2 wks. Range: 12.5–900 mg/day.

Dose Modification

Leukopenia/granulocytopenia: Mild: (WBC 3,000–3,500/mm^3 and/or ANC 1,500–2,000/mm^3): Continue treatment, monitor WBC and ANC twice weekly until WBC greater than 3,500/mm^3 and ANC greater than 2,000/mm^3. **Moderate: (WBC 2,000–3,000/mm^3 and/or ANC greater than 1,000/mm^3–1,500/mm^3):** Interrupt therapy, monitor WBC and ANC daily until WBC greater than 3,000/mm^3 and ANC greater than 1,500/mm^3, then twice weekly until WBC greater than 3,500 and ANC greater than 2,000/mm^3. **Severe: (WBC less than 2,000/mm^3 and/or ANC less than 1,500/mm^3):** Discontinue treatment. **Discontinue:** QT_C interval greater than 500 msec, cardiomyopathy/myocarditis, hepatotoxicity, or neuroleptic malignant syndrome.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (39%–14%): Drowsiness, salivation, tachycardia, dizziness, constipation. **Occasional (9%–4%):** Hypotension, headache, tremor, syncope, diaphoresis, dry mouth, nausea, visual disturbances, nightmares, restlessness, akinesia, agitation, hypertension, abdominal discomfort, heartburn, weight gain. **Rare:** Rigidity, confusion, fatigue, insomnia, diarrhea, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Seizures occur occasionally (3% of pts). Overdose produces CNS depression (sedation, delirium, coma), respiratory depression, hypersalivation. Blood dyscrasias, particularly agranulocytosis, mild leukopenia, may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline weight, glucose, Hgb A1c, WBC, absolute neutrophil count (ANC) before initiating treatment. Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content.

INTERVENTION/EVALUATION

Monitor B/P for hypertension/hypotension. Assess pulse for tachycardia (common side effect). Monitor CBC for blood dyscrasias. Monitor ANC, WBC count every wk for first 6 mos, then biweekly for 6 mos. If CBC and ANC are normal after 12 mos, then monthly monitoring of CBC and ANC is recommended. Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression).

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue long-term drug therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Drowsiness generally subsides during continued therapy. • Avoid alcohol, caffeine. • Report fever, sore throat, flu-like symptoms.

cobicistat

koe-bi-**sye**-stat
(Tybost)

FIXED-COMBINATION(S)

Evotaz: cobicistat (antiretroviral booster)/atazanavir (antiretroviral): 150 mg/300 mg. **Prezcobix:** cobicistat (antiretrovial booster)/darunavir (antiretroviral): 150 mg/800 mg. **Stribild:** cobicistat (antiretroviral booster)/emtricitabine/elvitegravir/tenofovir (antiretroviral agents): 150 mg/200 mg/150 mg/300 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: CYP3A inhibitor. **CLINICAL:** Antiretroviral booster.

USES

Indicated to increase systemic exposure of atazanavir or darunavir (once daily dosing regimen), in combination with other antiretroviral agents for treatment of HIV-1 infection.

PRECAUTIONS

Contraindications: Concomitant use with alfuzosin, dihydroergotamine, dronedarone, ergotamine, indinavir, irinotecan, lovastatin, methylergonovine, midazolam (oral), nevirapine, rifampin, sildenafil (use in PAH), simvastatin, St. John's wort. **Cautions:** Hepatic/renal impairment, hypercholesterolemia. **Not recommended with:** darunavir 600 mg twice daily, fosamprenavir, saquinavir, or tipranavir; other protease inhibitors including tenofovir DF if creatinine clearance less than 70 ml/min; any treatment regimen requiring more than one antiretroviral agent requiring pharmacokinetic enhancement; darunavir, in combination with efavirenz, nevirapine, or etravirine; atazanavir, in combination with etravirine or efavirenz in treatment-experienced pts; cobicistat, in combination with Stribild. Co-administration of cobicistat and ritonavir. Cobicistat is not interchangeable with ritonavir.

ACTION

Inhibits cytochrome P450 3A (CYP3A). **Therapeutic Effect:** Boosts exposure of atazanavir or darunavir. Does not exhibit antiviral activity.

PHARMACOKINETICS

Readily absorbed after PO administration. Metabolized in liver. Protein binding: 97%–98%. Peak plasma concentration: 3.5 hrs. Eliminated in feces (86%), urine (8%). **Half-life:** 3–4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Breastfeeding not recommended due to risk of postnatal HIV transmission. Secreted in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in pts younger than 18 yrs. **Elderly:** Safety and efficacy not established in pts older than 65 yrs. May have increased risk of side effects/adverse reactions, renal failure.

INTERACTIONS

DRUG: Note: See contraindications. **Nephrotoxic medications** may increase risk of acute renal failure. **Efavirenz**, **etravirine**, **nevirapine** may decrease cobicistat effectiveness. May increase concentration/effect of **antiarrhythmics (e.g., amiodarone**, **digoxin), antifungals (e.g., ketoconazole), atorvastatin**, **benzodiazepines**, **beta blockers (e.g., carvedilol**, **metoprolol), calcium channel blockers (e.g., amlodipine**, **diltiazem), clarithromycin**, **colchicine**, **cyclosporine**, **fluticasone**, **maraviroc**,

neuroleptics (e.g., risperidone, thioridazine), opioids (e.g., morphine), PDE-5 inhibitors (e.g., sildenafil), SSRIs, tricyclic antidepressants. Antacids, anticonvulsants (e.g., carbamazepine, phenytoin), famotidine, omeprazole may decrease absorption/effect. **HERBAL:** **St John's wort** contraindicated; may decrease effectiveness. **FOOD:** None known. **LAB VALUES:** May increase amylase, ALT, AST, bilirubin, BUN, cholesterol (LDL/HDL), creatine kinase (CK), creatinine, GGT, triglycerides, urine glucose, urine protein, urine RBC. May decrease creatinine clearance.

AVAILABILITY (Rx)

Film-Coated Tablets: 150 mg.

ADMINISTRATION/HANDLING

PO

• Give with food. • Must be administered simultaneously with atazanavir or darunavir. • If pt receiving antacid with cobicistat/atazanavir regimen, do not give aluminum- or magnesium-containing antacids within 2 hrs, H_2-receptor antagonists (e.g., famotidine) within 10 hrs, or proton pump inhibitors (e.g., omeprazole) within 12 hrs of antiretroviral dose.

INDICATIONS/ROUTES/DOSAGE

HIV Infection

PO: ADULTS/ELDERLY: 150 mg once daily with either atazanavir 300 mg once daily (for treatment-naïve or treatment-experienced pts) or darunavir 800 mg once daily (for treatment-naïve or treatment-experienced pts with no darunavir resistance–associated substitutions).

Dosage in Renal Impairment

No dose adjustment; use caution.

Dosage in Hepatic Impairment

Mild to moderate impairment: No dose adjustment; use caution. **Severe impairment:** Not studied; use extreme caution.

SIDE EFFECTS

Occasional (5%): Jaundice, dermatitis, pruritus, pustular folliculitis, rash, urticaria. **Rare (3%–2%):** Ocular icterus, nausea, diarrhea, headache, depression, abnormal dreams, insomnia.

ADVERSE REACTIONS/TOXIC EFFECTS

May cause acute renal failure or Fanconi syndrome when administered with tenofovir. Nephrolithiasis reported in 2% of pts. Pts co-infected with hepatitis B or C virus have increased risk for viral reactivation, worsening of hepatic function, or may experience hepatic decompensation and/or failure if therapy is discontinued.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, BMP, creatinine clearance, GFR, lipid panel, LFT, serum phosphate (baseline renal impairment), urine glucose, urine protein, vital signs; CD4+ count, viral load. Screen for hepatitis B or C co-infection, hypercholesterolemia. Receive full medication history including herbal products and screen for contraindications. Question possibility of pregnancy.

INTERVENTION/EVALUATION

Diligently monitor hepatic/renal function tests. An increase in serum creatinine greater than 0.4 mg/dL from baseline may indicate renal impairment. Monitor CD4+ count, viral load for treatment effectiveness. Assess skin for urticaria, pruritus, rash. Cough, dyspnea, fever, excess of band cells on CBC may indicate acute infection (WBC test may be unreliable in pts with uncontrolled HIV infection).

PATIENT/FAMILY TEACHING

• Offer emotional support. • Take cobicistat with atazanavir or darunavir at the same time each day with food (optimizes absorption). • Antacids may decrease drug effectiveness. • Drug resistance can form if therapy is interrupted; do not run out of supply. • Cobicistat does not cure

HIV infection nor reduce risk of transmission. • As immune system strengthens, it may respond to dormant infections hidden within the body. Report body aches, chills, cough, fever, night sweats, shortness of breath. • Treatment may cause kidney failure if used with tenofovir regimen. Report abdominal pain, darkened urine, decreased urine output. • Clay-colored stools, significant weight loss, or yellowing of skin or eyes may indicate liver problem. • Do not take any new medications, including over-the-counter drugs or herbal products, unless approved by your doctor.

C

codeine

HIGH ALERT

koe-deen
(Codeine Contin)
Do not confuse codeine with Cardene or Lodine.

■ **BLACK BOX ALERT** ■ Respiratory depression, death have occurred in children following tonsillectomy and/or adenoidectomy.

FIXED-COMBINATION(S)

Capital with Codeine, Tylenol with Codeine: acetaminophen/codeine: 120 mg/12 mg per 5 ml. **Tylenol with Codeine:** acetaminophen/codeine: 300 mg/15 mg, 300 mg/30 mg, 300 mg/60 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid agonist. **CLINICAL:** Analgesic: Single entity: **Schedule II:** Fixed-combination form: **Schedule III:** Less than 90 mg, fixed combinations.

USES

Relief of mild to moderate pain. **OFF-LABEL:** Short-term relief of cough.

PRECAUTIONS

Contraindications: Respiratory depression in absence of resuscitative equipment, acute or severe bronchial asthma or hypercarbia, paralytic ileus. Postoperative pain management in children following tonsillectomy/adenoidectomy. **Cautions:** Adrenal insufficiency, biliary tract impairment, CNS depression/coma, morbid obesity, prostatic hyperplasia, urinary stricture, thyroid dysfunction, severe renal/hepatic impairment, COPD, respiratory disease, cardiovascular disease, hypovolemia, GI obstruction, head injury, elevated intracranial pressure, history of drug abuse, patients with 2 or more copies of variant CYP2D6*2 allele (may have extensive conversion to morphine).

ACTION

Binds to opioid receptors in CNS. Inhibits ascending pain pathways. **Therapeutic Effect:** Alters perception, emotional response to pain; suppresses cough reflex.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30–60 min	1–1.5 hrs	4–6 hrs
IM	10–30 min	0.5–1 hr	4–6 hrs

Well absorbed following PO administration. Protein binding: (7–25%.) Metabolized in liver. Excreted in urine. **Half-life:** 2.5–3.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy Category C (D if used for prolonged periods or at high dosages at term). Children: Efficacy not established in those younger than 2 years. **Elderly:** May cause confusion, oversedation; use lower dosing range.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS, respiratory depression, hypotension. **Anticholinergics** may increase risk of urinary retention, severe constipation. **MAOIs** may produce a severe, sometimes fatal reaction (reduce dosage to ¼ usual dose). **HERBAL: St. John's wort** may decrease concentration. **Gotu kola, kava kava, SAMe, St. John's wort, valerian** may increase

CNS depression. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Tablets: 15 mg, 30 mg, 60 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.
- Take with food or milk to decrease adverse GI effects.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Reduce initial dosage in pts with hypothyroidism, Addison's disease, renal insufficiency, pts using other CNS depressants concurrently. Respiratory depression and death have occurred in children receiving codeine following tonsillectomy and/or adenoidectomy and found to have evidence of being ultrarapid metabolizers of codeine due to a CYP2D6 polymorphism.

Analgesia

PO: ADULTS, ELDERLY: 15–60 mg q4h as needed. **Maximum total daily dose:** 360 mg. **CHILDREN:** 0.5–1 mg/kg q4–6h. **Maximum:** 60 mg/dose.

Dosage in Renal Impairment

Dosage is modified based on creatinine clearance.

Creatinine Clearance	Dosage
10–50 ml/min	75% of usual dose
Less than 10 ml/min	50% of usual dose

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

◀ALERT▶ Ambulatory pts, pts not in severe pain may experience dizziness, nausea, vomiting, hypotension more frequently than those in supine position or with severe pain. **Frequent:** Constipation, drowsiness, nausea, vomiting. **Occasional:** Paradoxical excitement, confusion, palpitations, facial flushing, decreased urination, blurred vision, dizziness, dry mouth, headache, hypotension (including orthostatic hypotension), decreased appetite, injection site redness, burning, or pain. **Rare:** Hallucinations, depression, abdominal pain, insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Chronic use may result in paralytic ileus. Overdose may produce cold/clammy skin, confusion, seizures, decreased B/P, restlessness, pinpoint pupils, bradycardia, respiratory depression, decreased LOC, severe weakness. Tolerance to drug's analgesic effect, physical dependence may occur with chronic use.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Analgesic: Assess onset, type, location, duration of pain. Effect of medication is reduced if full pain response recurs before next dose. **Antitussive:** Assess type, severity, frequency of cough, sputum production.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Increase fluid intake, environmental humidity to improve viscosity of lung secretions. Initiate deep breathing, coughing exercises. Assess for clinical improvement; record onset of relief of pain, cough.

PATIENT/FAMILY TEACHING

- Change positions slowly to avoid orthostatic hypotension.
- Avoid tasks that require alertness, motor skills until response to drug is established.
- Tolerance, dependence may occur with prolonged use of high dosages.
- Avoid alcohol.

colchicine HIGH ALERT

kol-chi-seen
(Colcrys)

C

Do not confuse colchicine with Cortrosyn.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkaloid.
CLINICAL: Antigout.

USES

Prevention, treatment of acute gouty arthritis. Used to reduce frequency of recurrence of familial Mediterranean fever (FMF). **OFF-LABEL:** Treatment of biliary cirrhosis, recurrent pericarditis.

PRECAUTIONS

Contraindications: Concomitant use of a P-glycoprotein (e.g., cyclosporine) or strong CYP3A4 inhibitor (e.g., clarithromycin) in presence of renal or hepatic impairment. **Cautions:** Hepatic impairment, elderly, debilitated, renal impairment. Concomitant use of cyclosporine, diltiazem, verapamil, fibrates, statins; may increase risk of myopathy.

ACTION

Decreases leukocyte motility, phagocytosis, lactic acid production. **Therapeutic Effect:** Decreases urate crystal deposits, reduces inflammatory process.

PHARMACOKINETICS

Rapidly absorbed from GI tract. Highest concentration is in liver, spleen, kidney. Protein binding: 30%–50%. Reenters intestinal tract by biliary secretion and is reabsorbed from intestines. Partially metabolized in liver. Eliminated primarily in feces. **Half-life:** 12–30 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** May be more susceptible to cumulative toxicity. Age-related renal impairment may increase risk of myopathy.

INTERACTIONS

DRUG: May increase concentration of **statins** and increase risk of rhabdomyolysis. **Atazanavir, clarithromycin, cyclosporine, diltiazem, erythromycin, fluconazole, fosamprenavir, indinavir, itraconazole, ketoconazole, nelfinavir, ranolazine, ritonavir, saquinavir, verapamil** may increase colchicine concentration, toxicity. **HERBAL:** None significant. **FOOD:** **Grapefruit products** may increase concentration/toxicity. **LAB VALUES:** May increase serum alkaline phosphatase, AST. May decrease platelet count.

AVAILABILITY (Rx)

Tablets: 0.6 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • For FMF, give in 1 or 2 divided doses. • Give with adequate water and maintain fluid intake.

INDICATIONS/ROUTES/DOSAGE

Acute Gouty Arthritis

PO: ADULTS, ELDERLY: Initially, 1.2 mg at first sign of gout flare, then 0.6 mg 1 hr later. **Coadministration with Strong CYP3A4 Inhibitors:** Initially, 0.6 mg, then 0.3 mg dose 1 hr later. Do not repeat for at least 3 days. **Coadministration with Moderate CYP3A4 Inhibitors:** 1.2 mg once. Do not repeat for at least 3 days. **Coadministration with P-Glycoprotein Inhibitors:** 0.6 mg once. Do not repeat for at least 3 days.

Gout Prophylaxis

PO: ADULTS, ELDERLY: 0.6 mg 1–2 times/day. **Maximum:** 1.2 mg/day. **Coadministration with Strong CYP3A4 Inhibitors:** If dose is 0.6 mg 2 times/day, adjust dose to 0.3 mg once daily; if dose is 0.6 mg once daily, adjust dose to 0.3 mg every other day. **Coadministration with Moderate CYP3A4 Inhibitors:** If dose is 0.6 mg 2 times/day, adjust dose

to 0.3 mg twice daily or 0.6 mg once daily; if dose is 0.6 mg once daily, adjust dose to 0.3 mg once daily. **Coadministration with P-Glycoprotein Inhibitors:** If dose is 0.6 mg 2 times/day, adjust dose to 0.3 mg once daily; if dose is 0.6 mg once daily, adjust dose to 0.3 mg every other day.

FMF

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 1.2–2.4 mg/day. **Coadministration with strong CYP3A4 inhibitors: Maximum:** 0.6 mg once daily (or 0.3 mg twice daily). **Coadministration with moderate CYP3A4 inhibitors:** 1.2 mg/day (0.6 mg twice daily). **Coadministration with P-glycoprotein inhibitors:** 0.6 mg once daily (or 0.3 mg twice daily). **CHILDREN 6–12 YRS:** 0.9–1.8 mg/day in 1–2 divided doses. **CHILDREN 4–5 YRS:** 0.3–1.8 mg/day in 1–2 divided doses. **Note:** Increase or decrease dose by 0.3 mg/day, not to exceed maximum dose.

Pericarditis

PO: ADULTS, ELDERLY: 0.6 mg 2 times/day.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
Less than 30 ml/min	
FMF	0.3 mg initially
Gout prophylaxis	0.3 mg/day
Gout flare	No reduction
HD	
FMF	0.3 mg as single dose
Gout prophylaxis	0.3 mg 2–4 times/wk

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent: Nausea, vomiting, abdominal discomfort. **Occasional:** Anorexia. **Rare:** Hypersensitivity reaction, including angioedema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Bone marrow depression (aplastic anemia, agranulocytosis, thrombocytopenia) may occur with long-term therapy. Overdose initially causes burning feeling in skin/throat; severe diarrhea, abdominal pain. Second stage manifests as fever, seizures, delirium, renal impairment (hematuria, oliguria). Third stage causes hair loss, leukocytosis, stomatitis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory studies. **Gout:** Assess involved joints for pain, mobility, edema. **Mediterranean fever:** Assess abdominal pain, fever, chills, erythema, swollen skin lesions.

INTERVENTION/EVALUATION

Discontinue medication immediately if GI symptoms occur. Encourage high fluid intake (3,000 ml/day). Monitor I&O (output should be at least 2,000 ml/day), CBC, hepatic/renal function tests. Monitor serum uric acid. Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Drink 8–10 glasses (8 oz) of fluid daily while taking medication. • Report skin rash, sore throat, fever, unusual bruising/bleeding, weakness, fatigue, numbness. • Stop medication as soon as gout pain is relieved or at first sign of nausea, vomiting, diarrhea. • Avoid grapefruit products.

colesevelam

(**koe**-le-**sev**-e-lam)
(Lodalis ✱, Welchol)

C

CLASSIFICATION

PHARMACOTHERAPEUTIC: Bile acid sequestrant. **CLINICAL:** Antihyperlipidemic agent, hypoglycemic agent.

USES

Adjunctive therapy to diet and exercise to reduce elevated LDL-C. Improves glycemic control in pts with type 2 diabetes mellitus when used with other antidiabetic agents. Used as monotherapy or in combination with other cholesterol-lowering drugs (statins). Indicated for children (10–17 yrs of age) with heterozygous familial hypercholesterolemia with LDL-C greater than 190 mg/dL or LDL-C greater than 160 mg/dL (after adequate trial of diet therapy) with positive family history of premature cardiovascular history, or two or more other cardiovascular risk factors.

PRECAUTIONS

Contraindications: Bowel obstruction, hypertriglyceridemia-induced pancreatitis, serum triglycerides greater than 500 mg/dL. **Cautions:** Chronic constipation, major GI surgery, gastroparesis, serum triglycerides 300–500 mg/dL, fat-soluble vitamin deficiency.

ACTION

Binds with bile acids in the intestine, preventing reabsorption. Increases clearance of low-density lipoprotein cholesterol (LDL-C). Glycemic control mechanism unknown. **Therapeutic Effect:** Decreases serum LDL-C levels, Hgb A1c levels.

PHARMACOKINETICS

Not absorbed after PO administration. Strictly limited to intestines. Primarily excreted in feces.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Breast milk distribution unlikely due to nonsystemic absorption. **Pregnancy Category B. Children:** Safety and efficacy not established in pts under 10 yrs of age. Oral suspension recommended. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease concentration/effects of **oral contraceptives** containing **ethinyl estradiol** and **norethindrone; cyclosporine, glipizide, glyburide, levothyroxine, olmesartan, phenytoin. HERBAL: Gotu kola** may decrease effectiveness. **FOOD:** None significant. **LAB VALUES:** May increase serum triglycerides, CPK, ALT, AST. Decreases serum glucose, Hgb A1c.

AVAILABILITY (RX)

Tablets: 625 mg. **Suspension, Oral (Packet):** 3.75 grams.

ADMINISTRATION/HANDLING

PO

- Give with meal.

Oral Suspension

- Empty packet into 4–8 ounces of water, fruit juice, soft drink.

INDICATIONS/ROUTES/DOSAGE

Hyperlipidemia

PO: ADULTS, CHILDREN (10–17 YRS): 3 tablets (1,875 mg) twice/day with meal or 6 tablets (3,750 mg) once daily with meal. **Oral Suspension:** 3.75 grams once daily with meal.

◀ALERT▶ Not indicated for treatment of type 1 diabetes, diabetic ketoacidosis.

Type 2 Diabetes

PO: ADULTS: 1,875 mg twice daily or 3,750 mg once daily.

SIDE EFFECTS

Frequent (11%–8%): Constipation, dyspepsia. **Occasional (6%–3%):** Nasopharyngitis, nausea, headache, fatigue, asthenia, pharyngitis, flu-like symptoms. **Rare (2%):** Rhinitis, vomiting, myalgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Elevated serum triglycerides may increase cardiovascular risk. Hypoglycemia reported in 3% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain enhanced lipid panel, LFT, Hgb A1c, blood glucose. Obtain baseline therapeutic levels if applicable: TSH (hormone replacement therapy), PT/INR (warfarin), phenytoin free/total (phenytoin, fosphenytion).

INTERVENTION/EVALUATION

Monitor lipid panel, Hgb A1c, blood glucose for therapeutic response. Monitor daily pattern of bowel activity, stool consistency. Notify physician if abdominal pain, distention occurs.

PATIENT/FAMILY TEACHING

• Instruct importance of diet, exercise. • Do not take medications within 4 hrs of dose. • Blood levels will be drawn routinely. • Sweating, confusion, dizziness, tremors may indicate low blood sugar. • Report any newly prescribed medications. • Take with meal. • Report persistent GI upset, severe abdominal pain, respiratory difficulties.

conjugated estrogens

kon-joo-gate-ed **ess**-troe-jenz (Cenestin, Enjuvia, Premarin)

■ **BLACK BOX ALERT** ■ Risk of dementia may be increased in postmenopausal women. Do not use to prevent cardiovascular disease. May increase risk of endometrial carcinoma in postmenopausal women.

Do not confuse Enjuvia with Januvia, or Premarin with Primaxin, Provera, or Remeron.

FIXED-COMBINATION(S)

Duavee: conjugated estrogen/bazedoxifene (estrogen agonist/antagonist): 0.45 mg/20 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Estrogen.
CLINICAL: Hormone.

USES

Premarin: Management of moderate to severe vasomotor symptoms associated with menopause. Treatment of atrophic vaginitis, kraurosis vulvae, female hypogonadism and castration, primary ovarian failure. Retardation of osteoporosis in postmenopausal women. Palliative treatment of inoperable, progressive cancer of the prostate in men and of the breast in postmenopausal women. Abnormal uterine bleeding. Treatment of moderate to severe postmenopausal dyspareunia (painful sexual intercourse). **Cenestin:** Treatment of moderate to severe vasomotor symptoms of menopause, treatment of vulvar/vaginal atrophy. **Enjuvia:** Treatment of moderate to severe vasomotor symptoms, moderate to severe vaginal dryness and pain with intercourse, symptoms of vulvar/vaginal atrophy associated with menopause. **OFF-LABEL:** Prevention of estrogen deficiency–induced premenopausal osteoporosis. **Cream:** Prevention of nosebleeds.

PRECAUTIONS

Contraindications: Breast cancer (except in pts being treated for metastatic disease), hepatic disease, history of or current thrombophlebitis, undiagnosed abnormal vaginal bleeding, pregnancy. **Cautions:** Asthma, epilepsy, migraine headaches, diabetes, cardiac/renal dysfunction, history of severe hypocalcemia, lupus erythematosis, porphyria, endometriosis, gallbladder disease, familial defects of lipoprotein metabolism. Hypoparathyroidism, history of cholestatic jaundice.

C

ACTION

Responsible for development and maintenance of female reproductive system and secondary sexual characteristics; modulates release of gonadotropin-releasing hormone, reduces follicle-stimulating hormone (FSH), luteinizing hormone (LH). **Therapeutic Effect:** Reduces elevated levels of gonadotropins, LH, and FSH.

PHARMACOKINETICS

Well absorbed from GI tract. Widely distributed. Protein binding: 50%–80%. Metabolized in liver. Primarily excreted in urine. **Half-life (total estrone):** 27 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. May be harmful to fetus. Not for use during lactation. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** **Black cohosh, dong quai** may increase estrogenic activity. **Ginseng, red clover, saw palmetto** may increase hormonal effects. **St. John's wort** may decrease concentration. **FOOD:** **Grapefruit products** may increase concentration/toxicity. **LAB VALUES:** May increase serum glucose, HDL, calcium, triglycerides. May decrease serum cholesterol, LDH. May affect serum metapyrone testing, thyroid function tests.

AVAILABILITY (Rx)

Cream, Vaginal (Premarin): 0.625 mg/g. **Injection, Powder for Reconstitution:** 25 mg. **Tablet (Cenestin, Enjuvia, Premarin):** 0.3 mg, 0.45 mg, 0.625 mg, 0.9 mg, 1.25 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute with Sterile Water for Injection. • Slowly add diluent, shaking gently. • Avoid vigorous shaking.

Rate of Administration • Give slowly to prevent flushing reaction.

Storage • Refrigerate vials for IV use. • Use immediately following reconstitution.

PO

- Administer at same time each day.
- Give with milk, food if nausea occurs.

IV INCOMPATIBILITIES

No information available on Y-site administration.

INDICATIONS/ROUTES/DOSAGE

Vasomotor Symptoms Associated with Menopause

PO: ADULTS, ELDERLY: (Premarin): 0.3 mg/day cyclically (21 days on, 7 days off) or continuously. (Enjuvia): 0.3 mg/day. May titrate up to 1.25 mg/day. (Cenestin): 0.45 mg/day. May titrate up to 1.25 mg/day.

Vulvar and Vaginal Atrophy

PO: ADULTS, ELDERLY: (Cenestin, Enjuvia, Premarin): 0.3 mg/day.

Intravaginal: ADULTS, ELDERLY: 0.5–2 g/day cyclically, such as 21 days on and 7 days off.

Female Hypogonadism

PO: ADULTS: (Premarin): 0.3–0.625 mg/day given either as 3 wks on/1 wk off or 25 days on/5 days off.

Female Castration, Primary Ovarian Failure

PO: ADULTS: (Premarin): Initially, 1.25 mg/day cyclically given either as 3 wks on/1 wk off or 25 days on/5 days off. Adjust dosage, upward or downward, according to severity of symptoms and pt response. For maintenance, adjust dosage to lowest level that will provide effective control.

Postmenopausal Osteoporosis Prevention

PO: ADULTS, ELDERLY: (Premarin): 0.3 daily or cyclically, such as 25 days on and 5 days off or 3 wks on and 1 wk off.

Breast Cancer

PO: ADULTS, ELDERLY: (Premarin): 10 mg 3 times a day for at least 3 mos.

Prostate Cancer

PO: ADULTS, ELDERLY: (Premarin): 1.25–2.5 mg 3 times a day.

Abnormal Uterine Bleeding

IV, IM: ADULTS: 25 mg; may repeat once in 6–12 hrs.

Dyspareunia

Intravaginal: ADULTS, ELDERLY: 0.5 g daily (21 days on, 7 days off).

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Contraindicated.

SIDE EFFECTS

Frequent: Vaginal bleeding (spotting, breakthrough bleeding), breast pain/tenderness, gynecomastia. **Occasional:** Headache, hypertension, intolerance to contact lenses. **High doses:** Anorexia, nausea. **Rare:** Loss of scalp hair, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Prolonged administration may increase risk of breast, cervical, endometrial, hepatic, vaginal carcinoma; cerebrovascular disease, coronary heart disease, gallbladder disease, hypercalcemia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to estrogen, hepatic dysfunction, thromboembolic disorders associated with pregnancy, estrogen therapy. Assess frequency/severity of vasomotor symptoms.

INTERVENTION/EVALUATION

Assess B/P periodically. Assess for edema; weigh daily. Monitor for loss of vision, diplopia, migraine, thromboembolic disorder, sudden onset of proptosis.

PATIENT/FAMILY TEACHING

• Avoid smoking due to increased risk of heart attack, blood clots. • Avoid grapefruit products. • Diet, exercise important part of therapy when used to retard osteoporosis. • Teach how to perform Homans' test, signs/symptoms of blood clots (report these immediately). • Promptly report signs/symptoms of thromboembolic, thrombotic disorders: sudden severe headache, shortness of breath, vision/speech disturbance, weakness/numbness of an extremity, loss of coordination; pain in chest, groin, leg. • Report abnormal vaginal bleeding, depression. • Teach female pts to perform breast self-exam. • Report weight gain of more than 5 lbs a wk. • Stop taking medication, contact physician if pregnancy is suspected.

cortisone

kor-ti-sone

Do not confuse cortisone with Cardizem.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenocortical steroid. **CLINICAL:** Glucocorticoid.

USES

Treatment of adrenocortical insufficiency, conditions treated by immunosuppression, inflammatory conditions.

PRECAUTIONS

Contraindications: Hypersensitivity to corticosteroids, administration of live virus vaccine, systemic viral or fungal infection, serious infections (except septic shock or tuberculosis meningitis). **Cautions:** Thromboembolic disorders, history of tuberculosis (may reactivate disease), hypothyroidism, cirrhosis, HF,

psychosis, renal insufficiency, seizure disorders, GI disease, cardiovascular disease, peptic ulcer, myasthenia gravis, hepatic impairment, diabetes, cataracts, or glaucoma. Prolonged therapy should be discontinued slowly.

ACTION

Decreases inflammation by suppressing migration of polymorphonuclear leukocytes, suppressing increased capillary permeability. **Therapeutic Effect:** Prevents/suppresses cell-mediated immune reactions. Decreases/prevents tissue response to inflammatory process.

PHARMACOKINETICS

Slowly absorbed from GI tract. Widely distributed. Metabolized in liver. Excreted in urine/feces. **Half-life:** 0.5–2 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category C (D if used in the first trimester). Children:** Monitor growth, development of children, infants on prolonged steroid therapy. **Elderly:** Higher risk for hypertension, osteoporosis.

INTERACTIONS

DRUG: **CYP3A4 inducers (e.g., phenobarbital, phenytoin, rifampin)** may decrease concentration/effect. **CYP3A4 inhibitors (e.g., itraconazole, ketoconazole)** may increase concentration. May alter effects of **anticoagulants.** **HERBAL:** **Echinacea** may decrease corticosteroid effectiveness. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, cholesterol, amylase, sodium. May decrease serum calcium, potassium, thyroxine.

AVAILABILITY (Rx)

Tablets: 25 mg.

ADMINISTRATION/HANDLING

- Administer with meals, food, or milk to decrease risk of GI disturbance.

INDICATIONS/ROUTES/DOSAGE

Dosage is dependent on condition being treated and pt response.

Physiologic Replacement

PO: ADULTS, ELDERLY: 25–35 mg/day. **CHILDREN:** 0.5–0.75 mg/kg/day in 3 divided doses.

Inflammatory Conditions

PO: ADULTS, ELDERLY: 25–300 mg/day. **CHILDREN:** 2.5–10 mg/kg/day in 3–4 divided doses.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Insomnia, heartburn, anxiety, abdominal distention, increased diaphoresis, acne, mood swings, increased appetite, facial flushing, delayed wound healing, increased susceptibility to infection, diarrhea, constipation. **Occasional:** Headache, edema, change in skin color, frequent urination. **Rare:** Tachycardia, allergic reaction (rash, urticaria), psychological changes, hallucinations, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term therapy: Hypocalcemia, hypokalemia, muscle wasting (esp. arms, legs), osteoporosis, spontaneous fractures, amenorrhea, cataracts, glaucoma, peptic ulcer, HF. **Abrupt withdrawal following long-term therapy:** Anorexia, nausea, fever, headache, joint pain, rebound inflammation, fatigue, weakness, lethargy, dizziness, orthostatic hypotension.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to any corticosteroids. Obtain baseline values for weight, B/P, serum glucose, cholesterol, electrolytes.

INTERVENTION/EVALUATION

Be alert for infection (reduced immune response): sore throat, fever, vague symptoms. For pts on long-term therapy, monitor for hypocalcemia (muscle twitching, cramps, positive Trousseau's or Chvostek's signs), hypokalemia (weakness, muscle cramps, numbness/tingling [esp. lower extremities], nausea/vomiting, irritability, EKG changes). Assess emotional status, ability to sleep.

PATIENT/FAMILY TEACHING

• Do not change dose or schedule or stop taking drug; **must** taper off under medical supervision. • Report fever, sore throat, muscle aches, sudden weight gain/swelling. • Inform dentist, other physicians of cortisone therapy now or within past 12 mos.

cosyntropin

koe-sin-**troe**-pin
(Cortrosyn)
Do not confuse Cortrosyn with colchicine, cortisone, or Cotazym.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenocortical steroid. **CLINICAL:** Glucocorticoid.

USES

Diagnostic testing of adrenocortical function.

PRECAUTIONS

Contraindications: Hypersensitivity to cosyntropin, corticotropin. **Cautions:** Preexisting allergies, history of allergic reaction to corticotropin.

ACTION

Stimulates initial reaction in synthesis of adrenal steroids from adrenal cortex. **Therapeutic Effect:** Increases endogenous corticoid synthesis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Powder for Injection: 0.25 mg. **Injection, Solution:** 0.25 mg/ml.

ADMINISTRATION/HANDLING

Reconstitution

IM: • Reconstitute with 1 ml 0.9% NaCl. • Give as 0.25 mg/ml concentration.
IV Push: • Dilute with 2–5 ml 0.9% NaCl over 2 min.

Storage

Powder: • Room temperature. **Solution:** • Refrigerate.

INDICATIONS/ROUTES/DOSAGE

Adrenocortical Insufficiency

IM, IV: ADULTS, ELDERLY, CHILDREN OLDER THAN 2 YRS: 0.25–0.75 mg. **CHILDREN 2 YRS AND YOUNGER:** 0.125 mg. **NEONATES:** 0.015 mg/kg/dose.
IV Infusion: ADULTS, ELDERLY, CHILDREN OLDER THAN 2 YRS: 0.25 mg over 6 hrs at 0.04 mg/hr.

SIDE EFFECTS

Occasional: Nausea, vomiting. **Rare:** Hypersensitivity reaction (fever, pruritus).

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Hold cortisone, hydrocortisone, spironolactone the day prior to and the day of the test. Ensure that baseline plasma cortisol

concentration has been drawn before start of test or 24-hr urine for 17-KS or 17-OHCS is initiated.

C

INTERVENTION/EVALUATION

Adhere to time frame for blood draws; monitor urine collection if indicated.

PATIENT/FAMILY TEACHING

- Explain procedure, purpose of test.

crizotinib

kriz-**o**-ti-nib
(Xalkori)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of locally advanced or metastatic non–small-cell lung cancer (NSCLC) that is anaplastic lymphoma kinase (ALK) positive.

PRECAUTIONS

Contraindications: None known. **Cautions:** Baseline hepatic impairment, congenital long QT interval syndrome. Pregnancy (avoid use). Concomitant use of CYP3A4 inducers/inhibitors, agents known to cause bradycardia.

ACTION

Inhibits receptor tyrosine kinases including anaplastic lymphoma kinase (ALK), hepatocyte growth factor receptors (HGFR, c-Met), receptor d'origine nantais (RON). **Therapeutic Effect:** Inhibits tumor cell proliferation and survival.

PHARMACOKINETICS

Well absorbed after PO administration. Peak plasma concentration: 4–6 hrs. Protein binding: 91%. Metabolized in liver. Excreted in feces (63%) and urine (22%). **Half-life:** 42 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy. May cause fetal harm. Contraception should be considered during therapy and for at least 12 wks after discontinuation. Do not initiate therapy until pregnancy status confirmed. Unknown if crosses placenta or distributed in breast milk. Nursing mothers must discontinue either nursing or drug therapy. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Strong CYP3A inhibitors** including **atazanavir, clarithromycin, itraconazole, ketoconazole, ritonavir, saquinavir, voriconazole** may increase concentration. **Strong CYP3A inducers** including **carbamazepine, phenytoin, rifabutin, rifampin** may decrease concentration. May alter plasma levels of **alfentanil, cyclosporine, dihydroergotamine, ergotamine, fentanyl, pimozide, sirolimus. Proton pump inhibitors, H_2 blockers, antacids** may decrease solubility. May increase plasma levels of **colchicine, dexamethasone, doxorubicin, etoposide, non-nucleoside reverse transcriptase inhibitors, protease inhibitors, quinidine, tacrolimus, vinblastine.** **HERBAL:** **St. John's wort** may decrease effectiveness. **FOOD:** **Grapefruit products** may increase concentration/toxicity (potential for torsades, myelotoxicity). **LAB VALUES:** May increase serum ALT, AST, alkaline phosphatase, bilirubin. May decrease neutrophils, platelets, lymphocytes.

AVAILABILITY (Rx)

Capsules: 200 mg, 250 mg.

ADMINISTRATION/HANDLING

- May give without regard to meals.
- Avoid grapefruit products.
- Do not break, crush, dissolve, or divide capsules.

INDICATIONS/ROUTES/DOSAGE

Non–Small-Cell Lung Cancer (ALK-Positive)

PO: ADULTS: 250 mg twice daily. **Dosage Modification:** Interrupt and/or reduce to 200 mg twice daily based on graded protocol, including hematologic toxicity (grade 4), elevated LFT with bilirubin elevation (grade 1), QT prolongation (grade 3). May reduce to 250 mg once daily if indicated. Discontinue treatment for QT prolongation (grade 4), elevated LFT with bilirubin elevation (grade 2, 3, 4), pneumonitis of any grade.

Dosage in Renal Impairment

Creatinine Clearance Less Than 30 ml/min: 250 mg once daily.

Dosage in Hepatic Impairment

No dose adjustment.

Dosage Modification for Toxicity

Hematologic

Grade 3 Toxicity (WBC 1,000–2,000/mm^3, ANC 500–1,000/mm^3, platelets 25,000–50,000/mm^3), Grade 3 Anemia: Withhold treatment until recovery to grade 2 or less, then resume at same dosage. **Grade 4 Toxicity (WBC Less Than 1,000/mm^3, ANC Less Than 500/mm^3, Platelets Less Than 25,000/mm^3), Grade 4 Anemia:** Withhold treatment until recovery to grade 2 or less, then resume at 200 mg twice daily. **Grade 4 Toxicity on 200 mg Twice Daily:** Withhold treatment until recovery to grade 2 or less, then resume at 250 mg once daily. **Recurrent Grade 4 Toxicity on 250 mg Once Daily:** Permanently discontinue.

Cardiac

Grade 3 QTc Prolongation on at Least 2 Separate EKGs: Withhold treatment until recovery to baseline or grade 1 or less. Resume at 200 mg twice daily. **Recurrent Grade 3 QTc Prolongation on 200 mg Twice Daily:** Withhold treatment until recovery to baseline or grade 1 or less. Resume at 250 mg once daily. **Recurrent Grade 3 QTc Prolongation on 250 mg Once Daily:** Permanently discontinue.

Bradycardia

Grade 2 or 3: Withhold until recovery to asymptomatic bradycardia or heart rate 60 or more beats/min, evaluate concomitant medications, then resume at 200 mg twice daily. **Grade 4 Due to Crizotinib:** Permanently discontinue. **Grade 4 Associated with Concurrent Medications Known to Cause Bradycardia/Hypotension:** Withhold until recovery to asymptomatic bradycardia or heart rate 60 or more beats/min, and if concurrent medications can be stopped, resume at 250 mg once daily.

Pulmonary

Pulmonary Toxicity: Permanently discontinue.

SIDE EFFECTS

Frequent (62%–27%): Diplopia, photopsia, photophobia, blurry vision, visual field defect, vitreous floaters, reduced visual acuity, nausea, diarrhea, vomiting, peripheral/localized edema, constipation. **Occasional (20%–4%):** Fatigue, decreased appetite, dizziness, neuropathy, paresthesia, dysgeusia, dyspepsia, dysphagia, esophageal obstruction/pain/spasm/ulcer, odynophagia, reflux esophagitis, rash, abdominal pain/tenderness, stomatitis, glossodynia, glossitis, cheilitis, mucosal inflammation, oropharyngeal pain/discomfort, bradycardia, headache, cough. **Rare (3%–1%):** Musculoskeletal chest pain, insomnia, dyspnea, arthralgia, nasopharyngitis, rhinitis, pharyngitis, URI, back pain, complex renal cysts, chest pain/tightness.

ADVERSE EFFECTS/TOXIC REACTIONS

Severe, sometimes fatal treatment-related pneumonitis, pneumonia, dyspnea, pulmonary embolism in less than 2% of pts was noted. Grade 3–4 elevation of hepatic enzymes, increased QT prolongation may require discontinuation. May cause thrombocytopenia, neutropenia, lymphopenia. Severe/worsening vitreous

floaters, photopsia may indicate retinal hole, retinal detachment.

C

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess vital signs, O_2 saturation. Obtain baseline CBC with differential, serum chemistries, LFT, PT/INR, EKG. Question possibility of pregnancy or plans for breastfeeding. Obtain full medication history including vitamins, minerals, herbal products. Detection of ALK-positive NSCLC test needed prior to treatment. Assess history of tuberculosis, HIV, HF, bradyarrhythmias, electrolyte imbalance, medications that prolong QT interval. Assess visual acuity, history of vitreous floaters.

INTERVENTION/EVALUATION

Assess vital signs, O_2 saturation routinely. Monitor CBC with differential monthly, LFT, monthly; increase testing for grades 2, 3, 4 adverse effects. Obtain EKG for bradycardia, electrolyte imbalance, chest pain, difficulty breathing. Monitor for bruising, hematuria, jaundice, right upper abdominal pain, weight loss, or acute infection (fever, diaphoresis, lethargy, oral mucosal changes, productive cough). Report decrease in RBC, Hgb, Hct, platelets, neutrophils, lymphocytes. Worsening cough, fever, or shortness of breath may indicate pneumonitis. Consider ophthalmological evaluation for vision changes. Reinforce birth control compliance.

PATIENT/FAMILY TEACHING

• Blood levels will be drawn routinely. • Report urine changes, bloody or clay-colored stools, upper abdominal pain, nausea, vomiting, bruising, fever, cough, difficulty breathing. • Report history of liver abnormalities or heart problems including long QT syndrome, syncope, palpitations, extremity swelling. • Immediately report any newly prescribed medications, suspected pregnancy, or vision changes including light flashes, blurred vision, photophobia, or new or increased floaters. • Contraception recommended during treatment and for at least 3 mos after treatment. • Avoid alcohol, grapefruit products.

cyanocobalamin (vitamin B_{12})

sye-an-oh-koe-**bal**-a-min
(Nascobal)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Coenzyme.
CLINICAL: Vitamin, antianemic.

USES

Treatment of pernicious anemia, vitamin B_{12} deficiency due to malabsorption diseases, increased B_{12} requirement due to pregnancy, thyrotoxicosis, hemorrhage, malignancy, hepatic/renal disease.

PRECAUTIONS

Contraindications: Hereditary optic nerve atrophy. **Cautions:** Folic acid deficiency, anemia, premature neonates.

ACTION

Coenzyme for metabolic functions (fat, carbohydrate metabolism, protein synthesis). **Therapeutic Effect:** Necessary for cell growth and replication, hematopoiesis, myelin synthesis.

PHARMACOKINETICS

In presence of calcium, absorbed systemically in lower half of ileum. Initially, bound to intrinsic factor; this complex passes down intestine, binding to receptor sites on ileal mucosa. Protein binding: High. Metabolized in liver. Primarily eliminated unchanged in urine. **Half-life:** 6 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category A (C if used in doses above recommended daily allowance;**

C for intranasal). Children/Elderly: No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 1,000 mcg/ml. **Nasal Spray (Nascobal):** 500 mcg/spray. **Tablets:** 50 mcg, 100 mcg, 250 mcg, 500 mcg, 1,000 mcg. **Tablets (Extended-Release):** 1,000 mcg.

ADMINISTRATION/HANDLING

IM, Subcutaneous

- Avoid IV route.

PO

- May give without regard to food.

Intranasal

• Clear both nostrils. • Pull clear cover off top of pump. • Press down firmly and quickly on pump's finger grips until a droplet of gel appears at top. Then press down on finger grips two more times. • Place the tip halfway into nostril, pointing tip toward back of nose. • Press down firmly and quickly on finger grips to release medication into one nostril while pressing other nostril closed. • Massage medicated nostril for a few seconds. • Administer nasal preparation at least 1 hr before or 1 hr after hot foods or liquids are consumed (hot foods can cause nasal secretion, resulting in loss of medication).

INDICATIONS/ROUTES/DOSAGE

Pernicious Anemia

IM, Subcutaneous: ADULTS, ELDERLY: 100 mcg/day for 7 days, then every other day for 7 days, then every 3–4 days for 2–3 wks. **Maintenance:** 100 mcg/mo (PO 1,000–2,000 mcg/day). **CHILDREN:** 30–50 mcg/day for 2 or more wks. **Maintenance:** 100 mcg/mo. **NEONATES:** 0.2 mcg/kg for 2 days, then 1,000 mcg/day for 2–7 days. **Maintenance:** 100 mcg/mo.

Vitamin Deficiency

IM, Subcutaneous: ADULTS, ELDERLY: 30 mcg/day for 5–10 days, then 100–200 mcg/mo.

PO: ADULTS, ELDERLY: 250 mcg/day.

Intranasal: ADULTS, ELDERLY: (NASCOBAL): 500 mcg in one nostril once weekly.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: Diarrhea, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Impurities in preparation may cause rare allergic reaction. Peripheral vascular thrombosis, pulmonary edema, hypokalemia, HF occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for signs, symptoms of vitamin B_{12} deficiency (anorexia, ataxia, fatigue, hyporeflexia, insomnia, irritability, loss of positional sense, pallor, palpitations on exertion).

INTERVENTION/EVALUATION

Assess for HF, pulmonary edema, hypokalemia in cardiac pts receiving subcutaneous/IM therapy. Monitor serum potassium, serum B_{12}, rise in reticulocyte count (peaks in 5–8 days). Assess for reversal of deficiency symptoms (hyporeflexia, loss of positional sense, ataxia, fatigue, irritability, insomnia, anorexia, pallor, palpitations on exertion). Therapeutic response usually dramatic within 48 hrs.

PATIENT/FAMILY TEACHING

• Lifetime treatment may be necessary with pernicious anemia. • Report symptoms of infection. • Foods rich in vitamin B_{12} include clams, oysters, herring, red snapper, muscle meats, fermented cheese, dairy products, egg yolks. • Use nasal preparation at least 1 hr before or 1 hr after consuming hot foods, liquids.

C

cyclobenzaprine

sye-kloe-**ben**-za-preen
(Amrix, Apo-Cyclobenzaprine, Fexmid, Novo-Cycloprine)
Do not confuse cyclobenzaprine with cycloserine or cyproheptadine, or Flexeril with Floxin.

CLASSIFICATION

CLINICAL: Skeletal muscle relaxant.

USES

Treatment of muscle spasm associated with acute, painful musculoskeletal conditions. **OFF-LABEL:** Treatment of muscle spasms associated with temporomandibular joint pain (TMJ).

PRECAUTIONS

Contraindications: Acute recovery phase of MI, arrhythmias, HF, heart block, conduction disturbances, hyperthyroidism, use within 14 days of MAOIs. **Cautions:** Hepatic impairment, history of urinary hesitancy or retention, angle-closure glaucoma, increased intraocular pressure (IOP), elderly.

ACTION

Centrally acting skeletal muscle relaxant that reduces tonic somatic muscle activity at level of brainstem. **Therapeutic Effect:** Relieves local skeletal muscle spasm.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	3–4 hrs	12–24 hrs

Well but slowly absorbed from GI tract. Protein binding: 93%. Metabolized in GI tract and liver. Primarily excreted in urine. **Half-life:** 8–37 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B.**

Children: Safety and efficacy not established. **Elderly:** Increased sensitivity to anticholinergic effects (e.g., confusion, urinary retention).

INTERACTIONS

DRUG: Alcohol, other CNS depressant medications may increase CNS depression. **MAOIs** may increase risk of hypertensive crisis, seizures. **Tramadol** may increase risk of seizures. **HERBAL: Gotu kola, kava kava, SAMe, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 5 mg, 7.5 mg, 10 mg.

Capsules (Extended-Release [Amrix]): 15 mg, 30 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not break, crush, dissolve, or divide extended-release capsule. • Give extended-release capsule at same time each day.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Do not use longer than 2–3 wks.

Acute, Painful Musculoskeletal Conditions

PO: ADULTS, ELDERLY, CHILDREN 15 YRS AND OLDER: Initially, 5 mg 3 times a day. May increase to 7.5–10 mg 3 times a day.
PO *(Extended-Release)*: ADULTS, ELDERLY: 15–30 mg once daily.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Note: Extended-release capsule not recommended in hepatic impairment. **Mild:** 5 mg 3 times a day. **Moderate and severe:** Not recommended.

SIDE EFFECTS

Frequent (39%–11%): Drowsiness, dry mouth, dizziness. **Rare (3%–1%):** Fatigue,

asthenia, blurred vision, headache, anxiety, confusion, nausea, constipation, dyspepsia, unpleasant taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may result in visual hallucinations, hyperactive reflexes, muscle rigidity, vomiting, hyperpyrexia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type, location, duration of muscular spasm. Check for immobility, stiffness, swelling.

INTERVENTION/EVALUATION

Assist with ambulation. Assess for therapeutic response: relief of pain; decreased stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

Avoid tasks that require alertness, motor skills until response to drug is established. • Drowsiness usually diminishes with continued therapy. • Avoid alcohol, other depressants while taking medication. • Avoid sudden changes in posture. • Sugarless gum, sips of water may relieve dry mouth.

HIGH ALERT

cyclophosphamide

sye-kloe-**foss**-fa-mide
(Procytox ✱)
Do not confuse cyclophosphamide with cyclosporine or ifosfamide.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent. **CLINICAL:** Antineoplastic.

USES

Treatment of acute lymphocytic, acute nonlymphocytic, chronic myelocytic, chronic lymphocytic leukemias; ovarian, breast carcinomas; neuroblastoma; retinoblastoma; Hodgkin's, non-Hodgkin's lymphomas; multiple myeloma; mycosis fungoides; nephrotic syndrome in children. **OFF-LABEL:** Treatment of adrenocortical, bladder, cervical, endometrial, prostatic, testicular carcinomas; Ewing's sarcoma; multiple sclerosis; non–small-cell, small-cell lung cancer; organ transplant rejection; osteosarcoma; ovarian germ cell, primary brain, trophoblastic tumors; rheumatoid arthritis; soft-tissue sarcomas; systemic dermatomyositis; systemic lupus erythematosus; Wilms' tumor.

PRECAUTIONS

Contraindications: Severe myelosuppression. **Cautions:** Severe leukopenia, thrombocytopenia, tumor infiltration of bone marrow, previous therapy with other antineoplastic agents, radiation, renal/hepatic/cardiac impairment.

ACTION

Inhibits DNA, RNA protein synthesis by cross-linking with DNA, RNA strands. Cell cycle–phase nonspecific. **Therapeutic Effect:** Prevents cell growth. Potent immunosuppressant.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 10%–60%. Crosses blood-brain barrier. Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 3–12 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy. May cause fetal malformations (limb abnormalities, cardiac anomalies, hernias). Distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category D. Children:** No age-related precautions noted.

Elderly: Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **CYP2D6 inducers (e.g., carbamazepine, phenobarbital)** may decrease concentration; **CYP2D6 inhibitors (e.g., paroxetine, amiodarone)** may increase concentration. **Anthracycline agents (e.g., doxorubicin, epirubicin)** may increase risk of cardiomyopathy. **CYP3A4 inhibitors (e.g., ketoconazole)** may increase concentration, risk of adverse effects. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** Pts with an estrogen-dependent tumor should avoid **black cohosh, dong quai.** **FOOD:** None known. **LAB VALUES:** May increase serum uric acid.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 500 mg, 1 g, 2 g.

Tablets: 25 mg, 50 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

IV

Reconstitution • Reconstitute each 100 mg with 5 ml Sterile Water for Injection, 0.9% NaCl, or D_5W to provide concentration of 20 mg/ml. • Shake to dissolve. • Allow to stand until clear.

Rate of Administration • Infusion rates vary based on protocol. May give by direct IV injection, IV piggyback, or continuous IV infusion.

Storage • Reconstituted solution in 0.9% NaCl is stable for 24 hrs at room temperature or up to 6 days if refrigerated.

PO

• Give on an empty stomach. If GI upset occurs, give with food. • Do not cut or crush. • To minimize risk of bladder irritation, do not give at bedtime.

IV INCOMPATIBILITY

Amphotericin B complex (Abelcet, AmBisome, Amphotec).

IV COMPATIBILITIES

Granisetron (Kytril), heparin, hydromorphone (Dilaudid), lorazepam (Ativan), morphine, ondansetron (Zofran), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Note: Hematologic toxicity may require dose reduction.

Usual Dosage (Refer to Individual Protocols)

IV: ADULTS, ELDERLY, CHILDREN: (Single agent): 40–50 mg/kg in divided doses over 2–5 days or 10–15 mg/kg q7–10 days or 3–5 mg/kg twice weekly.
PO: ADULTS, ELDERLY, CHILDREN: 1–5 mg/kg/day.

Nephrotic Syndrome

PO: ADULTS, CHILDREN: 2.5–3 mg/kg/day for 60–90 days.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Expected: Marked leukopenia 8–15 days after initiation. **Frequent:** Nausea, vomiting (beginning about 6 hrs after administration and lasting about 4 hrs); alopecia (33%). **Occasional:** Diarrhea, darkening of skin/fingernails, stomatitis, headache, diaphoresis. **Rare:** Pain/redness at injection site.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression resulting in blood dyscrasias (leukopenia, anemia, thrombocytopenia, hypoprothrombinemia) has been noted. Expect leukopenia to resolve in

17–28 days. Anemia generally occurs after large doses or prolonged therapy. Thrombocytopenia may occur 10–15 days after drug initiation. Hemorrhagic cystitis occurs commonly in long-term therapy (esp. in children). Pulmonary fibrosis, cardiotoxicity noted with high doses. Amenorrhea, azoospermia, hyperkalemia may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC weekly during therapy or until maintenance dose is established, then at 2- to 3-wk intervals.

INTERVENTION/EVALUATION

Monitor CBC, serum BUN, creatinine, electrolytes; urine output. Monitor WBC counts closely during initial therapy. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Recovery from marked leukopenia due to myelosuppression can be expected in 17–28 days.

PATIENT/FAMILY TEACHING

• Encourage copious fluid intake, frequent voiding (assists in preventing cystitis) at least 24 hrs before, during, after therapy. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever, sore throat, signs of local infection, difficulty or pain with urination, unusual bruising/bleeding from any site. • Hair loss is reversible, but new hair growth may have different color, texture.

*cycloSPORINE

sye-kloe-**spor**-in
(Apo-Cyclosporine, Gengraf, Neoral, Restasis, Sandimmune)

■ **BLACK BOX ALERT** ■ Only physicians experienced in management of immunosuppressive therapy and organ transplant pts should prescribe. Renal impairment may occur with high dosage. Increased risk of neoplasia, susceptibility to infections. May cause hypertension, nephrotoxicity. Psoriasis pts: Increased risk of developing skin malignancies.

Do not confuse cyclosporine with cycloserine or cyclophosphamide, Gengraf with ProGraf, Neoral with Neurontin or Nizoral, or Sandimmune with Sandostatin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Cyclic polypeptide. **CLINICAL:** Immunosuppressant.

USES

Prevents organ rejection of kidney, liver, heart in combination with steroid therapy and/or azathioprine. Treatment of chronic allograft rejection in those previously treated with other immunosuppressives. **Capsules/solution:** Treatment of severe, active rheumatoid arthritis, severe recalcitrant plaque psoriasis in nonimmunocompromised adults. **Ophthalmic:** Chronic dry eyes. **OFF-LABEL:** Allogenic stem cell transplants for prevention/treatment of graft-vs-host disease; focal segmental glomerulosclerosis, lupus nephritis, severe ulcerative colitis.

PRECAUTIONS

Contraindications: History of hypersensitivity to cyclosporine, polyoxyethylated castor oil; uncontrolled hypertension, renal impairment, or malignancies in treatment of psoriasis or rheumatoid arthritis. **Cautions:** Hepatic/renal, impairment.

ACTION

Inhibits cellular, humoral immune responses by inhibiting interleukin-2, a proliferative factor needed for T-cell activity. **Therapeutic Effect:** Prevents

organ rejection, relieves symptoms of psoriasis, arthritis.

C

PHARMACOKINETICS

Variably absorbed from GI tract. Protein binding: 90%. Metabolized in liver. Eliminated primarily by biliary or fecal excretion. Not removed by hemodialysis. **Half-life:** Adults, 10–27 hrs; children, 7–19 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category C. Children:** No age-related precautions noted in transplant pts. **Elderly:** Increased risk of hypertension, increased serum creatinine.

INTERACTIONS

DRUG: **Allopurinol, bromocriptine, cimetidine, clarithromycin, danazol, diltiazem, oral contraceptives, erythromycin, fluconazole, itraconazole, ketoconazole** may increase concentration, risk of hepatic/renal toxicity. **Rifampin, carbamazepine, phenytoin** may decrease **cyclosporine** concentration. **ACE inhibitors, potassium-sparing diuretics, potassium supplements** may cause hyperkalemia. **Immunosuppressants** may increase risk of infection, lymphoproliferative disorders. **Lovastatin, simvastatin, atorvastatin, pravastatin** may increase risk of rhabdomyolysis. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's response to vaccine. May increase concentration/toxicity of **digoxin, colchicine.** **HERBAL:** Avoid **cat's claw, echinacea** (possess immunostimulant properties). **St. John's wort** may decrease plasma concentration. **FOOD:** **Grapefruit products** may increase absorption/immunosuppression, risk of toxicity. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, amylase, bilirubin, creatinine, potassium, uric acid, ALT, AST. May decrease serum magnesium. **Therapeutic peak serum level:** 50–400 ng/ml; **toxic serum level:** greater than 400 ng/ml.

AVAILABILITY (Rx)

Capsules (Gengraf, Neoral [Modified], Sandimmune [Nonmodified]): 25 mg, 50 mg, 100 mg. **Injection, Solution (Sandimmune):** 50 mg/ml. **Ophthalmic Emulsion (Restasis):** 0.05%. **Oral Solution (Gengraf, Neoral [Modified], Sandimmune [Nonmodified]):** 100 mg/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Oral solution available in bottle form with calibrated liquid measuring device. Oral form should replace IV administration as soon as possible.

IV

Reconstitution • Dilute each ml (50 mg) concentrate with 20–100 ml 0.9% NaCl or D_5W (**maximum concentration:** 2.5 mg/ml).

Rate of Administration • Infuse over 2–6 hrs. • Monitor pt continuously for hypersensitivity reaction (facial flushing, dyspnea).

Storage • Store parenteral form at room temperature. • Protect IV solution from light. • After diluted, stable for 6 hrs in PVC; 24 hrs in Excel or glass.

PO

• Administer consistently with relation to time of day and meals. • Oral solution may be mixed in glass container with milk, chocolate milk, orange juice, or apple juice (preferably at room temperature). Stir well. • Drink immediately. • Add more diluent to glass container. Mix with remaining solution to ensure total amount is given. • Dry outside of calibrated liquid measuring device before replacing cover. • Do not rinse with water. • Avoid refrigeration of oral solution (solution may separate). • Discard oral solution after 2 mos once bottle is opened.

Ophthalmic

• Invert vial several times to obtain uniform suspension. • Instruct pt to remove contact lenses before administration (may reinsert 15 min after administration). • May use with artificial tears.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), amphotericin B complex (Abelcet, AmBisome, Amphotec), magnesium.

IV COMPATIBILITY

Propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Transplantation, Prevention of Organ Rejection

PO: ADULTS, ELDERLY, CHILDREN: NOT MODIFIED: 10–18 mg/kg/dose given 4–12 hrs prior to organ transplantation. **Maintenance:** 5–15 mg/kg/day in divided doses then tapered to 3–10 mg/kg/day. **MODIFIED:** (dose dependent upon type of transplant): **Renal:** 6–12 mg/kg/day in 2 divided doses. **Hepatic:** 4–12 mg/kg/day in 2 divided doses. Heart: 4–10 mg/kg/day in 2 divided doses.

IV: ADULTS, ELDERLY, CHILDREN: Initially, 5–6 mg/kg/dose given 4–12 hrs prior to organ transplantation. **Maintenance:** 2–10 mg/kg/day in divided doses.

Rheumatoid Arthritis

PO: ADULTS, ELDERLY: Initially, 2.5 mg/kg a day in 2 divided doses. May increase by 0.5–0.75 mg/kg/day. **Maximum:** 4 mg/kg/day.

Psoriasis

PO: ADULTS, ELDERLY: Initially, 2.5 mg/kg/day in 2 divided doses. May increase by 0.5 mg/kg/day after 4 wks; additional increases may be made q2wks. **Maximum:** 4 mg/kg/day.

Dry Eye

Ophthalmic: ADULTS, ELDERLY: Instill 1 drop in each affected eye q12h.

Dosage in Renal Impairment

Modify dose if serum creatinine levels 25% or above pretreatment levels.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (26%–12%): Mild to moderate hypertension, hirsutism, tremor. **Occasional (4%–2%):** Acne, leg cramps, gingival hyperplasia (red, bleeding, tender gums), paresthesia, diarrhea, nausea, vomiting, headache. **Rare (less than 1%):** Hypersensitivity reaction, abdominal discomfort, gynecomastia, sinusitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Mild nephrotoxicity occurs in 25% of renal transplants, 38% of cardiac transplants, 37% of liver transplants, generally 2–3 mos after transplantation (more severe toxicity may occur soon after transplantation). Hepatotoxicity occurs in 4% of renal, 7% of cardiac, and 4% of liver transplants, generally within first mo after transplantation. Both toxicities usually respond to dosage reduction. Severe hyperkalemia, hyperuricemia occur occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum chemistries, esp. renal function, LFT. If nephrotoxicity occurs, mild toxicity is generally noted 2–3 mos after transplantation; more severe toxicity noted early after transplantation; hepatotoxicity may be noted during first mo after transplantation.

INTERVENTION/EVALUATION

Diligently monitor serum BUN, creatinine, bilirubin, ALT, AST, LDH levels for evidence of hepatotoxicity/nephrotoxicity (mild toxicity noted by slow rise in serum levels; more overt toxicity noted by rapid rise in levels; hematuria also noted in nephrotoxicity). Monitor serum potassium for evidence of hyperkalemia.

C

Encourage diligent oral hygiene (gingival hyperplasia). Monitor B/P for evidence of hypertension. **Note:** Reference ranges dependent on organ transplanted, organ function, cyclosporine toxicity. Trough levels should be obtained immediately prior to next dose. **Therapeutic serum level:** 50–400 ng/ml; **toxic serum level:** greater than 400 ng/ml.

PATIENT/FAMILY TEACHING

• Blood levels will be drawn routinely. • Report severe headache, persistent nausea/vomiting, unusual swelling of extremities, chest pain. • Avoid grapefruit products (increases concentration/effects), St. John's wort (decreases concentration).

cytarabine HIGH ALERT

sye-**tar**-a-bine
(Ara-C, Cytosar-U, Depo-Cyt)

■ **BLACK BOX ALERT** ■ Must be administered by personnel trained in administration/handling of chemotherapeutic agents. ***Conventional:*** Potent myelosuppressant. High risk of multiple toxicities (GI, CNS, pulmonary, cardiac). ***Liposomal:*** Chemical arachnoiditis, manifested by profound nausea, vomiting, fever, may be fatal if untreated. **Do not confuse cytarabine with Cytoxan or vidarabine, or Cytosar with Cytoxan or Neosar.**

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic.

USES

Ara-C: Remission induction in acute myeloid leukemia (AML), treatment of acute lymphocytic leukemia (ALL) and chronic myelocytic leukemia (CML), prophylaxis and treatment of meningeal leukemia. **Depo-Cyt:** Treatment of lymphomatous meningitis. **OFF-LABEL: Ara-C:** Carcinomatous meningitis, Hodgkin's and non-Hodgkin's lymphomas, myelodysplastic syndrome.

PRECAUTIONS

Contraindications: (Liposomal): Active meningeal infection. **Cautions:** Renal/hepatic impairment, prior drug-induced bone marrow suppression.

ACTION

Inhibits DNA polymerase. Cell cycle–specific for S phase of cell division. **Therapeutic Effect:** Appears to inhibit DNA synthesis. Potent immunosuppressive activity.

PHARMACOKINETICS

Widely distributed; moderate amount crosses blood-brain barrier. Protein binding: 15%. Primarily excreted in urine. **Half-life:** 1–3 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy. May cause fetal malformations. Unknown if distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category D. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: May decrease concentration of **digoxin, flucytosine. Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's response to vaccine. **HERBAL: Echinacea** may decrease therapeutic effect. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, uric acid, AST.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Ara-C): 100 mg, 500 mg, 1 g. **Injection, Solution (Ara-C):** 20 mg/ml, 100 mg/ml. **Injection, Suspension (Depo-Cyt):** 10 mg/ml.

ADMINISTRATION/HANDLING

◄ALERT► May give by subcutaneous, IV push, IV infusion, intrathecal routes at concentration not to exceed 100 mg/ml.

May be carcinogenic, mutagenic, teratogenic (embryonic deformity). Handle with extreme care during preparation/administration. Depo-Cyt for intrathecal use only.

IV, Subcutaneous, Intrathecal

IV

Reconstitution • Ara-C: Reconstitute with Bacteriostatic Water for Injection. • Dose may be further diluted with 250–1,000 ml D_5W or 0.9% NaCl for IV infusion. • For intrathecal use, reconstitute vial with preservative-free 0.9% NaCl or pt's spinal fluid. Dose usually administered in 5–15 ml of solution, after equivalent volume of CSF removed. • Depo-Cyt: No reconstitution required.

Rate of Administration • Ara-C: For IV infusion, give over 1–3 hrs or as continuous infusion.

Storage • Ara-C: Store at room temperature. • Reconstituted solution is stable for 48 hrs at room temperature. • Use diluted solution within 24 hrs. • Discard if slight haze develops. • Depo-Cyt: Refrigerate; use within 4 hrs following withdrawal from vial.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), ganciclovir (Cytovene), heparin, insulin (regular).

IV COMPATIBILITIES

Dexamethasone (Decadron), diphenhydramine (Benadryl), filgrastim (Neupogen), granisetron (Kytril), hydromorphone (Dilaudid), lorazepam (Ativan), morphine, ondansetron (Zofran), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage for Induction (Refer to Individual Protocols)

IV: ADULTS, ELDERLY, CHILDREN: (Induction): 100 mg/m²/day continuous infusion for 7 days.

Intrathecal: ADULTS, ELDERLY, CHIDREN: 5–75 mg/m² daily for 4 days or once q4days.

Usual Maintenance Dosage

IV: ADULTS, ELDERLY, CHILDREN: 70–200 mg/m²/day for 2–5 days q mo.

Subcutaneous: ADULTS, ELDERLY, CHILDREN: 1–1.5 mg/m² as single dose q1–4wks.

Usual Dosage for Depo-Cyt

Intrathecal: ADULTS, ELDERLY: (Induction): 50 mg q14 days for 2 doses (wks 1, 3). **(Consolidation):** 50 mg q14 days for 3 doses (wks 5, 7, 9) followed by additional dose at wk 13. **(Maintenance):** 50 mg q28days for 4 doses (wks 17, 21, 25, 29).

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: IV, Subcutaneous (33%–16%): Asthenia, fever, pain, altered taste/smell, nausea, vomiting (risk greater with IV push than with continuous IV infusion). **Intrathecal (28%–11%):** Headache, asthenia, altered taste/smell, confusion, drowsiness, nausea, vomiting.

Occasional: IV, Subcutaneous (11%–7%): Abnormal gait, drowsiness, constipation, back pain, urinary incontinence, peripheral edema, headache, confusion. **Intrathecal (7%–3%):** Peripheral edema, back pain, constipation, abnormal gait, urinary incontinence.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression resulting in blood dyscrasias (leukopenia, anemia, thrombocytopenia, megaloblastosis, reticulocytopenia) occurring minimally after single IV dose. Leukopenia, anemia, thrombocytopenia should be expected with daily or continuous IV therapy. Cytarabine syndrome (fever, myalgia, rash, conjunctivitis, malaise, chest pain), hyperuricemia

may occur. High-dose therapy may produce severe CNS, GI, pulmonary toxicity.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, renal function, LFT. Leukocyte count decreases within 24 hrs after initial dose, continues to decrease for 7–9 days followed by brief rise at 12 days, decreases again at 15–24 days, then rises rapidly for next 10 days. Platelet count decreases 5 days after drug initiation to its lowest count at 12–15 days, then rises rapidly for next 10 days.

INTERVENTION/EVALUATION

Monitor serum BUN, creatinine, uric acid, ALT, AST, bilirubin, alkaline phosphatase. Monitor CBC for evidence of myelosuppression. Monitor for blood dyscrasias (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Monitor for signs of neuropathy (gait disturbances, handwriting difficulties, paresthesia).

PATIENT/FAMILY TEACHING

• Increase fluid intake (may protect against hyperuricemia). • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site.

dabigatran

TOP 100

dab-i-**gah**-tran
(Pradaxa, Pradax)

■ **BLACK BOX ALERT** ■ Risk of thrombotic events (e.g., stroke) increased if dabigatran discontinued for a reason other than pathological bleeding.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Thrombin inhibitor. **CLINICAL:** Anticoagulant.

USES

Indicated to reduce risk of stroke, systemic embolism in pts with nonvalvular atrial fibrillation. Treatment and reduction of risk of deep vein thrombosis (DVT) and pulmonary embolism (PE).

PRECAUTIONS

Contraindications: Active major bleeding, pts with mechanical prosthetic heart valves. **Cautions:** Renal impairment (creatinine clearance 15–30 ml/min), moderate hepatic impairment, invasive procedures, spinal anesthesia, major surgery, those with congenital or acquired bleeding disorders, elderly, concurrent use of medication that increases risk of bleeding.

ACTION

Direct thrombin inhibitor that inhibits coagulation by preventing thrombin effects (e.g., inhibition of thrombin-induced platelet aggregation). **Therapeutic Effect:** Produces anticoagulation, preventing development of thrombus.

PHARMACOKINETICS

Metabolized in liver. Protein binding: 35%. Eliminated primarily in urine. **Half-life:** 12–17 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Severe renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Rifampin may decrease concentration. **Antacids, proton pump inhibitors** may decrease level, effect. **Antiplatelet agents, NSAIDs, other anticoagulants, thrombolytics** may increase risk of bleeding. **HERBAL: Feverfew, ginkgo biloba, green tea, red clover** may increase risk of bleeding. **St. John's wort** may decrease concentration/effect. **FOOD: High-fat meal** delays absorption approximately 2 hrs. **LAB VALUES:** May increase aPTT, PT, INR.

AVAILABILITY (Rx)

Capsules: 75 mg, 150 mg.

ADMINISTRATION/HANDLING

PO

• May be given without regard to food. Administer with water. • Do not break, cut, open capsules.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Medication should be discontinued prior to invasive or surgical procedures.

DVT/PE

PO: ADULTS, ELDERLY: 150 mg twice daily.

Nonvalvular Atrial Fibrillation

PO: ADULTS, ELDERLY: 150 mg twice daily.

Dosage in Renal Impairment (Nonvalvular Atrial Fibrillation)

Creatinine Clearance 15–30 ml/min: 75 mg twice daily. **Creatinine clearance less than 15, or HD:** Use not recommended (removes ~60% over 2–3 hrs).

Dosage in Hepatic Impairment

No dosage adjustment.

SIDE EFFECTS

Frequent (less than 16%): Dyspepsia (heartburn, nausea, indigestion), diarrhea, upper abdominal pain.

D

ADVERSE EFFECTS/ TOXIC REACTIONS

Gastrointestinal bleeding occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess CBC, including platelet count. Check PT, PTT. Determine baseline B/P.

INTERVENTION/EVALUATION

Assess for any sign of bleeding (hematuria, melena, bleeding from gums, petechiae, bruising). Do not obtain B/P in lower extremities (possible deep vein thrombosis). Assess for decrease in B/P, increase in pulse rate, complaint of abdominal pain, diarrhea. Obtain aPTT, PT, platelet count. Question for increase in discharge during menses. Monitor for hematoma. Use care in removing any dressing, tape.

PATIENT/FAMILY TEACHING

• Do not chew, crush, open, or divide capsules. • Use electric razor, soft toothbrush to prevent bleeding. • Report any sign of red or dark urine, black or red stool, coffee-ground vomitus, red-speckled mucus from cough. • Keep in original container. • Once bottle is opened, must be used within 60 days. • Open blister pack at time of use.

dabrafenib

da-**braf**-e-nib
(Tafinlar)
Do not confuse dabrafenib with dasatinib.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of unresectable or metastatic melanoma with BRAF V600E mutation as detected by FDA-approved test.
◄ALERT► Not indicated for treatment of wild-type BRAF melanomas.

PRECAUTIONS

Contraindications: None known. **Cautions:** Diabetes mellitus, hepatic/renal impairment, dehydration, glucose-6-phosphate dehydrogenase (G6PD) deficiency, pts at increased risk for arrhythmias.

ACTION

Inhibits BRAF kinase gene mutation, a main cause of tumor cell growth, in the absence of growth factors that are normally required for proliferation. **Therapeutic Effect:** Inhibits tumor cell growth and metastasis.

PHARMACOKINETICS

Readily absorbed after PO administration. Protein binding: 99.7%. Peak plasma concentration: 2 hrs. Metabolized in liver. Excreted in feces (71%), urine (23%). **Half-life:** 8 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy. May cause fetal harm. Must use effective nonhormonal contraception during treatment and for at least 4 wks after treatment (intrauterine device, barrier methods). Unknown if distributed in breast milk. Must either discontinue breastfeeding or discontinue therapy. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** May have increased risk of adverse effects, skin lesions.

INTERACTIONS

DRUG: Antacids, H_2-receptors blockers, proton pump inhibitors may decrease concentration/effect. **CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin)** may decrease concentration/effect. **CYP3A4 inhibitors (e.g., clarithromycin, gemfibrozil, ketoconazole)** may increase

concentration. May decrease effectiveness of **hormonal contraceptives, warfarin.** **HERBAL:** **St John's wort** may decrease concentration/effect. **FOOD:** **High-fat meals** may decrease absorption/effect. **LAB VALUES:** May increase serum glucose, alkaline phosphatase. May decrease serum phosphate, sodium.

AVAILABILITY (Rx)

Capsules: 50 mg, 75 mg.

ADMINISTRATION/HANDLING

PO

• Give at least 1 hr before or at least 2 hrs after meal. Do not break, crush, open, or divide capsule. Missed dose may be given up to 6 hrs prior to next dose.

INDICATIONS/ROUTES/DOSAGE

Metastatic Melanoma

PO: ADULTS/ELDERLY: 150 mg twice daily (about 12 hrs apart).

Dose Modification

Based on Common Terminology Criteria for Adverse Events (CTCAE) grading 1–4.

Reduction Levels	Dose
1st dose reduction	100 mg twice daily
2nd dose reduction	75 mg twice daily
3rd dose reduction	50 mg twice daily

Fever greater than 101.3°F or Any Grade 2 or Grade 3 Adverse Event

Withhold until fever or adverse event resolves to grade 1 or less, then reduce dose by one level. May further decrease each dose level based on tolerability.

Recurrent Grade 4 Adverse Event or 50-mg Dose Intolerability or Hemodynamic Instability

Permanently discontinue.

Dosage in Renal/Hepatic Impairment

No dosage adjustment.

SIDE EFFECTS

Frequent (37%–17%): Hyperkeratosis, headache, pyrexia, arthralgia, alopecia, rash. **Occasional (12%–10%):** Back pain, cough, myalgia, constipation, nasopharyngitis, fatigue.

ADVERSE EFFECTS/ TOXIC REACTIONS

Cutaneous squamous cell carcinoma (cuSCC) and keratocanthomas reported in 11% of pts (esp. elderly, prior skin cancer, chronic sun exposure). Skin reactions including palmar-plantar erythrodysesthesia syndrome (PPES), papilloma have occurred. May increase cell proliferation of wild-type BRAF melanoma or new malignant melanomas. Eye conditions including uveitis, iritis reported. Hyperglycemia reported in 6% of pts. Serious febrile drug reactions including hypotension, rigors, dehydration reported in 4% of pts. Pts with G6PD deficiency have increased risk of hemolytic anemia. Pancreatitis, interstitial nephritis, bullous rash reported in less than 10% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CMP, serum magnesium, phosphate, blood glucose level. Confirm presence of BRAF V600E mutation, negative urine pregnancy before initiating treatment. Assess skin for moles, lesions, papillomas. Baseline ophthalmologic exam, visual acuity. Question current breastfeeding status. Receive full medication history including herbal products.

INTERVENTION/EVALUATION

Offer emotional support. Monitor serum electrolytes, blood glucose routinely. Obtain CBC if hemolytic anemia suspected. Monitor for signs of hyperglycemia (thirst, polyuria, confusion, dehydration). Assess for skin lesions every 2 mos during treatment and at least 6 mos after treatment. Immediately report any vision changes, eye pain/swelling, febrile events, renal impairment.

D

PATIENT/FAMILY TEACHING

• Treatment may cause hair loss. • Do not breastfeed. • Avoid pregnancy; nonhormonal contraception should be used during treatment and up to 4 wks after treatment. • Take capsule at least 1 hr before or at least 2 hrs after meal. Swallow whole; do not chew, crush, open, or divide. • Report any increased urination, thirst, confusion, vision changes, eye pain, fever, skin changes including moles or lesions. • Minimize exposure to sunlight. • Males may experience a decreased sperm count. • Report any newly prescribed medications.

dacarbazine HIGH ALERT

da-**kar**-bah-zeen
(DTIC)

■ **BLACK BOX ALERT** ■ Myelosuppression is most common toxicity. May cause hepatic necrosis, hepatic vein thrombosis. May be carcinogenic or teratogenic. Administer only under supervision of an experienced cancer chemotherapy physician.

Do not confuse dacarbazine with Dicarbosil or procarbazine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent. **CLINICAL:** Antineoplastic.

USES

Treatment of metastatic malignant melanoma, second-line therapy of Hodgkin's disease. **OFF-LABEL:** Treatment of islet cell carcinoma, soft-tissue sarcoma, pheochromocytoma, medullary carcinoma of thyroid.

PRECAUTIONS

Contraindications: Hypersensitivity to dacarbazine. **Cautions:** Renal/hepatic impairment, bone marrow suppression.

ACTION

Forms methyldiazonium ions, which attack nucleophilic groups in DNA. Cross-links DNA strands. **Therapeutic Effect:** Inhibits DNA, RNA, protein synthesis.

PHARMACOKINETICS

Minimally crosses blood-brain barrier. Protein binding: 5%. Metabolized in liver. Excreted in urine. **Half-life:** 5 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. Breastfeeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Bone marrow depressants** may enhance myelosuppression. **CYP1A2 inducers (e.g., rifampin)** may decrease effects. **CYP1A2 inhibitors (e.g., fluoxetine, amlodipine)** may increase level/effects. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to the vaccine. **HERBAL:** **Dong quai, St. John's wort** may increase photosensitization. **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, ALT, AST.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 100-mg vial, 200-mg vial.

ADMINISTRATION/HANDLING

ALERT Give by IV push or IV infusion. May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

IV

Reconstitution • Reconstitute 100-mg vial with 9.9 ml Sterile Water for Injection

(19.7 ml for 200-mg vial) to provide concentration of 10 mg/ml.

Rate of Administration • Further dilute with 250–1,000 ml D_5W or 0.9% NaCl at a concentration not to exceed 10 mg/ml. Infuse over 30–60 min. • Apply hot packs if local pain, burning sensation, irritation at injection site occur. • Avoid extravasation (stinging, swelling, coolness, slight or no blood return at injection site).

Storage • Protect from light; refrigerate vials. • Color change from ivory to pink indicates decomposition; discard. • Solution containing 10 mg/ml is stable for 8 hrs at room temperature or 72 hrs if refrigerated. • Solution diluted with D_5W or 0.9% NaCl is stable for at least 24 hrs at room temperature.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), hydrocortisone (Solu-Cortef), heparin, piperacillin and tazobactam (Zosyn).

IV COMPATIBILITIES

Granisetron (Kytril), ondansetron (Zofran), palonosetron (Aloxi).

INDICATIONS/ROUTES/DOSAGE

Refer to individual protocols.

Metastatic Melanoma

IV: ADULTS, ELDERLY: 250 mg/m^2/day for 5 days, repeat q3wks.

Hodgkin's Disease

IV: ADULTS, ELDERLY, CHILDREN: 375 mg/m^2 once, repeat in 15 days (as combination therapy) of every 28-day cycle.

Dosage in Renal Impairment

Creatinine Clearance	Dose
46–60 ml/min	80% of dose
31–45 ml/min	75% of dose
30 or less ml/min	70% of dose

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (90%): Nausea, vomiting, anorexia (occurs within 1 hr of initial dose, may last up to 12 hrs). **Occasional:** Facial flushing, paresthesia, alopecia, flu-like symptoms (fever, myalgia, malaise), dermatologic reactions, confusion, blurred vision, headache, lethargy. **Rare:** Diarrhea, stomatitis, photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression resulting in blood dyscrasias (leukopenia, thrombocytopenia) generally appears 2–4 wks after last dacarbazine dose. Hepatotoxicity occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, serum chemistries, esp. LFT. Conflicting reports of antiemetic effectiveness for nausea, vomiting. Some clinicians recommend food, fluid restriction 4–6 hrs before treatment; other clinicians believe good hydration to within 1 hr of treatment will prevent dehydration due to vomiting.

INTERVENTION/EVALUATION

Monitor CBC for evidence of myelosuppression. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site).

PATIENT/FAMILY TEACHING

• Tolerance to GI effects occurs rapidly (generally after 1–2 days of treatment). • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site. • Report persistent nausea, vomiting.

dalbavancin

dal-ba-**van**-sin
(Dalvance)
Do not confuse dalbavancin with oritavancin or telavancin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Glycopeptide. **CLINICAL:** Antibiotic.

USES

Treatment of adult pts with acute bacterial skin and skin structure infections (ABSSSI) caused by susceptible strains of gram-positive microorganisms including *Staphylococcus aureus* (methicillin-susceptible and methicillin-resistant strains), *Streptococcus pyogenes*, *Streptococcus agalactiae,* and *Streptococcus anginosus* group (including *S. anginosus*, *S. intermedius*, *S. constellatus*).

PRECAUTIONS

Contraindications: Known hypersensitivity reaction to dalbavancin. **Cautions:** Hepatic/renal impairment, chronic hepatitis, hx alcohol abuse, hx hypersensitivity reaction to glycopeptides (e.g., vancomycin), recent *Clostridium difficile* infection or antibiotic-associated colitis.

ACTION

Inhibits cell wall synthesis by binding to bacterial cell membrane. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Widely distributed. Metabolism not defined. Protein binding: 93%. Primarily eliminated in urine. **Half-life:** 14.4 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk; use caution. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None known. **HERBAL:** None known. **FOOD:** None significant. **LAB VALUES:** May increase serum ALT, AST, bilirubin.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 500 mg.

ADMINISTRATION/HANDLING

IV

ALERT Must be reconstituted with Sterile Water for Injection and subsequently diluted with 5% Dextrose Injection only.

Reconstitution • Reconstitute each 500 mg vial with 25 ml of Sterile Water for Injection for final concentration of 20 mg/ml. • To avoid foaming, alternate between gentle swirling and inversion of vial until completely dissolved. Do not shake. • Visually inspect for particulate matter. Solution should appear clear, colorless to yellow. Do not use if particulate matter observed. • Aseptically transfer required dose into 5% dextrose to a final concentration of 1-5 mg/ml.

Rate of Administration • Infuse over 30 min.

Storage • Store unused vials at room temperature. • Reconstituted vials/diluted bag may be refrigerated or stored at room temperature for up to 48 hrs. • Do not freeze.

IV INCOMPATIBILITIES

Do not infuse with other medications or electrolytes. Saline-based solutions may cause precipitate formation. If using single IV access, flush IV with 5% dextrose before and after each use.

INDICATIONS/ROUTES/DOSAGE

Acute Bacterial Skin and Skin Structure Infection

IV: ADULTS/ELDERLY: ***(Two-Dose Regimen):*** 1,000 mg once, followed by 500 mg once 7 days later.

Dosage in Renal Impairment

CrCl less than 30 ml/min who are not receiving regularly scheduled hemodialysis: 750 mg once, followed by 375 mg once 7 days later. **Pts receiving regularly scheduled hemodialysis:** No dose adjustment necessary.

Dosage in Hepatic Impairment

Mild: No dose adjustment. **Moderate to Severe:** Not defined; use caution.

SIDE EFFECTS

Occasional (6%–4%): Nausea, vomiting, diarrhea, headache. **Rare (3%–2%):** Rash, pruritus.

ADVERSE EFFECTS/TOXIC REACTIONS

Serious hypersensitivity reactions including anaphylaxis or severe skin reactions have been reported with glycopeptide antibacterial agents. Too-rapid infusion may cause "red-man syndrome" reaction, characterizing by flushing of upper body, urticaria, pruritus, rash. *C. difficile*–associated diarrhea with severity ranging from mild diarrhea to fatal colitis has occurred. Drug-induced hepatotoxicity with hepatic enzymes greater than 3 times upper limit normal has been reported. Treatment in the absence of proven or strongly suspected bacterial infection may increase risk of drug-resistant bacteria.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC (WBC), BMP, LFT, wound culture and sensitivity, vital signs. Question history of recent *C. difficile* infection, hepatic/renal impairment, hypersensitivity reaction. Assess skin wound characteristics; hydration status. Question pt's usual stool characteristics (color, frequency, consistency).

INTERVENTION/EVALUATION

Assess skin infection/wound for improvement. Monitor daily pattern of bowel activity, stool consistency; increasing severity may indicate antibiotic-associated colitis. If frequent diarrhea occurs, obtain *C. difficile* toxin screen and initiate isolation precautions until result confirmed. Encourage PO intake. Monitor I&O. Monitor for "red-man syndrome" during infusion; stopping or slowing infusion may decrease reaction.

PATIENT/FAMILY TEACHING

• It is essential to complete drug therapy despite symptom improvement. Early discontinuation may result in antibacterial resistance or increased risk of recurrent infection. • Report any episodes of diarrhea, esp. following weeks after treatment completion. Frequent diarrhea, fever, abdominal pain, blood-streaked stool may indicate *C. difficile* infection, which may be contagious to others. • Report abdominal pain, black/tarry stools, bruising, yellowing of skin or eyes, dark urine, decreased urine output. • Do not breastfeed. • Drink plenty of fluids.

dalfampridine

dal-**fam**-pri-deen
(Ampyra)
Do not confuse Ampyra with anakinra, or dalfampridine with desipramine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Potassium channel blocker. **CLINICAL:** Multiple sclerosis agent.

D

USES

Indicated to improve ambulation in pts with MS, as demonstrated by increase in walking speed.

PRECAUTIONS

Contraindications: History of seizures, moderate to severe renal impairment (creatinine clearance [CrCl] equal to or less than 50 ml/min). **Cautions:** Mild renal impairment (CrCl equal to 51–80 ml/min).

ACTION

Increases conduction of action potentials in demyelinated axons, inhibiting potassium channels. **Therapeutic Effect:** Improves ambulation in those with multiple sclerosis (MS).

PHARMACOKINETICS

Rapidly absorbed from GI tract. Minimally metabolized in liver. Primarily excreted in urine. **Half-life:** 5.2–6.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 years. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase creatinine clearance.

AVAILABILITY (Rx)

Tablet, Film-Coated, Extended-Release: 10 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food. • Do not break, crush, dissolve, or divide tablets.

INDICATIONS/ROUTES/DOSAGE

Multiple Sclerosis

PO: ADULTS 18 YEARS AND OLDER, ELDERLY: 10 mg twice daily.

Dosage in Renal Impairment

Creatinine Clearance 50 ml/min or Less: Contraindicated.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (9%–5%): Insomnia, dizziness, headache, nausea, asthenia, back pain. **Rare (4%–2%):** Paresthesia, nasopharyngitis, constipation, dyspepsia, pharyngolaryngeal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Urinary tract infection occurs in 12% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, serum BUN, creatinine clearance, serum chemistries prior to treatment and routinely thereafter. Offer emotional support.

INTERVENTION/EVALUATION

Monitor CBC, serum chemistries, renal function tests, particularly creatinine clearance. Monitor for urinary, respiratory infection. Assess for therapeutic response (improvement in walking as demonstrated by increase in walking speed).

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Report difficulty in sleeping, dizziness, headache, nausea, back pain, loss of strength or energy. • Do not chew, crush, dissolve, or divide tablets.

dalteparin

HIGH ALERT

dal-te-par-in
(Fragmin)

■ **BLACK BOX ALERT** ■ Epidural or spinal anesthesia greatly increases potential for spinal or epidural hematoma, subsequent long-term or permanent paralysis.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Low molecular weight heparin. **CLINICAL:** Anticoagulant.

USES

Treatment of unstable angina, non–Q-wave MI to prevent ischemic events. Prevention of deep vein thrombosis (DVT) in pts undergoing hip replacement or abdominal surgery who are at risk for thromboembolic complications. Extended treatment of symptomatic venous thromboembolism (VTE) to reduce recurrence of VTE in cancer pts. Prevention of DVT or pulmonary embolism in acutely ill pts with severely restricted mobility. Those at risk are 40 yrs and older, obese, undergoing surgery under general anesthesia lasting longer than 30 min, malignancy, history of DVT, pulmonary embolism. **OFF-LABEL:** Treatment of DVT in noncancer pts.

PRECAUTIONS

Contraindications: Active major bleeding; concurrent heparin therapy; hypersensitivity to dalteparin, heparin, pork products; unstable angina; history of heparin-induced thrombocytopenia; non–Q-wave MI; prolonged venous thromboembolism undergoing epidural/neuraxial anesthesia. **Cautions:** Conditions with increased risk for hemorrhage, bacterial endocarditis, renal/hepatic impairment, uncontrolled hypertension, history of recent GI ulceration/hemorrhage, peptic ulcer disease, pericarditis, preexisting thrombocytopenia, recent childbirth, concurrent use of aspirin.

ACTION

Antithrombin in presence of low molecular weight heparin inhibits factor Xa, thrombin. Only slightly influences platelet aggregation, PT, aPTT. **Therapeutic Effect:** Produces anticoagulation.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Subcutaneous	N/A	4 hrs	N/A

Protein binding: less than 10%. **Half-life:** 3–5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Use with caution, particularly during last trimester, immediate postpartum period (increased risk of maternal hemorrhage). Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Anticoagulants, NSAIDs, platelet inhibitors, thrombolytic agents may increase risk of bleeding. **HERBAL: Cat's claw, dong quai, evening primrose, garlic, ginseng, other herbs with anticoagulant/antiplatelet activity** may increase antiplatelet activity. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST. May decrease serum triglycerides.

AVAILABILITY (Rx)

Injection, Solution: 2,500 international units/0.2 ml, 5,000 international units/0.2 ml, 7,500 international units/0.3 ml, 10,000 international units/ml, 25,000 international units/ml, 12,500 international units/0.5 ml, 15,000 international units/0.6 ml, 18,000 international units/0.72 ml.

ADMINISTRATION/HANDLING

Subcutaneous

• Store at room temperature. • Inject in U-shaped area around the navel, upper outer side of thigh, upper outer quadrangle of buttock. • Use fine needle (25–26 gauge) to minimize tissue trauma. • Introduce entire length of needle (½ inch) into skin fold held between thumb and forefinger, holding needle during injection at 45- to 90-degree angle. • Do not rub injection site after administration (prevents bruising). • Alternate administration site with each injection. • New injections should be administered at least 1 inch from the old site. Never inject into an area where skin is tender, bruised, red, or hard.

INDICATIONS/ROUTES/DOSAGE

Abdominal Surgery, Low to Moderate DVT Risk

Subcutaneous: ADULTS, ELDERLY: 2,500 international units 1–2 hrs before surgery, then daily for 5–10 days.

Abdominal Surgery, High DVT Risk

Subcutaneous: ADULTS, ELDERLY: 5,000 international units 1–2 hrs before surgery, then daily for 5–10 days.

Total Hip Surgery

Subcutaneous: ADULTS, ELDERLY: 2,500 international units 1–2 hrs before surgery, then 2,500 units 4–8 hrs after surgery, then 5,000 units/day (starting at least 6 hrs after postsurgical dose) for 7–10 days.

Unstable Angina, Non–Q-Wave MI

Subcutaneous: ADULTS, ELDERLY: 120 international units/kg q12h (**maximum:** 10,000 international units/dose) given with aspirin until clinically stable.

Venous Thromboembolism (Cancer Pts)

Subcutaneous: ADULTS, ELDERLY: Initially (1 mo), 200 international units/kg (**maximum:** 18,000 international units) daily for 30 days. **Maintenance (2–6 mos):** 150 international units/kg once daily (**maximum:** 18,000 international units). If platelet count 50,000–100,000/mm^3, reduce dose by 2,500 units until platelet count recovers to 100,000/mm^3 or more. If platelet count less than 50,000/mm^3, discontinue until platelet count recovers to more than 50,000/mm^3.

Prevention of DVT, Acutely Ill Pt, Immobile Pt

Subcutaneous: ADULTS, ELDERLY: 5,000 international units once a day.

Dosage in Renal Impairment

For creatinine clearance less than 30 ml/min, monitor anti-Xa levels to determine appropriate dose.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (7%–3%): Hematoma at injection site. **Rare (less than 1%):** Hypersensitivity reaction (chills, fever, pruritus, urticaria, asthma, rhinitis, lacrimation, headache); mild, local skin irritation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may lead to bleeding complications ranging from local ecchymoses to major hemorrhage. Thrombocytopenia occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline coagulation studies, CBC, esp. platelet count. Determine baseline B/P.

INTERVENTION/EVALUATION

Periodically monitor CBC, platelet count, stool for occult blood (no need for daily monitoring in pts with normal presurgical coagulation parameters). Assess for any sign of bleeding (bleeding at surgical

site, hematuria, blood in stool, bleeding from gums, petechiae, bruising/bleeding at injection sites).

PATIENT/FAMILY TEACHING

• Usual length of therapy is 5–10 days. • Do not take any OTC medication (esp. aspirin) without consulting physician. • Report bleeding, bruising, dizziness, light-headedness, rash, itching, fever, swelling, breathing difficulty. • Rotate injection sites daily. • Teach proper injection technique. • Excessive bruising at injection site may be lessened by ice massage before injection.

dantrolene

dan-troe-leen
(Dantrium, Revonto, Ryanodex)

■ **BLACK BOX ALERT** ■ Potential for hepatotoxicity.

Do not confuse Dantrium with danazol or Daraprim, Revontro with Revatio.

CLASSIFICATION

CLINICAL: Skeletal muscle relaxant.

USES

PO: Relief of symptoms of spasticity due to spinal cord injuries, stroke, cerebral palsy, multiple sclerosis, esp. flexor spasms, concomitant pain, clonus, muscular rigidity. **Parenteral:** Management of fulminant hypermetabolism of skeletal muscle due to malignant hyperthermia crisis. Prevention of malignant hyperthermia (pre- or postoperative administration). **Ryanodex:** Treatment of malignant hyperthermia; prevention of malignant hyperthermia in pts at high risk. **OFF-LABEL:** Neuroleptic malignant syndrome.

PRECAUTIONS

Contraindications: **IV:** None known. **PO:** When spasticity used to maintain posture/balance during locomotion or to obtain increased motor function. Active hepatic disease. **Cautions:** Cardiac/pulmonary impairment, history of previous hepatic disease.

ACTION

Acts directly on skeletal muscle by interfering with release of calcium ion. Reduces calcium ion concentration. **Therapeutic Effect:** Dissociates excitation-contraction coupling. Interferes with catabolic process associated with malignant hyperthermia.

PHARMACOKINETICS

Poorly absorbed from GI tract. Protein binding: High. Metabolized in liver. Primarily excreted in urine. **Half-life:** **IV:** 4–8 hrs; **PO:** 8.7 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Breastfeeding not recommended. **Pregnancy Category C. Children:** No age-related precautions noted in those 5 yrs and older. **Elderly:** No precautions specified.

INTERACTIONS

DRUG: **CNS depressants** may increase CNS depression with short-term use. **Hepatotoxic medications** may increase risk of hepatic toxicity with chronic use. **CYP3A4 inhibitors (e.g., clarithromycin)** may increase concentration. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May alter serum hepatic function test.

AVAILABILITY (Rx)

Capsules (Dantrium): 25 mg, 50 mg, 100 mg. **Injection, Powder for Reconstitution (Dantrium, Revontro):** 20-mg vial. **Injection Suspension (Ryanodex):** 250 mg powder.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 20-mg vial with 60 ml Sterile Water for Injection

(**not** Bacteriostatic Water for Injection). ***(Ryanodex):*** 250 mg vial with 5 ml Sterile Water for Injection.

Rate of Administration • For therapeutic or emergency dose, give IV over 2–3 min. • For IV infusion, administer over 1 hr. • Diligently monitor for extravasation (high pH of IV preparation). May produce severe complications. ***(Ryanodex):*** Do not dilute; infuse into IV catheter or indwelling catheter.

Storage • Store at room temperature. • Use within 6 hrs after reconstitution. • Solution is clear, colorless. Discard if cloudy, precipitate forms.

PO

• Give without regard to food.

IV INCOMPATIBILITIES

D_5W, 0.9% NaCl.

INDICATIONS/ROUTES/DOSAGE

Spasticity

PO: ADULTS, ELDERLY: Initially, 25 mg once daily for 7 days; then 25 mg 3 times/day for 7 days; then 50 mg 3 times/day for 7 days; then 100 mg 3 times/day. **Maximum:** 400 mg/day. **CHILDREN:** Initially, 0.5 mg/kg/dose once daily for 7 days; then 0.5 mg/kg/dose 3 times/day for 7 days; then 1 mg/kg/dose 3 times/day for 7 days; then 2 mg/kg/dose 3 times/day. **Maximum:** 400 mg/day.

Perioperative Prophylaxis for Malignant Hyperthermic Crisis

PO: ADULTS, ELDERLY, CHILDREN: 4–8 mg/kg/day in 3–4 divided doses beginning 1–2 days before surgery; give last dose 3–4 hrs before surgery.

IV: ADULTS, ELDERLY, CHILDREN: 2.5 mg/kg about 1.25 hrs before surgery with additional doses as needed.

Management of Malignant Hyperthermic Crisis

IV: ADULTS, ELDERLY, CHILDREN: Initially, a minimum of 2.5 mg/kg rapid IV; may repeat up to total cumulative dose of 10 mg/kg. May follow with 4–8 mg/kg/day PO in 4 divided doses up to 3 days after crisis. ***(Ryanodex):*** Minimum dose of 1 mg/kg. **Maximum:** 10 mg/kg (cumulative).

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Drowsiness, dizziness, weakness, general malaise, diarrhea (mild). **Occasional:** Confusion, diarrhea (severe), headache, insomnia, constipation, urinary frequency. **Rare:** Paradoxical CNS excitement or restlessness, paresthesia, tinnitus, slurred speech, tremor, blurred vision, dry mouth, nocturia, impotence, rash, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Risk of hepatotoxicity, most notably in females, pts 35 yrs and older, pts taking other hepatotoxic medications concurrently. Overt hepatitis noted most frequently between 3rd and 12th mo of therapy. Overdose results in vomiting, muscular hypotonia, muscle twitching, respiratory depression, seizures.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline LFT (ALT, AST, alkaline phosphatase, total bilirubin). Record onset, type, location, duration of muscular spasm. Check for immobility, stiffness, swelling.

INTERVENTION/EVALUATION

Assist with ambulation. For pts on long-term therapy, hepatic/renal function tests, CBC should be performed periodically. Assess for therapeutic response: relief of pain, stiffness, spasm.

PATIENT/FAMILY TEACHING

• Drowsiness usually diminishes with continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid

alcohol/other depressants. • Report continued weakness, fatigue, nausea, diarrhea, skin rash, itching, bloody/tarry stools.

dapagliflozin

dap-a-gli-**floe**-zin
(Farxiga)
Do not confuse dapagliflozin with canagliflozin or empagliflozin.

FIXED COMBINATION(S)

Xigduo XR: dapagliflozin/metformin (an antidiabetic): 5 mg/500 mg, 5 mg/1,000 mg, 10 mg/500 mg, 10 mg/1,000 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Sodium-glucose co-transporter 2 (SGLT2) inhibitor. **CLINICAL:** Antidiabetic agent.

USES

Adjunctive treatment to diet and exercise to improve glycemic control in pts with type 2 diabetes mellitus.

PRECAUTIONS

Contraindications: History of hypersensitivity to SGLT2 inhibitors; severe renal impairment, dialysis, end-stage renal disease. **Cautions:** Baseline hypotension, mild to moderate renal impairment, hypovolemia/dehydration (correct before initiating treatment), hx of genital mycotic infection. Not recommended in pts with active bladder cancer, diabetic ketoacidosis, type 1 diabetes mellitus. Concurrent use of loop diuretics, elderly.

ACTION

Increases excretion of urinary glucose by inhibiting reabsorption of glucose in kidneys by inhibiting SGLT2 in proximal renal tubule. **Therapeutic Effect:** Lowers serum glucose levels, Hgb A1c.

PHARMACOKINETICS

Rapidly absorbed following PO administration. Metabolized in liver. Protein binding: 91%. Peak plasma concentration: 2 hrs. Eliminated in urine (75%), feces (21%). Unknown if removed by hemodialysis. **Half-life:** 12.9 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. **Pregnancy Category C. Children:** Safety and efficacy not established in pts younger than 18 yrs. **Elderly:** May have increased adverse effects related to renal impairment/volume depletion.

INTERACTIONS

DRUG: None significant. **HERBAL:** **Fenugreek, garlic, ginkgo, ginger, ginseng** may increase hypoglycemic effect. **FOOD:** None known. **LAB VALUES:** May increase Hct, low-density lipoprotein cholesterol (LDL-C) levels; serum creatinine, phosphate. May decrease eGFR. Expected to decrease Hgb A1c; yield positive urine glucose test.

AVAILABILITY (Rx)

Tablets: 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

May give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

Type 2 Diabetes Mellitus

PO: ADULTS/ELDERLY: Initially, 5 mg once daily in the morning. May increase to 10 mg once daily.

Dosage in Renal Impairment

Mild to Moderate (eGFR greater than 60 ml/min): No dose adjustment necessary; use caution. **Severe (eGFR less than 60 ml/min):** Avoid use. **Development of Renal Impairment During Treatment:** Discontinue if eGFR is persistently less than 60 ml/min.

Dosage in Hepatic Impairment
No dose adjustment.

Concomitant Use of Insulin or Insulin Secretagogue
Consider lowering dose of insulin or insulin secretagogue to reduce risk of hypoglycemia.

SIDE EFFECTS

Occasional (6%–3%): Nasopharyngitis, back pain, increased urination, nausea. **Rare (2%):** Constipation, extremity pain, discomfort with urination.

ADVERSE REACTIONS/TOXIC EFFECTS

Orthostatic hypotension, postural dizziness, symptomatic hypotension, syncope, volume depletion may occur; pts who are elderly, use loop diuretics, or have baseline renal impairment have increased risk. Genital mycotic (yeast) infections occurred in 6% of pts; most reported cases were vulvovaginal infections in women and balanitis in men. Hypoglycemic events reported in 1.5% of pts (5% in elderly). Hypersensitivity reactions including anaphylaxis, angioedema (tongue/lip swelling), erythema, rash, pruritus, urticaria have occurred. Newly diagnosed bladder cancer occur rarely. Genitourinary infections including cystitis, kidney infection, prostatitis, pyelonephritis, trigonitis, urethritis, UTI occurred in 5.7% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain capillary blood glucose, Hgb A1c, LDL-C, renal function test, urinalysis. Assess hydration status. Correct volume depletion prior to initiating treatment. Assess pt's understanding of diabetes management, routine home glucose monitoring. Receive full medication history including herbal products. Question history of co-morbidities, esp. hypersensitivity reaction, renal impairment, type 1 diabetes. Assess breastfeeding status.

INTERVENTION/EVALUATION

Monitor capillary blood glucose, Hgb A1c, renal function tests. Assess for hypoglycemia, hyperglycemia, mycotic infections. Screen for glucose-altering conditions: fever, increased activity or stress, trauma, surgery. Obtain dietary consult for nutritional education. Encourage PO intake. Monitor for hypotension. Monitor for hypersensitivity reaction such as dyspnea, urticaria, angioedema, dizziness.

PATIENT/FAMILY TEACHING

• Diabetes mellitus requires lifelong control. Diet and exercise are principal parts of treatment; do not skip or delay meals. • Test blood sugar regularly. • When taking combination drug therapy or when glucose demands are altered (fever, infection, trauma, stress), have low blood sugar treatment available (glucagon, oral dextrose). • Monitor daily calorie intake. • Report suspected pregnancy. Do not breastfeed. • Genital itching or discharge may indicate yeast infection. • Therapy may increase risk for dehydration/low blood pressure, esp. in pts who are elderly, on low-salt diet, have low blood pressure, or take water pills (diuretics). Drink plenty of fluids. • Report any decrease in urine output, dark-colored urine, painful urination, or flank pain. • Therapy may increase risk of bladder cancer; report any blood in urine or painful urination. • May rarely cause allergic reaction; report itching, hives, difficulty breathing, wheezing.

daptomycin

dap-toe-mye-sin
(Cubicin)
Do not confuse Cubicin with Cleocin, or daptomycin with dactinomycin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Lipopeptide antibacterial agent. **CLINICAL:** Antibiotic.

USES

Treatment of complicated skin/skin structure infections caused by susceptible strains of gram-positive pathogens, including *Staphylococcus aureus* (methicillin susceptible and methicillin resistant) [MRSA], *Streptococcus pyogenes, Streptococcus agalactiae.* Treatment of *S. aureus* systemic infections caused by methicillin-susceptible and -resistant *S. aureus*. **OFF-LABEL:** Severe infections caused by MRSA or Vancomycin-resistant *Enterococcus* (VRE); treatment of prosthetic joint infection caused by staphylococci or *Enterococcus*.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe renal impairment (creatinine clearance less than 30 ml/min), concurrent use of other medications associated with myopathy (e.g., statins).

ACTION

Binds to bacterial membranes and causes rapid depolarization of membrane potential. Inhibits protein, DNA, RNA synthesis. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Widely distributed. Protein binding: 90%. Primarily excreted unchanged in urine. Moderately removed by hemodialysis. **Half-life:** 7–8 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Concurrent use with **HMG-CoA reductase inhibitors (statins)** may cause myopathy (discontinue use). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum CPK, potassium. May alter serum LFT results.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 500 mg/vial.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 500-mg vial with 10 ml 0.9% NaCl to provide a concentration of 50 mg/ml. May further dilute in 0.9% NaCl. • Do not shake or agitate vial.

Rate of Administration • For IV injection, give over 2 min (concentration: 50 mg/ml). • For intermittent IV infusion (piggyback), infuse over 30 min.

Storage • Refrigerate. • Appears as pale yellow to light brown lyophilized cake. • Reconstituted solution is stable for 12 hrs at room temperature or up to 48 hrs if refrigerated. • Discard if particulate forms.

IV INCOMPATIBILITIES

Diluents containing dextrose. If same IV line is used to administer different drugs, flush line with 0.9% NaCl.

IV COMPATIBILITIES

0.9% NaCl, Lactated Ringer's, aztreonam (Azactam), dopamine, fluconazole (Diflucan), gentamicin, heparin, levofloxacin (Levaquin).

INDICATIONS/ROUTES/DOSAGE

Complicated Skin/Skin Structure Infections

IV: ADULTS, ELDERLY: 4 mg/kg every 24 hrs for 7–14 days.

Systemic Infections

IV: ADULTS, ELDERLY: 6 mg/kg once daily for 2–6 wks.

Dosage in Renal Impairment

Creatinine clearance less than 30 ml/min, (HD) hemodialysis, (PD) peritoneal dialysis: Dosage is 4 mg/kg q48h for skin and soft tissue infections; 6 mg/kg q48h for staphylococcal bacteremia. **(HD) hemodialysis:** Give dose after dialysis. **(CRRT) continuous renal replacement therapy (CVVHD):** 8 mg/kg q48h, **(CVVH or CVVHDF):** 8 mg/kg q48h or 4–6 mg/kg q24h.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (6%–5%): Constipation, nausea, peripheral injection site reactions, headache, diarrhea. **Occasional (4%–3%):** Insomnia, rash, vomiting. **Rare (less than 3%):** Pruritus, dizziness, hypotension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Skeletal muscle myopathy (muscle pain/weakness, particularly of distal extremities) occurs rarely. Antibiotic-associated colitis, other superinfections (abdominal cramps, severe diarrhea, fever) may result from altered bacterial balance in GI tract.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CPK, blood cultures before first dose (therapy may begin before results are known).

INTERVENTION/EVALUATION

Assess oral cavity for white patches on mucous membranes, tongue (thrush). Monitor for myopathy (muscle pain, weakness), CPK levels, renal function tests. Monitor daily pattern of bowel activity, stool consistency. Mild GI effects may be tolerable, but increasing severity may indicate onset of antibiotic-associated colitis. Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor for dizziness, institute appropriate measures.

PATIENT/FAMILY TEACHING

- Report rash, headache, nausea, dizziness, constipation, diarrhea, muscle pain, or any other new symptom.

darbepoetin alfa TOP 100

dar-be-poe-**e**-tin **al**-fa (Aranesp)

■ **BLACK BOX ALERT** ■ Increased risk of serious cardiovascular events, thromboembolic events, mortality, time-to-tumor progression when administered to a target hemoglobin greater than 11 g/dL. Shortened overall survival and/or increased risk of tumor progression has been reported with breast, cervical, head/neck, NSCL cancers. **Do not confuse Aranesp with Aricept, or darbepoetin with dalteparin or epoetin.**

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Glycoprotein. **CLINICAL:** Hematopoietic agent.

USES

Treatment of anemia associated with chronic renal failure (including pts on dialysis and pts not on dialysis), treatment of anemia caused by concurrent myelosuppressive chemotherapy in pts planned to receive chemotherapy for minimum of 2 additional months. **OFF-LABEL:** Treatment of symptomatic anemia in myelodysplastic syndrome (MDS).

PRECAUTIONS

Contraindications: Pure red cell aplasia, uncontrolled hypertension. **Cautions:** History of seizures, hypertension. Not recommended in pts with mild to moderate anemia and HF or CAD.

ACTION

Stimulates formation of RBCs in bone marrow; increases serum half-life of epoetin. **Therapeutic Effect:** Induces erythropoiesis, release of reticulocytes from bone marrow into bloodstream.

PHARMACOKINETICS

Well absorbed after subcutaneous administration. **Half-life:** 48.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C.** **Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum ferritin, serum transferrin saturation.

AVAILABILITY (Rx)

Injection Solution: 25 mcg/ml, 40 mcg/ml, 60 mcg/ml, 100 mcg/ml, 150 mcg/0.75 ml, 200 mcg/ml, 300 mcg/ml. **Prefilled Syringe:** 25 mcg/0.42 ml, 40 mcg/0.4 ml, 60 mcg/0.3 ml, 100 mcg/0.5 ml, 150 mcg/0.3 ml, 200 mcg/0.4 ml, 300 mcg/0.6 ml, 500 mcg/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Avoid excessive agitation of vial; do not shake (will cause foaming).

IV

Reconstitution • No reconstitution necessary. Do not dilute.

Rate of Administration • May be given as IV bolus.

Storage • Refrigerate. • Do not shake. Vigorous shaking may denature medication, rendering it inactive.

Subcutaneous

• Use 1 dose per vial; do not reenter vial. Discard unused portion.

IV INCOMPATIBILITIES

Do not mix with other medications.

INDICATIONS/ROUTES/DOSAGE

Anemia in Chronic Renal Failure

◀ALERT▶ Individualize dosing and use lowest dose to reduce need for RBC transfusions. **ON DIALYSIS:** Initiate when Hgb less than 10 g/dL; reduce or stop dose when Hgb approaches or exceeds 11 g/dL. **NOT ON DIALYSIS:** Initiate when Hgb less than 10 g/dL and Hgb decline would likely result in RBC transfusion; reduce dose or stop if Hgb exceeds 10 g/dL.

IV, Subcutaneous: ADULTS, ELDERLY: ON DIALYSIS: Initially, 0.45 mcg/kg once weekly or 0.75 mcg/kg once q2wks. **NOT ON DIALYSIS:** 0.45 mcg/kg q4wks.

Decrease dose by 25%: If Hgb approaches 12 g/dL or increases greater than 1 g/dL in any 2-wk period.

Increase dose by 25%: If Hgb does not increase by 1 g/dL after 4 wks of therapy and Hgb is below target range (with adequate iron stores), do not increase dose more frequently than every 4 wks.

Note: If pt does not attain Hgb range of 10–12 g/dL after appropriate dosing over 12 wks, do not increase dose and use minimum effective dose to maintain Hgb level that will avoid red blood cell transfusions. Discontinue treatment if responsiveness does not improve.

Anemia Associated with Chemotherapy

◀ALERT▶ Initiate only if Hgb less than 10 g/dL and anticipated duration of myelosuppression is 2 months or longer. Titrate dose to maintain Hgb level and avoid RBC transfusions. Discontinue upon completion of chemotherapy.

Subcutaneous: ADULTS, ELDERLY: 2.25 mcg/kg once weekly or 500 mcg every 3 wks.

Increase dose: If Hgb does not increase by 1 g/dL after 6 wks and Hgb is below target range, increase dose to 4.5 mcg/kg once weekly. No dose adjustment if using q3wk dosing.

Decrease dose: Decrease dose by 40% if Hgb increases greater than 1 g/dL in any 2-wk period or Hgb reaches level that will avoid red blood cell transfusions. **Note:** Withhold dose when Hgb exceeds a level needed to avoid RBC transfusions, resume at dose 40% lower when Hgb approaches a level where transfusions may be required.

Dosage in Renal/Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Frequent: Myalgia, hypertension/hypotension, headache, diarrhea. **Occasional:** Fatigue, edema, vomiting, reaction at injection site, asthenia, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Vascular access thrombosis, HF, sepsis, arrhythmias, anaphylactic reaction occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P before drug administration. B/P often rises during early therapy in pts with history of hypertension. Assess serum iron (transferrin saturation should be greater than 20%), serum ferritin (greater than 100 ng/ml) before and during therapy. Consider supplemental iron therapy. Establish baseline CBC (esp. note Hgb, Hct).

INTERVENTION/EVALUATION

Monitor serum ferritin, CBC, serum creatinine, BUN, potassium, phosphorus, reticulocyte count. Monitor B/P aggressively for increase (25% of pts taking medication require antihypertension therapy, dietary restrictions).

PATIENT/FAMILY TEACHING

• Frequent blood tests needed to determine correct dose. • Report swollen extremities, breathing difficulty, extreme fatigue, or severe headache. • Avoid tasks requiring alertness, motor skills until response to drug is established.

darifenacin

dare-i-**fen**-a-sin
(Enablex)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Muscarinic receptor antagonist. **CLINICAL:** Urinary antispasmodic.

USES

Management of symptoms of bladder overactivity (urge incontinence, urinary urgency/frequency).

PRECAUTIONS

Contraindications: Uncontrolled narrow-angle glaucoma, paralytic ileus, GI/GU obstruction, urine retention. **Cautions:** Bladder outflow obstruction, hepatic impairment, nonobstructive prostatic hyperplasia, decreased GI motility, constipation, hiatal hernia, reflux esophagitis, ulcerative colitis, controlled narrow-angle glaucoma, myasthenia gravis, concurrent use of CYP3A4 inhibitors.

ACTION

Acts as a direct antagonist at muscarinic receptor sites in cholinergically innervated organs; limits bladder contractions. **Therapeutic Effect:** Reduces symptoms of bladder irritability/overactivity (urge incontinence, urinary urgency/frequency), improves bladder capacity.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 98%. Metabolized in liver. Excreted in urine (60%), feces (40%). **Half-life:** 13–19 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in

breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (clarithromycin, erythromycin, isoniazid, protease inhibitors) may increase concentration/effects. **Anticholinergics** may increase side effects (e.g., dry mouth, constipation). **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets (Extended-Release): 7.5 mg, 15 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Administer extended-release tablets whole; do not break, crush, dissolve, or divide tablet.

INDICATIONS/ROUTES/DOSAGE

Overactive Bladder

PO: ADULTS, ELDERLY: Initially, 7.5 mg once daily. If response is not adequate after at least 2 wks, may increase to 15 mg once daily. Do not exceed 7.5 mg once daily in moderate hepatic impairment or concurrent use with CYP3A4 inhibitors (clarithromycin, fluconazole, protease inhibitors, isoniazid).

Dosage in Renal Impairment

No dose adjustment.

Dosage Hepatic Impairment

Moderate impairment: Maximum dose: 7.5 mg. **Severe impairment:** Not recommended.

SIDE EFFECTS

Frequent (35%–21%): Dry mouth, constipation. **Occasional (8%–4%):** Dyspepsia, headache, nausea, abdominal pain. **Rare (3%–2%):** Asthenia, diarrhea, dizziness, ocular dryness.

ADVERSE EFFECTS/ TOXIC REACTIONS

UTI occurs occasionally.

D

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Monitor voiding pattern, assess signs/symptoms of overactive bladder prior to therapy as baseline.

INTERVENTION/EVALUATION

Monitor I&O. Palpate bladder for urine retention. Monitor daily pattern of bowel activity, stool consistency for evidence of constipation. Dry mouth may be relieved with sips of tepid water. Assess for relief of symptoms of overactive bladder (urge incontinence, urinary frequency/urgency).

PATIENT/FAMILY TEACHING

• Swallow tablet whole; do not chew, crush, dissolve, or divide. • Increase fluid intake to reduce risk of constipation. • Avoid tasks that require alertness, motor skills until response to drug is established.

darunavir

TOP 100

dar-**ue**-na-veer
(Prezista)

FIXED COMBINATION(S)

Prezcobix: Darunavir/cobicistat (antiretroviral booster): 800 mg/150 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Protease inhibitor. **CLINICAL:** Antiretroviral.

USES

Treatment of HIV infection in combination with ritonavir and other antiretroviral agents in adults and children 3 yrs and older.

D

PRECAUTIONS

Contraindications: Concurrent therapy with alfuzosin, dihydroergotamine, ergonovine, ergotamine, lovastatin, methylergonovine, oral midazolam, pimozide, rifampin, sildenafil (for treatment of PAH), simvastatin, St. John's wort, triazolam. **Cautions:** Diabetes mellitus, hemophilia, known sulfonamide allergy, hepatic impairment.

ACTION

Binds to site of HIV-I protease activity, inhibiting cleavage of viral precursors into functional proteins required for infectious HIV. **Therapeutic Effect:** Prevents formation of mature viral cells.

PHARMACOKINETICS

Readily absorbed following PO administration. Protein binding: 95%. Metabolized in liver. Eliminated in feces (79.5%), urine (13.9%). Not significantly removed by hemodialysis. **Half-life:** 15 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category B.** **Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration/effects of **amiodarone, bepridil, lidocaine, desipramine, colchicine, beta blockers, midazolam, paroxetine, sertraline, atorvastatin, clarithromycin, cyclosporine, felodipine, inhaled fluticasone, lovastatin, nicardipine, nifedipine, pravastatin, simvastatin, sirolimus, tacrolimus, trazodone, sildenafil, tadalafil, vardenafil. CYP3A4 inhibitors (e.g., itraconazole, ketoconazole, voriconazole)** may increase concentration. May decrease effects of **methadone, oral contraceptives.** **HERBAL:** **St. John's wort** may lead to loss of virologic response, potential resistance to darunavir. **FOOD:** **Food** increases plasma concentration. **LAB VALUES:** May increase aPTT, PT, serum alkaline phosphatase, bilirubin, amylase, lipase, cholesterol, triglycerides, uric acid. May decrease lymphocytes/neutrophil count, platelets, WBC count; serum bicarbonate, albumin, calcium. May alter serum glucose, sodium.

AVAILABILITY (Rx)

Suspension, oral (Prezista): 100 mg/ml

Tablets (Prezista): 75 mg, 150 mg, 400 mg, 600 mg, 800 mg.

ADMINISTRATION/HANDLING

PO

• Give with food (increases plasma concentration). • Coadministration with ritonavir required. • Do not break, crush, dissolve, or divide film-coated tablets. Shake suspension prior to each dose. Use provided oral dosing syringe.

INDICATIONS/ROUTES/DOSAGE

Note: Genotypic testing recommended in therapy-experienced pts.

HIV Infection, Treatment Experienced

PO: ADULTS, ELDERLY: 600 mg administered with 100 mg ritonavir with food twice daily or 800 mg (two 400-mg tablets) with 100 mg ritonavir with food once daily.

HIV Infection, Treatment Naive

PO: ADULTS, ELDERLY: 800 mg (two 400-mg tablets) administered with 100 mg ritonavir with food once daily.

Usual Pediatric Dose

◄ALERT► Do not use once-daily dosing in pediatric pts.

PO: CHILDREN 3 YRS OF AGE OR OLDER: 20 mg/kg twice daily.

Use Tablet or Suspension

PO: CHILDREN WEIGHING 40 KG OR MORE: 600 mg twice daily with 100 mg

ritonavir. **WEIGHING 30–39 KG:** 450 mg twice daily with 60 mg ritonavir. **WEIGHING 15–29 KG:** 375 mg twice daily with 50 mg ritonavir.

Use Oral Suspension Only

14 KG TO LESS THAN 15 KG: 280 mg (48 mg ritonavir) twice daily. **13 KG TO LESS THAN 14 KG:** 250 mg (40 mg ritonavir) twice daily. **12 KG TO LESS THAN 13 KG:** 240 mg (40 mg ritonavir) twice daily. **11 KG TO LESS THAN 12 KG:** 220 mg (32 mg ritonavir) twice daily. **10 KG TO LESS THAN 11 KG:** 200 mg (32 mg ritonavir) twice daily.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Not recommended in severe impairment.

SIDE EFFECTS

Frequent (19%–13%): Diarrhea, nausea, headache, nasopharyngitis. **Occasional (3%–2%):** Constipation, abdominal pain, vomiting. **Rare (less than 2%):** Allergic dermatitis, dyspepsia, flatulence, abdominal distention, anorexia, arthralgia, myalgia, paresthesia, memory impairment.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypertension, MI, transient ischemic attack occur in less than 2% of pts. Acute renal failure, diabetes mellitus, dyspnea, worsening of hepatic impairment, skin reactions including Stevens-Johnson syndrome, toxic epidermal necrolysis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline LFT before beginning therapy and at periodic intervals during therapy. Offer emotional support. Obtain full medication history.

INTERVENTION/EVALUATION

Closely monitor for GI discomfort. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash, other skin reactions, chemistries, laboratory abnormalities, particularly hepatic profile, glucose, cholesterol, triglycerides. Assess for opportunistic infections (onset of fever, oral mucosa changes, cough, other respiratory symptoms).

PATIENT/FAMILY TEACHING

• Take medication with food. • Continue therapy for full length of treatment. • Doses should be evenly spaced. • Darunavir is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Pt may continue to experience illnesses, including opportunistic infections. • Diarrhea can be controlled with OTC medication. • Report any skin reactions.

dasatinib

HIGH ALERT

da-**sa**-ti-nib
(Sprycel)

Do not confuse dasatinib with erlotinib, imatinib, or lapatinib.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protein-tyrosine kinase inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of adults with chronic, accelerated, myeloid or lymphoid blast phase of CML with resistance, intolerance to prior therapy, including imatinib. Treatment of adults with Philadelphia chromosome–positive (Ph+) ALL with resistance or intolerance to prior therapy. Treatment of Ph+ CML in chronic phase of newly diagnosed pts. **OFF-LABEL:** Post–stem cell transplant follow-up treatment of CML. Treatment of GI stromal tumor.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment, myelosuppression

(particularly thrombocytopenia), pts prone to fluid retention, those with prolonged QT interval, cardiovascular/pulmonary disease. Concomitant use of anticoagulants, CYP3A4 inducers/inhibitors may increase risk of pulmonary arterial hypertension.

ACTION

Reduces activity of proteins responsible for uncontrolled growth of leukemia cells by binding to most imatinib-resistant BCR-ABL mutations of pts with chronic myelogenous leukemia (CML) or acute lymphoblastic leukemia (ALL). **Therapeutic Effect:** Inhibits proliferation, tumor growth of CML and ALL cancer cell lines.

PHARMACOKINETICS

Extensively distributed in extravascular space. Protein binding: 96%. Metabolized in liver. Eliminated primarily in feces. **Half-life:** 3–5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has potential for severe teratogenic effects, fertility impairment. Breastfeeding not recommended. **Pregnancy Category D.** **Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **CYP3A4 inhibitors (e.g., atazanavir, clarithromycin, erythromycin, indinavir, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir)** may increase concentration. **CYP3A4 inducers (e.g., carbamazepine, phenobarbital, phenytoin, rifampin)** may decrease concentration. **Antacids** alter pH-dependent solubility of dasatinib. **Famotidine, omeprazole** may reduce dasatinib absorption. **HERBAL:** **St. John's wort, echinacea** may decrease concentration. **FOOD:** **Grapefruit products** may increase concentration/toxicity (increased risk of torsades, myelotoxicity). **LAB VALUES:** May decrease WBC, platelets, Hgb, Hct, RBC; serum calcium, phosphates. May increase serum bilirubin, ALT, AST, creatinine.

AVAILABILITY (Rx)

Tablets (Film-Coated): 20 mg, 50 mg, 70 mg, 80 mg, 100 mg, 140 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Take with food or large glass of water if GI upset occurs. • Avoid grapefruit products. • Do not break, crush, dissolve, or divide film-coated tablets. • Store at room temperature. • Do not give antacids either 2 hrs prior to or within 2 hrs after dasatinib administration.

INDICATIONS/ROUTES/DOSAGE

Note: CYP3A4 Inhibitors: Consider decreasing dose from 100 mg to 20 mg or 140 mg to 40 mg.
CYP3A4 Inducers: Consider increasing dose with monitoring.

CML

PO: ADULTS, ELDERLY: (Chronic phase): 100 mg once daily. May increase to 140 mg once daily in pts not achieving cytogenetic response. **(Accelerated or blast phase):** 140 mg once daily. May increase to 180 mg once daily in pts not achieving cytogenetic response.

CML (Newly Diagnosed)

PO: ADULTS, ELDERLY: 100 mg once daily. May increase to 140 mg/day in pts not achieving cytogenetic response.

Ph+ ALL

PO: ADULTS, ELDERLY: 140 mg once daily. May increase to 180 mg once daily in pts not achieving cytogenetic response.

Dosage in Renal/Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Frequent (50%–32%): Fluid retention, diarrhea, headache, fatigue, musculoskeletal pain, fever, rash, nausea, dyspnea. **Occasional (28%–12%):** Cough, abdominal pain, vomiting, anorexia, asthenia, arthralgia, stomatitis, dizziness, constipation, peripheral neuropathy, myalgia. **Rare (less than 12%):** Abdominal distention, chills, weight increase, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pleural effusion occurs in 8% of pts, febrile neutropenia in 7%, GI bleeding, pneumonia in 6%, thrombocytopenia in 5%, dyspnea in 4%; anemia, cardiac failure in 3%.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC weekly for first mo, biweekly for second mo, and periodically thereafter. Monitor LFT before treatment begins and monthly thereafter.

INTERVENTION/EVALUATION

Assess lower extremities for pedal edema, early evidence of fluid retention. Weigh daily, monitor for unexpected rapid weight gain. Offer antiemetics to control nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Assess oral mucous membranes for evidence of stomatitis. Monitor CBC for neutropenia, thrombocytopenia; monitor hepatic function tests for hepatotoxicity.

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with anyone who recently received live virus vaccine; do not receive vaccinations. • Antacids may be taken up to 2 hrs before or 2 hrs after taking dasatinib. • Avoid grapefruit products. Do not chew, crush, dissolve, or divide tablets.

*DAUNOrubicin

HIGH ALERT

daw-noe-**roo**-bi-sin
(Cerubidine, DaunoXome)

■ **BLACK BOX ALERT** ■ Irreversible cardiotoxicity may occur. Myelosuppresant. Lipid component may cause infusion-related effects (back pain, flushing, chest tightness) within first 5 min of infusion. Must be administered by personnel trained in administration/handling of chemotherapeutic agents. Caution in renal impairment or hepatic dysfunction. Potent vesicant.

Do not confuse daunorubicin with dactinomycin, doxorubicin, epirubicin, idarubicin, or valrubicin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Anthracycline antibiotic. **CLINICAL:** Antineoplastic.

USES

Cerubidine: Treatment of leukemias (acute lymphocytic [ALL], acute myeloid [AML]) in combination with other agents. **DaunoXome:** Advanced HIV-related Kaposi's sarcoma.

PRECAUTIONS

Contraindications: None known. **Cautions:** Preexisting heart disease, hypertension, concurrent chemotherapeutic agents, elderly, infants, radiation therapy.

ACTION

Inhibits DNA, DNA-dependent RNA synthesis by binding with DNA strands. Cell cycle–phase nonspecific. **Therapeutic Effect:** Prevents cell division.

PHARMACOKINETICS

Widely distributed. Protein binding: High. Does not cross blood-brain barrier. Metabolized in liver to active metabolite. Excreted in urine (40%); biliary

excretion (40%). **Half-life:** 18.5 hrs; metabolite: 26.7 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Breastfeeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Cardiotoxicity may be more frequent; reduced bone marrow reserves require caution. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Previous use of **doxorubicin,** concurrent use of **cyclophosphamide** increases risk of cardiotoxicity. **Hepatotoxic medications** increase risk of hepatotoxicity. **Bone marrow depressants** may enhance myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Echinacea** may decrease level/effects. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, uric acid, AST.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Cerubidine): 20 mg. **Injection Solution (Cerubidine):** 5 mg/ml. **Injection Solution (DaunoXome):** 2 mg/ml.

ADMINISTRATION/HANDLING

IV

◄ALERT► **Cerubidine:** Give by IV push or IV infusion. **DaunoXome:** Give by IV infusion. May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

Reconstitution

Cerubidine • Reconstitute each 20-mg vial with 4 ml Sterile Water for Injection to provide concentration of 5 mg/ml. • Gently agitate vial until completely dissolved. • May further dilute with 100 ml D_5W or 0.9% NaCl.

DaunoXome • Must dilute with equal part D_5W to provide concentration of 1 mg/ml. • Do not use any other diluent.

Rate of Administration

Cerubidine • For IV push, withdraw desired dose into syringe containing 10–15 ml 0.9% NaCl. Inject over 1–5 min into tubing of rapidly infusing IV solution of D_5W or 0.9% NaCl. • For IV infusion, further dilute with 100 ml D_5W or 0.9% NaCl. Infuse over 15–30 min. • Extravasation produces immediate pain, severe local tissue damage. Aspirate as much infiltrated drug as possible, then infiltrate area with hydrocortisone sodium succinate injection (50–100 mg hydrocortisone) and/or isotonic sodium thiosulfate injection or ascorbic acid injection (1 ml of 5% injection). Apply cold compresses.

DaunoXome • Infuse over 60 min. • Do not use in-line filter.

Storage

Cerubidine • Reconstituted solution is stable for 4 days at room temperature. Diluted solution in D_5W or 0.9% NaCl is stable for 4 wks at room temperature if protected from light. • Color change from red to blue-purple indicates decomposition; discard.

DaunoXome • Refrigerate unopened vials • Reconstituted solution is stable for 6 hrs if refrigerated. • Do not use if opaque.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), aztreonam (Azactam), cefepime (Maxipime), dexamethasone (Decadron), heparin, piperacillin and tazobactam (Zosyn). **DaunoXome:** Do not mix with any other solution, esp. NaCl or bacteriostatic agents (e.g., benzyl alcohol).

IV COMPATIBILITIES

Granisetron (Kytril), ondansetron (Zofran).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Refer to individual protocols. **Cerubidine:** Cumulative dose should not exceed 550 mg/m² in adults (increased risk of cardiotoxicity) or 400 mg/m² in those receiving chest irradiation.

Acute Lymphoblastic Leukemia

IV *(Cerubidine)*: ADULTS, ELDERLY: 45 mg/m² on days 1, 2, and 3 of induction course. **CHILDREN 2 YRS AND OLDER, BODY SURFACE AREA 0.5 m² OR GREATER:** 25 mg/m² on day 1 of every wk for up to 4–6 cycles. Cumulative dose not to exceed 300 mg/m². **CHILDREN YOUNGER THAN 2 YRS, BODY SURFACE AREA LESS THAN 0.5 m²:** 1 mg/kg/dose per protocol. Cumulative dose not to exceed 10 mg/kg.

Acute Myeloid Leukemia

IV *(Cerubidine)*: ADULTS YOUNGER THAN 60 YRS: 45 mg/m² on days 1, 2, and 3 of induction course, then on days 1 and 2 of subsequent courses. **ADULTS 60 YRS AND OLDER:** 30 mg/m² on days 1, 2, and 3 of induction course, then on days 1 and 2 of subsequent courses. **CHILDREN 2 YRS AND OLDER, BSA 0.5 m² OR GREATER:** 30–60 mg/m²/day on days 1–3 of cycle.

Kaposi's Sarcoma

IV *(Daunoxome)*: ADULTS: 40 mg/m² over 1 hr repeated q2wks.

Dosage in Renal Impairment

Cerubidine: Serum creatinine greater than 3 mg/dL: 50% of normal dose.

Daunoxome: Serum creatinine greater than 3 mg/dL: 50% of normal dose.

Dosage in Hepatic Impairment

Cerubidine: Bilirubin 1.2–3 mg/dL: 75% of normal dose. **Bilirubin 3.1–5 mg/dL:** 50% of normal dose. **Bilirubin Greater than 5 mg/dL:** Daunorubicin is not recommended for use in this pt population.

Daunoxome: Bilirubin 1.2–3 mg/dL: 75% of normal dose. **Bilirubin greater than 3 mg/dL:** 50% of normal dose.

SIDE EFFECTS

Frequent: Complete alopecia (scalp, axillary, pubic), nausea, vomiting (beginning a few hrs after administration and lasting 24–48 hrs). **DaunoXome:** Mild to moderate nausea, fatigue, fever. **Occasional:** Diarrhea, abdominal pain, esophagitis, stomatitis, transverse pigmentation of fingernails, toenails. **Rare:** Transient fever, chills.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression manifested as hematologic toxicity (severe leukopenia, anemia, thrombocytopenia). Decrease in platelet count, WBC count occurs in 10–14 days, returns to normal level by third week. Cardiotoxicity noted as either acute, transient, abnormal. EKG findings and/or cardiomyopathy manifested as HF (risk increases when cumulative dose exceeds 550 mg/m² in adults, 300 mg/m² in children 2 yrs and older, or total dosage greater than 10 mg/kg in children younger than 2 yrs).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain WBC, platelet, erythrocyte counts before and at frequent intervals during therapy. EKG should be obtained before therapy. Antiemetics may be effective in preventing, treating nausea.

INTERVENTION/EVALUATION

Monitor for stomatitis. May lead to ulceration within 2–3 days. Assess skin, nailbeds for hyperpigmentation. Monitor hematologic status, renal/hepatic function, serum uric acid. Monitor daily pattern of bowel activity, stool consistency. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site),

symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• Urine may turn reddish color for 1–2 days after beginning therapy. • Hair loss is reversible, but new hair growth may have different color, texture. • New hair growth resumes about 5 wks after last therapy dose. • Maintain strict oral hygiene. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site, yellowing of whites of eyes/skin, difficulty breathing. • Increase fluid intake (may protect against hyperuricemia). • Report for persistent nausea, vomiting.

decitabine

HIGH ALERT

de-**sye**-ta-bine
(Dacogen)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: DNA demethylation agent. **CLINICAL:** Antineoplastic.

USES

Treatment of myelodysplastic syndromes. **OFF-LABEL:** Treatment of acute myelogenous leukemia, sickle cell anemia.

PRECAUTIONS

Contraindications: None known. **Cautions:** Baseline thrombocytopenia, anemia, neutropenia; diabetes mellitus, fluid retention, hepatic/renal impairment.

ACTION

Incorporated into DNA, causing hypomethylation.
Therapeutic Effect: Causes cell death (S-phase of cell cycle).

PHARMACOKINETICS

Protein binding: less than 1%. Elimination appears to occur by removal of an amino group from the enzyme cytidine deaminase, found principally in liver, but also in granulocytes, intestinal epithelium, whole blood. **Half-life:** 30 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May be embryotoxic; may cause developmental abnormalities of fetus. Breastfeeding not recommended. Men should not father a child while receiving treatment and for 2 mos after treatment. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase level/effects of **clozapine.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease Hgb, Hct, WBC, RBC, platelets. May increase serum creatinine, ALT, AST, alkaline phosphatase, bicarbonate, lactate dehydrogenase, BUN, bilirubin, glucose, albumin, magnesium, sodium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 50 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute with 10 ml Sterile Water for Injection. • Further dilute with 50–250 ml 0.9% NaCl, D_5W, or lactated Ringer's to a final concentration of 0.1–1 mg/ml.
Rate of Administration • Give by continuous IV infusion over 1–3 hrs.
Storage • Store vials at room temperature. • Unless used within 15 min of reconstitution, diluted solution must be prepared using cold infusion fluids and may be stored in refrigerator up to maximum of 7 hrs until administration.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Premedicate with antiemetics prior to therapy.

Myelodysplastic Syndrome

IV Infusion: ADULTS, ELDERLY: (Option 1): 15 mg/m² over 3 hrs q8h (45 mg/m²/day) for 3 days. Subsequent treatment cycles should be repeated every 6 wks for a minimum of 4 cycles. **(Option 2):** 20 mg/m² over 1 hr daily for 5 days. Repeat cycle q4wks. Adjust dose for delayed hematologic recovery. Hold treatment until resolution of serum creatinine 2 mg/dL or greater; ALT or bilirubin 2 times upper limit of normal; active or uncontrolled infection.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (53%–20%): Fever, nausea, cough, petechiae, constipation, diarrhea, insomnia, headache, vomiting, peripheral edema, pallor, ecchymosis, rigors, arthralgia. **Occasional (19%–11%):** Rash, limb pain, dizziness, back pain, anorexia, pharyngitis, abdominal pain, erythema, oral mucosal, petechiae, stomatitis, confusion, lethargy, dyspepsia, anxiety, pruritus, hypoesthesia. **Rare (10%–5%):** Candidiasis, ascites, alopecia, chest wall pain, rales, catheter site infection, facial edema, hypotension, urticaria, dehydration, blurred vision, musculoskeletal discomfort, malaise, sinusitis, gastroesophageal reflux.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pneumonia occurs in 22% of pts, cellulitus in 12%. Hematologic toxicity manifested most commonly as neutropenia (90%; recovery 28–50 days), thrombocytopenia (89%), anemia (82%), febrile neutropenia (29%), leukopenia (28%), lymphadenopathy (12%). UTI occurs in 7%.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support. Use strict asepsis, protect pt from infection. Perform CBC, renal/hepatic function tests as needed to monitor response, toxicity but esp. prior to each dosing cycle.

INTERVENTION/EVALUATION

Monitor for hematologic toxicity (fever, sore throat, signs of local infections, unusual bleeding/bruising), symptoms of anemia (excessive fatigue, weakness). Assess response to medication. Monitor, report nausea, vomiting, diarrhea. Avoid rectal temperatures, other traumas that may induce bleeding. Monitor CBC, platelets, serum creatinine, LFT. If serum creatinine increases to 2 mg/dL, ALT, total bilirubin at least 2 times upper limit of normal, and pt has active or uncontrolled infection, stop treatment; do not restart until toxicity is resolved.

PATIENT/FAMILY TEACHING

• Do not have immunizations without physician's approval (drug lowers resistance). • Avoid crowds, persons with known infections. • Report signs of infection (fever, flu-like symptoms) immediately. • Report persistent nausea or vomiting. • Men should use barrier contraception during therapy.

deferasirox

dee-**fur**-a-sir-ox
(Exjade)

■ **BLACK BOX ALERT** ■ May cause renal/hepatic failure, hepatotoxicity, gastrointestinal hemorrhage.
Do not confuse deferasirox with deferoxamine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Iron-chelating agent. **CLINICAL:** Iron reduction agent.

D

USES

Treatment of chronic iron overload due to blood transfusions (transfusional hemosiderosis) or due to non–transfusion-dependent thalassemia syndrome.

PRECAUTIONS

Contraindications: Platelet counts less than 50,000/mm^3; poor performance status and high-risk myelodysplastic syndromes or advanced malignancies; creatinine clearance less than 40 ml/min or serum creatinine greater than 2 times the upper limit of normal. **Cautions:** Renal/hepatic impairment, elderly, concurrent medications that may increase GI effects (e.g., NSAIDs).

ACTION

Selective for iron. Binds iron with high affinity in a 2:1 ratio. **Therapeutic Effect:** Induces iron excretion.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 99%. Metabolized in liver. Excreted in feces (84%), urine (8%). **Half-life:** 8–16 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Not recommended for those younger than 2 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Antacids containing aluminium, cholestyramine, phenobarbital, phenytoin, rifampin, ritonavir** decrease concentration/effects. May decrease effects of **cyclosporine, simvastatin, oral contraceptives.** May increase concentration of **cyclobenzaprine, olanzapine, tizanidine.** **HERBAL:** None significant. **FOOD:** Bioavailability is variably increased when given with **food.** **LAB VALUES:** Decreases serum ferritin. May increase serum creatinine, ALT, AST, urine protein.

AVAILABILITY (Rx)

Tablets for Oral Suspension (Exjade): 125 mg, 250 mg, 500 mg.

ADMINISTRATION/HANDLING

PO

• Give on empty stomach 30 min before food. • Do not give simultaneously with aluminum-containing antacids, cholestyramine. • Tablets should not be chewed or swallowed whole. • Disperse tablet by stirring in water, apple juice, orange juice until fine suspension is achieved. • Dosage less than 1 g should be dispersed in 3.5 oz of liquid, dosage more than 1 g should be dispersed in 7 oz of liquid. If any residue remains in glass, resuspend with a small amount of liquid.

INDICATIONS/ROUTES/DOSAGE

Iron Overload

PO: ADULTS, ELDERLY, CHILDREN 2 YRS AND OLDER: Initially, 20 mg/kg once daily. Adjust dosage of 5 or 10 mg/kg/day every 3–6 mos based on serum ferritin levels. Hold dose for serum ferritin less than 500 mcg/L. **Maximum:** 40 mg/kg once daily.

Thalassemia Syndromes

PO: ADULTS, ELDERLY, CHILDREN 10 YRS AND OLDER: 10 mg/kg once daily. May increase to 20 mg/kg once daily after 4 wks if baseline iron is greater than 15 mg Fe/g dry wgt.

Dosage in Renal Impairment

Note: See Contraindications.

ADULTS: For increase in serum creatinine greater than 33% on 2 consecutive measures, reduce daily dose by 10 mg/kg. **CHILDREN:** For increase in serum creatinine above age-appropriate upper limit of normal on 2 consecutive measures, reduce daily dose by 10 mg/kg.

Dosage in Hepatic Impairment
For severe or persistent elevations in hepatic function tests, consider dose reduction or discontinuation.

SIDE EFFECTS

Frequent (19%–10%): Fever, headache, abdominal pain, cough, nasopharyngitis, diarrhea, nausea, vomiting. **Occasional (9%–4%):** Rash, arthralgia, fatigue, back pain, urticaria. **Rare (1%):** Edema, sleep disorder, dizziness, anxiety.

ADVERSE EFFECTS/ TOXIC REACTIONS

Bronchitis, pharyngitis, acute tonsillitis, ear infection occur occasionally. Hepatitis, auditory disturbances, ocular abnormalities occur rarely. Acute renal failure, cytopenias (e.g., agranulocytosis, neutropenia, thrombocytopenia) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline serum CBC, ferritin, iron, creatinine, ALT, AST, urine protein, then monthly thereafter. Auditory, ophthalmic testing should be obtained before therapy and annually thereafter.

INTERVENTION/EVALUATION

Treatment should be interrupted if serum ferritin levels are consistently less than 500 mcg/L. Suspend treatment if severe rash occurs.

PATIENT/FAMILY TEACHING

• Take on empty stomach 30 min before food. • Do not chew or swallow tablet whole; disperse tablet completely in water, apple juice, orange juice; drink resulting suspension immediately. • Do not take aluminum-containing antacids concurrently. • Report severe skin rash, changes in vision/hearing, or yellowing of skin/eyes.

degarelix

deg-a-**re**-lix
(Firmagon)
Do not confuse degarelix with cetrorelix or ganirelix.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Gonadotropin-releasing hormone antagonist. **CLINICAL:** Antineoplastic.

USES

Treatment of advanced prostate cancer.

PRECAUTIONS

Contraindications: Pregnancy (Pregnancy Category X), potential to become pregnant. **Cautions:** History of QT prolongation, those with risk factors for QT prolongation (e.g., hypokalemia, hypomagnesemia), severe hepatic impairment, renal impairment (creatinine clearance less than 50 ml/min).

ACTION

Antagonizes pituitary gonadotropin-releasing hormone (GnRH) receptors (binds immediately and reversibly), suppressing release of luteinizing hormone (LH) and follicle-stimulating hormone (FSH), from pituitary gland, leading to rapid and sustained suppression of testosterone release from testes. **Therapeutic Effect:** Reduces size and growth of prostate cancer.

PHARMACOKINETICS

Distributed throughout total body water. Protein binding: 90%. Metabolized due to peptide hydrolysis during hepatobiliary system passage. Excreted in feces (70%–80%), urine (20%–30%). **Half-life:** 53 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not indicated for use in this pt population. **Pregnancy Category X. Children:** Not indicated

for use in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Dronedarone, amiodarone, macrolide antibiotics other QT prolonging medications increase risk of QT prolongation. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Expected to decrease serum testosterone levels. May increase serum ALT, AST levels.

AVAILABILITY (Rx)

Injection, Powder for Solution: 80 mg, 120 mg.

ADMINISTRATION/HANDLING

Subcutaneous

• Reconstitute 80-mg vial with 4.2 ml Sterile Water for Injection to provide 20 mg/ml concentration (120 mg with 3 ml SWI to provide 40 mg/ml concentration). • Administer within 1 hr following reconstitution. • Wear gloves during preparation and administration. • Vial must be kept vertical at all times; do not shake. • Administer in abdominal region in areas that will not be exposed to pressure (on or close to waistband area).

INDICATIONS/ROUTES/DOSAGE

Prostate Cancer

Subcutaneous: ADULTS, ELDERLY: Loading dose: 240 mg given as 2 injections of 120 mg (40 mg/ml). **Maintenance:** 80 mg q28days beginning 28 days after loading dose.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: (27%–11%): Hot flashes, injection site pain, erythema, increased weight. **Occasional (7%–5%):** Hypertension, local edema, fatigue, back pain, constipation, urinary tract infection, asthenia, arthralgia, chills. **Rare: (1%):** Insomnia, headache, nausea, dizziness, erectile dysfunction, gynecomastia, testicular atrophy, night sweats.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term androgen deprivation therapy may prolong QT interval. Loss of bone density may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline EKG, electrolyte parameters, LFT, prostate-specific antigen (PSA), testosterone levels prior to initiation of therapy.

INTERVENTION/EVALUATION

Monitor serum electrolytes, PSA periodically. If PSA increases, measure testosterone serum concentrations. Monitor routine EKG for QT prolongation. Assess for decrease in testosterone levels throughout therapy. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Advise pt that swelling, itching, redness may occur at injection site. • Avoid tasks that require alertness, motor skills until response to drug is established.

denosumab

TOP 100

den-**oh**-sue-mab
(Prolia, Xgeva)
Do not confuse denosumab with daclizumab, or Prolia with Avandia or Zebeta.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Bone resorption inhibitor.

USES

Prolia: Treatment of postmenopausal women with osteoporosis at high risk for fracture. Treatment to increase bone

mass in men at high risk for fractures receiving androgen deprivation therapy for nonmetastatic prostate cancer and in women at high risk for fractures receiving adjuvant aromatase inhibitor therapy for breast cancer. Treatment to increase bone mass in men with osteoporosis at high risk for fracture. **Xgeva:** Prevention of skeletal-related events (e.g., fracture, spinal cord compression) in pts with bone metastases from solid tumor. Treatment of giant cell tumor of bone in adults and skeletally mature adolescents. Treatment of hypercalcemia of malignancy refractory to biphosphonate therapy. **OFF-LABEL:** Treatment of bone destruction caused by rheumatoid arthritis.

PRECAUTIONS

Contraindications: **Prolia:** Preexisting hypocalcemia (must be corrected prior to surgery), pregnancy. **Cautions:** History of hypoparathyroidism, thyroid/parathyroid surgery, malabsorption syndromes, excision of small intestine, immunocompromised pts. Pts with severe renal impairment or receiving dialysis (greater risk for developing hypocalcemia). Pts with impaired immune system or immunosuppressive therapy.

ACTION

Binds to RANK ligand (transmembrane protein), preventing osteoclast formation. **Therapeutic Effect:** Decreases bone resorption; increases bone mass in osteoporosis; decreases skeletal-related events and tumor-induced bone destruction in solid tumors. Inhibits tumor growth.

PHARMACOKINETICS

Serum level detected 1 hr after administration. **Half-life:** 32 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Approved for use only in postmenopausal women. **Pregnancy Category X (Prolia), D (Xgeva). Children:** Approved for use only in postmenopausal women. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum calcium. May increase serum cholesterol.

AVAILABILITY (Rx)

Injection, Solution (Prolia): 60 mg/ml. **(Xgeva):** 120 mg/1.7 ml.

ADMINISTRATION/HANDLING

Subcutaneous

- Administer in upper arm, upper thigh, or abdomen.

Storage • Refrigerate. Use within 14 days once at room temperature. • Solution appears as clear, colorless to pale yellow.

INDICATIONS/ROUTES/DOSAGE

Note: Administer calcium and vitamin D to prevent/treat hypocalcemia.

Prolia

Androgen deprivation–induced bone loss in men with prostate cancer; aromatase inhibitor–induced bone loss in women with breast cancer; osteoporosis in men or postmenopausal women.

Subcutaneous: ADULTS, ELDERLY: 60 mg every 6 mos.

Xgeva

Prevention of Skeletal-Related Events from Solid Tumors

Subcutaneous: ADULTS, ELDERLY: 120 mg q4wks.

Xgeva

Giant Cell Tumor of Bone, Hypercalcemia of Malignancy

Subcutaneous: ADULTS, ELDERLY, MATURE ADOLESCENTS: 120 mg q4wks with additional doses on days 8 and 15 of first mo of therapy.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (35%–12%): Back pain, extremity pain. **Occasional (8%–5%):** Musculoskeletal pain, vertigo, peripheral edema, sciatica. **Rare (4%–2%):** Bone pain, upper abdominal pain, rash, insomnia, flatulence, pruritus, myalgia, asthenia, GI reflux.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increases risk of infection, specifically cystitis, upper respiratory tract infection, pneumonia, pharyngitis, herpes zoster (shingles) occur in 2%–6% of pts. Osteonecrosis of the jaw (OJN) was reported. Suppression of bone turnover, pancreatitis have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Hypocalcemia must be corrected prior to treatment. Calcium 1,000 mg/day and vitamin D at least 400 international units/day should be given. Dental exam should be provided prior to treatment.

INTERVENTION/EVALUATION

Monitor serum magnesium, calcium, ionized calcium, phosphate. In pts predisposed with hypocalcemia and disturbances of mineral metabolism, clinical monitoring of calcium, mineral levels is highly recommended. Adequately supplement all pts with calcium and vitamin D. Monitor for delayed fracture healing.

PATIENT/FAMILY TEACHING

• Report rash, new-onset eczema. • Seek prompt medical attention if signs, symptoms of severe infection (rash, itching, reddened skin, cellulitis) occur. • Report muscle stiffness, numbness, cramps, spasms (signs of hypocalcemia); swelling or drainage from jaw, mouth, or teeth.

desipramine

de-**sip**-ra-meen
(Novo-Desipramine, Norpramin)

■ **BLACK BOX ALERT** ■ Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse desipramine with clomipramine, dalfampridine, diphenhydramine, disopyramide, or imipramine, or Norpramin with nortriptyline.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Tricyclic.
CLINICAL: Antidepressant.

USES

Treatment of depression, often in conjunction with psychotherapy. **OFF-LABEL:** Treatment of ADHD, adjunct in chronic pain treatment, neurogenic pain, depression in children 6–12 yrs.

PRECAUTIONS

Contraindications: Use within 14 days of MAOIs, acute recovery phase of MI. Initiation in pts receiving linezolid. **Cautions:** Cardiovascular disease, cardiac conduction disturbances, urinary retention, diabetes, BPH, glaucoma, narrow-angle glaucoma, xerostomia, visual problems, constipation, history of bowel obstruction, seizure disorders, hyperthyroidism, pts taking thyroid replacement therapy, high risk of suicide, renal/hepatic impairment, elderly.

ACTION

Blocks reuptake of neurotransmitters, (norepinephrine, serotonin) at presynaptic membranes, increasing their availability at postsynaptic receptor sites. Strong anticholinergic activity. **Therapeutic Effect:** Relieves depression.

PHARMACOKINETICS

Rapidly, well absorbed from GI tract. Protein binding: 90%. Metabolized in liver. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 7–60 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Minimally distributed in breast milk. **Pregnancy Category C. Children:** Not recommended in pts 6 yrs and younger. Children and adolescents with major depressive disorder (MDD), other psychiatric disorders, at increased risk for suicidal ideation, behavior, esp. during first few mos of treatment. **Elderly:** Use lower dosages (higher dosages not tolerated, increases risk of toxicity).

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS, respiratory depression; hypotensive effects. **Cimetidine** may increase concentration, risk of toxicity. **Fluoxetine, paroxetine, phenothiazines, propafenone, flecainide** may increase concentration. **HERBAL:** **Kava kava, SAMe, St. John's wort, valerian** may increase sedation, risk of serotonin syndrome. **St. John's wort** may decrease concentration. **FOOD:** **Grapefruit products** may increase concentration, toxicity. **LAB VALUES:** May alter serum glucose, EKG readings. **Therapeutic serum level:** 115–300 ng/ml; **toxic serum level:** greater than 400 ng/ml.

AVAILABILITY (Rx)

Tablets: 10 mg, 25 mg, 50 mg, 75 mg, 100 mg, 150 mg.

ADMINISTRATION/HANDLING

PO

- Give with food, milk if GI distress occurs.

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS: 75 mg/day. May gradually increase to 150–200 mg/day. **Maximum:** 300 mg/day. **ELDERLY:** Initially, 10–25 mg/day. May gradually increase to 75–100 mg/day. **Maximum:** 150 mg/day. **CHILDREN OLDER THAN 12 YRS:** Initially, 25–50 mg/day. May gradually increase to 100 mg/day. **Maximum:** 150 mg/day. **CHILDREN 6–12 YRS (OFF-LABEL):** 1–3 mg/kg/day. **Maximum:** 5 mg/kg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Drowsiness, fatigue, dry mouth, blurred vision, constipation, delayed urination, orthostatic hypotension, diaphoresis, impaired concentration, increased appetite, urinary retention. **Occasional:** GI disturbances (nausea, GI distress, metallic taste). **Rare:** Paradoxical reactions (agitation, restlessness, nightmares, insomnia), extrapyramidal symptoms (particularly fine hand tremor).

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce confusion, seizures, drowsiness, arrhythmias, fever, hallucinations, dyspnea, vomiting, unusual fatigue, weakness. Abrupt discontinuation after prolonged therapy may produce severe headache, malaise, nausea, vomiting, vivid dreams.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

For pts on long-term therapy, LFT, renal function tests, blood counts should be performed periodically. For pts at risk for arrhythmias, perform baseline EKG.

INTERVENTION/EVALUATION

Monitor for worsening of depression, suicidal ideation. Assess appearance, behavior, speech pattern, level of interest,

mood. **Therapeutic serum level:** 115–300 ng/ml; **toxic serum level:** greater than 400 ng/ml. Monitor EKG if pt has history of arrhythmias.

PATIENT/FAMILY TEACHING

• Go from lying to standing slowly. • Tolerance to postural hypotension, sedative, anticholinergic effects usually develops during early therapy. • Maximum therapeutic effect may be noted in 2–4 wks. • Do not abruptly discontinue medication. • Avoid alcohol, grapefruit products. • Report worsening depression, suicidal ideation, unusual changes in behavior (esp. at initiation of therapy or with changes in dosage).

desloratadine

des-lor-**a**-ta-deen
(Aerius, Clarinex, Clarinex Redi-Tabs)
Do not confuse Clarinex with Celebrex or Claritin.

FIXED-COMBINATION(S)

Clarinex-D 24 Hour: desloratadine/pseudoephedrine (a sympathomimetic): 5 mg/240 mg. **Clarinex-D 12 Hour:** desloratadine/pseudoephedrine: 2.5 mg/120 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: H_1 antagonist. **CLINICAL:** Nonsedating antihistamine.

USES

Relief of nasal/non-nasal symptoms of seasonal and perennial rhinitis (sneezing, rhinorrhea, itching/tearing of eyes, stuffiness), chronic idiopathic urticaria (hives).

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment, breastfeeding.

ACTION

Exhibits selective peripheral histamine H_1 receptor blocking action. **Therapeutic Effect:** Prevents allergic response mediated by histamine (rhinitis, urticaria).

PHARMACOKINETICS

Rapidly absorbed from GI tract. Distributed mainly in liver, lungs, GI tract, bile. Protein binding: 82%. Metabolized in liver. Eliminated in urine, feces. **Half-life:** 27 hrs (increased in elderly, renal/hepatic impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Excreted in breast milk. **Pregnancy Category C. Children/Elderly:** More sensitive to anticholinergic effects (e.g., dry mouth, nose, throat).

INTERACTIONS

DRUG: **Erythromycin, ketoconazole, fluoxetine, cimetidine** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May suppress wheal, flare reactions to antigen skin testing unless antihistamines are discontinued 4 days before testing.

AVAILABILITY (Rx)

Syrup (Clarinex): 2.5 mg/5 ml. **Tablets (Clarinex):** 5 mg. **Tablet, Oral Dispersable:** 2.5 mg, 5 mg.

ADMINISTRATION/HANDLING

PO

• May give with or without food. • Oral dispersable Tablet: Place directly on tongue (disintegrates immediately). • May take with or without water.

INDICATIONS/ROUTES/DOSAGE

Allergic Rhinitis, Urticaria

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 5 mg once a day. **CHILDREN 6–12 YRS:** 2.5 mg once a day.
CHILDREN 1–5 YRS: 1.25 mg once a day. **CHILDREN 6–11 MOS:** 1 mg once a day.

Dosage in Hepatic/Renal Impairment
Dosage is decreased to 5 mg every other day.

SIDE EFFECTS

Frequent (12%): Headache. **Occasional (3%):** Dry mouth, drowsiness. **Rare (less than 3%):** Fatigue, dizziness, diarrhea, nausea.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess lung sounds for wheezing; skin for urticaria, hives.

INTERVENTION/EVALUATION

For upper respiratory allergies, increase fluids to decrease viscosity of secretions, offset thirst, replace any loss of fluids. Monitor symptoms for therapeutic response.

PATIENT/FAMILY TEACHING

• Drink plenty of water (may cause dry mouth). • Avoid tasks that require alertness, motor skills until response to drug is established (may cause drowsiness). • Avoid alcohol.

desmopressin

des-moe-**press**-in
(Apo-Desmopressin, DDAVP, DDAVP Rhinal Tube, Novo-Desmopressin, Stimate)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic pituitary hormone. **CLINICAL:** Antidiuretic.

USES

DDAVP Nasal: Central cranial diabetes insipidus. **Parenteral:** Central cranial diabetes insipidus. Maintain hemostasis and control bleeding in hemophilia A, von Willebrand's disease (type I). **Stimate intranasal:** Maintain hemostasis and control bleeding in hemophilia A, von Willebrand's disease (type I). **PO:** Central cranial diabetes insipidus, primary nocturnal enuresis, temporary polyuria, polydipsia following pituitary surgery or head trauma. **OFF-LABEL:** Uremic bleeding occurring with acute/ chronic renal failure; prevent surgical bleeding in pts with uremia.

PRECAUTIONS

Contraindications: Hyponatremia, history of hyponatremia, moderate to severe renal impairment. **Cautions:** Predisposition to thrombus formation; conditions with fluid, electrolyte imbalance; coronary artery disease; hypertensive cardiovascular disease, elderly, cystic fibrosis, HF, impaired renal function, polydipsia. Avoid use in hemophilia A with factor VIII levels less than 5%; hemophilia B; severe type I, type IIB, platelet-type von Willebrand's disease.

ACTION

Increases CAMP in renal tubular cells, which increases water permeability, decreasing urine volume. Increases levels of von Willebrand factor, factor VIII, tissue plasminogen activator (tPA). **Therapeutic Effect:** Shortens activated partial thromboplastin time (aPTT), bleeding time. Decreases urinary output.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	2–7 hrs	8–12 hrs
IV	15–30 min	1.5–3 hrs	8–12 hrs
Intranasal	15 min–1 hr	1–5 hrs	8–12 hrs

Poorly absorbed after PO, nasal administration. Metabolism: Unknown. **Half-life: PO:** 1.5–2.5 hrs. **Intranasal:** 3.3–3.5 hrs. **IV:** 0.4–4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Pregnancy Category B. Children: Caution in neonates,

those younger than 3 mos (increased risk of fluid balance problems). Careful fluid restrictions recommended in infants. **Elderly:** Increased risk of hyponatremia, water intoxication.

D

INTERACTIONS

DRUG: **Carbamazepine, lamotrigine, NSAIDs, SSRIs, tricyclic antidepressants** may increase effect. **Demeclocycline, lithium** may decrease effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum sodium.

AVAILABILITY (Rx)

Injection Solution (DDAVP): 4 mcg/ml. **Nasal Solution (DDAVP):** 100 mcg/ml. **Nasal Spray (Stimate):** 1.5 mg/ml (150 mcg/spray). **(DDAVP):** 100 mcg/ml (10 mcg/spray). **Tablets (DDAVP):** 0.1 mg, 0.2 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • For IV infusion, dilute in 10–50 ml 0.9% NaCl (10 ml for children 10 kg or less; 50 ml for adults, children greater than 10 kg).
Rate of Administration • Infuse over 15–30 min.
Storage • Refrigerate.

Subcutaneous

• Withdraw dose from vial. Further dilution not required.

Intranasal

• Refrigerate DDAVP Rhinal Tube solution, Stimate nasal spray. • Rhinal Tube solution, Stimate nasal spray are stable for 3 wks at room temperature. • DDAVP nasal spray is stable at room temperature. • Calibrated catheter (rhinyle) is used to draw up measured quantity of desmopressin; with one end inserted in nose, pt blows on other end to deposit solution deep in nasal cavity. • For infants, young children, obtunded pts, air-filled syringe may be attached to catheter to deposit solution.

INDICATIONS/ROUTES/DOSAGE

Primary Nocturnal Enuresis

PO: CHILDREN 6 YRS AND OLDER: 0.2–0.6 mg once before bedtime. Limit fluid intake 1 hr prior and at least 8 hrs after dose.

Central Cranial Diabetes Insipidus

◀ALERT▶ Fluid restriction should be observed.
PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 0.05 mg twice a day. Titrate to desired response. Range: 0.1–1.2 mg/day in 2–3 divided doses. **CHILDREN YOUNGER THAN 12 YRS:** Initially, 0.05 mg, twice a day. Titrate to desired response. Range: 0.1–1.2 mg daily.
IV, Subcutaneous: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 2–4 mcg/day in 2 divided doses or $\frac{1}{10}$ of maintenance intranasal dose.
Intranasal *(Use 100 mcg/ml Concentration)*: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 10–40 mcg (0.1–0.4 ml) in 1–3 doses/day. **CHILDREN 3 MOS–12 YRS:** Initially, 5 mcg (0.05 ml)/day. Range: 5–30 mcg (0.05–0.3 ml)/day.

Hemophilia A, von Willebrand's Disease (Type I)

IV Infusion: ADULTS, ELDERLY, CHILDREN WEIGHING MORE THAN 10 KG: 0.3 mcg/kg diluted in 50 ml 0.9% NaCl. **CHILDREN WEIGHING 10 KG AND LESS:** 0.3 mcg/kg diluted in 10 ml 0.9% NaCl.
Intranasal *(Use 1.5 mg/ml Concentration Providing 150 mcg/Spray)*: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER WEIGHING MORE THAN 50 KG: 300 mcg; use 1 spray in each nostril. **ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER WEIGHING 50 KG OR LESS:** 150 mcg as a single spray.

Dosage in Renal Impairment

Creatinine clearance less than 50 ml/min: Not recommended.

Dosage in Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Occasional: IV: Pain, redness, swelling at injection site; headache, abdominal cramps, vulvular pain, flushed skin, mild B/P elevation, nausea with high dosages. **Nasal:** Rhinorrhea, nasal congestion, slight B/P elevation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Water intoxication, hyponatremia (headache, drowsiness, confusion, decreased urination, rapid weight gain, seizures, coma) may occur in overhydration. Children, elderly pts, infants are esp. at risk.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baselines for B/P, pulse, weight, serum electrolytes, urine specific gravity. Check lab values for factor VIII coagulant concentration for hemophilia A, von Willebrand's disease; bleeding times.

INTERVENTION/EVALUATION

Check B/P, pulse with IV infusion. Monitor pt weight, fluid intake; urine volume, urine specific gravity, osmolality, serum electrolytes for diabetes insipidus. Assess factor VIII antigen levels, aPTT, factor VIII activity level for hemophilia.

PATIENT/FAMILY TEACHING

• Avoid overhydration. • Follow guidelines for proper intranasal administration. • Report headache, shortness of breath, heartburn, nausea, abdominal cramps.

desvenlafaxine

des-ven-la-**fax**-een
(Khedezia, Pristiq)

■ **BLACK BOX ALERT** ■ Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Phenethylamine derivative. **CLINICAL:** Antidepressant.

USES

Treatment of major depression (acute/maintenance) exhibited as persistent, prominent dysphoria (occurring nearly every day for at least 2 wks) manifested by 4 of 8 symptoms: change in appetite, change in sleep pattern, increased fatigue, impaired concentration, feelings of guilt or worthlessness, loss of interest in usual activities, psychomotor agitation or retardation, or suicidal tendencies.

PRECAUTIONS

Contraindications: Use of MAOIs within 14 days or in those currently taking MAOIs (may cause neuroleptic malignant syndrome). Allow at least 7 days after discontinuation before starting an MAOI. Initiation in pts taking linezolid. **Cautions:** Renal impairment, history of seizures, bipolar disorder, pts with suicidal ideation and behavior, increased intraocular pressure, narrow-angle glaucoma, cardiovascular or cerebrovascular disease, elderly.

ACTION

Appears to inhibit serotonin and norepinephrine reuptake at CNS neuronal presynaptic membranes (weakly inhibits dopamine reuptake). **Therapeutic Effect:** Produces antidepressant effect.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 30%. Excreted primarily in urine. Steady-state plasma levels occur in 4–5 days. **Half-life:** 9–11 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category C.**

Children: Safety and efficacy not established. **Elderly:** No age-related precautions noted.

D

INTERACTIONS

DRUG: Concurrent use of **MAOIs** may cause neuroleptic malignant syndrome: hyperthermia, rigidity, myoclonus, autonomic instability (including rapid fluctuations of vital signs), mental status changes, coma, extreme agitation. **Alcohol** may increase CNS depressant effects. May decrease **midazolam** concentration. May increase **desipramine** concentration. **Aspirin, NSAIDs, warfarin** increase risk of bleeding. **Ketoconazole** may increase concentration/effect. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depressant effects. **FOOD:** None known. **LAB VALUES:** May increase total serum cholesterol, LDL cholesterol, triglycerides, ALT, AST, prolactin level.

AVAILABILITY (Rx)

Tablets (Extended-Release): 50 mg, 100 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Give with food or milk if GI distress occurs. • Do not break, crush, dissolve, or divide tablets. • Must be swallowed whole, with fluid.

INDICATIONS/ROUTES/DOSAGE

Major Depressive Disorder

PO: ADULTS: 50 mg once daily. **Maximum:** 400 mg/day.

Dosage in Renal Impairment

Creatinine clearance less than 30 ml/min: 50 mg every other day. **HD:** 50 mg every other day.

Dosage in Hepatic Impairment

Moderate to severe: 50 mg once daily. **Maximum:** 100 mg/day.

SIDE EFFECTS

Frequent (22%–20%): Nausea, headache. **Occasional (13%–7%):** Dizziness, dry mouth, diarrhea, sweating, constipation, insomnia, fatigue. **Rare (5%–2%):** Anorexia, drowsiness, decreased libido, erectile dysfunction in men, anxiety, blurred vision, vomiting, decreased weight, tremor, paresthesia, irritability, abnormal dreams, blurred vision, tinnitus.

ADVERSE EFFECTS/TOXIC REACTIONS

Seizures, syncope, extrapyramidal disorder, depersonalization, hypomania, epistaxis occur rarely. Ischemic cardiac events, including myocardial ischemia, MI, coronary occlusion requiring revascularization, may occur. Sustained increase in diastolic B/P (10–15 mm Hg) occurs occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain initial weight, B/P. Assess appearance, behavior, speech pattern, level of interest, mood, sleep pattern.

INTERVENTION/EVALUATION

Assess sleep pattern for evidence of insomnia. Monitor for suicidal ideation (esp. at initiation of therapy or changes in dosage). Assess appearance, behavior, speech pattern, level of interest, mood for therapeutic response. For pts on long-term therapy, LFT should be performed periodically.

PATIENT/FAMILY TEACHING

• Take with food to minimize GI distress. • Do not chew, crush, dissolve, or divide tablets. • Do not increase, decrease, or suddenly discontinue medication. • Therapeutic effect may be noted within 1–4 wks. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Report worsening depression, suicidal ideation, unusual changes in behavior.

dexamethasone

dex-a-**meth**-a-sone
(Apo-Dexamethasone, Baycadron, Dexamethasone Intensol, DexPak TaperPak, Maxidex)
Do not confuse Decadron with Percodan, dexamethasone with dextroamphetamine, or Maxidex with Maxzide.

FIXED-COMBINATION(S)

Ciprodex Otic: dexamethasone/ciprofloxacin (antibiotic): 0.1%/0.3%. **Dexacidin, Maxitrol:** dexamethasone/neomycin/polymyxin (antiinfectives): 0.1%/3.5 mg/10,000 units per g or ml.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Long-acting glucocorticoid. **CLINICAL:** Corticosteroid.

USES

Used primarily as an anti-inflammatory or immunosuppressant agent in a variety of diseases (e.g., allergic, inflammatory autoimmune). **OFF-LABEL:** Antiemetic, treatment of croup, dexamethasone suppression test (indicator consistent with suicide and/or depression), accelerate fetal lung maturation. Treatment of acute mountain sickness, high altitude cerebral edema.

PRECAUTIONS

Contraindications: Systemic fungal infections, cerebral malaria. **Cautions:** Thyroid disease, renal/hepatic impairment, cardiovascular disease, diabetes, glaucoma, cataracts, myasthenia gravis, pts at risk for seizures, osteoporosis, post MI, elderly.

ACTION

Suppresses neutrophil migration, decreases production of inflammatory mediators, reverses increased capillary permeability. **Therapeutic Effect:** Decreases inflammation. Suppresses normal immune response.

PHARMACOKINETICS

Rapidly absorbed from GI tract after PO administration. Widely distributed. Protein binding: High. Metabolized in liver. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 3–4.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C (D if used in the first trimester). Children:** Prolonged treatment with high-dose therapy may decrease short-term growth rate, cortisol secretion. **Elderly:** Higher risk for developing hypertension, osteoporosis.

INTERACTIONS

DRUG: Amphotericin may increase hypokalemia. May increase **digoxin** toxicity caused by hypokalemia. **CYP3A4 inducers (e.g., carbamazepine, phenytoin, rifampin)** may decrease concentration. **CYP3A4 inhibitors (e.g., ketoconazole), macrolide antibiotics** may increase concentration. May decrease effects of **oral antidiabetic agents. Live virus vaccines** may decrease pt's antibody response to vaccine, increase vaccine side effects, potentiate virus replication. **HERBAL: Cat's claw, echinacea** may increase immunosuppressant effect. **FOOD:** Interferes with **calcium** absorption. **LAB VALUES:** May increase serum glucose, lipids, sodium levels. May decrease serum calcium, potassium, thyroxine, WBC.

AVAILABILITY (Rx)

Elixir: 0.5 mg/5 ml. **Injection, Solution:** 4 mg/ml, 10 mg/ml. **Ophthalmic Solution:** 0.1%. **Ophthalmic Suspension (Maxidex):** 0.1%. **Solution, Oral:** 0.5 mg/5 ml. **Solution, Oral Concentrate (Dexamethasone Intensol):** 1 mg/ml. **Tablets:** 0.5 mg,

0.75 mg, 1 mg, 1.5 mg, 2 mg, 4 mg, 6 mg. **Tablets (TaperPak [DexPak]):** 1.5 mg (35 or 51 tablets on taper dose card).

ADMINISTRATION/HANDLING

D

IV

◀ALERT▶ Dexamethasone sodium phosphate may be given by IV push or IV infusion. Rapid injection may cause genital burning sensation in females.

• For IV push, give over 1–4 min if dose is less than 10 mg. • For IV infusion, mix with 50–100 ml 0.9% NaCl or D_5W and infuse over 15–30 min. • For neonates, solution must be preservative free. • IV solution must be used within 24 hrs.

IM

• Give deep IM, preferably in gluteus maximus.

PO

• Give with milk, food (to decrease GI effect).

Ophthalmic Solution, Suspension

• Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Place prescribed number of drops or ¼–½ inch ointment into pocket. • Instruct pt to close eye gently for 1–2 min (so medication will not be squeezed out of the sac). • Instruct pt to apply digital pressure to lacrimal sac at inner canthus for 1–2 min to minimize systemic absorption.

IV INCOMPATIBILITIES

Ciprofloxacin (Cipro), daunorubicin (Cerubidine), idarubicin (Idamycin), midazolam (Versed).

IV COMPATIBILITIES

Cimetidine (Tagamet), cisplatin (Platinol), cyclophosphamide (Cytoxan), cytarabine (Cytosar), docetaxel (Taxotere), doxorubicin (Adriamycin), etoposide (VePesid), furosemide (Lasix), granisetron (Kytril), heparin, hydromorphone (Dilaudid), lorazepam (Ativan), morphine, ondansetron (Zofran), paclitaxel (Taxol), palonosetron (Aloxi), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Anti-Inflammatory

PO, IV, IM: ADULTS, ELDERLY: 0.75–9 mg/day in divided doses q6–12h. **CHILDREN:** 0.08–0.3 mg/kg/day in divided doses q6–12h.

Cerebral Edema

IV: ADULTS, ELDERLY: Initially, 10 mg, then 4 mg (IV or IM) q6h.

PO, IV, IM: CHILDREN: Loading dose of 1–2 mg/kg, then 1–1.5 mg/kg/day in divided doses q4–6h.

Nausea/Vomiting in Chemotherapy Pts

IV: ADULTS, ELDERLY: 10–20 mg 15–30 min before treatment. **CHILDREN:** 10 mg/m^2/dose on days of chemotherapy.

Physiologic Replacement

PO, IV, IM: ADULTS, ELDERLY, CHILDREN: 0.03–0.15 mg/kg/day in divided doses q6–12h.

Usual Ophthalmic Dosage, Ocular Inflammatory Conditions

Suspension: ADULTS, ELDERLY, CHILDREN: Initially, 2 drops q1h while awake and q2h at night for 1 day, then reduce to 3–4 times a day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Inhalation: Cough, dry mouth, hoarseness, throat irritation. **Intranasal:** Burning, mucosal dryness. **Ophthalmic:** Blurred vision. **Systemic:** Insomnia, facial edema (cushingoid appearance ["moon face"]), moderate abdominal distention, indigestion, increased appetite, nervousness, facial flushing, diaphoresis. **Occasional: Inhalation:** Localized fungal infection (thrush). **Intranasal:** Crusting inside

nose, epistaxis, sore throat, ulceration of nasal mucosa. **Ophthalmic:** Decreased vision; lacrimation; eye pain; burning, stinging, redness of eyes; nausea; vomiting. **Systemic:** Dizziness, decreased/blurred vision. **Rare: Inhalation:** Increased bronchospasm, esophageal candidiasis. **Intranasal:** Nasal/pharyngeal candidiasis, eye pain. **Systemic:** Generalized allergic reaction (rash, urticaria); pain, redness, swelling at injection site; psychological changes; false sense of well-being; hallucinations; depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term therapy: Muscle wasting (esp. arms, legs), osteoporosis, spontaneous fractures, amenorrhea, cataracts, glaucoma, peptic ulcer disease, HF. **Ophthalmic:** Glaucoma, ocular hypertension, cataracts. **Abrupt withdrawal following long-term therapy:** Severe joint pain, severe headache, anorexia, nausea, fever, rebound inflammation, fatigue, weakness, lethargy, dizziness, orthostatic hypotension.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for hypersensitivity to any corticosteroids. Obtain baselines for height, weight, B/P, serum glucose, electrolytes.

INTERVENTION/EVALUATION

Monitor I&O, daily weight, serum glucose. Assess for edema. Evaluate food tolerance. Monitor daily pattern of bowel activity, stool consistency. Report hyperacidity promptly. Check vital signs at least twice a day. Be alert to infection (sore throat, fever, vague symptoms). Monitor serum electrolytes, esp. for hypercalcemia (muscle twitching, cramps), hypokalemia (weakness, muscle cramps, paresthesia [esp. lower extremities], nausea/vomiting, irritability), Hgb, occult blood loss. Assess emotional status, ability to sleep.

PATIENT/FAMILY TEACHING

• Do not change dose/schedule or stop taking drug. • **Must** taper off gradually under medical supervision. • Report fever, sore throat, muscle aches, sudden weight gain, edema, exposure to measles/chickenpox. • Severe stress (serious infection, surgery, trauma) may require increased dosage. • Inform dentist, other physicians of dexamethasone therapy within past 12 mos. • Avoid alcohol, limit caffeine.

dexlansoprazole

TOP 100

dex-lan-soe-**pra**-zol
(Dexilant)
Do not confuse dexlansoprazole with aripiprazole, lansoprazole, omeprazole, pantoprazole, or rabeprazole.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzimidazole.
CLINICAL: Proton pump inhibitor.

USES

Healing of all grades of erosive esophagitis; maintenance healing of erosive esophagitis. Treatment of heartburn associated with nonerosive gastroesophageal reflux disease (GERD).

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment.

ACTION

Binds to and inhibits hydrogen-potassium adenosine triphosphatase, an enzyme on surface of gastric parietal cells, blocking the final step of acid production. **Therapeutic Effect:** Reduces gastric acid production.

PHARMACOKINETICS

Extensively metabolized in liver. Excreted in urine (51%), feces (48%). Protein binding: 97%. **Half-life:** 1–2 hrs.

D

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

Drug: May decrease concentration/effect of **atazanavir.** May interfere with **ampicillin, digoxin, iron salts, ketoconazole** absorption. May increase effect of **warfarin. Sucralfate** may delay dexlansoprazole absorption (give dexlansoprazole 30 min before sucralfate). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, potassium, creatinine. May decrease platelets.

AVAILABILITY (Rx)

Capsules (Delayed-Release): 30 mg, 60 mg.

ADMINISTRATION/HANDLING

PO

• Do not crush or cut delayed-release capsules. • May take with or without regard to food. • If pt has difficulty swallowing capsules, open capsules, sprinkle granules on 1 tbsp of applesauce, and have pt swallow immediately.

INDICATIONS/ROUTES/DOSAGE

Erosive Esophagitis

PO: ADULTS, ELDERLY: 60 mg once daily for up to 8 wks. Maintenance of healed erosive esophagitis: 30 mg once daily for up to 6 mos.

GERD

PO: ADULTS, ELDERLY: 30 mg once daily for 4 wks.

Moderate Hepatic Impairment

PO: ADULTS, ELDERLY: Consider 30 mg maximum daily dose.

Dosage in Renal Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (5%–4%): Diarrhea, abdominal pain. **Rare (3%–1%):** Nausea, vomiting, flatulence.

ADVERSE EFFECTS/ TOXIC REACTIONS

Upper respiratory tract infection occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab tests. Assess for epigastric or abdominal pain, occult blood.

INTERVENTION/EVALUATION

Assess for therapeutic response (relief of GI symptoms). Question for occurrence of diarrhea, GI discomfort, nausea. Monitor CBC, renal/hepatic function.

PATIENT/FAMILY TEACHING

• Do not chew/crush delayed-release capsules. • For pts who have difficulty swallowing capsules, open capsules, sprinkle granules on 1 tbsp of applesauce, and have pt swallow immediately.

dexmedetomidine

dex-med-e-**toe**-mye-deen
(Precedex)
Do not confuse Precedex with Percocet or Peridex.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha$_2$ agonist. **CLINICAL:** Nonbarbiturate sedative, hypnotic.

USES

Sedation of initially intubated, mechanically ventilated adults in intensive care setting. Use in nonintubated pts requiring sedation before and/or during surgical and other procedures. **OFF-LABEL:** Treatment of shivering, use in children. Awake craniotomy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Heart block, bradycardia, hepatic impairment, hypovolemia, diabetes, hypotension, chronic hypertension, severe ventricular dysfunction, elderly, use of vasodilators or drugs decreasing heart rate. **Pregnancy Category C.**

ACTION

Selective alpha$_2$-adrenergic agonist. Inhibits norepinephrine release. **Therapeutic Effect:** Produces analgesic, hypnotic, sedative effects.

PHARMACOKINETICS

Protein binding: 94%. Metabolized in liver. Excreted in urine. **Half-life:** 2 hrs.

INTERACTIONS

DRUG: **Sedatives, opioids, hypnotics** may enhance effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, potassium, ALT, AST.

AVAILABILITY (Rx)

Injection Solution: 200 mcg/2 ml vials, 4 mcg/ml solutions (50 ml, 100 ml).

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute 2 ml of dexmedetomidine with 48 ml 0.9% NaCl.
Rate of Administration • Individualized, titrated to desired effect. Use controlled infusion pump.
Storage • Store at room temperature.

IV INCOMPATIBILITIES

Do not mix dexmedetomidine with any other medications.

IV COMPATIBILITIES

Amiodarone (Cordarone), bumetanide (Bumex), calcium gluconate, cisatracurium (Nimbex), dexamethasone, dobutamine, dopamine, magnesium sulfate, norepinephrine (Levophed), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Sedation

IV: ADULTS: Loading dose of 1 mcg/kg over 10 min followed by maintenance infusion of 0.2–0.7 mcg/kg/hr. **ELDERLY:** May require decreased dosage. No guidelines available.

SIDE EFFECTS

Frequent (30%–11%): Hypotension, nausea. **Occasional (3%–2%):** Pain, fever, oliguria, thirst.

ADVERSE EFFECTS/ TOXIC REACTIONS

Bradycardia, atrial fibrillation, hypoxia, anemia, pain, pleural effusion may occur with too-rapid IV infusion.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline B/P, heart rate, LOC prior to initiation.

INTERVENTION/EVALUATION

Monitor EKG for arrhythmia, pulse for bradycardia, B/P for hypotension, level of sedation. Assess respiratory rate, rhythm. Monitor ventilator settings. Discontinue once pt is extubated.

dexmethylphenidate

dex-**meth**-il-**fen**-i-date
(Focalin, Focalin XR)

■ **BLACK BOX ALERT** ■ Chronic use can lead to marked tolerance,

psychological dependence. Severe depression may occur during drug withdrawal.

Do not confuse dexmethylphenidate with methadone.

D

CLASSIFICATION

PHARMACOTHERAPEUTIC: Cerebral cortex stimulator **(Schedule II).** **CLINICAL:** CNS stimulant.

USES

Treatment of ADHD.

PRECAUTIONS

Contraindications: Diagnosis or family history of Tourette's syndrome, glaucoma, history of marked agitation, anxiety, tension, motor tics, use of MAOIs within 14 days. **Cautions:** Cardiovascular disease (HF, recent MI), seizure disorder, psychosis, emotional instability, acute stress reactions, hyperthyroidism. Avoid use in pts with history of substance abuse.

ACTION

Blocks reuptake of norepinephrine, dopamine into presynaptic neurons, increasing release of these neurotransmitters into synaptic cleft. **Therapeutic Effect:** Decreases motor restlessness, fatigue; increases motor activity, mental alertness, attention span; elevates mood.

PHARMACOKINETICS

Readily absorbed from GI tract. Metabolized in liver. Excreted in urine. **Half-life:** 2.2 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if excreted in breast milk. **Pregnancy Category C. Children:** May be more susceptible to developing anorexia, insomnia, abdominal pain, weight loss. Chronic use may inhibit growth. In psychotic children, may exacerbate symptoms of behavior disturbance, thought disorder. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May enhance effects of **antihypertensives.** May inhibit metabolism of **phenobarbital, phenytoin, primidone, tricyclic antidepressants;** decreased dosages may be necessary. May alter effects of **warfarin.** **HERBAL:** **Ephedra** may cause hypertension, arrhythmias. **Yohimbe** may increase CNS stimulation. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets (Focalin): 2.5 mg, 5 mg, 10 mg.

Capsules (Extended-Release [Focalin XR]): 5 mg, 10 mg, 15 mg, 20 mg, 30 mg, 35 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

• Do not give drug in afternoon or evening (causes insomnia). • Tablets may be crushed. • Give without regard to food. • Administer extended-release capsules whole; do not cut or crush. • May sprinkle contents of extended-release capsules on small amount of applesauce. • Give extended-release capsules once each day in the morning, before breakfast.

INDICATIONS/ROUTES/DOSAGE

ADHD

Pts not currently taking methylphenidate:

Capsules (Extended-Release)

PO: ADULTS, ELDERLY: Initially, 10 mg/day. May increase in increments of 10 mg/day at weekly intervals. **Maximum:** 40 mg/day. **CHILDREN 6 YRS AND OLDER:** Initially, 5 mg/day. May increase in increments of 5 mg/day at weekly intervals. **Maximum:** 30 mg/day.

Tablets (Immediate-Release)

PO: ADULTS, ELDERLY, CHILDREN 6 YRS AND OLDER: Initially, 2.5 mg 2 times a day. Doses should be given at least 4 hrs apart. May increase in increments of 2.5–5 mg at weekly intervals. **Maximum:** 20 mg/day.

Dosage in Renal/Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Frequent: Abdominal pain, nausea, anorexia, fever. **Occasional:** Tachycardia, arrhythmias, palpitations, insomnia, twitching. **Rare:** Blurred vision, rash, arthralgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Withdrawal after prolonged therapy may unmask symptoms of underlying disorder. May lower seizure threshold in pts with history of seizures. Overdose produces excessive sympathomimetic effects (vomiting, tremor, hyperreflexia, seizures, confusion, hallucinations, diaphoresis). Prolonged administration to children may delay growth. Neuroleptic malignant syndrome occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate pt for cardiac disease, psychiatric conditions. Obtain baseline vital signs, CBC count.

INTERVENTION/EVALUATION

CBC, B/P, heart rate should be performed routinely during therapy. If paradoxical return of ADHD occurs, dosage should be reduced or discontinued. Weigh, measure pediatric pt regularly to detect delayed growth.

PATIENT/FAMILY TEACHING

• Report any increase in seizures, chest pain, unexplained syncope. • Avoid caffeine. • Last dose should be given in morning to prevent insomnia. • Report anxiety, fever.

dexrazoxane

dex-ra-**zox**-ane
(Totect, Zinecard)
Do not confuse Zinecard with Gemzar.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Cytoprotective agent. **CLINICAL:** Antineoplastic.

USES

Totect: Treatment of anthracycline-induced extravasation. **Zinecard:** Reduction of incidence, severity of cardiomyopathy–associated with doxorubicin therapy in women with metastatic breast cancer having received a cumulative dose of 300 mg/m^2 and would benefit from continued doxorubicin therapy. Not recommended with initiation of doxorubicin therapy.

PRECAUTIONS

Contraindications: Use in nonanthracycline chemotherapy regimens. **Cautions:** Hepatic/renal impairment.

ACTION

Rapidly penetrates myocardial cell membrane. Binds intracellular iron, prevents generation of free radicals by anthracyclines. **Therapeutic Effect:** Protects against anthracycline-induced cardiomyopathy.

PHARMACOKINETICS

Rapidly distributed after administration. Not bound to plasma proteins. Primarily excreted in urine. Removed by peritoneal dialysis. **Half-life:** 2.1–2.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May be embryotoxic, teratogenic. Unknown if distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Information not available.

INTERACTIONS

DRUG: **Other myelosuppressive agents** may increase risk of myelosuppression, infection. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

D

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: (Zinecard): 250 mg (10 mg/ml reconstituted in 25-ml single-use vial). **(Totect, Zinecard):** 500 mg (10 mg/ml reconstituted in 50-ml single-use vial).

ADMINISTRATION/HANDLING

◀ALERT▶ Do not mix with other drugs. Use caution in handling/preparation of reconstituted solution (glove use recommended). If powder/solution comes in contact with skin, wash immediately with soap and water.

IV

Reconstitution • Reconstitute with 0.167 molar (M/6) sodium lactate injection to give concentration of 10 mg dexrazoxane for each ml of sodium lactate. • May further dilute with 0.9% NaCl or D_5W. Concentration should range from 1.3–5 mg/ml. Treatment of extravasation: Further dilute reconstituted vial in 1,000 ml 0.9% NaCl.

Rate of Administration • Give reconstituted solution by slow IV push or IV infusion over 5–15 min. • After infusion is complete and before total elapsed time of 30 min from beginning of dexrazoxane infusion, give IV injection of doxorubicin. Treatment of extravasation: Infuse over 1–2 hrs in large vein other than in area of extravasation.

Storage • Store vials at room temperature. • **Zinecard:** Reconstituted solution is stable for 6 hrs at room temperature or if refrigerated. Discard unused solution. **Totect:** Stable for 4 hrs in 0.9% NaCl.

IV INCOMPATIBILITIES

Do not mix dexrazoxane with other medications.

INDICATIONS/ROUTES/DOSAGE

Cardioprotective

IV *(Zinecard)*: ADULTS, CHILDREN: Recommended dosage ratio is 10 parts dexrazoxane to 1 part doxorubicin (e.g., 500 mg/m^2 dexrazoxane for every 50 mg/m^2 doxorubicin).

Anthracycline Extravasation

IV *(Totect)*: ADULTS, ELDERLY: 1,000 mg/m^2 on days 1 and 2 (**maximum:** 2,000 mg), then 500 mg/m^2 on day 3 (**maximum:** 1,000 mg). Begin treatment within 6 hrs of extravasation.

Dosage in Renal Impairment

IV: ADULTS, ELDERLY: Moderate to severe (creatinine clearance less than 40 ml/min): Reduce dose by 50%.

SIDE EFFECTS

Frequent (94%–22%): Alopecia, nausea, vomiting, fatigue/malaise, anorexia, stomatitis, fever, infection, diarrhea. **Occasional (11%–6%):** Pain at injection site, neurotoxicity, streaking/erythema at injection site, dysphagia. **Rare (5%–4%):** Esophagitis, phlebitis, urticaria.

ADVERSE EFFECTS/ TOXIC REACTIONS

Fluorouracil, adriamycin, cyclophosphamide (FAC) therapy with dexrazoxane increases risk for severe leukopenia, granulocytopenia, thrombocytopenia compared with those receiving FAC without dexrazoxane. Overdose can be removed with peritoneal dialysis or hemodialysis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, electrolytes, BUN, creatinine, LFT, cardiac function. Use gloves when preparing solution. Antiemetics may be effective in preventing, treating nausea.

INTERVENTION/EVALUATION

Frequently monitor platelets, CBC with differential for evidence of blood dyscrasias. Assess for stomatitis (burning/erythema of oral mucosa at inner margin of lips, sore throat, difficulty swallowing). Monitor hematologic status, renal/hepatic function, cardiac function. Monitor for hematologic toxicity (fever, signs of local infection, unusual bruising/bleeding from any site).

PATIENT/FAMILY TEACHING

• Hair loss is reversible, but new hair growth may have different color/texture. • New hair growth resumes 2–3 mos after last therapy dose. • Maintain strict oral hygiene. • Promptly report fever, sore throat, signs of local infection, bleeding, bruising. • Report persistent nausea, vomiting.

TOP 100

dextroamphetamine and amphetamine

dex-troe-am-**fet**-ah-meen/am-**fet**-ah-meen
(Adderall, Adderall-XR)

■ **BLACK BOX ALERT** ■ High potential for abuse. Prolonged administration may lead to drug dependence.
Do not confuse Adderall with Inderal.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Amphetamine **(Schedule II). CLINICAL:** CNS stimulant.

USES

Treatment of narcolepsy; treatment of ADHD.

PRECAUTIONS

Contraindications: Advanced arteriosclerosis, agitated mental states, glaucoma, history of drug abuse, hypersensitivity to sympathomimetic amines, hyperthyroidism, moderate to severe hypertension, symptomatic cardiovascular disease, use of MAOIs within 14 days. **Cautions:** Elderly, debilitated pts, history of seizures, mild hypertension.

ACTION

Enhances action of dopamine, norepinephrine by blocking reuptake from synapses. Inhibits monoamine oxidase, facilitates release of catecholamines. **Therapeutic Effect:** Increases motor activity, mental alertness; decreases drowsiness, fatigue; suppresses appetite.

PHARMACOKINETICS

Well absorbed following PO administration. Widely distributed including CNS. Metabolized in liver. Excreted in urine. Removed by hemodialysis. **Half-life:** 10–13 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 3 yrs. **Elderly:** Age-related cardiovascular, cerebrovascular disease, hepatic/renal impairment may increase risk of side effects.

INTERACTIONS

DRUG: May enhance effects of **tricyclic antidepressants, sympathomimetics. MAOIs** may prolong, intensify effects. May antagonize effects of **hypotensive agents. HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase plasma corticosteroid.

AVAILABILITY (Rx)

Tablets (Adderall): 5 mg, 7.5 mg, 10 mg, 12.5 mg, 15 mg, 20 mg, 30 mg.

Capsules (Extended-Release [Adderall-XR]): 5 mg, 10 mg, 15 mg, 20 mg, 25 mg, 30 mg.

ADMINISTRATION/HANDLING

PO

• Give tablets at least 6 hrs before bedtime. • Extended-release capsules should be swallowed whole; do not break, crush, or cut. • Avoid afternoon doses to prevent insomnia. • May open capsules and sprinkle on applesauce. Instruct pt not to chew sprinkled beads; take immediately.

INDICATIONS/ROUTES/DOSAGE

Narcolepsy

PO: ADULTS, CHILDREN OLDER THAN 12 YRS: Initially, 10 mg/day. Increase

by 10 mg/day at weekly intervals until therapeutic response is achieved. **Maximum:** 60 mg/day given in 1–3 divided doses with interval of 4–6 hrs between doses. **CHILDREN 6–12 YRS:** Initially, 5 mg/day. Increase by 5 mg/day at weekly intervals until therapeutic response is achieved. **Maximum:** 60 mg/day given in 1–3 divided doses with interval of 4–6 hrs between doses.

ADHD

ADULTS, ELDERLY: (ADDERALL-XR): Initially, 20 mg once daily in the morning. May increase up to 60 mg/day. **CHILDREN 13–17 YRS: (ADDERALL-XR):** Initially, 10 mg once daily in the morning. May increase to 20 mg/day after 1 wk if symptoms are not controlled. May increase up to 60 mg/day. **CHILDREN 6–12 YRS: (ADDERALL):** Initially, 5 mg 1–2 times a day. May increase in 5-mg increments at weekly intervals until optimal response is obtained. **Maximum:** 40 mg/day given in 1–3 divided doses (use intervals of 4–6 hrs between additional doses). **(ADDERALL-XR):** Initially, 5–10 mg once daily in the morning. May increase daily dose in 5- to 10-mg increments at weekly intervals. **Maximum:** 30 mg/day. **CHILDREN 3–5 YRS: (ADDERALL):** Initially, 2.5 mg/day given every morning. May increase daily dose in 2.5-mg increments at weekly intervals until optimal response is obtained. **Maximum:** 40 mg/day given in 1–3 divided doses (use intervals of 4–6 hrs between additional doses). Not recommended in children younger than 3 yrs.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Increased motor activity, talkativeness, nervousness, mild euphoria, insomnia. **Occasional:** Headache, chills, dry mouth, GI distress, worsening depression in pts who are clinically depressed, tachycardia, palpitations, chest pain, dizziness, decreased appetite.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce skin pallor/flushing, arrhythmias, psychosis. Abrupt withdrawal after prolonged use of high doses may produce lethargy (may last for wks). Prolonged administration to children with ADHD may temporarily suppress normal weight/height pattern.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess child's attention span, impulse control, interaction with others. Screen for drug–seeking behavior, past drug abuse. Obtain baseline B/P.

INTERVENTION/EVALUATION

Monitor for CNS overstimulation, increase in B/P, growth rate, change in pulse rate, respirations, weight loss. **Narcolepsy:** Observe/document frequency of narcoleptic episodes. **ADHD:** Observe for improved attention span.

PATIENT/FAMILY TEACHING

• Normal dosage levels may produce tolerance to drug's anorexic mood-elevating effects within a few wks. • Dry mouth may be relieved with sugarless gum, sips of water. • Take early in day. • Do not break, chew, or crush extended-release capsules. • May mask extreme fatigue. • Report pronounced anxiety, dizziness, decreased appetite, dry mouth, new or worsening behavior, chest pain, palpitations. • Avoid alcohol, caffeine.

diazepam

dye-**az**-e-pam
(Apo-Diazepam, Diastat, Diazepam Intensol, Novo-Dipam, Valium)

Do not confuse diazepam with diazoxide, diltiazem, Ditropan, or lorazepam, or Valium with Valcyte.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine **(Schedule IV). CLINICAL:** Antianxiety, skeletal muscle relaxant, anticonvulsant.

USES

Short-term relief of anxiety symptoms, relief of acute alcohol withdrawal. Adjunct for relief of acute musculoskeletal conditions, treatment of seizures (IV route used for termination of status epilepticus). **Gel:** Control of increased seizure activity in refractory epilepsy in pts on stable regimens. **OFF-LABEL:** Treatment of panic disorder. Short-term treatment of spasticity in children with cerebral palsy. Sedation for mechanically vented pts in ICU.

PRECAUTIONS

Contraindications: Acute narrow-angle glaucoma, severe respiratory depression, severe hepatic insufficiency, sleep apnea syndrome, myasthenia gravis. Children less than 6 months of age. **Cautions:** Pts receiving other CNS depressants or psychoactive agents, depression, history of drug and alcohol abuse, renal/hepatic impairment, respiratory disease, impaired gag reflex, concurrent use of strong CYP3A4 inhibitors or inducers.

ACTION

Depresses all levels of CNS by enhancing action of gamma-aminobutyric acid, a major inhibitory neurotransmitter in the brain. **Therapeutic Effect:** Produces anxiolytic effect, elevates seizure threshold, produces skeletal muscle relaxation.

PHARMACOKINETICS

Well absorbed from GI tract. Widely distributed. Protein binding: 98%. Excreted in urine. Minimally removed by hemodialysis. **Half-life:** 20–70 hrs (increased in hepatic dysfunction, elderly).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. May increase risk of fetal abnormalities if administered during first trimester of pregnancy. Chronic ingestion during pregnancy may produce withdrawal symptoms, CNS depression in neonates. **Pregnancy Category D. Children/Elderly:** Use small initial doses with gradual increases to avoid ataxia, excessive sedation.

INTERACTIONS

DRUG: **Alcohol, CNS depressants** may increase CNS depression. **CYP3A4 inducers (e.g., carbamazepine, rifampin)** may decrease concentration. **CYP3A4 inhibitors (e.g., itraconazole, ketoconazole)** may increase concentration. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease concentration/effects. **FOOD:** **Grapefruit products** may increase concentration/effects. **LAB VALUES:** None significant. **Therapeutic serum level:** 0.5–2 mcg/ml; **toxic serum level:** greater than 3 mcg/ml.

AVAILABILITY (Rx)

Injection, Solution: 5 mg/ml. **Oral Concentrate (Diazepam Intensol):** 5 mg/ml. **Oral Solution:** 5 mg/5 ml. **Rectal Gel (Diastat)** (adult rectal tip): Delivers set doses of 12.5 mg, 15 mg, 17.5 mg, 20 mg. (pediatric rectal tip): Delivers set dose of 2.5 mg. (adult/pediatric tip): Delivers set doses of 5 mg, 7.5 mg, 10 mg. **Tablet (Valium):** 2 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • Give by IV push into tubing of flowing IV solution as close as possible to vein insertion point. • Administer directly into large vein (reduces risk of thrombosis/phlebitis). Do not use small veins (e.g., wrist/dorsum of

hand). • Administer IV at rate not exceeding 5 mg/min for adults. For children, give 1–2 mg/min (too-rapid IV may result in hypotension, respiratory depression). • Monitor respirations q5–15min for 2 hrs.

Storage • Store at room temperature.

IM

• Injection may be painful. Inject deeply into large muscle mass.

PO

• Give without regard to meals. • Dilute oral concentrate with water, juice, carbonated beverages; may be mixed in semisolid food (applesauce, pudding). • Tablets may be crushed.

GEL

• Insert rectal tip and gently push plunger over 3 sec. Remove tip after 3 additional sec. • Buttocks should be held together for 3 sec after removal.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), diltiazem (Cardizem), fluconazole (Diflucan), foscarnet (Foscavir), furosemide (Lasix), heparin, hydrocortisone (SoluCortef), hydromorphone (Dilaudid), meropenem (Merrem IV), potassium chloride, propofol (Diprivan), vitamins.

IV COMPATIBILITIES

Dobutamine (Dobutrex), fentanyl, morphine.

INDICATIONS/ROUTES/DOSAGE

Anxiety

PO: ADULTS: 2–10 mg 2–4 times a day. **ELDERLY:** Initially, 1–2 mg 1–2 times a day. **CHILDREN:** 0.12–0.8 mg/kg/day in divided doses q6–8h.

IV, IM: ADULTS: 2–10 mg; may repeat in 3–4 hrs if needed. **CHILDREN:** 0.04–0.3 mg/kg/dose q2–4h. **Maximum:** 0.6 mg/kg within 8-hr period.

Skeletal Muscle Relaxation

PO: ADULTS: 2–10 mg 2–4 times a day. **ELDERLY:** Initially, 1–2 mg 1–2 times a day. **CHILDREN:** 0.12–0.8 mg/kg/day in divided doses q6–8h.

Alcohol Withdrawal

PO: ADULTS, ELDERLY: 10 mg 3–4 times during first 24 hrs, then reduced to 5 mg 3–4 times a day as needed.

Status Epilepticus

IV: ADULTS, ELDERLY: 5–10 mg q5–10min. **Maximum:** 30 mg. **INFANTS, CHILDREN:** 0.1–0.3 mg/kg over 5 min or less; may repeat after 5–10 min. **Maximum:** 10 mg/dose.

Control of Increased Seizure Activity (Breakthrough Seizures) in Pts with Refractory Epilepsy Who Are on Stable Regimens of Anticonvulsants

Rectal Gel: ADULTS, CHILDREN 12 YRS AND OLDER: 0.2 mg/kg; may be repeated in 4–12 hrs. **CHILDREN 6–11 YRS:** 0.3 mg/kg; may be repeated in 4–12 hrs. **CHILDREN 2–5 YRS:** 0.5 mg/kg; may be repeated in 4–12 hrs.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Decrease maintenance dose by 50%.

SIDE EFFECTS

Frequent: Pain with IM injection, drowsiness, fatigue, ataxia. **Occasional:** Slurred speech, orthostatic hypotension, headache, hypoactivity, constipation, nausea, blurred vision. **Rare:** Paradoxical CNS reactions (hyperactivity/nervousness in children, excitement/restlessness in elderly/debilitated) generally noted during first 2 wks of therapy, particularly in presence of uncontrolled pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

IV route may produce pain, swelling, thrombophlebitis, carpal tunnel syndrome. Abrupt or too-rapid withdrawal may result in pronounced restlessness, irritability, insomnia, hand tremor, abdominal/muscle cramps, diaphoresis, vomiting, seizures. Abrupt withdrawal in pts with epilepsy may produce increase in frequency/severity of seizures. Overdose results in drowsiness, confusion, diminished reflexes, CNS depression, coma. **Antidote:** Flumazenil (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse, respirations immediately before administration. **Anxiety:** Assess autonomic response (cold, clammy hands, diaphoresis), motor response (agitation, trembling, tension). **Musculoskeletal spasm:** Record onset, type, location, duration of pain. Check for immobility, stiffness, swelling. **Seizures:** Review history of seizure disorder (length, intensity, frequency, duration, LOC). Observe frequently for recurrence of seizure activity. Initiate seizure precautions.

INTERVENTION/EVALUATION

Monitor heart rate, respiratory rate, B/P, mental status. Assess children, elderly for paradoxical reaction, particularly during early therapy. Evaluate for therapeutic response (decrease in intensity/frequency of seizures; calm facial expression, decreased restlessness; decreased intensity of skeletal muscle pain). **Therapeutic serum level:** 0.5–2 mcg/ml; **toxic serum level:** greater than 3 mcg/ml.

PATIENT/FAMILY TEACHING

• Avoid alcohol. • Limit caffeine. • May cause drowsiness, avoid tasks that require alertness, motor skills until response to drug is established. • May be habit forming. • Avoid abrupt discontinuation after prolonged use.

diclofenac

dye-**kloe**-fen-ak
(Apo-Diclo ✱, Cambia, Cataflam, Flector, Pennsaid, Solaraze, Voltaren, Voltaren Gel, Voltaren XR, Zipsor, Zorvolex)

■ **BLACK BOX ALERT** ■ Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation of stomach, intestines. Contraindicated for treatment of perioperative pain in setting of CABG surgery.
Do not confuse Cataflam with Catapres, diclofenac with Diflucan or Duphalac, or Voltaren with tramadol, Ultram, or Verelan.

FIXED-COMBINATION(S)

Arthrotec: diclofenac/misoprostol (an antisecretory gastric protectant): 50 mg/200 mcg, 75 mg/200 mcg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID.
CLINICAL: Analgesic, anti-inflammatory.

USES

PO: (Immediate-release): Treatment of rheumatoid arthritis, osteoarthritis, ankylosing spondylitis, primary dysmenorrhea. **(Zipsor):** Mild to moderate pain. **(Zorvolex):** Mild to moderate pain, osteoarthritic pain. **(Delayed-release):** Treatment of rheumatoid arthritis, osteoarthritis, ankylosing spondylitis. **(Extended-release):** Treatment of rheumatoid arthritis, osteoarthritis. **Oral Solution (Cambia):** Treatment of migraine. **Topical Patch:** Treatment of acute pain due to minor strains, sprains, contusions. **OFF-LABEL:** Treatment of juvenile idiopathic arthritis.

PRECAUTIONS

Contraindications: Asthmatic pts, hypersensitivity to aspirin, diclofenac, other NSAIDs; perioperative pain in setting of

CABG surgery. **Cautions:** HF, hypertension, renal/hepatic impairment, hepatic porphyria, history of GI disease.

D

ACTION

Inhibits prostaglandin synthesis, intensity of pain stimulus reaching sensory nerve endings. **Therapeutic Effect:** Produces analgesic, anti-inflammatory effects.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30 min	2–3 hrs	Up to 8 hrs

Completely absorbed from GI tract. Protein binding: greater than 99%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 1.2–2 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Unknown if distributed in breast milk. Avoid use during third trimester (may adversely affect fetal cardiovascular system: premature closure of ductus arteriosus). **Pregnancy Category B (D if used in third trimester or near delivery; C for ophthalmic solution). Children:** Safety and efficacy not established. **Elderly:** GI bleeding, ulceration more likely to cause serious adverse effects. Age-related renal impairment may increase risk of hepatic/renal toxicity; reduced dosage recommended.

INTERACTIONS

DRUG: May decrease effects of **acetylcholine, antihypertensives, carbachol, diuretics. Aspirin, other salicylates, warfarin** may increase risk of GI side effects/bleeding. **CYP2C9 inhibitors (e.g., voriconazole)** may increase concentration/risk of toxicity. **CYP2C9 inducers (e.g., rifampin)** may decrease effect. May increase **cyclosporine** concentration/toxicity. **Ophthalmic:** May decrease antiglaucoma effects of **antiglaucoma agents, epinephrine. HERBAL: Cat's claw, dong quai, evening primrose, garlic, ginseng** may increase antiplatelet activity. **FOOD:** None known. **LAB VALUES:** May increase urine protein, serum BUN, alkaline phosphatase, creatinine, LDH, potassium, ALT, AST. May decrease serum uric acid.

AVAILABILITY (Rx)

Adhesive Patch (Flector): 10×14 cm patch containing 180 mg diclofenac. **Capsules (Zipsor):** 25 mg. **(Zorvolex):** 18 mg, 35 mg. **Oral Solution (Cambia):** 25-mg, 50-mg packets. **Tablets (Cataflam):** 50 mg.

Tablets (Delayed-Release [Voltaren]): 25 mg, 50 mg, 75 mg. **Tablets (Extended-Release [Voltaren XR]):** 100 mg.

ADMINISTRATION/HANDLING

PO

• Do not break, crush, dissolve, or divide enteric-coated tablets. • May give with food, milk, antacids if GI distress occurs. • **Cambia:** Mix one packet in 1–2 oz water, stir well, and instruct pt to drink immediately.

Transdermal Patch

• Apply to intact skin; avoid contact with eyes. • Do not wear when bathing/showering. • Wash hands after handling.

INDICATIONS/ROUTES/DOSAGE

Osteoarthritis

PO *(Cataflam, Voltaren)*: ADULTS, ELDERLY: 50 mg 2–3 times a day.
PO *(Voltaren XR)*: ADULTS, ELDERLY: 100 mg/day as a single dose.

Rheumatoid Arthritis (RA)

PO *(Cataflam, Voltaren)*: ADULTS, ELDERLY: 50 mg 3–4 times a day.
PO *(Voltaren XR)*: ADULTS, ELDERLY: 100 mg once a day. **Maximum:** 100 mg twice a day.

Ankylosing Spondylitis

PO *(Voltaren)*: ADULTS, ELDERLY: 100–125 mg/day in 4–5 divided doses.

Analgesia, Primary Dysmenorrhea
PO ***(Cataflam)*****: ADULTS, ELDERLY:** 50 mg 3 times a day.

Acute Pain
Topical Patch ***(Flector)*****: ADULTS, ELDERLY:** Apply 2 times a day.

Mild–Moderate Pain
PO ***(Zipsor)*****: ADULTS, ELDERLY:** 25 mg 4 times a day. ***(Zorvolex)*****: ADULTS, ELDERLY:** 18 mg or 35 mg 3 times a day.

Migraine (Oral Solution)
PO ADULTS, ELDERLY: 50 mg once.

Osteoarthritic Pain
PO ***(Zorvolex):*** **ADULTS, ELDERLY:** 35 mg 3 times/day.

Dosage in Renal Impairment
Not recommended in severe impairment.

Dosage in Hepatic Impairment
May require dose adjustment.

SIDE EFFECTS

Frequent (9%–4%): PO: Headache, abdominal cramps, constipation, diarrhea, nausea, dyspepsia. **Ophthalmic:** Burning, stinging on instillation, ocular discomfort. **Occasional (3%–1%): PO:** Flatulence, dizziness, epigastric pain. **Ophthalmic:** Ocular itching, tearing. **Rare (less than 1%): PO:** Rash, peripheral edema, fluid retention, visual disturbances, vomiting, drowsiness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may result in acute renal failure. In pts treated chronically, peptic ulcer, GI bleeding, gastritis, severe hepatic reaction (jaundice), nephrotoxicity (hematuria, dysuria, proteinuria), severe hypersensitivity reaction (bronchospasm, angioedema) occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Anti-inflammatory: Assess onset, type, location, duration of pain, inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition.

INTERVENTION/EVALUATION

Monitor CBC, renal function, LFT, urine output, occult blood test. Monitor for headache, dyspepsia. Monitor daily pattern of bowel activity, stool consistency. Assess for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Swallow tablets whole; do not chew, crush, dissolve, or divide. • Avoid aspirin, alcohol during therapy (increases risk of GI bleeding). • If GI upset occurs, take with food, milk. • Report skin rash, itching, weight gain, changes in vision, black stools, bleeding, jaundice, upper quadrant pain, persistent headache. • **Ophthalmic:** Do not use hydrogel soft contact lenses. • **Topical:** Avoid exposure to sunlight, sunlamps. • Report rash.

dicyclomine

dye-**sye**-kloe-meen
(Bentyl, Bentylol, Formulex, Lomine)
Do not confuse Bentyl with Aventyl, Benadryl, Proventil, or Trental, or dicyclomine with diphenhydramine or doxycycline.

CLASSIFICATION

CLINICAL: GI antispasmodic, anticholinergic. **PHARMACOTHERAPEUTIC:** Anticholinergic, antimuscarinic agent.

USES

Treatment of functional bowel/irritable bowel syndrome.

D

PRECAUTIONS

Contraindications: Bladder neck obstruction, myasthenia gravis, narrow-angle glaucoma, obstructive disease of GI tract, severe ulcerative colitis, tachycardia, infants younger than 6 mos of age, nursing mothers. **Caution:** Autonomic neuropathy, mild to moderate ulcerative colitis, hyperthyroidism, hepatic/renal disease, hypertension, tachyarrhythmias, HF, coronary artery disease, hiatal hernia. Childern with Down's syndrome, spastic paralysis or brain damage.

ACTION

Blocks action of acetylcholine in smooth muscle. **Therapeutic Effect:** Reduces tone, motility of GI tract.

PHARMACOKINETICS

Readily absorbed from GI tract. Widely distributed. Metabolized in liver. **Half-life:** 9–10 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Infants, young children more susceptible to toxic effects. **Elderly:** May cause excitement, agitation, drowsiness, confusion.

INTERACTIONS

DRUG: **Antacids** may decrease absorption. May decrease absorption of **ketoconazole.** Other **anticholinergics (e.g., tricyclic antidepressants)** may increase effects. May antagonize effects of **antiglaucoma agents.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules (Bentyl): 10 mg. **Injection Solution (Bentyl):** 10 mg/ml. **Oral Solution (Bentyl):** 10 mg/5 ml. **Tablets (Bentyl):** 20 mg.

ADMINISTRATION/HANDLING

IM

• Injection should appear colorless. • Do not administer IV or subcutaneous. • Inject deep into large muscle mass. • Do not give for longer than 2 days.

PO

• Dilute oral solution with equal volume of water just before administration. • Administer 30 min before food.

INDICATIONS/ROUTES/DOSAGE

Functional Bowel/Irritable Bowel Syndrome

PO: ADULTS: 20 mg 3–4 times a day for 1 week. May increase up to 40 mg 4 times a day. **ELDERLY:** 10–20 mg 4 times a day. May increase up to 40 mg 4 times/day. **CHILDREN OLDER THAN 2 YRS:** 10 mg 3–4 times a day. **CHILDREN 6 MOS–2 YRS:** 5 mg 3–4 times a day.
IM: ADULTS: 10–20 mg 4 times/day for 1–2 days.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Dry mouth (sometimes severe), constipation, diminished sweating ability. **Occasional:** Blurred vision, photophobia, urinary hesitancy; drowsiness (with high dosage), agitation, excitement, confusion, drowsiness noted in elderly (even with low dosages), transient dizziness (with IM route), irritation at injection site (with IM route). **Rare:** Confusion, hypersensitivity reaction, increased intraocular pressure, nausea, vomiting, unusual fatigue.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce temporary paralysis of ciliary muscle, pupillary dilation, tachycardia, palpitations, hot/dry/flushed

skin, absence of bowel sounds, hyperthermia, increased respiratory rate, EKG abnormalities, nausea, vomiting, rash over face/upper trunk, CNS stimulation, psychosis (agitation, restlessness, rambling speech, visual hallucinations, paranoid behavior, delusions) followed by depression.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess symptoms of irritable bowel syndrome (abdominal cramping, bloating, excessive flatus).

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Monitor I/O. Assess for urinary retention. Monitor changes in B/P, temperature. Be alert for fever (increased risk of hyperthermia). Assess skin turgor, mucous membranes to evaluate hydration status (encourage adequate fluid intake), bowel sounds for peristalsis.

PATIENT/FAMILY TEACHING

• Do not become overheated during exercise in hot weather (may result in heatstroke). • Avoid hot baths, saunas. • Avoid tasks that require alertness, motor skills until response to drug is established. • Do not take antacids or antidiarrheals within 1 hr of taking dicyclomine (decreased effectiveness).

digoxin

HIGH ALERT

di-**jox**-in
(Apo-Digoxin ✱, Digox, Lanoxin)
Do not confuse digoxin with Desoxyn or doxepin, or Lanoxin with Lasix, Levoxyl, Levsinex, Lonox, or Mefoxin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Cardiac glycoside. **CLINICAL:** Antiarrhythmic, cardiotonic.

USES

Treatment of mild to moderate HF, atrial fibrillation (rate-controlled). **OFF-LABEL:** Fetal tachycardia with or without hydrops; decrease ventricular rate in supraventricular tachyarrhythmias.

PRECAUTIONS

Contraindications: Ventricular fibrillation. **Cautions:** Renal impairment, sinus nodal disease, acute MI (within 6 mos), second- or third-degree heart block (unless functioning pacemaker), concurrent use of strong inducers or inhibitors of P-glycoprotein (cyclosporine), hyperthyroidism, hypothyroidism, hypokalemia, hypocalcemia.

ACTION

HF: Inhibits sodium/potassium ATPase pump in myocardial cells. Promotes calcium influx. **Supraventricular Arrhythmias:** Suppresses AV node conduction. **Therapeutic Effect: HF:** Increases contractility. **Supraventricular Arrhythmias:** Increases effective refractory period/decreases conduction velocity, decreases heart rate.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–2 hrs	2–8 hrs	3–4 days
IV	5–30 min	1–4 hrs	3–4 days

Readily absorbed from GI tract. Widely distributed. Protein binding: 30%. Partially metabolized in liver. Primarily excreted in urine. Minimally removed by hemodialysis. **Half-life:** 36–48 hrs (increased in renal impairment, elderly).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** Premature infants more susceptible to toxicity. **Elderly:** Age-related hepatic/renal impairment may require dosage adjustment. Increased risk of loss of appetite.

D

INTERACTIONS

DRUG: Amiodarone may increase concentration/toxicity. **Beta-blockers, calcium channel blockers** may have additive effect on slowing AV nodal conduction. **Potassium-depleting diuretics** may increase toxicity due to hypokalemia. **Sympathomimetics** may increase risk of arrhythmias. **HERBAL: Ephedra** may increase risk of arrhythmias. **Licorice** may cause sodium and water retention, loss of potassium. **FOOD: Meals with increased fiber (bran) or high in pectin** may decrease absorption. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Oral Solution (Lanoxin): 50 mcg/ml. **Injection Solution (Lanoxin):** 100 mcg/ml, 250 mcg/ml. **Tablets (Lanoxin):** 125 mcg, 250 mcg.

ADMINISTRATION/HANDLING

◄ALERT► IM rarely used (produces severe local irritation, erratic absorption). If no other route possible, give deep into muscle followed by massage. Give no more than 2 ml at any one site.

IV

• May give undiluted or dilute with at least a 4-fold volume of Sterile Water for Injection or D_5W (less may cause precipitate). • Use immediately. • Give IV slowly over at least 5 min.

PO

• May give without regard to meals. • Tablets may be crushed.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), fluconazole (Diflucan), foscarnet (Foscavir), propofol (Diprivan).

IV COMPATIBILITIES

Diltiazem (Cardizem), furosemide (Lasix), heparin, insulin regular, lidocaine, midazolam (Versed), milrinone (Primacor), morphine, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Loading Dose

PO: ADULTS, ELDERLY: 0.75–1.5 mg. **CHILDREN 10 YRS AND OLDER:** 10–15 mcg/kg. **CHILDREN 5–9 YRS:** 20–35 mcg/kg. **CHILDREN 2–4 YRS:** 30–40 mcg/kg. **CHILDREN 1–23 MOS:** 35–60 mcg/kg. **NEONATE, FULL-TERM:** 25–35 mcg/kg. **NEONATE, PREMATURE:** 20–30 mcg/kg.

IV: ADULTS, ELDERLY: (Supraventricular tachyarrhythmias): 0.5–1 mg. **CHILDREN 10 YRS AND OLDER:** 8–12 mcg/kg. **CHILDREN 5–9 YRS:** 15–30 mcg/kg. **CHILDREN 2–4 YRS:** 25–35 mcg/kg. **CHILDREN 1–23 MOS:** 30–50 mcg/kg. **NEONATES, FULL-TERM:** 20–30 mcg/kg. **NEONATES, PREMATURE:** 15–25 mcg/kg.

Maintenance Dosage

	PO	IV/IM
Preterm infant	5–7.5 mcg/kg	4–6 mcg/kg
Full-term infant	6–10 mcg/kg	5–8 mcg/kg
1 mo–2 yrs	10–15 mcg/kg	7.5–12 mcg/kg
2–5 yrs	7.5–10 mcg/kg	6–9 mcg/kg
5–10 yrs	5–10 mcg/kg	4–8 mcg/kg

HEART FAILURE

PO: ADULTS, ELDERLY: 0.125–0.25 mg once daily.

Supraventricular Arrhythmias

PO: ADULTS, ELDERLY: Digitalizing dose: 0.75–1.5 mg. **Maintenance dose:** 0.125–0.5 mg once daily. **IV: Digitalizing dose:** 0.5–1 mg **Maintenance dose:** 0.1–0.4 mg once daily.

Dosage in Renal Impairment

Dosage adjustment is based on creatinine clearance. Total digitalizing dose: decrease by 50% in end-stage renal disease.

Creatinine Clearance	Dosage
10–50 ml/min	25%–75% of usual dose or q36h
Less than 10 ml/min	10%–25% of usual dose or q48h

Dosage in Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Dizziness, headache, diarrhea, rash, visual disturbances.

ADVERSE EFFECTS/ TOXIC REACTIONS

Most common early manifestations of digoxin toxicity are GI disturbances (anorexia, nausea, vomiting), neurologic abnormalities (fatigue, headache, depression, weakness, drowsiness, confusion, nightmares). Facial pain, personality change, ocular disturbances (photophobia, light flashes, halos around bright objects, yellow or green color perception) may occur. Sinus bradycardia, AV block, ventricular arrhythmias noted. **Antidote:** Digoxin immune FAB (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess apical pulse. If pulse is 60 or less/min (70 or less/min for children), withhold drug, contact physician. Blood samples are best taken 6–8 hrs after dose or just before next dose.

INTERVENTION/EVALUATION

Monitor pulse for bradycardia, EKG for arrhythmias for 1–2 hrs after administration (excessive slowing of pulse may be first clinical sign of toxicity). Assess for GI disturbances, neurologic abnormalities (signs of toxicity) q2–4h during loading dose (daily during maintenance). Monitor serum potassium, magnesium, calcium, renal function. **Therapeutic serum level:** 0.8–2 ng/ml; **toxic serum level:** greater than 2 ng/ml.

PATIENT/FAMILY TEACHING

• Follow-up visits, blood tests are an important part of therapy. • Follow guidelines to take apical pulse and report pulse 60 or less/min (or as indicated by physician). • Wear/carry identification of digoxin therapy and inform dentist, other physician of taking digoxin. • Do not increase or skip doses. • Do not take OTC medications without consulting physician. • Report decreased appetite, nausea/vomiting, diarrhea, visual changes.

dihydroergotamine

dye-**hye**-droe-er-**got**-a-meen
(D.H.E. 45, Migranal)

■ **BLACK BOX ALERT** ■ Concurrent use with CYP3A4 inhibitors (macrolide antibiotics, azole antifungals, protease inhibitors) increases risk of vasospasm, producing ischemia of brain and peripheral extremities.

FIXED-COMBINATION(S)

Bellergal-S: ergotamine/belladonna (anticholinergic)/phenobarbital (sedative-hypnotic): 0.6 mg/0.2 mg/40 mg. **Cafergot, Wigraine:** ergotamine/caffeine (stimulant): 1 mg/100 mg, 2 mg/100 mg.
Do not confuse Cafergot with Carafate.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Ergotamine derivative. **CLINICAL:** Antimigraine.

USES

Treatment of migraine headache with or without aura. Injection also used to treat cluster headache. **OFF-LABEL:** Prevention of deep venous thrombosis (DVT), prevention and treatment of orthostatic hypotension, xerostomia secondary to antidepressants, pelvic congestion with pain.

PRECAUTIONS

Contraindications: Uncontrolled hypertension, ischemic heart disease, coronary

artery vasospasm, hemiplegic or basilar migraine, peripheral vascular disease, sepsis, severe renal/hepatic impairment, use of MAOIs within 14 days, use of 5-HT_B agonists within 24 hrs, CYP3A4 inhibitors (e.g., azole antifungals, macrolide antibiotics, protease inhibitors), pregnancy, breastfeeding. **Cautions:** Elderly.

ACTION

Directly stimulates vascular smooth muscle, resulting in peripheral and cerebral vasoconstriction. May have antagonist effects on serotonin. **Therapeutic Effect:** Suppresses vascular headaches, migraine headaches.

PHARMACOKINETICS

Slowly, incompletely absorbed from GI tract; rapidly and extensively absorbed after rectal administration. Protein binding: greater than 90%. Eliminated in feces by the biliary system. **Half-life:** 21 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy (produces uterine stimulant action, resulting in possible fetal death or retarded fetal growth); increases vasoconstriction of placental vascular bed. Drug distributed in breast milk. May produce diarrhea, vomiting in neonate. May prohibit lactation. **Pregnancy Category X. Children:** No precautions in those 6 yrs and older, but use only when unresponsive to other medication. **Elderly:** Age-related occlusive peripheral vascular disease increases risk of peripheral vasoconstriction. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Beta blockers, erythromycin** may increase risk of peripheral vasoconstriction. **Ergot alkaloids, 5-HT_B agonists (e.g., sumatriptan), systemic vasoconstrictors** may increase vasopressor effect. **HERBAL:** None significant. **FOOD:** **Coffee, cola, tea** may increase absorption. **Grapefruit products** may increase concentration, toxicity. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Dihydroergotamine Injection, Solution: 1 mg/ml. **Intranasal Spray, Solution (Migranal):** 4 mg/ml (0.5 mg/spray).

INDICATIONS/ROUTES/DOSAGE

Migraine Headache

IM/Subcutaneous: ADULTS, ELDERLY: 1 mg at onset of headache; repeat hourly. **Maximum:** 3 mg/day; 6 mg/wk.

IV: ADULTS, ELDERLY: 1 mg at onset of headache; repeat hourly. **Maximum:** 2 mg/day; 6 mg/wk.

Intranasal: ADULTS, ELDERLY: 1 spray (0.5 mg) into each nostril; repeat in 15 min. **Maximum:** 6 sprays/day; 8 sprays/wk.

Dosage in Renal/Hepatic Impairment

Contraindicated in severe impairment.

SIDE EFFECTS

Occasional (5%–2%): Cough, dizziness. **Rare (less than 2%):** Myalgia, fatigue, diarrhea, upper respiratory tract infection, dyspepsia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Prolonged administration, excessive dosage may produce ergotamine poisoning, manifested as nausea, vomiting, paresthesia of extremities, muscle pain/weakness, precordial pain, significant changes in pulse rate and blood pressure. Vasoconstriction of peripheral arteries/arterioles may result in localized edema, pruritus. Feet, hands will become cold, pale. Muscle pain will occur when walking and later, even at rest. Other rare effects include confusion, depression, drowsiness, seizures, gangrene.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of peripheral vascular disease, renal/hepatic impairment,

possibility of pregnancy. Question onset, location, duration of migraine, possible precipitating symptoms.

INTERVENTION/EVALUATION

Monitor closely for evidence of ergotamine overdosage as result of prolonged administration or excessive dosage.

PATIENT/FAMILY TEACHING

• Initiate therapy at first sign of migraine headache. • Report if there is need to progressively increase dose to relieve vascular headaches or if palpitations, nausea, vomiting, paresthesia, pain or weakness of extremities, chest pain. Avoid grapefruit products. • Female pts should avoid pregnancy; if suspected, immediately report. (Pregnancy Category X).

diltiazem

TOP 100

dil-**tye**-a-zem
(Apo-Diltiaz 🍁, Cardizem, Cardizem CD, Cardizem LA, Cartia XT, Dilacor XR, Dilt-CD, Dilt-XR, Diltia XT, Matzim LA, Taztia XT, Tiazac)

Do not confuse Cardizem with Cardene or Cardene SR, Cartia XT with Procardia XL, diltiazem with Calan, diazepam, or Dilantin, or Tiazac with Ziac.

FIXED-COMBINATION(S)

Teczem: diltiazem/enalapril (ACE inhibitor): 180 mg/5 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium channel blocker. **CLINICAL:** Antianginal, antihypertensive, antiarrhythmic.

USES

PO: Treatment of angina due to coronary artery spasm (Prinzmetal's variant angina), chronic stable angina (effort-associated angina). **Extended-release:** Treatment of essential hypertension, angina. **Cardizem LA:** Treatment of chronic stable angina. **Parenteral:** Temporary control of rapid ventricular rate in atrial fibrillation/flutter. Rapid conversion of paroxysmal supraventricular tachycardia (PSVT) to normal sinus rhythm. **OFF-LABEL:** Stable narrow complex tachycardia, recurrent SVT, pediatric hypertension, hypertrophic cardiomyopathy.

PRECAUTIONS

Contraindications: PO: Acute MI, pulmonary congestion, hypersensitivity to diltiazem or other calcium channel blockers, second- or third-degree AV block (except in presence of pacemaker), severe hypotension (less than 90 mm Hg, systolic), sick sinus syndrome. **IV:** Sick sinus syndrome or second- or third-degree block (except with functioning pacemaker), cardiogenic shock, administration of IV beta blocker within several hours, atrial fibrillation/flutter associated with accessory bypass tract. **Cautions:** Renal/hepatic impairment, HF, concurrent use with beta-blocker, hypertrophic obstructive cardiomyopathy.

ACTION

Inhibits calcium movement across cardiac, vascular smooth-muscle cell membranes (causes dilation of coronary arteries, peripheral arteries, arterioles). **Therapeutic Effect:** Relaxes coronary vascular smooth muscle, increases myocardial oxygen delivery in pts with vasospastic angina, decreases heart rate.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.5–1 hr	N/A	N/A
PO (extended-release)	2–3 hrs	N/A	N/A
IV	3 min	N/A	N/A

Well absorbed from GI tract. Protein binding: 70%–80%. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 3–8 hrs.

D

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Beta blockers, digoxin may have additive effect on prolonging AV conduction. May increase concentration, risk of toxicity with **carbamazepine, benzodiazepines.** May increase serum **digoxin** concentration. **Rifampin** may decrease concentration/effects. May increase concentration of **statins** and risk of myopathy/rhabdomyolysis. **HERBAL: Ephedra** may worsen arrhythmias, hypertension. **Garlic** may increase antihypertensive effect. **Ginseng, yohimbe** may worsen hypertension. **St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** EKG: May increase PR interval.

AVAILABILITY (Rx)

Injection, Infusion (Ready to Hang): 1 mg/ml. **Injection, Solution:** 5 mg/ml (5 ml, 10 ml, 25 ml). **Tablets, Immediate-Release:** 30 mg, 60 mg, 90 mg, 120 mg. **Capsules, Extended-Release: (Cardizem CD):** 120 mg, 180 mg, 240 mg, 300 mg, 360 mg. **(Cartia XT):** 120 mg, 180 mg, 240 mg, 300 mg. **(Dilacor XR, Dilt-XR, Diltia XT):** 120 mg, 180 mg, 240 mg. **(Taztia XT):** 120 mg, 180 mg, 240 mg, 300 mg, 360 mg. **(Tiazac):** 120 mg, 180 mg, 240 mg, 300 mg, 360 mg, 420 mg. **Capsules, Sustained-Release:** 60 mg, 90 mg, 120 mg. **Tablets, Extended-Release: (Cardizem LA):** 120 mg, 180 mg, 240 mg, 300 mg, 360 mg, 420 mg. **(Matzim LA):** 120 mg, 180 mg, 240 mg, 300 mg, 360 mg, 420 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Add 125 mg to 100 ml D_5W, 0.9% NaCl to provide concentration of 1 mg/ml.

Rate of Administration • Infuse per dilution/rate chart provided by manufacturer.

Storage • Refrigerate vials. • After dilution, stable for 24 hrs.

PO

• Give immediate-release tablets before meals and at bedtime. • Tablets may be crushed. • Do not break, crush, dissolve, or divide sustained-release capsules or extended-release capsules or tablets. • Taztia XT capsules may be opened and mixed with applesauce; follow with glass of water. • Cardizem CD, Cardizem LA, Cartia XT, Dilt-CD, Matzim LA may be given without regard to meals. • Dilacor XR, Dilt-XR, Diltia XT to be given on empty stomach.

IV INCOMPATIBILITIES

Acetazolamide (Diamox), acyclovir (Zovirax), ampicillin, ampicillin/sulbactam (Unasyn), diazepam (Valium), furosemide (Lasix), heparin, insulin, nafcillin, phenytoin (Dilantin), rifampin (Rifadin), sodium bicarbonate.

IV COMPATIBILITIES

Albumin, aztreonam (Azactam), bumetanide (Bumex), cefazolin (Ancef), cefotaxime (Claforan), ceftazidime (Fortaz), ceftriaxone (Rocephin), cefuroxime (Zinacef), ciprofloxacin (Cipro), clindamycin (Cleocin), dexmedetomidine (Precedex), digoxin (Lanoxin), dobutamine (Dobutrex), dopamine (Intropin), gentamicin, hydromorphone (Dilaudid), lidocaine, lorazepam (Ativan), metoclopramide (Reglan), metronidazole (Flagyl), midazolam (Versed), morphine, multivitamins, nitroglycerin, norepinephrine (Levophed), potassium chloride, potassium phosphate, tobramycin (Nebcin), vancomycin (Vancocin).

INDICATIONS/ROUTES/DOSAGE

Angina

PO ***(Immediate-Release) (Cardizem)*: ADULTS, ELDERLY:** Initially, 30 mg 4 times a day. Range: 120–320 mg/day.

PO ***(Extended-Release) (Cardizem CD, Cartia XT, Dilacor XR, DILT-CD, DILT XR, DILT XT)*****: ADULTS, ELDERLY:** Initially, 120–180 mg once daily. Range: 120–320 mg. **Maximum:** 480 mg/day.

(Extended-Release) (Tiazac, Taztia XT)**: ADULTS, ELDERLY:** Initially, 120–180 mg once daily. Range: 120–320 mg/day. **Maximum:** 540 mg/day.

(Extended-Release) (Cardizem LA, Matzim LA)**:** Initially, 180 mg/day. Range: 120–320 mg. **Maximum:** 360 mg daily.

Hypertension

PO ***(Cardizem CD, Cartia XT, Dilacor XR, DILT CD, Diltia XT, Tiazac)*****: ADULTS, ELDERLY:** Initially, 180–240 mg/day. Range: 180–420 mg/day, **Tiazac:** 120–540 mg/day.

PO ***(Sustained-Release)*****: ADULTS, ELDERLY:** Initially, 60–120 mg twice a day. May increase at 14-day intervals. **Maintenance:** 240–360 mg/day.

PO ***(Cardizem LA, Matzim LA)*****: ADULTS, ELDERLY:** Initially, 180–240 mg/day. May increase at 14-day intervals. Range: 120–540 mg/day.

Temporary Control of Rapid Ventricular Rate in Atrial Fibrillation/Flutter; Rapid Conversion of Paroxysmal Supraventricular Tachycardia to Normal Sinus Rhythm

IV Push: ADULTS, ELDERLY: Initially, 0.25 mg/kg (average dose: 20 mg) actual body weight over 2 min. May repeat in 15 min at dose of 0.35 mg/kg (average dose: 25 mg) actual body weight. Subsequent doses individualized.

IV Infusion: ADULTS, ELDERLY: After initial bolus injection, may begin infusion at 5–10 mg/hr; may increase by 5 mg/hr up to a maximum of 15 mg/hr. Infusion duration should not exceed 24 hrs. Attempt conversion to PO therapy as soon as possible.

Dosage in Renal/Hepatic Impairment

Use with caution.

SIDE EFFECTS

Frequent (10%–5%): Peripheral edema, dizziness, light-headedness, headache, bradycardia, asthenia. **Occasional (5%–2%):** Nausea, constipation, flushing, EKG changes. **Rare (less than 2%):** Rash, micturition disorder (polyuria, nocturia, dysuria, frequency of urination), abdominal discomfort, drowsiness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt withdrawal may increase frequency, duration of angina, HF; second- and third-degree AV block occur rarely. Overdose produces nausea, drowsiness, confusion, slurred speech, profound bradycardia. **Antidote:** Glucagon, insulin drip with continuous calcium infusion (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Record onset, type (sharp, dull, squeezing), radiation, location, intensity, duration of anginal pain, precipitating factors (exertion, emotional stress). Assess baseline renal/hepatic function tests. Assess B/P, apical pulse immediately before drug is administered.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Assess for peripheral edema. Monitor pulse rate for bradycardia. Assess B/P, renal function, LFT, EKG with IV therapy. Question for asthenia headache.

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication. • Compliance with therapy regimen is essential to control anginal pain. • To avoid hypotensive effect, go from lying to standing slowly. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report palpitations, shortness of breath, pronounced dizziness, nausea, constipation. • Avoid alcohol (may increase risk of hypotension or vasodilation).

D

dimenhydrinate

dye-men-**hye**-dra-nate
(Apo-Dimenhydrinate, Dramamine, Driminate)
Do not confuse dimenhydrinate with diphenhydramine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Anticholinergic, antihistamine. **CLINICAL:** Antiemetic, antivertigo.

USES

Prevention and treatment of nausea, vomiting, dizziness, vertigo associated with motion sickness. **OFF-LABEL:** Nausea and vomiting of pregnancy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Narrow-angle glaucoma, peptic ulcer, prostatic hypertrophy, pyloroduodenal or bladder neck obstruction, asthma, COPD, increased IOP, cardiovascular disease, hyperthyroidism, hypertension, seizure disorders.

ACTION

Competes with histamine for receptor sites on effector cells of GI tract, blood vessels, and respiratory tract. Depressant action on labyrinthine function. Diminishes vestibular stimulation. **Therapeutic Effect:** Prevents, treats nausea, vomiting, vertigo associated with motion sickness.

PHARMACOKINETICS

	Onset	Peak	Duration
PO	15-60 min	1–2 hrs	4–6 hrs

Well absorbed following PO administration. Metabolized in liver. Primarily excreted in urine. **Half-life:** 1.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Small amount detected in breast milk. **Pregnancy Category B. Children/Elderly:** Paradoxical excitement may occur. **Elderly:** Increased risk for dizziness, sedation, confusion, hyperexcitability.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS depressant effects. **Anticholinergics** may increase anticholinergic, CNS depressant effects. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May suppress wheal/flare reactions to antigen skin testing unless antihistamines are discontinued 4 days before testing.

AVAILABILITY (OTC)

Injection, solution: 50 mg/ml. **Tablets:** 50 mg. **Tablets, Chewable:** 25 mg, 50 mg.

ADMINISTRATION/HANDLING

IV

Must dilute with 10 ml 0.9% NaCl.

PO

• Give with food or water. • Scored tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Nausea, Vomiting, Motion Sickness

PO: ADULTS, ELDERLY: 50–100 mg q4–6h. **Maximum:** 400 mg in 24 hrs. **CHILDREN 6–12 YRS:** 25–50 mg q6–8h. **Maximum:** 150 mg in 24 hrs. **CHILDREN 2–5 YRS:** 12.5–25 mg q6–8h. **Maximum:** 75 mg in 24 hrs.
IV: ADULTS: 50 mg q4h. **Maximum:** 100 mg q4h.
IM: ADULTS: 50–100 mg q4h. **CHILDREN:** 1.25 mg/kg 4 times/day. **Maximum:** 300 mg/day.

SIDE EFFECTS

Occasional: Drowsiness, restlessness, dry mouth, hypotension, insomnia (esp. in children), excitation, lassitude. Sedation, dizziness, hypotension more

likely noted in elderly. **Rare:** Visual disturbances, hearing disturbances, paresthesia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Children may experience dominant paradoxical reactions (restlessness, insomnia). Overdosage may result in seizures, respiratory depression.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline B/P, pulse rate. Assess for dehydration if excessive vomiting has occurred (poor skin turgor, dry mucous membranes, longitudinal furrows in tongue).

INTERVENTION/EVALUATION

Monitor B/P, esp. in elderly (increased risk of hypotension). Monitor children closely for paradoxical reaction. Monitor serum electrolytes in pts with severe vomiting. Assess hydration status.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Sugarless gum, sips of water may relieve dry mouth. • Coffee, tea may help reduce drowsiness.

dimethyl fumarate TOP 100

dye-**meth**-il-**fue**-ma-rate
(Tecfidera)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Fumaric acid ester. **CLINICAL:** Multiple sclerosis agent.

USES

Treatment of relapsing-remitting multiple sclerosis.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment (may increase hepatic transaminases, lymphopenia (may decrease lymphocyte count).

ACTION

Exact mechanism of action unknown. May include antiinflammatory action and cytoprotective properties. **Therapeutic Effect:** Modifies disease progression.

PHARMACOKINETICS

Undergoes rapid hydrolysis into active metabolite, monomethyl fumarate. Peak concentration: 2–2½ hrs. Protein binding: 27%–45%. Extensively metabolized by esterases. Primarily eliminated as exhaled carbon dioxide (60%). **Half-life:** 1 hr.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in pts younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None known. **HERBAL:** None known. **FOOD:** None significant. **LAB VALUES:** May decrease lymphocytes. May increase serum ALT, AST, eosinophils, urine albumin.

AVAILABILITY (Rx)

Capsules, Delayed-Release: 120 mg, 240 mg.

ADMINISTRATION/HANDLING

PO

• Give capsule whole; do not break, crush, dissolve, or divide. May give without regard to meal. May give with food to decrease flushing reaction and GI effects. Protect from light.

INDICATIONS/ROUTES/DOSAGE

Relapsing-Remitting Multiple Sclerosis

PO: ADULTS/ELDERLY: Initially, 120 mg twice daily for 7 days. Then increase to 240 mg twice daily.

Dosage in Renal/Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Frequent (40%): Flushing. **Occasional (18%–5%):** Abdominal pain, diarrhea, nausea, vomiting, dyspepsia, pruritus, rash, erythema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Lymphopenia may increase risk for infection. Severe flushing may lead to noncompliance of therapy.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, CMP, urine pregnancy if applicable. Question any plans of breastfeeding. Assess hydration status (urine output, skin turgor). Question history of hepatic impairment, lymphopenia.

INTERVENTION/EVALUATION

Monitor CBC, LFT. Encourage PO intake. Offer antiemetics for nausea, vomiting. Question any episodes of noncompliance due to flushing, GI symptoms. Monitor for infectious process (fever, malaise, chills, body aches, cough).

PATIENT/FAMILY TEACHING

• Pts will most likely experience abdominal pain, diarrhea, nausea, and flushing. Side effects may decrease over time. • Take with meals to decrease flushing reaction. • Swallow capsule whole; do not chew, crush, dissolve, or divide. • Two dosage strengths will be provided for starting dose and maintenance dose. • Report any yellowing of skin or eyes, upper abdominal pain, bruising, dark-colored urine, fever, body aches, cough, dehydration.

dinoprostone

dye-noe-**pros**-tone
(Cervidil, Prepidil, Prostin E_2)

■ **BLACK BOX ALERT** ■ To be used only by personnel medically trained in dinoprostone-specific drug effects in a hospital setting.
Do not confuse Cervidil or Prepidil with bepridil.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Prostaglandin. **CLINICAL:** Oxytocic, abortifacient.

USES

Vaginal suppository: To induce abortion from wk 12 through wk 20 of pregnancy, to evacuate uterine contents in missed abortion or intrauterine fetal death up to 28 wks gestational age (as calculated from first day of last normal menstrual period), benign hydatidiform mole. **Gel:** Ripening of unfavorable cervix in pregnant women at or near term with medical/obstetric need for labor induction. Induction of labor at or near term. **Vaginal insert:** Initiation and/or cervical ripening in pts with medical indication for induction of labor.

PRECAUTIONS

Contraindications: Gel: Active cardiac, hepatic, pulmonary, renal disease; acute pelvic inflammatory disease (PID); fetal malpresentation; grand multiparae with 6 or more previous term pregnancy cases with nonvertex presentation; history of cesarean section, major uterine surgery; history of difficult labor, traumatic delivery; hypersensitivity to other prostaglandins; placenta previa, unexplained vaginal bleeding during this pregnancy; pts for whom vaginal delivery is not indicated (vasa previa, active herpes genitalia); significant cephalopelvic disproportion. **Vaginal Suppository:** Active cardiac, hepatic, pulmonary, renal disease; acute PID. **Cautions:** Renal/hepatic impairment, asthma, glaucoma, cardiovascular or pulmonary disease, epilepsy. **Endocervical gel:** With ruptured membrane. **Vaginal gel:** With ruptured membrane, nonvertex or nonsingleton pregnancy, previous

uterine pregnancy. **Suppository:** History of hypotension/hypertension, anemia, jaundice, diabetes, compromised uteri, cervicitis, endocervical infections or acute vaginitis.

ACTION

Abortifacient: Stimulates uterine contractions. **Labor Induction:** Relaxes smooth muscle at the cervix .**Therapeutic Effect:** Stimulates myometrial contractions in gravid uterus.

PHARMACOKINETICS

	Onset	Peak	Duration
Uterine stimulation	10 min (contractions begin)	1–2 hrs (abortion time)	2–6 hrs (contractions persist)

Undergoes rapid enzymatic deactivation primarily in maternal lungs. Protein binding: 73%. Primarily excreted in urine. **Half-life:** Less than 5 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Suppository: Teratogenic, therefore abortion must be complete. **Gel:** Sustained uterine hyperstimulation may affect fetus (e.g., abnormal heart rate). **Pregnancy Category C. Children/Elderly:** Not used in these pt populations.

INTERACTIONS

DRUG: **Oxytocics** may cause uterine contractions, possibly resulting in uterine rupture, cervical laceration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May alter B/P, heart rate. May increase body temperature.

AVAILABILITY (Rx)

Endocervical Gel (Prepidil): 0.5 mg/3 g syringe. **Vaginal Inserts (Cervidil):** 10 mg. **Vaginal Suppositories (Prostin E_2):** 20 mg.

ADMINISTRATION/HANDLING

Gel

• Refrigerate. • Use caution in handling; prevent skin contact. Wash hands thoroughly with soap and water following administration. • Bring to room temperature just before use (avoid forcing the warming process). • Assemble dosing apparatus as described in manufacturer's insert. • Place pt in dorsal position with cervix visualized using a speculum. • Introduce gel into cervical canal just below level of internal os. • Have pt remain in supine position at least 15–30 min (minimizes leakage from cervical canal). • Wait 6–12h after gel administration before initiating oxytocin therapy.

Suppository, Vaginal Inserts

• Keep frozen (−4°F); bring to room temperature just before use. • Administer only in hospital setting with emergency equipment available. • Warm suppository to room temperature before removing foil wrapper. • Avoid skin contact (risk of absorption). • Insert high into vagina. • Pt should remain supine for 10 min after administration of suppository, 2 hrs after vaginal insert. • Wait at least 30 min after removing insert before initiating oxytocin therapy.

INDICATIONS/ROUTES/DOSAGE

Abortifacient

Intravaginal: ADULTS (VAGINAL SUPPOSITORY): 20 mg (one suppository) high into vagina. May repeat at 3- to 5-hr intervals until abortion occurs. Do not administer for longer than 2 days.

Ripening of Unfavorable Cervix

Intracervical *(Prepidil)*: ADULTS (ENDOCERVICAL GEL): Initially, 0.5 mg (2.5 ml); if no cervical or uterine response, may repeat 0.5-mg dose in 6 hrs. **Maximum:** 1.5 mg (7.5 ml) for a 24-hr period.

Intracervical *(Cervidil)*: ADULTS (VAGINAL INSERT): 10 mg transversely into posterior formix of the vagina (remove upon onset of active labor or 12 hrs after insertion).

SIDE EFFECTS

Frequent (66%–33%): Vomiting, diarrhea, nausea. **Occasional (10%):** Headache,

chills/shivering, urticaria, bradycardia, increased uterine pain accompanying abortion, peripheral vasoconstriction. **Rare:** Flushing of skin, vulvar edema.

D

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may cause uterine contractions with spasm and tetanic contraction, leading to cervical laceration/perforation, uterine rupture/hemorrhage.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support. **Suppository:** Obtain orders for antiemetics, antidiarrheals, meperidine, other pain medication for abdominal cramps. Assess any uterine activity, vaginal bleeding. **Gel:** Assess Bishop score. Assess degree of effacement (determines size of shielded endocervical catheter).

INTERVENTION/EVALUATION

Suppository: Check strength, duration, frequency of contractions. Monitor vital signs q15min until stable, then hourly until abortion complete. Check resting uterine tone. Administer medications for relief of GI effects if indicated or for abdominal cramps. **Gel:** Monitor uterine activity (onset of uterine contractions), fetal status (heart rate), character of cervix (dilation, effacement). Have pt remain recumbent 12 hrs after application with continuous electronic monitoring of fetal heart rate, uterine activity. Record maternal vital signs at least hourly in presence of uterine activity. Reassess Bishop score.

PATIENT/FAMILY TEACHING

- **Suppository:** Report promptly fever, chills, foul-smelling/increased vaginal discharge, uterine cramps, pain.

*diphenhydrAMINE

dye-fen-**hye**-dra-meen
(Allerdryl, Banophen, Benadryl, Benadryl Children's Allergy, Diphen, Diphenhist, Dytan, Genahist, Nytol)
Do not confuse Benadryl with benazepril, Bentyl, or Benylin, or diphenhydramine with desipramine, dicyclomine, or dimenhydrinate.

FIXED-COMBINATION(S)

Advil PM: diphenhydramine/ibuprofen (NSAID): 38 mg/200 mg. With calamine, an astringent, and camphor, a counterirritant **(Caladryl).**

CLASSIFICATION

PHARMACOTHERAPEUTIC: Ethanolamine. **CLINICAL:** Antihistamine, anticholinergic, antipruritic, antitussive, antiemetic, antidyskinetic.

USES

Treatment of allergic reactions including nasal allergies; parkinsonism, including drug-induced extrapyramidal symptoms; prevention/treatment of nausea, vomiting, or vertigo due to motion sickness; antitussive; short-term management of insomnia; adjunct to epinephrine in treatment of anaphylaxis. Topical form used for relief of pruritus from insect bites, skin irritations.

PRECAUTIONS

Contraindications: Acute exacerbation of asthma, neonates or premature infants, breastfeeding. **Cautions:** Narrow-angle glaucoma, stenotic peptic ulcer, prostatic hypertrophy, pyloroduodenal/bladder neck obstruction, asthma, COPD, increased IOP, cardiovascular disease, hyperthyroidism.

ACTION

Competes with histamine for receptor site on effector cells in GI tract, blood vessels, respiratory tract. **Therapeutic Effect:** Produces anticholinergic, antipruritic, antitussive, antiemetic, antidyskinetic, sedative effects.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15–30 min	1–4 hrs	4–6 hrs
IV, IM	Less than 15 min	1–4 hrs	4–6 hrs

Well absorbed after PO, parenteral administration. Protein binding: 98%–99%. Widely distributed. Metabolized in liver. Primarily excreted in urine. **Half-life:** 1–4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Detected in breast milk (may produce irritability in breastfed infants). Increased risk of seizures in neonates, premature infants if used during third trimester of pregnancy. May prohibit lactation. **Pregnancy Category B. Children:** Not recommended in newborns, premature infants (increased risk of paradoxical reaction, seizures). **Elderly:** Increased risk for dizziness, sedation, confusion, hypotension, hyperexcitability.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS depressant effects. **Anticholinergics** may increase anticholinergic effects. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May suppress wheal/flare reactions to antigen skin testing unless drug is discontinued 4 days before testing.

AVAILABILITY (OTC)

Capsules: 25 mg (Banophen, Diphen, Genahist), 50 mg. **Cream (Benadryl):** 1%, 2%. **Injection Solution (Benadryl):** 50 mg/ml. **Syrup (Diphen, Diphenhist):** 12.5 mg/5 ml. **Tablets (Banophen, Benadryl, Genahist):** 25 mg, 50 mg. **Tablets, Chewable (Benadryl Children's Allergy):** 12.5 mg, 25 mg.

ADMINISTRATION/HANDLING

IV

• May be given undiluted. • Give IV injection over at least 1 min. **Maximum rate:** 25 mg/min.

IM

• Give deep IM into large muscle mass.

PO

• Give with food to decrease GI distress. • Scored tablets may be crushed.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), cefepime (Maxipime), dexamethasone (Decadron), foscarnet (Foscavir).

IV COMPATIBILITIES

Atropine, cisplatin (Platinol), cyclophosphamide (Cytoxan), cytarabine (Ara-C), fentanyl, glycopyrrolate (Robinul), heparin, hydrocortisone (Solu-Cortef), hydromorphone (Dilaudid), hydroxyzine (Vistaril), lidocaine, metoclopramide (Reglan), ondansetron (Zofran), potassium chloride, promethazine (Phenergan), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Moderate to Severe Allergic Reaction

PO: ADULTS, ELDERLY: 25–50 mg q6–8h. **Maximum:** 400 mg/day. **IM, IV:** 10–50 mg/dose. **PO, IV, IM: CHILDREN:** 5 mg/kg/day in divided doses q6–8h. **Maximum:** 300 mg/day.

Motion Sickness

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 25–50 mg q4–6h. **Maximum:** 300 mg/day. **CHILDREN 6–11 YRS:** 12.5–25 mg q4–6h. **Maximum:** 150 mg/day. **CHILDREN 2–5 YRS:** 6.25 mg q4–6h. **Maximum:** 37.5 mg/day.

Parkinson's Disease

IM, IV ***(Dystonic Reaction)*****:** 50 mg; may repeat in 20–30 min.

D

Antitussive

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 25 mg q4h. **Maximum:** 150 mg/day. **CHILDREN 6–11 YRS:** 12.5 mg q4h. **Maximum:** 75 mg/day. **CHILDREN 2–5 YRS:** 6.25 mg q4h. **Maximum:** 37.5 mg/day.

Nighttime Sleep Aid

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 25–50 mg at bedtime. **CHILDREN 2–11 YRS:** 1 mg/kg/dose. **Maximum:** 50 mg.

Pruritus

Topical: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Apply 1% or 2% cream or spray 3–4 times a day. **CHILDREN 2–11 YRS:** Apply 1% cream or spray 3–4 times a day.

SIDE EFFECTS

Frequent: Drowsiness, dizziness, muscle weakness, hypotension, urinary retention, thickening of bronchial secretions, dry mouth, nose, throat, lips; in elderly: sedation, dizziness, hypotension. **Occasional:** Epigastric distress, flushing, visual/hearing disturbances, paresthesia, diaphoresis, chills.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reactions (eczema, pruritus, rash, cardiac disturbances, photosensitivity) may occur. Overdose symptoms may vary from CNS depression (sedation, apnea, hypotension, cardiovascular collapse, death) to severe paradoxical reactions (hallucinations, tremors, seizures). Children, infants, neonates may experience paradoxical reactions (restlessness, insomnia, euphoria, nervousness, tremors). Overdosage in children may result in hallucinations, seizures, death.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

If pt is having acute allergic reaction, obtain history of recently ingested foods, drugs, environmental exposure, emotional stress. Monitor B/P rate; depth, rhythm, type of respiration; quality, rate of pulse. Assess lung sounds for rhonchi, wheezing, rales.

INTERVENTION/EVALUATION

Monitor B/P, esp. in elderly (increased risk of hypotension). Monitor children closely for paradoxical reaction.

PATIENT/FAMILY TEACHING

• Tolerance to antihistaminic effect generally does not occur; tolerance to sedative effect may occur. • Avoid tasks that require alertness, motor skills until response to drug is established. • Dry mouth, drowsiness, dizziness may be an expected response to drug. • Avoid alcohol.

diphenoxylate with atropine

dye-fen-**ox**-i-late **at**-roe-peen (Lomotil)

Do not confuse Lomotil with Lamictal, Lamisil, or Lasix, or Lonox with Lanoxin, Loprox, or Lovenox.

FIXED-COMBINATION(S)

Lomotil: diphenoxylate/atropine (anticholinergic, antispasmodic): 2.5 mg/0.025 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Meperidine derivative. **CLINICAL:** Antidiarrheal.

USES

Adjunctive treatment of acute, chronic diarrhea.

PRECAUTIONS

Contraindications: Children younger than 2 yrs, obstructive jaundice, diarrhea associated with pseudomembranous colitis or enterotoxin-producing bacteria. **Cautions:** Children, acute ulcerative colitis, renal/hepatic impairment.

ACTION

Acts locally and centrally on gastric mucosa. **Therapeutic Effect:** Reduces excessive GI motility and GI propulsion.

PHARMACOKINETICS

	Onset	Peak	Duration
Antidiarrheal	45–60 min	—	3–4 hrs

Well absorbed from GI tract. Metabolized in liver. Primarily eliminated in feces. **Half-life:** 2.5 hrs; metabolite: 12–24 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Not recommended (increased susceptibility to toxicity, including respiratory depression). **Elderly:** More susceptible to anticholinergic effects, confusion, respiratory depression.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS depressant effects. **Anticholinergics** may increase effects of atropine. **MAOIs** may precipitate hypertensive crisis. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum amylase.

AVAILABILITY (Rx)

Liquid (Lomotil): 2.5 mg/5 ml. **Tablets (Lomotil):** 2.5 mg diphenoxylate/0.025 mg atropine.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. If GI irritation occurs, give with food. • Use liquid for children 2–12 yrs (use graduated dropper for administration of liquid medication).

INDICATIONS/ROUTES/DOSAGE

Diarrhea

PO: ADULTS, ELDERLY: Initially, 5 mg (2 tabs or 10 ml) 4 times/day. **Maximum:** 20 mg/day. Then reduce dose as needed.

CHILDREN: 0.3–0.4 mg/kg/day in 4 divided doses (**maximum:** 10 mg/day); then reduce dose as needed.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Drowsiness, light-headedness, dizziness, nausea. **Occasional:** Headache, dry mouth. **Rare:** Flushing, tachycardia, urinary retention, constipation, paradoxical reaction (marked by restlessness, agitation), blurred vision.

ADVERSE EFFECTS/ TOXIC REACTIONS

Dehydration may predispose pt to diphenoxylate toxicity. Paralytic ileus, toxic megacolon (constipation, decreased appetite, abdominal pain with nausea/vomiting) occur rarely. Severe anticholinergic reaction (severe lethargy, hypotonic reflexes, hyperthermia) may result in severe respiratory depression, coma.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check baseline hydration status: skin turgor, mucous membranes for dryness, urinary status.

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency. Record time of evacuation. Assess for abdominal disturbances. Discontinue medication if abdominal distention occurs.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Report persistent fever, palpitations, diarrhea. • Report abdominal distention.

D

dipyridamole

HIGH ALERT

dye-peer-**id**-a-mole
(Apo-Dipyridamole FC, Persantine)

Do not confuse Aggrenox with Aggrastat, dipyridamole with disopyramide, or Persantine with Periactin.

FIXED-COMBINATION(S)

Aggrenox: dipyridamole/aspirin (antiplatelet): 200 mg/25 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Blood modifier, platelet aggregation inhibitor, coronary vasodilator. **CLINICAL:** Antiplatelet, antianginal, diagnostic agent.

USES

Used with warfarin to decrease thrombosis following artificial heart valve replacement. **OFF-LABEL:** Stroke prevention (in combination with aspirin).

PRECAUTIONS

Contraindications: None known. **Cautions:** Hypotension, unstable angina, recent MI, hepatic impairment. Bronchospastic disease. Concomitant use of other antiplatelet medication or anticoagulation.

ACTION

Inhibits activity of adenosine deaminase and phosphodiesterase, enzymes causing accumulation of adenosine, cyclic adenosine monophosphate (AMP). **Therapeutic Effect:** Inhibits platelet aggregation; may cause coronary vasodilation.

PHARMACOKINETICS

Slowly, variably absorbed from the GI tract. Widely distributed. Protein binding: 91%–99%. Metabolized in liver. Primarily eliminated via biliary excretion. **Half-life:** 10–15 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Anticoagulants, aspirin, heparin, salicylates, thrombolytics may increase risk of bleeding. **HERBAL: Cat's claw, dong quai, evening primrose, garlic, ginseng** may increase antiplatelet activity. **FOOD:** None known. **LAB VALUES:** May increase ALT, AST, bilirubin.

AVAILABILITY (Rx)

Tablets: 25 mg, 50 mg, 75 mg.

ADMINISTRATION/HANDLING

PO

- Best taken on empty stomach with full glass of water.

INDICATIONS/ROUTES/DOSAGE

Prevention of Thromboembolic Disorders

PO: ADULTS, ELDERLY: 75–100 mg 4 times a day in combination with other medications. **CHILDREN:** 3–6 mg/kg/day in 3 divided doses.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (14%): Dizziness. **Occasional (6%–2%):** Abdominal distress, headache, rash. **Rare (less than 2%):** Diarrhea, vomiting, flushing, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces peripheral vasodilation, resulting in hypotension.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for presence of chest pain. Obtain baseline B/P, pulse. When used as antiplatelet, check hematologic status.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Assess B/P for hypotension. Monitor for change in heart rate. Assess skin for flushing, rash.

PATIENT/FAMILY TEACHING

• Avoid alcohol. • If nausea occurs, cola, unsalted crackers, dry toast may relieve effect. • Therapeutic response may not be achieved before 2–3 mos of continuous therapy. • Go from lying to standing slowly.

*DOBUTamine HIGH ALERT

doe-**bue**-ta-meen
(Dobutrex)
Do not confuse dobutamine with dopamine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic. **CLINICAL:** Cardiac stimulant.

USES

Short-term management of cardiac decompensation. **OFF-LABEL:** Positive inotropic agent in myocardial dysfunction or sepsis, stress echocardiography.

PRECAUTIONS

Contraindications: Idiopathic hypertrophic subaortic stenosis. **Cautions:** Atrial fibrillation, hypovolemia, post MI, concurrent use of MAOIs, elderly.

ACTION

Direct-action inotropic agent acting primarily on beta$_1$-adrenergic receptors. **Therapeutic Effect:** Enhances myocardial contractility, increases heart rate.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	1–2 min	10 min	Length of infusion

Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Sympathomimetics may increase effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum potassium.

AVAILABILITY (Rx)

Infusion (Ready-to-Use): 1 mg/ml (250 ml), 2 mg/ml (250 ml), 4 mg/ml (250 ml). **Injection Solution:** 12.5-mg/ml vial.

ADMINISTRATION/HANDLING

ALERT Correct hypovolemia with volume expanders before dobutamine infusion. Those with atrial fibrillation should be digitalized before infusion. Administer by IV infusion only.

IV

Reconstitution • Dilute vial in 0.9% NaCl or D_5W to maximum concentration of 5,000 mcg/ml (5 mg/ml).

Rate of Administration • Use infusion pump to control flow rate. • Titrate dosage to individual response. • Infiltration causes local inflammatory changes. • Extravasation may cause dermal necrosis.

Storage • Store at room temperature. • Pink discoloration of solution (due to oxidation) does not indicate significant loss of potency if used within recommended time period. • Further diluted solution for infusion is stable for 48 hrs at room temperature, 7 days if refrigerated.

D

IV INCOMPATIBILITIES

Acyclovir (Zovirax), alteplase (Activase), amphotericin B complex (Abelcet, AmBisome, Amphotec), bumetanide (Bumex), cefepime (Maxipime), foscarnet (Foscavir), furosemide (Lasix), heparin, piperacillin/tazobactam (Zosyn), sodium bicarbonate.

IV COMPATIBILITIES

Amiodarone (Cordarone), calcium chloride, calcium gluconate, diltiazem (Cardizem), dopamine (Intropin), enalapril (Vasotec), epinephrine, famotidine (Pepcid), hydromorphone (Dilaudid), insulin (regular), lidocaine, lorazepam (Ativan), magnesium sulfate, midazolam (Versed), milrinone (Primacor), morphine, nitroglycerin, nitroprusside (Nipride), norepinephrine (Levophed), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

◄ALERT► Dosage determined by pt response to drug.

Management of Cardiac Decompensation

IV Infusion: ADULTS, ELDERLY, CHILDREN: 2.5–20 mcg/kg/min titrated to desired response. May be infused at a rate of up to 40 mcg/kg/min to increase cardiac output. **NEONATES:** 2–20 mcg/kg/min titrated to desired response.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (greater than 5%): Increased heart rate, B/P. **Occasional (5%–3%):** Pain at injection site. **Rare (3%–1%):** Nausea, headache, anginal pain, shortness of breath, fever.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce marked increase in heart rate (30 beats/min or higher), marked increase in B/P (50 mm Hg or higher), anginal pain, premature ventricular contractions (PVCs).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pt must be on continuous cardiac monitoring. Determine weight (for dosage calculation). Obtain initial B/P, heart rate, respirations. Correct hypovolemia before drug therapy.

INTERVENTION/EVALUATION

Continuously monitor for cardiac rate, arrhythmias. Maintain accurate I&O; measure urinary output frequently. Assess serum potassium, plasma dobutamine (therapeutic range: 40–190 ng/ml). Monitor B/P continuously (hypertension risk greater in pts with preexisting hypertension). Check cardiac output, pulmonary wedge pressure/central venous pressure (CVP) frequently. Immediately notify physician of decreased urinary output, cardiac arrhythmias, significant increase in B/P, heart rate, or less commonly, hypotension.

docetaxel HIGH ALERT

doe-se-**tax**-el
(Docefrez, Taxotere)

■ **BLACK BOX ALERT** ■ Avoid use with bilirubin more than upper limit of normal (ULN) or ALT, AST more than 1.5 times ULN in conjunction with alkaline phosphatase more than 2.5 times ULN. Severe hypersensitivity reaction (rash, hypotension, bronchospasm, anaphylaxis) may occur. Fluid retention syndrome (pleural effusions, ascites, edema, dyspnea at rest) has been reported. Pts with abnormal hepatic function, receiving higher doses, and pts with non–small-cell lung carcinoma (NSCLC) and history of prior platinum treatment receiving docetaxel dose of 100 mg/m^2 at higher risk for mortality. Avoid use with ANC more than 1,500/mm^3.

Do not confuse docetaxel with paclitaxel or Taxotere with Taxol.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimitotic agent, taxoid. **CLINICAL:** Antineoplastic.

USES

Treatment of locally advanced or metastatic breast carcinoma after failure of prior chemotherapy. Treatment of metastatic non–small-cell lung cancer. Treatment of metastatic prostate cancer, head and neck cancer (with prednisone). Treatment of advanced gastric adenocarcinoma. **OFF-LABEL:** Bladder, esophageal, ovarian, small-cell lung carcinoma; soft tissue carcinoma, cervical cancer, Ewing's sarcoma, osteosarcoma.

PRECAUTIONS

Contraindications: History of severe hypersensitivity to drugs formulated with polysorbate 80, neutrophil count less than 1,500 cells/mm^3. **Cautions:** Hepatic impairment, myelosuppression, concomitant CYP3A4 inhibitors, fluid retention, pulmonary disease, HF, active infection.

ACTION

Disrupts microtubular cell network, essential for cellular function. **Therapeutic Effect:** Inhibits cellular mitosis.

PHARMACOKINETICS

Widely distributed. Protein binding: 94%. Extensively metabolized in liver. Excreted in feces (75%), urine (6%). **Half-life:** 11.1 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established in those younger than 16 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., erythromycin, ketoconazole) may increase concentration/toxicity. **CYP3A4 inducers (e.g., rifampin)** may decrease concentration/effects. **Live virus vaccines** may potentiate replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL: Echinacea** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, ALT, AST. Reduces neutrophil, platelet counts, Hgb, Hct.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 20 mg, 80 mg. **Injection Solution:** 10 mg/ml, 20 mg/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution (Solution) • Withdraw dose and add to 250–500 ml 0.9% NaCl or D_5W in glass or polyolefin container to provide a final concentration of 0.3–0.74 mg/ml. **(Powder)** Add 1 ml diluent provided to 20-mg vial to provide a concentration of 20 mg/0.8 ml (4 ml to 80-mg vial to provide a concentration of 24 mg/ml). Shake well. Further dilute in 250 ml NaCl or D_5W to a final concentration of 0.3–0.74 mg/ml.

Rate of Administration • Administer as a 1-hr infusion. • Monitor closely for hypersensitivity reaction (flushing, localized skin reaction, bronchospasm [may occur within a few min after beginning infusion]).

Storage • Store vials between 36°F–77°F. • Protect from bright light. • If refrigerated, stand vial at room temperature for 5 min before administering (do not store in PVC bags). • Diluted solution should be used within 4 hrs (including infusion time).

IV INCOMPATIBILITIES

Amphotericin B (Fungizone), methylprednisolone (Solu-Medrol), nalbuphine (Nubain).

D

IV COMPATIBILITIES

Bumetanide (Bumex), calcium gluconate, dexamethasone (Decadron), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), furosemide (Lasix), granisetron (Kytril), heparin, hydromorphone (Dilaudid), lorazepam (Ativan), magnesium sulfate, mannitol, morphine, ondansetron (Zofran), palonosetron (Aloxi), potassium chloride.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Pt should be premedicated with oral corticosteroids (e.g., dexamethasone 16 mg/day for 5 days beginning day 1 before docetaxel therapy); reduces severity of fluid retention, hypersensitivity reaction.

Breast Carcinoma

IV: ADULTS: 60–100 mg/m^2 given over 1 hr q3wks as a single agent. Operable, node positive: 75 mg/m^2 q3wks for 6 courses (in combination with doxorubicin and cyclophosphamide).

Non–Small-Cell Lung Carcinoma

IV: ADULTS: 75 mg/m^2 q3wks (as monotherapy or in combination with cisplatin).

Prostate Cancer

IV: ADULTS, ELDERLY: 75 mg/m^2 q3wks with concurrent administration of prednisone.

Head/Neck Cancer

IV: ADULTS, ELDERLY: 75 mg/m^2 q3wks (in combination with cisplatin and fluorouracil) for 3–4 cycles, followed by radiation therapy.

Gastric Adenocarcinoma

IV: ADULTS, ELDERLY: 75 mg/m^2 q3wks (in combination with cisplatin and fluorouracil).

Dose Modification for Gastric or Head/Neck Cancer

ALT, AST > 2.5 to ≤ 5 times ULN and alkaline phosphatase ≤ 2.5 times ULN	80% of dose
ALT, AST > 1.5 to ≤ 5 times ULN and alkaline phosphatase > 2.5 to ≤ 5 times ULN	80% of dose
ALT, AST > 5 times ULN and/or alkaline phosphatase > 5 times ULN	Discontinue docetaxel

Note: Toxicity includes febrile neutropenia, neutrophils less than 500/mm^3 for longer than 1 wk, severe cutaneous reactions. Also, for NSCLC, platelet nadir less than 25,000/mm^3, any grade 3 or 4 nonhematologic toxicity.

Breast Cancer

Reduce dose to 75 mg/mm^3; if toxicity persists, reduce to 55 mg/mm^3.

Breast Cancer Adjuvant

Administer when neutrophils are less than 1,500/mm^3. If toxicity persists, or grade 3 or 4 stomatitis, reduce dose to 60 mg/mm^3.

Non–Small-Cell Lung Cancer

Monotherapy

Hold dose until toxicity resolves, then reduce dose to 55 mg/mm^3; peripheral neuropathy grade 3 or 4, discontinue.

Combination Therapy

Reduce dose to 65 mg/mm^3; may further reduce to 50 mg/mm^3 if needed.

Prostate Cancer

Reduce dose to 60 mg/mm^3; discontinue if toxicity persists.

Gastric or Head and Neck Cancer

Reduce dose to 60 mg/mm^3; if neutropenic toxicity persists, further reduce to 45 mg/mm^3. For grade 3 or 4 thrombocytopenia, reduce dose from 75 mg/mm^3 to 60 mg/mm^3; discontinue if toxicity persists.

Dosage in Renal Impairment
No dose adjustment.

Dosage in Hepatic Impairment
Total bilirubin more than ULN, or ALT, AST more than 1.5 times ULN with alkaline phosphatase more than 2.5 times ULN: Use not recommended.

SIDE EFFECTS

Frequent (80%–19%:) Alopecia, asthenia, hypersensitivity reaction (e.g., dermatitis), which is decreased in pts pretreated with oral corticosteroids; fluid retention, stomatitis, nausea, diarrhea, fever, nail changes, vomiting, myalgia. **Occasional:** Hypotension, edema, anorexia, headache, weight gain, infection (urinary tract, injection site, indwelling catheter tip), dizziness. **Rare:** Dry skin, sensory disorders (vision, speech, taste), arthralgia, weight loss, conjunctivitis, hematuria, proteinuria.

ADVERSE EFFECTS/ TOXIC REACTIONS

In pts with normal hepatic function, neutropenia (ANC count less than 1,500 cells/mm^3), leukopenia (WBC count less than 4,000 cells/mm^3) occur in 96% of pts; anemia (hemoglobin level less than 11 g/dL) occurs in 90% of pts; thrombocytopenia (platelet count less than 100,000 cells/mm^3) occurs in 8% of pts; infection occurs in 28% of pts. Neurosensory, neuromotor disturbances (distal paresthesia, weakness) occur in 54% and 13% of pts, respectively.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline ANC, CBC, serum chemistries. Offer emotional support to pt, family. Antiemetics may be effective in preventing, treating nausea/vomiting. Pt should be pretreated with corticosteroids to reduce fluid retention, hypersensitivity reaction.

INTERVENTION/EVALUATION

Frequently monitor blood counts, particularly ANC count (less than 1,500 cells/mm^3 requires discontinuation of therapy). Monitor hepatic function tests, serum uric acid levels. Observe for cutaneous reactions (rash with eruptions, mainly on hands, feet). Assess for extravascular fluid accumulation: rales in lungs, dependent edema, dyspnea at rest, pronounced abdominal distention (due to ascites).

PATIENT/FAMILY TEACHING

• Hair loss is reversible, but new hair growth may have different color or texture. • New hair growth resumes 2–3 mos after last therapy dose. • Maintain strict oral hygiene. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid those who have recently taken any live virus vaccine. • Report persistent nausea, diarrhea, respiratory difficulty, chest pain, fever, chills, unusual bleeding, bruising.

docusate

dok-ue-sate
(Apo-Docusate, Colace, Diocto, Docusoft-S, Novo-Docusate, PMS-Docusate, Regulex, Selax, Soflax, Surfak)
Do not confuse Colace with Calan or Cozaar, or Surfak with Surbex.

FIXED COMBINATION(S)

Peri-Colace, Senokot-S: colace/senna (a laxative): 50 mg/8.6 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Bulk-producing laxative. **CLINICAL:** Stool softener.

USES

Pts who need to avoid straining during defecation; constipation associated with hard, dry stools.

D

PRECAUTIONS

Contraindications: Acute abdominal pain, concomitant use of mineral oil, intestinal obstruction, nausea, vomiting. **Cautions:** Do not use for longer than 1 wk.

ACTION

Decreases surface film tension by mixing liquid with bowel contents. **Therapeutic Effect:** Increases infiltration of liquid to form softer stool.

PHARMACOKINETICS

Minimal absorption from GI tract. Acts in small and large intestines. Results usually occur 1–2 days after first dose but may take 3–5 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category C. Children:** Not recommended in those younger than 6 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Capsules: 50 mg (Colace), 100 mg (Colace, Docusoft-S), 240 mg (Surfak). **Liquid (Colace, Diocto):** 50 mg/5 ml. **Syrup (Colace, Diocto):** 60 mg/15 ml.

ADMINISTRATION/HANDLING

• Drink 6–8 glasses of water a day (aids stool softening). • Give each dose with full glass of water, fruit juice. • Administer docusate liquid with milk, fruit juice, infant formula (masks bitter taste).

INDICATIONS/ROUTES/DOSAGE

Stool Softener

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 50–500 mg/day in 1–4 divided doses. **CHILDREN 6–11 YRS:** 40–150 mg/day in 1–4 divided doses. **CHILDREN 3–5 YRS:** 20–60 mg/day in 1–4 divided doses. **CHILDREN YOUNGER THAN 3 YRS:** 10–40 mg in 1–4 divided doses.

SIDE EFFECTS

Occasional: Mild GI cramping, throat irritation (with liquid preparation). **Rare:** Rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Encourage adequate fluid intake. Assess bowel sounds for peristalsis. Monitor daily pattern of bowel activity, stool consistency. Record time of evacuation.

PATIENT/FAMILY TEACHING

• Institute measures to promote defecation: increase fluid intake, exercise, high-fiber diet. • Do not use for longer than 1 wk.

dofetilide

doe-**fet**-i-lide
(Tikosyn)

■ **BLACK BOX ALERT** ■ Pt must be placed in a setting with continuous EKG monitoring for minimum of 3 days and monitored by staff familiar with treatment of life-threatening arrhythmias.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Potassium channel blocker. **CLINICAL:** Antiarrhythmic: Class III.

USES

Maintenance of normal sinus rhythm (NSR) in pts with chronic atrial fibrillation/atrial flutter of longer than 1-wk duration who have been converted to NSR. Conversion of atrial fibrillation/flutter to NSR. **OFF-LABEL:** Treatment of atrial fibrillation in pts with hypertrophic cardiomyopathy.

PRECAUTIONS

Contraindications: Paroxysmal atrial fibrillation, congenital or acquired prolonged QT syndrome, severe renal impairment, concurrent use of drugs that may prolong QT interval, hypokalemia, hypomagnesemia, concurrent use with verapamil, dolutegravir, itraconazole, ketoconazole, prochlorperazine, megestrol, cimetidine, hydrochlorothiazide, trimethoprim. Severe renal impairment. **Cautions:** Severe hepatic impairment, renal impairment, pts previously taking amiodarone, elderly. Concurrent use of other agents that prolong QT interval. Pts with sick sinus syndrome or second- or third-degree heart block unless functional pacemaker in place.

ACTION

Prolongs repolarization without affecting conduction velocity by blocking one or more time-dependent potassium currents. No effect on sodium channels, alpha-adrenergic, beta-adrenergic receptors. **Therapeutic Effect:** Terminates reentrant tachyarrhythmias, preventing reinduction.

PHARMACOKINETICS

Well absorbed following PO administration. 80% eliminated in urine as unchanged drug, 20% excreted as minimally active metabolites. Protein binding: 60%–70%. **Half-life:** 2–3 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Cimetidine, verapamil, itraconazole, ketoconazole, trimethoprim, hydrochlorothiazide** may increase concentration, toxicity. **HERBAL:** **St. John's wort** may decrease concentration. **Ephedra** may worsen arrhythmias. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 125 mcg, 250 mcg, 500 mcg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Do not break, crush, or open capsules.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ EKG interval measurements, esp. QTc interval, must be determined prior to first dose.

Antiarrhythmias

PO: ADULTS, ELDERLY: Initially, 500 mcg twice daily. Modify dose in response to initial dose.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
40–60 ml/min	250 mcg twice daily
20–39 ml/min	125 mcg twice daily

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Rare (less than 2%): Headache, chest pain, dizziness, dyspnea, nausea, insomnia, back/abdominal pain, diarrhea, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Angioedema, bradycardia, cerebral ischemia, facial paralysis, serious arrhythmias (ventricular, various forms of block) have been noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Prior to initiating treatment, QTc intervals must be determined. Do not use if heart rate less than 50 beats/min. Provide continuous EKG monitoring, calculation of creatinine clearance, equipment for

resuscitation available for minimum of 3 days. Anticipate proarrhythmic events.

INTERVENTION/EVALUATION

Assess for conversion of cardiac dysrhythmias and absence of new arrhythmias. Constantly monitor EKG. Provide emotional support. Monitor renal function for electrolyte imbalance (prolonged or excessive diarrhea, sweating, vomiting, thirst).

PATIENT/FAMILY TEACHING

• Instruct pt on need for compliance and requirement for periodic monitoring of EKG and renal function. • Do not break, crush, or open capsule.

dolutegravir

doe-loo-**teg**-ra-veer
(Tivicay)

FIXED COMBINATION(S)

Triumaq: dolutegravir/abacavir/lamivudine (antiretrovirals): 50 mg/600 mg/300 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Integrase stand transfer inhibitor (INSTI). **CLINICAL:** Antiretroviral.

USES

Treatment of HIV-1 infection in adults and children age 12 yrs and older and weighing at least 40 kg, in combination with at least two other antiretroviral agents.

PRECAUTIONS

Contraindications: Co-administration of dofetilide. **Cautions:** Diabetes mellitus, hepatic/renal impairment, history of hepatitis or tuberculosis, prior hypersensitivity reaction to INSTIs.

ACTION

Inhibits HIV integrase by blocking strand transfer of retroviral DNA integration (essential for HIV replication cycle). **Therapeutic Effect:** Interferes with HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Readily absorbed after PO administration. Peak plasma concentration: 2–3 hrs. Protein binding: 99%. Metabolized in liver. Excreted primarily unchanged in feces and as metabolite in urine. **Half-life:** 14 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Breastfeeding not recommend due to risk of postnatal HIV transmission. Unknown if distributed in human breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in pts less than 12 yrs or weighing under 40 kg or who are INSTI-experienced with documented or clinically suspected resistance to other INSTIs. **Elderly:** May have increased risk of adverse effects or worsening hepatic, renal, cardiac function.

INTERACTIONS

DRUG: Medications containing aluminum, calcium, magnesium or iron; metabolic inducers (e.g., carbamazepine, phenytoin, phenobarbital, rifampin); nonnucleoside reverse transcriptase inhibitors (e.g., efavirenz, etravirine, nevirapine); protease inhibitors (e.g., fosamprenavir/ritonavir, tipranavir/ritonavir) may decrease concentration/effects. May increase concentration/effect of **metformin.** **HERBAL: St John's wort** may decrease effectiveness. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, bilirubin, cholesterol, creatinine, creatine kinase (CK), glucose, lipase, triglycerides. May decrease creatinine clearance, neutrophils.

AVAILABILITY (Rx)

Tablets: 50 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meal. Administer at least 2 hrs before or at least 6 hrs

after giving medications containing aluminum, calcium, iron, magnesium (supplements, antacids, laxatives).

INDICATIONS/ROUTES/DOSAGE

HIV Infection

PO: ADULTS/ELDERLY: Treatment naïve or treatment-experienced, INSTI naïve: 50 mg once daily. Increase to 50 mg twice daily if also receiving efavirenz, fosamprenavir/ritonavir, tipranavir/ritonavir, rifampin or INSTI-experienced with certain INSTI-associated resistance substitutions or clinically suspected INSTI resistance.

PO: CHILDREN: Treatment naïve: 50 mg once daily. Increase to 50 mg twice daily if also receiving **fosamprenavir/ritonavir, tipranavir/ritonavir, rifampin.**

SIDE EFFECTS

Rare (3%-1%): Insomnia, headache, nausea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction including rash, fever, angioedema, difficulty breathing, skin blistering/peeling, arthralgia, lethargy reported. Pts co-infected with hepatitis B or C have increased risk for viral reactivation, worsening of hepatic function, and may experience hepatic decompensation and/or failure if therapy is discontinued. May cause redistribution/ accumulation of body fat (lipodystrophy). May induce immune recovery syndrome (inflammatory response to dormant opportunistic infections such as *Mycobacterium avium,* cytomegalovirus, PCP, tuberculosis, or acceleration of autoimmune disorders such as Graves' disease, polymyositis, Guillain-Barré).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, CMP, CD4+ count, viral load, lipid panel, lipase. Screen all pts for hepatitis B or C co-infection. Receive full medication history including vitamins, minerals, herbal products. Question possibility of pregnancy.

INTERVENTION/EVALUATION

Monitor labs accordingly. Assess for hepatic impairment (bruising, hematuria, jaundice, right upper abdominal pain, nausea, vomiting, weight loss). Screen for immune recovery syndrome, hypersensitivity reaction.

PATIENT/FAMILY TEACHING

• Offer emotional support. • Blood levels will be monitored routinely. • Report any signs of abdominal pain, darkened urine, decreased urine output, yellowing of skin or eyes, clay-colored stools, weight loss. • Do not breastfeed. • Report any newly prescribed medications. • Dolutegravir does not cure HIV infection nor reduce risk of transmission. • Practice safe sex with barrier methods or abstinence. • As immune system strengthens, it may respond to dormant infections hidden within the body. Report any new fever, chills, body aches, cough, night sweats, shortness of breath. • Antiretrovirals may cause excess body fat in upper back, neck, breast, trunk; and may cause decreased body fat in legs, arms, face. • Drug resistance can form if therapy is interrupted for even a short time; do not run out of supply.

donepezil

doe-**nep**-e-zil
(Aricept, Aricept ODT)
Do not confuse Aricept with Aciphex, Ascriptin, or Azilect.

FIXED COMBINATION(S)

Namzaric: donepezil/memantine (NMDA receptor antagonist): 10 mg/14 mg, 10 mg/28 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Cholinesterase inhibitor. **CLINICAL:** Cholinergic.

D

USES

Treatment of dementia of Alzheimer's disease. **OFF-LABEL:** Treatment of behavioral syndromes in dementia, dementia associated with Parkinson's disease, Lewy body dementia.

PRECAUTIONS

Contraindications: History of hypersensitivity to piperidine derivatives. **Cautions:** Asthma, COPD, bradycardia, bladder outflow obstruction, history of ulcer disease, those taking concurrent NSAIDs, supraventricular cardiac conduction disturbances (e.g., "sick sinus syndrome," Wolff-Parkinson-White syndrome), seizures.

ACTION

Inhibits enzyme acetylcholinesterase, increasing concentration of acetylcholine at cholinergic synapses, enhancing cholinergic function in CNS. **Therapeutic Effect:** Slows progression of Alzheimer's disease.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 96%. Extensively metabolized. Eliminated in urine, feces. **Half-life:** 70 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effect of **anticholinergic medications.** May increase synergistic effects of **cholinergic agonists, neuromuscular blockers, succinylcholine. Ketoconazole** may inhibit metabolism. **CYP3A4 inducers (e.g., carbamazepine, rifampin)** may decrease concentration/effects. **HERBAL: St. John's wort** may decrease concentration. **Ginkgo** may increase adverse effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets (Aricept): 5 mg, 10 mg, 23 mg. **Tablets (Orally Disintegrating [Aricept ODT]):** 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

- May be given at bedtime without regard to meals.
- Swallow tablets whole; do not break, crush, dissolve, or divide.
- **ODT:** Allow to dissolve completely on tongue.
- Follow dose with water.

INDICATIONS/ROUTES/DOSAGE

Alzheimer's Disease

PO: ADULTS, ELDERLY: Initially 5 mg/day at bedtime. May increase at 4- to 6-wk intervals to 10 mg/day at bedtime. For moderate to severe Alzheimer's, a dose of 23 mg once daily can be administered once pt has been taking 10 mg once daily for at least 3 mos.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (11%–8%): Nausea, diarrhea, headache, insomnia, nonspecific pain, dizziness. **Occasional (6%–3%):** Mild muscle cramps, fatigue, vomiting, anorexia, ecchymosis. **Rare (3%–2%):** Depression, abnormal dreams, weight loss, arthritis, drowsiness, syncope, frequent urination.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may result in cholinergic crisis (severe nausea, increased salivation, diaphoresis, bradycardia, hypotension, flushed skin, abdominal pain, respiratory depression, seizures, cardiorespiratory collapse). Increasing muscle weakness may occur, resulting in death if muscles of respiration become involved. **Antidote:** Atropine sulfate 1–2 mg IV with subsequent doses based on therapeutic response.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess cognitive function (e.g., memory, attention, reasoning). Obtain baseline vital signs. Assess history for peptic ulcer, urinary obstruction, asthma, COPD, seizure disorder, cardiac conduction disturbances.

INTERVENTION/EVALUATION

Monitor behavior, mood/cognitive function, activities of daily living. Monitor for cholinergic reaction (GI discomfort/cramping, feeling of facial warmth, excessive salivation/diaphoresis), lacrimation, pallor, urinary urgency, dizziness. Monitor for nausea, diarrhea, headache, insomnia.

PATIENT/FAMILY TEACHING

• Report nausea, vomiting, diarrhea, diaphoresis, increased salivary secretions, severe abdominal pain, dizziness. • May take without regard to food (best taken at bedtime). • Not a cure for Alzheimer's disease but may slow progression of symptoms.

*DOPamine

HIGH ALERT

dope-a-meen

■ **BLACK BOX ALERT** ■ If extravasation occurs, infiltrate area with phentolamine (5–10 ml 0.9% NaCl) as soon as possible, no later than 12 hrs after extravasation.

Do not confuse dopamine with dobutamine or Dopram.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic (adrenergic agonist). **CLINICAL:** Cardiac stimulant, vasopressor.

USES

Adjunct in treatment of hypotension, shock (associated with MI, trauma, renal failure, cardiac decompensation, open heart surgery, persisting after adequate fluid volume replacement). **OFF-LABEL:** Symptomatic bradycardia or heart block unresponsive to atropine or cardiac pacing.

PRECAUTIONS

Contraindications: Pheochromocytoma, ventricular fibrillation. Hypersensitivity to sulfites. **Cautions:** Ischemic heart disease, occlusive vascular disease, hypovolemia, recent use of MAOIs (within 2–3 weeks), ventricular arrhythmias, post-MI.

ACTION

Stimulates adrenergic and dopaminergic receptors. Effects are dose dependent. Lower dosage stimulates dopaminergic receptors, causing renal vasodilation. Higher doses stimulate both dopaminergic and beta$_1$-adrenergic receptors, causing cardiac stimulation and renal vasodilation. **Therapeutic Effect:** **Low dosage (1–3 mcg/kg/min):** Increases renal blood flow, urinary flow, sodium excretion. **Low to moderate dosage (4–10 mcg/kg/min):** Increases myocardial contractility, stroke volume, cardiac output. **High dosage (greater than 10 mcg/kg/min):** Increases peripheral resistance, vasoconstriction, B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	1–2 min	N/A	Less than 10 min

Widely distributed. Does not cross blood-brain barrier. Metabolized in liver, kidneys, plasma. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Recommended close hemodynamic monitoring (gangrene due to extravasation reported). **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May have increased effects with **vasopressors, vasoconstrictive agents. COMT inhibitors** may increase level/effects. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 40 mg/ml, 80 mg/ml, 160 mg/ml. **Injection (Premix with Dextrose):** 0.8 mg/ml (250 ml, 500 ml), 1.6 mg/ml (250 ml, 500 ml), 3.2 mg/ml (250 ml).

ADMINISTRATION/HANDLING

◀ALERT▶ Blood volume depletion must be corrected before administering dopamine (may be used concurrently with fluid replacement).

IV

Reconstitution • Available prediluted in 250 or 500 ml D_5W or dilute in 250–500 ml 0.9% NaCl or D_5W, to maximum concentration of 3,200 mcg/ml (3.2 mg/ml).

Rate of Administration • Administer into large vein (antecubital fossa, central line preferred) to prevent extravasation. • Use infusion pump to control flow rate. • Titrate drug to desired hemodynamic, renal response (optimum urinary flow determines dosage).

Storage • Do not use solutions darker than slightly yellow or discolored to yellow, brown, pink to purple (indicates decomposition of drug). • Stable for 24 hrs after dilution.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), furosemide (Lasix), insulin, sodium bicarbonate.

IV COMPATIBILITIES

Amiodarone (Cordarone), calcium chloride, dexmedetomidine (Precedex), diltiazem (Cardizem), dobutamine (Dobutrex), enalapril (Vasotec), epinephrine, heparin, hydromorphone (Dilaudid), labetalol (Trandate), levofloxacin (Levaquin), lidocaine, lorazepam (Ativan), methylprednisolone (Solu-Medrol), midazolam (Versed), milrinone (Primacor), morphine, nicardipine (Cardene), nitroglycerin, norepinephrine (Levophed), piperacillin/tazobactam (Zosyn), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Effects of dopamine are dose dependent. Titrate to desired response.

Acute Hypotension, Shock

IV Infusion: ADULTS, ELDERLY: Initially, 1–5 mcg/kg/min up to 20 mcg/kg/min. **Maximum:** 50 mcg/kg/min. Titrate to desired response. **CHILDREN:** Initially, 1–5 mcg/kg/min. Increase in 5–10 mcg/kg/min increments. Titrate to desired response. **Maximum:** 50 mcg/kg/min. **NEONATES:** 1–20 mcg/kg/min. Titrate to desired response.

SIDE EFFECTS

Frequent: Headache, arrhythmias, tachycardia, anginal pain, palpitations, vasoconstriction, hypotension, nausea, vomiting, dyspnea. **Occasional:** Piloerection (goose bumps), bradycardia, widening of QRS complex.

ADVERSE EFFECTS/ TOXIC REACTIONS

High doses may produce ventricular arrhythmias. Pts with occlusive vascular disease are at high risk for further compromise of circulation to extremities, which may result in gangrene. Tissue necrosis with sloughing may occur with extravasation of IV solution.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pt must be on continuous cardiac monitoring. Determine weight (for dosage

calculation). Obtain initial B/P, heart rate, respirations. Assess potency of IV access.

INTERVENTION/EVALUATION

Continuously monitor for cardiac arrhythmias. Measure urinary output frequently. If extravasation occurs, immediately infiltrate affected tissue with 10–15 ml 0.9% NaCl solution containing 5–10 mg phentolamine mesylate. Monitor B/P, heart rate, respirations q15min during administration (more often if indicated). Assess cardiac output, pulmonary wedge pressure, or central venous pressure (CVP) frequently. Assess peripheral circulation (palpate pulses, note color/temperature of extremities). Immediately notify physician of decreased urinary output, cardiac arrhythmias, significant changes in B/P, heart rate, or failure to respond to increase or decrease in infusion rate, decreased peripheral circulation (cold, pale, mottled extremities). Taper dosage before discontinuing (abrupt cessation of therapy may result in marked hypotension). Be alert to excessive vasoconstriction (decreased urine output, increased heart rate, arrhythmias, disproportionate increase in diastolic B/P, decrease in pulse pressure); slow or temporarily stop infusion, notify physician.

doripenem

dor-i-**pen**-em
(Doribax)
Do not confuse Doribax with Zovirax, or doripenem with ertapenem, imipenem, or meropenem.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Carbapenem. **CLINICAL:** Antibiotic.

USES

Treatment of complicated intra-abdominal infections, complicated UTIs due to susceptible gram-positive, gram-negative (including *Pseudomonas aeruginosa*), and anaerobic bacteria. **OFF-LABEL:** Treatment of intravascular catheter-related bloodstream infection due to ESBL producing *Escherichia coli* and *Klebsiella* spp. Pneumonia, including ventilator-associated.

PRECAUTIONS

Contraindications: History of serious hypersensitivity to carbapenems (meropenem, imipenem-cilastin, ertapenem). Anaphylactic reactions to beta-lactam antibiotics. **Cautions:** Hypersensitivity to penicillins, cephalosporins.

ACTION

Inactivates penicillin-binding proteins, resulting in inhibition of cell wall synthesis. **Therapeutic Effect:** Produces bacterial cell death.

PHARMACOKINETICS

Penetrates into body fluids, tissues. Widely distributed. Protein binding: 8%. Primarily excreted in urine. Removed by dialysis. **Half-life:** 1 hr.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Advanced renal insufficiency, end-stage renal insufficiency may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** reduces renal excretion of doripenem. May decrease **valproic acid** concentration (do not use concurrently). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST. May decrease Hgb, Hct, platelet count; serum potassium.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 250 mg, 500 mg.

D

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 250-mg or 500-mg vial with 10 ml Sterile Water for Injection or 0.9% NaCl. • Shake well to dissolve. • Further dilute with 100 ml 0.9% NaCl or D_5W.

Rate of Administration • Give by intermittent IV infusion (piggyback). • Do not give IV push. • Infuse over 60 min.

Storage • Stable for 12 hrs at room temperature, 72 hrs if refrigerated when diluted in 0.9% NaCl; 4 hrs at room temperature, 24 hrs if refrigerated when diluted in D_5W.

IV INCOMPATIBILITIES

Diazepam (Valium), potassium phosphate, propofol (Diprivan).

IV COMPATIBILITIES

Amiodarone, bumetanide (Bumex), calcium gluconate, dexamethasone, diltiazem (Cardizem), diphenhydramine (Benadryl), furosemide (Lasix), heparin, hydrocortisone (Solu-Cortef), hydromorphone (Dilaudid), insulin, labetalol (Trandate), lorazepam (Ativan), magnesium sulfate, methylprednisolone (Solu-Medrol), metoclopramide (Reglan), milrinone, morphine, ondansetron (Zofran), pantoprazole (Protonix), potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Intra-Abdominal Infections

IV: ADULTS, ELDERLY: 500 mg q8h for 5–14 days.

Urinary Tract Infections

IV: ADULTS, ELDERLY: 500 mg q8h for 10–14 days.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
30–50 ml/min	250 mg q8h
11–29 ml/min	250 mg q12h
Hemodialysis	250 mg q24h, if treating infection caused by *Pseudomonas aeruginosa:* 500 mg q12h on day 1, then 500 g q24h
Continuous renal replacement therapy	250 mg q12h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (10%–6%): Diarrhea, nausea, headache. **Occasional (5%–2%):** Altered mental status, insomnia, rash, abdominal pain, constipation, vomiting, edema, fever. **Rare (less than 2%):** Dizziness, cough, oral candidiasis, anxiety, tachycardia, phlebitis at IV site.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may occur. Anaphylactic reactions in those receiving beta-lactams have occurred. Seizures may occur in those with CNS disorders (brain lesions, history of seizures) or with bacterial meningitis or severe impaired renal function.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question pt for history of allergies, particularly to beta-lactams, penicillins, cephalosporins. Inquire about history of seizures.

INTERVENTION/EVALUATION

Monitor for signs of hypersensitivity reaction during first dose. Monitor daily pattern of bowel activity, stool consistency. Monitor for nausea, vomiting. Evaluate hydration status. Evaluate for inflammation at IV injection site. Assess skin for

rash. Check mental status; be alert to tremors, possible seizures. Assess sleep pattern for evidence of insomnia.

PATIENT/FAMILY TEACHING

- Report tremors, seizures, rash, diarrhea, or other new symptoms.

doxazosin

dox-a-**zoe**-sin
(Apo-Doxazosin, Cardura, Cardura XL, Novo-Doxazosin)
Do not confuse Cardura with Cardene, Cordarone, Coumadin, K-Dur, or Ridaura, or doxazosin with doxapram, doxepin, or doxorubicin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha-adrenergic blocker. **CLINICAL:** Antihypertensive.

USES

Cardura: Treatment of mild to moderate hypertension. Used alone or in combination with other antihypertensives. Treatment of benign prostatic hyperplasia *(BPH)*: **Cardura XL:** Treatment of benign prostatic hyperplasia. **OFF-LABEL:** Pediatric hypertension. Facilitate distal ureteral stone expulsion. Erectile dysfunction in pts with BPH.

PRECAUTIONS

Contraindications: Hypersensitivity to other quinazolines (prazosin, terazosin). **Cautions:** Constipation, ileus, GI obstruction, hepatic impairment.

ACTION

Hypertension: Selectively blocks alpha$_1$-adrenergic receptors, decreasing peripheral vascular resistance. **BPH:** Inhibits postsynaptic alpha-adrenergic receptors in prostatic stromal and bladder neck tissues. **Therapeutic Effect: Hypertension:** Causes peripheral vasodilation, lowering B/P. **BPH:** Relaxes smooth muscle of bladder, prostate, reducing BPH symptoms.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (antihypertensive)	1–2 hrs	2–6 hrs	24 hrs

Well absorbed from GI tract. Protein binding: 98%–99%. Metabolized in liver. Primarily eliminated in feces. Not removed by hemodialysis. **Half-life:** 19–22 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** May be more sensitive to hypotensive effects.

INTERACTIONS

DRUG: NSAIDs may decrease effect. **Hypotension-producing medications (e.g., antihypertensives, diuretics)** may increase effect. **CYP3A4 inhibitors (e.g., atanazavir, ketoconazole)** may increase hypotensive effect. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. Avoid **saw palmetto** (limited experience with this combination). **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 1 mg, 2 mg, 4 mg, 8 mg.

Tablets, Extended-Release: 4 mg, 8 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food. • Do not break, crush, dissolve, or divide extended-release tablet. • Immediate-release tablets given morning or evening; extended-release tablets given with morning meal.

D

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO ***(Immediate-Release)*****: ADULTS:** Initially, 1 mg once a day. May increase upward over several weeks to a maximum of 16 mg/day. **ELDERLY:** Initially, 0.5 mg once a day. May increase upward over several weeks.

Benign Prostatic Hyperplasia

PO ***(Immediate-Release)*****: ADULTS, ELDERLY:** Initially, 1 mg/day. May increase q1–2wks. **Maximum:** 8 mg/day. ***(Extended-Release)*****:** Initially, 4 mg/day. May increase to 8 mg in 3–4 wks. **Note:** When switching to extended-release, omit evening dose prior to starting morning dose.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (20%–10%): Dizziness, asthenia headache, edema. **Occasional (9%–3%):** Nausea, pharyngitis, rhinitis, pain in extremities, drowsiness. **Rare (2%–1%):** Palpitations, diarrhea, constipation, dyspnea, myalgia, altered vision, anxiety.

ADVERSE EFFECTS/ TOXIC REACTIONS

First-dose syncope (hypotension with sudden loss of consciousness) may occur 30–90 min following initial dose of 2 mg or greater, too-rapid increase in dosage, addition of another antihypertensive agent to therapy. First-dose syncope may be preceded by tachycardia (pulse rate 120–160 beats/min).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Give first dose at bedtime. If initial dose is given during daytime, pt must remain recumbent for 3–4 hrs. Assess B/P, pulse immediately before each dose, and q15–30min until B/P is stabilized (be alert to fluctuations).

INTERVENTION/EVALUATION

Monitor B/P, I/O. Monitor pulse diligently (first-dose syncope may be preceded by tachycardia). Assess for edema, headache. Assist with ambulation if dizziness, light-headedness occurs.

PATIENT/FAMILY TEACHING

• Full therapeutic effect may not occur for 3–4 wks. • May cause syncope (fainting); go from lying to standing slowly. • Avoid tasks that require alertness, motor skills until response to drug is established.

doxepin

dox-e-pin

(Apo-Doxepin, Novo-Doxepin, Prudoxin, Silenor, Sinequan, Zonalon)

■ **BLACK BOX ALERT** ■ Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse doxepin with digoxin, doxapram, doxazosin, Doxidan, or doxycycline, or Sinequan with Seroquel, or Singulair.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Tricyclic.
CLINICAL: Antidepressant, antianxiety, antineuralgic, antiulcer, antipruritic.

USES

Treatment of depression, often in conjunction with psychotherapy. **Silenor:** Treatment of insomnia in pts with difficulty staying asleep. **Topical:** Treatment of pruritus associated with atopic dermatitis. **OFF-LABEL:** Treatment of neurogenic pain, treatment of anxiety.

PRECAUTIONS

Contraindications: Narrow-angle glaucoma, hypersensitivity to other tricyclic antidepressants, urinary retention, use of MAOIs within 14 days. **Cautions:** Cardiac/hepatic/renal disease, pts at risk for suicidal ideation, respiratory compromise, sleep apnea, history of bowel obstruction, increased IOP, glaucoma, history of seizures, history of urinary retention/obstruction, hyperthyroidism, prostatic hypertrophy, hiatal hernia, elderly.

ACTION

Increases synaptic concentrations of norepinephrine, serotonin. **Therapeutic Effect:** Produces antidepressant, anxiolytic effects.

PHARMACOKINETICS

PO: Rapidly absorbed from GI tract. Protein binding: 80%–85%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 6–8 hrs. **Topical:** Absorbed through skin. Distributed to body tissues. Metabolized to active metabolite. Excreted in urine.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C (B for topical form). Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** Increased risk of toxicity (lower dosages recommended).

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS, respiratory depression, hypotensive effects. **Cimetidine** may increase concentration, risk of toxicity. **MAOIs** may increase risk of seizures, hyperpyrexia, hypertensive crisis (discontinue at least 2 wks prior to starting doxepin). **Phenothiazines** may increase anticholinergic, sedative effects. **HERBAL: Kava kava, SAMe, St. John's wort, valerian** may increase sedation, risk of serotonin syndrome. **St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May alter serum glucose, EKG readings. **Therapeutic serum level:** 110–250 ng/ml; **toxic serum level:** greater than 300 ng/ml.

AVAILABILITY (Rx)

Capsules: 10 mg, 25 mg, 50 mg, 75 mg, 100 mg, 150 mg. **Cream (Prudoxin, Zonalon):** 5%. **Oral Concentrate:** 10 mg/ml. **Tablets (Silenor):** 3 mg, 6 mg.

ADMINISTRATION/HANDLING

PO

• Give with food, milk if GI distress occurs. • Dilute concentrate in 4-oz glass of water, milk, orange, tomato, prune, pineapple juice. Incompatible with carbonated drinks. • Give larger portion of daily dose at bedtime. • **Silenor:** Give within 30 min of bedtime but not within 3 hrs of a meal.

Topical

• Apply thin film of cream on affected areas of skin. • Do not use for more than 8 days. • Do not use occlusive dressing.

INDICATIONS/ROUTES/DOSAGE

Depression, Anxiety

PO: ADULTS: 25–150 mg/day at bedtime or in 2–3 divided doses. May increase gradually to 300 mg/day (single dose should not exceed 150 mg). **ELDERLY:** Initially, 10–25 mg at bedtime. May increase by 10–25 mg/day every 3–7 days. **Maximum:** 75 mg/day. **ADOLESCENTS:** Initially, 25–50 mg/day as a single dose or in divided doses. May increase to 100 mg/day. **CHILDREN 12 YRS AND YOUNGER:** 1–3 mg/kg/day.

Insomnia

PO: ADULTS: 3–6 mg. **ELDERLY:** 3 mg (give within 30 min of bedtime). May increase to 6 mg once daily.

Pruritus Associated with Atopic Dermatitis

Topical: ADULTS, ELDERLY: Apply thin film 4 times a day at 3- to 4-hr intervals. Not recommended for more than 8 days.

Dosage in Renal Impairment
No dose adjustment.

Dosage in Hepatic Impairment
Use lower initial dose; adjust gradually. **Silenor:** Initially, 3 mg once daily.

D

SIDE EFFECTS

Frequent: PO: Orthostatic hypotension, drowsiness, dry mouth, headache, increased appetite, weight gain, nausea, unusual fatigue, unpleasant taste. **Topical:** Edema, increased pruritus, eczema, burning, tingling, stinging at application site, altered taste, dizziness, drowsiness, dry skin, dry mouth, fatigue, headache, thirst. **Occasional: PO:** Blurred vision, confusion, constipation, hallucinations, difficult urination, eye pain, irregular heartbeat, fine muscle tremors, nervousness, impaired sexual function, diarrhea, diaphoresis, heartburn, insomnia. **Silenor:** Nausea, upper respiratory infection. **Topical:** Anxiety, skin irritation/cracking, nausea. **Rare: PO:** Allergic reaction, alopecia, tinnitus, breast enlargement. **Topical:** Fever, photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt or too-rapid withdrawal may result in headache, malaise, nausea, vomiting, vivid dreams. Overdose may produce confusion, severe drowsiness, agitation, tachycardia, arrhythmias, shortness of breath, vomiting.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse, EKG (those with history of cardiovascular disease). Perform CBC, serum electrolyte tests before long-term therapy. Assess pt's appearance, behavior, level of interest, mood, suicidal ideation, sleep pattern.

INTERVENTION/EVALUATION

Monitor B/P, pulse, weight. Perform CBC, serum electrolyte tests periodically to assess renal/hepatic function. Monitor mental status, suicidal ideation. Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess appearance, behavior, speech pattern, level of interest, mood. **Therapeutic serum level:** 110–250 ng/ml; **toxic serum level:** greater than 300 ng/ml.

PATIENT/FAMILY TEACHING

• Do not discontinue abruptly. • Change positions slowly to avoid dizziness. • Avoid tasks that require alertness, motor skills until response to drug is established. • Do not cover affected area with occlusive dressing after applying cream. • May cause dry mouth. • Avoid alcohol, limit caffeine. • May increase appetite. • Avoid exposure to sunlight/artificial light source. • Therapeutic effect may be noted within 2–5 days, maximum effect within 2–3 wks. • Report worsening depression, suicidal ideation, unusual changes in behavior (esp. at initiation of therapy or with changes in dosage).

*DOXOrubicin

HIGH ALERT

dox-o-**rue**-bi-sin
(Adriamycin, Caelyx, Doxil, Lipodox)

■ **BLACK BOX ALERT** ■ May cause concurrent or cumulative myocardial toxicity. Acute allergic or anaphylaxis-like infusion reaction may be life-threatening. Severe myelosuppresion may occur. Must be administered by personnel trained in administration/handling of chemotherapeutic agents. Secondary acute myelogenous leukemia and myelodysplastic syndrome have been reported. Potent vesicant.

Do not confuse doxorubicin with dactinoycin, daunorubicin, doxazosin, epirubicin, idarubicin, or valrubicin, or Adriamycin with Aredia or idamycin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Anthracycline antibiotic. **CLINICAL:** Antineoplastic.

USES

Adriamycin: Treatment of acute lymphocytic leukemia (ALL), acute myeloid leukemia (AML), Hodgkin's disease, malignant lymphoma; breast, gastric, small-cell lung, ovarian, epithelial, thyroid, bladder carcinomas; neuroblastoma, Wilms tumor, osteosarcoma, soft tissue sarcoma. **Doxil:** Treatment of AIDS-related Kaposi's sarcoma, metastatic ovarian cancer. Used with bortezomib to treat multiple myeloma in pts who have not previously received bortezomib and have received at least one previous treatment. **OFF-LABEL: Adriamycin:** Multiple myeloma, endometrial carcinoma, uterine sarcoma; head and neck cancer, liver, kidney cancer. **Doxil:** Metastatic breast cancer, Hodgkin's lymphoma, cutaneous T-cell lymphomas, advanced soft tissue sarcomas, recurrent or metastatic cervical cancer, advanced or metastatic uterine sarcoma.

PRECAUTIONS

Contraindications: Adriamycin: Severe hepatic impairment, recent MI, severe arrhythmias. Previous or concomitant treatment with high accumulative doses of doxorubicin, daunorubicin, idarubicin, or other anthracyclines or anthracenediones; baseline ANC count less than 1,500/mm^3. **Doxil:** Breastfeeding (Canada). **Cautions:** Hepatic impairment. Cardiomyopathy, preexisting myelosuppression, severe HF.

ACTION

Inhibits DNA, DNA-dependent RNA synthesis by binding with DNA strands. Liposomal encapsulation increases uptake by tumors, prolongs drug action, may decrease toxicity. **Therapeutic Effect:** Prevents cell division.

PHARMACOKINETICS

Widely distributed. Protein binding: 74%–76%. Does not cross blood-brain barrier. Metabolized in liver. Primarily eliminated by biliary system. Not removed by hemodialysis. **Half-life:** 20–48 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. Breastfeeding not recommended. **Pregnancy Category D. Children/Elderly:** Cardiotoxicity may be more frequent in those younger than 2 yrs or older than 70 yrs.

INTERACTIONS

DRUG: Cyclosporine may increase risk of hematologic toxicity. **Bone marrow depressants** may increase myelosuppression. **Daunorubicin** may increase risk of cardiotoxicity. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL: St. John's wort** may decrease concentration. Avoid **black cohosh, dong quai** in estrogen-dependent tumors. **FOOD:** None known. **LAB VALUES:** May cause EKG changes, increase serum uric acid. May reduce neutrophil, RBC counts.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 10 mg, 20 mg, 50 mg. **Injection Solution (Adriamycin):** 2 mg/ml (5-ml, 10-ml, 25-ml, 100-ml vial). **Lipid Complex (Doxil):** 2 mg/ml (10 ml, 25 ml).

ADMINISTRATION/HANDLING

◀ALERT▶ Wear gloves. If powder or solution comes in contact with skin, wash thoroughly. Avoid small veins; swollen/edematous extremities; areas overlying joints, tendons. **Doxil:** Do not use with in-line filter or mix with any diluent except D_5W. May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

D

IV

Reconstitution • Reconstitute vials of powder with 0.9% NaCl to provide concentration of 2 mg/ml. • Shake vial; allow contents to dissolve. • Withdraw appropriate volume of air from vial during reconstitution (avoids excessive pressure buildup). • May be further diluted with 50–1,000 ml D_5W or 0.9% NaCl and given as continuous infusion. **Doxil:** Dilute each dose in 250 ml D_5W (doses greater than 90 mg in 500 ml D_5W).

Rate of Administration (Adriamycin): • For IV push, administer into tubing of freely running IV infusion of D_5W or 0.9% NaCl, preferably via butterfly needle over 3–5 min (avoids local erythematous streaking along vein and facial flushing). • Must test for flashback q30sec to be certain needle remains in vein during injection. IV piggyback over 15–60 min or continuous infusion. • Extravasation produces immediate pain, severe local tissue damage. Terminate administration immediately; withdraw as much medication as possible, obtain extravasation kit, follow protocol. **Doxil:** Give as infusion over 60 min. Do not use in-line filter.

Storage • **Adriamycin powder:** Store at room temperature. • Reconstituted vials stable for 7 days at room temperature, 15 days if refrigerated. Infusions stable for 48 hrs at room temperature. • Protect from prolonged exposure to sunlight; discard unused solution. • **Adriamycin solution:** Refrigerate vials. Solutions diluted in D_5W or 0.9% NaCl stable for 48 hrs at room temperature. • **Doxil:** Refrigerate unopened vials. After solution is diluted, use within 24 hrs.

IV INCOMPATIBILITIES

Doxorubicin: Allopurinol (Aloprim), amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), furosemide (Lasix), ganciclovir (Cytovene), heparin, piperacillin/tazobactam (Zosyn), propofol (Diprivan). **Doxil:** Do not mix with any other medications.

IV COMPATIBILITIES

Dexamethasone (Decadron), diphenhydramine (Benadryl), granisetron (Kytril), hydromorphone (Dilaudid), lorazepam (Ativan), morphine, ondansetron (Zofran).

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Refer to individual protocols.

Usual Dosage

IV ***(Adriamycin)*****: ADULTS:** 60–75 mg/m^2 as a single dose every 21 days, 20 mg/m^2 once weekly, or 20–30 mg/m^2/day on 2–3 successive days q4wks. Because of risk of cardiotoxicity, do not exceed cumulative dose of 550 mg/m^2 (400–450 mg/m^2 for those previously treated with related compounds or irradiation of cardiac region). **CHILDREN:** 35–75 mg/m^2 as a single dose q3wks or 20–30 mg/m^2 weekly, or 60–90 mg/m^2 as continuous infusion over 96 hrs q3–4wks.

Kaposi's Sarcoma

IV ***(Doxil)*****: ADULTS:** 20 mg/m^2 q3wks infused over 30 min.

Ovarian Cancer

IV ***(Doxil)*****: ADULTS:** 50 mg/m^2 q4wks.

Multiple Myeloma

IV ***(Doxil)*****: ADULTS:** 30 mg/m^2/dose every 3 wks (with bortezomib).

Dosage in Renal Impairment

No dose adjustment.

Dose Modifications

Adriamycin

Neutropenic Fever/Infection: Reduce dose to 75%. **ANC less than 1,000/mm³:** Delay treatment until ANC 1,000/mm^3 or more. **Platelets less than 100,000/mm³:** Delay treatment until platelets 100,000/mm^3 or more.

Doxil

Adjustments for Hand-Foot Syndrome, Stomatitis, Hematologic Toxicities: Refer to manufacturer's labeling.

Dosage in Hepatic Impairment

ADRIAMYCIN

Hepatic Function	Dosage
ALT, AST 2–3 times ULN	75% of normal dose
ALT, AST greater than 3 times ULN or bilirubin 1.2–3 mg/dL	50% of normal dose
Bilirubin 3.1–5 mg/dL	25% of normal dose
Bilirubin greater than 5 mg/dL	Not recommended

ULN = upper limit of normal.

DOXIL

Hepatic Function	Dosage
Bilirubin 1.2–3 mg/dL	50% of normal dose
Bilirubin greater than 3 mg/dL	25% of normal dose

SIDE EFFECTS

Frequent: Complete alopecia (scalp, axillary, pubic hair), nausea, vomiting, stomatitis, esophagitis (esp. if drug is given on several successive days), reddish urine. **Doxil:** Nausea. **Occasional:** Anorexia, diarrhea; hyperpigmentation of nailbeds, phalangeal, dermal creases. **Rare:** Fever, chills, conjunctivitis, lacrimation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression manifested as hematologic toxicity (principally leukopenia and, to lesser extent, anemia, thrombocytopenia) generally occurs within 10–15 days, returns to normal levels by third wk. Cardiotoxicity (either acute, manifested as transient EKG abnormalities, or chronic, manifested as HF) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain ANC, CBC, platelet, erythrocyte counts before and at frequent intervals during therapy. Obtain EKG before therapy, LFT before each dose. Antiemetics may be effective in preventing, treating nausea.

INTERVENTION/EVALUATION

Monitor for stomatitis (burning or erythema of oral mucosa at inner margin of lips, difficulty swallowing). Observe IV injection site for infiltration, vein irritation. May lead to ulceration of mucous membranes within 2–3 days. Assess dermal creases, nailbeds for hyperpigmentation. Monitor hematologic status, renal/hepatic function studies, serum uric acid levels. Monitor daily pattern of bowel activity, stool consistency. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness).

PATIENT/FAMILY TEACHING

• Hair loss is reversible, but new hair growth may have different color, texture. New hair growth resumes 2–3 mos after last therapy dose. • Maintain strict oral hygiene. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site. • Report persistent nausea/vomiting. • Avoid alcohol (may cause GI irritation, a common side effect with liposomal doxorubicin).

doxycycline TOP 100

dox-i-**sye**-kleen

(Adoxa, Apo-Doxy, Doryx, Doxy-100, Doxycin, Monodox, Novo-Doxylin, Oracea, Periostat, Vibramycin, Vibra-Tabs).

Do not confuse doxycycline with dicyclomine or doxepin, Monodox with Maalox, Oracea with Orencia, Vibramycin with Vancomycin or Vibativ, or Vibra-Tabs with Vibativ.

D

CLASSIFICATION

PHARMACOTHERAPEUTIC: Tetracycline. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *H. ducreyi, Pasteurella pestis, P. tularensis, Bacteroides* spp., *V. cholerae, Brucella* spp., *Rickettsiae, Y. pestis, Francisella tularensis, M. pneumoniae* including brucellosis, chlamydia, cholera, granuloma inguinale, lymphogranuloma venereum, malaria prophylaxis, nongonococcal urethritis, pelvic inflammatory disease (PID), plague, psittacosis, relapsing fever, rickettsia infections, primary and secondary syphilis, tularemia. Treatment of inflammatory lesions in adults with rosacea. **OFF-LABEL:** Sclerosing agent for pleural effusion; vancomycin-resistant enterococci (VRE); alternative for MRSA, treatment of refractory periodontitis, juvenile periodontitis.

PRECAUTIONS

Contraindications: Hypersensitivity to tetracyclines. **Cautions:** History or predisposition to oral candidiasis. Avoid use during pregnancy, during tooth development in children. Avoid prolonged exposure to sunlight.

ACTION

Inhibits bacterial protein synthesis by binding to ribosomes. **Therapeutic Effect:** Bacteriostatic.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 90%. Partially excreted in urine; partially eliminated in bile. **Half-life:** 15–24 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category D. Children:** May cause permanent discoloration of teeth, enamel hypoplasia. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Antacids containing aluminum, calcium, magnesium; laxatives containing magnesium, oral iron preparations decrease absorption. **Barbiturates, carbamazepine, phenytoin** may decrease concentration. **Cholestyramine, colestipol** may decrease absorption. May decrease effects of **oral contraceptives. HERBAL: Dong quai, St. John's wort** may increase photosensitization. **St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, amylase, bilirubin, ALT, AST. May alter CBC.

AVAILABILITY (Rx)

Capsules: 40 mg (Oracea), 50 mg (Monodox), 75 mg (Monodox), 100 mg (Doryx, Monodox, Vibramycin). **Injection, Powder for Reconstitution (Doxy-100):** 100 mg. **Oral Suspension (Vibramycin):** 25 mg/5 ml. **Syrup (Vibramycin):** 50 mg/5 ml. **Tablets:** 20 mg (Periostat), 50 mg (Adoxa), 75 mg (Adoxa), 100 mg (Adoxa, Vibra-Tabs), 150 mg (Adoxa).

ADMINISTRATION/HANDLING

◀ALERT▶ Do not administer IM or subcutaneous. Space doses evenly around clock.

IV

Reconstitution • Reconstitute each 100-mg vial with 10 ml Sterile Water for Injection for concentration of 10 mg/ml. • Further dilute each 100 mg with at least 100 ml D_5W, 0.9% NaCl, lactated Ringer's.

Rate of Administration • Give by intermittent IV infusion (piggyback). • Infuse over 1–4 hrs.
Storage • After reconstitution, IV infusion (piggyback) is stable for 12 hrs at room temperature or 72 hrs if refrigerated. • Protect from direct sunlight. Discard if precipitate forms.

PO

• Store capsules, tablets at room temperature. • Oral suspension is stable for 2 wks at room temperature. • Give with full glass of fluid. • Instruct pt to sit up for 30 min after taking to reduce risk of esophageal irritation and ulceration. • Give without regard to food. Oracea should be given 1 hr before or 2 hrs after meals. • Avoid concurrent use of antacids, milk; separate by 2 hrs.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), heparin, piperacillin/tazobactam (Zosyn).

IV COMPATIBILITIES

Acyclovir (Zovirax), amiodarone (Cordarone), dexmedetomidine (Precedex), diltiazem (Cardizem), granisetron (Kytril), hydromorphone (Dilaudid), magnesium sulfate, meperidine (Demerol), morphine, ondansetron (Zofran), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IV/PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 8 YRS; GREATER THAN 45 KG: 100–200 mg/day in 1–2 divided doses. **CHILDREN OLDER THAN 8 YRS 45 KG OR LESS:** 2–5 mg/kg/day (**maximum:** 200 mg/day) in 1–2 divided doses.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Anorexia, nausea, vomiting, diarrhea, dysphagia, photosensitivity (may be severe). **Occasional:** Rash, urticaria.

ADVERSE EFFECTS/ TOXIC REACTIONS

Superinfection (esp. fungal), benign intracranial hypertension (headache, visual changes) may occur. Hepatotoxicity, fatty degeneration of liver, pancreatitis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. to tetracyclines, sulfites.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Monitor LOC due to potential for increased intracranial pressure (ICP). Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Monitor CBC, renal/hepatic function tests.

PATIENT/FAMILY TEACHING

• Avoid unnecessary exposure to sunlight. • Do not take with antacids, iron products. • Complete full course of therapy. • After application of dental gel, avoid brushing teeth, flossing the treated areas for 7 days. • Report severe diarrhea.

dronabinol

droe-**nab**-i-nol
(Marinol)
Do not confuse dronabinol with droperidol.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Controlled substance **(Schedule III).** **CLINICAL:** Antinausea, antiemetic, appetite stimulant.

USES

Prevention, treatment of nausea/vomiting due to cancer chemotherapy; appetite

stimulant in AIDS. **OFF-LABEL:** Cancer-related anorexia.

PRECAUTIONS

Contraindications: Hypersensitivity to sesame oil, tetrahydrocannabinol products, marijuana; history of schizophrenia. **Cautions:** History of psychiatric illness, history of substance abuse, mania, depression, seizure disorder, hepatic impairment, elderly.

ACTION

Unknown. May inhibit endorphins in brain's emetic center, suppress prostaglandins synthesis or effect on cannabinoid receptor in CNS. **Therapeutic Effect:** Inhibits nausea/vomiting, stimulates appetite.

PHARMACOKINETICS

Well absorbed after PO administration, only 10%–20% reaches systemic circulation. Protein binding: 97%. Undergoes first-pass metabolism. Highly lipid soluble. Primarily excreted in feces. **Half-life:** 25–36 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** Not recommended. **Elderly:** Monitor carefully during therapy.

INTERACTIONS

DRUG: Alcohol, other CNS suppressants may increase CNS depression. **Sympathomimetics, tricyclic antidepressants** may increase risk of hypertension, tachycardia. **Anticholinergics** may increase drowsiness, tachycardia. **HERBAL: St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules (Gelatin [Marinol]): 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• Store in cool environment. May refrigerate capsules. • May administer without regard to meals. Give before meals if used for appetite stimulant.

INDICATIONS/ROUTES/DOSAGE

Prevention of Chemotherapy-Induced Nausea and Vomiting

PO: ADULTS, CHILDREN: Initially, 5 mg/m^2 1–3 hrs before chemotherapy, then q2–4h after chemotherapy for total of 4–6 doses a day. May increase by 2.5 mg/m^2 up to 15 mg/m^2 per dose.

Appetite Stimulant

PO: ADULTS: Initially, 2.5 mg twice a day (before lunch and dinner). Range: 2.5–20 mg/day.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Reduce dose in severe hepatic failure.

SIDE EFFECTS

Frequent (24%–3%): Euphoria, dizziness, paranoid reaction, drowsiness. **Occasional (less than 3%–1%):** Asthenia, ataxia, confusion, abnormal thinking, depersonalization. **Rare (less than 1%):** Diarrhea, depression, nightmares, speech difficulties, headache, anxiety, tinnitus, flushed skin.

ADVERSE EFFECTS/ TOXIC REACTIONS

Mild intoxication may produce increased sensory awareness (taste, smell, sound), altered time perception, reddened conjunctiva, dry mouth, tachycardia. Moderate intoxication may produce memory impairment, urinary retention. Severe intoxication may produce lethargy, decreased motor coordination, slurred speech, orthostatic hypotension.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess dehydration status if excessive vomiting occurs (skin turgor, mucous membranes, urinary output).

INTERVENTION/EVALUATION

Supervise closely for serious mood, behavior responses, esp. in pts with history of psychiatric illness. Monitor B/P, heart rate.

PATIENT/FAMILY TEACHING

• Change positions slowly to avoid dizziness. • Relief from nausea/vomiting generally occurs within 15 min of drug administration. • Do not take any other medications, including OTC, without physician approval. • Avoid alcohol, barbiturates. • Avoid tasks that require alertness, motor skills until response to drug is established. • For appetite stimulation, take before lunch and dinner.

dronedarone

droe-**ne**-da-rone
(Multaq)

■ **BLACK BOX ALERT** ■ Contraindicated in those with Class II–III congestive heart failure (HF) with recent decompensation requiring hospitalization or referral to specialized HF clinic or with Class IV HF (over 2-fold increased mortality risk).

Do not confuse dronedarone with amiodarone, dexamethasone, methylnaltrexone, milrinone, prednisone, or risperidone, or Multaq with Adalat, Atarax, Betaloc, Carac, or Titralac.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Cardiac agent. **CLINICAL:** Antiarrhythmic.

USES

Outpatient management to reduce cardiovascular hospitalization in pts with persistent or paroxysmal atrial fibrillation, atrial flutter in those in sinus rhythm. **OFF-LABEL:** Treatment of atrial fibrillation in pts with hypertrophic cardiomyopathy.

PRECAUTIONS

Contraindications: Class II–III HF with recent decompensation requiring hospitalization or referral to specialized HF clinic, Class IV HF, sick sinus syndrome without pacemaker, bradycardia less than 50 beats/min, concurrent use of drugs that prolong QT interval (QTc interval equal to or greater than 500 ms or PR interval greater than 280 ms), pregnancy, breastfeeding, severe hepatic impairment. Concomitant use of strong CYP3A4 inhibitors (e.g., ketoconazole, cyclosporine, clarithromycin). **Cautions:** Mild to moderate hepatic impairment, hypomagnesemia, hypokalemia. May increase risk of serious cardiovascular events in pts with permanent atrial fibrillation. Renal impairment, women of childbearing potential.

ACTION

Exact mechanism unknown. Has antiarrhythmic properties of all 4 Vaughan-Williams classes, but contribution of each of these to clinical effect unknown. **Therapeutic Effect:** Suppresses arrhythmias.

PHARMACOKINETICS

Derivative of amiodarone. Protein binding: 98%. Metabolized extensively in liver. Eliminated mainly in feces, with smaller amount excreted in urine. **Half-life:** 13–19 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May be distributed in breast milk. May cause fetal harm; teratogenic. **Pregnancy Category X. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Drugs prolonging QT interval (e.g., tricyclic antidepressants, macrolide antibiotics, class I and III

antiarrhythmics) are contraindicated. **Calcium channel blockers, beta blockers** that depress SA/AV node function may increase effects. May increase concentration, toxicity of **digoxin. Simvastatin** may increase risk of myopathy, rhabdomyolysis. **CYP3A4 inducers (e.g., rifampin)** may increase risk for torsades, VF. **CYP3A4 inhibitors (e.g., ketoconazole)** may increase concentration. May increase concentration of **tacrolimus, sirolimus. HERBAL: St. John's wort** may decrease effect. **FOOD: Grapefruit products** may decrease effects. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, ANA titer. May cause changes in EKG, thyroid function tests. Expected to increase serum creatinine by about 0.1 mg/dL; elevation has rapid onset, reaches plateau after 7 days, and is reversible after discontinuation.

AVAILABILITY (Rx)

Tablets (Film-Coated): 400 mg.

ADMINISTRATION/HANDLING

PO

• Give with meals to reduce risk of GI distress. • Do not break, crush, dissolve, or divide film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Should only be used in pts who can be converted to normal sinus rhythm.

Atrial Fibrillation/Atrial Flutter

PO: ADULTS, ELDERLY: 400 mg twice daily: 1 tablet with morning meal, 1 tablet with evening meal.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (9%–5%): Diarrhea, asthenia, nausea, rash (including pruritus, dermatitis, eczema). **Occasional (4%–3%):** Abdominal pain, bradycardia. **Rare (2%–1%):** Vomiting, dyspepsia, photosensitivity reaction, dysgeusia (distortion or loss of taste).

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose manifested as arrhythmias, B/P changes.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Premenopausal women who have not undergone a hysterectomy or oophorectomy must use effective contraception (Pregnancy Category X). Obtain baseline pulmonary function tests, chest X-ray, serum ALT, AST, alkaline phosphatase, potassium, magnesium, creatinine. Potassium levels should be within normal range prior to administration and maintained in normal range during administration.

INTERVENTION/EVALUATION

If serum creatinine increases and plateaus, use increased value as pt's new baseline. Assess pulse for quality, irregular rate, bradycardia. Monitor EKG for cardiac changes, particularly widening of QRS, prolongation of PR and QT intervals. Stop medication if QTc interval is equal to or greater than 500 ms. Notify physician of any significant interval changes. Assess for diarrhea, nausea, rash, weakness.

PATIENT/FAMILY TEACHING

• Protect against photosensitivity reaction on skin exposed to sunlight. Wear protective clothing; avoid suntanning beds. • Report increased shortness of breath, cough, sudden weight gain, dependent edema. • Pt should monitor pulse before taking medication. • Compliance with therapy regimen is essential to control arrhythmias. • Use appropriate contraception to avoid pregnancy (Pregnancy Category X).

droxidopa

drox-i-doe-pa
(Northera)

■ **BLACK BOX ALERT** ■ Monitor supine B/P prior to and during treatment or more frequently when dosage is increased. Elevating head of bed (HOB) decreases risk of supine hypertension. If supine hypertension cannot be managed by elevating HOB, reduce or discontinue treatment.

Do not confuse droxidopa with carbidopa, levodopa, or methyldopa.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic amino acid precursor of norepinephrine. **CLINICAL:** Vasoconstrictor.

USES

Treatment of orthostatic dizziness, lightheadedness, presyncopal episodes in adults with symptomatic neurogenic orthostatic hypotension caused by primary autonomic failure (Parkinson's disease, multiple system atrophy, pure autonomic failure), dopamine beta-hydroxylase deficiency, and nondiabetic autonomic neuropathy.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of arrhythmia, cardiovascular disease, HF, hypertension, recent MI.

ACTION

Exact mechanism of action unknown. Directly metabolized to norepinephrine (exerts vasoconstriction effects through norepinephrine). **Therapeutic Effect:** Increases B/P through peripheral arterial and venous vasoconstriction.

PHARMACOKINETICS

Rapidly absorbed following PO administration. Metabolized at cellular level by dopa-decarboxylase via catecholamine pathway to norepinephrine. Protein binding: 75%. Peak plasma concentration: 1–4 hrs. Eliminated in urine (75%). **Half-life:** 2.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. **Pregnancy Category C.**
Children: Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Medications that increase B/P **(e.g., midodrine, norepinephrine, triptans)** may increase risk of supine hypertension. **HERBAL:** **Ephedrine, guarana, licorice** may increase risk of supine hypertension. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Capsules: 100 mg, 200 mg, 300 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Administer whole; do not break, cut, crush, or divide.

INDICATIONS/ROUTES/DOSAGE

Symptomatic Neurogenic Orthostatic Hypotension

PO: ADULTS/ELDERLY: Initially, 100 mg 3 times/day: on arising in the morning, at midday, and in late afternoon, at least 3 hrs prior to bedtime with HOB elevated (to reduce risk of supine hypertension during sleep). Titrate to symptomatic response, in increments of 100 mg 3 times/day, q24–48h. **Maximum:** 600 mg 3 times/day (1,800 mg/day).

Dosage in Renal Impairment

Mild to Moderate: No dose adjustment necessary. **Severe:** Use caution.

Dosage in Hepatic Impairment
Not studied; use caution.

Persistent Supine Hypertension
Reduce dose or permanently discontinue.

D

SIDE EFFECTS

Occasional (13%–7%): Headache, dizziness, nausea, hypertension.

ADVERSE EFFECTS/TOXIC REACTIONS

May cause or exacerbate supine hypertension; risk increased if administered within 3 hrs of bedtime. May increase risk of cardiovascular events, esp. in pts with history of ischemic heart disease, arrhythmias, and HF. Hyperpyrexia and confusion may indicate neuroleptic malignant syndrome (fever, hyperthermia, muscle rigidity, involuntary movements, altered mental status). May cause hypersensitivity reaction including bronchial asthma.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain orthostatic vital signs; note B/P in supine position. Initiate fall precautions. Question history of arrhythmia, cardiovascular disease, HF, hypertension, recent MI. Receive full medication history including herbal products.

INTERVENTION/EVALUATION

Closely monitor B/P, both in supine position and in elevated HOB position, esp. after any increased change in dosage. Ensure HOB is elevated when pt resting/sleeping. Monitor orthostatic vital signs for treatment effectiveness. Routinely screen for neuroleptic malignant syndrome.

PATIENT/FAMILY TEACHING

• Treatment may cause high blood pressure while lying flat. Recommend sleeping with HOB elevated. • Do not take within 3 hrs of bedtime. • Slowly go from lying to standing. • Immediately report confusion, fever, headache, muscle rigidity, involuntary movements, allergic reactions such as difficulty breathing or wheezing. • Do not breastfeed.

dulaglutide

doo-la-**gloo**-tide
(Trulicity)

■ **BLACK BOX ALERT** ■ Contraindicated in pts with a personal/family history of medullary thyroid carcinoma (MTC) or in pts with multiple endocrine neoplasia syndrome type 2 (MEN2). Unknown if dulaglutide causes thyroid cell tumors in humans.

Do not confuse dulaglutide with albiglutide or liraglutide.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: GLP-1 receptor agonist. **CLINICAL:** Antidiabetic.

USES

Adjunct to diet and exercise to improve glycemic controls in pts with type 2 diabetes mellitus.

PRECAUTIONS

Contraindications: Personal/family history of medullary thyroid carcinoma or multiple endocrine neoplasia syndrome type 2. Prior hypersensitivity reaction to drug class. **Cautions:** Pts with increased serum calcitonin, thyroid nodules, hx pancreatitis, renal impairment. Not recommended in pts with severe GI disease, diabetic ketoacidosis, or type 1 diabetes.

ACTION

Activates GLP-1 receptors in pancreatic beta cells increasing intracellular cyclic AMP. **Therapeutic Effect:** Causes glucose-dependent insulin release, decreases glucagon secretion, slows gastric emptying. Improves glycemic control.

PHARMACOKINETICS

Readily absorbed following subcutaneous administration. Degraded into amino acids by general protein catabolism. Peak plasma concentration: 24–72 hrs. Steady state reached in 2–4 wks. Elimination not specified. **Half-life:** 5 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. **Pregnancy Category C. Children:** Safety and efficacy not established in pts younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Insulin, insulin secretagogues (e.g., glyburide)** may increase risk of hypoglycemia. May reduce rate of absorption of oral medications. **HERBAL:** **Garlic,** other herbs with hypooglycemic activity may increase risk of hypoglycemia. **FOOD:** None known. **LAB VALUES:** Expected to decrease serum glucose, Hgb A1c. May increase amylase, lipase.

AVAILABILITY (Rx)

Prefilled Injector Pen or Syringe: 0.75 mg/0.5 ml, 1.5 mg/0.5 ml.

ADMINISTRATION/HANDLING

Subcutaneous

• Administer any time of day, without regard to meals, on same day each week. • May change administration day if last dose was given more than 3 days prior. If dose missed, administer within 3 days of missed dose. If more than 3 days have passed after missed dose, wait until next regularly scheduled dose to administer.

Administration • Subcutaneously insert needle into abdomen, thigh, or upper arm region and inject solution. • Do not reuse needle. • Rotate injection sites each week.

Storage • Refrigerate unused pens/syringes; do not freeze. • May store at room temperature for up to 14 days. • Protect from light.

INDICATIONS/ROUTES/DOSAGE

Type 2 Diabetes Mellitus

SQ: ADULTS/ELDERLY: 0.75 mg once weekly. May increase to 1.5 mg once weekly if glycemic response inadequate. **Maximum:** 1.5 mg weekly.

Dose Modification

Concomitant Use with Insulin Secretagogue (e.g., Sulfonylurea) or Insulin: Consider reduced dose of insulin secretagogue based on glycemic goal.

Dosage in Renal/Hepatic Impairment

No dose adjustment necessary.

SIDE EFFECTS

Occasional (12%–6%): Nausea, diarrhea, vomiting, abdominal pain. **Rare (4% or less):** Decreased appetite, dyspepsia, fatigue, asthenia.

ADVERSE EFFECTS/TOXIC REACTIONS

May increase risk of acute renal failure or worsening of chronic renal impairment (esp. with dehydration), severe gastroparesis, pancreatitis, thyroid C-cell tumors. May increase risk of hypoglycemia when used with other hypoglycemic agents or insulin. Dyspnea, pruritus, rash may indicate hypersensitivity reaction. May prolong PR interval by 2–3 msec or may rarely cause first-degree AV block, tachycardia. Immunogenicity (antidulaglutide antibody formation) reported. Some pts with antibody formation also tested positive for antibodies to GLP-1 and human albumin.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline fasting glucose level, Hgb A1c, BMP. Question history of medullary thyroid carcinoma, multiple endocrine neoplasia syndrome type 2, pancreatitis, renal impairment; first-degree AV block, PR interval prolongation. Receive full medication history and screen for use of

other hypoglycemic agents or insulin. Assess pt's understanding of diabetes management, routine home glucose monitoring, medication self-administration. Assess hydration status.

D

INTERVENTION/EVALUATION

Monitor capillary blood glucose levels, Hgb A1c; renal function test in pts with renal impairment reporting severe GI reactions including diarrhea, gastroparesis, vomiting. Screen for thyroid tumors (dysphagia, dyspnea, persistent hoarseness, neck mass). If tumor suspected, consider endocrinologist consultation. Clinical significance of serum calcitonin level or thyroid ultrasound with GLP-1–associated thyroid tumors is debated/unknown. Assess for hypoglycemia, hyperglycemia, hypersensitivity/allergic reaction. Screen for glucose-altering conditions: fever, stress, surgical procedures, trauma. Obtain dietary consult for nutritional education. Encourage PO intake.

PATIENT/FAMILY TEACHING

• Diabetes mellitus requires lifelong control. Diet and exercise are principal parts of treatment; do not skip or delay meals. Test blood sugar regularly. Monitor daily calorie intake. • When taking additional medications to lower blood sugar or when glucose demands are altered (fever, infection, stress trauma), have low blood sugar treatment available (glucagon, oral dextrose). • Report suspected pregnancy or plans for breastfeeding. • Therapy may increase risk of thyroid cancer; report lumps or swelling of the neck; hoarseness, shortness of breath, trouble swallowing. • Persistent, severe abdominal pain that radiates to the back (with or without vomiting) may indicate acute pancreatitis. • Rash, itching, hives may indicate allergic reaction.

duloxetine

TOP 100

du-**lox**-e-teen
(Cymbalta)

■ **BLACK BOX ALERT** ■ Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse duloxetine with fluoxetine or paroxetine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin norepinephrine reuptake inhibitor (SNRI). **CLINICAL:** Antidepressant.

USES

Treatment of major depression. Management of pain associated with diabetic neuropathy, fibromyalgia, or chronic musculoskeletal pain. Treatment of generalized anxiety disorder. **OFF-LABEL:** Treatment of stress incontinence.

PRECAUTIONS

Contraindications: Uncontrolled narrow-angle glaucoma, use within 14 days of MAOIs. Concomitant use with linezolid or IV methylene blue. **Cautions:** Renal impairment, history of alcoholism, chronic hepatic disease, history of mania, pts with suicidal ideation or behavior. Concurrent use with inhibitors of CYP1A2 or thioridazine, CNS depressants. Hypertension, controlled narrow-angle glaucoma, pts with impaired GI motility. Concomitant use of NSAIDs (may increase risk of bleeding), history of seizures. Use of medications that lower seizure threshold; elderly; pts at high risk for suicide.

ACTION

Appears to inhibit serotonin and norepinephrine reuptake at CNS neuronal presynaptic membranes; is a less potent inhibitor of dopamine reuptake. **Therapeutic Effect:** Produces antidepressant effect.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: greater than 90%. Metabolized in liver. Excreted in urine (70%), feces (20%). **Half-life:** 8–17 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May produce neonatal adverse reactions (constant crying, feeding difficulty, hyperreflexia, irritability). Unknown if distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Caution required when increasing dosage.

INTERACTIONS

DRUG: **Alcohol** increases risk of hepatic injury. **CYP1A2** and **CYP2D6 inhibitors (e.g., fluoxetine, fluvoxamine, paroxetine, quinidine, quinolone antimicrobials)** may increase plasma concentration. **MAOIs** may cause serotonin syndrome (autonomic hyperactivity, coma, diaphoresis, excitement, hyperthermia, rigidity). **Aspirin, NSAIDs** may increase risk of bleeding. May increase concentration, potential toxicity of **tricyclic antidepressants.** Serotonergic drugs **(e.g., triptans, lithium, tramadol)** may increase risk of serotonin syndrome. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may increase risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** May increase serum bilirubin, ALT, AST, alkaline phosphatase.

AVAILABILITY (Rx)

Capsules (Delayed-Release, Enteric-Coated Pellets): 20 mg, 30 mg, 60 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Allow at least 14 days to elapse between use of MAOIs and duloxetine.

PO

• Give without regard to meals. Give with food, milk if GI distress occurs. • Do not break, crush, cut delayed-release capsules. • Contents of capsule may be sprinkled on applesauce or mixed in apple juice and swallowed (without chewing) immediately.

INDICATIONS/ROUTES/DOSAGE

Fibromyalgia

PO: ADULTS: Initially, 30 mg/day for 1 wk. Increase to 60 mg/day.

Major Depressive Disorder

PO: ADULTS: Initially, 40–60 mg/day in 1 or 2 divided doses. For doses greater than 60 mg/day, titrate in increments of 30 mg/day over 1 wk. **Maximum:** 120 mg/day. **ELDERLY:** Initially, 20 mg 1–2 times day. May increase to 40–60 mg/day as single or divided doses.

Diabetic Neuropathy Pain

PO: ADULTS, ELDERLY: 60 mg once a day. **Maximum:** 120 mg/day.

Generalized Anxiety Disorder

PO: ADULTS, ELDERLY: Initially, 30–60 mg once daily. May increase up to 120 mg/day in 30-mg increments weekly.

Chronic Musculoskeletal Pain

PO: ADULTS, ELDERLY: 30 mg once daily for 1 wk, then increase to 60 mg once daily.

Dosage in Renal/Hepatic Impairment

Not recommended with creatinine clearance less than 30 ml/min or ESRD. **Hepatic:** Not recommended.

SIDE EFFECTS

Frequent (20%–11%): Nausea, dry mouth, constipation, insomnia. **Occasional (9%–5%):** Dizziness, fatigue, diarrhea, drowsiness, anorexia, diaphoresis, vomiting. **Rare (4%–2%):** Blurred vision, erectile dysfunction, delayed or failed ejaculation, anorgasmia, anxiety, decreased libido, hot flashes.

D

ADVERSE EFFECTS/ TOXIC REACTIONS

May slightly increase heart rate. Colitis, dysphagia, gastritis, irritable bowel syndrome occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess appearance, behavior, speech pattern, level of interest, mood, sleep pattern, suicidal tendencies. Question pain level, intensity, location of pain.

INTERVENTION/EVALUATION

For those on long-term therapy, serum chemistry profile to assess hepatic/renal function should be performed periodically. Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Monitor B/P, mental status, anxiety, social functioning, serum glucose levels.

PATIENT/FAMILY TEACHING

• Therapeutic effect may be noted within 1–4 wks. • Do not abruptly discontinue medication. • Avoid tasks that require alertness, motor skills until response to drug is established. • Inform physician of intention of pregnancy or if pregnancy occurs. • Report anxiety, agitation, panic attacks, worsening of depression. • Avoid heavy alcohol intake (associated with severe hepatic injury).

dutasteride

du-**tas**-ter-ide
(Avodart)

FIXED-COMBINATION(S)

Jalyn: dutasteride/tamsulosin (alpha-adrenergic blocker): 0.5 mg/0.4 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Androgen hormone inhibitor. **CLINICAL:** Benign prostatic hyperplasia (BPH) agent.

USES

Treatment of benign prostatic hyperplasia (BPH), alone or in combination with tamsulosin (Flomax). **OFF-LABEL:** Treatment of hair loss.

PRECAUTIONS

Contraindications: Females who are pregnant or of childbearing potential, pediatric pts. **Cautions:** Obstructive uropathy, physical handling of tablets by those who are or may be pregnant. **Pregnancy Category X.**

ACTION

Inhibits 5-alpha reductase, an intracellular enzyme that converts testosterone into dihydrotestosterone (DHT) in the prostate gland, reducing serum DHT level. **Therapeutic Effect:** Reduces enlarged prostate gland.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	24 hrs	N/A	3–8 wks

Moderately absorbed after PO administration. Widely distributed. Protein binding: 99%. Metabolized in liver. Primarily excreted in feces. **Half-life:** Up to 5 wks.

INTERACTIONS

DRUG: **CYP3A4 inhibitors (e.g., ritonavir)** may increase concentration. **HERBAL:** Avoid **saw palmetto** (limited experience with this combination). **St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** Decreases serum prostate-specific antigen (PSA) level.

AVAILABILITY (Rx)

Capsules: 0.5 mg.

ADMINISTRATION/HANDLING

PO

• Swallow whole. Do not break, crush, dissolve, or divide capsules. • Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

Benign Prostatic Hyperplasia (BPH)

PO: ADULTS, ELDERLY (MEN ONLY): 0.5 mg once a day (alone or in combination with tamsulosin).

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Occasional (5%–3%): Impotence, decreased libido. **Rare (less than 2%):** Ejaculation disorders, gynecomastia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Toxicity manifested as rash, diarrhea, abdominal pain.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Serum prostate-specific antigen (PSA) determination should be performed in pts with benign prostatic hyperplasia (BPH) before beginning therapy and periodically thereafter. Question possibility of sexual dysfunction.

INTERVENTION/EVALUATION

Diligently monitor I&O. Assess for signs/symptoms of BPH (hesitancy, reduced force of urinary stream, postvoid dribbling, sensation of incomplete bladder emptying).

PATIENT/FAMILY TEACHING

• Take whole; do not chew, crush, dissolve, or divide capsules. • Discuss potential for impotence; volume of ejaculate may be decreased during treatment. • May not notice improved urinary flow for up to 6 mos after beginning treatment. • Women who are or may be pregnant should not handle capsules (risk of fetal anomaly to male fetus). • Do not donate blood for at least 6 mos after last dose.

ecallantide

e-**kal**-an-tide
(Kalbitor)

■ **BLACK BOX ALERT** ■ Risk of anaphylactic reaction. Must be administered by health care personnel with appropriate support to manage anaphylaxis, hereditary angioedema and an understanding of the similarity of symptoms.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Plasma kallikrein inhibitor. **CLINICAL:** Proteolytic complex.

USES

Treatment of acute attacks of hereditary angioedema in pts 12 yrs and older.

PRECAUTIONS

Contraindications: Known hypersensitivity to other proteolytic medications or to ecallantide. **Cautions:** None known.

ACTION

Blocks inflammatory and coagulation pathways; converts kininogen to bradykinin by inactivating enzymatic active components. **Therapeutic Effect:** Reduces conversion of kininogen to bradykinin, thereby treating symptoms of hereditary angioedema.

PHARMACOKINETICS

Half-life: 1.5–2.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 16 yrs. **Elderly:** Age-related renal, hepatic, cardiac impairment may require dosage adjustment. Initiate treatment at low end of dosage range.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May prolong aPTT.

AVAILABILITY (Rx)

Single-Use Vial: 10 mg/ml. Dose supplied as three single-use vials in one carton.

ADMINISTRATION/HANDLING

Subcutaneous

Reconstitution • Withdraw 1 ml (10 mg) from each vial.

Rate of Administration • Administer as 3 subcutaneous injections. • Injection site for each injection may be in same or different anatomic locations (abdomen, thigh, upper arm). There is no need for site rotation. Injection sites should be located at least 2 inches away from anatomic site of attack.

Storage • Refrigerate unused vials. • Liquid appears as clear, colorless. Discard if solution contains particulate or is discolored. • Vials kept at room temperature must be used within 14 days or returned to refrigeration.

INDICATIONS/ROUTES/DOSAGE

Hereditary Angioedema

Subcutaneous: ADULTS, ELDERLY, ADOLESCENTS 12 YRS AND OLDER: 30 mg (3 ml) administered as three injections of 10 mg (1 ml) each. If attack persists, an additional 30-mg dose may be administered within 24 hrs.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (8%–3%): Headache, nausea, diarrhea, fever, injection site reactions, nasopharyngitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Symptoms associated with anaphylactic reactions may include chest discomfort, flushing, pharyngeal edema, pruritus, rhinorrhea, sneezing, urticaria, rash, wheezing, hypotension. Reactions occur within first hr after dosing.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess for history of immediate hypersensitivity reactions, including anaphylaxis.

INTERVENTION/EVALUATION

Observe pt following drug administration. Given the similarity between hypersensitivity reactions and acute hereditary angioedema symptoms, pt should be monitored closely in the event of a hypersensitivity reaction.

PATIENT/FAMILY TEACHING

• Immediately report signs, symptoms of allergic reactions. Pt should be advised that medication may cause anaphylaxis, other hypersensitivity reactions. • A second 30-mg subcutaneous dose administered within 24 hrs following initial dose may be given if symptoms persist or relapse occurs.

eculizumab

e-kue-**liz**-ue-mab
(Soliris)

■ **BLACK BOX ALERT** ■ Increased risk for meningococcal infections (septicemia, meningitis) in those with paroxysmal nocturnal hemoglobinemia. Meningococcal vaccination to be given 2 wks before initiation of treatment. Access restricted through a REMS program. **Do not confuse eculizumab with efalizumab or palivizumab, or Soliris with Synagis.**

CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Hemostatic agent.

USES

Reduces hemolysis in pts with paroxysmal nocturnal hemoglobinuria. Treatment of atypical hemolytic uremic syndrome to inhibit complement-mediated thrombotic microangiopathy.

PRECAUTIONS

Contraindications: Unresolved serious *Neisseria meningitides* infection, pts not currently vaccinated against *N. meningitides*. **Cautions:** Systemic infection.

ACTION

Binds to complement protein C5, preventing terminal intravascular hemolysis. **Therapeutic Effect:** Prevents intravascular hemolysis in paroxysmal nocturnal hemoglobinuria.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	Rapid	End of infusion	1–2 wks

Complete bioavailablity. Unknown metabolism. **Half-life:** 11.3 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase levels/effects of **leflunomide, natalizumab. Trastuzumab** may increase concentration/effect. **HERBAL: Echinacea** may decrease effect. **FOOD:** None known. **LAB VALUES:** Reduces serum LDH levels.

AVAILABILITY (Rx)

Injection, Solution: 10 mg/ml (30-ml vial).

ADMINISTRATION/HANDLING

◀ALERT▶ Vaccination with a meningococcal vaccine must be given at least 2 wks prior to receiving first dose of eculizumab. Must be given by IV infusion; do not give by bolus or IV push.

IV

Reconstitution • Withdraw required amount of eculizumab from vial and

dilute with equal volume of 0.9% NaCl, D_5W, or lactated Ringer's to provide final concentration of 5 mg/ml. • Final admixture is 120 ml for 600-mg dose or 180 ml for 900-mg dose. • Gently invert bag to ensure thorough mixing. • Prior to administration, allow admixture to adjust to room temperature.

Rate of Administration • Administer over 35 min. • Total infusion time should not exceed 2 hrs.

Storage • Refrigerate vials. • Discard solution that is discolored or contains particulate matter. • Solution is stable for 24 hrs at room temperature or if refrigerated.

INDICATIONS/ROUTES/DOSAGE

Paroxysmal Nocturnal Hemoglobinuria

IV Infusion: ADULTS, ELDERLY: 600 mg every 7 days for 4 doses, followed by 900 mg 7 days later, then 900 mg every 14 days thereafter.

Atypical Hemolytic Uremic Syndrome

IV Infusion: ADULTS, ELDERLY: 900 mg every 7 days for 4 doses, followed by 1,200 mg 7 days later, then 1,200 mg every 14 days thereafter. **CHILDREN (BASED ON BODY WEIGHT):**

Body Weight	Induction	Maintenance
40 kg and over	900 mg weekly × 4 doses	1,200 mg wk 5, then 1,200 mg q2wks
30–39 kg	600 mg weekly × 2 doses	900 mg wk 3, then 900 mg q2wks
20–29 kg	600 mg weekly × 2 doses	600 mg wk 3, then 600 mg q2wks
10–19 kg	600 mg weekly × 1 dose	300 mg wk 2, then 300 mg q2wks
5–9 kg	300 mg weekly × 1 dose	300 mg wk 2, then 300 mg q3wks

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (44%–23%): Headache, pharyngitis. **Occasional (19%–12%):** Back pain, nausea, cough, fatigue. **Rare (7%):** Constipation, myalgia, sinusitis, herpes simplex infection, extremity pain, influenza-like symptoms.

ADVERSE EFFECTS/ TOXIC REACTIONS

Eculizumab increases susceptibility to serious meningococcal infections (septicemia, meningitis), encapsulated bacteria. Pts who discontinue treatment may be at increased risk for serious hemolysis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory studies. Vaccinate pts with meningococcal vaccine at least 2 wks prior to receiving first dose of eculizumab.

INTERVENTION/EVALUATION

Observe for infusion site reaction. Monitor CBC, LDH, AST, urinalysis results. Monitor for early signs of meningococcal infection (moderate to severe headache with nausea or vomiting; moderate to severe headache and fever; moderate to severe headache with stiff neck or stiff back; fever 103°F or higher; fever with rash, confusion, severe myalgia with flu-like symptoms, photosensitivity).

PATIENT/ FAMILY TEACHING

• Vaccination may not prevent meningococcal infection.

efavirenz

e-**fav**-ir-enz
(Sustiva)

FIXED COMBINATION(S)

Atripla: efavirenz/emtricitabine (an antiretroviral)/tenofovir (an antiretroviral): 600 mg/200 mg/300 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonnucleoside reverse transcriptase inhibitor. **CLINICAL:** Antiretroviral.

USES

Treatment of HIV infection in combination with at least two other appropriate antiretroviral agents in adults and children 3 mos and older.

PRECAUTIONS

Contraindications: Concurrent use with bepridil, ergot derivatives, midazolam, St. John's wort, triazolam. **Cautions:** History of mental illness, seizures, suspected hepatitis B or C, substance abuse, hepatic impairment (class A). Avoid pregnancy.

ACTION

Binds to reverse transcriptase, blocking RNA and DNA-dependent DNA polymerase activity including HIV-1 replication. **Therapeutic Effect:** Interrupts HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 99%. Metabolized in liver. Eliminated in feces (16%–61%), urine (14%–34%). **Half-life:** 40–55 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Breastfeeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 3 yrs; may have increased incidence of rash. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Ergot derivatives, midazolam, triazolam** may cause serious or life-threatening reactions (cardiac arrhythmias, prolonged sedation, respiratory depression). Decreases plasma concentrations of **amprenavir, atazanavir, boceprevir, telaprevir, indinavir, saquinavir.** Increases plasma concentrations of **ritonavir. CYP3A4 inducers (e.g., phenobarbital, rifabutin, rifampin)** decrease concentration/effects. May alter **warfarin** plasma concentration. **HERBAL:** **St. John's wort** may decrease concentration/effects. **FOOD:** **High-fat meals** may increase drug absorption. **LAB VALUES:** May produce false-positive urine test results for cannabinoid. May increase serum ALT, AST. May decrease neutrophils.

AVAILABILITY (Rx)

Capsules: 50 mg, 200 mg.

Tablets: 600 mg.

ADMINISTRATION/HANDLING

PO

- Give with water at bedtime (decreases CNS adverse effects).
- Avoid high-fat meals (may increase absorption)
- Capsules may be opened and added to small amount of food/liquid. Administer within 30 min.
- Do not break, crush, dissolve, or divide tablets.

INDICATIONS/ROUTES/DOSAGE

HIV Infection (in Combination with Other Antiretrovirals)

PO: ADULTS, ELDERLY, CHILDREN WEIGHING 40 KG OR MORE: 600 mg once a day at bedtime. **CHILDREN WEIGHING 32.5 KG–LESS THAN 40 KG:** 400 mg once a day. **CHILDREN WEIGHING 25 KG–LESS THAN 32.5 KG:** 350 mg once a day. **CHILDREN WEIGHING 20 KG–LESS THAN 25 KG:** 300 mg once a day. **CHILDREN WEIGHING 15 KG–LESS THAN 20 KG:** 250 mg once a day. **CHILDREN WEIGHING 7.5 KG–LESS THAN 15 KG:** 200 mg once a day. **CHILDREN WEIGHING 5 KG–LESS THAN 7.5 KG:** 150 mg once a day. **CHILDREN WEIGHING 3.5 KG–LESS THAN 5 KG:** 100 mg once a day.

Dosage: Concurrent Rifampin

PO: ONLY IF PT WEIGHS 50 KG OR GREATER: 800 mg once daily.

Dosage: Concurrent Voriconazole
PO: Reduce efavirenz to 300 mg once daily; increase voriconazole to 400 mg q12h.

Dosage in Renal/Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Frequent (52%): **Mild to severe:** Dizziness, vivid dreams, insomnia, confusion, impaired concentration, amnesia, agitation, depersonalization, hallucinations, euphoria. **Occasional:** **Mild to moderate:** Maculopapular rash (27%); nausea, fatigue, headache, diarrhea, fever, cough (less than 26%).

ADVERSE EFFECTS/ TOXIC REACTIONS

Serious adverse psychiatric experiences (aggressive reactions, agitation, delusions, emotional lability, mania, neurosis, paranoia, psychosis, suicide) have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support. Obtain baseline ALT, AST in pts with history of hepatitis B or C; serum cholesterol or triglycerides before initiating therapy and at intervals during therapy. Obtain history of all prescription and OTC medications (high level of drug interaction).

INTERVENTION/EVALUATION

Monitor for CNS, psychological symptoms: severe acute depression (including suicidal ideation or attempts), dizziness, impaired concentration, drowsiness, abnormal dreams, insomnia (begins during first or second day of therapy, generally resolves in 2–4 wks). Assess for evidence of rash (common side effect). Monitor hepatic enzyme studies for abnormalities. Assess for headache, nausea, diarrhea.

PATIENT/FAMILY TEACHING

• Avoid high-fat meals during therapy. • Report appearance of skin rash immediately. • CNS, psychological symptoms occur in more than half of pts (dizziness, impaired concentration, delusions, depression). • Take medication every day as prescribed. • Do not alter dose or discontinue medication without informing physician. • Do not chew, crush, dissolve, or divide tablets. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Efavirenz is not a cure for HIV infection, nor does it reduce risk of transmission to others.

eletriptan

el-e-**trip**-tan
(Relpax)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin receptor agonist. **CLINICAL:** Antimigraine.

USES

Treatment of acute migraine headache with or without aura.

PRECAUTIONS

Contraindications: Arrhythmias associated with conduction disorders, cerebrovascular syndrome including strokes and transient ischemic attacks (TIAs), coronary artery disease, hemiplegic or basilar migraine, ischemic heart disease, peripheral vascular disease including ischemic bowel disease, severe hepatic impairment, uncontrolled hypertension; use within 24 hrs of treatment with another 5-HT_1 agonist, an ergotamine-containing or ergot-type medication such as dihydroergotamine (DHE) or methysergide. **Cautions:** Mild to moderate renal/hepatic impairment, controlled hypertension, history of CVA.

ACTION

Binds selectively to serotonin receptors, producing vasoconstrictive effect on cranial blood vessels. **Therapeutic Effect:** Relieves migraine headache.

PHARMACOKINETICS

Well absorbed after PO administration. Metabolized by liver. Eliminated in urine. **Half-life:** 4.4 hrs (increased in hepatic impairment, elderly [older than 65 yrs]).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May decrease possibility of ovulation. Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Increased risk of hypertension in those older than 65 yrs.

INTERACTIONS

DRUG: **CYP3A4 inhibitors (e.g., clarithromycin, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir)** may decrease metabolism. **Ergotamine-containing medications** may produce vasospastic reaction. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 20 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

• May take without regard to food. Do not break, crush, dissolve, or divide film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

Acute Migraine Headache

PO: ADULTS, ELDERLY: 20–40 mg. If headache improves but then returns, dose may be repeated after 2 hrs. **Maximum:** 80 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (6%–5%): Dizziness, drowsiness, asthenia, nausea. **Rare (3%–2%):** Paresthesia, headache, dry mouth, warm or hot sensation, dyspepsia, dysphagia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Cardiac reactions (ischemia, coronary artery vasospasm, MI), noncardiac vasospasm-related reactions (hemorrhage, CVA) occur rarely, particularly in pts with hypertension, obesity, diabetes, strong family history of coronary artery disease; smokers; males older than 40 yrs; postmenopausal women.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question pt regarding onset, location, duration of migraine, possible precipitating symptoms. Obtain baseline B/P for evidence of uncontrolled hypertension (contraindication).

INTERVENTION/EVALUATION

Assess for relief of migraine headache, potential for photophobia, phonophobia (sound sensitivity), nausea, vomiting.

PATIENT/FAMILY TEACHING

• Take a single dose as soon as symptoms of an actual migraine attack appear. • Medication is intended to relieve migraine headaches, not to prevent or reduce number of attacks. • Avoid tasks that require alertness, motor skills until response to drug is established. • Immediately report palpitations, pain/tightness in chest/throat, sudden or severe abdominal pain, pain/weakness of extremities.

eltrombopag

el-**trom**-boe-pag
(Promacta, Revolade)

■ **BLACK BOX ALERT** ■ May cause hepatotoxicity. Measure ALT, AST,

and bilirubin prior to initiation of eltrombopag, every 2 wks during dose adjustment phase, and monthly following establishment of a stable dose. If bilirubin is elevated, perform fractionation. Discontinue eltrombopag if ALT levels increase to 3 times or greater upper limit of normal and are progressive, persistent for 4 or more wks, accompanied by increased direct bilirubin, clinical symptoms of hepatic injury, or evidence of hepatic decompensation.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Thrombopoietin receptor agonist. **CLINICAL:** Prevents thrombocytopenia.

USES

Treatment of thrombocytopenia in pts with chronic immune (idiopathic) thrombocytopenic purpura (ITP) with insufficient response with corticosteroids, immunoglobulins, or splenectomy. Use only in pts who are at increased risk for bleeding; should not be used to normalize platelet counts. Treatment of thrombocytopenia in pts with chronic hepatitis C to allow the initiation and maintenance of interferon-based therapy. Treatment of severe aplastic anemia in pts having an insufficient response to immunosuppressive therapy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Preexisting hepatic impairment, renal impairment (any degree), myelodysplastic syndrome (may increase risk for hematologic malignancies). Pts with known risk for thromboembolism, risk for cataracts.

ACTION

Interacts with the human thrombopoietin receptor and initiates signaling cascades. **Therapeutic Effect:** Induces proliferation and differentiation of megakaryocytes from bone marrow progenitor cells.

PHARMACOKINETICS

Readily absorbed from gastrointestinal tract. Primarily distributed in blood cells. Protein binding: 99%. Extensively metabolized including oxidation, conjugation with glucuronic acid or cysteine. Excreted primarily in feces. **Half-life:** 26–35 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Use caution due to increased frequency of hepatic, renal, cardiac dysfunction.

INTERACTIONS

DRUG: May increase concentration/toxicity of **atorvastatin, fluvastatin, methotrexate, nateglinide, pravastatin, repaglinide, rifampin, rosuvastatin. Aluminum, antacids, calcium, iron, magnesium** may decrease concentration/effects. **HERBAL:** None significant. **FOOD:** **Dairy products** may decrease concentration/effects. **LAB VALUES:** May increase serum ALT, AST.

AVAILABILITY (Rx)

Tablets: 12.5 mg, 25 mg, 50 mg, 75 mg.

ADMINISTRATION/HANDLING

PO

• Give on an empty stomach, either 1 hr before or 2 hrs after eating food. • Give at least 4 hrs before or 4 hrs after ingestion of antacids, food high in calcium or minerals, or calcium-fortified juices.

INDICATIONS/ROUTES/DOSAGE

Aplastic Anemia

PO: ADULTS, ELDERLY: 50 mg once daily (25 mg for pts of East Asian ancestry or hepatic impairment). Adjust dose to maintain platelets more than 50,000/mm^3. **Maximum:** 150 mg/day.

ITP

PO: ADULTS, ELDERLY: Initially, 50 mg once daily (25 mg for pts of East Asian ancestry or moderate to severe hepatic insufficiency). After initiating eltrombopag, adjust dose (25 mg to 75 mg once daily) to achieve and maintain platelet count of 50,000 mm^3 or greater as necessary to reduce risk of bleeding. **Maximum:** 75 mg once daily.

Chronic Hepatitis C–associated Thrombocytopenia

PO: ADULTS, ELDERLY: 25 mg once daily. **Maximum:** 100 mg once daily.

Dosage Adjustment Based on Platelet Response

Less than 50,000/mm^3 (after at least 2 wks)	Increase by 25 mg q2 wks up to 100 mg/day
200,000/mm^3 or more and 400,000/mm^3 or less	Decrease by 25 mg
More than 400,000/mm^3	Withhold; when less than 150,000/mm^3, resume with dose reduced by 25 mg
More than 400,000/mm^3 after 2 wks at lowest dose	Discontinue

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

ITP

Mild to severe	Initial: 25 mg/day
East Asian ancestry	Initial: 12.5 mg/day

Chronic Hepatitis C

No dose adjustment.

SIDE EFFECTS

Frequent (6%–4%): Nausea, vomiting, menorrhagia. **Occasional (3%–2%):** Myalgia, paresthesia, dyspepsia, ecchymosis, cataract, conjunctival hemorrhage.

ADVERSE EFFECTS/ TOXIC REACTIONS

May cause hepatotoxicity. Increases risk of reticulin fiber deposits within bone marrow (may lead to bone marrow fibrosis). May produce hematologic malignancies. May cause excessive increase in platelets, leading to thrombotic complications.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess CBC and peripheral blood smears, LFT prior to initiating therapy. Examine peripheral blood smear to establish extent of RBC and WBC abnormalities. Obtain baseline ocular examination.

INTERVENTION/EVALUATION

Monitor CBC, platelet counts, peripheral blood smears, LFT throughout and following discontinuation of eltrombopag. Monitor for signs of cataracts during therapy.

PATIENT/FAMILY TEACHING

• Lab values will be closely monitored throughout therapy and for at least 4 wks following discontinuation of therapy. • Report any yellowing of the skin or whites of eyes, unusual darkening of the urine, unusual tiredness, pain in right upper stomach area. • Report changes in vision.

elvitegravir

el-vi-**teg**-ra-vir
(Vitekta)
Do not confuse elvitegravir with dolutegravir or raltegravir.

FIXED COMBINATION(S)

Stribild: elvitegravir (an integrase inhibitor)/cobicistat (an antiretroviral booster)/emtricitabine/tenofovir (antiretroviral agents): 150 mg/150 mg/200 mg/300 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Integrase strand transfer inhibitor. **CLINICAL:** Antiretroviral agent.

USES

Used in combination with an HIV protease inhibitor, co-administered with ritonavir and other antiretroviral medications for the treatment of HIV-1 infection in antiretroviral treatment–experienced adults.

PRECAUTIONS

Contraindications: None known. **Cautions:** Diabetes, hepatic impairment, hypercholesterolemia. Not recommended with a HIV protease inhibitor and cobicistat combination; co-administration of HIV-1 protease inhibitors other than atazanavir, darunavir, fosamprenavir, lopinavir, and tipranavir.

ACTION

Inhibits HIV integrase by preventing integration of HIV-1 DNA into host DNA, blocking formation of HIV-1 provirus. **Therapeutic Effect:** Interferes with HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Readily absorbed after PO administration. Metabolized in liver. Protein binding: 98%–99%. Peak plasma concentration: 4 hrs. Eliminated in feces (95%), urine (7%). **Half-life:** 8.7 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Breastfeeding not recommend due to risk of postnatal HIV transmission. Unknown if distributed in human breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in pts younger than 18 yrs. **Elderly:** Safety and efficacy not established in pts older than 65 yrs. May have increased risk of adverse reactions, hepatic impairment.

INTERACTIONS

DRUG: Antacids, aluminum/calcium/magnesium/iron supplements, antiretrovirals (e.g., efavirenz, nevirapine), corticosteroids (e.g., dexamethasone), anticonvulsants (e.g., carbamazepine, phenytoin), rifampin may decrease concentration/effect. May increase concentrations/effects of **ketoconazole, rifampin. Antifungals (e.g., ketoconazole), atazanavir, lopinavir** may increase concentration/effect. May decrease concentration/effect of **hormonal contraceptives. HERBAL: St John's wort** may decrease effectiveness. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST, amylase bilirubin, cholesterol, creatine kinase (CK), GGT, glucose, lipase, triglycerides, urine glucose, urine RBC. May decrease neutrophils.

AVAILABILITY (Rx)

Tablets: 85 mg, 150 mg.

ADMINISTRATION/HANDLING

PO

• Must be taken with food. • Must be administered with a protease inhibitor, in combination with ritonavir and another antiretroviral drug. • If pt receiving antacid, do not give aluminum- or magnesium-containing antacids within 2 hrs of dose.

INDICATIONS/ROUTES/DOSAGE

HIV Infection

PO: ADULTS/ELDERLY: ***(First Regimen):*** 85 mg once daily (elvitegravir) co-administered with atazanavir 300 mg once daily with ritonavir 100 mg once daily or lopinavir 400 mg twice daily with ritonavir 100 mg twice daily. ***(Second Regimen):*** 150 mg once daily (elvitegravir) co-administered with darunavir 600 mg twice daily with ritonavir 100 mg twice daily, or fosamprenavir 700 mg twice daily with ritonavir 100 mg twice daily, or tipranavir 500 mg twice daily with ritonavir 100 mg twice daily.

Dosage in Renal Impairment
No dose adjustment.

Dosage in Hepatic Impairment
Mild to Moderate: No dose adjustment. **Severe:** Not recommended.

SIDE EFFECTS

Occasional (7%–4%): Diarrhea, nausea. **Rare (3%):** Headache.

ADVERSE REACTIONS/ TOXIC EFFECTS

May induce immune recovery syndrome (inflammatory response to dormant opportunistic infections such as *Mycobacterium avium,* cytomegalovirus, *Pneomocystis carinii* pneumonia [PCP], tuberculosis, or acceleration of autoimmune disorders such as Graves' disease, polymyositis, Guillain-Barré). Pts co-infected with hepatitis B or C have increased risk for viral reactivation and worsening of hepatic function and may experience hepatic decompensation and/or failure if therapy is discontinued. Elevation of hepatic enzymes greater than 5 times upper limit of normal reported in 2% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain BMP, CBC, lipid panel, LFT, urine glucose, vital signs; CD4+ count, viral load level. Screen for hepatitis B or C co-infection, hypercholesterolemia. Receive full medication history including herbal products. Question possibility of pregnancy; history of diabetes, hepatitis B or C infection, hypercholesterolemia.

INTERVENTION/EVALUATION

Monitor CBC, hepatic function, lipid levels. Monitor CD4+ count, viral load for treatment effectiveness. Cough, dyspnea, fever, excess of band cells on CBC may indicate acute infection (WBC count may be unreliable in pts with uncontrolled HIV infection). Screen for immune reconstitution syndrome.

PATIENT/FAMILY TEACHING

• Offer emotional support. • Take elvitegravir with a HIV protease inhibitor, combined with ritonavir at the same time each day with food (optimizes absorption). • Antacids may decrease drug effectiveness; do not take within 2 hrs of dose • Treatment regimen does not cure HIV infection, nor reduce risk of transmission. • Drug resistance can form if therapy is interrupted; do not run out of supply. • As immune system strengthens, it may respond to dormant infections hidden within the body. Report body aches, chills, cough, fever, night sweats, shortness of breath. • Treatment may cause liver dysfunction; report abdominal pain, darkened urine, clay-colored stools, significant weight loss, or yellowing of skin or eyes.• Do not take any new medications, including over-the-counter drugs or herbal products, unless approved by your doctor.

empagliflozin

em-pa-gli-**floe**-zin
Do not confuse empagliflozin with canagliflozin or dapagliflozin.

FIXED COMBINATION(S)

Glyxambi: empagliflozin/linagliptin (an antidiabetic): 10 mg/5 mg, 25 mg/5 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Sodium-glucose co-transporter 2 (SGLT2) inhibitor. **CLINICAL:** Antidiabetic.

USES

Adjunctive treatment to diet and exercise to improve glycemic controls in pts with type 2 diabetes mellitus.

PRECAUTIONS

Contraindications: History of hypersensitivity to SGLT2 inhibitors, severe renal impairment, end-stage renal disease,

dialysis. **Cautions:** Not recommended in type 1 diabetes, diabetic ketoacidosis. Concurrent use of diuretics, other hypoglycemic medications, mild to moderate renal impairment, hypovolemia (dehydration/anemia), elderly, those with low systolic B/P, hyperlipidemia, pts with history of genital mycotic infection.

ACTION

Increases excretion of urinary glucose by inhibiting reabsorption of filtered glucose in kidney. Inhibits SGLT2 in proximal renal tubule. **Therapeutic Effect:** Lowers serum glucose levels.

PHARMACOKINETICS

Readily absorbed following PO administration. Metabolized in liver by glucuronidation. Peak plasma concentration: 1.5 hrs. Protein binding: 86%. Excreted in urine (54%) and feces (41%). **Half-life:** 12.4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. **Pregnancy Category C. Children:** Safety and efficacy not established in pts younger than 18 yrs. **Elderly:** May have increased risk for adverse reactions (e.g., hypotension, syncope, dehydration).

INTERACTIONS

DRUG: **Diuretics** may increase risk of hypotension/volume depletion. **Insulin, insulin secretagogues (e.g., glyburide)** may increase risk of hypoglycemia. May increase concentration/effect of **digoxin.** **HERBAL:** Herbs with hypoglycemic properties **(e.g., fenugreek, garlic, ginger, ginseng, gotu)** may increase risk of hypoglycemia. **FOOD:** None known. **LAB VALUES:** May increase low-density lipoprotein cholesterol (LDL-C), serum creatinine. May decrease glomerular filtration rate.

AVAILABILITY (Rx)

Tablets: 10 mg, 25 mg.

ADMINISTRATION/HANDLING

PO

May give without regard to food in the morning.

INDICATIONS/ROUTES/DOSAGE

Type 2 Diabetes Mellitus

PO: ADULTS/ELDERLY: Initially, 10 mg daily in the morning. May increase to 25 mg daily.

Dosage in Renal impairment

GFR 45 ml/min or greater: No dose adjustment. **GFR less than 45 ml/min:** Discontinue.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (9.3–5.4%): UTI, female genital mycotic infection. **Rare (4–1.1%):** Upper respiratory tract infection, increased urination, dyslipidemia, arthralgia, male genital mycotic infections, nausea.

ADVERSE REACTIONS/ TOXIC EFFECTS

Symptomatic hypotension (postural dizziness, orthostatic hypotension, syncope) may occur. Genital myocotic (yeast) infections reported in 6.5% of pts. Hypoglycemic events reported (concomitant use of hypoglycemic medications may increase hypoglycemic risk).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess hydration status. Obtain serum chemistries, capillary blood glucose, hemoglobin A1c, LDL-C. Assess pt's understanding of diabetes management, routine home glucose monitoring. Receive full medication history including minerals, herbal products. Question history of co-morbidities, esp. renal or hepatic impairment.

INTERVENTION/EVALUATION

Monitor serum cholesterol, blood glucose, renal function, LFT. Assess for

hypoglycemia (diaphoresis, tremors, dizziness, anxiety, headache, tachycardia, perioral numbness, hunger, diplopia, difficulty concentrating), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, fatigue, Kussmaul respirations), hypersensitivity reaction. Screen for glucose-altering conditions: fever, increased activity or stress, surgical procedures. Dietary consult for nutritional education. Encourage PO intake.

PATIENT/FAMILY TEACHING

• Diabetes mellitus requires lifelong control. • Diet and exercise are principal parts of treatment; do not skip or delay meals. • Test blood sugar regularly. When taking combination drug therapy or when glucose demands are altered (fever, infection, trauma, stress), have low blood sugar treatment available (glucagon, oral dextrose). • Report suspected pregnancy or plans of breastfeeding. • Monitor daily calorie intake. • Slowly go from lying to standing to prevent dizziness. • Therapy may increase risk for dehydration/ low blood pressure. • Genital itching may indicate yeast infection. Report any signs of UTI (e.g., burning while urinating, cloudy urine, pelvic pain, back pain).

emtricitabine TOP 100

em-tri-**sye**-ta-bine
(Emtriva)

■ **BLACK BOX ALERT** ■ Serious, sometimes fatal, hypersensitivity reaction, lactic acidosis, severe hepatomegaly with steatosis (fatty liver) have occurred. May exacerbate hepatitis B following completion of emtricitabine therapy.

FIXED-COMBINATION(S)

Atripla: emtricitabine/efavirenz (an antiretroviral)/tenofovir (an antiretroviral): 200 mg/600 mg/300 mg. **Complera:** emtricitabine/rilpivirine (an antiretroviral)/tenofovir (an antiretroviral): 200 mg/25 mg/300 mg. **Truvada:** emtricitabine/tenofovir (an antiretroviral): 200 mg/300 mg. **Stribild:** emtricitabine/elvitegravir (an integrase inhibitor)/cobicistat (a pharmacokinetic enhancer)/tenofovir (a nucleotide reverse transcriptase inhibitor): 200 mg/150 mg/150 mg/300 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nucleoside reverse transcriptase inhibitor. **CLINICAL:** Antiretroviral agent.

USES

Used in combination with at least two other antiretroviral agents for treatment of HIV-1 infection.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal impairment, history of hepatitis, diabetes.

ACTION

Inhibits HIV-1 reverse transcriptase by incorporating itself into viral DNA, resulting in chain termination. **Therapeutic Effect:** Impairs HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Rapidly, extensively absorbed from GI tract. Protein binding: less than 4%. Excreted primarily in urine. **Half-life:** 10 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Breastfeeding not recommended. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, lipase, ALT, AST, triglycerides. May alter serum glucose.

E

AVAILABILITY (Rx)

Capsules: 200 mg. **Oral Solution:** 10 mg/ml.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

HIV

Capsules

PO: ADULTS, ELDERLY, CHILDREN 3 MOS–17 YRS, WEIGHING MORE THAN 33 KG: 200 mg once daily.

Oral Solution

PO: ADULTS, ELDERLY: 240 mg once daily. **CHILDREN 3 MOS–17 YRS WEIGHING MORE THAN 33 KG:** 6 mg/kg once daily. **Maximum:** 240 mg once daily. **CHILDREN 0–3 MOS:** 3 mg/kg/day.

Dosage in Renal Impairment

Creatinine Clearance	Capsule	Oral Solution
30–49 ml/min	200 mg q48h	120 mg q24h
15–29 ml/min	200 mg q72h	80 mg q24h
Less than 15 ml/min; hemodialysis pts	200 mg q96h	60 mg q24h (administer after dialysis)

Administer after dialysis on dialysis days.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (23%–13%): Headache, rhinitis, rash, diarrhea, nausea. **Occasional (14%–4%):** Cough, vomiting, abdominal pain, insomnia, depression, paresthesia, dizziness, peripheral neuropathy, dyspepsia, myalgia. **Rare (3%–2%):** Arthralgia, abnormal dreams.

ADVERSE EFFECTS/ TOXIC REACTIONS

Lactic acidosis, hepatomegaly with steatosis (excess fat in liver) occur rarely; may be severe.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory tests, esp. hepatic function, serum triglycerides before beginning and at periodic intervals during therapy. Offer emotional support.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Question for evidence of nausea, pruritus. Assess skin for rash, urticaria. Monitor serum chemistry tests, LFT for marked abnormalities, signs/symptoms of lactic acidosis.

PATIENT/FAMILY TEACHING

• May cause redistribution of body fat. • Continue therapy for full length of treatment. • Emtricitabine is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Pts may continue to acquire illnesses associated with advanced HIV infection. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report persistent or severe abdominal pain, nausea, vomiting, numbness.

enalapril

en-**al**-a-pril
(Apo-Enalapril, Epaned, Novo-Enalapril, Vasotec)

■ **BLACK BOX ALERT** ■ May cause fetal injury, mortality if used during second or third trimester of pregnancy.

Do not confuse enalapril with Anafranil, Elavil, Eldepryl, or ramipril.

FIXED-COMBINATION(S)

Lexxel: enalapril/felodipine (calcium channel blocker): 5 mg/2.5 mg, 5 mg/5 mg. **Teczem:** enalapril/diltiazem (calcium channel blocker): 5 mg/180 mg. **Vaseretic:** enalapril/hydrochlorothiazide (diuretic): 5 mg/12.5 mg, 10 mg/25 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin-converting enzyme (ACE) inhibitor. **CLINICAL:** Antihypertensive, vasodilator.

USES

Treatment of hypertension alone or in combination with other antihypertensives. Adjunctive therapy for symptomatic HF. Treatment of asymptomatic left ventricular dysfunction. **(Epaned):** Treatment of hypertension in adults and children older than 1 mo. **OFF-LABEL:** Hypertension due to scleroderma renal crisis, hypertensive crisis, idiopathic edema, diagnosis of aldosteronism, post MI for prevention of ventricular failure. Delay progression of nephropathy and reduce risks of cardiovascular events in hypertensive pts with type 1 or 2 diabetes.

PRECAUTIONS

Contraindications: History of angioedema from previous treatment with ACE inhibitors. Idiopathic/hereditary angioedema. Concomitant use of aliskiren in pts with diabetes. **Cautions:** Renal impairment, hypertrophic cardiomyopathy with outflow tract obstruction; severe aortic stenosis; before, during, or immediately after major surgery. Concommitant use of potassium supplement; unstented unilateral or bilateral renal artery stenosis.

ACTION

Suppresses renin-angiotensin-aldosterone system (prevents conversion of angiotensin I to angiotensin II, a potent vasoconstrictor; may inhibit angiotensin II at local vascular, renal sites). Decreases plasma angiotensin II, increases plasma renin activity, decreases aldosterone secretion. **Therapeutic Effect:** In hypertension, reduces peripheral arterial resistance. In HF, increases cardiac output; decreases peripheral vascular resistance, B/P, pulmonary capillary wedge pressure, heart size.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	4–6 hrs	24 hrs
IV	15 min	1–4 hrs	6 hrs

Readily absorbed from GI tract. Protein binding: 50%–60%. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 11 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. May cause fetal/neonatal mortality, morbidity. **Pregnancy Category D (C if used in first trimester). Children:** Safety and efficacy not established. **Elderly:** May be more susceptible to hypotensive effects.

INTERACTIONS

DRUG: Alcohol, antihypertensive agents, diuretics may increase effects. **NSAIDs** may decrease antihypertensive effect, increase risk of possible acute renal failure. **Potassium-sparing diuretics, potassium supplements** may cause hyperkalemia. May increase **lithium** concentration, toxicity. **HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **Licorice** may cause sodium/water retention, loss of potassium. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, potassium, ALT, AST. May decrease serum sodium. May cause positive ANA titer.

AVAILABILITY (Rx)

Injection Solution: 1.25 mg/ml. **Powder for Oral Solution *(Epaned):*** 1 mg/ml (after reconstitution). **Tablets:** 2.5 mg, 5 mg, 10 mg, 20 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • May give undiluted or dilute with D_5W or 0.9% NaCl.

Rate of Administration • For IV push, give undiluted over 5 min. • For IV piggyback, infuse over 10–15 min.
Storage • Store parenteral form at room temperature. • Use only clear, colorless solution. • Diluted IV solution is stable for 24 hrs at room temperature.

PO

• Give without regard to food. • Tablets may be crushed.

Epaned

• Reconstitute with 150 ml Ora-Sweet SF (provided) to produce a 1 mg/ml concentration. Stable for 60 days after reconstitution.

IV INCOMPATIBILITIES

Amphotericin B (Fungizone), amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), phenytoin (Dilantin).

IV COMPATIBILITIES

Calcium gluconate, dexmedetomidine (Precedex), dobutamine (Dobutrex), dopamine (Intropin), fentanyl (Sublimaze), heparin, lidocaine, magnesium sulfate, morphine, nitroglycerin, potassium chloride, potassium phosphate, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 2.5–5 mg/day. May increase at 1–2 wk intervals. Range: 2.5–40 mg/day in 1–2 divided doses. **CHILDREN 1 MO–16 YRS:** 0.08 mg/kg/day in 1–2 divided doses. **Maximum:** 5 mg/day. **NEONATES:** 0.04–0.1 mg/kg/day given q24h. **Epaned: ADULTS, ELDERLY:** Initially, 5 mg once daily. **CHILDREN:** Initially, 0.08 mg/kg once daily. **Maximum:** 5 mg.
IV: ADULTS, ELDERLY: 0.625–1.25 mg q6h up to 5 mg q6h.

Adjunctive Therapy for HF

PO: ADULTS, ELDERLY: Initially, 2.5–5 mg/day. Titrate slowly at 1–2 wk intervals. Range: 5–40 mg/day in 2 divided doses.

Asymptomatic Left Ventricular Dysfunction

PO: ADULTS, ELDERLY: 2.5 mg twice daily. Titrate up to 20 mg/day.

Dosage in Renal Impairment

Creatinine Clearance	PO	IV
30 ml/min or greater	5 mg/day; titrate to maximum 40 mg/day	1.25 mg q6h; titrate to desired response
Less than 30 ml/min	2.5 mg/day; titrate to control B/P	0.626 mg q6h; titrate to desired response

Hemodialysis: Initially, 2.5 mg on dialysis days, adjust dose on non-dialysis days depending on B/P.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (7%–5%): Headache, dizziness. **Occasional (3%–2%):** Orthostatic hypotension, fatigue, diarrhea, cough, syncope. **Rare (less than 2%):** Angina, abdominal pain, vomiting, nausea, rash, asthenia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive hypotension ("first-dose syncope") may occur in pts with HF, severe salt or volume depletion. Angioedema (facial, lip swelling), hyperkalemia occur rarely. Agranulocytosis, neutropenia may be noted in pts with renal impairment, collagen vascular diseases (scleroderma, systemic lupus erythematosus). Nephrotic syndrome may be noted in those with history of renal disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P immediately before each dose (be alert to fluctuations). In pts with renal impairment, autoimmune disease, or taking drugs that affect leukocytes/immune response, CBC should be performed before beginning therapy, q2wks for 3 mos, then periodically thereafter.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Monitor CBC, serum BUN, potassium, creatinine, B/P. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• To reduce hypotensive effect, go from lying to standing slowly. • Several wks may be needed for full therapeutic effect of B/P reduction. • Skipping doses or voluntarily discontinuing drug may produce severe, rebound hypertension. • Limit alcohol intake. • Report vomiting, diarrhea, diaphoresis, persistent cough, difficulty in breathing; swelling of face, lips, tongue.

enfuvirtide

en-**fue**-veer-tide
(Fuzeon)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fusion inhibitor. **CLINICAL:** Antiretroviral agent.

USES

Used in combination with other antiretroviral agents for treatment of HIV-1 infection in treatment-experienced pts with evidence of HIV-1 replication.

PRECAUTIONS

Contraindications: None known. **Cautions:** Not recommended in antiretroviral-naïve pts, those with coagulation disorders (e.g., hemophilia) or on anticoagulants.

ACTION

Interferes with entry of HIV-1 into $CD4^+$ cells by inhibiting fusion of viral, cellular membranes. **Therapeutic Effect:** Impairs HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Comparable absorption when injected into subcutaneous tissue of abdomen, arm, thigh. Protein binding: 92%. Undergoes catabolism to amino acids. **Half-life:** 3.8 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Breastfeeding not recommended. **Pregnancy Category B. Children:** Safety and effectiveness not established in those 6 yrs and younger. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration of **protease inhibitors. Protease inhibitors** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May elevate serum glucose, amylase, creatine kinase (CK), lipase, triglycerides, ALT, AST. May decrease Hgb.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 108-mg vials (approximately 90 mg/ml when reconstituted).

ADMINISTRATION/HANDLING

Subcutaneous

Reconstitution • Reconstitute with 1.1 ml Sterile Water for Injection. • Visually inspect vial for particulate matter. Solution should appear clear, colorless (may take up to 45 min to form clear, colorless solution). • Discard unused portion.

Rate of Administration • Administer into upper arm, anterior thigh, abdomen. Rotate injection sites.

Storage • Store at room temperature. • Refrigerate reconstituted solution;

use within 24 hrs. • Bring reconstituted solution to room temperature before injection.

INDICATIONS/ROUTES/DOSAGE

HIV Infection

Subcutaneous: ADULTS, ELDERLY: 90 mg (1 ml) twice a day. **CHILDREN 6–16 YRS:** 2 mg/kg twice a day. **Maximum:** 90 mg twice a day.

Pediatric Dosing Guidelines

Weight: kg (lb)	Dose: mg (ml)
11–15.5 (24–34)	27 (0.3)
15.6–20 (35–44)	36 (0.4)
20.1–24.5 (45–54)	45 (0.5)
24.6–29 (55–64)	54 (0.6)
29.1–33.5 (65–74)	63 (0.7)
33.6–38 (75–84)	72 (0.8)
38.1–42.5 (85–94)	81 (0.9)
Greater than 42.5 (greater than 94)	90 (1)

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Expected (98%): Local injection site reactions (pain, discomfort, induration, erythema, nodules, cysts, pruritus, ecchymosis). **Frequent (26%–16%):** Diarrhea, nausea, fatigue. **Occasional (11%–4%):** Insomnia, peripheral neuropathy, depression, cough, decreased appetite or weight loss, sinusitis, anxiety, asthenia, myalgia, cold sores. **Rare (3%–2%):** Constipation, influenza, conjunctivitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

May potentiate bacterial pneumonia. Hypersensitivity (rash, fever, chills, rigors, hypotension), thrombocytopenia, neutropenia, renal insufficiency/failure occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory tests, esp. CBC, LFT, triglycerides before beginning enfuvirtide therapy and at periodic intervals during therapy. Offer emotional support.

INTERVENTION/EVALUATION

Assess skin for local injection site hypersensitivity reaction. Question for evidence of nausea, fatigue. Assess sleep pattern. Monitor for insomnia, signs/symptoms of depression, pneumonia. Monitor CBC, serum chemistry tests for marked abnormalities.

PATIENT/FAMILY TEACHING

• Increased rate of bacterial pneumonia has occurred with enfuvirtide therapy; seek medical attention if cough with fever, rapid breathing occurs. • Continue therapy for full length of treatment. • Enfuvirtide is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Report if injection site reaction is severe.

enoxaparin

TOP 100 HIGH ALERT

en-**ox**-a-par-in
(Lovenox)

■ **BLACK BOX ALERT** ■ Epidural or spinal anesthesia greatly increases potential for spinal or epidural hematoma, subsequent long-term or permanent paralysis.

Do not confuse Lovenox with Lasix, Levaquin, Lotronex, or Protonix.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Low-molecular-weight heparin. **CLINICAL:** Anticoagulant.

USES

Prevention of postop deep vein thrombosis (DVT) following hip or knee replacement

surgery, abdominal surgery. Long-term DVT prevention following hip replacement surgery, nonsurgical acute illness. Treatment of acute coronary syndrome (ACS): unstable angina, non–Q-wave MI, acute ST-segment elevation MI (STEMI). Acute DVT (with warfarin). **OFF-LABEL:** Prophylaxis/treatment of thromboembolism in children. DVT prophylaxis following moderate-risk general surgery, gynecologic surgery; management of venous thromboembolism (VTE) during pregnancy.

PRECAUTIONS

Contraindications: Active major bleeding, concurrent heparin therapy, hypersensitivity to heparin, pork products, thrombocytopenia associated with positive in vitro test for antiplatelet antibodies. Not for IM use. **Cautions:** Conditions with increased risk of hemorrhage, platelet defects, renal impairment (renal failure), elderly, uncontrolled arterial hypertension, history of recent GI ulceration or hemorrhage. When neuraxial anesthesia (epidural or spinal anesthesia) or spinal puncture is used, pts anticoagulated or scheduled to be anticoagulated with enoxaparin for prevention of thromboembolic complications are at risk for developing an epidural or spinal hematoma that can result in long-term or permanent paralysis.

ACTION

Potentiates action of antithrombin III, inactivates coagulation factor Xa. **Therapeutic Effect:** Produces anticoagulation. Does not significantly influence PT, aPTT.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Subcutaneous	N/A	3–5 hrs	12 hrs

Well absorbed after subcutaneous administration. Eliminated primarily in urine. Not removed by hemodialysis. **Half-life:** 4.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Use with caution, particularly during third trimester, immediate postpartum period (increased risk of maternal hemorrhage). Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** May be more susceptible to bleeding.

INTERACTIONS

DRUG: **Antiplatelet agents, aspirin, NSAIDs, thrombolytics** may increase risk of bleeding. **HERBAL:** **Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng** may increase antiplatelet action. **FOOD:** None known. **LAB VALUES:** Increases serum alkaline phosphatase, ALT, AST. May decrease Hgb, Hct, RBCs.

AVAILABILITY (Rx)

Injection Solution: 30 mg/0.3 ml, 40 mg/0.4 ml, 60 mg/0.6 ml, 80 mg/0.8 ml, 100 mg/ml, 120 mg/0.8 ml, 150 mg/ml in prefilled syringes.

ADMINISTRATION/HANDLING

◀ALERT▶ Do not mix with other injections, infusions. Do not give IM.

Subcutaneous

• Parenteral form appears clear, colorless to pale yellow. • Store at room temperature. • Instruct pt to lie down before administering by deep subcutaneous injection. • Inject between left and right anterolateral and left and right posterolateral abdominal wall. • Introduce entire length of needle (½ inch) into skin fold held between thumb and forefinger, holding skin fold during injection.

INDICATIONS/ROUTES/DOSAGE

Prevention of Deep Vein Thrombosis (DVT) After Hip and Knee Surgery

Subcutaneous: ADULTS, ELDERLY: 30 mg twice a day, generally for 7–10 days, with initial dose given within 12–24 hrs following surgery. Once-daily dosing following

hip surgery: 40 mg with initial dose within 9–15 hrs before surgery.

Prevention of DVT After Abdominal Surgery

Subcutaneous: ADULTS, ELDERLY: 40 mg a day for 7–10 days, with initial dose given 2 hrs prior to surgery.

Prevention of DVT After Bariatric Surgery

BMI 50 or less (kg/m^2): 40 mg q12h. BMI greater than 50 kg/m^2: 60 mg q12h.

Prevention of Long-Term DVT in Nonsurgical Acute Illness

Subcutaneous: ADULTS, ELDERLY: 40 mg once a day; continue until risk of DVT has diminished (usually 6–11 days).

Prevention of Ischemic Complications of Unstable Angina, Non–Q-Wave MI (with Oral Aspirin Therapy)

Subcutaneous: ADULTS, ELDERLY: 1 mg/kg q12h (with oral aspirin).

STEMI

Subcutaneous: ADULTS YOUNGER THAN 75 YRS: 30 mg IV once plus 1 mg/kg q12h (**maximum:** 100 mg first 2 doses only). **ADULTS 75 YRS OR OLDER:** 0.75 mg/kg (**maximum:** 75 mg first 2 doses only) q12h.

Acute DVT

Subcutaneous: ADULTS, ELDERLY: 1 mg/kg q12h or 1.5 mg/kg once daily.

Usual Pediatric Dosage

Subcutaneous: CHILDREN 2 MOS AND OLDER: 0.5 mg/kg q12h (prophylaxis); 1 mg/kg q12h (treatment). **NEONATES, INFANTS YOUNGER THAN 2 MOS:** 0.75/mg/kg/dose q12h (prophylaxis); 1.5 mg/kg/dose q12h (treatment).

Dosage in Renal Impairment

Clearance is decreased when creatinine clearance is less than 30 ml/min. Monitor and adjust dosage as necessary.

Use	Dosage
Abdominal surgery, pts with acute illness	30 mg once/day
Hip, knee surgery	30 mg once/day
DVT, angina, MI	1 mg/kg once/day
STEMI: (<75 yrs)	30 mg IV once plus 1 mg/kg q24h
STEMI (75 yrs or greater)	1 mg/kg q24h
NSTEMI	1 mg/kg q24h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (4%–1%): Injection site hematoma, nausea, peripheral edema.

ADVERSE EFFECTS/ TOXIC REACTIONS

May lead to bleeding complications ranging from local ecchymoses to major hemorrhage. May cause heparin-induced thrombocytopenia (HIT). **Antidote:** IV injection of protamine sulfate (1% solution) equal to dose of enoxaparin injected. One mg protamine sulfate neutralizes 1 mg enoxaparin. One additional dose of 0.5 mg protamine sulfate per 1 mg enoxaparin may be given if aPTT tested 2–4 hrs after first injection remains prolonged.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC. Note platelet count. Assess potential risk of bleeding.

INTERVENTION/EVALUATION

Periodically monitor CBC, platelet count, stool for occult blood (no need for daily monitoring in pts with normal presurgical coagulation parameters). Assess for any sign of bleeding (bleeding at surgical site, hematuria, blood in stool, bleeding from gums, petechiae, bruising, bleeding from injection sites).

PATIENT/FAMILY TEACHING

• Usual length of therapy is 7–10 days. • Do not take any OTC medication

(esp. aspirin) without consulting physician. • Report unusual bleeding or bruising.

entacapone

en-**tak**-a-pone
(Comtan)

FIXED-COMBINATION(S)

Stalevo: entacapone/carbidopa/levodopa (an antiparkinson agent): 200 mg/12.5 mg/50 mg, 200 mg/25 mg/100 mg, 200 mg/37.5 mg/150 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Enzyme inhibitor. **CLINICAL:** Antiparkinson agent.

USES

◀ALERT▶ Adjunct to carbidopa/levodopa therapy when pts experience end-of-dose diminishing effectiveness.

PRECAUTIONS

Contraindications: None known. **Cautions:** Pts at risk for hypotension, preexisting dyskinesias, use of MAOIs within 14 days, hepatic impairment, severe renal impairment, lower GI disease, pts at risk for dehydration.

ACTION

Inhibits the enzyme catechol-*O*-methyltransferase (COMT), potentiating dopamine activity, increasing duration of action of levodopa. **Therapeutic Effect:** Decreases signs, symptoms of Parkinson's disease by enhancing effectiveness of levodopa/carbidopa in the brain.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 98%. Metabolized in liver. Primarily eliminated by biliary excretion. Not removed by hemodialysis. **Half-life:** 2.4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Not used in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Nonselective MAOIs (including phenelzine)** may inhibit catecholamine metabolism. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Serum iron may decrease.

AVAILABILITY (Rx)

Tablets: 200 mg.

ADMINISTRATION/HANDLING

PO

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Always administer with levodopa/carbidopa.

Adjunctive Treatment of Parkinson's Disease

PO: ADULTS, ELDERLY: 200 mg concomitantly with each dose of carbidopa and levodopa up to a maximum of 8 times a day (1,600 mg).

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (greater than 10%): Dyskinesia (uncontrolled body movements), nausea, dark yellow or orange urine and sweat, diarrhea. **Occasional (9%–3%):** Abdominal pain, vomiting, constipation, dry mouth, fatigue, back pain. **Rare (less than 2%):** Anxiety, drowsiness, agitation, dyspepsia, flatulence, diaphoresis, asthenia, dyspnea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hallucinations may be noted.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor for evidence of dyskinesia (difficulty with movement). Assess for clinical reversal of symptoms (improvement of tremor of head and hands at rest, mask-like facial expression, shuffling gait, muscular rigidity). Monitor B/P, hepatic function tests. Assess for orthostatic hypotension, diarrhea.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • May cause color change in urine or sweat (dark yellow, orange). • Report any uncontrolled movement of face, eyelids, mouth, tongue, arms, hands, legs.

entecavir

en-**tek**-a-veer
(Baraclude)

■ **BLACK BOX ALERT** ■ Serious, sometimes fatal, hypersensitivity reaction, lactic acidosis, severe hepatomegaly with steatosis (fatty liver) have occurred. May cause HIV resistance in chronic hepatitis B pts. Severe acute exacerbations of hepatitis B may occur upon discontinuation of entecavir.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Reverse transcriptase inhibitor. **CLINICAL:** Antiretroviral agent.

USES

Treatment of chronic hepatitis B virus (HBV) infection with evidence of active viral replication and evidence of either persistent transaminase elevations or histologically active disease or evidence of decompensated hepatic disease. **OFF-LABEL:** HBV reinfection prophylaxis, post–liver transplant, HIV/HBV coinfection.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal impairment, pts receiving concurrent therapy that may reduce renal function.

ACTION

Inhibits hepatitis B viral polymerase, an enzyme blocking reverse transcriptase activity. **Therapeutic Effect:** Interferes with viral DNA synthesis.

PHARMACOKINETICS

Poorly absorbed from GI tract. Protein binding: 13%. Extensively distributed into tissues. Partially metabolized in liver. Eliminated primarily in urine. **Half-life:** 5–6 days (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 16 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Ganciclovir, ribavirin, valganciclovir may increase concentration. **HERBAL:** None significant. **FOOD: Food** delays absorption, decreases concentration. **LAB VALUES:** May increase serum amylase, lipase, bilirubin, ALT, AST, creatinine, glucose. May decrease serum albumin, platelets.

AVAILABILITY (Rx)

Oral Solution: 0.05 mg/ml. **Tablets:** 0.5 mg, 1 mg.

ADMINISTRATION/HANDLING

PO

• Administer tablets on an empty stomach (at least 2 hrs after a meal and 2 hrs

before the next meal). • Do not dilute, mix oral solution with water or any other liquid. • Each bottle of oral solution is accompanied by a dosing spoon. Before administering, hold spoon in vertical position, fill it gradually to mark corresponding to prescribed dose.
Storage • Store tablets, oral solution at room temperature.

INDICATIONS/ROUTES/DOSAGE

Chronic Hepatitis B (No Previous Nucleoside Treatment)
PO: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: 0.5 mg once daily.

Chronic Hepatitis B (Receiving Lamivudine, Known Lamivudine Resistance, Decompensated Liver Disease)
PO: ADULTS, ELDERLY, CHILDREN 16 YRS AND OLDER: 1 mg once daily.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
50 ml/min and greater	0.5 mg once daily
30–49 ml/min	0.25 mg once daily
10–29 ml/min	0.15 mg once daily
9 ml/min and less	0.05 mg once daily

Dosage in Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Occasional (4%–3%): Headache, fatigue.
Rare (less than 1%): Diarrhea, dyspepsia, nausea, vomiting, dizziness, insomnia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Lactic acidosis, severe hepatomegaly with steatosis have been reported. Severe, acute exacerbations of hepatitis B have been reported in pts who have discontinued therapy; reinitiation of antihepatitis B therapy may be required. Hematuria occurs occasionally. May cause development of HIV resistance if HIV untreated.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline laboratory tests, esp. LFT before beginning therapy and at periodic intervals during therapy. Offer emotional support. Obtain full medication history.

INTERVENTION/EVALUATION

Hepatic function should be monitored closely with both clinical and laboratory follow-up for at least several mos in pts who discontinue antihepatitis B therapy. For pts on therapy, closely monitor serum amylase, lipase, bilirubin, ALT, AST, creatinine, glucose, albumin; platelet count. Assess for evidence of GI discomfort.

PATIENT/FAMILY TEACHING

• Take medication at least 2 hrs after a meal and 2 hrs before the next meal. • Avoid transmission of hepatitis B infection to others through sexual contact, blood contamination. • Immediately report unusual muscle pain, abdominal pain with nausea/vomiting, cold feeling in extremities, dizziness (signs and symptoms signaling onset of lactic acidosis).

enzalutamide

en-za-**loo**-ta-mide
(XTANDI)
Do not confuse enzalutamide with bicalutamide, flutamide, or nilutamide.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiandrogen renal inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of metastatic castration-resistant prostate cancer.

PRECAUTIONS

Contraindications: Women who are pregnant or may become pregnant (not indicated in female population). **Cautions:** History of seizure, underlying brain injury with loss of consciousness, transient ischemic attack within past 12 mos, CVA, brain metastases, brain arteriovenous abnormality, use of concurrent medications that may lower seizure threshold.

ACTION

Inhibits androgen binding to androgen receptors in target tissue, and inhibits interaction with DNA. **Therapeutic Effect:** Decreases proliferation, induces cell death of prostate cancer cells.

PHARMACOKINETICS

Readily absorbed in GI tract. Maximum plasma concentration achieved in 0.5–3 hrs. Metabolized in liver. Protein binding: (97%–98%). Primarily excreted in urine. **Half-life:** 5.8 days (Range: 2.8–10.2 days).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not used in female population. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Strong CYP2C8, CYP3A4 inhibitors (e.g., gemfibrozil, itraconazole)** may increase concentration. **Moderate or strong CYP3A4 inducers** may decrease concentration. **HERBAL:** None significant. **FOOD:** **All foods** may increase absorption. **LAB VALUES:** May increase serum ALT, AST, bilirubin. May decrease Hgb, Hct, platelets, WBC count.

AVAILABILITY (Rx)

Capsules: 40 mg.

ADMINISTRATION/HANDLING

PO • May give with or without food. Take at same time each day. Swallow whole. • Do not break, crush, dissolve, or open capsules.

INDICATIONS/ROUTES/DOSAGE

Metastatic Castration-Resistant Prostate Cancer

PO: ADULTS, ELDERLY: 160 mg (40 mg capsules) given once daily.

Dose Modification

If a grade 3 or greater toxicity or an intolerable side effect occurs, withhold dosing for 1 week or until symptoms improve to grade 2 or less, then resume at same dose or a reduced dose (120 mg or 80 mg). Concurrent use of strong CYP2C8 inhibitors (e.g., gemfibrozil) should be avoided if possible. If concurrent use is necessary, reduce the enzalutamide dose to 80 mg once daily.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Common (51%): Asthenia. **Frequent (26%–15%):** Back pain, diarrhea, arthralgia, hot flashes, peripheral edema, musculoskeletal pain. **Occasional (12%–6%):** Headache, dizziness, insomnia, hematuria, paresthesia, anxiety, hypertension. **Rare (4%–2%):** Mental impairment disorders (includes amnesia, memory impairment, cognitive disorder, attention deficit), hematuria (includes pollakiuria, pruritus, dry skin).

ADVERSE EFFECTS/ TOXIC REACTIONS

Upper respiratory tract infection occurs in 11% of pts; lower respiratory tract and lung infection (includes pneumonia, bronchitis) occur in slightly less (9%). Spinal cord compression and cauda equina syndrome occurs in 7% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Offer emotional support. Obtain baseline CBC, ALT, AST, bilirubin periodically throughout therapy. Assess bowel activity, stool consistency. Pregnancy Category X. If coadministered with warfarin (CYP2C9 substrate), perform additional INR monitoring.

INTERVENTION/EVALUATION

Assess for peripheral edema. Question level of fatigue, weakness. Question presence of back pain, arthralgia, or headache. Assess level of anxiety. Monitor B/P for hypertension. Assess for hematuria. Question pt regarding sleeping pattern.

PATIENT/FAMILY TEACHING

• Sexually active men must wear condom during treatment and for 1 wk after treatment due to potential risks to fetus. • Women who are pregnant or are planning pregnancy may not touch medication without gloves. • Dizziness, headache, muscle weakness, leg swelling/discomfort should be reported. • Immediately report fever or cough. • Routine lab testing will occur during treatment.

epinephrine

HIGH ALERT

ep-i-**nef**-rin
(Adrenalin, EpiPen, EpiPen Jr., Twinject)
Do not confuse epinephrine with ephedrine.

FIXED-COMBINATION(S)

LidoSite: epinephrine/lidocaine (anesthetic): 0.1%/10%.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic (adrenergic agonist). **CLINICAL:** Antiglaucoma, bronchodilator, cardiac stimulant, antiallergic, antihemorrhagic, priapism reversal agent.

USES

Treatment of asthma (acute exacerbation, reversible bronchospasm), anaphylaxis, hypersensitivity reaction, cardiac arrest. Added to local anesthetics to decrease systemic absorption and increase duration of activity of local anesthetic. Decreases superficial hemorrhage. **OFF-LABEL:** Ventricular fibrillation or pulseless ventricular tachycardia unresponsive to initial defibrillatory shocks; pulseless electrical activity, asystole, hypotension unresponsive to volume resuscitation; bradycardia/hypotension unresponsive to atropine or pacing; inotropic support.

PRECAUTIONS

Contraindications: **Note:** There are no absolute contraindications with injectable epinephrine in a life-threatening situation. **IV:** Narrow-angle glaucoma, shock, organic brain damage; during labor, HF; coronary insufficiency. **Inhalation:** Concurrent use or within 2 wks of MAOIs. **Cautions:** Elderly, diabetes mellitus, hypertension, Parkinson's disease, thyroid disease, cerebrovascular or cardiovascular disease, concurrent use of tricyclic antidepressants.

ACTION

Stimulates alpha-adrenergic receptors (vasoconstriction, pressor effects), $beta_1$-adrenergic receptors (cardiac stimulation), $beta_2$-adrenergic receptors (bronchial dilation, vasodilation). **Therapeutic Effect:** Relaxes smooth muscle of bronchial tree, produces cardiac stimulation, dilates skeletal muscle vasculature.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IM	5–10 min	20 min	1–4 hrs
Subcutaneous	5–10 min	20 min	1–4 hrs
Inhalation	3–5 min	20 min	1–3 hrs

Well absorbed after parenteral administration; minimally absorbed after inhalation. Metabolized in liver, other tissues, sympathetic nerve endings. Excreted in

urine. Ophthalmic form may be systemically absorbed as a result of drainage into nasal pharyngeal passages. Mydriasis occurs within several min and persists several hrs; vasoconstriction occurs within 5 min and lasts less than 1 hr.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effects of **beta-blockers. Digoxin, sympathomimetics** may increase risk of arrhythmias. **Ergonovine, methergine, oxytocin** may increase vasoconstriction. **MAOIs, tricyclic antidepressants** may increase cardiovascular effects. **HERBAL: Ephedra, yohimbe** may increase CNS stimulation. **FOOD:** None known. **LAB VALUES:** May decrease serum potassium.

AVAILABILITY (Rx)

Injection, Solution (Prefilled Syringes): ***(EpiPen)***: 0.3 mg/0.3 ml, ***(EpiPen Jr.)***: 0.15 mg/0.3 ml, ***(Twinject)***: 0.15 mg/0.15 ml. **Injection, Solution:** 0.1 mg/ml (1:10,000), 1 mg/ml (1:1,000).

Solution for Oral Inhalation
(Adrenalin): 2.25% (0.5 ml).

ADMINISTRATION/HANDLING

IV

Reconstitution • For injection, dilute each 1 mg of 1:1,000 solution with 10 ml 0.9% NaCl to provide 1:10,000 solution and inject each 1 mg or fraction thereof over 1 min or more (except in cardiac arrest). • For infusion, further dilute with 250–500 ml D_5W. Maximum concentration 64 mcg/ml.

Rate of Administration • For IV infusion, give at 1–10 mcg/min (titrate to desired response).

Storage • Store parenteral forms at room temperature. • Do not use if solution appears discolored or contains a precipitate.

Subcutaneous

• Shake ampule thoroughly. • Use tuberculin syringe for injection into lateral deltoid region. • Massage injection site (minimizes vasoconstriction effect). Use only 1:1,000 solution.

Nebulizer

• No more than 10 drops Adrenalin Chloride solution 1:100 should be placed in reservoir of nebulizer. • Place nozzle just inside pt's partially opened mouth. • As bulb is squeezed once or twice, instruct pt to inhale deeply, drawing vaporized solution into lungs. • Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness). • When nebulizer is not in use, replace stopper, keep in upright position.

IV INCOMPATIBILITIES

Ampicillin, pantoprazole (Protonix), sodium bicarbonate.

IV COMPATIBILITIES

Calcium chloride, calcium gluconate, dexmedetomidine (Precedex), diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), fentanyl (Sublimaze), heparin, hydromorphone (Dilaudid), lorazepam (Ativan), midazolam (Versed), milrinone (Primacor), morphine, nitroglycerin, norepinephrine (Levophed), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Anaphylaxis

IM: ADULTS, ELDERLY: 0.2–0.5 mg (0.2–0.5 ml of 1:1,000 solution). May repeat q5–15 min if anaphylaxis persists. **CHILDREN WEIGHING 30 KG OR MORE:** 0.3–0.5 mg: may repeat in 5–10 min. **WEIGHING LESS THAN 30 KG:** 0.01 mg/kg q 5–10 min. **Maximum:** 0.3 mg.

Asthma Bronchodilation

Subcutaneous: ADULTS, ELDERLY: 0.3–0.5 mg (0.3–0.5 ml of 1:1,000 solution) q20min times 3 doses. **CHILDREN:** 0.01 ml/kg/dose (1:1,000 solution); q20min times 3 doses.

Nebulization: ADULTS, ELDERLY, CHILDREN 4 YRS OR OLDER: Add 0.5 ml to hand bulb nebulizer: 1–3 inhalations up to q3h if needed.

Cardiac Arrest

IV: ADULTS, ELDERLY: Initially, 1 mg. May repeat q3–5min as needed. **CHILDREN:** Initially, 0.01 mg/kg (0.1 ml/kg of a 1:10,000 solution). May repeat q3–5min as needed.

Endotracheal: ADULTS, ELDERLY: 2–2.5 mg q3–5 min as needed. **CHILDREN:** 0.1 mg/kg (0.1 ml/kg of a 1:1,000 solution). May repeat q3–5min as needed.

Hypersensitivity Reaction

IM, Subcutaneous: ADULTS, ELDERLY: 0.2–0.5 mg (1:1,000) q15–20min.

IV: 0.1 mg (1:10,000) over 5 min.

IM, Subcutaneous: CHILDREN: 0.01 mg/kg every 5–15 min. **Maximum single dose:** 0.3 mg.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Systemic: Tachycardia, palpitations, anxiety. **Ophthalmic:** Headache, eye irritation, watering of eyes. **Occasional: Systemic:** Dizziness, lightheadedness, facial flushing, headache, diaphoresis, increased B/P, nausea, trembling, insomnia, vomiting, fatigue. **Ophthalmic:** Blurred/decreased vision, eye pain. **Rare: Systemic:** Chest discomfort/pain, arrhythmias, bronchospasm, dry mouth/throat.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive doses may cause acute hypertension, arrhythmias. Prolonged/excessive use may result in metabolic acidosis due to increased serum lactic acid. Metabolic acidosis may cause disorientation, fatigue, hyperventilation, headache, nausea, vomiting, diarrhea.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor changes of B/P, HR. Assess lung sounds for rhonchi, wheezing, rales. Monitor ABGs. In cardiac arrest, adhere to ACLS protocols.

PATIENT/FAMILY TEACHING

• Avoid excessive use of caffeine. • Report any new symptoms (tachycardia, shortness of breath, dizziness) immediately: may be systemic effects.

epirubicin HIGH ALERT

ep-i-**rue**-bi-sin
(Ellence, Pharmorubicin)

■ **BLACK BOX ALERT** ■ Potential for cardiotoxicity, severe myelosuppresion. May increase risk of secondary leukemias. With IV, severe local tissue damage, necrosis may occur. Must be administered by personnel trained in administration/handling of chemotherapeutic agents. **Do not confuse Ellence with Elase, or epirubicin with daunorubicin, doxorubicin, or idarubicin.**

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Anthracycline antibiotic. **CLINICAL:** Antineoplastic.

USES

Adjuvant therapy in pts with primary breast cancer. **OFF-LABEL:** Esophageal, gastric, soft tissue sarcoma; uterine sarcoma.

PRECAUTIONS

Contraindications: Hypersensitivity to epirubicin, previous treatment with anthracyclines up to maximum cumulative dose, recent MI, cardiomyopathy and/or

HF, severe arrhythmias. **Cautions:** Renal/hepatic/cardiac impairment.

ACTION

Inhibits DNA, RNA, protein synthesis by steric obstruction. Inhibits DNA helicase activity, preventing enzymatic separation of double-stranded DNA, interfering with replication, transcription. **Therapeutic Effect:** Produces cytotoxic activity.

PHARMACOKINETICS

Widely distributed into tissues. Protein binding: 77%. Metabolized in liver and RBCs. Primarily eliminated through biliary excretion. Not removed by hemodialysis. **Half-life:** 33 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted but monitor for toxicity.

INTERACTIONS

DRUG: **Cytotoxic medications** may increase risk of hematologic and GI effects. **Calcium channel blockers** may increase risk of developing heart failure. **Cimetidine** may increase serum concentration, toxicity. **Daunorubicin, doxorubicin, idarubicin, mitoxantrone** may increase risk of GI, hematologic, hepatic effects; cardiotoxicity. **Hepatotoxic medications** may increase risk of hepatotoxicity. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Echinacea** may decrease concentration. Avoid **black cohosh, dong quai** in estrogen-dependent tumors. **FOOD:** None known. **LAB VALUES:** May increase serum uric acid.

AVAILABILITY (Rx)

Injection Solution: 2-mg/ml single-use vials (25 ml, 100 ml). **Injection, Powder for Reconstitution:** 50 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Exclude pregnant staff from working with epirubicin; wear protective clothing. If accidental contact with skin or eyes occurs, flush area immediately with copious amounts of water.

IV

Reconstitution • Ready-to-use vials require no reconstitution. **Powder:** Reconstitute with Sterile Water for Injection to final concentration of 2 mg/ml.

Rate of Administration • **IV Push:** Infuse medication into tubing of free-flowing IV of 0.9% NaCl or D_5W over 3–10 min. **IV Infusion:** Further dilute with 50–250 ml 0.9% NaCl or D_5W and infuse over 15–20 min.

Storage • Refrigerate vial of solution; store vials of powder at room temperature. • Protect from light. • Use within 24 hrs of first penetration of rubber stopper. • Discard unused portion.

IV INCOMPATIBILITIES

Fluorouracil (5-FU), heparin. Do not mix epirubicin in same syringe with other medications.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Avoid use of veins over joints or in extremities with compromised venous or lymphatic drainage. Pts receiving 120 mg/m^2 per cycle should also receive prophylactic antibiotic therapy.

Breast Cancer

IV: ADULTS: 60 mg/m^2 on days 1 and 8 q28days for 6 cycles or 100 mg/m^2 on day 1 q21days for 6 cycles in combination with 5-fluorouracil (5-FU) and Cytoxan. Dosage adjustment considered in pts with bone marrow depression or impaired renal function.

Dosage in Renal Impairment

Lower doses recommended with severe impairment.

Hematologic Toxicity

Delay day 1 dose until platelets greater than 100,000/mm^3; ANC greater than 1,500/mm^3, nonhematologic toxicity grade 1 or less.

Reduce day 1 dose to 75% if previous day 1 dose resulted in nadir platelets less than 50,000/mm^3, ANC less than 250/mm^3, neutropenic fever, or grade 3 or 4 nonhematologic toxicity.

For breast cancer in combination with cyclophosphamide and fluorouracil, reduce day 8 dose by 75% of day 1 dose if platelets are 75,000–100,000/mm^3 and ANC 1,000–1,499/mm^3, or grade 3 or 4 nonhematologic toxicity.

Dosage in Hepatic Impairment

Bilirubin 1.2–3 mg/dL or AST 2–4 times the upper limit of normal	50% of starting dose
Bilirubin more than 3 mg/dL or AST more than 4 times the upper limit of normal	25% of starting dose

SIDE EFFECTS

Frequent (83%–70%): Nausea, vomiting, alopecia, amenorrhea. **Occasional (9%–5%):** Stomatitis, diarrhea, hot flashes. **Rare (2%–1%):** Rash, pruritus, fever, lethargy, conjunctivitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Risk of cardiotoxicity (either acute, manifested as transient EKG abnormalities, or chronic, manifested as HF) increases when total cumulative dose exceeds 900 mg/m^2. Extravasation during administration may result in severe local tissue necrosis. Myelosuppression may produce hematologic toxicity, manifested principally as leukopenia and, to lesser extent, anemia, thrombocytopenia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC before and at frequent intervals during therapy. Obtain baseline serum chemistries before therapy. Obtain EKG before therapy, LFT before each dose. Antiemetics may be effective in preventing, treating nausea.

INTERVENTION/EVALUATION

Monitor for stomatitis (may lead to ulceration of mucous membranes within 2–3 days). Monitor blood counts for evidence of myelosuppression, renal function, LFT. Assess cardiac function. Monitor daily pattern of bowel activity, stool consistency. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Monitor EKG changes. Assess injection site for extravasation, local skin reactions.

PATIENT/FAMILY TEACHING

• Hair loss is reversible, but new hair growth may have different color, texture. New hair growth resumes 2–3 mos after last therapy dose. • Maintain strict oral hygiene. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site.

eplerenone

ep-**ler**-e-none
(Inspra)
Do not confuse Inspra with Spiriva.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Aldosterone receptor antagonist. **CLINICAL:** Antihypertensive.

USES

Treatment of hypertension alone or in combination with other antihypertensive agents. Treatment of HF following acute myocardial infarction (AMI).

PRECAUTIONS

Contraindications: Concurrent use with strong CYP3A4 inhibitors (e.g., ketoconazole, itraconazole), creatinine clearance less than 30 ml/min, serum potassium level greater than 5.5 mEq/L. **Hypertension:** Type 2 diabetes with microalbuminuria; CrCl less than 50 ml/min; serum creatinine greater than 2 mg/dL in men, greater than 1.8 mg/dL in women; concomitant use of potassium supplements or potassium-sparing diuretics. **Cautions:** Hyperkalemia, HF, post MI, diabetes, mild renal impairment.

ACTION

Binds to mineralocorticoid receptors in kidney, heart, blood vessels, brain, blocking binding of aldosterone. **Therapeutic Effect:** Reduces B/P.

PHARMACOKINETICS

Absorption unaffected by food. Protein binding: 50%. Metabolized in liver. Excreted in urine (67%), feces (32%). Not removed by hemodialysis. **Half-life:** 4–6 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **ACE inhibitors, angiotensin II antagonists potassium-sparing diuretics (e.g., spironolactone), potassium supplements** increase risk of hyperkalemia. **CYP3A4 inhibitors (e.g., itraconazole, ketoconazole)** increase concentration five-fold (use is contraindicated). **NSAIDs** may decrease antihypertensive effect. **HERBAL: St. John's wort** decreases effectiveness. **FOOD: Grapefruit products** may increase potential for hyperkalemia, arrhythmias. **LAB VALUES:** May increase serum potassium, ALT, AST, cholesterol, triglycerides, serum creatinine, uric acid. May decrease serum sodium.

AVAILABILITY (Rx)

Tablets: 25 mg, 50 mg.

ADMINISTRATION/HANDLING

• Do not break, crush, dissolve, or divide film-coated tablets. • May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: 50 mg once a day. If 50 mg once a day produces an inadequate B/P response, may increase dosage to 50 mg twice a day. If pt is concurrently receiving CYP3A4 inhibitors (e.g., erythromycin, saquinavir, verapamil, or fluconazole), reduce initial dose to 25 mg once a day.

HF Following MI

PO: ADULTS, ELDERLY: Initially, 25 mg once a day. If tolerated, titrate up to 50 mg once a day within 4 wks.

Dosage Adjustment for Serum Potassium Concentrations in HF

Less than 5 mEq/L: Increase dose from 25 mg daily to 50 mg daily or increase dose from 25 mg every other day to 25 mg daily.
5–5.4 mEq/L: No adjustment needed.
5.5–5.9 mEq/L: Decrease dose from 50 mg daily to 25 mg daily. Decrease dose from 25 mg daily to 25 mg every other day. Decrease dose from 25 mg every other day to withhold medication.
6 mEq/L or Greater: Withhold medication until potassium is less than 5.5 mEq/L, then restart at 25 mg every other day.

Dosage in Renal Impairment

Use is contraindicated in pts with hypertension with creatinine clearance less than 50 ml/min or serum creatinine greater than 2 mg/dL in males or greater

than 1.8 mg/dL in females. All other indications, creatinine clearance less than 30 ml/min, use is contraindicated.

Dosage in Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Rare (3%–1%): Dizziness, diarrhea, cough, fatigue, flu-like symptoms, abdominal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hyperkalemia may occur, particularly in pts with type 2 diabetes mellitus and microalbuminuria.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations). If excessive reduction in B/P occurs, place pt in supine position, feet slightly elevated.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Monitor serum potassium levels. Assess B/P for hypertension/hypotension. Monitor daily pattern of bowel activity, stool consistency. Assess for evidence of flu-like symptoms.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established (possible dizziness effect). • Hypertension requires lifelong control. • Avoid exercising during hot weather (risk of dehydration, hypotension). • Do not use salt substitutes containing potassium.

epoetin alfa

TOP 100

e-**poe**-e-tin **al**-fa
(Epogen, Eprex ✱, Procrit)

■ **BLACK BOX ALERT** ■ Increased risk of serious cardiovascular events, thromboembolic events, mortality, time-to-tumor progression in pts with head and neck cancer, metastatic breast cancer, non–small-cell lung cancer when administered to a target hemoglobin of more than 11 g/dL. Increases rate of deep vein thrombosis in perioperative pts not receiving anticoagulant therapy.

Do not confuse epoetin with darbepoetin, or Epogen with Neupogen.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Glycoprotein. **CLINICAL:** Erythropoietin.

USES

Treatment of anemia in pts receiving or who have received chemotherapy, pts with chronic renal failure to decrease need for RBC transfusion, HIV-infected pts on zidovudine (AZT) therapy when endogenous erythropoietin levels are 500 mUnits/ml or less, pts scheduled for elective noncardiac, nonvascular surgery, reducing need for allogenic blood transfusions. **OFF-LABEL:** Anemia in myelodysplastic syndromes.

PRECAUTIONS

Contraindications: Pure red cell aplasia, uncontrolled hypertension. **Cautions:** History of seizures or hypertension. **Cancer pts:** Tumor growth, shortened survival may occur when Hgb levels of 11 g/dL or greater are achieved with epoetin alfa. **Chronic renal failure pts:** Increased risk for serious cardiovascular reactions (e.g., stroke, MI) when Hgb levels greater than 11 g/dL are achieved with epoetin alfa.

ACTION

Stimulates division, differentiation of erythroid progenitor cells in bone marrow. **Therapeutic Effect:** Induces erythropoiesis, releases reticulocytes from bone marrow.

E

PHARMACOKINETICS

Well absorbed after subcutaneous administration. Following administration, an increase in reticulocyte count occurs within 10 days, and increases in Hgb, Hct, and RBC count are seen within 2–6 wks. **Half-life:** 4–13 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C.** **Children:** Safety and efficacy not established in those 12 yrs and younger. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, phosphorus, potassium, creatinine, uric acid, sodium. May decrease bleeding time, iron concentration, serum ferritin.

AVAILABILITY (Rx)

Injection Solution (Epogen, Procrit): 2,000 units/ml, 3,000 units/ml, 4,000 units/ml, 10,000 units/ml, 40,000 units/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Avoid excessive agitation of vial; do not shake (foaming).

IV

Reconstitution • No reconstitution necessary.

Rate of Administration • May be given as an IV bolus.

Storage • Refrigerate. • Vigorous shaking may denature medication, rendering it inactive.

Subcutaneous

• Mix in syringe with bacteriostatic 0.9% NaCl with benzyl alcohol 0.9% (bacteriostatic saline) at a 1:1 ratio (benzyl alcohol acts as local anesthetic; may reduce injection site discomfort). • Use 1 dose per vial; do not reenter vial. Discard unused portion.

IV INCOMPATIBILITIES

Do not mix injection form with other medications.

INDICATIONS/ROUTES/DOSAGE

Anemia Associated with Chemotherapy

◀ALERT▶ Begin therapy only if Hgb less than 10 g/dL and anticipated duration of myelosuppressive chemotherapy is greater than 2 months. Use minimum effective dose to maintain Hgb level that will avoid red blood cell transfusions. Discontinue upon completion of chemotherapy.

Subcutaneous: ADULTS, ELDERLY: Initially, 150 units/kg 3 times/wk (commonly used dose of 10,000 units 3 times/wk) or 40,000 units once weekly. **IV: CHILDREN 5 YRS AND OLDER:** 600 units/kg once weekly. **Maximum:** 40,000 units.

Increase dose: (Adults, elderly): If Hgb does not increase by greater than 1 g/dL and remains below 10 g/dL after initial 4 wks may increase to 300 units/kg 3 times/wk or 60,000 units once weekly. ***(Children):*** If Hgb does not increase by greater than 1 g/dL and remains less than 10 g/dL after initial 4 wks of once-weekly dosing, may increase dose to 900 units/kg/wk. **Maximum:** 60,000 units once weekly.

Decrease dose: Decrease dose by 25% if Hgb increases greater than 1 g/dL in any 2-wk period or Hgb levels reaches level that will avoid red blood cell transfusions.

Reduction of Allogenic Blood Transfusions in Elective Surgery

Subcutaneous: ADULTS, ELDERLY: 300 units/kg/day for 10 days before and 4 days after surgery.

Anemia in Chronic Renal Failure

◀ALERT▶ Individualize dose, using lowest dose to reduce need for RBC transfusions. **ON DIALYSIS:** Initiate when Hgb less than 10 g/dL; reduce dose or

discontinue if Hgb approaches or exceeds 11 g/dL. **NOT ON DIALYSIS:** Initiate when Hgb less than 10 g/dL; reduce dose or stop if Hgb exceeds 10 g/dL.

IV, Subcutaneous: ADULTS, ELDERLY: 50–100 units/kg 3 times/wk. **CHILDREN:** 50 units/kg 3 times/wk.

Maintenance: *Decrease dose by 25%:* If Hgb increases greater than 1 g/dL in any 2-wk period. ***Increase dose by 25%:*** If Hgb does not increase by greater than 1 g/dL after 4 wks of therapy. Do not increase dose more frequently than every 4 wks.

Note: If pt does not attain adequate response after appropriate dosing over 12 wks, do not continue to increase dose and use minimum effective dose to maintain Hgb level that will avoid red blood cell transfusions.

HIV Infection in Pts Treated with Zidovudine (AZT)

IV, Subcutaneous: ADULTS: Initially, 100 units/kg 3 times a wk for 8 wks; may increase by 50–100 units/kg 3 times a wk. Evaluate response q4–8wks thereafter. Adjust dosage by 50–100 units/kg 3 times a wk. If dosages larger than 300 units/kg 3 times a wk are not eliciting response, it is unlikely pt will respond. **Maintenance:** Titrate to maintain desired Hgb level. Hgb levels should not exceed 12 g/dL. If Hgb greater than 12 g/dL, resume treatment with 25% dose reduction when Hgb drops below 11 g/dL. Discontinue if Hgb increase not attained with 300 units/kg for 8 wks.

Anemia of Prematurity

Intravenous, Subcutaneous: 500–1,250 units/kg/wk divided in 2–5 doses for 10 doses.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Pts Receiving Chemotherapy

Frequent (20%–17%): Fever, diarrhea, nausea, vomiting, edema. **Occasional (13%–11%):** Asthenia, shortness of breath, paresthesia. **Rare (5%–3%):** Dizziness, trunk pain.

Pts with Chronic Renal Failure

Frequent (24%–11%): Hypertension, headache, nausea, arthralgia. **Occasional (9%–7%):** Fatigue, edema, diarrhea, vomiting, chest pain, skin reactions at administration site, asthenia, dizziness.

Pts with HIV Infection Treated with AZT

Frequent (38%–15%): Fever, fatigue, headache, cough, diarrhea, rash, nausea. **Occasional (14%–9%):** Shortness of breath, asthenia, skin reaction at injection site, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypertensive encephalopathy, thrombosis, cerebrovascular accident, MI, seizures occur rarely. Hyperkalemia occurs occasionally in pts with chronic renal failure, usually in those who do not comply with medication regimen, dietary guidelines, frequency of dialysis regimen.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P before drug initiation (80% of pts with chronic renal failure have history of hypertension). B/P often rises during early therapy in pts with history of hypertension. Consider that all pts eventually need supplemental iron therapy. Assess serum iron (should be greater than 20%), serum ferritin (should be greater than 100 ng/ml) before and during therapy. Establish baseline CBC (esp. note Hct).

INTERVENTION/EVALUATION

Assess CBC rountinely (esp. Hgb, Hct). Monitor aggressively for increased B/P (25% of pts on medication require antihypertensive therapy, dietary restrictions). Monitor temperature, esp. in cancer pts on chemotherapy and

zidovudine-treated HIV pts. Monitor serum BUN, uric acid, creatinine, phosphorus, potassium, esp. in chronic renal failure pts.

PATIENT/FAMILY TEACHING

• Frequent laboratory assessments needed to determine correct dosage. • Immediately report any severe headache. • Avoid potentially hazardous activity during first 90 days of therapy (increased risk of seizures in pts with chronic renal failure during first 90 days). • Specific dietary regimen must be maintained.

eprosartan

ep-roe-**sar**-tan
(Teveten)

■ **BLACK BOX ALERT** ■ May cause fetal injury, mortality if used during second or third trimester of pregnancy.

FIXED COMBINATION(S)

Teveten HCT: eprosartan/hydrochlorothiazide (a diuretic): 400 mg/12.5 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Angiotensin II receptor antagonist. **CLINICAL:** Antihypertensive.

USES

Treatment of hypertension (alone or in combination with other medications).

PRECAUTIONS

Contraindications: Concomitant use with aliskiren in pts with diabetes. **Cautions:** Unstented renal artery stenosis, preexisting renal insufficiency.

ACTION

Potent vasodilator. Blocks vasoconstrictor, aldosterone-secreting effects of angiotensin II, inhibiting binding of angiotensin II to AT_1 receptors. **Therapeutic Effect:** Causes vasodilation, decreases peripheral resistance, decreases B/P.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 98%. Minimally metabolized in liver. Primarily excreted via urine, biliary system. Minimally removed by hemodialysis. **Half-life:** 5–9 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has caused fetal and neonatal morbidity and mortality. Potential for adverse effects on breastfeeding infant. Breastfeeding not recommended. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Potassium-sparing diuretics, potassium supplements may increase risk of hyperkalemia. May produce additive effect with **antihypertensive agents. HERBAL: Ephedra, ginseng, yohimbe** may worsen hypertension**. Garlic** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, ALT, AST. May decrease Hgb, Hct.

AVAILABILITY (Rx)

Tablets: 400 mg, 600 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not break, crush, dissolve, or divide tablets.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 600 mg/day. Range: 400–800 mg/day as single dose or 2 divided doses.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (5%–2%): Headache, cough, dizziness. **Rare (less than 2%):** Muscle pain, fatigue, diarrhea, upper respiratory tract infection, dyspepsia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdosage may manifest as hypotension, tachycardia. Bradycardia occurs less often.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P, apical pulse immediately before each dose, in addition to regular monitoring (be alert to fluctuations). Question for possibility of pregnancy (see Pregnancy Category), history of hepatic/renal impairment, renal artery stenosis. Assess medication history (esp. diuretics).

INTERVENTION/EVALUATION

Monitor B/P, pulse, serum BUN, creatinine, electrolytes, urinalysis.

PATIENT/FAMILY TEACHING

• Inform female pt regarding consequences of second- and third-trimester exposure to medication. • Avoid tasks that require alertness, motor skills until response to drug is established. • Restrict sodium, alcohol intake. • Follow diet, control weight. • Do not stop taking medication; hypertension requires lifelong control. • Check B/P regularly. • Do not chew, crush, dissolve, or divide tablets; take whole.

eptifibatide

HIGH ALERT

ep-ti-**fye**-ba-tide
(Integrilin)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Glycoprotein IIb/IIIa inhibitor. **CLINICAL:** Antiplatelet, antithrombotic.

USES

Treatment of pts with acute coronary syndrome (ACS), including those managed medically and those undergoing percutaneous coronary intervention (PCI). **OFF-LABEL:** Support PCI during ST-elevation myocardial infarction (STEMI).

PRECAUTIONS

Contraindications: Active abnormal bleeding within previous 30 days; history of bleeding diathesis; history of stroke within 30 days or history of hemorrhagic stroke; severe hypertension (systolic B/P greater than 200 mm Hg or diastolic B/P greater than 110 mm Hg); major surgery within previous 6 wks, dependency on hemodialysis. **Cautions:** Impaired renal function, hemorrhagic retinopathy, platelet counts less than 100,000/mm^3. **Pregnancy Category B.**

ACTION

Blocks platelet glycoprotein IIb/IIIa receptor (binding site for fibrinogen, von Willebrand factor). **Therapeutic Effect:** Prevents thrombus formation within coronary arteries. Prevents platelet aggregation.

PHARMACOKINETICS

Protein binding: 25%. Excreted in urine. **Half-life:** 2.5 hrs.

INTERACTIONS

DRUG: **Anticoagulants, heparin, NSAIDs, antiplatelets, thrombolytic agents** may increase risk of bleeding. **HERBAL:** **Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng** may increase antiplatelet effects. **FOOD:** None known. **LAB VALUES:** Increases PT, aPTT. Decreases platelet count. Prolongs clotting time.

AVAILABILITY (Rx)

Injection Solution: 0.75 mg/ml, 2 mg/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Withdraw bolus dose from 10-ml vial (2 mg/ml); for IV infusion, withdraw from 100-ml vial (0.75 mg/ml). • IV push and infusion administration may be given undiluted.
Rate of Administration • Give bolus dose IV push over 1–2 min.
Storage • Store vials in refrigerator. • Solution appears clear, colorless. • Do not shake. • Discard any unused portion left in vial or if preparation contains *any* opaque particles.

IV INCOMPATIBILITIES

Administer in separate line; do not add other medications to infusion solution.

IV COMPATIBILITIES

Amiodarone (Cordarone), argatroban, bivalirudin, metoprolol (Lopressor).

INDICATIONS/ROUTES/DOSAGE

Adjunct to Percutaneous Coronary Intervention (PCI)

IV Bolus, IV Infusion: ADULTS, ELDERLY: 180 mcg/kg (**maximum:** 22.6 mg) before PCI initiation; then continuous drip of 2 mcg/kg/min and a second 180 mcg/kg (**maximum:** 22.6 mg) bolus 10 min after the first. **Maximum:** 15 mg/hr. Continue until hospital discharge or for up to 18–24 hrs. Minimum 12 hrs is recommended. Concurrent aspirin and heparin therapy is recommended.

Acute Coronary Syndrome (ACS)

IV Bolus, IV Infusion: ADULTS, ELDERLY: 180 mcg/kg over 1–2 min. (**maximum:** 22.6 mg) bolus then 2 mcg/kg/min until discharge or coronary artery bypass graft, up to 72 hrs. **Maximum:** 15 mg/hr. Concurrent aspirin and heparin therapy is recommended.

Dosage in Renal Impairment

Creatinine Clearance Less than 50 ml/min: Use 180 mcg/kg bolus (**maximum:** 22.6 mg) and 1 mcg/kg/min infusion (**maximum:** 7.5 mg/hr).

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (7%): Hypotension.

ADVERSE EFFECTS/ TOXIC REACTIONS

Minor to major bleeding complications may occur, most commonly at arterial access site for cardiac catheterization.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess platelet count, Hgb, Hct before treatment and during therapy. If platelet count less than 90,000/mm^3, additional platelet counts should be obtained routinely to avoid thrombocytopenia.

INTERVENTION/EVALUATION

Diligently monitor for potential bleeding, particularly at other arterial, venous puncture sites. If possible, urinary catheters, nasogastric tubes should be avoided.

eribulin

er-i-**bue**-lin
(Halaven)
Do not confuse eribulin with epirubicin or erlotinib.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Microtubule inhibitor. **CLINICAL:** Antineoplastic.

USES

Treatment of metastatic breast cancer in pts who previously received at least 2 chemotherapeutic regimens for treatment.

PRECAUTIONS

Contraindications: None known. **Cautions:** Prolonged QTc (congenital, other medications that prolong QT interval), hypokalemia, hypomagnesium, hepatic/renal impairment, moderate to severe neuropathy, HF.

ACTION

Binds directly on microtubules during active stage of G_2 and M phases of cell cycle, preventing formation of microtubules, an essential part of process of separation of chromosomes. **Therapeutic Effect:** Blocks cells in mitotic phase of cell division, leading to cell death.

PHARMACOKINETICS

Extensively metabolized in liver. Protein binding: 49%–65%. Excreted in feces (82%), urine (9%). **Half-life:** 40 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause embryo-fetal toxicity. Unknown if distributed in breast milk. **Pregnancy Category D.** **Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **FOOD:** None known. **HERBAL:** None significant. **LAB VALUES:** May decrease WBC, Hgb, Hct, platelet count, potassium. May increase ALT.

AVAILABILITY (Rx)

Injection, Solution: 1 mg/2 ml (0.5-mg/ml).

ADMINISTRATION/HANDLING

IV

Reconstitution • May administer undiluted or dilute in 100 ml 0.9% NaCl.

Rate of Administration • Administer over 2–5 min.

Storage • Store at room temperature. • Once diluted, syringe or diluted solution may be stored for up to 4 hrs at room temperature or up to 24 hrs if refrigerated.

IV INCOMPATIBILITIES

Do not dilute with D_5W or administer through IV line containing solutions with dextrose or in same IV line with other medications.

INDICATIONS/ROUTES/DOSAGE

Metastatic Breast Cancer

IV: ADULTS, ELDERLY: 1.4 mg/m^2 over 2–5 min on days 1 and 8 of 21-day cycle.

Mild Hepatic/Renal Impairment (Creatinine Clearance 30–50 ml/min)

IV: ADULTS, ELDERLY: 1.1 mg/m^2 over 2–5 min on days 1 and 8 of 21-day cycle.

Moderate Hepatic Impairment

IV: ADULTS, ELDERLY: 0.7 mg/m^2 over 2–5 min on days 1 and 8 of 21-day cycle.

Recommended Dose Delays

Do not administer day 1 or day 8 of treatment for any of the following: ANC less than 1,000/mm^3, platelets less than 75,000/mm^3, grade 3 or 4 nonhematologic toxicities. Day 8 dose may be delayed for maximum of 1 wk. If toxicities do not resolve or improve to grade 2 severity by day 15, omit dose. If toxicities resolve or improve to grade 2 severity by day 15, continue treatment at reduced dose and initiate next cycle no sooner than 2 wks later. Do not re-escalate dose after it has been reduced.

SIDE EFFECTS

Common (54%–35%): Fatigue, asthenia, alopecia, peripheral sensory neuropathy, nausea. **Frequent (25%–18%):** Constipation, arthralgia/myalgia, decreased weight, anorexia, pyrexia, headache, diarrhea, vomiting. **Occasional (16%–9%):** Back pain, dyspnea, cough, bone pain, extremity pain, urinary tract infection, oral mucosal inflammation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Neutropenia occurs in 82% of pts, with 57% developing grade 3 neutropenia. Severe neutropenia (ANC less than 500/mm^3)

lasting more than 1 wk occurred in 12%. Anemia occurs in 58% of pts. Peripheral neuropathy occurs in 8% of pts but is the most common adverse reaction requiring discontinuation of therapy. Prolonged QTc may be noted on or after day 8 of treatment.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy. Obtain baseline CBC, serum chemistries before treatment begins. Obtain CBC prior to each dose.

INTERVENTION/EVALUATION

Diligently monitor for neutropenia, peripheral neuropathy (most frequent cause of drug discontinuation). Monitor for symptoms of neuropathy (burning sensation, hyperesthesia, hypoesthesia, paresthesia, discomfort, neuropathic pain). Assess hands, feet for erythema. Monitor CBC for evidence of neutropenia, thrombocytopenia. Assess mouth for stomatitis (erythema, ulceration, mucosal burning).

PATIENT/FAMILY TEACHING

• Avoid crowds, those with known infection. • Avoid contact with anyone who recently received live virus vaccine. • Do not have immunizations without physician's approval (drug lowers body resistance). • Promptly report fever over 100.5°F, chills, cough, burning or pain urinating, numbness, tingling, burning sensation, erythema of hands/feet.

erlotinib

HIGH ALERT

er-**loe**-ti-nib
(Tarceva)

Do not confuse erlotinib with dasatinib, eribulin, geftinib, imatinib, or lapatinib.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Human epidermal growth factor. **CLINICAL:** Antineoplastic.

USES

Treatment of locally advanced or metastatic non–small-cell lung cancer (NSCLC) after failure of at least one prior chemotherapy regimen (as monotherapy). Treatment of locally advanced, unresectable, or metastatic pancreatic cancer (in combination with gemcitabine). Maintenance treatment of locally advanced or metastatic NSCLC that has not progressed after 4–6 cycles of first-line platinum-based chemotherapy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe hepatic/renal impairment cardiovascular disease. Concurrent use of strong CYP3A4 inhibitors and inducers (see Appendix J), pts at risk for GI perforation (e.g., peptic ulcer disease, diverticular disease).

ACTION

Reversibly inhibits overall epidermal growth factor receptor (EGFR)–tyrosine kinase activity. **Therapeutic Effect:** Produces tumor cell death.

PHARMACOKINETICS

About 60% is absorbed after PO administration; bioavailability is increased by food to almost 100%. Protein binding: 93%. Extensively metabolized in liver. Primarily eliminated in feces (83%), urine (8%). **Half-life:** 24–36 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: CYP3A4 inhibitors (e.g., atanzavir, clarithromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir) may increase concentration/effects.

CYP3A4 inducers (e.g., carbamazepine, phenobarbital, phenytoin, rifampin) may decrease concentration/effects. **Proton pump inhibitors (e.g., omeprazole), H_2 antagonists (e.g., ranitidine)** may decrease absorption/effects (avoid use of **proton pump inhibitors.** Give ertapenem 10 hrs after or 2 hrs prior to **H_2 antagonists**). **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD: Grapefruit products** may increase potential for myelotoxicity. **LAB VALUES:** May increase serum bilirubin, ALT, AST.

AVAILABILITY (Rx)

Tablets: 25 mg, 100 mg, 150 mg.

ADMINISTRATION/HANDLING

PO

• Give at least 1 hr before or 2 hrs after ingestion of food. • Avoid grapefruit products. • May dissolve in 3–4 oz water and give orally or via feeding tube.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage adjustment for toxicity: Reduce dose in 50-mg increments.

Lung Cancer

PO: ADULTS, ELDERLY: 150 mg/day until disease progression or unacceptable toxicity occurs.

Pancreatic Cancer

PO: ADULTS, ELDERLY: 100 mg/day in combination with gemcitabine until disease progression or unacceptable toxicity occurs.

Dosage in Renal Impairment

Interrupt dosing for renal disease due to dehydration.

Dosage in Hepatic Impairment

Reduce starting dose to 75 mg and individualize dose escalation if tolerated.

SIDE EFFECTS

Frequent (greater than 10%): Fatigue, anxiety, headache, depression, insomnia, rash, pruritus, dry skin, erythema, diarrhea, anorexia, nausea, vomiting, mucositis, constipation, dyspepsia, weight loss, dysphagia, abdominal pain, arthralgia, dyspnea, cough. **Occasional (10%–1%):** Keratitis. **Rare (less than 1%):** Corneal ulceration.

ADVERSE EFFECTS/ TOXIC REACTIONS

UTI occurs occasionally. Pneumonitis, GI bleeding occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain CBC, serum electrolytes, hepatic enzyme levels before beginning therapy.

INTERVENTION/EVALUATION

Assess LFT and CBC, renal function, serum electrolytes, hydration status periodically.

PATIENT/FAMILY TEACHING

• Take drug on empty stomach. • Report rash, blood in stool, diarrhea, irritated eyes, fever. • Avoid grapefruit products.

ertapenem

er-ta-**pen**-em
(Invanz)
Do not confuse ertapenem with doripenem, imipenem, or meropenem, or Invanz with Avinza.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Carbapenem. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *S. aureus* (methicillin-susceptible only), *S. agalactiae, S. pneumoniae* (penicillin-susceptible only), *S. pyogenes, E. coli, H. influenzae* (beta-lactamase negative strains only), *K. pneumoniae, M. catarrhalis, Bacteroides* spp., *C. clostridioforme,*

Peptostreptococcus spp., including moderate to severe intra-abdominal, skin/skin structure infections; community-acquired pneumonia; complicated UTI; acute pelvic infection; adult diabetic foot infections without osteomyelitis. Prevention of surgical site infection. **OFF-LABEL:** Treatment of IV catheter–related bloodstream infection; prosthetic joint infection.

PRECAUTIONS

Contraindications: History of anaphylactic hypersensitivity to beta-lactams (e.g., imipenem and cilastin, meropenem), hypersensitivity to amide-type local anesthetics (IM). **Cautions:** Hypersensitivity to penicillins, cephalosporins, renal impairment, CNS disorders, esp. brain lesions or history of seizures, elderly.

ACTION

Penetrates bacterial cell wall of microorganisms, binds to penicillin-binding proteins, inhibiting cell wall synthesis. **Therapeutic Effect:** Produces bacterial cell death.

PHARMACOKINETICS

Almost completely absorbed after IM administration. Protein binding: 85%–95%. Widely distributed. Primarily excreted in urine (80%), feces (10%). Removed by hemodialysis. **Half-life:** 4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Advanced or end-stage renal insufficiency may require dosage adjustment.

INTERACTIONS

DRUG: **Probenecid** may increase concentration/effect. May decrease concentration/effect of **valproic acid.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, bilirubin, BUN, creatinine, glucose, PT, aPTT, sodium. May decrease platelet count, Hgb, Hct, WBC.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 1 g.

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute 1-g vial with 10 ml 0.9% NaCl or Bacteriostatic Water for Injection. • Shake well to dissolve. • Further dilute with 50 ml 0.9% NaCl (**maximum concentration:** 20 mg/ml).

Rate of Administration • Give by intermittent IV infusion (piggyback). Do not give IV push. • Infuse over 30 min.

Storage • Solution appears colorless to yellow (variation in color does not affect potency). • Discard if solution contains precipitate. • Reconstituted solution is stable for 6 hrs at room temperature or 24 hrs if refrigerated.

IM

• Reconstitute with 3.2 ml 1% lidocaine HCl injection (without epinephrine). • Shake vial thoroughly. • Inject deep in large muscle mass (gluteal or lateral part of thigh). • Administer suspension within 1 hr after preparation.

IV INCOMPATIBILITIES

Do not mix or infuse with any other medications. Do not use diluents or IV solutions containing dextrose.

IV COMPATIBILITIES

Heparin, potassium chloride, tigecycline (Tygacil), Sterile Water for Injection, 0.9% NaCl.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

IM, IV: ADULTS, ELDERLY, CHILDREN 13 YRS AND OLDER: 1 g/day. **CHILDREN 3 MOS–12 YRS:** 15 mg/kg 2 times/day. **Maximum:** 1 g/day.

Dosage in Renal Impairment

Creatinine clearance 30 ml/min or less	500 mg once daily
Hemodialysis	If daily dose given within 6h prior to HD, give 150 mg dose after HD.
Peritoneal dialysis	500 mg once daily

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (10%–6%): Diarrhea, nausea, headache. **Occasional (5%–2%):** Altered mental status, insomnia, rash, abdominal pain, constipation, chest pain, vomiting, edema, fever. **Rare (less than 2%):** Dizziness, cough, oral candidiasis, anxiety, tachycardia, phlebitis at IV site.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Anaphylactic reactions have been reported. Seizures may occur in those with CNS disorders (brain lesions, history of seizures), bacterial meningitis, severe renal impairment.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, particularly to beta-lactams, penicillins, cephalosporins. Inquire about history of seizures. Monitor WBC count.

INTERVENTION/EVALUATION

Monitor renal/hepatic function. Monitor daily pattern of bowel activity, stool consistency. Monitor for nausea, vomiting. Evaluate hydration status. Evaluate for inflammation at IV injection site. Assess skin for rash. Observe mental status; be alert to tremors, possible seizures. Assess sleep pattern for evidence of insomnia.

PATIENT/FAMILY TEACHING

- Report tremors, seizures, rash, prolonged diarrhea, chest pain, other new symptoms.

erythromycin

er-**ith**-roe-**mye**-sin

(Akne-Mycin, Apo-Erythro Base, EES, Erybid, Eryc, EryDerm, EryPed, Ery-Tab, Erythrocin, PCE Dispertab)

Do not confuse Eryc with Emcyt, or erythromycin with azithromycin or clarithromycin.

FIXED-COMBINATION(S)

Eryzole, Pediazole: erythromycin/sulfisoxazole (sulfonamide): 200 mg/600 mg per 5 ml.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Macrolide. **CLINICAL:** Antibiotic, antiacne.

USES

Treatment of susceptible infections due to *S. pyogenes, S. pneumoniae, S. aureus, M. pneumoniae, Legionella, Chlamydia, N. gonorrheae, E. histolytica,* including syphilis, nongonococcal urethritis, diphtheria, pertussis, chancroid, *Campylobacter* gastroenteritis. **Topical:** Treatment of acne vulgaris. **Ophthalmic:** Prevention of gonococcal ophthalmia neonatorum, superficial ocular infections. **OFF-LABEL: Systemic:** Treatment of acne vulgaris, chancroid, *Campylobacter* enteritis, gastroparesis, Lyme disease, preoperative gut sterilization. **Topical:** Treatment of minor bacterial skin infections. **Ophthalmic:** Treatment of blepharitis, conjunctivitis, keratitis, chlamydial trachoma.

PRECAUTIONS

Contraindications: Hepatic impairment. Concomitant administration with ergot

derivatives, lovastatin, simvastatin. **Cautions:** Elderly, myasthenia gravis, strong CYP3A4 inhibitor, hepatic impairment, pts with prolonged QT intervals, uncorrected hypokalemia or hypomagnesemia, concurrent use of class IA or III antiarrhythmics.

ACTION

Penetrates bacterial cell membranes, reversibly binds to bacterial ribosomes, inhibiting protein synthesis. **Therapeutic Effect:** Bacteriostatic.

PHARMACOKINETICS

Variably absorbed from GI tract (depending on dosage form used). Protein binding: 70%–90%. Widely distributed. Metabolized in liver. Primarily eliminated in feces by bile. Not removed by hemodialysis. **Half-life:** 1.4–2 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. Erythromycin estolate may increase hepatic enzymes in pregnant women. **Pregnancy Category B. Children/Elderly:** No age-related precautions noted. High dosage in pts with decreased hepatic/renal function increases risk of hearing loss.

INTERACTIONS

DRUG: May increase concentration of **buspirone, cyclosporine, calcium channel blockers, statins.** May inhibit metabolism of **carbamazepine. Hepatotoxic medications** may increase risk of hepatotoxicity. May increase risk of **theophylline** toxicity. May increase effects of **warfarin.** **HERBAL:** **St. John's wort** may decrease concentration. **FOOD:** **Grapefruit** may increase potential for torsades. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, ALT, AST.

AVAILABILITY (Rx)

Gel, Topical: 2%. **Injection, Powder for Reconstitution:** 500 mg, 1 g. **Ointment, Ophthalmic:** 0.5%. **Ointment, Topical (Akne-Mycin):** 2%. **Oral Suspension (EES, EryPed):** 100 mg/2.5 ml, 200 mg/5 ml, 400 mg/5 ml. **Tablet as Base:** 250 mg, 333 mg, 500 mg. **Tablet as Ethylsuccinate (EES):** 400 mg.

Capsules, Delayed-Release (Eryc): 250 mg. **Tablets, Delayed-Release (Ery-Tab):** 250 mg, 333 mg, 500 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute each 500 mg with 10 ml Sterile Water for Injection without preservative to provide a concentration of 50 mg/ml. • Further dilute with 100–250 ml D_5W or 0.9% NaCl to maximum concentration of 5 mg/ml.

Rate of Administration • For intermittent IV infusion (piggyback), infuse over 20–60 min.

Storage • Store parenteral form at room temperature. • Initial reconstituted solution in vial is stable for 2 wks refrigerated or 24 hrs at room temperature. • Diluted IV solution stable for 8 hrs at room temperature or 24 hrs if refrigerated. • Discard if precipitate forms.

PO

• May give with food to decrease GI upset. Do not give with milk or acidic beverages. • Oral suspension is stable for 35 days at room temperature. • Do not crush delayed-release capsules, tablets.

Ophthalmic

• Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Place ¼–½ inch of ointment into pocket. • Instruct pt to close eye gently for 1–2 min (so medication will not be squeezed out of the sac) and to roll eyeball to increase contact area of drug to eye.

IV INCOMPATIBILITIES

Fluconazole (Diflucan), furosemide (Lasix), heparin, metoclopramide (Reglan).

IV COMPATIBILITIES

Amiodarone (Cordarone), diltiazem (Cardizem), hydromorphone (Dilaudid), lidocaine, lorazepam (Ativan), magnesium sulfate, midazolam (Versed), morphine, multivitamins, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage Range

PO: ADULTS, ELDERLY: BASE: 250–500 mg q6–12h. **CHILDREN:** 30–50 mg/kg/day in 2–4 divided doses. **Maximum:** 2 g/day. **ETHYLSUCCINATE: ADULTS, ELDERLY:** 400–800 mg q6–12h. **Maximum:** 4 g/day. **CHILDREN:** 30–50 mg/kg/day in divided doses. **Maximum:** 3.2 g/day. **NEONATES:** 10 mg/kg/dose q8–12h. **IV: ADULTS, ELDERLY:** 15–20 mg/kg/day divided q6h. **Maximum:** 4 g/day. **CHILDREN, INFANTS:** 15–50 mg/kg/day divided q6h. **Maximum:** 4 g /day. **NEONATES:** 10 mg/ks/dose q8–12h.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: IV: Abdominal cramping/discomfort, phlebitis/thrombophlebitis. **Topical:** Dry skin (50%). **Occasional:** Nausea, vomiting, diarrhea, rash, urticaria. **Rare: Ophthalmic:** Sensitivity reaction with increased irritation, burning, itching, inflammation. **Topical:** Urticaria.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other super infections (abdominal cramps, severe watery diarrhea, fever), reversible cholestatic hepatitis may occur. High dosage in pts with renal impairment may lead to reversible hearing loss. Anaphylaxis occurs rarely. Ventricular arrhythmias, prolonged QT interval occur rarely with IV form.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies (particularly erythromycins), hepatitis.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Assess for hepatotoxicity (malaise, fever, abdominal pain, GI disturbances). Be alert for superinfection: fever, vomiting, diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema). Check for phlebitis (heat, pain, red streaking over vein). Monitor for high-dose hearing loss.

PATIENT/FAMILY TEACHING

• Continue therapy for full length of treatment. • Doses should be evenly spaced. • Take medication with 8 oz water 1 hr before or 2 hrs following food or beverage. • **Ophthalmic:** Report burning, itching, inflammation. • **Topical:** Report excessive skin dryness, itching, burning. • Improvement of acne may not occur for 1–2 mos; maximum benefit may take 3 mos; therapy may last mos or yrs. • Use caution if using other topical acne preparations containing peeling or abrasive agents, medicated or abrasive soaps, cosmetics containing alcohol (e.g., astringents, aftershave lotion).

escitalopram

es-sye-**tal**-o-pram
(Cipralex ✱, Lexapro)

■ **BLACK BOX ALERT** ■ Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin reuptake inhibitor. **CLINICAL:** Antidepressant.

USES

Treatment of major depressive disorder. Treatment of generalized anxiety disorder (GAD). **OFF-LABEL:** Treatment of mild dementia-associated agitation in nonpsychotic pt; vasomotor symptoms associated with menopause.

PRECAUTIONS

Contraindications: Use within 14 days of MAOIs. **Cautions:** Hepatic/renal impairment, history of seizures, concurrent use of CNS depressants, pts at high risk of suicide, concomitant aspirin, NSAIDs, warfarin (may potentiate bleeding risk), elderly.

ACTION

Blocks uptake of neurotransmitter serotonin at neuronal presynaptic membranes, increasing its availability at postsynaptic receptor sites. **Therapeutic Effect:** Antidepressant effect.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 56%. Primarily metabolized in liver. Primarily excreted in feces, with a lesser amount eliminated in urine. **Half-life:** 35 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category C. Children:** May cause increased anticholinergic effects or hyperexcitability. **Elderly:** More sensitive to anticholinergic effects (e.g., dry mouth), more likely to experience dizziness, sedation, confusion, hypotension, hyperexcitability.

INTERACTIONS

DRUG: **Alcohol, other CNS suppressants** may increase CNS depression. **Linezolid, aspirin, NSAIDs, warfarin** may increase risk of bleeding. **MAOIs** may cause serotonin syndrome (autonomic hyperactivity, diaphoresis, excitement, hyperthermia, rigidity, neuroleptic malignant syndrome, coma). **Sumatriptan** may cause weakness, hyperreflexia, poor coordination. **HERBAL:** **Gotu kola, kava kava, SAMe, St. John's wort, valerian** may increase CNS depression. **Ginkgo biloba, St. John's wort** may increase risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** May decrease serum sodium.

AVAILABILITY (Rx)

Oral Solution: 5 mg/5 ml.

Tablets: 5 mg, 10 mg, 20 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not break, crush, dissolve, or divide tablets.

INDICATIONS/ROUTES/DOSAGE

Depression

PO: ADULTS: Initially, 10 mg once a day in the morning or evening. May increase to 20 mg after a minimum of 1 wk. **ELDERLY:** 10 mg/day. **CHILDREN 12–17 YRS:** Initially, 10 mg once daily. May increase to 20 mg/day after at least 3 wks. **Maximum:** 20 mg once daily. Recommended: 10 mg once daily.

Generalized Anxiety Disorder

PO: ADULTS: Initially, 10 mg once a day in morning or evening. May increase to 20 mg after minimum of 1 wk. **ELDERLY:** 10 mg/day.

Dosage in Renal Impairment

Use caution in pts with creatinine clearance less than 20 ml/min.

Dosage in Hepatic Impairment

10 mg/day.

SIDE EFFECTS

Frequent (21%–11%): Nausea, dry mouth, drowsiness, insomnia, diaphoresis. **Occasional (8%–4%):** Tremor, diarrhea, abnormal ejaculation, dyspepsia, fatigue, anxiety, vomiting, anorexia. **Rare (3%–2%):** Sinusitis, sexual dysfunction,

menstrual disorder, abdominal pain, agitation, decreased libido.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose manifested as dizziness, drowsiness, tachycardia, confusion, seizures.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

For pts on long-term therapy, LFT, renal function tests, blood counts should be performed periodically. Observe, record behavior. Assess psychological status, thought content, sleep pattern, appearance, interest in environment.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, suicide potential increases). Assess appearance, behavior, speech pattern, level of interest, mood. Monitor for suicidal ideation (esp. at beginning of therapy or when doses are increased or decreased), social interaction, mania, panic attacks.

PATIENT/FAMILY TEACHING

• Do not stop taking medication or increase dosage. • Avoid alcohol. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report worsening depression, suicidal ideation, unusual changes in behavior.

esmolol

HIGH ALERT

es-moe-lol
(Brevibloc)
Do not confuse Brevibloc with Bumex or Buprenex, or esmolol with Osmitrol.

CLASSIFICATION

PHARMACOTHERAPEUTIC: $Beta_1$-adrenergic blocker. **CLINICAL:** Antiarrhythmic.

USES

Rapid, short-term control of ventricular rate in supraventricular tachycardia (SVT), atrial fibrillation or flutter; treatment of tachycardia and/or hypertension (esp. intraop or postop). Treatment of noncompensatory sinus tachycardia. **OFF-LABEL:** Postoperative hypertension or SVT in children. Arrhythmia and/or rate control in ACS, intubation, thyroid storm, pheochromocytoma, electroconvulsive therapy.

PRECAUTIONS

Contraindications: Cardiogenic shock, uncompensated cardiac failure, second- or third-degree heart block (except in pts with pacemaker), sinus bradycardia. **Cautions:** Pts with sick sinus syndrome; compensated heart failure; concurrent use of digoxin, verapamil, diltiazem; diabetes; myasthenia gravis; renal impairment; history of anaphylaxis to allergens.

ACTION

Selectively blocks $beta_1$-adrenergic receptors. **Therapeutic Effect:** Slows sinus heart rate, decreases cardiac output, reducing B/P.

PHARMACOKINETICS

Rapidly metabolized primarily by esterase in cytosol of red blood cells. Protein binding: 55%. Less than 1%–2% excreted in urine. **Half-life:** 9 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Opioids, calcium channel blockers, MAOIs** may increase level/effects. **HERBAL:** **Yohimbe** may decrease effects. **FOOD:** None known. **LAB VALUES:** None significant.

E

AVAILABILITY (Rx)

Injection Solution: 10 mg/ml (250 ml), 20 mg/ml (100 ml).

ADMINISTRATION/HANDLING

◀ALERT▶ Give by IV infusion. Avoid butterfly needles, very small veins (can cause thrombophlebitis).

IV

Rate of Administration • Administer by controlled infusion device; titrate to tolerance and response. • Infuse IV loading dose over 1–2 min. • Hypotension (systolic B/P less than 90 mm Hg) is greatest during first 30 min of IV infusion.

Storage • Use only clear and colorless to light yellow solution. • Discard solution if discolored or precipitate forms.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), furosemide (Lasix).

IV COMPATIBILITIES

Amiodarone (Cordarone), dexmedetomidine (Precedex), diltiazem (Cardizem), dopamine (Intropin), heparin, magnesium, midazolam (Versed), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Rate Control in Supraventricular Arrhythmias

IV: ADULTS, ELDERLY: Initially, loading dose of 500 mcg/kg/min for 1 min, followed by 50 mcg/kg/min for 4 min. If optimum response is not attained in 5 min, give second loading dose of 500 mcg/kg/min for 1 min, followed by infusion of 100 mcg/kg/min for 4 min. A third (and final) loading dose can be given and infusion increased by 50 mcg/kg/min, up to 200 mcg/kg/min, for 4 min. Once desired response is attained, increase infusion by no more than 25 mcg/kg/min. Infusion usually administered over 24–48 hrs in most pts. Range: 50–200 mcg/kg/min (average dose 100 mcg/kg/min).

Intraop/Postop Tachycardia Hypertension (Immediate Control)

IV: ADULTS, ELDERLY: Initially, 80 mg over 30 sec, then 150 mcg/kg/min infusion up to 300 mcg/kg/min.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Generally well tolerated, with transient, mild side effects. **Frequent:** Hypotension (systolic B/P less than 90 mm Hg) manifested as dizziness, nausea, diaphoresis, headache, cold extremities, fatigue. **Occasional:** Anxiety, drowsiness, flushed skin, vomiting, confusion, inflammation at injection site, fever.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce profound hypotension, bradycardia, dizziness, syncope, drowsiness, breathing difficulty, bluish fingernails or palms of hands, seizures. May potentiate insulin-induced hypoglycemia in diabetic pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, apical pulse immediately before drug is administered (if pulse is 60 or less/min or systolic B/P is 90 mm Hg or less, withhold medication, contact physician).

INTERVENTION/EVALUATION

Monitor B/P for hypotension, EKG, heart rate, respiratory rate, development of diaphoresis, dizziness (usually first sign of impending hypotension). Assess pulse for quality, irregular rate, bradycardia, extremities for coldness. Assist with ambulation if dizziness occurs. Assess for nausea, diaphoresis, headache, fatigue.

esomeprazole

es-o-**mep**-ra-zole
(Apo-Esomeprazole*, Nexium, Nexium 24 HR)
Do not confuse esomeprazole with aripiprazole or omeprazole, or Nexium with Nexavar.

FIXED-COMBINATION(S)

Vimovo: esomeprazole/naproxen (NSAID): 20 mg/375 mg, 20 mg/500 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Proton pump inhibitor. **CLINICAL:** Gastric acid inhibitor.

USES

PO: Short-term treatment (4–8 wks) of erosive esophagitis (diagnosed by endoscopy); symptomatic gastroesophageal reflux disease (GERD). Treatment of Zollinger-Ellison syndrome. Used in triple therapy with amoxicillin and clarithromycin for treatment of *H. pylori* infection in pts with duodenal ulcer. Reduces risk of NSAID-induced gastric ulcer. **IV:** Treatment of GERD with erosive esophagitis. Short-term treatment of GERD when oral therapy is not appropriate. **OFF-LABEL:** Prevent recurrent peptic ulcer bleeding postendoscopy.

PRECAUTIONS

Contraindications: Hypersensitivity to benzimidazoles, concomitant use of other proton pump inhibitors. **Cautions:** May increase risk of hip, wrist, spine fractures; hepatic impairment; elderly; Asian populations. Concurrent use of CYP3A4 inducers (e.g., rifampin).

ACTION

Converted to active metabolites that irreversibly bind to, inhibit enzymes on surface of gastric parietal cells. Inhibits hydrogen ion transport into gastric lumen. **Therapeutic Effect:** Increases gastric pH; reduces gastric acid production.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 97%. Extensively metabolized in liver. Primarily excreted in urine. **Half-life:** 1–1.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease concentration/effects of **atazanavir, digoxin, iron, ketoconazole.** May increase effect of **warfarin.** May decrease effect of **clopidogrel. CYP3A4 inducers (e.g., rifampin)** may decrease concentration/effects. **HERBAL: St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 20 mg, 40 mg. **Oral Suspension, Delayed-Release Packets:** 2.5 mg, 5 mg, 10 mg, 20 mg, 40 mg.

Capsules (Delayed-Release [Nexium]): 20 mg, 40 mg. **[Nexium 24 HR]:** 20 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • For IV push, add 5 ml of 0.9% NaCl to esomeprazole vial. **Infusion** • For IV infusion, dissolve content of one vial in 50 ml 0.9% NaCl, or D_5W. **Rate of Administration** • For IV push, administer over not less than 3 min. For intermittent infusion (piggyback) infuse over 10–30 min. • Flush line with 0.9% NaCl, or D_5W, both before and after administration.

Storage • Use only clear and colorless to very slightly yellow solution. • Discard solution if particulate forms. • IV infusion stable for 12 hrs in 0.9% NaCl or lactated Ringer's; 6 hrs in D_5W.

PO (Capsules)

• Give 1 hr or more before eating (best before breakfast). • Do not crush, cut capsule; administer whole. • For those with difficulty swallowing capsules, open capsule and mix pellets with 1 tbsp applesauce. Swallow immediately without chewing.

PO (Oral Suspension)

• Empty contents into 5 ml water for 2.5 mg, 5 mg; 15 ml for 10 mg, 20 mg, 40 mg and stir. • Let stand 2–3 min to thicken. • Stir and drink within 30 min.

IV INCOMPATIBILITIES

Do not mix esomeprazole with any other medications through the same IV line or tubing.

IV COMPATIBILITIES

Ceftaroline (Teflaro), doripenem (Doribax).

INDICATIONS/ROUTES/DOSAGE

Erosive Esophagitis

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 20–40 mg once daily for 4–8 wks. May continue for additional 4–8 wks. **CHILDREN 1–11 YRS, WEIGHING 20 KG OR MORE:** 10–20 mg/day for up to 8 wks. **WEIGHING LESS THAN 20 KG:** 10 mg/day for up to 8 wks.

Maintenance Therapy for Erosive Esophagitis

PO: ADULTS, ELDERLY: 20 mg/day.

Treatment of NSAID-Induced Gastric Ulcers

PO: ADULTS, ELDERLY: 20 mg/day for 4–8 wks.

Prevention of NSAID-Induced Gastric Ulcer

PO: ADULTS, ELDERLY: 20–40 mg once a day for up to 6 mos.

Gastroesophageal Reflux Disease (GERD)

IV: ADULTS, ELDERLY: 20 or 40 mg once daily for up to 10 days. **CHILDREN 1–17 YRS, WEIGHING 55 KG OR MORE:** 20 mg once daily; **1–17 YRS, WEIGHING LESS THAN 55 KG:** 10 mg once daily; **1 MO TO LESS THAN 1 YR:** 0.5 mg/kg once daily.
PO: ADULTS, ELDERLY, CHILDREN, 12–17 YRS: 20 mg once daily. **CHILDREN 1–11 YRS:** 10 mg/day for up to 8 wks.

Zollinger-Ellison Syndrome

PO: ADULTS, ELDERLY: 40 mg 2 times a day. Doses up to 240 mg/day have been used.

Duodenal Ulcer Caused by *Helicobacter Pylori*

PO: ADULTS, ELDERLY: 40 mg (esomeprazole) once a day, with amoxicillin 1,000 mg and clarithromycin 500 mg twice a day for 10 days.

Dosage in Renal Impairment

No dose adjustment.

Dosage Hepatic Impairment

Severe: Doses should not exceed 20 mg/day.

SIDE EFFECTS

Frequent (7%): Headache. **Occasional (3%–2%):** Diarrhea, abdominal pain, nausea. **Rare (less than 2%):** Dizziness, asthenia, vomiting, constipation, rash, cough.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pancreatitis, hepatotoxicity, interstitial nephritis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess epigastric/abdominal pain.

INTERVENTION/EVALUATION

Evaluate for therapeutic response (relief of GI symptoms). Question if GI discomfort, nausea, diarrhea occur. Monitor for occult blood, observe for hemorrhage in pts with peptic ulcer.

PATIENT/FAMILY TEACHING

• Report headache. • Take at least 1 hr before eating. • If swallowing capsules is difficult, open capsule and mix pellets with 1 tbsp applesauce. Swallow immediately without chewing.

estradiol

es-tra-**dye**-ole
(Alora, Climara, Delestrogen, Depo-Estradiol, Divigel, Elestrin, Estrace, Estraderm, Estrasorb, Estring, Estrogel, Evamist, Femring, Femtrace, Menostar, Minivelle, Vagifem, Vivelle-Dot)

■ **BLACK BOX ALERT** ■ Increased risk of dementia when given to women 65 yrs and older. Use of estrogen without progestin increases risk of endometrial cancer in postmenopausal women with intact uterus. Increased risk of invasive breast cancer in postmenopausal women using conjugated estrogens with medroxyprogesterone. Do not use to prevent cardiovascular disease or dementia.

Do not confuse Alora with Aldara, or Estraderm with Testoderm.

FIXED-COMBINATION(S)

Activella: estradiol/norethindrone (hormone): 1 mg/0.5 mg. **Climara PRO:** estradiol/levonorgestrel (progestin): 0.045 mg/24 hr, 0.015 mg/24 hr. **Combi-patch:** estradiol/norethindrone (hormone): 0.05 mg/0.14 mg, 0.05 mg/0.25 mg. **Femhrt:** estradiol/norethindrone (hormone): 5 mcg/1 mg. **Lunelle:** estradiol/medroxy-progesterone (progestin): 5 mg/25 mg per 0.5 ml.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Estrogen.
CLINICAL: Estrogen, antineoplastic.

E

USES

Treatment of moderate to severe vasomotor symptoms associated with menopause, vulvar and vaginal atrophy associated with menopause, hypoestrogenism (due to hypogonadism, primary ovarian failure), metastatic breast cancer (palliation) in men and postmenopausal women, advanced prostate cancer (palliation), prevention of osteoporosis in menopausal women.

PRECAUTIONS

Contraindications: Hepatic dysfunction or disease, undiagnosed abnormal vaginal bleeding, active or history of arterial thrombosis, estrogen-dependent cancer, known or suspected breast cancer (except for pts being treated for metastatic disease), pregnancy, thrombophlebitis or thromboembolic disorders (current or history of). **Cautions:** Renal insufficiency, diabetes mellitus, endometriosis, severe hypocalcemia, hyperlipidemias, asthma, epilepsy, migraines, SLE, hypertension, hypocalcemia, hypothyroidism, history of jaundice due to past estrogen use or pregnancy, cardiovascular disease, obesity, porphyria, severe hypocalcemia.

ACTION

Modulates pituitary secretion of gonadotropins; follicle-stimulating hormone (FSH), luteinizing hormone (LH). **Therapeutic Effect:** Promotes normal growth/development of female sex organs.

PHARMACOKINETICS

Well absorbed from GI tract. Widely distributed. Protein binding: 50%–80%.

Metabolized in liver. Primarily excreted in urine. **Half-life:** Unknown.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. May be harmful to infant. Breastfeeding not recommended. **Pregnancy Category X. Children:** Caution in those for whom bone growth is not complete (may accelerate epiphyseal closure). **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **CYP3A4 inducers (e.g., carbamazepine, rifampin)** may decrease concentration/effects. **CYP3A4 inhibitors (e.g., ketoconazole, ritonavir)** may increase concentration/effect. **HERBAL:** Avoid **black cohosh, dong quai, saw palmetto;** may enhance toxic/adverse effects. **St. John's wort** may decrease concentration/effects of estrogens. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, calcium, HDL, triglycerides. May decrease serum cholesterol, LDL. May affect metapyrone testing, thyroid function tests.

AVAILABILITY (Rx)

Emulsion, Topical (Estrasorb): 4.35 mg estradiol/1.74 g pouch (contents of 2 pouches deliver estradiol 0.05 mg/day). **Gel, Topical: (Divigel):** 0.1% (0.25-g packet delivers estradiol 0.25 mg, 0.5 g-packet delivers estradiol 0.5 mg, 1-g packet delivers 1 mg). **(Elestrin):** 0.06% delivers 0.52 mg estradiol/actuation. **(Estrogel):** 0.06% delivers 0.75 mg/actuation. **Injection (Cypionate): Depo-Estradiol:** 5 mg/ml. **(Valerate): Delestrogen:** 10 mg/ml, 20 mg/ml, 40 mg/ml. **Tablets: (Estrace):** 0.5 mg, 1 mg, 2 mg. **(Femtrace):** 0.9 mg. **Topical Spray (Evamist):** 1.53 mg/spray. **Transdermal System (Alora):** twice weekly: 0.025 mg/24 hrs, 0.05 mg/24 hrs, 0.075 mg/24 hrs, 0.1 mg/24 hrs. **Transdermal System (Climara):** once weekly: 0.025 mg/24 hrs, 0.0375 mg/24 hrs, 0.05 mg/24 hrs, 0.06 mg/24 hrs, 0.075 mg/24 hrs, 0.1 mg/24 hrs. **Transdermal System (Menostar):** once weekly: 0.014 mg/24 hrs. **Transdermal System (Minivelle, Vivelle-Dot):** twice weekly: 0.025 mg/24 hrs, 0.0375 mg/24 hrs, 0.05 mg/24 hrs, 0.075 mg/24 hrs, 0.1 mg/24 hrs. **Vaginal Cream (Estrace):** 0.1 mg/g. **Vaginal Ring (Estring):** 2 mg (releases 7.5 mcg/day over 90 days). **Vaginal Ring (Femring):** 0.05 mg/day (total estradiol 12.4 mg-release 0.05 mg/day over 3 mos); 0.1 mg/day (total estradiol 24.8 mg-release 0.1 mg/day over 3 mos). **Vaginal Tablet (Vagifem):** 10 mcg.

ADMINISTRATION/HANDLING

IM

• Rotate vial to disperse drug in solution. • Inject deep IM in large muscle mass.

PO

• Administer at same time each day. • Administer with food.

Transdermal

• Remove old patch; select new site (buttocks are alternative application site). • Peel off protective strip to expose adhesive surface. • Apply to clean, dry, intact skin on trunk of body (area with as little hair as possible). • Press in place for at least 10 sec (do not apply to breasts or waistline).

Vaginal

• Apply at bedtime for best absorption. • Insert end of filled applicator into vagina, directed slightly toward sacrum; push plunger down completely. • Avoid skin contact with cream (prevents skin absorption).

INDICATIONS/ROUTES/DOSAGE

Prostate Cancer

IM *(Delestrogen)*: ADULTS, ELDERLY: 30 mg or more q1–2wks.

PO: ADULTS, ELDERLY: 1–2 mg tid for at least 3 mos.

Breast Cancer

PO: ADULTS, ELDERLY: 10 mg 3 times a day for at least 3 mos.

Osteoporosis Prophylaxis in Postmenopausal Females

PO: ADULTS, ELDERLY: 0.45–0.5 mg/day cyclically (3 wks on, 1 wk off).
Transdermal *(Climara)*: ADULTS, ELDERLY: Initially, 0.025 mg/24 hrs weekly, adjust dose as needed.
Transdermal *(Alora, Minivelle, Vivelle-Dot)*: ADULTS, ELDERLY: Initially, 0.025 mg/24 hrs patch twice weekly, adjust dose as needed.
Transdermal *(Menostar)*: ADULTS, ELDERLY: 0.014 mg/24 hrs patch weekly.

Female Hypoestrogenism

PO: ADULTS, ELDERLY: 1–2 mg/day, adjust dose as needed.
IM *(Depo-Estradiol)*: ADULTS, ELDERLY: 1.5–2 mg monthly.
IM *(Delestrogen)*: ADULTS, ELDERLY: 10–20 mg q4wks.

Vasomotor Symptoms Associated with Menopause

PO: ADULTS, ELDERLY: 1–2 mg/day cyclically (3 wks on, 1 wk off), adjust dose as needed.
IM *(Depo-Estradiol)*: ADULTS, ELDERLY: 1–5 mg q3–4wks.
IM *(Delestrogen)*: ADULTS, ELDERLY: 10–20 mg q4wks.
Topical Emulsion *(Estrasorb)*: ADULTS, ELDERLY: 3.48 g (contents of 2 pouches) once a day in the morning.
Topical Gel *(Estrogel)*: ADULTS, ELDERLY: 1.25 g/day.
Transdermal Spray *(Evamist)*: Initially, 1 spray daily. May increase to 2–3 sprays daily.
Transdermal *(Climara)*: ADULTS, ELDERLY: 0.025 mg/24 hrs weekly. Adjust dose as needed.
Transdermal ADULTS, ELDERLY: *(Alora)*: 0.05 mg/24 hrs twice a wk. ***(Vivelle-Dot)*:** 0.0375 mg/24 hrs twice a wk.
Vaginal Ring *(Femring)*: ADULTS, ELDERLY: 0.05 mg. May increase to 0.1 mg if needed.

Vaginal Atrophy

Vaginal Ring *(Estring)*: ADULTS, ELDERLY: 2 mg.
Vaginal Cream *(Estrace)*: Insert 2–4 g/day intravaginally for 2 wks, then reduce dose by ½ initial dose for 2 wks, then maintenance dose of 1 g 1–3 times a wk.

Atrophic Vaginitis

Vaginal Tablet *(Vagifem)*: ADULTS, ELDERLY: Initially, 1 tablet/day for 2 wks. **Maintenance:** 1 tablet twice a wk.

SIDE EFFECTS

Frequent: Anorexia, nausea, swelling of breasts, peripheral edema marked by swollen ankles and feet. **Transdermal:** Skin irritation, redness. **Occasional:** Vomiting (esp. with high doses), headache (may be severe), intolerance to contact lenses, hypertension, glucose intolerance, brown spots on exposed skin. **Vaginal:** Local irritation, vaginal discharge, changes in vaginal bleeding (spotting, breakthrough, prolonged bleeding). **Rare:** Chorea (involuntary movements), hirsutism (abnormal hairiness), loss of scalp hair, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Prolonged administration increases risk of gallbladder disease, thromboembolic disease, breast/cervical/vaginal/endometrial/hepatic carcinoma. Cholestatic jaundice occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess frequency/severity of vasomotor symptoms. Question for hypersensitivity to estrogen, previous jaundice, thromboembolic disorders associated with pregnancy, estrogen therapy. Question for possibility of pregnancy (Pregnancy Category X).

INTERVENTION/EVALUATION

Monitor B/P, weight, serum calcium, glucose, hepatic enzymes. Monitor for loss of vision, sudden onset of proptosis, diplopia, migraine, thromboembolic disorders.

PATIENT/FAMILY TEACHING

• Limit alcohol, caffeine. • Avoid grapefruit products. • Immediately report sudden headache, vomiting, disturbance of vision/speech, numbness/weakness of extremities, chest pain, calf pain, shortness of breath, severe abdominal pain, mental depression, unusual bleeding. • Avoid smoking. • Report abnormal vaginal bleeding. • Never place patch on breast or waistline.

estramustine

HIGH ALERT

es-tra-**mus**-teen
(Emcyt)
Do not confuse Emcyt with Eryc, or estramustine with exemestane.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Alkylating agent, estrogen/nitrogen mustard.
CLINICAL: Antineoplastic.

USES

Treatment of metastatic or progressive carcinoma of prostate gland.

PRECAUTIONS

Contraindications: Active thrombophlebitis or thromboembolic disorders (unless tumor is cause of thromboembolic disorder and benefits outweigh risk), hypersensitivity to estradiol, nitrogen mustard. **Cautions:** History of thrombophlebitis, thrombosis, thromboembolic disorders; cerebrovascular, coronary artery disease; hepatic impairment; renal insufficiency, diabetes, pts with fluid accumulation; migraine, seizure disorder; hypertension.

ACTION

Binds to microtubule-associated proteins, causing their disassembly. **Therapeutic Effect:** Reduces serum testosterone concentration, increases estrogen levels.

PHARMACOKINETICS

Well absorbed from GI tract. Highly localized in prostatic tissue. Metabolized in liver. Primarily eliminated in feces by biliary system. **Half-life:** 20 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not indicated for use in women. **Children:** Not used in this pt population. **Elderly:** Age-related renal impairment and/or peripheral vascular disease may require dosage adjustment.

INTERACTIONS

DRUG: **Hepatotoxic medications** may increase risk of hepatotoxicity. **HERBAL:** **Echinacea** may decrease concentration/effects. **FOOD:** **Milk, dairy products, other calcium-rich foods** may impair absorption. **LAB VALUES:** May increase serum glucose, bilirubin, cortisol, LDH, phospholipid, prolactin, AST, sodium, triglyceride. May decrease serum phosphate. May alter thyroid function test results.

AVAILABILITY (Rx)

Capsules: 140 mg.

ADMINISTRATION/HANDLING

PO

• Refrigerate capsules (may remain at room temperature for 24–48 hrs without loss of potency). • Give with water 1 hr before or 2 hrs after meals. Avoid milk or calcium products.

INDICATIONS/ROUTES/DOSAGE

Prostatic Carcinoma

PO: ADULTS, ELDERLY: 10–16 mg/kg/day (most common: 14 mg/kg/day) in 3–4 divided doses.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Peripheral edema (esp. lower extremities), breast tenderness/enlargement, diarrhea, flatulence, nausea. **Occasional:** Increase in B/P, thirst, dry skin, ecchymosis, flushing, alopecia, night sweats. **Rare:** Headache, rash, fatigue, insomnia, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

May exacerbate HF; increased risk of pulmonary emboli, thrombophlebitis, CVA.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor serum calcium, hepatic function tests, B/P periodically.

PATIENT/FAMILY TEACHING

• Do not take with milk, milk products, calcium-rich food, calcium-containing antacids. • Use contraceptive measures during therapy. • Report headache (migraine or severe), vomiting, disturbed speech/vision, dizziness, numbness, shortness of breath, calf pain, chest pain/pressure, unexplained cough.

eszopiclone

TOP 100

e-**zop**-i-klone
(Lunesta)
Do not confuse Lunesta with Neulasta.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonbenzodiazepine **(Schedule IV). CLINICAL:** Hypnotic.

USES

Treatment of insomnia in pts who experience difficulty falling asleep or are unable to sleep through the night (sleep maintenance difficulty).

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic impairment, compromised respiratory function, COPD, sleep apnea, clinical depression, suicidal ideation, history of drug dependence; concomitant CNS depressants, strong CYP3A4 inhibitors (e.g., ketoconazole); elderly.

ACTION

May interact with GABA-receptor complexes at binding domains located close to or allosterically coupled to benzodiazepine receptors. **Therapeutic Effect:** Prevents insomnia, difficulty maintaining normal sleep.

PHARMACOKINETICS

Rapidly absorbed following PO administration. Protein binding: 52%–59%. Metabolized in liver. Excreted in urine. **Half-life:** 5–6 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Those with impaired motor or cognitive performance may require dosage adjustment.

INTERACTIONS

DRUG: **Alcohol, anticonvulsants, antihistamines, other CNS depressants** may increase CNS depression. **CYP3A4 inhibitors (e.g., clarithromycin, itraconazole, ketoconazole, nelfinavir, ritonavir)** may increase concentration/toxicity. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** Onset of action may be reduced if taken with or immediately after a **high-fat meal.** **LAB VALUES:** None known.

AVAILABILITY (Rx)

Tablets, Film-Coated: 1 mg, 2 mg, 3 mg.

ADMINISTRATION/HANDLING

PO

• Should be administered immediately before bedtime. • Do not give with or immediately following a high-fat or heavy meal. • Do not break, crush, dissolve, or divide tablet.

INDICATIONS/ROUTES/DOSAGE

Insomnia

PO: ADULTS: 1 mg before bedtime. **Maximum:** 3 mg. **Concurrent use with CYP3A4 inhibitors** (e.g., clarithromycin, erythromycin, azole antifungals): 1 mg before bedtime; if needed, dose may be increased to 2 mg. **ELDERLY:** Initially, 1 mg before bedtime. **Maximum:** 2 mg.

Sleep Maintenance Difficulty

PO: ADULTS: 2 mg before bedtime.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Reduce dose to 1 mg in severe impairment.

SIDE EFFECTS

Frequent (34%–21%): Unpleasant taste, headache. **Occasional (10%–4%):** Drowsiness, dry mouth, dyspepsia, dizziness, nervousness, nausea, rash, pruritus, depression, diarrhea. **Rare (3%–2%):** Hallucinations, anxiety, confusion, abnormal dreams, decreased libido, neuralgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Chest pain, peripheral edema occur occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse, respirations. Raise bed rails, provide call light. Provide environment conducive to sleep (quiet environment, low or no lighting).

INTERVENTION/EVALUATION

Assess sleep pattern of pt. Evaluate for therapeutic response (decrease in number of nocturnal awakenings, increase in length of sleep).

PATIENT/FAMILY TEACHING

• Take only when experiencing insomnia. Do not take when insomnia is not present. • Do not break, chew, crush, dissolve, or divide tablet. Take whole. • Avoid alcohol. • At least 8 hrs must be devoted for sleep time before daily activity begins. • Take immediately before bedtime. • Report insomnia that worsens or persists longer than 7–10 days, abnormal thoughts or behavior, memory loss, anxiety.

etanercept

TOP 100

e-**tan**-er-sept
(Enbrel)

■ **BLACK BOX ALERT** ■ Serious, potentially fatal, infections, including bacterial sepsis, tuberculosis, have occurred. Lymphomas, other malignancies may occur (reported in children/adolescents).

Do not confuse Enbrel with Levbid.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Protein, TNF inhibitor. **CLINICAL:** Antiarthritic.

USES

Treatment of moderate to severely active rheumatoid arthritis (RA). Treatment of moderately to severely active polyarticular juvenile idiopathic arthritis (JIA), ankylosing spondylitis, psoriatic arthritis. Treatment of chronic, moderate to severe plaque psoriasis. **OFF-LABEL:** Treatment of acute graft-versus-host disease.

PRECAUTIONS

Contraindications: Serious active infection or sepsis. **Cautions:** History of recurrent infections, illnesses that predispose to infection (e.g., diabetes). Pts with HF, decreased left ventricular function, history of significant hematologic abnormalities; moderate to severe alcoholic hepatitis, elderly, preexisting or recent-onset CNS demyelinating disorder.

ACTION

Binds to tumor necrosis factor (TNF), blocking its interaction with cell surface receptors. Elevated levels of TNF, involved in inflammatory and immune responses, are found in synovial fluid of rheumatoid arthritis pts. **Therapeutic Effect:** Relieves symptoms of rheumatoid arthritis.

PHARMACOKINETICS

Well absorbed after subcutaneous administration. **Half-life:** 72–132 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted in those 4 yrs and older. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Anakinra** may increase risk of infection. Use of **live virus vaccines** may potentiate virus replication, increase vaccine side effect, decrease pt's antibody response to vaccine. **HERBAL:** **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, bilirubin.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 25 mg. **Injection, Solution (Prefilled Syringe):** 50 mg/ml. **Injection, Solution (Autoinjector):** 50 mg/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Do not add other medications to solution. Do not use filter during reconstitution or administration.

Subcutaneous

• Refrigerate prefilled syringes, powder for reconstitution. • Reconstitute with 1 ml Bacteriostatic Water for Injection. To avoid excessive foaming, gently swirl contents until powder is dissolved. • Do not shake • Withdraw all of the solution into syringe. Final volume should be approximately 1 ml. • Inject into thigh, abdomen, upper arm. Rotate injection sites. • Give new injection at least 1 inch from an old site and never into area where skin is tender, bruised, red, hard. • Once reconstituted, may be stored in vial for up to 14 days refrigerated.

INDICATIONS/ROUTES/DOSAGE

Rheumatoid Arthritis (RA), Psoriatic Arthritis, Ankylosing Spondylitis

Subcutaneous: ADULTS, ELDERLY: 25 mg twice weekly given 72–96 hrs apart or 50 mg once weekly. **Maximum:** 50 mg/wk.

Juvenile Rheumatoid Arthritis (JIA)

Subcutaneous: CHILDREN 2–17 YRS: Twice weekly: 0.4 mg/kg 2 times/wk given 72–96 hrs apart. **Maximum dose:** 25 mg. Once weekly: 0.8 mg/kg/dose. **Maximum dose:** 50 mg.

Plaque Psoriasis

Subcutaneous: ADULTS, ELDERLY: 50 mg twice a wk (give 3–4 days apart) for 3 mos. **Maintenance:** 50 mg once a wk.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (37%): Injection site erythema, pruritus, pain, swelling; abdominal pain, vomiting (more common in children than adults). **Occasional (16%–4%):** Headache, rhinitis, dizziness, pharyngitis, cough, asthenia, abdominal pain, dyspepsia. **Rare (less than 3%):** Sinusitis, allergic reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Infection (pyelonephritis, cellulitis, osteomyelitis, wound infection, leg ulcer, septic arthritis, diarrhea, bronchitis, pneumonia) occurs in 29%–38% of pts. Rare adverse effects include heart failure, hypertension, hypotension, pancreatitis, GI hemorrhage.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain, inflammation. If significant exposure to varicella virus has occurred during treatment, therapy should be temporarily discontinued and treatment with varicella-zoster immune globulin should be considered.

INTERVENTION/EVALUATION

Assess for improvement of joint swelling, pain, tenderness. Monitor erythrocyte sedimentation rate (ESR), C-reactive protein level, CBC with differential, platelet count. Observe for signs of infection.

PATIENT/FAMILY TEACHING

- Instruct pt in subcutaneous injection technique, including areas of body acceptable as injection sites.
- Injection site reaction generally occurs in first mo of treatment and decreases in frequency during continued therapy.
- Do not receive live vaccines during treatment.
- Report persistent fever, bruising, bleeding, pallor.

ethambutol

eth-**am**-bue-tol
(Etibi, Myambutol)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Isonicotinic acid derivative. **CLINICAL:** Antitubercular.

USES

In conjunction with other antitubercular agents for treatment of pulmonary tuberculosis. **OFF-LABEL:** Treatment of atypical mycobacterial infections (e.g., *Mycobacterium avium* complex [MAC]).

PRECAUTIONS

Contraindications: Optic neuritis. Use in young children, unconscious pts, or anyone unable to report visual changes. **Cautions:** Renal dysfunction, ocular defects (diabetic retinopathy, cataracts), recurrent ocular inflammatory conditions. Not recommended for children 13 yrs and younger (unless benefit outweighs risk).

ACTION

Inhibits arabinosyl transferase causing impaired mycobacterial cell wall synthesis. **Therapeutic Effect:** Suppresses multiplication of mycobacteria.

PHARMACOKINETICS

Rapidly, well absorbed from GI tract. Protein binding: 20%–30%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Removed by hemodialysis. **Half-life:** 3–4 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 13 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Aluminum hydroxide** may decrease concentration/effect. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum uric acid.

AVAILABILITY (Rx)

Tablets: 100 mg, 400 mg.

ADMINISTRATION/HANDLING

PO

• May be crushed and mixed with apple juice or applesauce. • Administer at least 4 hrs before giving aluminum hydroxide. • Give with food (decreases GI upset).

INDICATIONS/ROUTES/DOSAGE

Tuberculosis

PO: ADULTS, ELDERLY: 15–25 mg/kg once daily (**maximum:** 1.5–2.5 g/day). **CHILDREN:** 15–20 mg/kg/day (**maximum:** 1 g/day) or 50 mg/kg twice weekly (**maximum:** 2.5 g/dose).

Dosage in Renal Impairment

Dosage interval is modified based on creatinine clearance.

Creatinine Clearance	Dosage
10–50 ml/min	q24–36h
Less than 10 ml/min	q48h
Hemodialysis	Administer post HD
Peritoneal dialysis	Administer q48h
Continuous renal replacement therapy	Administer q24–36h

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: Acute gouty arthritis (chills, pain, swelling of joints with hot skin), confusion, abdominal pain, nausea, vomiting, anorexia, headache. **Rare:** Rash, fever, blurred vision, red-green color blindness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Optic neuritis (more common with high-dosage, long-term therapy), peripheral neuritis, thrombocytopenia, anaphylactoid reaction occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Evaluate baseline CBC, renal function, LFT, and monitor periodically.

INTERVENTION/EVALUATION

Assess for vision changes (altered color perception, decreased visual acuity may be first signs). Give with food if GI distress occurs. Monitor serum uric acid. Assess for hot, painful, swollen joints, esp. great toe, ankle, knee (gout). Report numbness, tingling, burning of extremities (peripheral neuritis).

PATIENT/FAMILY TEACHING

• Do not skip doses; take for full length of therapy (may take mos or yrs). • Immediately report any visual changes (visual effects generally reversible with discontinuation of ethambutol but in rare cases may take up to 1 yr to disappear or may be permanent). • Promptly report swelling or pain of joints, numbness or tingling/ burning of extremities, fever, chills.

etodolac

e-**toe**-doe-lak
(Apo-Etodolac, Ultradol)

■ **BLACK BOX ALERT** ■ Increased risk of serious cardiovascular thrombotic events, including myocardial infarction, CVA. Increased risk of severe GI reactions, including ulceration, bleeding, perforation of stomach, intestines.

CLASSIFICATION

PHARMACOTHERAPEUTIC: NSAID.
CLINICAL: NSAID, analgesic.

USES

Acute and long-term treatment of osteoarthritis, management of pain, treatment of rheumatoid arthritis (RA), juvenile idiopathic arthritis (JIA).

PRECAUTIONS

Contraindications: Perioperative pain in setting of CABG surgery, history of hypersensitivity to aspirin, NSAIDs. **Cautions:** Renal/hepatic impairment, history of GI tract disease, predisposition to fluid retention, HF. Active peptic ulcer disease, chronic inflammation of GI tract, GI bleeding/ulceration. Cardiovascular disease; concurrent use of aspirin, anticoagulants; smoking; elderly; use of alcohol; debilitated pts; asthma.

ACTION

Produces analgesic, anti-inflammatory effects by inhibiting prostaglandin synthesis. **Therapeutic Effect:** Reduces inflammatory response, intensity of pain.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (analgesic)	2–4 hrs	N/A	4–12 hrs

Completely absorbed from GI tract. Protein binding: greater than 99%. Widely distributed. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 6–7 hrs. **Extended-release:** 12 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Avoid use during third trimester (may adversely affect fetal cardiovascular system: premature closure of ductus arteriosus). **Pregnancy Category C (D if used in third trimester or near delivery). Children:** Safety and efficacy not established. **Elderly:** GI bleeding, ulceration more likely to cause serious adverse effects. Age-related renal impairment may increase risk of hepatic/renal toxicity; decreased dosage recommended.

INTERACTIONS

DRUG: May decrease antihypertensive effect of **ACE inhibitors. Aspirin, other salicylates** may increase risk of GI side effects, bleeding. May increase concentration/toxicity of **cyclosporine, digoxin, methotrexate, lithium. HERBAL: Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng** may increase antiplatelet action, risk of bleeding. **FOOD:** None known. **LAB VALUES:** May increase bleeding time, serum creatinine, alkaline phosphatase, ALT, AST, bilirubin. May decrease serum uric acid.

AVAILABILITY (Rx)

Tablets: 400 mg, 500 mg.

Capsules: 200 mg, 300 mg. **Tablets (Extended-Release):** 400 mg, 500 mg, 600 mg.

ADMINISTRATION/HANDLING

PO

• Do not break, crush, dissolve, or divide capsules, extended-release tablets. • May give with food, milk, antacids if GI distress occurs.

INDICATIONS/ROUTES/DOSAGE

Osteoarthritis, Rheumatoid Arthritis (RA)

PO *(Immediate-Release)*: ADULTS, ELDERLY: Initially, 300 mg 2–3 times a day, or 400 mg or 500 mg twice a day.

PO *(Extended-Release)*: ADULTS, ELDERLY: 400–1,000 mg once daily.

Juvenile Idiopathic Arthritis (JIA)

PO *(Extended-Release)*: CHILDREN 6–16 YRS: 1,000 mg in children weighing more than 60 kg, 800 mg once daily in children weighing 46–60 kg, 600 mg once daily in children weighing 31–45 kg, 400 mg once daily in children weighing 20–30 kg.

Analgesia

PO *(Immediate-Release)*: ADULTS, ELDERLY: 200–400 mg q6–8h as needed. **Maximum:** 1,000 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (9%–4%): Dizziness, headache, abdominal pain/cramping, abdominal bloating, diarrhea, nausea, indigestion. **Rare (3%–1%):** Constipation, rash, pruritus, visual disturbances, tinnitus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may result in acute renal failure. Increased risk of cardiovascular events (MI, CVA) and serious, potentially life-threatening GI bleeding. Rare reactions with long-term use include peptic ulcer, gastritis, jaundice, nephrotoxicity (hematuria, dysuria, proteinuria), severe hypersensitivity reaction (bronchospasm, angioedema).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess onset, type, location, duration of pain/inflammation. Inspect appearance of affected joints for immobility, deformities, skin condition.

INTERVENTION/EVALUATION

Monitor CBC, LFT, renal function tests. Observe for bleeding/ecchymosis. Evaluate for therapeutic response: relief of pain, stiffness, swelling; increased joint mobility; reduced joint tenderness; improved grip strength.

PATIENT/FAMILY TEACHING

• Swallow extended-release tablet, capsule whole; do not chew, crush, dissolve, or divide. • Avoid aspirin, alcohol (increases risk of GI bleeding). • Report GI distress, visual disturbances, rash, edema, headache. • Report any signs of bleeding. • Take with food, milk, antacid if GI distress occurs. • Avoid tasks that require alertness, motor skills until response to drug is established.

etoposide, VP-16 HIGH ALERT

e-**toe**-poe-side

(Etopophos, Toposar, VePesid 🍁)

■ **BLACK BOX ALERT** ■ Severe myelosuppression with resulting infection, bleeding may occur. Must be administered by personnel trained in administration/handling of chemotherapeutic agents.

Do not confuse etoposide with etidronate, or VePesid with Pepcid or Versed.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Epipodophyllotoxin. **CLINICAL:** Antineoplastic.

USES

Treatment of refractory testicular tumors, small-cell lung carcinoma. **OFF-LABEL:** Acute lymphocytic, acute nonlymphocytic leukemias; Ewing's and Kaposi's sarcoma; Hodgkin's and non-Hodgkin's lymphomas; endometrial, gastric, non–small-cell lung carcinomas; multiple myeloma; myelodysplastic syndromes; neuroblastoma; osteosarcoma; ovarian germ cell tumors; primary brain, gestational trophoblastic tumors; soft tissue sarcomas; Wilms tumor.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic/renal impairment, myelosuppression, elderly, pts with low serum albumin.

ACTION

Induces single- and double-stranded breaks in DNA. Cell cycle-dependent and phase-specific; most effective in S and G_2 phases of cell division. **Therapeutic Effect:** Inhibits, alters DNA synthesis.

E

PHARMACOKINETICS

Variably absorbed from GI tract. Rapidly distributed, low concentrations in CSF. Protein binding: 97%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 3–12 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Breast-feeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Bone marrow depressants** may increase myelosuppression. **Live-virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Echinacea, St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** Expected decrease of leukocytes, platelets, RBC, Hgb, Hct.

AVAILABILITY (Rx)

Capsules: 50 mg. **Injection, Powder for Reconstitution (Water-Soluble [Etopophos]):** 100 mg. **Injection Solution (Toposar):** 20 mg/ml (5 ml, 25 ml, 50 ml).

ADMINISTRATION/HANDLING

◄ALERT► Administer by slow IV infusion. Wear gloves when preparing solution. If powder or solution comes in contact with skin, wash immediately and thoroughly with soap, water. May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation, administration.

IV

Reconstitution

Vepesid • Dilute each 100 mg (5 ml) with at least 250 ml D_5W or 0.9% NaCl to provide concentration of 0.4 mg/ml (500 ml for concentration of 0.2 mg/ml). May dilute to a concentration as low as 0.1 mg/ml.

Etopophos • Reconstitute each 100 mg with 5–10 ml Sterile Water for Injection, D_5W, or 0.9% NaCl to provide concentration of 20 mg/ml or 10 mg/ml, respectively. • May give without further dilution or further dilute to concentration as low as 0.1 mg/ml with 0.9% NaCl or D_5W.

Rate of administration

Vepesid • Infuse slowly, at least 30–60 min (rapid IV may produce marked hypotension) at a rate not to exceed 100 $mg/m^2/hr$. • Monitor for anaphylactic reaction during infusion (chills, fever, dyspnea, diaphoresis, lacrimation, sneezing, throat, back, chest pain).

Etopophos • May give over as little as 5 min up to 210 min.

Storage

Vepesid • Store injection at room temperature before dilution. • Concentrate for injection is clear, yellow. • Diluted solution is stable at room temperature for 96 hrs at 0.2 mg/ml, 24 hrs at 0.4 mg/ml. • Discard if crystallization occurs.

Etopophos • Refrigerate vials. • Stable at room temperature for 24 hrs or for 7 days if refrigerated after reconstitution.

PO

Storage • Refrigerate gelatin capsules.

IV INCOMPATIBILITIES

VePesid: Cefepime (Maxipime), filgrastim (Neupogen). **Etopophos:** Amphotericin B (Fungizone), cefepime (Maxipime), chlorpromazine (Thorazine), methylprednisolone (Solu-Medrol), prochlorperazine (Compazine).

IV COMPATIBILITIES

VePesid: Carboplatin (Paraplatin), cisplatin (Platinol), cytarabine (Cytosar), daunorubicin (Cerubidine), doxorubicin (Adriamycin), granisetron (Kytril), mitoxantrone (Novantrone), ondansetron (Zofran). **Etopophos:** Carboplatin (Paraplatin), cisplatin (Platinol), cytarabine (Cytosar), dacarbazine (DTIC-Dome),

daunorubicin (Cerubidine), dexamethasone (Decadron), diphenhydramine (Benadryl), doxorubicin (Adriamycin), granisetron (Kytril), magnesium sulfate, mannitol, mitoxantrone (Novantrone), ondansetron (Zofran), potassium chloride.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage individualized based on clinical response, tolerance to adverse effects. Treatment repeated at 3- to 4-wk intervals. Refer to individual protocols.

Refractory Testicular Tumors

IV: ADULTS: 50–100 mg/m^2/day on days 1–5, or 100 mg/m^2/day on days 1, 3, 5 (as combination therapy). Give q3–4wks for 3–4 courses.

Small-Cell Lung Carcinoma

PO: ADULTS: Twice the IV dose rounded to nearest 50 mg. Give once a day for doses 200 mg or less, in divided doses for dosages greater than 200 mg.

IV: ADULTS: 35 mg/m^2/day for 4 consecutive days up to 50 mg/m^2/day for 5 consecutive days q3–4wks (as combination therapy).

Dosage in Renal Impairment

Creatinine Clearance	Dosage
15–50 ml/min	75% of normal dose
Less than 15 ml/min	Consider further dose reduction.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (66%–43%): Mild to moderate nausea/vomiting, alopecia. **Occasional (13%–6%):** Diarrhea, anorexia, stomatitis. **Rare (2% or less):** Hypotension, peripheral neuropathy.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myelosuppression manifested as hematologic toxicity, principally anemia, leukopenia (occurring 7–14 days after drug administration), thrombocytopenia (occurring 9–16 days after administration), and, to lesser extent, pancytopenia. Bone marrow recovery occurs by day 20. Hepatotoxicity occurs occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain hematologic tests before and at frequent intervals during therapy. Antiemetics readily control nausea, vomiting.

INTERVENTION/EVALUATION

Monitor Hgb, Hct, WBC, platelet count, B/P, hepatic/renal function tests. Monitor daily pattern of bowel activity, stool consistency. Monitor for hematologic toxicity (fever, sore throat, signs of local infection, unusual bruising/bleeding from any site), symptoms of anemia (excessive fatigue, weakness). Assess for paresthesia (peripheral neuropathy). Monitor for stomatitis.

PATIENT/FAMILY TEACHING

• Hair loss is reversible, but new hair growth may have different color, texture. • Do not have immunizations without physician's approval (drug lowers resistance). • Avoid contact with those who have recently received live virus vaccine. • Promptly report fever, sore throat, signs of local infection, unusual bruising or bleeding from any site, burning or pain with urination, numbness in extremities, yellowing of skin or eyes.

etravirine

e-tra-**veer**-een
(Intelence)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Nonnucleoside reverse transcriptase inhibitor. **CLINICAL:** Antiretroviral.

E

USES

Used in combination with at least two other antiretroviral agents for treatment of HIV-1 infection in antiretroviral treatment-experienced adults and children 6 yrs and older weighing at least 16 kg.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe hepatic impairment, renal impairment, elderly.

ACTION

Binds directly to HIV-1 reverse transcriptase, changing shape of enzyme, blocking RNA-, DNA-dependent DNA polymerase activity. **Therapeutic Effect:** Interferes with HIV replication, slowing progression of HIV infection.

PHARMACOKINETICS

Well absorbed following PO administration if given following a meal. Protein binding: 99.6%. Metabolized in liver. Eliminated in feces and urine. **Half-life:** 41 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related hepatic, renal, cardiac impairment may require dosage adjustment.

INTERACTIONS

DRUG: **CYP3A4 inducers (e.g., rifampin, carbamazepine, phenytoin)** may decrease concentration. **CYP3A4 inhibitors (e.g., clarithromycin, ketoconazole)** may increase concentration. May decrease effects of **cyclosporine, sirolimus, tacrolimus.** May alter **warfarin** plasma concentration. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depressant effects. **St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** May increase serum amylase, cholesterol, lipase, creatinine, triglycerides, glucose, ALT, AST. May decrease Hgb, neutrophil, platelet count.

AVAILABILITY (Rx)

Tablets: 25 mg, 100 mg, 200 mg.

ADMINISTRATION/HANDLING

PO

• Give following a meal. • Tablets may be dissolved in water. • Stir dispersion well and instruct pt to swallow immediately after dispersion. • Glass should be rinsed several times with water and each rinse swallowed to ensure entire dose is consumed.

INDICATIONS/ROUTES/DOSAGE

HIV-1 Infection

PO: ADULTS: 200 mg (one 200-mg or two 100-mg tablets) twice daily following a meal. **CHILDREN 6–18 YRS, WEIGHING 30 KG OR GREATER:** 200 mg twice daily. **WEIGHING 25–29 KG:** 150 mg twice daily. **WEIGHING 20–24 KG:** 125 mg twice daily. **WEIGHING 16–19 KG:** 100 mg twice daily.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (17%–16%): Rash (mild to moderate, occurring primarily during wk 2 of therapy and infrequently after wk 4), nausea. **Rare (6%–3%):** Diarrhea, fatigue, abdominal pain, hypertension, peripheral neuropathy, headache.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe/life-threatening rash presenting as Stevens-Johnson syndrome, hypersensitivity reaction, erythema multiforme occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab tests before beginning therapy and at periodic intervals thereafter. Offer emotional support.

INTERVENTION/EVALUATION

Closely monitor for evidence of rash (usually appears on trunk, face, extremities during second wk of drug initiation). Rash generally resolves within 1–2 wks on continued therapy.

PATIENT/FAMILY TEACHING

• Do not take any medications, including OTC drugs, without consulting physician. • Small, frequent meals may offset anorexia, nausea. • Etravirine is not a cure for HIV infection, nor does it reduce risk of transmission to others. • If rash appears, contact physician before continuing therapy.

everolimus

TOP 100

e-**veer**-oh-li-mus
(Afinitor, Afinitor Disperz, Zortress)
Do not confuse Afinitor with Lipitor, or everolimus with sirolimus, tacrolimus, or temsirolimus.

■ **BLACK BOX ALERT** ■ Immunosuppresant (may result in infection, malignancy including lymphoma or skin cancer); increased risk of nephrotoxicity in renal transplants (avoid standard doses of cyclosporine); increased risk of renal arterial or venous thrombosis in renal transplants.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Enzyme inhibitor. **CLINICAL:** Antineoplastic, immunosuppressant.

USES

Afinitor: Treatment of advanced renal cell carcinoma after failure of treatment with sunitinib or sorafenib. Treatment of subependymal giant cell astrocytoma (SEGA) associated with tuberous sclerosis. Advanced pancreatic neuroendocrine tumors (PNET). Treatment of breast cancer in postmenopausal women. Treatment of tuberous sclerosis complex (TSC) not requiring immediate surgery. **Afinitor Disperz:** Treatment of SEGA associated with TSC requiring intervention but that cannot be curatively resected. **Zortress:** Prophylaxis of organ rejection after kidney transplant at low to moderate immunologic risk. **OFF-LABEL:** Relapsed or refractory Waldenström's macroglobulinemia. Treatment of progressive advanced carcinoid tumors.

PRECAUTIONS

Contraindications: Hypersensitivity to everolimus, sirolimus, other rapamycin derivatives. **Cautions:** Noninfectious pneumonitis; viral, fungal, or bacterial infection; oral ulceration; mucositis; current immunosuppression; hereditary galactose intolerance; renal/hepatic impairment; hyperlipidemia; concurrent use of CYP3A4 inducers and inhibitors (see Interactions).

ACTION

Binds to the FK binding protein, reducing protein synthesis and cell proliferation. Also reduces lipoma volume. **Therapeutic Effect:** Reduces cell proliferation, produces cell death.

PHARMACOKINETICS

Peak concentration occurs in 1–2 hrs following administration, with steady-state levels achieved in 2 wks. Undergoes extensive hepatic metabolism. Protein binding: 74%. Eliminated in feces (80%), urine (5%). **Half-life:** 30 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **CYP3A4 inhibitors (e.g., atazanavir, clarithromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir, voriconazole)** may increase concentration. **CYP3A4 inducers**

(e.g., carbamazepine, dexamethasone, phenobarbital, phenytoin, rifabutin, rifampin, rifapentine) may decrease concentration. **P-gp inhibitors (e.g., cyclosporine)** may increase everolimus concentration, toxicity. **Statins** may increase risk of rhabdomyolysis. **FOOD:** **High-fat meals** may reduce plasma concentration. **Grapefruit products** may increase concentration (potential for myelotoxicity, nephrotoxicity). **HERBAL:** **St. John's wort** may decrease plasma concentration. **LAB VALUES:** May increase serum BUN, creatinine, glucose, triglycerides, lipids. May decrease WBCs, neutrophils, Hgb, platelets.

AVAILABILITY (Rx)

Tablets (Zortress): 0.25 mg, 0.5 mg, 0.75 mg. **Tablets (Afinitor):** 2.5 mg, 5 mg, 7.5 mg, 10 mg. **Tablets for Oral Suspension (Afinitor Disperz):** 2 mg, 3 mg, 5 mg.

ADMINISTRATION/HANDLING

• Give without regard to food. • Swallow whole. Do not crush/cut Afinitor or Zortress. • Avoid direct contact of crushed tablets with skin or mucous membranes. If unable to swallow, disperse Afinitor Disperz in water with gentle stirring, give immediately.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ If pt requires coadministration of a strong CYP3A4 inducer (carbamazepine, dexamethasone, phenobarbital, phenytoin, rifabutin, rifampin), consider doubling the dose. If strong inducer is discontinued, reduce everolimus to dose used prior to initiation. If moderate CYP3A4 inhibitors are required, reduce dose by 50%.

Renal Carcinoma, Pancreatic Neuroendocrine Tumors, Breast Cancer, TSC

PO: ADULTS, ELDERLY: (Afinitor): 10 mg once daily at same time every day. Coadministration with CYP3A4 inhibitors or P-gp inhibitors: 2.5 mg once daily. May increase to 5 mg/day. Coadministration with CYP3A4 inducers: Increase by 5-mg increments up to 20 mg/day.

SEGA with TSC

PO: ADULTS, CHILDREN: 4.5 mg/m^2 once daily. **Coadministration with CYP3A4 inhibitors or P-gb inhibitors:** 2.5 mg/m^2/day. **Coadministration with CYP3A4 inducers:** 9 mg/m^2/day.

Renal Transplant Prophylaxis

PO: ADULTS, ELDERLY: (Zortress): Initially, 0.75 mg 2 times/day. Give in combination with basiliximab and concurrently with reduced doses of cyclosporine and corticosteroids.

Liver Transplant Prophylaxis

PO: ADULTS, ELDERLY: (Zortress): 1 mg 2 times/day.

Astrocytoma

PO: ADULTS, ELDERLY: Initially, 4.5 mg/m2 once daily, titrated to attain trough concentration of 5-15 ng/ml.

If trough greater than 15 ng/ml: reduce dose by 2.5 mg/day (tablets) or 2 mg/day (tablets for oral suspension). If trough is less than 15 ng/ml: increase dose by 2.5 mg/day (tablets) or 2 mg/day (tablets for oral suspension).

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

	Mild	Moderate	Severe
Breast Cancer PNET, RCC, renal angiomyolipoma	7.5 mg/day or 5 mg/day	5 mg/day or 2.5 mg/day	2.5 mg/day
Liver/Renal transplant	Reduce dose by 33%	Reduce dose by 50%	Reduce dose by 50%
SEGA	No change	No change	Initial dose 2.5 mg/m^2/day

SIDE EFFECTS

Common (44%–26%): Stomatitis, asthenia. Diarrhea, cough, rash, nausea. **Frequent (25%–20%):** Peripheral edema, anorexia, dyspnea, vomiting, pyrexia. **Occasional (19%–10%):** Mucosal inflammation, headache, epistaxis, pruritus, dry skin, epigastric distress, extremity pain. **Rare (less than 10%):** Abdominal pain, insomnia, dry mouth, dizziness, paresthesia, eyelid edema, hypertension, nail disorder, chills.

ADVERSE EFFECTS/ TOXIC REACTIONS

Noninfectious pneumonitis characterized as hypoxia, pleural effusion, cough, or dyspnea was reported in 14% of pts; grade 3 noninfectious pneumonitis reported in 4%. Localized and systemic infections, including pneumonia, other bacterial infections, and invasive fungal infections, have occurred due to everolimus immunosuppressive properties. Renal failure occurs in 3% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess medical history, esp. renal function, use of other immunosuppressants. Obtain baseline CBC, serum chemistries including LFT, BUN, creatinine before treatment begins and routinely thereafter.

INTERVENTION/EVALUATION

Offer antiemetics to control nausea, vomiting. Monitor daily pattern of bowel activity, stool consistency. Assess skin for evidence of rash, edema. Monitor CBC, particularly Hgb, platelet, neutrophil count, BUN, creatinine, LFT. Monitor for shortness of breath, fatigue, hypertension. Assess mouth for stomatitis, mucositis.

PATIENT/FAMILY TEACHING

• Take dose at same time each day. • Avoid crowds, those with known infection. • Avoid contact with anyone who recently received live virus vaccine. • Do not have immunizations without physician's approval (drug lowers body resistance). • Promptly report fever, unusual bruising/bleeding from any site. • Avoid direct contact of crushed tablets with skin or mucous membrane (wash thoroughly if contact occurs). • Avoid grapefruit products.

exemestane

HIGH ALERT

ex-e-**mes**-tane
(Aromasin)
Do not confuse Aromasin with Arimidex, or exemestane with estramustine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Hormone.
CLINICAL: Antineoplastic.

USES

Treatment of advanced breast cancer in postmenopausal women whose disease has progressed following tamoxifen therapy. Adjuvant treatment of postmenopausal women with estrogen-receptor positive early breast cancer after 2–3 yrs of tamoxifen therapy for completion of 5 consecutive yrs of adjuvant hormonal therapy. **OFF-LABEL:** Reduces risk of invasive breast cancer in postmenopausal women; treatment of endometrial cancer, uterine sarcoma.

PRECAUTIONS

Contraindications: Women who are pregnant or may become pregnant; use in premenopausal women. **Cautions:** Concomitant use of estrogen-containing agents, CYP3A4 inducers (e.g., phenobarbital, rifampin).

ACTION

Inactivates aromatase, the principal enzyme that converts androgens to estrogens in both premenopausal and postmenopausal women, lowering circulating estrogen level. **Therapeutic Effect:** Inhibits growth of breast cancers stimulated by estrogens.

E

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 90%. Distributed extensively into tissues. Metabolized in liver; eliminated in urine and feces. **Half-life:** 24 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Indicated for postmenopausal women. **Pregnancy Category D. Children:** Not indicated for use in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **CYP3A4 inducers (e.g., phenobarbital, rifampin)** may decrease concentration/effect. **HERBAL:** **St. John's wort** may decrease concentration. Avoid **black cohosh, dong quai** in estrogen-dependent tumors. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST.

AVAILABILITY (Rx)

Tablets: 25 mg.

ADMINISTRATION/HANDLING

PO

- Give after meals.

INDICATIONS/ROUTES/DOSAGE

Breast Cancer

PO: ADULTS, ELDERLY: 25 mg once a day after a meal. 50 mg/day when used concurrently with potent CYP3A4 inducers (e.g., rifampin, phenytoin).

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (22%–10%): Fatigue, nausea, depression, hot flashes, pain, insomnia, anxiety, dyspnea. **Occasional (8%–5%):** Headache, dizziness, vomiting, peripheral edema, abdominal pain, anorexia, flu-like symptoms, diaphoresis, constipation, hypertension. **Rare (4%):** Diarrhea.

ADVERSE EFFECTS/ TOXIC REACTIONS

MI has been noted.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor for onset of depression. Assess sleep pattern. Monitor for and assist with ambulation if dizziness occurs. Assess for headache. Offer antiemetic for nausea/vomiting.

PATIENT/FAMILY TEACHING

- Report if nausea, hot flashes become unmanageable. • Avoid tasks that require alertness, motor skills until response to drug is established. • Best taken after meals and at same time each day.

exenatide

HIGH ALERT

ex-**en**-a-tide
(Bydureon, Byetta)

■ **BLACK BOX ALERT** ■ (Bydureon): Risk of thyroid C-cell tumors.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Incretin mimetic. **CLINICAL:** Antidiabetic.

USES

Adjunct to diet, exercise to improve glycemic control in pts with type 2 diabetes mellitus.

PRECAUTIONS

Contraindications: Bydureon: History of medullary thyroid carcinoma. Pts with multiple endocrine neoplasia syndrome type 2 (MEN2). **Cautions:** Diabetic ketoacidosis, type 1 diabetes mellitus. Pts with renal transplantation or moderate renal impairment. Not recommended in severe renal impairment, severe GI disease, pancreatitis.

ACTION

Stimulates release of insulin from beta cells of pancreas, mimics enhancement of glucose-dependent insulin secretion, suppresses elevated glucagon secretion, slows gastric emptying (central action increases satiety). **Therapeutic Effect:** Improves glycemic control by increasing postmeal insulin secretion, decreasing postmeal glucagon levels, delaying gastric emptying, and increasing satiety.

PHARMACOKINETICS

Minimal systemic metabolism. Eliminated by glomerular filtration with subsequent proteolytic degradation. **Half-life:** 2.4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effects of **digoxin, lovastatin.** May increase bleeding time, risk of bleeding when used with **warfarin.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Injection, Solution (Prefilled Pen): (Byetta) 10 mcq/0.4 ml; 5 mcg/0.2 ml. **Injection, Suspension (Bydureon):** 2 mg.

ADMINISTRATION/HANDLING

Subcutaneous

• May be given in thigh, abdomen, upper arm. • Rotation of injection sites is essential; maintain careful injection site record. • Give within 60 min before morning and evening meals. Give suspension immediately after powder is suspended.

Storage • Refrigerate prefilled pens. • Discard if freezing occurs. • May be stored at room temperature after first use. • Discard pen 30 days after initial use.

INDICATIONS/ROUTE/DOSAGE

Diabetes Mellitus

Subcutaneous: ADULTS, ELDERLY: (Byetta) 5 mcg per dose given twice a day at any time within the 60-min period before the morning and evening meals. Dose may be increased to 10 mcg twice a day after 1 mo of therapy. (Bydureon): 2 mg once q7days.

◀ALERT▶ Not recommended in pts with creatinine clearance less than 30 ml/min.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

(Byetta) Frequent (44%): Nausea. **Occasional (13%–6%):** Diarrhea, vomiting, dizziness, anxiety, dyspepsia. **Rare (less than 6%):** Weakness. **(Bydureon) 5% or greater:** Nausea, diarrhea, headache, constipation, vomiting, dyspepsia, injection site pruritus or nodule.

ADVERSE EFFECTS/ TOXIC REACTIONS

With concurrent sulfonylurea, hypoglycemia occurs in 36% when given a 10-mcg dose of exenatide, 16% when given a 5-mcg dose. May cause acute pancreatitis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check serum glucose before administration. Discuss lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt or family does not thoroughly understand diabetes management, glucose-testing technique. At least 1 mo should elapse to assess response to drug before new dose adjustment is made.

INTERVENTION/EVALUATION

Monitor serum glucose, food intake, renal function. Assess for hypoglycemia

(cool wet skin, tremors, dizziness, anxiety, headache, tachycardia, numbness in mouth, hunger, diplopia), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased activity or stress, surgical procedure).

PATIENT/FAMILY TEACHING

• Diabetes mellitus requires lifelong control. • Prescribed diet and exercise are principal parts of treatment. Do not skip, delay meals. • Continue to adhere to dietary instructions, regular exercise program, regular testing of serum glucose. • When taking combination therapy with a sulfonylurea, have source of glucose available to treat symptoms of hypoglycemia. • Report any unexplained severe abdominal pain with or without nausea or vomiting.

ezetimibe

TOP 100

e-**zet**-i-mib
(Ezetrol, Zetia)
Do not confuse Zetia with Zebeta or Zestril.

FIXED-COMBINATION(S)

Vytorin: ezetimibe/simvastatin (hydroxymethyglutaryl-CoA [HMG-CoA] reductase inhibitor): 10 mg/10 mg, 10 mg/20 mg, 10 mg/40 mg, 10 mg/80 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antihyperlipidemic. **CLINICAL:** Anticholesterol agent.

USES

Adjunct to diet for treatment of primary hypercholesterolemia (monotherapy or in combination with HMG-CoA reductase inhibitors [statins]), homozygous sitosterolemia, homozygous familial hypercholesterolemia (combined with atorvastatin or simvastatin). Mixed hyperlipidemia (in combination with fenofibrate).

PRECAUTIONS

Contraindications: Concurrent use of an HMG-CoA reductase inhibitor (atorvastatin, fluvastatin, lovastatin, pravastatin, simvastatin) in pts with active hepatic disease or unexplained persistent elevations in serum transaminase; pregnancy; breast-feeding. **Cautions:** Severe renal or mild hepatic impairment. Not recommended in those with moderate or severe hepatic impairment.

ACTION

Inhibits cholesterol absorption in brush border of small intestine, leading to decrease in delivery of intestinal cholesterol to liver. **Therapeutic Effect:** Reduces total serum cholesterol, LDL, triglyceride; increases HDL.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: greater than 90%. Metabolized in small intestine and liver. Excreted in feces (78%), urine (11%). **Half-life:** 22 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those 10 yrs or younger. **Elderly:** Age-related mild hepatic impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Antacids containing aluminum or magnesium, cyclosporine, fenofibrate, gemfibrozil** increase concentration. **Cholestyramine resin** decreases effectiveness. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, ALT, AST.

AVAILABILITY (Rx)

Tablets: 10 mg.

ADMINISTRATION/HANDLING

• Give without regard to food. • May give at same time as statins. Give at least 2 hrs before or 4 hrs after bile acid sequestrants.

INDICATIONS/ROUTES/DOSAGE

Hypercholesterolemia

PO: ADULTS, ELDERLY, CHILDREN, 10 YRS AND OLDER: Initially, 10 mg once a day, given with or without food. If pt is also receiving a bile acid sequestrant, give ezetimibe at least 2 hrs before or at least 4 hrs after bile acid sequestrant.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Not recommended in moderate to severe impairment.

SIDE EFFECTS

Occasional (4%–3%): Back pain, diarrhea, arthralgia, sinusitis, abdominal pain. **Rare (2%):** Cough, pharyngitis, fatigue, depression.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatitis, hypersensitivity reaction, myopathy, rhabdomyolysis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain diet history, esp. fat consumption. Obtain serum cholesterol, triglycerides, hepatic function tests, blood counts during initial therapy and periodically during treatment. Treatment should be discontinued if hepatic enzyme levels persist more than 3 times normal limit.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Question pt for signs/symptoms of back pain, abdominal disturbances. Monitor serum cholesterol, triglycerides for therapeutic response.

PATIENT/FAMILY TEACHING

• Periodic laboratory tests are essential part of therapy. • Do not stop medication without consulting physician. • Report muscular or bone pain. • May take at same time as statins. Take at least 2 hrs before or 4 hrs after cholestyramine, colestipol, colesevelam.

ezogabine

e-**zog**-a-bine
(Potiga)

■ **BLACK BOX ALERT** ■ Retinal abnormalities may progress to vision loss.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Potassium channel opener **(Schedule V).**
CLINICAL: Anticonvulsant.

USES

Adjunctive therapy for treatment of partial-onset seizures in pts 18 yrs of age and older.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hepatic/renal impairment, BPH, urinary retention, chronic cognitive impairment, prolonged QT interval, psychiatric history, pts at risk for suicide.

ACTION

Binds to voltage-gated potassium channels, stabilizing the channels in open formation and enhancing the M current. **Therapeutic Effect:** Regulates neuronal excitability, suppressing seizure activity.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Peak concentration: 0.5–2 hrs.

Protein binding: 80%. Metabolized by glucuronidation and acetylation. Primarily excreted in urine (85%), feces (14%). **Half-life:** 7–11 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Must either discontinue breastfeeding or discontinue drug regimen. **Pregnancy Category C. Children:** Safety and efficacy not established in pts under 18 yrs of age. **Elderly:** Dosage adjustment recommended for pts older than 65 yrs.

INTERACTIONS

DRUG: **Phenytoin, carbamazepine** may decrease plasma concentration/effects. **Alcohol** may increase concentration/adverse effects. May inhibit clearance of **digoxin.** **HERBAL:** None known. **FOOD:** None significant. **LAB VALUES:** May create falsely elevated urine bilirubin level.

AVAILABILITY (Rx)

Tablets: 50 mg, 200 mg, 300 mg, 400 mg.

ADMINISTRATION/HANDLING

- May give without regard to food. Swallow tablets whole.

INDICATIONS/ROUTES/DOSAGE

Partial Seizures

◀ALERT▶ Increase at weekly intervals by no more than 50 mg 3 times daily (150 mg per day).

PO: ADULTS: Initially, 100 mg 3 times daily. May increase to maintenance dose of 200–400 mg 3 times daily (600–1,200 mg daily). **Maximum:** 1,200 mg per day. **ELDERLY:** Initially, 50 mg 3 times a day. May increase weekly to therapeutic level. **Maximum:** 250 mg 3 times a day (750 mg per day).

Dosage Modification

Renal Impairment (CrCl less than 50 ml/min or ESRD): 50 mg 3 times a day for 7 days. Then increase to therapeutic level. **Maximum:** 200 mg 3 times a day (600 mg per day). **Hepatic Impairment (Child-Pugh score less than 9):** Initially, 50 mg 3 times a day for 7 days. Then increase to therapeutic level. **Maximum:** 250 mg 3 times a day (750 mg per day). **Hepatic Impairment (Child-Pugh score greater than 9):** Initially, 50 mg 3 times a day for 7 days. Then increase to therapeutic level. **Maximum:** 200 mg 3 times a day (600 mg per day). **Discontinuation:** Reduce gradually over period of at least 3 wks.

SIDE EFFECTS

Frequent (23%–15%): Dizziness, somnolence, fatigue. **Occasional (8%–4%):** Tremor, vertigo, abnormal coordination, nausea, diplopia, attention disturbance, memory impairment, asthenia, blurred vision, gait disturbance, aphasia, dysarthria, balance disorder. **Rare (3%–1%):** Constipation, anxiety, weight gain, dyspepsia, amnesia, dysphasia, disorientation, dysuria, urinary hesitation, hematuria, urine discoloration, psychotic behavior.

ADVERSE EFFECTS/ TOXIC REACTIONS

Urinary retention requiring catheterization, prolonged QT interval, myoclonus, peripheral edema, hypokinesia, dysphasia, hyperhydrosis, malaise reported in less than 2% of pts. Hydronephrosis associated with baseline renal impairment, increased risk of psychosis, hallucinations, suicidal ideation, depression, aggression, mania noted.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, LOC). Question history of BPH, urinary retention, cognitive impairment, psychiatric disorder, hepatic/renal impairment, alcoholism,

prolonged QT syndrome. Obtain full medication history including digoxin, antiarrhythmics, adjunct anticonvulsant therapy. Obtain baseline EKG, digoxin level if applicable. Question possibility of pregnancy or current breastfeeding.

INTERVENTION/EVALUATION

Initiate seizure precautions and observe for seizure activity. Assist with ambulation if dizziness occurs. Monitor for depression, suicidal ideation, unusual behavior, mania, anxiety. Routinely monitor digoxin levels. Monitor QT interval for pts with HF, ventricular hypertrophy, hypokalemia, hypomagnesemia.

PATIENT/FAMILY TEACHING

• Monitor closely for seizure activity. • Immediately report any new medications, trouble urinating, palpitations, pregnancy, or plans to breastfeed. • Avoid alcohol. • Report any thoughts of suicide, aggressive behavior, depression, anxiety, trouble sleeping, impulsiveness, unusual behavior. • Noncompliance may lead to increased risk of seizures.

famciclovir

fam-**sye**-klo-veer
(Apo-Famciclovir, Famvir)
Do not confuse Famvir with Femara.

F

CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic nucleoside. **CLINICAL:** Antiviral.

USES

Treatment of acute herpes zoster (shingles) in immunocompetent pts, treatment and suppression of recurrent genital herpes in immunocompetent pts, treatment of recurrent mucocutaneous herpes simplex in HIV-infected pts. Treatment of recurrent herpes labialis (cold sores) in immunocompetent pts.

PRECAUTIONS

Contraindications: Hypersensitivity to penciclovir. **Cautions:** Renal impairment. Avoid use in galactose intolerance, severe lactose deficiency, or glucose-galactose malabsorption syndromes.

ACTION

Inhibits HSV-2 polymerase, inhibiting herpes viral DNA synthesis and replication. **Therapeutic Effect:** Suppresses replication of herpes simplex virus, varicella-zoster virus.

PHARMACOKINETICS

Rapidly, extensively absorbed after PO administration. Protein binding: 20%–25%. Rapidly metabolized to penciclovir by enzymes in GI tract, liver, plasma. Eliminated unchanged in urine. Removed by hemodialysis. **Half-life:** 2–3 hrs (increased in severe renal failure).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if excreted in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase ALT, AST, amylase, bilirubin, lipase.

AVAILABILITY (Rx)

Tablets: 125 mg, 250 mg, 500 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Give with food to decrease GI distress.

INDICATIONS/ROUTES/DOSAGE

Acute Herpes Zoster (Shingles)

PO: ADULTS: 500 mg q8h for 7 days. Begin within 72 hrs of rash onset.

Initial Genital Herpes

PO: ADULTS: 250 mg 3 times/day for 7–10 days.

Recurrent Genital Herpes

PO: ADULTS: 1,000 mg twice a day for 1 day.

Suppression of Recurrent Genital Herpes

PO: ADULTS: 250 mg twice a day for up to 1 yr.

Recurrent Mucotaneous/Genital Herpes Simplex in HIV Pts

PO: ADULTS: 500 mg twice a day for 7 days or 5–10 days.

Herpes Labialis (Cold Sores)

PO: ADULTS, ELDERLY: 1,500 mg as a single dose. Initiate at first sign or symptom.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance and disease process.

Creatinine Clearance	Herpes Zoster	Recurrent Genital Herpes (single-day regimen)	Recurrent Genital Herpes (suppression)	Recurrent Herpes Labialis Treatment (single-day regimen)	Recurrent Orolabial or Genital Herpes in HIV Pts
40–59 ml/min	500 mg q12h	500 mg q12h	—	750 mg	—
20–39 ml/min	500 mg q24h	500 mg	125 mg q12h	500 mg	500 mg q24h
Less than 20 ml/min	250 mg q24h	250 mg	125 mg q24h	250 mg	250 mg q24h
Hemodialysis	250 mg after each hemodialysis session	250 mg after each hemodialysis session	125 mg after each hemodialysis session	250 mg after each hemodialysis session	250 mg after each hemodialysis session

Dosage in Hemodialysis Pts

For adults with herpes zoster, give 250 mg after each dialysis treatment; for adults with genital herpes, give 125 mg after each dialysis treatment.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (23%–12%): Headache, nausea. **Occasional (10%–2%):** Dizziness, drowsiness, paresthesia (esp. feet), diarrhea, vomiting, constipation, decreased appetite, fatigue, fever, pharyngitis, sinusitis, pruritus. **Rare (less than 2%):** Insomnia, abdominal pain, dyspepsia, flatulence, back pain, arthralgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Urticaria, hallucinations, confusion (delirium, disorientation occur predominantly in elderly) has been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline chemistry tests, esp. renal function.

INTERVENTION/EVALUATION

Evaluate cutaneous lesions. Be alert to neurologic effects: headache, dizziness. Provide analgesics, comfort measures; esp. exhausting in elderly. Monitor renal function, hepatic enzymes, CBC.

PATIENT/FAMILY TEACHING

• Drink adequate fluids. • Fingernails should be kept short, hands clean. • Do not touch lesions with fingers to avoid spreading infection to new site. • **Genital herpes:** Continue therapy for full length of treatment. • Avoid contact with lesions during duration of outbreak to prevent cross-contamination. • Report if lesions recur or do not improve. • Slowly go from lying to standing to avoid dizziness. • Avoid tasks that require alertness, motor skills until response to drug is established.

famotidine

fa-**moe**-ta-deen
(Acid Reducer, Apo-Famotidine, Novo-Famotidine, Pepcid, Ulcidine)
Do not confuse famotidine with fluoxetine or furosemide.

FIXED-COMBINATION(S)

Duexis: famotidine/ibuprofen (an NSAID): 26.6 mg/800 mg. **Pepcid Complete:** famotidine/calcium chloride/magnesium hydroxide (antacids): 10 mg/800 mg/165 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: H_2 receptor antagonist. **CLINICAL:** Antiulcer, gastric acid secretion inhibitor.

USES

Short-term treatment of active duodenal ulcer. Prevention, maintenance of duodenal ulcer recurrence. Treatment of active benign gastric ulcer, pathologic GI hypersecretory conditions. Short-term treatment of gastroesophageal reflux disease (GERD). OTC formulation for relief of heartburn, acid indigestion, sour stomach. **OFF-LABEL:** *H. pylori* eradication, risk reduction of duodenal ulcer recurrence (part of multidrug regimen), stress ulcer prophylaxis in critically ill pts, relief of gastritis.

PRECAUTIONS

Contraindications: Hypersensitivity to other H_2 antagonists. **Cautions:** Renal/hepatic impairment, elderly, thrombocytopenia.

ACTION

Inhibits histamine action of H_2 receptors of parietal cells. **Therapeutic Effect:** Inhibits gastric acid secretion (fasting, nocturnal, or stimulated by food, caffeine, insulin).

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	1–4 hrs	10–12 hrs
IV	0.5 hr	0.5–3 hrs	10–12 hrs

Rapidly, incompletely absorbed from GI tract. Protein binding: 15%–20%. Partially metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2.5–3.5 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** No age-related precautions noted. **Elderly:** Confusion more likely to occur, esp. in those with renal/hepatic impairment.

INTERACTIONS

DRUG: May decrease absorption of **atazanavir, itraconazole, ketoconazole.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** Interferes with skin tests using allergen extracts. May increase serum alkaline phosphatase, ALT, AST. May decrease platelet count.

AVAILABILITY (Rx)

Infusion, Premix: 20 mg in 50 ml 0.9% NaCl. **Injection, Solution (Pepcid):** 10 mg/ml. **Powder for Oral Suspension (Pepcid):** 40 mg/5 ml. **Tablets: (Acid Reducer):** 10 mg. **(Pepcid):** 20 mg, 40 mg. **Tablets, Chewable (Pepcid AC Maximum Strength):** 20 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • For IV push, dilute 20 mg with 5–10 ml 0.9% NaCl. • For intermittent IV infusion (piggyback), dilute with 50–100 ml D_5W, or 0.9% NaCl.
Rate of Administration • Give IV push over at least 2 min. • Infuse piggyback over 15–30 min.
Storage • Refrigerate unreconstituted vials. • IV solution appears clear, colorless. • After dilution, IV solution is stable for 48 hrs if refrigerated.

PO

• Store tablets, suspension at room temperature. • Following reconstitution, oral suspension is stable for 30 days at room temperature. • Give without regard to meals. • Shake suspension well before use.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), piperacillin/tazobactam (Zosyn).

IV COMPATIBILITIES

Calcium gluconate, dexamethasone (Decadron), dexmedetomidine (Precedex),

dobutamine (Dobutrex), dopamine (Intropin), doxorubicin (Adriamycin), furosemide (Lasix), heparin, hydromorphone (Dilaudid), insulin (regular), lidocaine, lorazepam (Ativan), magnesium sulfate, midazolam (Versed), morphine, nitroglycerin, norepinephrine (Levophed), ondansetron (Zofran), potassium chloride, potassium phosphate, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Duodenal Ulcer

PO: ADULTS, ELDERLY: Acute therapy: 40 mg/day at bedtime or 20 mg twice daily for 4–8 wks. **Maintenance:** 20 mg/day at bedtime.

Peptic Ulcer

PO: CHILDREN 1–16 YRS: 0.5 mg/kg/day at bedtime or 2 divided doses. **Maximum:** 40 mg/day.

Gastric Ulcer

PO: ADULTS, ELDERLY: 40 mg/day at bedtime.

Gastroesophageal Reflux Disease (GERD)

PO: ADULTS, ELDERLY: 20 mg twice a day for 6 wks. **CHILDREN 1–16 YRS:** 1 mg/kg/day in 2 divided doses. **Maximum:** 40 mg 2 times/day. **CHILDREN 3 MOS–11 MOS:** 0.5 mg/kg/dose twice a day. **CHILDREN YOUNGER THAN 3 MOS, NEONATES:** 0.5 mg/kg/dose once a day.

Esophagitis

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 20–40 mg twice a day for up to 12 wks.

Hypersecretory Conditions

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 20 mg q6h. May increase up to 160 mg q6h.

Acid Indigestion, Heartburn (OTC Use)

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 10–20 mg q12h. May take 15–60 min before eating. **Maximum:** 2 doses per day.

Usual Parenteral Dosage

IV: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 20 mg q12h. **CHILDREN 1–12 YRS:** 0.25–0.5 mg/kg q12h. **Maximum:** 40 mg/day.

Dosage in Renal Impairment

Creatinine Clearance	Dosage
Less than 50 ml/min	50% normal dose or increase dosing interval to 36–48 hrs

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (5%): Headache. **Rare (2% or less):** Confusion, constipation, diarrhea, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Agranulocytosis, pancytopenia, thrombocytopenia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess epigastric/abdominal pain.

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Monitor for diarrhea, constipation, headache. Assess for confusion in elderly.

PATIENT/FAMILY TEACHING

• May take without regard to meals, antacids. • Report headache. • Avoid excessive amounts of coffee, aspirin. • Report persistent symptoms of heartburn, acid indigestion, sour stomach.

febuxostat

fe-**bux**-oh-stat
(Uloric)
Do not confuse febuxostat with Femstat.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Xanthine oxidase inhibitor. **CLINICAL:** Antigout agent.

USES

Management of hyperuricemia in pts with gout. Not recommended for treatment of asymptomatic hyperuricemia.

PRECAUTIONS

Contraindications: Concomitant use with azathioprine, mercaptopurine. **Cautions:** Severe renal/hepatic impairment, history of heart disease or stroke.

ACTION

Decreases uric acid production by inhibiting the enzyme xanthine oxidase. **Therapeutic Effect:** Reduces uric acid concentrations in serum and urine.

PHARMACOKINETICS

Well absorbed from GI tract. Widely distributed. Protein binding: 99%. Metabolized in liver. Eliminated in urine (49%), feces (45%). Removed by hemodialysis. **Half-life:** 5–8 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase concentration, toxicity of **azathioprine, mercaptopurine, theophylline.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, ALT, AST, LDH, amylase, sodium, potassium, cholesterol, triglycerides, BUN, creatinine. May decrease platelet count, Hgb, Hct, neutrophil count. May prolong prothrombin time.

AVAILABILITY (Rx)

Tablets: 40 mg, 80 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to meals or antacids.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Recommended to take an NSAID or colchicine with initiation of therapy and continue for up to 6 mos to prevent exacerbations of gout.

Hyperuricemia

PO: ADULTS, ELDERLY: Initially, 40 mg once daily. If pt does not achieve serum uric acid level less than 6 mg/dL after 2 wks with 40 mg, may give 80 mg once daily.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Rare (1%): Nausea, arthralgia, rash, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatic function abnormalities occur in 6% of pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline renal function, LFT; concomitant use with azathioprine, mercaptopurine, theophylline (contraindicated).

INTERVENTION/EVALUATION

Discontinue medication immediately if rash appears. Encourage high fluid intake (3,000 ml/day). Monitor I&O (output should be at least 2,000 ml/day). Monitor CBC, serum uric acid, renal function, LFT. Assess urine for cloudiness, unusual color, odor. Assess for therapeutic response (reduced joint tenderness, swelling, redness, limitation of motion).

PATIENT/FAMILY TEACHING

• Encourage drinking 8–10 glasses (8 oz) of fluid daily while taking medication. • Report rash, chest pain, shortness of breath, symptoms suggestive of stroke. • Gout attacks may occur for several months after starting treatment (medication is not a pain reliever). • Continue taking even if gout attack occurs.

felodipine

fe-**loe**-di-peen
(Plendil 🍁, Renedil 🍁)
Do not confuse Plendil with Isordil, Pletal, Prilosec, or Prinivil, or Renedil with Prinivil.

FIXED-COMBINATION(S)

Lexxel: felodipine/enalapril (ACE inhibitor): 2.5 mg/5 mg, 5 mg/5 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Calcium channel blocker. **CLINICAL:** Antihypertensive, antianginal.

USES

Management of hypertension. May be used alone or with other antihypertensives. **OFF-LABEL:** Management of pediatric hypertension.

PRECAUTIONS

Contraindications: Hypersensitivity to felodipine or other calcium channel blocker. **Cautions:** Severe left ventricular dysfunction, HF, hepatic impairment, hypertrophic cardiomyopathy with outflow tract obstruction, peripheral edema, severe aortic stenosis, elderly. Concomitant CYP3A4 inhibitors (see Appendix J).

ACTION

Inhibits calcium movement across cardiac, vascular smooth muscle cell membranes. **Therapeutic Effect:** Relaxes coronary vascular smooth muscle and causes vasodilation. Increases myocardial oxygen delivery.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	2–5 hrs	N/A	24 hrs

Rapidly, completely absorbed from GI tract. Protein binding: greater than 99%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 11–16 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** May experience greater hypotensive response. Constipation may be more problematic.

INTERACTIONS

DRUG: **CYP3A4 inhibitors (e.g., ketoconazole, erythromycin, cimetidine)** may increase concentration. **HERBAL:** **St. John's wort** may decrease concentration. **Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** **Grapefruit products** may increase absorption, concentration. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets (Extended-Release): 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• Give with or without food. • Do not break, crush, dissolve, or divide extended-release tablets. Swallow whole.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS: Initially, 5 mg/day as single dose. Increase by 5 mg at 2-wk intervals. **Maximum:** 20 mg/day. **ELDERLY, PTS WITH HEPATIC IMPAIRMENT:** Initially, 2.5 mg/day. Adjust dosage at no less than

2-wk intervals. Range: 2.5–20 mg/day. **CHILDREN:** Initially, 2.5 mg once daily. **Maximum:** 10 mg/day.

Dosage in Renal Impairment
No dose adjustment.

SIDE EFFECTS

Frequent (22%–18%): Headache, peripheral edema. **Occasional (6%–4%):** Flushing, respiratory infection, dizziness, light-headedness, asthenia. **Rare (less than 3%):** Angina, gingival hyperplasia, paresthesia, abdominal discomfort, anxiety, muscle cramping, cough, diarrhea, constipation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose produces nausea, drowsiness, confusion, slurred speech, hypotension, bradycardia.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, apical pulse immediately before drug administration (if pulse is 60 or less/min or systolic B/P is less than 90 mm Hg, withhold medication, contact physician).

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Assess for peripheral edema behind media malleolus (sacral area in bedridden pts). Monitor pulse rate for bradycardia. Assess skin for flushing. Monitor hepatic function. Question for headache, asthenia.

PATIENT/FAMILY TEACHING

• Do not abruptly discontinue medication. • Compliance with therapy regimen is essential to control hypertension. • To avoid hypotensive effect, go from lying to standing slowly. • Avoid tasks that require alertness, motor skills until response to drug is established. • Report palpitations, shortness of breath, pronounced dizziness, nausea. • Swallow tablet whole; do not chew, crush, dissolve, or divide. • Avoid grapefruit products, alcohol. • Report exacerbation of angina.

fenofibrate

TOP 100

fen-o-**fye**-brate
(Antara, Apo-Fenofibrate, Fenoglide, Lipofen, Lofibra, Novo-Fenofibrate, Tricor, Triglide)
Do not confuse Tricor with Fibricor or Tracleer.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Fibric acid derivative. **CLINICAL:** Antihyperlipidemic.

USES

Adjunct to diet for reduction of low-density lipoprotein cholesterol (LDL-C), total cholesterol, triglycerides (types IV and V hyperlipidemia), apo-lipoprotein B, and to increase high-density lipoprotein cholesterol (HDL-C) in pts with primary hypercholesterolemia, mixed dyslipidemia. **OFF-LABEL:** Adjunctive therapy in treatment of hyperuricemia in pts with gout.

PRECAUTIONS

Contraindications: Active hepatic disease, severe renal/hepatic dysfunction (including primary biliary cirrhosis, unexplained persistent hepatic function abnormality), breastfeeding (Fenoglide, Lipofen, Tricor, Triglide). **Cautions:** Anticoagulant therapy (e.g., warfarin), history of hepatic disease, mild to moderate renal impairment, substantial alcohol consumption, statin or colchicine therapy (increased risk of myopathy, rhabdomyolysis).

ACTION

Enhances synthesis of lipoprotein lipase (VLDL). **Therapeutic Effect:** Increases VLDL catabolism, reduces total plasma triglycerides.

PHARMACOKINETICS

Well absorbed from GI tract. Absorption increased when given with food. Protein binding: 99%. Metabolized in liver. Excreted in urine (60%), feces (25%). Not removed by hemodialysis. **Half-life:** 10–35 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Safety in pregnancy not established. Breastfeeding not recommended. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Potentiates effects of **anticoagulants (e.g., warfarin). Bile acid sequestrants** may impede absorption. **Cyclosporine** may increase concentration, risk of nephrotoxicity. **Colchicine, HMG-CoA reductase inhibitors (statins)** may increase risk of severe myopathy, rhabdomyolysis, acute renal failure. **HERBAL:** None significant. **FOOD: All foods** increase absorption. **LAB VALUES:** May increase serum creatine kinase (CK), ALT, AST. May decrease Hgb, Hct, WBC; serum uric acid.

AVAILABILITY (Rx)

Capsules: ***(Antara):*** 43 mg, 130 mg. ***(Lipofen):*** 50 mg, 150 mg. ***(Lofibra):*** 67 mg, 134 mg, 200 mg. **Tablets:** ***(Fenoglide):*** 40 mg, 120 mg. ***(Lofibra):*** 54 mg, 160 mg. ***(Tricor):*** 48 mg, 145 mg. ***(Triglide):*** 50 mg, 160 mg.

ADMINISTRATION/HANDLING

PO

• Give Fenoglide, Lipofen, Lofibra with meals. • Antara, Tricor, and Triglide may be given without regard to food. Antara, Fenoglide, Lipafen: Swallow whole; do not open capsules.

INDICATIONS/ROUTES/DOSAGE

Hypertriglyceridemia

PO *(Antara)*: ADULTS, ELDERLY: 43–130 mg/day.

PO *(Fenoglide)*: ADULTS, ELDERLY: 40–120 mg/day with meals.

PO *(Lipofen)*: ADULTS, ELDERLY: 50–150 mg/day with meals.

PO *(Lofibra)*: ADULTS, ELDERLY: 67–200 mg/day with meals.

PO *(Tricor)*: ADULTS, ELDERLY: 48–145 mg/day.

PO *(Triglide)*: ADULTS, ELDERLY: 50–160 mg/day.

Hypercholesterolemia, Mixed Hyperlipidemia

PO *(Antara)*: ADULTS, ELDERLY: 130 mg/day.

PO *(Fenoglide)*: ADULTS, ELDERLY: 120 mg/day with meals.

PO *(Lipofen)*: ADULTS, ELDERLY: 150 mg/day with meals.

PO *(Lofibra)*: ADULTS, ELDERLY: 200 mg/day with meals.

PO *(Tricor)*: ADULTS, ELDERLY: 145 mg/day.

PO *(Triglide)*: ADULTS, ELDERLY: 160 mg/day.

Dosage in Renal Impairment

Monitor renal function before adjusting dose. Decrease dose or increase dosing interval for pts with renal failure.

Initial doses:	Antara: 43 mg/day	Lofibra: 67 mg/day
	Fenoglide: 40 mg/day	Tricor: 48 mg/day
	Lipofen: 50 mg/day	Triglide: 50 mg/day

Dosage in Hepatic Impairment

Contraindicated.

SIDE EFFECTS

Frequent (8%–4%): Pain, rash, headache, asthenia, fatigue, flu-like symptoms, dyspepsia, nausea/vomiting, rhinitis. **Occasional (3%–2%):** Diarrhea, abdominal pain, constipation, flatulence, arthralgia, decreased libido, dizziness, pruritus. **Rare (less than 2%):** Increased appetite, insomnia, polyuria, cough, blurred vision, eye floaters, earache.

ADVERSE EFFECTS/ TOXIC REACTIONS

May increase cholesterol excretion into bile, leading to cholelithiasis. Pancreatitis, hepatitis, thrombocytopenia, agranulocytosis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain diet history, esp. fat consumption. Obtain serum cholesterol, triglycerides, LFT, blood counts during initial therapy and periodically during treatment. Treatment should be discontinued if hepatic enzyme levels persist greater than 3 times normal limit.

INTERVENTION/EVALUATION

For pts on concurrent therapy with HMG-CoA reductase inhibitors, monitor for complaints of myopathy (muscle pain, weakness). Monitor serum creatine kinase (CK). Monitor serum cholesterol, triglyceride for therapeutic response.

PATIENT/FAMILY TEACHING

• Report severe diarrhea, constipation, nausea. • Report skin rash/irritation, insomnia, muscle pain, tremors, dizziness.

fenofibric acid TOP 100

fen-oh-**fye**-bric as-id
(Fibricor, Trilipix)
Do not confuse Fibricor with Tricor or Trilipix with Trileptal.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fibric acid derivative. **CLINICAL:** Antihyperlipidemic.

USES

Fibricor, Trilipix: Adjunct to diet for treatment of severely elevated serum triglycerides; adjunct for reduction of LDL-C, total cholesterol, triglycerides, apoprotein B, and increased HDL-C in primary hypercholesterolemia or mixed hyperlipidemia. **Trilipix:** With statin to reduce triglycerides, elevate HDL-C in pts with mixed lipidemia and/or at risk for coronary heart disease.

PRECAUTIONS

Contraindications: Severe renal impairment, primary biliary cirrhosis, active hepatic disease, gallbladder disease, nursing mothers. **Cautions:** Anticoagulant therapy, history of hepatic disease, substantial alcohol consumption. Mild to moderate renal impairment.

ACTION

Increases lipolysis and elimination of triglyceride-rich particles from plasma by activating lipoprotein lipase, reducing lipase activity. **Therapeutic Effect:** Increases VLDL catabolism, decreases plasma triglycerides.

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 99%. Does not undergo oxidative metabolism. Excreted primarily in urine. **Half-life:** 20 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Safety in pregnancy not established. Avoid use in nursing mothers. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require monitoring.

INTERACTIONS

DRUG: Potentiates effects of **anticoagulants (e.g., warfarin). Bile acid sequestrants (cholestyramine, colestipol)** may impede absorption; give Trilipix 1 hr before or 4–6 hrs after. **Cyclosporine** may increase risk of nephrotoxicity. **HMG-CoA reductase inhibitors (statins)** may increase risk of severe myopathy, rhabdomyolysis, acute renal failure. **HERBAL:** None significant. **FOOD:** **All foods** increase absorption. **LAB VALUES:** May increase serum creatine kinase (CK), ALT, AST. May decrease Hgb, Hct, WBC; serum uric acid.

AVAILABILITY (Rx)

Delayed-Release Capsules (Trilipix): 45 mg, 135 mg. **Tablets (Fibricor):** 35 mg, 105 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Do not break, crush, or open capsule. • May be given at the same time as a statin.

INDICATIONS/ROUTE/DOSAGE

Mixed Dyslipidemia, Primary Hypercholesterolemia

PO: ADULTS, ELDERLY: (Trilipix): 135 mg once daily. **(Fibricor):** 105 mg once daily.

Hypertriglyceridemia

PO: ADULTS, ELDERLY: (Trilipix): 45–135 mg once daily. **(Fibricor):** 35–105 mg once daily.

Mixed Lipidemia (with Statin)

PO: ADULTS, ELDERLY: (Trilipix): 135 mg once daily.

Dosage in Renal Impairment (Creatinine Clearance: 30–80 ml/min)

PO: ADULTS, ELDERLY: (Trilipix): 45 mg once daily. **(Fibricor):** 35 mg once daily. (Contraindicated with creatinine clearance less than 30 ml/min.)

Dosage in Hepatic Impairment

Contraindicated.

SIDE EFFECTS

Frequent (13%): Headache. **Occasional (6%–4%):** Back pain, upper respiratory tract infection, extremity pain, nausea, dizziness, diarrhea, arthralgia, dyspepsia, nasopharyngitis. **Rare (3%–2%):** Constipation, sinusitis, myalgia, fatigue, muscle spasm.

ADVERSE EFFECTS/ TOXIC REACTIONS

Increased risk for myopathy, rhabdomyolysis, particularly in elderly, those with diabetes, renal failure, hypothyroidism. May increase cholesterol excretion into the bile, leading to cholelithiasis. Pancreatitis, hepatitis, thrombocytopenia, agranulocytosis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline CBC, LFT, lipid profile during initial therapy and periodically during treatment.

INTERVENTION/EVALUATION

For those on concurrent therapy with HMG-CoA reductase inhibitors, monitor for complaints of myopathy (muscle pain, weakness), including serum creatine kinase levels. Monitor cholesterol, triglyceride concentrations for therapeutic response.

PATIENT/FAMILY TEACHING

• Periodic lab tests are essential part of therapy. • Follow special diet (important part of treatment). • Report severe diarrhea, constipation, nausea. • Report muscle pain, back/extremity pain, dizziness.

fentanyl

TOP 100 HIGH ALERT

fen-ta-nil

(Abstral, Actiq, Apo-Fentanyl*, Duragesic, Fentora, Lazanda, Novo-Fentanyl, Onsolis, Subsys)

■ **BLACK BOX ALERT** ■ Physical and psychological dependence may occur with prolonged use. Must be alert to abuse, misuse, or diversion. May cause life-threatening hypoventilation, respiratory depression, or death. Use with strong or moderate CYP3A4 inhibitors may result in potentially fatal respiratory depression. **Buccal:** Tablet and lozenge contain enough medication that may be fatal to children. **Transdermal patch:** Serious or life-threatening hypoventilation has occurred. Limit use to children 2 yrs of age and older. Exposure to direct heat source increases drug release, resulting in overdose/death. **Do not confuse fentanyl with alfentanil or sufentanil.**

CLASSIFICATION

PHARMACOTHERAPEUTIC: Opioid, narcotic agonist **(Schedule II).**
CLINICAL: Analgesic.

USES

Injection: pain relief, preop medication; adjunct to general or regional anesthesia. **Abstral:** Treatment of breakthrough pain in cancer pts 18 yrs of age and older. **Duragesic:** Management of chronic pain *(transdermal)*. **Actiq:** Treatment of breakthrough pain in chronic cancer or AIDS-related pain. **Fentora:** Breakthrough pain in pts on chronic opioids. **Onsolis:** Breakthrough pain in pts with cancer currently receiving opioids and tolerant to opioid therapy. **Lazanda:** Management of breakthrough pain in cancer. **Subsys:** Treatment of breakthrough cancer pain.

PRECAUTIONS

Contraindications: **Transdermal:** Severe respiratory disease depression, paralytic ileus, intermittent pain. **Transdermal, transmucosal, lozenges, buccal films:** Management of acute or postoperative pain, pts not opioid tolerant. **Cautions:** Bradycardia; renal, hepatic, respiratory disease; head injuries; altered LOC; biliary tract disease; acute pancreatitis; cor pulmonale; significant COPD; increased ICP; use of MAOIs within 14 days; elderly; morbid obesity.

ACTION

Binds to opioid receptors in CNS, reducing stimuli from sensory nerve endings, inhibits ascending pain pathways. **Therapeutic Effect:** Alters pain reception, increases pain threshold.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	1–2 min	3–5 min	0.5–1 hr
IM	7–15 min	20–30 min	1–2 hrs
Transdermal	6–8 hrs	24 hrs	72 hrs
Transmucosal	5–15 min	20–30 min	1–2 hrs

Well absorbed after IM or topical administration. Transmucosal form absorbed through buccal mucosa and GI tract. Protein binding: 80%–85%. Metabolized in liver. Primarily eliminated by biliary system. **Half-life:** 2–4 hrs IV; 17 hrs transdermal; 6.6 hrs transmucosal.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta. Unknown if distributed in breast milk. May prolong labor if administered in latent phase of first stage of labor or before cervical dilation of 4–5 cm has occurred. Respiratory depression may occur in neonate if mother received opiates during labor. **Pregnancy Category C (D if used for prolonged periods or at high dosages at term). Children:** Neonates more susceptible to respiratory depressant effects. Patch: Safety and efficacy not established in those younger than 12 yrs. **Elderly:** May be more susceptible to respiratory depressant effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **CYP3A4 inducers (e.g., rifampin, modafinil)** may decrease concentration, effects. **Alcohol, CNS depressant medications** may increase CNS depression. **CYP3A4 inhibitors (e.g., erythromycin, itraconazole, ketoconazole, protease inhibitors [e.g., ritonavir])** may increase effects and potential for respiratory depression. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may decrease concentration, effects. **FOOD:** **Grapefruit products** may increase potential for respiratory depression with oral, transmucosal forms. **LAB VALUES:** May increase serum amylase, lipase.

AVAILABILITY (Rx)

Buccal Tablet (Fentora): 100 mcg, 200 mcg, 400 mcg, 600 mcg, 800 mcg. **Buccal Soluble Film (Onsolis):** 200 mcg, 400 mcg, 600 mcg, 800 mcg, 1,200 mcg.

Injection Solution: 50 mcg/ml. **Nasal Spray (Lazanda):** 100 mcg/spray, 400 mcg/spray. **Sublingual Tablets (Abstral):** 100 mcg, 200 mcg, 300 mcg, 400 mcg, 600 mcg, 800 mcg. **Sublingual Spray (Subsys):** 100 mcg, 200 mcg, 400 mcg, 600 mcg, 800 mcg. **Transdermal Patch (Duragesic):** 12 mcg/hr, 25 mcg/hr, 50 mcg/hr, 75 mcg/hr, 100 mcg/hr. **Transmucosal Lozenges (Actiq):** 200 mcg, 400 mcg, 600 mcg, 800 mcg, 1,200 mcg, 1,600 mcg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • Give by slow IV injection (over 1–2 min). • Too-rapid IV increases risk of severe adverse reactions (skeletal/thoracic muscle rigidity resulting in apnea, laryngospasm, bronchospasm, peripheral circulatory collapse, anaphylactoid effects, cardiac arrest).

Storage • Store parenteral form at room temperature. • Opiate antagonist (naloxone) should be readily available.

Transdermal

• Apply to hairless area of intact skin of upper torso. • Use flat, nonirritated site. • Firmly press evenly and hold for 30 sec, ensuring adhesion is in full contact with skin and edges are completely sealed. • Use only water to cleanse site before application (soaps, oils may irritate skin). • Rotate sites of application. • Carefully fold used patches so that system adheres to itself; discard in toilet.

Buccal Film

• Wet inside of cheek. • Place film inside mouth with pink side of unit against cheek. • Press film against cheek and hold for 5 sec. • Leave in place until dissolved (15–30 min). • Do not chew, swallow, cut film. • Liquids may be given after 5 min of application; food after film dissolves.

Buccal Tablets

• Place tablet above a rear molar between upper cheek and gum. • Dissolve over 30 min. • Swallow remaining pieces with water. • Do not split tablet.

Sublingual Spray

• Open blister pack with scissors immediately prior to use. • Spray contents underneath tongue.

Sublingual Tablets

• Place under tongue. • Dissolves rapidly. • Do not suck, chew, or swallow tablet.

Nasal

• Prime device before use by spraying into pouch. • Insert nozzle about ½ inch into nose, pointing toward bridge of nose, tilting bottle slightly. • Press down firmly until hearing a "click" and number on counting window advances by one. Do not blow nose for at least 30 min following administration.

Transmucosal

• Suck lozenge vigorously. • Allow to dissolve over 15 min. • Do not chew.

IV INCOMPATIBILITIES

Azithromycin (Zithromax), pantoprazole (Protonix), phenytoin (Dilantin).

IV COMPATIBILITIES

Atropine, bupivacaine (Marcaine, Sensorcaine), clonidine (Duraclon), dexmedetomidine (Precedex), diltiazem (Cardizem), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), droperidol (Inapsine), heparin, hydromorphone (Dilaudid), ketorolac (Toradol), lorazepam (Ativan), metoclopramide (Reglan), midazolam (Versed), milrinone (Primacor), morphine, nitroglycerin, norepinephrine (Levophed), ondansetron (Zofran), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Note: Doses titrated to desired effect dependent upon degree of analgesia, pt status.

Acute Pain Management

IM/IV: ADULTS, ELDERLY: 25–100 mcg/dose q1–2h as needed. **CHILDREN:** 0.5–2 mcg/kg/dose q1–2h as needed. **INFANTS (IV push):** 1–4 mcg/kg/dose q2–4h.

Continuous IV Infusion

ADULTS, ELDERLY: 1–2 mcg/kg/hr. **CHILDREN:** 0.5–3 mcg/kg/hr.

F

Usual Buccal Dose

ADULTS, ELDERLY: Initially, 100 mcg. Titrate dose, providing adequate analgesia with tolerable side effects.

Usual Buccal Soluble Film Dose

Note: All pts must initiate with 200 mcg. **ADULTS, ELDERLY:** Initially, 200 mcg up to 1,200 mcg. **Maximum:** No more than 4 doses per day, separate by at least 2 hrs.

Usual Nasal Dose

Nasal: ADULTS, ELDERLY: Initially, 100 mcg. Titrate from 100 mcg to 200 mcg to 400 mcg to 800 mcg **(maximum).** Wait at least 2 hrs between doses; no more than 4 doses in 24 hrs.

Usual Sublingual Tablet Dose

ADULTS, ELDERLY: Initially, 100 mcg, then titrate to desired dose/effect. Wait at least 2 hrs between doses; no more than 4 doses in 24 hrs.

Usual Sublingual Spray Dose

ADULTS, ELDERLY: Initially, 100 mcg. May repeat in 30 min if pain not relieved. Must wait at least 4 hours before treating another episode of pain.

Usual Transdermal Dose

ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 12–25 mcg/hr. May increase after 3 days.

Usual Transmucosal Dose

ADULTS, CHILDREN: 200–1200 mcg for breakthrough pain. Limit to 4 applications/day.

Dosage in Renal/Hepatic Impairment

Injection: No dose adjustment.
Transdermal: Mild to Moderate Impairment: Reduce dose by 50%.
Severe Impairment: Not recommended.

SIDE EFFECTS

Frequent: IV: Postop drowsiness, nausea, vomiting. **Transdermal (10%–3%):** Headache, pruritus, nausea, vomiting, diaphoresis, dyspnea, confusion, dizziness, drowsiness, diarrhea, constipation, decreased appetite. **Occasional: IV:** Postop confusion, blurred vision, chills, orthostatic hypotension, constipation, difficulty urinating. **Transdermal (3%–1%):** Chest pain, arrhythmias, erythema, pruritus, syncope, agitation, skin irritations.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose or too-rapid IV administration may produce severe respiratory depression, skeletal/thoracic muscle rigidity (may lead to apnea, laryngospasm, bronchospasm, cold/clammy skin, cyanosis, coma). Tolerance to analgesic effect may occur with repeated use. **Antidote:** Naloxone (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Resuscitative equipment, opiate antagonist (naloxone 0.5 mcg/kg) should be available for initial use. Establish baseline B/P, respirations. Assess type, location, intensity, duration of pain.

INTERVENTION/EVALUATION

Assist with ambulation. Encourage post-op pt to turn, cough, deep breathe q2h. Monitor respiratory rate, B/P, heart rate, oxygen saturation. Assess for relief of pain.

PATIENT/FAMILY TEACHING

- Avoid alcohol; do not take other medications without consulting physician.
- Avoid tasks that require alertness, motor skills until response to drug is

established. • Teach pt proper transdermal, buccal, lozenge administration. **Transdermal:** Avoid saunas (increases drug release time). • Use as directed to avoid overdosage; potential for physical dependence with prolonged use. • Report constipation absence of pain relief. • Taper slowly after long-term use.

ferric carboxymaltose

fer-ik-kar-**box**-ee-**mawl**-tose
(Injectafer)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Iron preparation. **CLINICAL:** Iron replacement.

USES

Treatment of iron deficiency anemia in adults who are intolerant to oral iron or have had an unsatisfactory response to oral iron, or who have non–dialysis-dependent chronic kidney disease.

PRECAUTIONS

Contraindications: Hypersensitivity to ferric carboxymaltose, oral iron supplements, history of hemochromatosis, non–iron deficiency anemia. **Cautions:** Pts with history of significant allergies, asthma, severe hepatic impairment, hypertension.

ACTION

Essential component in formation of Hgb, myoglobin, essential enzymes. Necessary for effective erythropoiesis, transport, utilization of oxygen. **Therapeutic Effect:** Replenishes iron stores.

PHARMACOKINETICS

Iron is protein-bound to form hemosiderin, ferritin, or transferrin. No physiologic system of elimination. Small amounts are lost in daily shedding of skin, hair, nails, with trace elimination in feces, urine. **Half-life:** 7–12 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Oral iron supplements** may increase risk of hemosiderosis (iron overload). **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum phosphate. May increase serum ALT.

AVAILABILITY (Rx)

Injection Solution: 750 mg/15 ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • May give either as undiluted slow IV push or IV infusion. • When administering as IV infusion, dilute 750 mg dose in maximum of 250 ml 0.9% NaCl for concentration of 2–4 mg/ml. • Inspect for particulate matter. Solution will appear dark to light brown. **Rate of Administration** • For IV push, administer at maximum rate of 100 mg/min. For IV infusion, administer over at least 15 min. Monitor for extravasation. **Storage** • Following dilution, stable at room temperature for up to 72 hrs.

INDICATIONS/ROUTES/DOSAGE

Iron Deficiency Anemia

Dosage expressed in mg of elemental iron (50 mg iron per ml).

IV: ADULTS/ELDERLY: (WEIGHING 50 KG OR MORE): 750 mg times 2 doses, separated by at least 7 days. **Maximum dose:** 1500 mg/treatment course. **(WEIGHING LESS THAN 50 KG):** 15 mg/kg times 2 doses, separated by at least 7 days. **Maximum dose:** 1500 mg/treatment course.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (7%–2%): Nausea, hypertension, flushing, dizziness. **Rare (less than 2%):** Vomiting, headache, dysgeusia, hypotension, constipation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction including angioedema, chills, erythema, hypotension, pruritus, syncope, urticaria, wheezing reported in 1.5% of pts. Anaphylaxis was noted is less than 1% of pts. Transient hypertension reported in 4% of pts. Hemosiderosis (iron overload) may present with joint disorder, gait disturbance, asthenia. Extravasation may cause injection site discoloration.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline Hgb, serum ferritin, phosphate, hepatic function test. Obtain baseline B/P. Assess patency of IV site; do not administer if infiltration is suspected. Question history of hepatic impairment. Question use of oral iron medication.

INTERVENTION/EVALUATION

Monitor Hgb, serum ferritin, phosphate. Monitor for hypersensitivity reaction, hypertension for at least 30 min after administration. Assess IV site for extravasation.

PATIENT/FAMILY TEACHING

• Pain and brown staining may occur at IV site. • Do not take oral iron while receiving intravenous iron (may increase risk of iron overload). • Stools frequently becomes black with iron therapy; this is harmless unless accompanied by red streaking, sticky consistency of stool, abdominal pain, or cramping. • Oral hygiene, hard candy, gum may reduce unpleasant taste caused by therapy. • Report signs of allergic reaction.

ferrous fumarate

fer-us **fue**-ma-rate
(Femiron, Ferro-Sequels, Palafer)

ferrous gluconate

fer-us **gloo**-koe-nate
(Apo-Ferrous Gluconate, Fergon)

ferrous sulfate

fer-us **sul**-fate
(Apo-Ferrous Sulfate, Fer-In-Sol, Fer-Iron, Slow-Fe)

FIXED-COMBINATION(S)

Ferro-Sequels: ferrous fumarate/docusate (stool softener): 150 mg/100 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Enzymatic mineral. **CLINICAL:** Iron preparation.

USES

Prevention, treatment of iron deficiency anemia due to inadequate diet, malabsorption, pregnancy, blood loss.

PRECAUTIONS

Contraindications: Hemochromatosis, hemolytic anemias. **Cautions:** Peptic ulcer, regional enteritis, ulcerative colitis, pts receiving frequent blood transfusions.

ACTION

Essential component in formation of Hgb, myoglobin, enzymes. Promotes effective erythropoiesis and transport, utilization of oxygen. **Therapeutic Effect:** Prevents iron deficiency.

PHARMACOKINETICS

Absorbed in duodenum and upper jejunum. Ten percent absorbed in pts with

normal iron stores; increased to 20%–30% in those with inadequate iron stores. Primarily bound to serum transferrin. Excreted in urine, sweat, sloughing of intestinal mucosa, menses. **Half-life:** 6 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category A. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Antacids, calcium supplements, pancreatin, pancrelipase may decrease absorption of ferrous compounds. May decrease absorption of **etidronate, quinolones, tetracyclines.** **HERBAL:** None significant. **FOOD: Cereal, coffee, dietary fiber, eggs, milk, tea** decrease absorption. **LAB VALUES:** May increase serum bilirubin, iron. May decrease serum calcium.

AVAILABILITY (OTC)

Ferrous Fumarate

Tablets (Femiron): 63 mg (20 mg elemental iron), 324 mg (106 mg elemental iron).

Tablets (Timed-Release [Ferro-Sequels]): 150 mg (50 mg elemental iron).

Ferrous Gluconate

Tablets: 240 mg (27 mg elemental iron) (Fergon), 325 mg (36 mg elemental iron).

Ferrous Sulfate

Oral Solution (Fer-In-Sol, Fer-Iron): 75 mg/ml (15 mg/ml elemental iron). **Tablets:** 325 mg (65 mg elemental iron). **Elixir:** 220 mg/5 ml (44 mg elemental iron per 5 ml).

Tablets (Timed-Release [Slow-Fe]): 160 mg (50 mg elemental iron).

ADMINISTRATION/HANDLING

PO

- Store all forms (tablets, capsules, suspension, drops) at room temperature.
- Ideally, give between meals with water or juice but may give with meals if GI discomfort occurs.
- Transient staining of mucous membranes, teeth occurs with liquid iron preparation. To avoid staining, place liquid on back of tongue with dropper or straw.
- Do not give with milk or milk products.
- Do not break, crush, dissolve, or divide timed-release tablets.

INDICATIONS/ROUTES/DOSAGE

Iron Deficiency Anemia

Dosage is expressed in terms of milligrams of elemental iron. Assess degree of anemia, pt weight, presence of any bleeding. Expect to use periodic hematologic determinations as guide to therapy.

PO *(Ferrous Fumarate)*: ADULTS, ELDERLY: 60–100 mg twice a day. **CHILDREN:** 3–6 mg/kg/day in 2–3 divided doses.

PO *(Ferrous Gluconate)*: ADULTS, ELDERLY: 60 mg 2–4 times a day. **CHILDREN:** 3–6 mg/kg/day in 2–3 divided doses.

PO *(Ferrous Sulfate)*: ADULTS, ELDERLY: 65 mg 2–4 times a day. **CHILDREN:** 3–6 mg/kg/day in 2–3 divided doses.

Prevention of Iron Deficiency

PO *(Ferrous Fumarate)*: ADULTS, ELDERLY: 60–100 mg/day. **CHILDREN:** 1–2 mg/kg/day.

PO *(Ferrous Gluconate)*: ADULTS, ELDERLY: 60 mg/day. **CHILDREN:** 1–2 mg/kg/day.

PO *(Ferrous Sulfate)*: ADULTS, ELDERLY: 65 mg/day. **CHILDREN:** 1–2 mg/kg/day.

SIDE EFFECTS

Occasional: Mild, transient nausea. **Rare:** Heartburn, anorexia, constipation, diarrhea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Large doses may aggravate existing GI tract disease (peptic ulcer, regional enteritis, ulcerative colitis). Severe iron poisoning occurs most often in children, manifested

as vomiting, severe abdominal pain, diarrhea, dehydration, followed by hyperventilation, pallor, cyanosis, cardiovascular collapse.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess nutritional status, dietary history. To prevent mucous membrane and teeth staining with liquid preparation, use dropper or straw and allow solution to drop on back of tongue.

INTERVENTION/EVALUATION

Monitor serum iron, total iron-binding capacity, reticulocyte count, Hgb, ferritin. Monitor daily pattern of bowel activity, stool consistency. Assess for clinical improvement, record relief of iron deficiency symptoms (fatigue, irritability, pallor, paresthesia of extremities, headache).

PATIENT/FAMILY TEACHING

• Expect stool color to darken. • Oral liquid may stain teeth. • If GI discomfort occurs, take after meals or with food. • Do not take within 2 hrs of other medication or eggs, milk, tea, coffee, cereal.

fesoterodine

fes-oh-**ter**-oh-deen
(Toviaz)
Do not confuse fesoterodine with fexofenadine or tolteradine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Muscarinic receptor antagonist. **CLINICAL:** Antispasmodic.

USES

Treatment of overactive bladder with symptoms including urinary incontinence, urgency, frequency.

PRECAUTIONS

Contraindications: Gastric retention, uncontrolled narrow-angle glaucoma, urinary retention. **Cautions:** Severe renal impairment, severe hepatic impairment, clinically significant bladder outflow obstruction (risk of urinary retention), GI obstructive disorders (e.g., pyloric stenosis [risk of gastric retention], treated narrow-angle glaucoma, myasthenia gravis, concurrent therapy with strong CYP3A4 inhibitors, elderly, use in hot weather.

ACTION

Exhibits antimuscarinic activity by interceding via cholinergic muscarinic receptors, thereby mediating urinary bladder contraction. **Therapeutic Effect:** Decreases urinary frequency, urgency.

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 50%. Rapidly and extensively hydrolyzed to its active metabolite. Primarily excreted in urine. **Half-life:** 7 hours.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Increased incidence of antimuscarinic adverse events including dry mouth, constipation, dyspepsia, increase in residual urine, dizziness, urinary tract infections higher in pts 75 yrs of age and older.

INTERACTIONS

DRUG: **CYP3A4 inhibitors (e.g., clarithromycin, erythromycin, itraconazole, ketoconazole, miconazole)** may increase concentration. **HERBAL:** None significant. **FOOD:** **Grapefruit products** may increase potential for urinary retention, constipation. **LAB VALUES:** May increase serum ALT, GGT.

AVAILABILITY (Rx)

Tablets, Extended-Release: 4 mg, 8 mg.

ADMINISTRATION/HANDLING

PO

• May be administered with or without food. • Swallow whole; do not break, crush, dissolve, or divide tablet.

INDICATIONS/ROUTES/DOSAGE

Overactive Bladder

PO: ADULTS, ELDERLY: Initially, 4 mg once daily. May increase to 8 mg once daily. Maximum dose for pts with creatinine clearance less than 30 ml/min or concurrent use of strong CYP3A4 inhibitors (e.g., erythromycin, ketoconazole) is 4 mg once daily. Not recommended for use in severe hepatic impairment.

Dosage in Renal Impairment

PO: ADULTS, ELDERLY: Maximum dose: 4 mg with creatinine clearance less than 30 ml/min.

SIDE EFFECTS

Frequent (34%–18%): Dry mouth. **Occasional (6%–3%):** Constipation, urinary tract infection dry eyes. **Rare (2% or less):** Nausea, dysuria, back pain, rash, insomnia, peripheral edema.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe anticholinergic effects including abdominal cramps, facial warmth, excessive salivation/lacrimation, diaphoresis, pallor, urinary urgency, blurred vision.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess urinary pattern (e.g., urinary frequency, urgency). Obtain baseline chemistries.

INTERVENTION/EVALUATION

Assist with ambulation if dizziness occurs. Question for visual changes. Monitor incontinence, postvoid residuals. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• May produce constipation and urinary retention. • Blurred vision may occur; use caution until drug effects have been determined. • Heat prostration (due to decreased sweating) can occur if used in a hot environment.

fexofenadine

fex-oh-**fen**-a-deen
(Allegra, Allegra Children's Allergy ODT)
Do not confuse Allegra with Viagra, or fexofenadine with fesoterodine.

FIXED-COMBINATION(S)

Allegra-D 12 Hour: fexofenadine/pseudoephedrine (sympathomimetic): 60 mg/120 mg. **Allegra-D 24 Hour:** fexofenadine/pseudoephedrine (sympathomimetic): 180 mg/240 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Piperidine. **CLINICAL:** Antihistamine.

USES

Relief of seasonal allergic rhinitis, chronic idiopathic urticaria.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe renal impairment. Orally disintegrating tablet not recommended in children younger than 6 yrs.

ACTION

Competes with histamine in GI tract, blood vessels, and respiratory tract. **Therapeutic Effect:** Relieves allergic rhinitis symptoms.

PHARMACOKINETICS

	Onset	Peak	Duration
PO	60 min	—	12 hrs or greater

Rapidly absorbed after PO administration. Protein binding: 60%–70%. Does not cross blood-brain barrier. Minimally metabolized. Eliminated in feces (80%), urine (11%). Not removed by hemodialysis. **Half-life:** 14.4 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Aluminum-** and **magnesium-containing antacids** may decrease absorption if given within 15 min of fexofenadine. May increase concentrations of **erythromycin, ketoconazole.** **HERBAL:** **St. John's wort** may decrease concentration. **FOOD:** **Fruit juices** may decrease bioavailability. **LAB VALUES:** May suppress wheal, flare reactions to antigen skin testing unless drug is discontinued at least 4 days before testing.

AVAILABILITY (Rx)

Oral Suspension: 6 mg/ml. **Tablets:** 30 mg, 60 mg, 180 mg. **Tablets (Orally Disintegrating):** 30 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Avoid giving with fruit juices (apple, grapefruit, orange). Administer with water only. • Shake suspension well before use.

PO (Orally Disintegrating Tablet)

• Take on empty stomach. • Remove from blister pack; immediately place on tongue. • May take with or without liquid. • Do not split or cut.

INDICATIONS/ROUTES/DOSAGE

Allergic Rhinitis

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 60 mg twice a day or 180 mg once a day. **CHILDREN 2–11 YRS:** 30 mg twice a day.

Urticaria

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 60 mg twice a day or 180 mg once a day. **CHILDREN 2–11 YRS:** 30 mg twice a day. **CHILDREN 6 MOS–LESS THAN 2 YRS:** 15 mg twice a day.

Dosage in Renal Impairment (Creatinine Clearance Less Than 80 ml/min)

PO: ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 60 mg once daily. **CHILDREN 2–11 YRS:** 30 mg once daily. **CHILDREN 6 MOS–LESS THAN 2 YRS:** 15 mg once daily.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Rare (less than 2%): Drowsiness, headache, fatigue, nausea, vomiting, abdominal distress, dysmenorrhea.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

If pt is having an allergic reaction, obtain history of recently ingested foods, drugs, environmental exposure, emotional stress. Monitor rate, depth, rhythm, type of respiration; quality, rate of pulse. Assess lung sounds for rhonchi, wheezing, rales.

INTERVENTION/EVALUATION

Assess for therapeutic response; relief from allergy: itching, red, watery eyes, rhinorrhea, sneezing.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol during antihistamine therapy. • Coffee, tea may help reduce drowsiness. • Do not take with any fruit juices.

fidaxomicin

fye-**dax**-oh-**mye**-sin
(Dificid)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Macrolide. **CLINICAL:** Antibiotic.

USES

Treatment of *C. difficile*–associated diarrhea.

PRECAUTIONS

Contraindications: None known. **Cautions:** History of anemia, neutropenia, macrolide allergy.

ACTION

Binds to ribosomal sites of susceptible organisms, inhibiting RNA-dependent protein synthesis by RNA polymerase. **Therapeutic Effect:** Bactericidal against *Clostridium difficile.*

PHARMACOKINETICS

Minimal systemic absorption following PO administration. Mainly confined to GI tract. Excreted primarily in feces (92%). **Half-life:** 9 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **Cyclosporine** may increase serum concentration, effects. **HERBAL:** None known. **FOOD:** None significant. **LAB VALUES:** May increase serum ALT, AST, bilirubin, alkaline phosphatase.

AVAILABILITY (Rx)

Tablets: 200 mg.

ADMINISTRATION/HANDLING

- Give without regard to food.

INDICATIONS/ROUTES/DOSAGE

***Clostridium Difficile*–Associated Diarrhea**

PO: ADULTS: 200 mg twice daily for 10 days.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (62%–33%): Nausea, vomiting, abdominal pain. **Rare (less than 2%):** Pruritus, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Less than 2% reported events most likely related to diarrhea-associated illness including volume loss, dehydration, GI bleeding, bloating, megacolon, abdominal distention/tenderness, flatulence, dyspepsia, dysphasia, intestinal obstruction, bicarbonate loss, hyperglycemia, metabolic acidosis, and increased hepatic function tests. GI tract infection may cause bleeding, decreased platelets, decreased RBC count.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Verify positive C-Diff toxin test before initiating treatment. Implement infection control measures. Obtain baseline CBC, electrolytes, renal function, fecal occult blood test. Assess abdominal pain, bowel sounds, and stool characteristics (color, frequency, consistency). Assess hydration status.

INTERVENTION/EVALUATION

Monitor for volume loss, dehydration, hypotension. Encourage nutrition/fluid intake. Monitor daily pattern of bowel activity, stool consistency. Routinely assess bowel sounds. Screen for intestinal obstruction (increased nausea, abdominal pain, hyperactive bowel sounds) and consider abdominal X-ray if suspected.

PATIENT/FAMILY TEACHING

- Complete drug therapy, despite symptom improvement. Early discontinuation may result in antibacterial resistance

and increased risk of recurrent infection. • Report weakness, fatigue, pale skin, dizziness, or red/dark, tarry stools relating to GI bleeding.

filgrastim

TOP 100

fil-**gras**-tim
(Granix, Neupogen)
Do not confuse Neupogen with Epogen, Neulasta, Neumega, or Nutramigen.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Biologic modifier. **CLINICAL:** Granulocyte colony-stimulating factor (G-CSF).

USES

Granix, Neupogen: Decreases infection incidence in pts with malignancies receiving chemotherapy associated with severe neutropenia, fever. **Neupogen:** Reduces neutropenia duration, sequelae in pts with nonmyeloid malignancies having myeloablative therapy followed by bone marrow transplant (BMT). Mobilization of hematopoietic progenitor cells into peripheral blood for collection by apheresis. Treatment of chronic, severe neutropenia. **OFF-LABEL:** Treatment of AIDS-related neutropenia in pts receiving zidovudine, drug-induced neutropenia, treatment of anemia in myelodysplastic syndrome. Treatment of hepatitis C treatment-associated neutropenia.

PRECAUTIONS

Contraindications: (Neupogen) Hypersensitivity to *Escherichia coli*–derived proteins. **Cautions:** Malignancy with myeloid characteristics (due to G-CSF's potential to act as growth factor), gout, psoriasis, 24 hrs before or after cytotoxic chemotherapy, concurrent use of other drugs that may result in lowered platelet count. Neutrophil count greater than 50,000/mm^3, pts with sickle cell disease.

ACTION

Stimulates production, maturation, activation of neutrophils. **Therapeutic Effect:** Increases migration and cytotoxicity of neutrophils.

PHARMACOKINETICS

Readily absorbed after subcutaneous administration. Onset of action: 24 hrs (plateaus in 3–5 days). White counts return to normal in 4–7 days. Not removed by hemodialysis. **Half-life:** 3.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase LDH, leukocyte alkaline phosphatase (LAP) scores, serum alkaline phosphatase, uric acid.

AVAILABILITY (Rx)

Injection Solution: (Neupogen): 300 mcg/ml, 480 mcg/1.6 ml **(Granix, Neupogen):** 300 mcg/0.5 ml; 480 mcg/0.8 ml.

ADMINISTRATION/HANDLING

ALERT May be given by subcutaneous injection, short IV infusion (15–30 min), or continuous IV infusion. Do not dilute with normal saline.

IV

Reconstitution • Use single-dose vial; do not reenter vial. • Do not shake. • Dilute with 10–50 ml D_5W to concentration of 5–15 mcg/ml albumin to each 50 ml D_5W to provide a final albumin concentration of 2 mg/ml. Do not dilute to final concentration less than 5 mcg/ml. **Rate of Administration** • For intermittent infusion (piggyback), infuse over 15–30 min. • For continuous infusion, give single dose over 4–24 hrs. • In all

situations, flush IV line with D_5W before and after administration.

Storage • Refrigerate vials and syringes. • Stable for up to 24 hrs at room temperature (provided vial contents are clear and contain no particulate matter).

Subcutaneous

• Aspirate syringe before injection (avoid intra-arterial administration).

Storage • Store in refrigerator, but remove before use and allow to warm to room temperature.

IV INCOMPATIBILITIES

Amphotericin (Fungizone), cefepime (Maxipime), cefotaxime (Claforan), cefoxitin (Mefoxin), ceftizoxime (Cefizox), ceftriaxone (Rocephin), clindamycin (Cleocin), dactinomycin (Cosmegen), etoposide (VePesid), fluorouracil, furosemide (Lasix), heparin, mannitol, methylprednisolone (Solu-Medrol), mitomycin (Mutamycin), prochlorperazine (Compazine).

IV COMPATIBILITIES

Bumetanide (Bumex), calcium gluconate, hydromorphone (Dilaudid), lorazepam (Ativan), morphine, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Begin therapy at least 24 hrs after last dose of chemotherapy and at least 24 hrs after bone marrow infusion. Dosing based on actual body weight.

Chemotherapy-Induced Neutropenia

Neupogen

IV or Subcutaneous Infusion, Subcutaneous Injection: ADULTS, ELDERLY, CHILDREN: Initially, 5 mcg/kg/day. May increase by 5 mcg/kg for each chemotherapy cycle based on duration/severity of neutropenia; continue for up to 14 days or until absolute neutrophil count (ANC) reaches 10,000/mm^3.

Granix

Subcutaneous: ADULTS, ELDERLY: 5 mcg/kg/day. Continue until nadir has passed and neutrophil count recovered to normal range.

Bone Marrow Transplant

IV or Subcutaneous Infusion: ADULTS, ELDERLY, CHILDREN: 10 mcg/kg/day. Adjust dosage daily during period of neutrophil recovery based on neutrophil response.

Mobilization of Progenitor Cells

IV or Subcutaneous Infusion: ADULTS: 10 mcg/kg/day in donors beginning at least 4 days before first leukapheresis and continuing until last leukapheresis (usually for 6–7 days).

Chronic Neutropenia, Congenital Neutropenia

Subcutaneous: ADULTS, CHILDREN: 6 mcg/kg/dose twice a day.

Idiopathic or Cyclic Neutropenia

Subcutaneous: ADULTS, CHILDREN: 5 mcg/kg/dose once a day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (57%–11%): Nausea/vomiting, mild to severe bone pain (more frequent with high-dose IV form, less frequent with low-dose subcutaneous form), alopecia, diarrhea, fever, fatigue. **Occasional (9%–5%):** Anorexia, dyspnea, headache, cough, rash. **Rare (less than 5%):** Psoriasis, hematuria, proteinuria, osteoporosis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Long-term administration occasionally produces chronic neutropenia, splenomegaly. Thrombocytopenia, MI, arrhythmias occur rarely. Adult respiratory distress syndrome may occur in septic pts.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

CBC, platelet count should be obtained before therapy initiation and twice weekly thereafter.

INTERVENTION/EVALUATION

In septic pts, be alert for adult respiratory distress syndrome. Closely monitor those with preexisting cardiac conditions. Monitor B/P (transient decrease in B/P may occur), temperature, CBC with differential, platelet count, serum uric acid, hepatic function tests.

PATIENT/FAMILY TEACHING

- Report fever, chills, severe bone pain, chest pain, palpitations.

finasteride

fin-**as**-ter-ide
(Apo-Finasteride, Propecia, Proscar)
Do not confuse finasteride with furosemide, or Proscar with ProSom, Provera, or Prozac.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Androgen hormone inhibitor. **CLINICAL:** Benign prostatic hyperplasia agent.

USES

Proscar: Reduces risk of acute urinary retention, need for surgery in symptomatic benign prostatic hyperplasia (BPH) alone or in combination with doxazosin (Cardura). **Propecia:** Treatment of male pattern hair loss. **OFF-LABEL:** Treatment of female hirsutism.

PRECAUTIONS

Contraindications: Pregnancy, use in children. **Cautions:** Hepatic Impairment. Pregnant women, those attempting to conceive should avoid contact with crushed or broken tablets; pts with large residual urine volume or severely diminished urine flow.

ACTION

Inhibits 5-alpha reductase, an intracellular enzyme that converts testosterone into dihydrotestosterone (DHT) in prostate gland, resulting in decreased serum DHT. **Therapeutic Effect:** Reduces size of prostate gland.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO (reduction of DHT)	8 hrs	—	24 hrs

Rapidly absorbed from GI tract. Protein binding: 90%. Widely distributed. Metabolized in liver. **Half-life:** 6–8 hrs. Onset of clinical effect: 3–6 mos of continued therapy.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Physical handling of tablet by those who are or may become pregnant may produce abnormalities of external genitalia of male fetus. **Pregnancy Category X. Children:** Not indicated for use in children. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None known. **HERBAL:** **St. John's wort** may decrease concentration. Avoid concurrent use with **saw palmetto** (not adequately studied). **FOOD:** None known. **LAB VALUES:** Decreases serum prostate-specific antigen (PSA) level, even in presence of prostate cancer. Decreases dihydrotestosterone (DHT). Increases follicle-stimulating hormone (FSH), luteinizing hormone (LH), testosterone.

AVAILABILITY (Rx)

Tablets: 1 mg (Propecia), 5 mg (Proscar).

ADMINISTRATION/HANDLING

PO

- Do not break, crush, dissolve, or divide film-coated tablets. • Give without regard to meals.

INDICATIONS/ROUTES/DOSAGE

Benign Prostatic Hyperplasia (BPH)

PO: ADULTS, ELDERLY: (Proscar): 5 mg once a day (for minimum of 6 mos).

Hair Loss

PO: ADULTS: (Propecia): 1 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Rare (4%–2%): Gynecomastia, sexual dysfunction (impotence, decreased libido, decreased volume of ejaculate).

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction, circumoral swelling, testicular pain occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Digital rectal exam, serum prostate-specific antigen (PSA) determination should be performed in pts with benign prostatic hyperplasia (BPH) before initiating therapy and periodically thereafter.

INTERVENTION/EVALUATION

Diligent monitoring of I&O, esp. in pts with large residual urinary volume, severely diminished urinary flow, or obstructive uropathy.

PATIENT/FAMILY TEACHING

• Pt should be aware of potential for impotence. • May not notice improved urinary flow even if prostate gland shrinks. • Must take medication longer than 6 mos, and it is unknown if medication decreases need for surgery. • Because of potential risk to male fetus, women who are or may become pregnant should not handle tablets or be exposed to pt's semen. • Volume of ejaculate may be decreased during treatment.

fingolimod

TOP 100

fin-**goe**-li-mod
(Gilenya)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Immunomodulator. **CLINICAL:** Multiple sclerosis agent.

USES

Treatment of pts with relapsing forms of multiple sclerosis (MS) to reduce frequency of clinical exacerbations, delay accumulation of physical disability.

PRECAUTIONS

Contraindications: Sick sinus syndrome, second-degree or higher conduction block (unless pt has functioning pacemaker). Baseline QT interval 500 msec or greater. Concurrent use of class I or III antiarrhythmic. Recent (within 6 mos) MI, unstable angina, stroke, TIA, decompensated heart failure requiring hospitalization or NYHA class III/IV HF. **Cautions:** Concurrent use with antiarrhythmic drugs, beta-blockers, calcium channel blockers, pts with low heart rate, history of syncope, ischemic heart disease, HF, pts at increased risk for developing bradycardia or heart blocks. Severe hepatic impairment. Concomitant administration of immunosuppressants, immune modulating or antineoplastic medications. History of diabetes or uveitis. Prolonged QT interval at baseline.

ACTION

Blocks capacity of lymphocytes to move out from lymph nodes, reducing number of lymphocytes available to the CNS. **Therapeutic Effect:** May involve reduction of lymphocyte migration into central nervous system, which reduces central inflammation.

PHARMACOKINETICS

Metabolized by the enzyme sphingosine kinase to active metabolite. Highly distributed in red blood cells (85%). Minimally metabolized in liver. Protein binding: 99.7%. Primarily excreted in urine. **Half-life:** 6–9 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May cause fetal harm. Unknown if distributed in breast milk. **Pregnancy Category C.** **Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** Age-related severe hepatic impairment may increase risk of adverse reactions.

F

INTERACTIONS

DRUG: Antineoplastics, immunosuppressives, immunomodulators may increase risk of immunosuppression. **Ketoconazole** may increase concentration/adverse effects. May decrease effect of **vaccines.** May increase effects of **QT-prolonging medications.** **HERBAL: Echinacea** may decrease concentration. **FOOD:** None known. **LAB VALUES:** Expect decrease in neutrophil count. May increase serum alkaline phosphatase, ALT, AST, bilirubin, triglycerides.

AVAILABILITY (Rx)

Capsules: 0.5 mg.

ADMINISTRATION/HANDLING

PO

- May give without regard to food.

INDICATIONS/ROUTES/DOSAGE

Multiple Sclerosis

PO: ADULTS 18 YRS AND OLDER, ELDERLY: 0.5 mg once daily.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (25%–10%): Headache, diarrhea, back pain, cough. **Occasional (8%–5%):** Dyspnea, clinical depression, dizziness, hypertension, migraine, paresthesia, decreased weight. **Rare (4%–2%):** Blurred vision, alopecia, eye pain, asthenia, eczema, pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

May increase risk of infections (influenza, herpes viral infection, bronchitis, sinusitis, gastroenteritis, ear infection) in 13%–4% of pts. Pts with diabetes or history of uveitis are at increased risk for developing macular edema.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, serum chemistries prior to initial treatment. At initial treatment (within first 4–6 hrs after dose), medication reduces heart rate, AV conduction, followed by progressive increase after first day of treatment. Obtain baseline vitals, with particular attention to pulse rate. Perform ophthalmologic evaluation prior to treatment and 3–4 mos after initiation of treatment.

INTERVENTION/EVALUATION

Monitor for bradycardia for 6 hrs after first dose, followed by progressive improvement in heart rate after first day of treatment. Periodically monitor CBC, serum chemistries, particularly lymphocyte count (expected to decrease approximately 80% from baseline with continued treatment). Monitor for signs of systemic or local infection.

PATIENT/FAMILY TEACHING

- Obtain regular eye examinations during and for 2 mos following treatment.
- Use effective methods of contraception during and for 3 mos following treatment.
- Report fever, chills, aches, weakness, cough, nausea, symptoms of infection, visual changes, yellowing of skin, eyes, dark urine.

fluconazole

flu-**kon**-a-zole
(Apo-Fluconazole, Diflucan, Novo-Fluconazole)

Do not confuse Diflucan with diclofenac, Diprivan, or disulfiram, or fluconazole with fluoxetine, furosemide, or itraconazole.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic azole. **CLINICAL:** Systemic antifungal.

USES

Antifungal prophylaxis in pts undergoing bone marrow transplant; candidiasis (esophageal, oropharyngeal, urinary tract, vaginal); systemic Candida infections (e.g., candidemia); treatment of cryptococcal meningitis. **OFF-LABEL:** Cryptococcal pneumonia, candidal intertrigo.

PRECAUTIONS

Contraindications: Concomitant administration of QT-prolonging medications. **Cautions:** Hepatic/renal impairment, hypersensitivity to other triazoles (e.g., itraconazole, terconazole), imidazoles (e.g., butoconazole, ketoconazole).

ACTION

Interferes with cytochrome P-450 activity, an enzyme necessary for ergosterol formation. **Therapeutic Effect:** Directly damages fungal membrane, altering its function. Fungistatic.

PHARMACOKINETICS

Well absorbed from GI tract. Widely distributed, including to CSF. Protein binding: 11%. Partially metabolized in liver. Excreted unchanged primarily in urine. Partially removed by hemodialysis. **Half-life:** 20–30 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: High fluconazole dosages increase **cyclosporine, sirolimus, tacrolimus** concentrations. **Isoniazid, rifampin** may increase drug metabolism. May increase concentration/effects of **oral antidiabetic medication.** May decrease metabolism of **phenytoin, warfarin.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, ALT, AST.

AVAILABILITY (Rx)

Injection, Solution, Pre-Mix: 200 mg (100 ml); 400 mg (200 ml). **Powder for Oral Suspension:** 10 mg/ml, 40 mg/ml. **Tablets:** 50 mg, 100 mg, 150 mg, 200 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • Do not exceed maximum flow rate of 200 mg/hr.
Storage • Store at room temperature. • Do not remove from outer wrap until ready to use. • Squeeze inner bag to check for leaks. • Do not use parenteral form if solution is cloudy, precipitate forms, seal is not intact, or it is discolored. • Do not add supplementary medication.

PO

• Give without regard to meals.

IV INCOMPATIBILITIES

Amphotericin B (Fungizone), amphotericin B complex (Abelcet, AmBisome, Amphotec), ampicillin (Polycillin), calcium gluconate, cefotaxime (Claforan), ceftriaxone (Rocephin), cefuroxime (Zinacef), chloramphenicol (Chloromycetin), clindamycin (Cleocin), co-trimoxazole (Bactrim), diazepam (Valium), digoxin (Lanoxin), erythromycin (Erythrocin), furosemide (Lasix), haloperidol (Haldol), hydroxyzine (Vistaril), imipenem and cilastatin (Primaxin).

IV COMPATIBILITIES

Dexmedetomidine (Precedex), diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), heparin, lipids, lorazepam (Ativan), midazolam (Versed), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

◄ALERT► PO and IV therapy equally effective; IV therapy for pt intolerant of drug or unable to take orally. Oral suspension stable for 14 days at room temperature or refrigerated.

Usual Dosage

PO/IV: ADULTS, ELDERLY: 150 mg once or **loading dose:** 200–800 mg. **Maintenance dose:** 200–800 mg once daily. **CHILDREN AND NEONATES: Loading dose:** 6–12 mg/kg. **Maintenance dose:** 3–12 mg/kg once daily. **Maximum:** 600 mg/day.

Dosage in Renal Impairment

After a loading dose of 400 mg, daily dosage is based on creatinine clearance.

Creatinine Clearance	Dosage
Greater than 50 ml/min	100%
50 ml/min or less	50%
Dialysis	50%
CCRT	400–800 mg as loading dose
CVVH	then 200–800 mg/day
CVVHDF	400–800 mg as loading dose, then 400–800 mg/day

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (4%–1%): Hypersensitivity reaction (chills, fever, pruritus, rash), dizziness, drowsiness, headache, constipation, diarrhea, nausea, vomiting, abdominal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Exfoliative skin disorders, serious hepatic effects, blood dyscrasias (eosinophilia, thrombocytopenia, anemia, leukopenia) have been reported rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess infected area. Establish baselines for CBC, serum potassium, hepatic function.

INTERVENTION/EVALUATION

Assess for hypersensitivity reaction (chills, fever). Monitor CBC, BMP, LFT. Report rash, itching promptly. Monitor temperature at least daily. Monitor daily pattern of bowel activity, stool consistency. Assess for dizziness; provide assistance as needed.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Report dark urine, pale stool, jaundiced skin or sclera of eyes, rash, pruritus. • Pts with oropharyngeal infections should maintain fastidious oral hygiene. • Consult physician before taking any other medication.

fludarabine

HIGH ALERT

floo-**dar**-a-been
(Fludara)

■ **BLACK BOX ALERT** ■ Must be administered by certified chemotherapy personnel. Severe neurologic toxicity reported. Life-threatening hemolytic anemia, autoimmune thrombocytopenic purpura, hemophilia have occurred. Risk of severe myelosuppression (anemia, thrombocytopenia, neutropenia). Concurrent use with pentostatin may produce severe/fatal pulmonary toxicity.

Do not confuse Fludara with FUDR, or fludarabine with cladribine or Flumadine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic.

USES

Treatment of progressive or refractory B-cell chronic lymphocytic leukemia (CLL) in pts who have not responded to or have not progressed with another standard alkylating agent. **Tablets:** Treatment of CLL. **OFF-LABEL:** Treatment of non-Hodgkin's lymphoma, relapsed acute lymphocytic leukemia (ALL) or acute myeloid leukemia (AML) in children, Waldenström's macroglobulinemia, reduced-intensity conditioning regimens prior to allogeneic hematopoietic stem-cell transplantation.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal insufficiency, preexisting hematological disorders (e.g., granulocytopenia), seizure disorder, spasticity, peripheral neuropathy, infection, fever, immunodeficiency.

ACTION

Inhibits DNA synthesis by interfering with DNA polymerase alpha, ribonucleotide reductase, DNA primase. **Therapeutic Effect:** Induces cell death.

PHARMACOKINETICS

Rapidly dephosphorylated in serum, then phosphorylated intracellularly to active triphosphate. Primarily excreted in urine. **Half-life:** 7–20 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Not known whether distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category D. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Pentostatin** may increase risk of pulmonary toxicity. **Bone marrow depressants** may increase risk of myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, uric acid, AST.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Fludara): 50 mg. **Injection, Solution:** 25 mg/ml.

ADMINISTRATION/HANDLING

◀ALERT▶ Give by IV infusion. Do not add to other IV infusions. Avoid small veins; swollen, edematous extremities; areas overlying joints, tendons.

IV

Reconstitution • Reconstitute 50-mg vial with 2 ml Sterile Water for Injection to provide concentration of 25 mg/ml. • Further dilute with 100–125 ml 0.9% NaCl or D_5W.

Rate of Administration • Infuse over 30 min.

Storage • Store in refrigerator. • Handle with extreme care during preparation/administration. If contact with skin or mucous membranes occurs, wash thoroughly with soap and water; rinse eyes profusely with plain water. • Reconstituted vials stable for 16 days at room temperature or refrigerated. • Diluted solutions stable for 48 hrs at room temperature or refrigerated.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), amphotericin B (Fungizone), daunorubicin, hydroxyzine (Vistaril), prochlorperazine (Compazine).

IV COMPATIBILITIES

Heparin, hydromorphone (Dilaudid), lorazepam (Ativan), magnesium sulfate,

morphine, multivitamins, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Chronic Lymphocytic Leukemia

IV: ADULTS: 25 mg/m^2 daily for 5 consecutive days. Continue for up to 3 additional cycles. Begin each course of treatment every 28 days.

F

Dosage in Renal Impairment

Creatinine Clearance	Dosage
IV	
50–79 ml/min	20 mg/m^2
30–49 ml/min	15 mg/m^2
Less than 30 ml/min	Not recommended

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (60%–11%): Fever, nausea/vomiting, chills. **Occasional (20%–10%):** Fatigue, generalized pain, rash, diarrhea, cough, asthenia, stomatitis, dyspnea, peripheral edema. **Rare (7%–3%):** Anorexia, sinusitis, dysuria, myalgia, paresthesia, headache, visual disturbances.

ADVERSE EFFECTS/ TOXIC REACTIONS

Pneumonia occurs frequently. Severe hematologic toxicity (anemia, thrombocytopenia, neutropenia), GI bleeding may occur. Tumor lysis syndrome may begin with flank pain, hematuria; may also include hypercalcemia, hyperphosphatemia, hyperuricemia, resulting in renal failure. High-dosage therapy may produce acute leukemia, blindness, coma. Neurotoxicity (progressive demyelinating encephalopathy, mental status deterioration) occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess baseline CBC, serum creatinine, ALT, AST, electrolytes, uric acid and monitor during treatment. Drug should be discontinued if intractable vomiting, diarrhea, stomatitis, GI bleeding occurs.

INTERVENTION/EVALUATION

Assess for fatigue, visual disturbances, peripheral edema. Assess for onset of pneumonia. Monitor for dyspnea, cough, rapid decrease in WBC count, intractable vomiting, diarrhea, GI bleeding (bright red or tarry stool). Assess oral mucosa for stomatitis. Assess skin for rash. Be alert to possible tumor lysis syndrome (onset of flank pain, hematuria), signs of neurotoxicity.

PATIENT/FAMILY TEACHING

• Avoid crowds, exposure to infection. • Maintain strict oral hygiene. • Promptly report fever, sore throat, signs of local infection, unusual bruising/bleeding from any site. • Report persistent nausea/vomiting.

flunisolide

floo-**niss**-oh-lyde
(Apo-Flunisolide, Nasalide, Rhinalar)
Do not confuse flunisolide with fluocinonide.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Adrenocorticosteroid. **CLINICAL:** Antiasthmatic, anti-inflammatory.

USES

Relieves symptoms of seasonal, perennial rhinitis.

PRECAUTIONS

Contraindications: Hypersensitivity to any corticosteroid, untreated nasal mucosal infection. **Cautions:** Respiratory tuberculosis, untreated systemic infections, ocular herpes simplex.

ACTION

Controls rate of protein synthesis, depresses migration of polymorphonuclear leukocytes, reverses capillary permeability, stabilizes lysosomal membranes. **Therapeutic Effect:** Prevents, controls inflammation.

PHARMACOKINETICS

Rapidly absorbed from lungs and GI tract following inhalation. About 50% of dose is absorbed from nasal mucosa following intranasal administration. Metabolized in liver. Partially excreted in urine and feces. **Half-life:** 1–2 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Nasal Spray: 25 mcg/activation.

ADMINISTRATION/HANDLING

Intranasal

• Instruct pt to clear nasal passages as much as possible before use (topical nasal decongestants may be needed 5–15 min before use). • Tilt head slightly forward. • Insert spray tip into nostril, pointing toward inflamed nasal turbinates, away from nasal septum. • Pump medication into one nostril while pt holds other nostril closed, concurrently inspires through nose. • Discard opened nasal solution after 3 mos.

INDICATIONS/ROUTES/DOSAGE

Usual Intranasal Dosage

◀ALERT▶ Improvement usually seen within a few days; may take up to 3 wks. Discontinue use after 3 wks if no significant improvement occurs.

Intranasal: ADULTS, ELDERLY, CHILDREN 15 YRS AND OLDER: Initially, 2 sprays each nostril twice a day, may increase at 4- to 7-day intervals to 2 sprays 3 times a day. **Maximum:** 8 sprays in each nostril daily. **CHILDREN 6–14 YRS:** Initially, 1 spray 3 times a day or 2 sprays twice a day. **Maximum:** 4 sprays in each nostril daily. **Maintenance:** 1 spray into each nostril daily.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Inhalation (25%–10%): Unpleasant taste, nausea, vomiting, sore throat, diarrhea, cold symptoms, nasal congestion. **Occasional: Inhalation (9%–3%):** Dizziness, irritability, anxiety, tremors, abdominal pain, heartburn, oropharyngeal candidiasis, edema. **Nasal:** Mild nasopharyngeal irritation/dryness, rebound congestion, bronchial asthma, rhinorrhea, altered taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Acute hypersensitivity reaction (urticaria, angioedema, severe bronchospasm) occurs rarely. Transfer from systemic to local steroid therapy may unmask previously suppressed bronchial asthma condition.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline assessment of asthma, rhinitis.

INTERVENTION/EVALUATION

Advise pts receiving bronchodilators by inhalation concomitantly with steroid inhalation therapy to use bronchodilator several min before corticosteroid aerosol (enhances penetration of steroid into bronchial tree). Monitor rate, depth, rhythm, type of respiration; quality/rate of pulse. Assess lung sounds for rhonchi, wheezing, rales. Monitor ABGs.

PATIENT/FAMILY TEACHING

• Report exposure to measles, chickenpox. • Do not change dose/schedule or stop taking drug; must taper off gradually under medical supervision. • Maintain strict oral hygiene. • Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness, oral fungal infection). • Increase fluid intake (decreases lung secretion viscosity). • **Intranasal:** Clear nasal passages before use. • Report if no improvement in symptoms (within 3 wks), sneezing or nasal irritation occurs. • Improvement usually noted in several days.

fluorouracil, 5-FU HIGH ALERT

flure-oh-**ue**-ra-sil
(Adrucil, Carac, Efudex, Fluoroplex)

■ **BLACK BOX ALERT** ■ Must be administered by personnel trained in administration/handling of chemotherapeutic agents.

Do not confuse Efudex with Efidac.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic.

USES

Parenteral: Treatment of carcinoma of: colon, rectum, breast, stomach, pancreas. **Topical:** Treatment of multiple actinic or solar keratoses, superficial basal cell carcinomas. **OFF-LABEL: Parenteral:** Treatment of carcinoma of: bladder, cervical, endometrial, head/neck, anal, esophageal, renal cell, unknown primary cancer.

PRECAUTIONS

Contraindications: Myelosuppression, poor nutritional status, potentially serious infections. **Cautions:** History of high-dose pelvic irradiation, hepatic/renal impairment, palmar-plantar erythrodysesthia syndrome (hand and foot syndrome), previous use of alkylating agents.

ACTION

Blocks formation of thymidylic acid. Cell cycle–specific for S phase of cell division. **Therapeutic Effect:** Inhibits DNA, RNA synthesis. **Topical:** Destroys rapidly proliferating cells.

PHARMACOKINETICS

Widely distributed. Crosses blood-brain barrier. Metabolized in liver. Primarily excreted by lungs as carbon dioxide. Removed by hemodialysis. **Half-life:** 16 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Unknown if distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category D. Topical: Pregnancy Category X. Children:** No age-related precautions noted. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Bone marrow depressants may increase risk of myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL: Echinacea** may decrease effects. Avoid use of **black cohosh, dong quai** in pts with estrogen-dependent tumors. **FOOD:** None known. **LAB VALUES:** May decrease serum albumin. **Topical:** May cause eosinophilia, leukocytosis, thrombocytopenia, toxic granulation.

AVAILABILITY (Rx)

Cream, Topical (Carac): 0.5%. **(Efudex):** 5%. **(Fluoroplex):** 1%. **Injection Solution (Adrucil):** 50 mg/ml. **Solution, Topical (Efudex):** 2%, 5%.

ADMINISTRATION/HANDLING

◄ALERT► Give by IV injection or IV infusion. Do not add to other IV infusions.

Avoid small veins, swollen/edematous extremities, areas overlying joints, tendons. May be carcinogenic, mutagenic, teratogenic. Handle with extreme care during preparation/administration.

IV

Reconstitution • IV push does not need to be diluted or reconstituted. • Inject through Y-tube or 3-way stopcock of free-flowing solution. • For IV infusion, further dilute with 50–1,000 ml D_5W or 0.9% NaCl.

Rate of Administration • Give IV push slowly over 1–2 min. • IV infusion is administered over 30 min–24 hrs (refer to individual protocols). • Extravasation produces immediate pain, severe local tissue damage.

Storage • Store at room temperature. • Solution appears colorless to faint yellow. Slight discoloration does not adversely affect potency or safety. • If precipitate forms, redissolve by heating, shaking vigorously; allow to cool to body temperature. • Diluted solutions stable for 72 hrs at room temperature.

IV INCOMPATIBILITIES

Amphotericin B complex (Abelcet, AmBisome, Amphotec), filgrastim (Neupogen), ondansetron (Zofran), vinorelbine (Navelbine).

IV COMPATIBILITIES

Granisetron (Kytril), heparin, hydromorphone (Dilaudid), leucovorin, morphine, potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Note: Refer to individual protocols.

Usual Therapy

IV Bolus: ADULTS, ELDERLY: 400–500 mg/m^2/day for 4–5 days or 500–600 mg/m^2/dose q 3–4 wks.

IV Infusion: ADULTS, ELDERLY: 15 mg/kg/day or 500 mg/m^2/day over 4 hrs for 5 days or 800–1200 mg/m^2 over 24–120 hrs.

Multiple Actinic or Solar Keratoses

Topical *(Carac)*: ADULTS, ELDERLY: Apply once a day for up to 4 wks.

Topical *(Efudex)*: ADULTS, ELDERLY: Apply twice a day for 2–4 wks.

Topical *(Fluoroplex)*: Apply twice daily for 2–6 wks.

Basal Cell Carcinoma

Topical *(Efudex 5%)*: ADULTS, ELDERLY: Apply twice a day for 3–6 wks up to 10–12 wks.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Parenteral: Frequent (greater than 10%): Alopecia, dermatitis, anorexia, diarrhea, esophagitis, dyspepsia, stomatitis. **Occasional (10%–1%):** Cardiotoxicity (angina, EKG changes), skin dryness, epithelial fissuring, nausea, vomiting, excessive lacrimation, blurred vision. **Rare (less than 1%):** Headache, photosensitivity, somnolence, allergic reaction, dyspnea, hypotension, MI, pulmonary edema. **Topical: Occasional:** Erythema, skin ulceration, pruritus, hyperpigmentation, dermatitis, insomnia, stomatitis, irritability, photosensitivity, excessive lacrimation, blurred vision.

ADVERSE EFFECTS/ TOXIC REACTIONS

Earliest sign of toxicity (4–8 days after beginning therapy) is stomatitis (dry mouth, burning sensation, mucosal erythema, ulceration at inner margin of lips). Most common dermatologic toxicity is pruritic rash (generally on extremities, less frequently on trunk). Leukopenia (WBC less than 3500/mm^3) generally occurs within 9–14 days after drug administration but may occur as late as 25th day. Thrombocytopenia (platelets less than 100,000/mm^3) occasionally occurs within 7–17 days after administration. Pancytopenia, agranulocytosis occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC with differential, serum renal function, LFT and monitor during therapy.

INTERVENTION/EVALUATION

Monitor for rapidly falling WBC, platelet count, intractable diarrhea, GI bleeding (bright red or tarry stool). Assess oral mucosa for stomatitis. Drug should be discontinued if intractable diarrhea, stomatitis, GI bleeding occurs. Assess skin for rash.

PATIENT/FAMILY TEACHING

• Maintain strict oral hygiene. • Report signs/symptoms of infection, unusual bruising/bleeding, visual changes, nausea, vomiting, diarrhea, chest pain, palpitations. • Avoid sunlight, artificial light sources; wear protective clothing, sunglasses, sunscreen. • **Topical:** Apply only to affected area. • Do not use occlusive coverings. • Be careful near eyes, nose, mouth. • Wash hands thoroughly after application. • Treated areas may be unsightly for several weeks after therapy.

fluoxetine

floo-**ox**-e-teen
(Apo-Fluoxetine, Novo-Fluoxetine, Prozac, Prozac Weekly, Sarafem)

■ **BLACK BOX ALERT** ■ Increased risk of suicidal thinking and behavior in children, adolescents, young adults 18–24 yrs of age with major depressive disorder, other psychiatric disorders.

Do not confuse fluoxetine with duloxetine, famotidine, fluconazole, fluvastatin, fluvoxamine, fosinopril, furosemide, or paroxetine, or Prozac with Paxil, Prilosec, Prograf, Proscar, or ProSom, or Sarafem with Serophene.

FIXED-COMBINATION(S)

Symbyax: fluoxetine/olanzapine (an antipsychotic): 25 mg/6 mg, 25 mg/12 mg, 50 mg/6 mg, 50 mg/12 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Selective serotonin reuptake inhibitor (SSRI). **CLINICAL:** Antidepressant, antiobsessional agent, antibulimic.

USES

Treatment of major depressive disorder (MDD), obsessive-compulsive disorder (OCD), bulimia nervosa, premenstrual dysphoric disorder (PMDD), panic disorder with or without agoraphobia. Treatment of resistant or bipolar 1 depression (with olanzapine). **OFF-LABEL:** Treatment of fibromyalgia, post-traumatic stress disorder (PTSD), Raynaud's phenomena, social anxiety disorder, selective mutism.

PRECAUTIONS

Contraindications: Use within 14 days of MAOIs. Pts receiving linezolid. Use with thioridazine. **Cautions:** Seizure disorder, cardiac dysfunction (e.g., history of MI), diabetes, pts with risk factors for QT prolongation, concurrent use of medication that increase QT interval, renal/hepatic impairment, pts at high risk for suicide, in pts where weight loss is undesirable, elderly. Pts at risk of acute narrow-angle glaucoma or with increased intraocular pressure.

ACTION

Selectively inhibits serotonin uptake in CNS, enhancing serotonergic function. **Therapeutic Effect:** Relieves depression; reduces obsessive-compulsive, bulimic behavior.

PHARMACOKINETICS

Well absorbed from GI tract. Crosses blood-brain barrier. Protein binding: 94%. Metabolized in liver. Primarily

excreted in urine. Not removed by hemodialysis. **Half-life:** 2–3 days; metabolite, 7–9 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown whether drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** May be more sensitive to behavioral side effects (e.g., insomnia, restlessness). **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **NSAIDS, antiplatelets, anticoagulants** may increase risk of bleeding. **Alcohol, other CNS depressants** may increase CNS depression. **MAOIs** may produce serotonin syndrome and neuroleptic malignant syndrome. May increase concentration/toxicity of **phenytoin, tricyclic antidepressants.** **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **St. John's wort** may increase effects, risk of serotonin syndrome. **FOOD:** None known. **LAB VALUES:** May decrease serum sodium. May increase AST, ACT.

AVAILABILITY (Rx)

Capsules: 10 mg, 20 mg, 40 mg. **Oral Solution:** 20 mg/5 ml. **Tablets:** 10 mg, 20 mg, 60 mg.

Capsules (Delayed-Release [Prozac Weekly]): 90 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food, but give with food, milk if GI distress occurs. • **Bipolar disorder:** Give once daily in evening. • **Depression OCD:** Give once daily in morning or twice daily (morning and noon). • **Bulimia:** Give once daily in morning.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Use lower or less frequent doses in pts with renal/hepatic impairment, pts with concurrent disease or multiple medications, the elderly.

Depression

PO: ADULTS: Initially, 20 mg each morning. If therapeutic improvement does not occur after 2 wks, gradually increase to maximum of 80 mg/day in 2 equally divided doses in morning and at noon. **ELDERLY:** Initially, 10 mg/day. May increase by 10–20 mg q2wks. **Prozac Weekly:** 90 mg/wk, begin 7 days after last dose of 20 mg. **CHILDREN 8–18 YRS:** Initially, 5–10 mg/day. Titrate upward as needed. Usual dosage: 20 mg/day.

Panic Disorder

PO: ADULTS, ELDERLY: Initially, 10 mg/day. May increase to 20 mg/day after 1 wk. **Maximum:** 60 mg/day.

Bulimia Nervosa

PO: ADULTS: 60 mg each morning. May titrate to 60 mg over several days.

Obsessive-Compulsive Disorder (OCD)

PO: ADULTS, ELDERLY: 20–60 mg/day. **Maximum:** 80 mg/day. **CHILDREN 7–18 YRS:** Initially, 10 mg/day. May increase to 20 mg/day after 2 wks. Range: 20–60 mg/day.

Depression Associated with Bipolar Disorder

PO: ADULTS, ELDERLY ***(with olanzapine):*** Initially, 20 mg/day. May increase after several wks. Range: 20–50 mg/day.

Premenstrual Dysphoric Disorder (PMDD) (Sarafem)

PO: ADULTS: 20 mg/day **or** 20 mg/day beginning 14 days prior to menstruation and continuing through first full day of menses (repeated with each cycle).

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Use caution.

SIDE EFFECTS

Frequent (greater than 10%): Headache, asthenia, insomnia, anxiety, drowsiness, nausea, diarrhea, decreased appetite. **Occasional (9%–2%):** Dizziness, tremor, fatigue, vomiting, constipation, dry mouth, abdominal pain, nasal congestion, diaphoresis, rash. **Rare (less than 2%):** Flushed skin, light-headedness, impaired concentration.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce seizures, nausea, vomiting, excessive agitation, restlessness.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess appearance, behavior, mood, suicidal tendencies. For pts on long-term therapy, baseline renal function, LFT, blood counts should be performed at baseline and periodically thereafter.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Monitor mental status, anxiety, social functioning, appetite, nutritional intake. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Monitor serum LFT, glucose, sodium; weight.

PATIENT/FAMILY TEACHING

• Maximum therapeutic response may require 4 or more wks of therapy. • Do not abruptly discontinue medication. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • To avoid insomnia, take last dose of drug before 4 PM.

fluphenazine

floo-**fen**-a-zeen
(Apo-Fluphenazine, Modecate)

■ **BLACK BOX ALERT** ■ Increased mortality in elderly with dementia-related psychosis.
Do not confuse fluphenazine with fluvoxamine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Phenothiazine. **CLINICAL:** Antipsychotic.

USES

Management of psychotic disturbances and schizophrenia. **OFF-LABEL:** Psychosis/agitation related to Alzheimer's dementia.

PRECAUTIONS

Contraindications: Myelosuppression, coma, severe CNS depression, pts receiving large doses of hypnotics, hepatic disease, subcortical brain damage. **Cautions:** Elderly, seizures, Parkinson's disease, severe cardiac disease, renal/hepatic impairment, pts at risk for pneumonia, pts at risk for hypotension, decreased GI motility, urinary retention, BPH, narrow-angle glaucoma, myasthenia gravis, visual problems.

ACTION

Blocks postsynaptic dopaminergic receptors in brain. **Therapeutic Effect:** Decreases psychotic behavior. Produces weak anticholinergic, sedative, antiemetic effects; strong extrapyramidal effects.

PHARMACOKINETICS

Erratic absorption. Protein binding: greater than 90%. Metabolized in liver. Excreted in urine. **Half-life:** 33 hrs (Decanoate: 163–232 hrs).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; distributed in breast milk. **Pregnancy Category C. Children:** Pts with acute illnesses (e.g., chickenpox, measles, gastroenteritis, CNS infection) are at risk for developing neuromuscular,

extrapyramidal symptoms (EPS), particularly dystonias. **Elderly:** Susceptible to anticholinergic effects.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase hypotensive, CNS, respiratory depressant effects. EPS may increase with **medications producing EPS. Antihypertensive medications, hypotensive agents** may worsen hypotension. **Lithium** may decrease absorption, produce adverse neurologic effects. **MAOIs, tricyclic antidepressants** may increase anticholinergic, sedative effects. **Medications prolonging QT interval (e.g., erythromycin)** may have additive effect. **HERBAL:** **Dong quai, St. John's wort** may increase photosensitization. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May produce false-positive pregnancy, phenylketonuria test results. May cause EKG changes, including Q- and T-wave disturbances.

AVAILABILITY (Rx)

Elixir: 2.5 mg/5 ml. **Injection (Decanoate):** 25 mg/ml. **Injection Solution: Hydrochloride** 2.5 mg/ml. **Oral Concentrate:** 5 mg/ml. **Tablets:** 1 mg, 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

• Avoid skin contact with fluphenazine solution (may cause contact dermatitis). • Dilute oral concentrate only with water, milk, juice. Do not dilute with caffeine-containing beverages (coffee, cola), tannics (tea), or pectinates (apple juice) due to potential incompatibility.

INDICATIONS/ROUTES/DOSAGE

Psychosis

PO: ADULTS: 2.5–10 mg/day in divided doses q6–8h. **Maintenance:** 1–5 mg/day. **Maximum:** 40 mg/day. **ELDERLY:** Initially, 1–2.5 mg/day. Titrate gradually.

IM *(Hydrochloride)*: ADULTS, ELDERLY: 1.25 mg as single dose. May need 2.5–10 mg/day in divided doses q6–8h. ***(Decanoate)*:** Initially, 12.5–25 mg q2–4wks. May increase in 12.5-mg increments. **Maximum dose:** 100 mg.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Hypotension, dizziness, syncope (occur frequently after first injection, occasionally after subsequent injections, rarely with oral doses). **Occasional:** Drowsiness (during early therapy), dry mouth, blurred vision, lethargy, constipation or diarrhea, nasal congestion, peripheral edema, urinary retention. **Rare:** Ocular changes, altered skin pigmentation (with prolonged use of high doses).

ADVERSE EFFECTS/ TOXIC REACTIONS

EPS appears dose–related (particularly high dosage), divided into 3 categories: akathisia (inability to sit still, tapping of feet, urge to move around), parkinsonian symptoms (hypersalivation, mask-like facial expression, shuffling gait, tremors), acute dystonias (torticollis [neck muscle spasm], opisthotonos [rigidity of back muscles], oculogyric crisis [rolling back of eyes]). Dystonic reaction may produce diaphoresis, pallor. Tardive dyskinesia (tongue protrusion, puffing of cheeks, chewing/puckering of the mouth) occurs rarely but may be irreversible. Abrupt withdrawal after long-term therapy may precipitate dizziness, gastritis, nausea, vomiting, tremors. Blood dyscrasias, particularly agranulocytosis, mild leukopenia, may occur. May lower seizure threshold.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC. Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content.

INTERVENTION/EVALUATION

Monitor B/P for hypotension. Monitor CBC for blood dyscrasias. Monitor for fine tongue movement (may be early sign of tardive dyskinesia). Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression).

PATIENT/FAMILY TEACHING

• Full therapeutic effect may take up to 6 wks. • Avoid skin contact with solution (may cause contact dermatitis). • Urine may darken. • Do not abruptly withdraw from long-term drug therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Drowsiness generally subsides during continued therapy.

flurazepam

flure-**az**-e-pam
(Apo-Flurazepam, Dalmane)
Do not confuse Dalmane with Dialume, or flurazepam with temazepam.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Benzodiazepine (**Schedule IV**). **CLINICAL:** Sedative-hypnotic.

USES

Short-term treatment of insomnia.

PRECAUTIONS

Contraindications: Respiratory depression, preexisting CNS depression, hypersensitivity to other benzodiazepines, pregnancy, breastfeeding, narrow-angle glaucoma. **Cautions:** Renal/hepatic impairment, depression, chronic pulmonary insufficiency, low albumin, history of drug dependence.

ACTION

Enhances action of inhibitory neurotransmitter gamma-aminobutyric acid (GABA). **Therapeutic Effect:** Produces hypnotic effect due to CNS depression.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15–20 min	3–6 hrs	7–8 hrs

Well absorbed from GI tract. Protein binding: 97%. Crosses blood-brain barrier. Widely distributed. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 2.3 hrs; metabolite, 40–114 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; may be distributed in breast milk. Chronic ingestion during pregnancy may produce withdrawal symptoms, CNS depression in neonates. **Pregnancy Category X. Children:** Safety and efficacy not established in those younger than 15 yrs. **Elderly:** Use small initial doses with gradual dose increases to avoid ataxia, excessive sedation.

INTERACTIONS

DRUG: **Alcohol, CNS depressants** may increase CNS depression. **CYP3A4 inhibitors (e.g., azole antifungals)** may increase concentration, risk of toxicity. **HERBAL:** **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Capsules: 15 mg, 30 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals. • Capsules may be emptied and mixed with food.

INDICATIONS/ROUTES/DOSAGE

Insomnia

PO: ELDERLY, DEBILITATED, HEPATIC DISEASE, LOW SERUM ALBUMIN: 15 mg at

bedtime. **ADULTS:** 15–30 mg at bedtime. **CHILDREN OLDER THAN 15 YRS:** 15 mg at bedtime.

Dosage in Renal Impairment
Not recommended.

Dosage in Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Frequent: Drowsiness, dizziness, ataxia, sedation. Morning drowsiness occurs initially. **Occasional:** GI disturbances, anxiety, blurred vision, dry mouth, headache, confusion, skin rash, irritability, slurred speech. **Rare:** Paradoxical CNS excitement, restlessness (esp. in elderly, debilitated).

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt or too-rapid withdrawal after long-term use may result in pronounced restlessness/irritability, insomnia, hand tremors, abdominal/muscle cramps, vomiting, diaphoresis, seizures. Overdose results in drowsiness, confusion, diminished reflexes, coma. **Antidote:** Flumazenil (see Appendix K for dosage).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess B/P, pulse, respirations immediately before administration. Provide safe environment conducive to sleep (back rub, quiet environment, low lighting, raise bed rails).

INTERVENTION/EVALUATION

Assess for paradoxical reaction, particularly during early therapy. Evaluate for therapeutic response (decrease in number of nocturnal awakenings, increase in sleep duration).

PATIENT/FAMILY TEACHING

- Smoking reduces drug effectiveness.
- Do not abruptly withdraw medication after long-term use.
- May have disturbed sleep pattern 1–2 nights after discontinuing.
- Notify physician if pregnant or planning to become pregnant (Pregnancy Category X).
- Avoid alcohol, other CNS depressants.
- May be habit forming.

flutamide

HIGH ALERT

floo-ta-myde
(Apo-Flutamide 🍁, Euflex 🍁)

■ **BLACK BOX ALERT** ■ Hospitalization and, rarely, death due to flutamide-associated hepatic failure have been reported.

Do not confuse Eulexin with Edecrin, or flutamide with Flumadine.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antiandrogen, hormone. **CLINICAL:** Antineoplastic.

USES

Treatment of metastatic carcinoma of prostate (in combination with luteinizing hormone-releasing hormone [LHRH] analogues, e.g., leuprolide).

PRECAUTIONS

Contraindications: Severe hepatic impairment, pregnancy. **Cautions:** Diabetes mellitus.

ACTION

Inhibits androgen uptake and/or binding of androgen in target tissue. Used in conjunction with leuprolide to inhibit stimulant effects of flutamide on serum testosterone. **Therapeutic Effect:** Suppresses testicular androgen production, decreases growth of prostate carcinoma.

PHARMACOKINETICS

Completely absorbed from GI tract. Protein binding: 94%–96%. Metabolized in liver. Primarily excreted in urine. Not

removed by hemodialysis. **Half-life:** 6 hrs (increased in elderly).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Not used in this pt population. **Pregnancy Category D. Children:** Not used in children. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase effects of **warfarin.** **HERBAL:** **St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, estradiol, testosterone, bilirubin, creatinine, alkaline phosphatase, BUN, ALT, AST. May decrease Hgb, WBC.

AVAILABILITY (Rx)

Capsules: 125 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • May open and mix with soft food (e.g., applesauce, pudding).

INDICATIONS/ROUTES/DOSAGE

Prostatic Carcinoma

PO: ADULTS, ELDERLY: 250 mg q8h.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (50%–11%): Hot flashes, decreased libido, diarrhea, generalized pain, asthenia, constipation, nausea, nocturia. **Occasional (8%–6%):** Dizziness, paresthesia, insomnia, impotence, peripheral edema, gynecomastia. **Rare (5%–4%):** Rash, diaphoresis, hypertension, hematuria, vomiting, urinary incontinence, headache, flu-like syndrome, photosensitivity.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hepatotoxicity (including hepatic encephalopathy), hemolytic anemia may occur.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Obtain baseline LFT and periodically during long-term therapy.

PATIENT/FAMILY TEACHING

• Do not stop taking medication (both drugs must be continued). • Urine color may change to amber or yellow-green. • Avoid prolonged exposure to sun, tanning beds. Wear clothing to protect from ultraviolet exposure until tolerance is determined.

fluticasone

TOP 100

floo-**tik**-a-sone
(Apo-Fluticasone, Arnuity Ellipta, Cutivate, Flonase, Flovent Diskus, Flovent HFA, Veramyst)
Do not confuse Cutivate with Ultravate, or Flonase with Flovent.

FIXED-COMBINATION(S)

Advair, Advair Diskus, Advair HFA: fluticasone/salmeterol (bronchodilator): 100 mcg/50 mcg, 250 mcg/50 mcg, 500 mcg/50 mcg. **Dymista:** Fluticasone/azelastine (an antihistamine): 50 mcg/137 mcg per spray.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Corticosteroid. **CLINICAL:** Anti-inflammatory, antipruritic.

USES

Nasal: Relief of seasonal/perennial allergic rhinitis. **Topical:** Relief of inflammation/pruritus associated with steroid-responsive disorders (e.g., contact dermatitis, eczema), atopic dermatitis. **Inhalation:** Maintenance treatment of bronchial asthma. Assists in reducing, discontinuing oral corticosteroid therapy.

PRECAUTIONS

Contraindications: **Inhalation:** Primary treatment of status asthmaticus, acute exacerbation of asthma, other acute asthmatic conditions. **Cautions:** Untreated systemic ocular herpes simplex; untreated fungal, bacterial infection; active or quiescent tuberculosis. Thyroid disease, cardiovascular disease, diabetes, glaucoma, hepatic/renal impairment, cataracts, myasthenia gravis, seizures, GI disease, risk for osteoporosis, untreated localized infection of nasal mucosa. Following acute MI; concurrent use with strong CYP3A4 inhibitors.

ACTION

Controls rate of protein synthesis, depresses migration of polymorphonuclear leukocytes, reverses capillary permeability, stabilizes lysosomal membranes. **Therapeutic Effect:** Prevents, controls inflammation.

PHARMACOKINETICS

Inhalation/intranasal: Protein binding: 91%. Metabolized in liver. Excreted in urine. **Half-life:** 3–7.8 hrs. **Topical:** Amount absorbed depends on affected area and skin condition (absorption increased with fever, hydration, inflamed or denuded skin).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C.** **Children:** Safety and efficacy not established in those younger than 4 yrs. Children 4 yrs and older may experience growth suppression with prolonged or high doses. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: **CYP3A4 inhibitors (ritonavir, nelfinavir, clarithromycin, itraconazole, ketoconazole)** may increase concentration. **Ritonavir** may reduce serum cortisol concentration. **HERBAL:** **Echinacea, St. John's wort** may decrease concentration/effects. **FOOD:** None known. **LAB VALUES:** None known.

AVAILABILITY (Rx)

Aerosol for Oral Inhalation (Flovent HFA): 44 mcg/inhalation, 110 mcg/inhalation, 220 mcg/inhalation. **Cream (Cutivate):** 0.05%. **Ointment (Cutivate):** 0.005%. **Powder for Oral Inhalation (Flovent Diskus):** 50 mcg, 100 mcg, 250 mcg. **(Arnuity Ellipta):** 100 mcg/actuation, 200 mcg/actuation. **Suspension Intranasal Spray: (Flonase):** 50 mcg/inhalation. **(Veramyst):** 27.5 mcg/spray.

ADMINISTRATION/HANDLING

Inhalation

• Shake container well. Instruct pt to exhale completely. Place mouthpiece fully into mouth, inhale, hold breath as long as possible before exhaling. • Allow at least 1 min between inhalations. • Rinsing mouth after each use decreases dry mouth, hoarseness.

Intranasal

• Instruct pt to clear nasal passages as much as possible before use (topical nasal decongestants may be needed 5–15 min before use). • Tilt head slightly forward. • Insert spray tip into 1 nostril, pointing toward inflamed nasal turbinates, away from nasal septum. • Pump medication into 1 nostril while pt holds other nostril closed, concurrently inspires through nose.

INDICATIONS/ROUTES/DOSAGE

Allergic Rhinitis

Intranasal: ***(Flonase)*:** **ADULTS, ELDERLY:** Initially, 200 mcg (2 sprays in each nostril once daily or 1 spray in each nostril q12h). **Maintenance:** 1 spray in each nostril once daily. May increase to 100 mcg (2 sprays) in each nostril. **Maximum:** 200 mcg/day. **CHILDREN 4 YRS AND OLDER:** Initially, 100 mcg (1 spray in each nostril once daily). **Maximum:** 200 mcg/day (2 sprays each nostril).
***(Veramyst)*:** **ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER:** 110 mcg (2 sprays in

each nostril) once daily. **Maintenance:** 55 mcg (1 spray in each nostril) once daily. **CHILDREN 2–11 YRS:** 55 mcg (1 spray in each nostril) once daily. May increase to 110 mcg (2 sprays each nostril) once daily.

Usual Topical Dosage

Topical: ADULTS, ELDERLY, CHILDREN 3 MOS AND OLDER: Apply sparingly to affected area once or twice a day.

Maintenance Treatment of Asthma

Inhalation Powder *(Arnuity Ellipta):* ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 100–200 mcg once daily.

Maintenance Treatment for Asthma (Previously Treated with Bronchodilators)

Inhalation Powder *(Flovent Diskus):* ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 100 mcg twice a day. **Maximum:** 500 mcg/twice a day.
Inhalation *(Oral):* ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 88 mcg twice a day. **Maximum:** 440 mcg twice a day.

Maintenance Treatment for Asthma (Previously Treated with Inhaled Steroids)

Inhalation Powder *(Flovent Diskus):* ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: Initially, 100–250 mcg twice a day. **Maximum:** 500 mcg twice a day.
Inhalation *(Oral):* ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 88–220 mcg twice a day. **Maximum:** 440 mcg twice a day.

Maintenance Treatment for Asthma (Previously Treated with Oral Steroids)

Inhalation Powder *(Flovent Diskus):* ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 500–1,000 mcg twice a day.
Inhalation *(Oral):* ADULTS, ELDERLY, CHILDREN 12 YRS AND OLDER: 440–880 mcg twice a day.

Usual Pediatric Dose (4–11 Yrs)

Flovent Diskus: Initially, 50 mcg twice a day. May increase to 100 mcg twice a day. **Flovent HFA:** Initially, 88 mcg twice daily.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Inhalation: Throat irritation, hoarseness, dry mouth, cough, temporary wheezing, oropharyngeal candidiasis (particularly if mouth is not rinsed with water after each administration). **Intranasal:** Mild nasopharyngeal irritation, nasal burning, stinging, dryness, rebound congestion, rhinorrhea, altered sense of taste. **Occasional: Inhalation:** Oral candidiasis. **Intranasal:** Nasal/pharyngeal candidiasis, headache. **Topical:** Stinging, burning of skin.

ADVERSE EFFECTS/ TOXIC REACTIONS

None known.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline history of skin disorder, asthma, rhinitis.

INTERVENTION/EVALUATION

Monitor rate, depth, rhythm, type of respiration; quality/rate of pulse. Assess lung sounds for rhonchi, wheezing, rales. Monitor ABGs. Assess oral mucous membranes for evidence of candidiasis. Monitor growth in pediatric pts. **Topical:** Assess involved area for therapeutic response to irritation.

PATIENT/FAMILY TEACHING

• Pts receiving bronchodilators by inhalation concomitantly with steroid inhalation therapy should use bronchodilator several min before corticosteroid aerosol (enhances penetration of steroid into bronchial tree). • Do not change dose/schedule or stop taking drug; must taper off gradually under medical supervision. • Maintain strict oral hygiene. • Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness, oral fungal infection). • Increase fluid intake (decreases lung secretion viscosity). • **Intranasal:** Clear nasal passages

before use. • Report if no improvement in symptoms or sneezing/nasal irritation occurs. • Improvement noted in several days. • **Topical:** Rub thin film gently into affected area. • Use only for prescribed area and no longer than ordered. • Avoid contact with eyes.

fluvastatin

floo-va-**sta**-tin
(Lescol, Lescol XL)
Do not confuse fluvastatin with fluoxetine, nystatin, or pitavastatin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Hydroxymethylglutaryl-CoA (HMG-CoA) reductase inhibitor. **CLINICAL:** Antihyperlipidemic.

USES

Adjunct to diet therapy to reduce elevated total cholesterol (TC), LDL, apo-protein B (ApoB), and triglycerides (TG) and increase HDL in primary hypercholesterolemia and mixed dyslipidemia; reduce elevated TC, LDL, ApoB in children 10–16 yrs of age with heterozygous familial hypercholesterolemia (HFH); reduce need for revascularization procedures in pts with coronary artery disease (CAD); slow progression of atherosclerosis in pts with CAD.

PRECAUTIONS

Contraindications: Active hepatic disease, breastfeeding, pregnancy, unexplained increased serum transaminase. **Cautions:** Hepatic impairment; concurrent use with colchicine, gemfibrozil, fibric acid derivatives, or niacin; pts at risk for rhabdomyolysis; heavy alcohol consumption; elderly.

ACTION

Inhibits hydroxymethylglutaryl-CoA (HMG-CoA) reductase, the enzyme that catalyzes cholesterol synthesis. **Therapeutic Effect:** Decreases low–density lipoprotein (LDL) cholesterol, very low–density lipoprotein (VLDL), plasma triglyceride. Slightly increases high–density lipoprotein (HDL).

PHARMACOKINETICS

Well absorbed from GI tract. Unaffected by food. Does not cross blood-brain barrier. Protein binding: greater than 98%. Primarily eliminated in feces. **Half-life:** 3 hrs; extended-release, 9 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Contraindicated in pregnancy (suppression of cholesterol biosynthesis may cause fetal toxicity), lactation. Unknown if drug is distributed in breast milk. **Pregnancy Category X. Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: Increased risk of acute renal failure, rhabdomyolysis with **cyclosporine, colchicine, gemfibrozil, niacin.** May increase concentration/toxicity of **digoxin.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum creatine kinase (CK), ALT, AST.

AVAILABILITY (Rx)

Capsules (Lescol): 20 mg, 40 mg.

Tablets (Extended-Release [Lescol XL]): 80 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Do not break, crush, dissolve, or divide extended-release tablets. • Do not break, crush, or open capsules. Give at least 2 hrs following niacin or bile-acid binding resin use.

INDICATIONS/ROUTES/DOSAGE

Hyperlipoproteinemia

PO: ADULTS, ELDERLY, PATIENTS REQUIRING 25% OR LESS DECREASE IN LDL: Initially, 20 mg/day (capsule) in the evening. May increase up to 80 mg/day given as 40 mg 2 times/day (immediate-release) or 80 mg

once daily (extended-release). **PATIENTS REQUIRING MORE THAN 25% DECREASE IN LDL:** 40 mg 1–2 times a day or 80-mg extended-release tablet once a day.

Heterozygous Familial Hypercholesterolemia

PO: CHILDREN 10–16 YRS: Initially, 20 mg/day. May increase q6wks to maximum dose of 80 mg/day, given in 2 divided doses or a single daily dose (extended-release).

Dosage in Renal Impairment

Caution with severe impairment.

Dosage in Hepatic Impairment

Contraindicated with active liver disease.

SIDE EFFECTS

Frequent (8%–5%): Headache, dyspepsia, back pain, myalgia, arthralgia, diarrhea, abdominal cramping, rhinitis. **Occasional (4%–2%):** Nausea, vomiting, insomnia, constipation, flatulence, rash, pruritus, fatigue, cough, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Myositis (inflammation of voluntary muscle) with or without increased creatine kinase (CK), muscle weakness occur rarely. May progress to frank rhabdomyolysis, renal impairment, renal failure.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for possibility of pregnancy before initiating therapy (Pregnancy Category X). Assess baseline lab results (serum cholesterol, triglycerides, hepatic function test, CPK).

INTERVENTION/EVALUATION

Monitor daily pattern of bowel activity, stool consistency. Assess for headache, dizziness. Assess for rash, pruritus. Monitor serum cholesterol, triglyceride lab results for therapeutic response. Be alert for malaise, muscle cramping, weakness.

PATIENT/FAMILY TEACHING

• Follow special diet (important part of treatment). • Periodic lab tests are essential part of therapy. • Do not break, crush, or open capsules; do not chew, crush, dissolve, or divide tablets. • Promptly report vision changes, unusual bruising, yellowing of skin or eyes, any muscle pain/weakness, esp. if accompanied by fever, malaise.

fluvoxamine

floo-**vox**-a-meen
(Apo-Fluvoxumine, Luvox CR, Novo-Fluvoxamine)

■ **BLACK BOX ALERT** ■ Increased risk of suicidal ideation and behavior in children, adolescents, young adults 18–24 yrs with major depressive disorder, other psychiatric disorders.

Do not confuse fluvoxamine with flavoxate or fluoxetine, or Luvox with Lasix, Levoxyl, or Lovenox.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin reuptake inhibitor. **CLINICAL:** Antidepressant, antiobsessive.

USES

Immediate-Release: Treatment of obsessive-compulsive disorder (OCD) in adults and children 8 yrs and older. **Luvox CR:** Treatment of OCD in adults. **OFF-LABEL:** Treatment of anxiety disorders in children, depression, panic disorder, social anxiety disorder (SAD), mild dementia-associated agitation in nonpsychotic pts, post-traumatic stress disorder (PTSD).

PRECAUTIONS

Contraindications: Use within 14 days of MAOIs. Concomitant use with alosetron, pimozide, ramelteon, thioridazine, or tizanidine. Pts receiving linezolid. **Cautions:** Renal/hepatic impairment; elderly; impaired platelet aggregation; concurrent

use of NSAIDs, aspirin; seizure disorder; pts that are volume depleted; third trimester of pregnancy; pts with high suicide risk; risk of bleeding or receiving concurrent anticoagulant therapy.

ACTION

Selectively inhibits neuronal reuptake of serotonin. **Therapeutic Effect:** Relieves depression, symptoms of obsessive-compulsive disorder (OCD).

PHARMACOKINETICS

Well absorbed following PO administration. Protein binding: 77%. Metabolized in liver. Excreted in urine. **Half-life:** 15–20 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses the placenta; distributed in breast milk. **Children:** Safety and efficacy not established in those younger than 8 yrs. **Elderly:** Potential for reduced serum clearance; maintain caution.

INTERACTIONS

DRUG: May increase concentration, risk of toxicity of **benzodiazepines, carbamazepine, clozapine, theophylline. Lithium, tryptophan** may enhance fluvoxamine's serotonergic effects. **MAOIs** may increase risk of serotonin syndrome (hyperthermia, rigidity, myoclonus). **Tricyclic antidepressants** may increase concentration. May increase effects of **warfarin.** **HERBAL: Valerian, St. John's wort, SAMe, kava kava** may increase risk of serotonin syndrome or CNS depression. Avoid **herbs with antiplatelet activity (e.g., cat's claw, feverfew, ginger).** **FOOD:** None known. **LAB VALUES:** May decrease serum sodium.

AVAILABILITY (Rx)

Tablets: 25 mg, 50 mg, 100 mg.

Capsules (Extended-Release [Luvox CR]): 100 mg, 150 mg.

ADMINISTRATION/HANDLING

• Do not break, crush, dissolve, or divide extended-release capsules. • May give with or without food.

INDICATIONS/ROUTES/DOSAGE

Obsessive-Compulsive Disorder (OCD)

PO ***(Immediate-Release)*:** **ADULTS:** 50 mg at bedtime; may increase by 50 mg every 4–7 days. Dosages greater than 100 mg/day should be given in 2 divided doses. **Maximum:** 300 mg/day. ***(Extended-Release)*** Initially, 100 mg once daily at bedtime. May increase by 50 mg at no less than 1-wk intervals. Range: 100–300 mg/day. **Maximum:** 300 mg/day. **CHILDREN 8–17 YRS** ***(Immediate-Release)*:** 25 mg at bedtime; may increase by 25 mg every 4–7 days. Dosages greater than 50 mg/day should be given in 2 divided doses. **Maximum:** **(CHILDREN 8–11 YRS):** 200 mg/day. **(CHILDREN 12–17 YRS):** 300 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (40%–21%): Nausea, headache, drowsiness, insomnia. **Occasional (14%–8%):** Dizziness, diarrhea, dry mouth, asthenia, dyspepsia, constipation, abnormal ejaculation. **Rare (6%–3%):** Anorexia, anxiety, tremor, vomiting, flatulence, urinary frequency, sexual dysfunction, altered taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce seizures, nausea, vomiting, excessive agitation, extreme restlessness.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline chemistries, esp. renal function, LFT.

INTERVENTION/EVALUATION

Supervise suicidal-risk pt closely during early therapy (as depression lessens,

energy level improves, increasing suicide potential). Assess appearance, behavior, speech pattern, level of interest, mood. Assist with ambulation if dizziness, drowsiness occurs. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Maximum therapeutic response may require 4 wks or more of therapy. • Dry mouth may be relieved by sugarless gum, sips of water. • Do not abruptly discontinue medication. • Avoid tasks that require alertness, motor skills until response to drug is established.

folic acid

foe-lik **as**-id
(Apo-Folic, Folacin-800)
Do not confuse folic acid with folinic acid.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Coenzyme.
CLINICAL: Nutritional supplement.

USES

Treatment of megaloblastic and macrocytic anemias due to folate deficiency (e.g., pregnancy, inadequate dietary intake). Supplement to prevent fetal neural tube defects. **OFF-LABEL:** Adjunct cofactor therapy in methanol toxicity.

PRECAUTIONS

Contraindications: None known. **Cautions:** Anemias (aplastic, normocytic, pernicious, refractory) when anemia present with vitamin B_{12} deficiency.

ACTION

Stimulates production of platelets, RBCs, WBCs in folate deficiency anemia. **Therapeutic Effect:** Essential for nucleoprotein synthesis, maintenance of normal erythropoiesis.

PHARMACOKINETICS

PO form almost completely absorbed from GI tract (upper duodenum). Protein binding: High. Metabolized in liver. Excreted in urine. Removed by hemodialysis.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Distributed in breast milk. **Pregnancy Category A (C if more than recommended daily allowance). Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effects of **phenobarbital, phenytoin, primidone, raltitrexed. HERBAL: Green tea** may increase concentration. **FOOD:** None known. **LAB VALUES:** May decrease vitamin B_{12} concentration.

AVAILABILITY (Rx)

Injection Solution: 5 mg/ml. **Tablets:** 0.4 mg (OTC), 0.8 mg (OTC), 1 mg.

ADMINISTRATION/HANDLING

PO

• May give without regard to food.

IV

May give 5 mg or less undiluted over at least 1 min, or dilute with 50 ml 0.9% NaCl or D_5W and infuse over 30 min.

INDICATIONS/ROUTES/DOSAGE

Anemia

IM/IV/Subcutaneous/PO: ADULTS, ELDERLY, CHILDREN 4 YRS AND OLDER: 0.4 mg/day. **CHILDREN YOUNGER THAN 4 YRS:** Up to 0.3 mg/day. **INFANTS:** 0.1 mg/day. **PREGNANT/LACTATING WOMEN:** 0.8 mg/day.

Prevention of Neural Tube Defects

PO: WOMEN OF CHILDBEARING AGE: 400–800 mcg/day. **WOMEN AT HIGH RISK OR FAMILY HISTORY OF NEURAL TUBE DEFECTS:** 4 mg/day.

SIDE EFFECTS

None known.

ADVERSE EFFECTS/ TOXIC REACTIONS

Allergic hypersensitivity occurs rarely with parenteral form. Oral folic acid is nontoxic.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Pernicious anemia should be ruled out with Schilling test and vitamin B_{12} blood level before initiating therapy (may produce irreversible neurologic damage). Resistance to treatment may occur if decreased hematopoiesis, alcoholism, antimetabolic drugs, deficiency of vitamin B_6, B_{12}, C, E is evident.

INTERVENTION/EVALUATION

Assess for therapeutic improvement: improved sense of well-being, relief from iron deficiency symptoms (fatigue, shortness of breath, sore tongue, headache, pallor).

PATIENT/FAMILY TEACHING

- Eat foods rich in folic acid, including fruits, vegetables, organ meats.

fondaparinux HIGH ALERT

fon-**dap**-a-rin-ux
(Arixtra)

■ **BLACK BOX ALERT** ■ Epidural or spinal anesthesia greatly increases potential for spinal or epidural hematoma, subsequent long-term or permanent paralysis.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Factor Xa inhibitor. **CLINICAL:** Antithrombotic.

USES

Prevention of venous thromboembolism in pts undergoing total hip replacement, hip fracture surgery, knee replacement surgery, abdominal surgery. Treatment of acute deep vein thrombosis (DVT), acute pulmonary embolism. **OFF-LABEL:** Prophylaxis of DVT in pts with history of heparin-induced thrombocytopenia (HIT), acute symptomatic superficial vein thrombosis of the legs.

PRECAUTIONS

Contraindications: Active major bleeding, bacterial endocarditis, prophylaxis treatment in pts with body weight less than 50 kg, severe renal impairment (creatinine clearance less than 30 ml/min), thrombocytopenia associated with antiplatelet antibody formation in presence of fondaparinux. **Cautions:** Conditions with increased risk of bleeding, bacterial endocarditis, active ulcerative GI disease, hemorrhagic stroke, shortly after brain, spinal, or ophthalmologic surgery, concurrent platelet inhibitors, severe uncontrolled hypertension, history of CVA), history of heparin-induced thrombocytopenia, renal/hepatic impairment, elderly, indwelling epidural catheter use.

ACTION

Factor Xa inhibitor and pentasaccharide that selectively binds to antithrombin and increases its affinity for factor Xa, inhibiting factor Xa, stopping blood coagulation cascade. **Therapeutic Effect:** Indirectly prevents formation of thrombin and subsequently fibrin clot.

PHARMACOKINETICS

Well absorbed after subcutaneous administration. Undergoes minimal, if any, metabolism. Highly bound to antithrombin III. Distributed mainly in blood and to a minor extent in extravascular fluid. Excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 17–21 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Use with caution, particularly during third trimester, immediate postpartum period (increased risk of maternal hemorrhage). Unknown

if excreted in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may increase risk of bleeding.

INTERACTIONS

DRUG: **Anticoagulants, antiplatelet medications, aspirin, drotrecogin alfa, NSAIDs, thrombolytics** may increase risk of bleeding. **HERBAL:** **Cat's claw, dong quai, evening primrose, feverfew, garlic, ginger, ginkgo, ginseng, horse chestnut, red clover, Omega-3** may increase antiplatelet activity. **FOOD:** None known. **LAB VALUES:** May cause reversible increases in serum creatinine, ALT, AST. May decrease Hgb, Hct, platelet count.

AVAILABILITY (Rx)

Injection, Solution: 2.5 mg/0.5 ml, 5 mg/0.4 ml, 7.5 mg/0.6 ml, 10 mg/0.8 ml.

ADMINISTRATION/HANDLING

Subcutaneous

• Parenteral form appears clear, colorless. Discard if discoloration or particulate matter is noted. • Store at room temperature. • Do not expel air bubble from prefilled syringe before injection. • Pinch fold of skin at injection site between thumb and forefinger. Introduce entire length of subcutaneous needle into skin fold during injection. Inject into fatty tissue between left and right anterolateral or left and right posterolateral abdominal wall. • Rotate injection sites.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ For subcutaneous administration only.

Prevention of Venous Thromboembolism

Subcutaneous: ADULTS WEIGHING 50 KG OR GREATER: 2.5 mg once a day for 5–9 days after surgery (up to 10 days following abdominal surgery; 11 days following hip or knee replacement). Initial dose should be given 6–8 hrs after surgery.

Treatment of Venous Thromboembolism, Pulmonary Embolism

Note: Start warfarin on first treatment day and continue fondaparinux until INR reaches 2 to 3 for at least 24 hr.

Subcutaneous: ADULTS, ELDERLY WEIGHING GREATER THAN 100 KG: 10 mg once daily. **ADULTS, ELDERLY WEIGHING 50–100 KG:** 7.5 mg once daily. **ADULTS, ELDERLY WEIGHING LESS THAN 50 KG:** 5 mg once daily.

Dosage in Renal Impairment

Creatinine clearance 30–50 ml/min: Use caution (50% dose reduction or use of low-dose heparin). **Creatinine clearance less than 30 ml/min:** Contraindicated.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (19%–11%): Anemia, fever, nausea. **Occasional (10%–4%):** Edema, constipation, rash, vomiting, insomnia, increased wound drainage, hypokalemia. **Rare (less than 4%):** Dizziness, hypotension, confusion, urinary retention, injection site hematoma, diarrhea, dyspepsia, headache.

ADVERSE EFFECTS/ TOXIC REACTIONS

Accidental overdose may lead to bleeding complications ranging from local ecchymoses to major hemorrhage. Thrombocytopenia occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess CBC, renal function test.

INTERVENTION/EVALUATION

Periodically monitor CBC, esp. platelet count, stool for occult blood (no need for daily monitoring in pts with normal presurgical coagulation parameters). Assess for any signs of bleeding: bleeding at surgical site, hematuria, blood in stool, bleeding from gums, petechiae,

ecchymosis, bleeding from injection sites. Monitor B/P, pulse; hypotension, tachycardia may indicate bleeding, hypovolemia.

PATIENT/FAMILY TEACHING

• Usual length of therapy is 5–9 days. • Do not take any OTC medication (esp. aspirin, NSAIDs). • Report swelling of hands/feet, unusual back pain, unusual bleeding/bruising, weakness, sudden or severe headache.

formoterol

TOP 100

for-**moe**-ter-ol
(Foradil Aerolizer, Oxeze, Perforomist)

■ **BLACK BOX ALERT** ■ Long-acting beta-agonists (salmeterol, formoterol) increase risk of asthma-related deaths. May increase asthma-related hospitalizations in children.

Do not confuse formoterol or Foradil with toradol.

FIXED COMBINATION(S)

Dulera: formoterol/mometasone (a corticosteroid): 5 mcg/100 mcg, 5 mcg/200 mcg. Symbicort: formoterol/budesonide (a glucocorticoid): 4.5 mcg/80 mcg, 4.5 mcg/160 mcg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Sympathomimetic (beta$_2$-adrenergic agonist). **CLINICAL:** Bronchodilator.

USES

Foradil: Treatment of asthma (only as concomitant therapy with inhaled corticosteroid), prevention of exercise-induced bronchospasm, maintenance treatment of bronchoconstriction in pts with COPD. **Perforomist:** Maintenance treatment of bronchoconstriction in pts with COPD.

PRECAUTIONS

Contraindications: Monotherapy for asthma, acute episodes of asthma or COPD. **Cautions:** Hypertension, cardiovascular disease, seizure disorder, hyperthyroidism, glaucoma, diabetes, pheochromocytoma, hypokalemia. May increase risk of severe excacerbation of asthma.

ACTION

Stimulates beta$_2$-adrenergic receptors in lungs, resulting in relaxation of bronchial smooth muscle. Inhibits release of mediators from various cells in lungs, including mast cells, with little effect on heart rate. **Therapeutic Effect:** Relieves bronchospasm, reduces airway resistance. Improves bronchodilation, nighttime asthma control, peak flow rates.

PHARMACOKINETICS

Route	Onset	Peak	Duration
Inhalation	1–3 min	15 min	12 hrs

Absorbed from bronchi after inhalation. Protein binding: 61%–64%. Metabolized in liver. Primarily excreted in urine. Unknown if removed by hemodialysis. **Half-life:** 10–14 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 5 yrs. **Elderly:** May be more sensitive to tremor, tachycardia due to age-related increased sympathetic sensitivity.

INTERACTIONS

DRUG: Beta-blockers may decrease bronchodilating effects. **Diuretics, steroids, xanthine derivatives** may increase risk of hypokalemia. **Drugs that can prolong QT interval (e.g., erythromycin, quinidine, thioridazine), MAOIs, tricyclic antidepressants** may potentiate cardiovascular effects. **HERBAL:** None significant. **FOOD:** None known.

LAB VALUES: May decrease serum potassium. May increase serum glucose.

AVAILABILITY (Rx)

Inhalation Powder (Foradil): 12 mcg. **Inhalation Solution for Nebulization (Perforomist):** 20 mcg/2 ml.

ADMINISTRATION/HANDLING

F

Inhalation

• Pull off Aerolizer Inhaler cover, twisting mouthpiece in direction of arrow to open. • Place capsule in chamber. Capsule is pierced by pressing and releasing buttons on side of Aerolizer, once only. • Instruct pt to exhale completely; place mouthpiece into mouth, close lips and inhale quickly, deeply through mouth (this causes capsule to spin, dispensing the drug). Pt should hold breath as long as possible before exhaling slowly. • Check capsule to ensure all the powder is gone. If not, pt should inhale again to receive rest of the dose. Rinse mouth with water immediately after inhalation (prevents mouth/throat dryness).

Storage • Maintain capsules in individual blister pack until immediately before use. • Do not swallow capsules. • Do not use with a spacer.

Nebulization

• No diluent necessary. • Protect from heat. • Remove from foil pouch immediately before use. • Do not mix with other medications.

INDICATIONS/ROUTES/DOSAGE

Asthma (not Monotherapy)

Inhalation Powder: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: 12 mcg capsule inhaled q12h.

COPD (Maintenance)

Inhalation Powder: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: 12 mcg capsule q12h.

Inhalation Solution for Nebulization: ADULTS, ELDERLY: 20 mcg q12h. **Maximum dose:** 40 mcg.

Exercise-Induced Bronchospasm

Inhalation Powder: ADULTS, ELDERLY, CHILDREN 5 YRS AND OLDER: 12 mcg capsule inhaled at least 15 min before exercise. Do not repeat for another 12 hrs.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (less than 5%): Tremor, muscle cramps, tachycardia, insomnia, headache, irritability, mouth/throat irritation, diarrhea, nausea, vomiting, dizziness, nasopharyngitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive sympathomimetic stimulation may produce palpitations, extrasystoles, chest pain.

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Assess rate, depth, rhythm, type of respiration; quality/rate of pulse. Monitor EKG, serum potassium, ABG determinations. Assess lung sounds for wheezing (bronchoconstriction), rales, pulmonary function tests.

PATIENT/FAMILY TEACHING

• Follow manufacturer guidelines for proper use of inhaler. • Increase fluid intake (decreases lung secretion viscosity). • Rinsing mouth with water immediately after inhalation may prevent mouth/throat irritation. • Avoid excessive use of caffeine derivatives (chocolate, coffee, tea, cola).

fosamprenavir

fos-am-**pren**-a-veer
(Lexiva, Telzir)
Do not confuse Lexiva with Levitra.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Protease inhibitor. **CLINICAL:** Antiviral.

USES

Treatment of HIV infection in combination with at least 2 other antiretroviral agents.

PRECAUTIONS

Contraindications: Concurrent use of alfuzosin, delavirdine, dihydroergotamine, ergonovine, ergotamine, lovastatin, methylergonovine, midazolam, pimozide, rifampin, sildenafil (when used for pulmonary arterial hypertension), simvastatin, St. John's wort, triazolam, concurrent therapy with CYP3A4 substrates with a narrow therapeutic window. If fosamprenavir is given concurrently with ritonavir, then flecainide and propafenone are also contraindicated. **Caution:** Hepatic impairment, diabetes mellitus, elderly, known sulfonamide allergy, hemophilia, hepatitis B or C.

ACTION

Rapidly converted to amprenavir, inhibiting HIV-1 protease by binding to enzyme's active site, preventing processing of viral precursors, forming immature, noninfectious viral particles. **Therapeutic Effect:** Impairs HIV replication, proliferation.

PHARMACOKINETICS

Rapidly absorbed after PO administration. Protein binding: 90%. Metabolized in liver. Primarily excreted in feces. **Half-life:** 7.7 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 4 yrs. **Elderly:** Age-related hepatic impairment may require decreased dosage.

INTERACTIONS

DRUG: May interfere with metabolism of **amiodarone, bepridil, ergotamine, lidocaine, midazolam, oral contraceptives, quinidine, triazolam, tricyclic antidepressants. Carbamazepine, phenobarbital, phenytoin, rifampin** may decrease concentration. May increase concentrations of **colchicine, calcium channel blockers, bosentan, cyclosporine, tacrolimus, sirolimus, HMG-CoA reductase inhibitors (statins), warfarin. HERBAL: St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** May increase serum lipase, triglycerides, ALT, AST. May decrease neutrophil count.

AVAILABILITY (Rx)

Oral Suspension: 50 mg/ml.

Tablets: 700 mg (equivalent to 600 mg amprenavir).

ADMINISTRATION/HANDLING

PO

- Give tablets without regard to meals.
- Do not crush, break, dissolve, or divide film-coated tablets.
- Adults should take oral suspension without food. Children should take oral suspension with food.
- Shake suspension vigorously prior to use.

INDICATIONS/ROUTES/DOSAGE

HIV Infection without Previous Protease Inhibitor Therapy

PO: ADULTS, ELDERLY: (Unboosted regimen) 1,400 mg twice daily without ritonavir; or (Ritonavir boosted regimen) 1,400 mg once daily plus ritonavir 100 mg or 200 mg once daily; or 700 mg twice daily plus ritonavir 100 mg twice daily. **CHILDREN *(Unboosted):* 2 YRS OR OLDER AND 47 KG OR GREATER:** Use adult regimen. **2 YRS OR OLDER AND LESS THAN 47 KG:** 30 mg/kg/dose. **Maximum:** 1,400 mg. ***(Boosted):* 4 WKS OR OLDER AND 20 KG OR GREATER:** 18 mg/kg/dose twice daily plus ritonavir 3 mg/kg/dose. **15–19 KG:** 23 mg/kg/dose twice daily plus ritonavir 3 mg/kg/dose. **11–14 KG:** 30 mg/kg/dose twice daily

plus ritonavir 3 mg/kg/dose. **LESS THAN 11 KG:** 45 mg/kg/dose twice daily plus ritonavir 7 mg/kg/dose.

HIV Infection with Previous Protease Inhibitor Therapy

PO: ADULTS, ELDERLY: 700 mg twice daily plus ritonavir 100 mg twice daily. **CHILDREN 6 MOS OR OLDER AND 20 KG OR GREATER:** 18 mg/kg/dose twice daily plus ritonavir 3 mg/kg/dose. **15–19 KG:** 23 mg/kg/dose twice daily plus ritonavir 3 mg/kg/dose. **11–14 KG:** 30 mg/kg/dose twice daily plus ritonavir 3 mg/kg/dose. **LESS THAN 11 KG:** 45 mg/kg/dose twice daily plus ritonavir 7 mg/kg/dose.

Concurrent Therapy with Efavirenz (600 mg)

PO: ADULTS, ELDERLY: Once-daily regimen: 1,400 mg plus 300 mg ritonavir. **Twice-daily regimen:** 700 mg twice daily plus ritonavir 100 mg twice daily.

Concurrent Therapy with Maraviroc

PO: ADULTS, ELDERLY: 700 mg twice daily, plus ritonavir 100 mg twice daily.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Mild to moderate impairment: Reduce fosamprenavir to 700 mg twice daily (without concurrent ritonavir). **Severe impairment:** Reduce fosamprenavir to 350 mg twice daily (without ritonavir).

SIDE EFFECTS

Frequent (39%–35%): Nausea, rash, diarrhea. **Occasional (19%–8%):** Headache, vomiting, fatigue, depression. **Rare (7%–2%):** Pruritus, abdominal pain, perioral paresthesia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe or life-threatening dermatologic reactions, including Stevens-Johnson syndrome, occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline lab testing, esp. LFT, before beginning therapy and at periodic intervals during therapy. Offer emotional support. Obtain full medication history.

INTERVENTION/EVALUATION

Closely monitor for evidence of GI discomfort. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Monitor serum chemistry tests for marked abnormalities, particularly hepatic function, glucose, triglycerides, cholesterol. Assess for opportunistic infections (onset of fever, oral mucosa changes, cough, other respiratory symptoms).

PATIENT/FAMILY TEACHING

• Eat small, frequent meals to offset nausea, vomiting. • Continue therapy for full length of treatment. • Doses should be evenly spaced. • Fosamprenavir is not a cure for HIV infection, nor does it reduce risk of transmission to others. • Pt may continue to experience illnesses, including opportunistic infections. • Diarrhea can be controlled with OTC medication. • Report new-onset rash development.

foscarnet

foss-**kar**-net
(Foscavir)

■ **BLACK BOX ALERT** ■ Renal toxicity occurs to some degree in majority of pts. For use only in immunocompromised pts with cytomegalovirus (CMV) retinitis and mucocutaneous acyclovir-resistant herpes simplex virus (HSV) infection. Seizures due to electrolyte/mineral imbalance may occur.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Phosphonic acid derivative. **CLINICAL:** Antiviral.

USES

Treatment of acyclovir-resistant mucocutaneous HSV in immunocompromised pts; treatment of CMV retinitis in HIV pts. **OFF-LABEL:** Other CMV infections (e.g., colitis, esophagitis); CMV prophylaxis for cancer pts receiving alemtuzumab or allogenic stem cell transplant.

PRECAUTIONS

Contraindications: None known. **Cautions:** Neurologic/cardiac abnormalities, history of hepatic/renal impairment, altered calcium, other electrolyte imbalances.

ACTION

Selectively inhibits binding sites on virus-specific DNA polymerase, HIV reverse transcriptase. **Therapeutic Effect:** Inhibits replication of herpes virus.

PHARMACOKINETICS

Sequestered into bone, cartilage. Protein binding: 14%–17%. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 3.3–6.8 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Nephrotoxic medications** may increase risk of renal toxicity. **Pentamidine (IV)** may cause reversible hypocalcemia, hypomagnesemia, nephrotoxicity. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, creatinine, ALT, AST. May decrease serum magnesium, potassium. May alter serum calcium, phosphate.

AVAILABILITY (Rx)

Injection Solution: 24 mg/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Standard 24 mg/ml solution may be used without dilution when central venous catheter is used for infusion; 24 mg/ml solution *must* be diluted to maximum concentration of 12 mg/ml when peripheral vein catheter is being used. • Dilute only with D_5W or 0.9% NaCl solution.

Rate of Administration • Because dosage is calculated on body weight, unneeded quantity should be removed before start of infusion to avoid overdosage. Aseptic technique must be used and solution administered within 24 hrs of first entry into sealed bottle. • Do not give by IV injection or rapid infusion (increases toxicity). • Administer at rate not exceeding 1 mg/kg/min. • To minimize toxicity and phlebitis, use central venous lines or veins with adequate blood flow to permit rapid dilution, dissemination. • Use IV infusion pump to prevent accidental overdose.

Storage • Store parenteral vials at room temperature. • After dilution, stable for 24 hrs at room temperature. • Do not use if solution is discolored or particulate forms.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), amphotericin B (Fungizone), calcium, co-trimoxazole (Bactrim), diazepam (Valium), digoxin (Lanoxin), diphenhydramine (Benadryl), dobutamine (Dobutrex), ganciclovir (Cytovene), haloperidol (Haldol), leucovorin, magnesium, midazolam (Versed), pentamidine (Pentam IV), prochlorperazine (Compazine), vancomycin (Vancocin).

IV COMPATIBILITIES

Dopamine (Intropin), heparin, hydromorphone (Dilaudid), lorazepam (Ativan), morphine, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Cytomegalovirus (CMV) Retinitis

IV: ADULTS, ELDERLY: Initially, 60 mg/kg q8h or 90 mg/kg q12h for 2–3 wks. **Maintenance:** 90–120 mg/kg/day as a single IV infusion.

Herpes Simplex Infection

IV: ADULTS: 40 mg/kg q8–12h for 2–3 wks or until healed.

Dosage in Renal Impairment

Dosages are individualized based on creatinine clearance. Refer to dosing guide provided by manufacturer.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (65%–30%): Fever, nausea, vomiting, diarrhea. **Occasional (29%–5%):** Anorexia, pain/inflammation at injection site, rigors, malaise, altered B/P, headache, paresthesia, dizziness, rash, diaphoresis, abdominal pain. **Rare (4%–1%):** Back/chest pain, edema, flushing, pruritus, constipation, dry mouth.

ADVERSE EFFECTS/ TOXIC REACTIONS

Nephrotoxicity occurs to some extent in most pts. Seizures, serum mineral/electrolyte imbalances may be life-threatening.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, serum electrolyte levels, renal function test, vital signs. Risk of renal impairment can be reduced by sufficient fluid intake to ensure diuresis prior to and during therapy.

INTERVENTION/EVALUATION

Monitor serum chemistries, renal function tests. Assess for signs of hypocalcemia (perioral paresthesia, paresthesia of extremities), hypokalemia (weakness, muscle cramps, paresthesia of extremities, irritability). Assess for tremors; provide safety measures for potential seizures. Assess for bleeding, anemia, developing superinfections. Obtain periodic ophthalmologic exams.

PATIENT/FAMILY TEACHING

• Report perioral tingling, numbness in extremities, paresthesia during or following infusion (may indicate electrolyte abnormalities). • Tremors should be reported promptly due to potential for seizures.

fosinopril

foe-**sin**-oh-pril
(Apo-Fosinopril)

■ **BLACK BOX ALERT** ■ May cause fetal injury, mortality if used during second or third trimester of pregnancy.

Do not confuse fosinopril with Fosamax, or lisinopril, or Monopril with Accupril, minoxidil, moexipril, or ramipril.

CLASSIFICATION

PHARMACOTHERAPEUTIC: ACE inhibitor. **CLINICAL:** Antihypertensive.

USES

Treatment of hypertension, used alone or in combination with other antihypertensives. Treatment of HF.

PRECAUTIONS

Contraindications: Idiopathic or hereditary angioedema, history of angioedema from previous treatment with ACE inhibitors. Concomitant use with aliskiren in pts with diabetes. **Cautions:** Renal/hepatic impairment, pts with sodium depletion or on diuretic therapy, dialysis, hypovolemia, hypertrophic cardiomyopathy, hyperkalemia, concomitant use of potassium supplements, unstented unilateral/bilateral renal stenosis.

ACTION

Suppresses renin-angiotensin-aldosterone system (prevents conversion of angiotensin I to angiotensin II, a potent vasoconstrictor; may inhibit angiotensin II at local vascular, renal sites). Decreases plasma angiotensin II, increases plasma renin activity, decreases aldosterone secretion. **Therapeutic Effect:** Reduces B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	1 hr	2–6 hrs	24 hrs

Slowly absorbed from GI tract. Protein binding: 97%–98%. Metabolized in liver and GI mucosa. Primarily excreted in urine. Minimal removal by hemodialysis. **Half-life:** 11.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. May cause fetal or neonatal mortality or morbidity. **Pregnancy Category C (D if used in second or third trimester). Children:** Safety and efficacy not established. Neonates, infants may be at increased risk for oliguria, neurologic abnormalities. **Elderly:** May be more sensitive to hypotensive effects.

INTERACTIONS

DRUG: **Alcohol, antihypertensive agents, diuretics, NSAIDs** may increase effects. **Potassium-sparing diuretics, potassium supplements** may cause hyperkalemia. May increase **lithium** concentration/toxicity. **Antacids** may decrease absorption. **HERBAL:** **Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **Licorice** may cause sodium/water retention, loss of potassium. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, potassium, ALT, AST. May decrease serum sodium. May cause positive antinuclear antibody titer (ANA).

AVAILABILITY (Rx)

Tablets: 10 mg, 20 mg, 40 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to food. • Tablets may be crushed.

INDICATIONS/ROUTES/DOSAGE

Hypertension

PO: ADULTS, ELDERLY: Initially, 10 mg/day. **Maintenance:** 20–40 mg/day as a single dose or 2 divided doses. **Maximum:** 80 mg/day. **CHILDREN 6–16 YRS WEIGHING MORE THAN 50 KG:** Initially, 5–10 mg/day. **Maximum:** 40 mg/day.

Heart Failure

PO: ADULTS, ELDERLY: Initially, 5–10 mg/day. May increase dose over several wks. **Maintenance:** 20–40 mg/day. **Maximum:** 40 mg/day.

Dosage in Renal Impairment

Reduce initial dose in pts with HF.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (12%–9%): Dizziness, cough. **Occasional (4%–2%):** Hypotension, nausea, vomiting, upper respiratory tract infection.

ADVERSE EFFECTS/ TOXIC REACTIONS

Excessive hypotension (“first-dose syncope”) may occur in pts with HF, severely salt/volume depleted. Angioedema (swelling of face/lips), hyperkalemia occur rarely. Agranulocytosis, neutropenia may be noted in those with renal impairment, collagen vascular disease (scleroderma, systemic lupus erythematosus). Nephrotic syndrome may be noted in those with history of renal disease.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain B/P immediately before each dose, in addition to regular monitoring (be alert to fluctuations). Renal function tests should be performed before beginning therapy. In pts with renal impairment, autoimmune disease, or taking drugs that affect leukocytes or immune response, CBC, differential count should be performed before therapy begins and q2wks for 3 mos, then periodically thereafter.

INTERVENTION/EVALUATION

If excessive reduction in B/P occurs, place pt in supine position with legs elevated. Assist with ambulation if dizziness occurs. Assess for urinary frequency. Auscultate lung sounds for rales, wheezing in those with HF. Monitor renal function tests, CBC, urinalysis for proteinuria. Observe for angioedema (swelling of face, lips, tongue). Monitor serum potassium in those on concurrent diuretic therapy.

PATIENT/FAMILY TEACHING

• Report any sign of infection (sore throat, fever). • Several wks may be needed for full therapeutic effect of B/P reduction. • Skipping doses or voluntarily discontinuing drug may produce severe, rebound hypertension. • To reduce hypotensive effect, go from lying to standing slowly. • Immediately report swelling of face, lips, tongue, difficulty breathing, vomiting, excessive perspiration, persistent cough. • Avoid potassium salt substitutes.

fosphenytoin

fos-**fen**-i-toyn
(Cerebyx)
Do not confuse Cerebyx with Celebrex or Celexa, or fosphenytoin with fospropofol.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Hydantoin. **CLINICAL:** Anticonvulsant.

USES

Acute treatment, control of generalized convulsive status epilepticus; prevention, treatment of seizures occurring during neurosurgery; short-term substitution for oral phenytoin.

PRECAUTIONS

Contraindications: Adams-Stokes syndrome; hypersensitivity to phenytoin, other hydantoins; second- or third-degree AV block; sinus bradycardia; SA block; occurrence of rash during treatment (do not resume if rash is exfoliative, purpuric, or bullous); treatment of absence seizures; concurrent use of delavirdine. **Cautions:** Porphyria, diabetes, hypothyroidism, hypotension, severe myocardial insufficiency, renal/hepatic disease, hypoalbuminemia.

ACTION

Stabilizes neuronal membranes, limits spread of seizure activity. Decreases sodium, calcium ion influx into neurons. Decreases post-tetanic potentiation, repetitive discharge. **Therapeutic Effect:** Decreases seizure activity.

PHARMACOKINETICS

Completely absorbed after IM administration. Protein binding: 95%–99%. Rapidly and completely hydrolyzed to phenytoin after IM or IV administration. Time of complete conversion to phenytoin: 4 hrs after IM injection; 2 hrs after IV infusion. **Half-life:** 8–15 min (for conversion to phenytoin).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: May increase frequency of seizures during pregnancy. Increased risk of congenital malformations. Unknown if excreted in breast

milk. **Pregnancy Category D. Children:** Safety not established. **Elderly:** Lower dosage recommended.

INTERACTIONS

DRUG: **Alcohol, other CNS depressants** may increase CNS depression. **Amiodarone, anticoagulants, cimetidine, disulfiram, fluoxetine, isoniazid, sulfonamides** may increase concentration/effects, risk of toxicity. **CYP3A4 inhibitors (e.g., fluconazole, ketoconazole, miconazole)** may increase concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, GGT, alkaline phosphatase.

AVAILABILITY (Rx)

Injection Solution: 75 mg/ml (equivalent to 50 mg PE/ml phenytoin).

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute in D_5W or 0.9% NaCl to a concentration ranging from 1.5–25 mg phenytoin equivalents (PE)/ml.

Rate of Administration • Administer at rate less than 150 mg PE/min (decreases risk of hypotension, arrhythmias). Children: 1–3 mg PE/kg/min. **Maximum:** 150 mg PE/min.

Storage • Refrigerate. • Do not store at room temperature for longer than 48 hrs. • After dilution, solution is stable for 8 hrs at room temperature or 24 hrs if refrigerated.

IV INCOMPATIBILITY

Midazolam (Versed).

IV COMPATIBILITIES

Lorazepam (Ativan), phenobarbital, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

◄ALERT► 150 mg fosphenytoin yields 100 mg phenytoin. Dosage, concentration solution, infusion rate of fosphenytoin are expressed in terms of phenytoin equivalents (PE).

Status Epilepticus

IV: ADULTS: Loading dose: 15–20 mg PE/kg infused at rate of 100–150 mg PE/min.

Nonemergent Seizures

IV, IM: ADULTS: Loading dose: 10–20 mg PE/kg. **Maintenance:** 4–6 mg PE/kg/day.

Short-Term Substitution for Oral Phenytoin

IV, IM: ADULTS: May substitute for oral phenytoin at same total daily dose.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Dizziness, paresthesia, tinnitus, pruritus, headache, drowsiness. **Occasional:** Morbilliform rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Toxic fosphenytoin serum concentration may produce ataxia (muscular incoordination), nystagmus (rhythmic oscillation of eyes), diplopia, lethargy, slurred speech, nausea, vomiting, hypotension. As drug level increases, extreme lethargy may progress to coma.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (intensity, frequency, duration, LOC). Initiate seizure precautions. Obtain vital signs, medication history (esp. use of phenytoin, other anticonvulsants). Observe clinically.

INTERVENTION/EVALUATION

Monitor EKG, measure cardiac function, respiratory function, B/P during and immediately following infusion (10–20 min). Discontinue if skin rash appears. Interrupt or decrease rate if hypotension,

arrhythmias are detected. Assess pt postinfusion (may feel dizzy, ataxic, drowsy). Monitor free and total dilatin levels (2 hrs post IV infusion or 4 hrs post IM injection).

PATIENT/FAMILY TEACHING

• If noncompliance is cause of acute seizures, discuss and address reasons for noncompliance. • Avoid tasks that require alertness, motor skills until response to drug is established.

frovatriptan

froe-va-**trip**-tan
(Frova)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin receptor agonist. **CLINICAL:** Antimigraine.

USES

Treatment of acute migraine headache with or without aura in adults. **OFF-LABEL:** Short-term prevention of menstruation-associated migraines.

PRECAUTIONS

Contraindications: Management of basilar or hemiplegic migraine, cerebrovascular or peripheral vascular disease, coronary artery disease, ischemic heart disease (angina pectoris, history of MI, silent ischemia, Prinzmetal's angina), severe hepatic impairment (Child-Pugh grade C), uncontrolled hypertension, use within 24 hrs of ergotamine-containing preparations or another serotonin receptor agonist. **Cautions:** Mild to moderate hepatic impairment, pt profile suggesting cardiovascular risks. History of seizures or structural brain lesions.

ACTION

Agonist for serotonin in cranial arteries causing vasoconstriction and reduction of inflammation. **Therapeutic Effect:** Relieves migraine headache.

PHARMACOKINETICS

Well absorbed after PO administration. Protein binding: 15%. Metabolized in liver. Primarily eliminated in feces (62%), urine (32%). **Half-life:** 26 hrs (increased in hepatic impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug is excreted in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Not recommended for use in this pt population.

INTERACTIONS

DRUG: Ergotamine-containing medications may produce vasospastic reaction. **SSRI, SNRI (e.g., duloxetine, fluoxetine, fluvoxamine, paroxetine, sertraline, venlafaxine)** may produce weakness, hyperreflexia, uncoordination. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 2.5 mg.

ADMINISTRATION/HANDLING

PO

• Give with fluids as soon as symptoms appear. • Do not break, crush, dissolve, or divide film-coated tablets.

INDICATIONS/ROUTES/DOSAGE

Acute Migraine Headache

PO: ADULTS, ELDERLY: Initially, 2.5 mg. If headache improves but then returns, dose may be repeated after at least 2 hrs. **Maximum:** 7.5 mg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional (8%–4%): Dizziness, paresthesia, fatigue, flushing. **Rare (3%–2%):** Hot/cold sensation, dry mouth, dyspepsia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Cardiac reactions (ischemia, coronary artery vasospasm, MI), noncardiac vasospasm-related reactions (cerebral hemorrhage, CVA) occur rarely, particularly in pts with hypertension, obesity, smokers, diabetes, strong family history of coronary artery disease; males older than 40 yrs; postmenopausal women.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of peripheral vascular disease, renal/hepatic impairment, possibility of pregnancy. Question regarding onset, location, duration of migraine, possible precipitating factors.

INTERVENTION/EVALUATION

Assess for relief of migraine headache, potential for photophobia, phonophobia (sound sensitivity), nausea, vomiting.

PATIENT/FAMILY TEACHING

• Take a single dose as soon as symptoms of an actual migraine attack appear. • Medication is intended to relieve migraine headaches, not to prevent or reduce number of attacks. • Avoid tasks that require alertness, motor skills until response to drug is established. • Immediately report palpitations, pain, tightness in chest or throat, sudden or severe abdominal pain, pain or weakness of extremities.

fulvestrant HIGH ALERT

ful-**vest**-rant
(Faslodex)
Do not confuse Faslodex with Fosamax.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Estrogen antagonist. **CLINICAL:** Antineoplastic.

USES

Treatment of hormone receptor–positive metastatic breast cancer in postmenopausal women with disease progression following antiestrogen therapy.

PRECAUTIONS

Contraindications: None known. **Cautions:** Thrombocytopenia, bleeding diathesis, anticoagulant therapy, hepatic impairment, reduced hepatic blood flow, pregnancy.

ACTION

Competes with endogenous estrogen at estrogen receptor binding sites. **Therapeutic Effect:** Inhibits tumor growth.

PHARMACOKINETICS

Extensively, rapidly distributed after IM administration. Protein binding: 99%. Metabolized in liver. Eliminated by hepatobiliary route; excreted in feces. **Half-life:** 40 days in postmenopausal women. Peak serum levels occur in 7–9 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Do not administer to pregnant women. Unknown if excreted in breast milk. May cause fetal harm. **Pregnancy Category D. Children:** Not used in this pt population. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase ALT, AST.

AVAILABILITY (Rx)

Injection, Solution: 50 mg/ml.

ADMINISTRATION/HANDLING

IM

• Administer slowly into upper, outer quadrant or ventrogluteal area of buttock as two injections, one in each buttock over 1–2 min.

INDICATIONS/ROUTES/DOSAGE

Breast Cancer

IM: ADULTS, ELDERLY: Initially, 500 mg (two 250-mg injections) on days 1, 15, and 29. **Maintenance:** 500 mg once monthly thereafter.

Dosage in Renal Impairment

No dose adjustment.

Dosage in Hepatic Impairment

Reduce initial and maintenance dose to 250 mg.

SIDE EFFECTS

Frequent (26%–13%): Nausea, hot flashes, pharyngitis, asthenia, vomiting, vasodilation, headache. **Occasional (12%–5%):** Injection site pain, constipation, diarrhea, abdominal pain, anorexia, dizziness, insomnia, paresthesia, bone/back pain, depression, anxiety, peripheral edema, rash, diaphoresis, fever. **Rare (2%–1%):** Vertigo, weight gain.

ADVERSE EFFECTS/ TOXIC REACTIONS

UTI occurs occasionally. Vaginitis, anemia, thromboembolic phenomena, leukopenia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Estrogen receptor assay should be done before beginning therapy. Baseline CT should be performed initially and periodically thereafter for evidence of tumor regression.

INTERVENTION/EVALUATION

Monitor serum chemistries, plasma lipids. Be alert to increased bone pain, ensure adequate pain relief. Check for edema, esp. of dependent areas. Monitor for and assist with ambulation if asthenia or dizziness occurs. Assess for headache. Offer antiemetic for nausea/vomiting.

PATIENT/FAMILY TEACHING

- Notify physician if nausea/vomiting, asthenia (loss of strength, energy), hot flashes become unmanageable.

furosemide

TOP 100

fur-**oh**-se-myde (Apo-Furosemide, Lasix, Novo-Semide)

■ **BLACK BOX ALERT** ■ Large amounts can lead to profound diuresis with water and electrolyte depletion.

Do not confuse furosemide with famotidine, finasteride, fluconazole, fluoxetine, loperamide, or torsemide, or Lasix with Lidex, Lovenox, Luvox, or Luxiq.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Loop diuretic. **CLINICAL:** Diuretic.

USES

Treatment of edema associated with HF and renal/hepatic disease; acute pulmonary edema. Treatment of hypertension, either alone or in combination with other antihypertensives.

PRECAUTIONS

Contraindications: Anuria. **Cautions:** Hepatic cirrhosis, hepatic coma, severe electrolyte depletion, prediabetes, diabetes, systemic lupus erythematosus. Pts with prostatic hyperplasia/urinary stricture.

ACTION

Enhances excretion of sodium, chloride, potassium by direct action at ascending limb of loop of Henle. **Therapeutic Effect:** Produces diuresis, lowers B/P.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	30–60 min	1–2 hrs	6–8 hrs
IV	5 min	20–60 min	2 hrs
IM	30 min	N/A	N/A

Well absorbed from GI tract. Protein binding: greater than 98%. Partially metabolized in liver. Primarily excreted in urine (nonrenal clearance increases in severe renal impairment). Not removed by hemodialysis. **Half-life:** 30–90 min (increased in renal/hepatic impairment, neonates).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** Half-life increased in neonates; may require increased dosage interval. **Elderly:** May be more sensitive to hypotensive, electrolyte effects, developing circulatory collapse, thromboembolic effect. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Amphotericin B, nephrotoxic, ototoxic medications** may increase risk of nephrotoxicity, ototoxicity. May increase risk of **lithium** toxicity. **Other medications causing hypokalemia** may increase risk of hypokalemia. **HERBAL:** **Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** None known. **LAB VALUES:** May increase serum glucose, BUN, uric acid. May decrease serum calcium, chloride, magnesium, potassium, sodium.

AVAILABILITY (Rx)

Injection Solution: 10 mg/ml. **Oral Solution:** 10 mg/ml, 40 mg/5 ml. **Tablets:** 20 mg, 40 mg, 80 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • May give undiluted but is compatible with D_5W or 0.9% NaCl. • May be diluted for infusion to 1–2 mg/ml (**maximum:** 10 mg/ml). • Administer each 40 mg or fraction by IV push over 1–2 min. Do not exceed administration rate of 4 mg/min for short-term intermittent infusion.

Storage • Solution appears clear, colorless. • Discard yellow solutions. • Stable for 24 hrs at room temperature when mixed with 0.9% NaCl or D_5W.

IM

• Temporary pain at injection site may be noted.

PO

• Administer on empty stomach. • Give with food to avoid GI upset, preferably with breakfast (may prevent nocturia). • Food may decrease diuretic effect.

IV INCOMPATIBILITIES

Ciprofloxacin (Cipro), diltiazem (Cardizem), dobutamine (Dobutrex), dopamine (Intropin), doxorubicin (Adriamycin), droperidol (Inapsine), esmolol (Brevibloc), famotidine (Pepcid), filgrastim (Neupogen), fluconazole (Diflucan), gemcitabine (Gemzar), gentamicin (Garamycin), idarubicin (Idamycin), labetalol (Trandate), metoclopramide (Reglan), midazolam (Versed), milrinone (Primacor), nicardipine (Cardene), ondansetron (Zofran), quinidine, thiopental (Pentothal), vinblastine (Velban), vincristine (Oncovin), vinorelbine (Navelbine).

IV COMPATIBILITIES

Amiodarone (Cordarone), bumetanide (Bumex), calcium gluconate, cimetidine (Tagamet), dexmedetomidine (Precedex), heparin, hydromorphone (Dilaudid), lidocaine, lipids, morphine, nitroglycerin, norepinephrine (Levophed), potassium chloride, propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Edema, Heart Failure, Hypertension

PO: ADULTS, ELDERLY: Initially, 20–80 mg/dose; may increase by 20–40 mg/dose q6–8h. May titrate up to 600 mg/day

in severe edematous states. **CHILDREN:** Initially, 2 mg/kg/dose. May increase by 1–2 mg/kg/dose at 6–8 hr intervals. **Maximum:** 6 mg/kg/dose. **NEONATES:** 1 mg/kg/dose 1–2 times a day.

IV, IM: ADULTS, ELDERLY: 20–40 mg/dose; may increase by 20 mg/dose q1–2h. **Maximum single dose:** 160–200 mg. **CHILDREN:** Initially, 1 mg/kg/dose. May increase by 1 mg/kg/dose no sooner than 2 hrs after previous dose. **Maximum:** 6 mg/kg/dose. **NEONATES:** 1–2 mg/kg/dose q12–24h.

IV Infusion: ADULTS, ELDERLY: Bolus of 20–40 mg, followed by infusion of 10–40 mg/hr; may double q2h. **Maximum:** 80–160 mg/hr. **CHILDREN:** 0.05 mg/kg/hr; titrate to desired effect. **NEONATES:** Initially, 0.2 mg/kg/hr. May increase by 0.1 mg/kg/hr q12–24h. **Maximum:** 0.4 mg/kg/hr.

Dosage in Renal Impairment

Avoid use in oliguric states.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Expected: Increased urinary frequency/volume. **Frequent:** Nausea, dyspepsia, abdominal cramps, diarrhea or constipation, electrolyte disturbances. **Occasional:** Dizziness, light-headedness, headache, blurred vision, paresthesia, photosensitivity, rash, fatigue, bladder spasm, restlessness, diaphoresis. **Rare:** Flank pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Vigorous diuresis may lead to profound water loss/electrolyte depletion, resulting in hypokalemia, hyponatremia, dehydration. Sudden volume depletion may result in increased risk of thrombosis, circulatory collapse, sudden death. Acute hypotensive episodes may occur, sometimes several days after beginning therapy. Ototoxicity (deafness, vertigo, tinnitus) may occur, esp. in pts with severe renal impairment. Can exacerbate diabetes mellitus, systemic lupus erythematosus, gout, pancreatitis. Blood dyscrasias have been reported.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check vital signs, esp. B/P, pulse, for hypotension before administration. Assess baseline serum electrolytes, esp. for hypokalemia. Assess skin turgor, mucous membranes for hydration status; observe for edema. Assess muscle strength, mental status. Note skin temperature, moisture. Obtain baseline weight. Initiate I&O monitoring.

INTERVENTION/EVALUATION

Monitor B/P, vital signs, serum electrolytes, I&O, weight. Note extent of diuresis. Watch for symptoms of electrolyte imbalance: Hypokalemia may result in changes in muscle strength, tremor, muscle cramps, altered mental status, cardiac arrhythmias; hyponatremia may result in confusion, thirst, cold/clammy skin.

PATIENT/FAMILY TEACHING

- Expect increased frequency, volume of urination.
- Report palpitations, signs of electrolyte imbalances (noted previously), hearing abnormalities (sense of fullness in ears, tinnitus).
- Eat foods high in potassium such as whole grains (cereals), legumes, meat, bananas, apricots, orange juice, potatoes (white, sweet), raisins.
- Avoid sunlight, sunlamps.

Generic Drugs G

gabapentin	gentamicin	golimumab
galantamine	glatiramer	goserelin
ganciclovir	glimepiride	granisetron
gemcitabine	glipiZIDE	griseofulvin
gemfibrozil	glucagon	guaifenesin
gemifloxacin	glyBURIDE	guanfacine

gabapentin

ga-ba-**pen**-tin
(Apo-Gabapentin, Gralise, Horizant, Neurontin)
Do not confuse Neurontin with Motrin, Neoral, nitrofurantoin, Noroxin, or Zarontin.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Gamma-aminobutyric acid analogue. **CLINICAL:** Anticonvulsant, antineuralgic.

USES

Neurontin: Adjunct in treatment of partial seizures (with or without secondary generalized seizures) in children 13 yrs and older and adults. Adjunct to treatment of partial seizures in children 3–12 yrs; management of postherpetic neuralgia (PHN). **Horizant:** Treatment of moderate to severe primary restless legs syndrome (RLS), PHN. **Gralise:** Management of PHN. **OFF-LABEL:** Treatment of neuropathic pain, diabetic peripheral neuropathy, vasomotor symptoms, fibromyalgia, postoperative pain adjunct.

PRECAUTIONS

Contraindications: None known. **Cautions:** Severe renal impairment. Increased risk of suicidal behavior.

ACTION

Binds to gabapentin binding sites in brain and may modulate realease of excitatory neurotransmitters. **Therapeutic Effect:** Reduces seizure activity, neuropathic pain.

PHARMACOKINETICS

Well absorbed from GI tract (not affected by food). Protein binding: less than 5%. Widely distributed. Crosses blood-brain barrier. Primarily excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 5–7 hrs (increased in renal impairment, elderly).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those 3 yrs and younger. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Antacids** decrease absorption. **Morphine** may increase CNS depression. **HERBAL:** **Evening primrose** may decrease seizure threshold. **Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** May alter serum glucose; WBC count. May increase serum alkaline phosphatase, ALT, AST, bilirubin.

AVAILABILITY (Rx)

Capsules (Neurontin): 100 mg, 300 mg, 400 mg. **Oral Solution (Neurontin):** 250 mg/5 ml. **Tablets (Neurontin):** 600 mg, 800 mg. **Tablets (Gralise):** 300 mg, 600 mg.

Tablets, Extended-Release: (Horizant) 300 mg, 600 mg.

ADMINISTRATION/HANDLING

PO

Immediate-Release/Solution • Give without regard to meals; may give with food to avoid, reduce GI upset. • Swallow extended-release tablets whole; do not break, crush, dissolve, or divide. Take with evening meal.

INDICATIONS/ROUTES/DOSAGE

Note: When given 3 times/day, maximum time between doses should not exceed 12 hrs. If treatment is discontinued or anticonvulsant therapy is added, do so gradually over at least 1 wk (reduces risk of loss of seizure control).

Adjunctive Therapy for Seizure Control

PO: ADULTS, ELDERLY, CHILDREN 13 YEARS AND OLDER: Initially, 300 mg 3 times a day. May titrate dosage. Range: 900–1,800 mg/day in 3 divided doses. **Maximum:** 3,600 mg/day. **CHILDREN 3–12 YRS:** Initially,

10–15 mg/kg/day in 3 divided doses. May titrate up to 25–35 mg/kg/day (for children 5–12 yrs) and 40 mg/kg/day (for children 3–4 yrs). **Maximum:** 50 mg/kg/day.

Adjunctive Therapy for Neuropathic Pain

PO: ADULTS, ELDERLY: Initially, 100 mg 3 times a day; may increase by 300 mg/day at weekly intervals. **Maximum:** 3,600 mg/day in 3 divided doses. **CHILDREN:** Initially, 5 mg/kg/dose at bedtime, followed by 5 mg/kg/dose for 2 doses on day 2, then 5 mg/kg/dose for 3 doses on day 3. **Maximum:** 300 mg. Range: 8–35 mg/kg/day in 3 divided doses.

Postherpetic Neuralgia

PO: ADULTS, ELDERLY: ***(Neurontin):*** 300 mg once on day 1, 300 mg twice a day on day 2, and 300 mg 3 times a day on day 3 as needed. Range: 1,800–3,600 mg/day. ***(Gralise):*** 300 mg once on day 1; 600 mg once on day 2; 900 mg once daily on days 3–6; 1,200 mg once daily on days 7–10; 1,500 mg once daily on days 11–14; then 1,800 mg once daily.

RLS

PO: ADULTS, ELDERLY (HORIZANT): 600 mg once daily at 5 PM.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance:

Creatinine Clearance	Neurontin Dosage (Immediate-release)	Gralise Dosage (Extended-release)	Horizant Dosage	
			RLS	PHN
30–59 ml/min	200–700 mg q12h	600–1,800 mg once/day	300–600 mg/day	Same
16–29 ml/min	200–700 mg once daily	Not recommended	300 mg/day	Same
Less than 16 ml/min	100–300 mg once daily	Not recommended	300 mg q48 h	Same
Hemodialysis	125–350 mg following HD	Not recommended	Not recommended	300–600 mg following HD

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (19%–10%): Fatigue, drowsiness, dizziness, ataxia. **Occasional (8%–3%):** Nystagmus, tremor, diplopia, rhinitis, weight gain. **Rare (less than 2%):** Anxiety, dysarthria, memory loss, dyspepsia, pharyngitis, myalgia.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt withdrawal may increase seizure frequency, increased risk of suicidal behavior/thoughts. Overdosage may result in slurred speech, drowsiness, lethargy, diarrhea.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Review history of seizure disorder (type, onset, intensity, frequency, duration, LOC). Assess location, intensity of neuralgia/neuropathic pain.

INTERVENTION/EVALUATION

Provide safety measures as needed. Monitor seizure frequency/duration, renal function, weight, behavior in children. Monitor for signs/symptoms of depression, suicidal tendencies, other unusual behavior.

PATIENT/FAMILY TEACHING

• Use only as prescribed; do not abruptly stop taking drug (may increase seizure frequency). • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Carry identification card/bracelet to note seizure disorder/anticonvulsant therapy. • Report suicidal ideation, depression, unusual behavioral changes (esp. with changes in dosage), worsening of seizure activity or loss of seizure control.

galantamine

gal-**an**-ta-meen
(Razadyne, Razadyne ER, Reminyl ✱, Reminyl ER ✱)
Do not confuse Razadyne with Rozerem, or Reminyl with Amaryl.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Cholinesterase inhibitor. **CLINICAL:** Antidementia.

USES

Treatment of mild to moderate dementia of Alzheimer's type. **OFF-LABEL:** Severe dementia associated with Alzheimer's disease, mild to moderate dementia associated with Parkinson's disease, Lewy body dementia.

PRECAUTIONS

Contraindications: None known. **Cautions:** Moderate renal/hepatic impairment (not recommended in severe impairment), history of ulcer disease, asthma, COPD, bladder outflow obstruction, supraventricular cardiac conduction conditions (except with pacemaker), seizure disorder, concurrent medications that slow cardiac conduction through SA or AV node.

ACTION

Elevates acetylcholine concentrations by slowing degeneration of acetylcholine released by still intact cholinergic neurons. May increase serotonin levels. **Therapeutic Effect:** Slows progression of Alzheimer's disease.

PHARMACOKINETICS

Rapidly, completely absorbed from GI tract. Protein binding: 18%. Distributed to blood cells; binds to plasma proteins, mainly albumin. Metabolized in liver. Excreted in urine. **Half-life:** 7 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children:** Not prescribed for this pt population. **Elderly:** No age-related precautions noted, but use is not recommended in those with severe hepatic/renal impairment (creatinine clearance less than 9 ml/min).

INTERACTIONS

DRUG: May interfere with the effects of **bethanechol, succinylcholine. Cimetidine, ketoconazole, paroxetine** may increase concentration/effect. **HERBAL: St. John's wort** may decrease concentration. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Oral Solution (Razadyne): 4 mg/ml. **Tablets (Razadyne):** 4 mg, 8 mg, 12 mg.

Capsules (Extended-Release [Razadyne ER]): 8 mg, 16 mg, 24 mg.

ADMINISTRATION/HANDLING

PO

• Give tablet or solution with morning and evening meals. • Mix oral solution with nonalcoholic beverage, take immediately. • Extended-release capsule should be given with breakfast. Swallow whole. Do not break, crush, cut, or divide.

INDICATIONS/ROUTES/DOSAGE

Note: If therapy interrupted for 3 or more days, restart at lowest dose; then increase gradually.

Alzheimer's Disease

PO ***(Immediate-Release Tablets, Oral Solution)*****: ADULTS, ELDERLY:** Initially, 4 mg twice a day (8 mg/day). After a minimum of 4 wks (if well tolerated), may increase to 8 mg twice a day (16 mg/day). After another 4 wks, may increase to 12 mg twice daily (24 mg/day). Range: 16–24 mg/day in 2 divided doses.

PO ***(Extended-Release)*****: ADULTS, ELDERLY:** Initially, 8 mg once daily for 4 wks; then increase to 16 mg once daily for 4 wks or longer. If tolerated, may increase to 24 mg once daily. Range: 16–24 mg once daily.

Dosage in Renal/Hepatic Impairment

For moderate impairment, maximum dosage is 16 mg/day. Drug is not recommended for pts with severe impairment.

SIDE EFFECTS

Frequent (17%–7%): Nausea, vomiting, diarrhea, anorexia, weight loss. **Occasional (5%–4%):** Abdominal pain, insomnia, depression, headache, dizziness, fatigue, rhinitis. **Rare (less than 3%):** Tremors, constipation, confusion, cough, anxiety, urinary incontinence.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may cause cholinergic crisis (increased salivation, lacrimation, urination, defecation, bradycardia, hypotension, muscle weakness). Treatment aimed at generally supportive measures, use of anticholinergics (e.g., atropine).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess cognitive, behavioral, functional deficits of pt. Obtain baseline serum renal function, LFT.

INTERVENTION/EVALUATION

Monitor cognitive, behavioral, functional status of pt. Evaluate EKG, periodic rhythm strips in pts with underlying arrhythmias. Assess for evidence of GI disturbances (nausea, vomiting, diarrhea, anorexia, weight loss).

PATIENT/FAMILY TEACHING

• Take with meals (reduces risk of nausea). • Avoid tasks that require alertness, motor skills until response to drug is established. • Report persistent GI disturbances, excessive salivation, diaphoresis, excessive tearing, excessive fatigue, insomnia, depression, dizziness, increased muscle weakness.

ganciclovir

gan-**sye**-kloe-veer
(Cytovene)

■ **BLACK BOX ALERT** ■ Toxicity presents as neutropenia, thrombocytopenia, anemia. Studies suggest carcinogenic and teratogenic effects, inhibition of spermatogenesis.

Do not confuse Cytovene with Cytosar, or ganciclovir with acyclovir.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Synthetic nucleoside. **CLINICAL:** Antiviral.

USES

Parenteral: Treatment of cytomegalovirus (CMV) retinitis in immunocompromised pts (e.g., HIV), prophylaxis of CMV infection in transplant pts. **OFF-LABEL:** CMV retinitis.

PRECAUTIONS

Contraindications: Hypersensitivity to acyclovir, ganciclovir. **Cautions:** Neutropenia, thrombocytopenia, renal impairment, children (long-term safety not determined due to potential for long-term carcinogenic, adverse reproductive effects), pregnancy. Absolute neutrophil count less than 500/mm^3, platelet count less than 25,000/mm^3.

ACTION

Competes with viral DNA polymerase and incorporation into growing viral DNA chains. **Therapeutic Effect:** Interferes with DNA synthesis, viral replication.

PHARMACOKINETICS

Widely distributed (including CSF and ocular tissue). Protein binding: 1%–2%. Excreted primarily in urine. Removed by hemodialysis. **Half-life:** 1.7–5.8 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Effective contraception should be used during therapy; avoid use during pregnancy. Breastfeeding should be discontinued; may be resumed no sooner than 72 hrs after the last dose. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 12 yrs. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Bone marrow depressants** may increase myelosuppression. **Imipenem** may increase risk for generalized seizures. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, creatinine, alkaline phosphatase, bilirubin, ALT, AST.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution (Cytovene): 500 mg.

ADMINISTRATION/HANDLING

IV

Reconstitution • Reconstitute 500-mg vial with 10 ml Sterile Water for Injection to provide concentration of 50 mg/ml; do **not** use Bacteriostatic Water (contains parabens, which is incompatible with ganciclovir). • Further dilute with 100 ml D_5W, 0.9% NaCl to provide a concentration of 10 mg/ml or less for infusion.

Rate of Administration • Administer only by IV infusion over at least 1 hr. • Do not give by IV push or rapid IV infusion (increases risk of toxicity). Flush line with 0.9% NaCl before and after administration.

Storage • Store vials at room temperature. Do not refrigerate. • Reconstituted solution in vial is stable for 12 hrs at room temperature. • After dilution, use within 24 hrs. • Discard if precipitate forms, discoloration occurs. • Avoid exposure to skin, eyes, mucous membranes. • Use latex gloves, safety glasses during preparation/handling of solution. • Avoid inhalation. • If solution contacts skin or mucous membranes, wash thoroughly with soap and water; rinse eyes thoroughly with plain water.

IV INCOMPATIBILITIES

Aldesleukin (Proleukin), amifostine (Ethyol), aztreonam (Azactam), cefepime (Maxipime), cytarabine (ARA-C), doxorubicin (Adriamycin), fludarabine (Fludara), foscarnet (Foscavir), gemcitabine (Gemzar), ondansetron (Zofran), piperacillin and tazobactam (Zosyn), sargramostim (Leukine), vinorelbine (Navelbine).

IV COMPATIBILITIES

Amphotericin B, enalapril (Vasotec), filgrastim (Neupogen), fluconazole (Diflucan), granisetron (Kytril), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Cytomegalovirus (CMV) Retinitis

IV: ADULTS, CHILDREN 3 MOS AND OLDER: 5 mg/kg/dose q12h for 14–21 days, then 5 mg/kg/day as a single daily dose or 6 mg/kg 5 days a wk.

Prevention of CMV in Transplant Pts

IV: ADULTS, CHILDREN: 5 mg/kg/dose q12h for 7–14 days, then 5 mg/kg/day as a single daily dose dependent on clinical condition and degree of immunosuppression.

Congenital CMV

IV: NEONATES: 6 mg/kg/dose q12h for 6 wks (if HIV positive, longer duration may be considered).

Creatinine Clearance	Dosage IV Induction	IV Maintenance
50–69 ml/min	2.5 mg/kg q12h	2.5 mg/kg q24h
25–49 ml/min	2.5 mg/kg q24h	1.25 mg/kg q24h
10–24 ml/min	1.25 mg/kg q24h	0.625 mg/kg q24h
Less than 10 ml/min	1.25 mg/kg 3 times/wk	0.625 mg/kg 3 times/wk
Hemodialysis (give after HD on HD days)	1.25 mg/kg q48–72h	0.625 mg/kg q48–72h
Peritoneal dialysis	1.25 mg/kg 3 times/wk	0.625 mg/kg 3 times/wk
Continuous renal replacement therapy		
Continuous venovenous hemofiltration	2.5 mg/kg q24h	1.25 mg/kg q24h
Continuous venovenous hemodialysis/ continuous venovenous hemodiafiltration	2.5 mg/kg q12h	2.5 mg/kg q24h

G

Dosage in Renal Impairment
Dosage and frequency are modified based on creatinine clearance (see table).

Dosage in Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Frequent (41%–13%): Diarrhea, fever, nausea, abdominal pain, vomiting. **Occasional (11%–6%):** Diaphoresis, infection, paresthesia, flatulence, pruritus. **Rare (4%–2%):** Headache, stomatitis, dyspepsia, phlebitis.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hematologic toxicity occurs commonly: leukopenia (41%–29% of pts), anemia (25%–19% of pts). Intraocular implant occasionally results in visual acuity loss, vitreous hemorrhage, retinal detachment. GI hemorrhage occurs rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, BMP, LFT. Perform baseline ophthalmic exam. Obtain specimens for support of differential diagnosis (urine, feces, blood, throat) since retinal infection is usually due to hematogenous dissemination.

INTERVENTION/EVALUATION

Monitor I&O, ensure adequate hydration (minimum 1,500 ml/24 hrs). Diligently evaluate hematology reports for neutropenia, thrombocytopenia, leukopenia. Obtain periodic ophthalmic examinations. Question pt regarding visual acuity, therapeutic improvement, complications. Assess for rash, pruritus.

PATIENT/FAMILY TEACHING

• Ganciclovir provides suppression, not cure, of cytomegalovirus (CMV) retinitis. • Frequent blood tests, eye exams are necessary during therapy due to toxic nature of drug. • Report any new symptom promptly. • May temporarily or permanently inhibit sperm production in men, suppress fertility in women. • Barrier contraception should be used during and for 90 days after therapy due to mutagenic potential.

gemcitabine

HIGH ALERT

jem-**sye**-ta-been
(Gemzar)
Do not confuse gemcitabine with gemtuzumab, Gemzar with Zinecard.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Antimetabolite. **CLINICAL:** Antineoplastic.

USES

Metastatic breast cancer in combination with paclitaxel. Treatment of locally advanced (stage II, III) or metastatic (stage IV) adenocarcinoma of pancreas. In combination with cisplatin for treatment of locally advanced or metastatic non–small-cell lung cancer (NSCLC). Treatment of advanced ovarian cancer (in combination with carboplatin) that has relapsed. **OFF-LABEL:** Treatment of biliary tract carcinoma, bladder carcinoma, germ cell tumors (e.g., testicular), Hodgkin's lymphoma, non-Hodgkin's lymphoma, cervical.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment, pregnancy, elderly, concurrent radiation therapy, impaired pulmonary function.

ACTION

Inhibits ribonucleotide reductase, the enzyme necessary for catalyzing DNA synthesis. **Therapeutic Effect:** Produces death of cells undergoing DNA synthesis.

PHARMACOKINETICS

Not extensively distributed after IV infusion (increased with length of infusion). Protein binding: less than 10%. Metabolized intracellularly by nucleoside kinases. Excreted primarily in urine. **Half-life:** Influenced by duration of infusion. Infusion 1 hr or less: 42–94 min; infusion 3–4 hrs: 4–10.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: If possible, avoid use during pregnancy, esp. first trimester. May cause fetal harm. Unknown if distributed in breast milk. Breastfeeding not recommended. **Pregnancy Category D.** **Children:** Safety and efficacy not established. **Elderly:** Increased risk of hematologic toxicity.

INTERACTIONS

DRUG: **Bone marrow depressants** may increase risk of myelosuppression. **Live virus vaccines** may potentiate virus replication, increase vaccine side effects, decrease pt's antibody response to vaccine. **HERBAL:** **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, creatinine, ALT, AST. May decrease Hgb, Hct, leukocyte count, platelet count.

AVAILABILITY (Rx)

Injection, Powder for Reconstitution: 200-mg, 1-g, 2-g vials. **Injection, Solution:** 38 mg/ml.

ADMINISTRATION/HANDLING

IV

Reconstitution • Use gloves when handling/preparing gemcitabine. • Reconstitute with 0.9% NaCl injection without preservative to provide concentration of 38 mg/ml. • Shake to dissolve. Further diluted with 50–500 ml 0.9% NaCl to a concentration as low as 0.1 mg/ml.

Rate of Administration • Infuse over 30 min. • Infusion time greater than 60 min increases toxicity.

Storage • Store at room temperature (refrigeration may cause crystallization). • Reconstituted vials or diluted solutions are stable for 24 hrs at room temperature. Do not refrigerate.

IV INCOMPATIBILITIES

Acyclovir (Zovirax), amphotericin B (Fungizone), cefotaxime (Claforan), furosemide (Lasix), ganciclovir (Cytovene), imipenem and cilastatin (Primaxin), irinotecan (Camptosar), methotrexate, methylprednisolone (Solu-Medrol), mitomycin (Mutamycin), piperacillin/tazobactam (Zosyn), prochlorperazine (Compazine).

IV COMPATIBILITIES

Bumetanide (Bumex), calcium gluconate, dexamethasone (Decadron), diphenhydramine (Benadryl), dobutamine (Dobutrex), dopamine (Intropin), granisetron (Kytril), heparin, hydrocortisone (Solu-Cortef), lorazepam (Ativan), ondansetron (Zofran), potassium chloride.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosage is individualized based on clinical response, tolerance to adverse effects. When used in combination therapy, consult specific protocols for optimum dosage, sequence of drug administration.

Breast Cancer

IV: ADULTS, ELDERLY: (in combination with paclitaxel): 1,250 mg/m^2 over 30 min on days 1 and 8 of each 21-day cycle.

Non–Small-Cell Lung Cancer (NSCLC)

IV: ADULTS, ELDERLY, CHILDREN: (in combination with cisplatin): 1,000 mg/m^2 on days 1, 8, and 15, repeated every 28 days; or 1,250 mg/m^2 on days 1 and 8. Repeat every 21 days.

Ovarian Cancer

IV: ADULTS, ELDERLY: (in combination with carboplatin): 1,000 mg/m^2 on days 1 and 8 of each 21-day cycle.

Pancreatic Cancer

IV: ADULTS: 1,000 mg/m^2 once weekly for up to 7 wks or until toxicity necessitates decreasing dosage or withholding the dose, followed by 1 wk of rest. Subsequent cycles should consist of once-weekly dose for 3 consecutive wks out of every 4 wks. For pts completing cycles at 1,000 mg/m^2, increase dose to 1,250 mg/m^2 as tolerated. Dose for next cycle may be increased to 1,500 mg/m^2.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

Dosage Reduction Guidelines

Pancreatic Cancer, Non–Small-Cell Lung Cancer (NSCLC)

Dosage adjustments should be based on granulocyte count and platelet count, as follows:

Absolute Granulocyte Counts (cells/mm^3)	Platelet Count (cells/mm^3)	% of Full Dose
1,000	100,000	100
500–999	50,000–99,000	75
Less than 500 or	Less than 50,000	Hold

Breast Cancer

Absolute Granulocyte Counts (cells/mm^3)	Platelet Count (cells/mm^3)	% of Full Dose
Equal to or greater than 1,200 and	Greater than 75,000	100
1,000–1,199 or	50,000–75,000	75
700–999 and	Equal to or greater than 50,000	50
Less than 700 or	Less than 50,000	Hold

Ovarian Cancer

Absolute Granulocyte Counts (cells/mm^3)	Platelet Count (cells/mm^3)	% of Full Dose
1,500 or greater and	100,000 or greater	100
1,000–1,499 and/or	75,000–99,999	50
Less than 1,000 and/or	Less than 75,000	Hold

SIDE EFFECTS

Frequent (69%–20%): Nausea, vomiting, generalized pain, fever, mild to moderate pruritic rash, mild to moderate dyspnea, constipation, peripheral edema. **Occasional (19%–10%):** Diarrhea, petechiae, alopecia, stomatitis, infection, drowsiness,

paresthesia. **Rare:** Diaphoresis, rhinitis, insomnia, malaise.

ADVERSE EFFECTS/ TOXIC REACTIONS

Severe myelosuppression (anemia, thrombocytopenia, leukopenia) occurs commonly.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline CBC, renal function, LFT, and periodically thereafter (CBC, platelets before each dose). Drug should be suspended or dosage modified if myelosuppression is detected.

INTERVENTION/EVALUATION

Assess all lab results prior to each dose. Monitor for dyspnea, fever, pruritic rash, dehydration. Assess oral mucosa for erythema, ulceration at inner margin of lips, sore throat, difficulty swallowing (stomatitis). Assess skin for rash. Monitor daily pattern of bowel activity, stool consistency. Provide antiemetics as needed.

PATIENT/FAMILY TEACHING

• Avoid crowds, exposure to infection. • Maintain strict oral hygiene. • Promptly report fever, sore throat, signs of local infection, easy bruising, rash, yellowing of skin or eyes. • Report nausea or vomiting that continues at home.

gemfibrozil

jem-**fye**-broe-zil
(Apo-Gemfibrozil ✱, Lopid, Novo-Gemfibrozil ✱)
Do not confuse Lopid with Levbid, Lipitor, Lodine, or Slo-Bid.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Fibric acid derivative. **CLINICAL:** Antihyperlipidemic.

USES

Treatment of hypertriglyceridemia in types IV and V hyperlipidemia in pts who are at greater risk for pancreatitis and those who have not responded to dietary intervention. Reduce risk of coronary heart disease (CHD) development in pts without symptoms who have decreased HDL, increased LDL, increased triglycerides.

PRECAUTIONS

Contraindications: Hepatic dysfunction (including primary biliary cirrhosis), preexisting gallbladder disease, severe renal dysfunction, concurrent use with repaglinide. **Cautions:** Concurrent use with statins, mild to moderate renal impairment. anticoagulant therapy (e.g., warfarin).

ACTION

Exact mechanism of action unknown. Can inhibit lipolysis of fat in adipose tissue; decrease hepatic uptake of free fatty acids (reduces hepatic triglyceride production) or inhibit hepatic secretion of very low density lipoprotein (VLDL). **Therapeutic Effect:** Lowers serum cholesterol, triglycerides (decreases VLDL, LDL; increases HDL).

PHARMACOKINETICS

Well absorbed from GI tract. Protein binding: 99%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 1.5 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. Decision to discontinue breastfeeding or drug should be based on potential for serious adverse effects. **Pregnancy Category C. Children:** Not recommended in pts younger than 2 yrs (cholesterol necessary for normal development). **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Statins may increase risk for myopathy/rhabdomyolysis. May increase

effects of **repaglinide, warfarin. Bile acid–binding resins (e.g., colestipol)** may decrease concentration. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, bilirubin, creatine kinase, LDH, ALT, AST. May decrease Hgb, Hct, leukocyte counts, serum potassium.

AVAILABILITY (Rx)

Tablets: 600 mg.

G

ADMINISTRATION/HANDLING

PO

- Give 30 min before morning and evening meals.

INDICATIONS/ROUTES/DOSAGE

Hyperlipidemia

PO: ADULTS, ELDERLY: 600 mg twice daily 30 min before breakfast and dinner.

Dosage in Renal Impairment

Use cautions.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (20%): Dyspepsia. **Occasional (10%–2%):** Abdominal pain, diarrhea, nausea, vomiting, fatigue. **Rare (less than 2%):** Constipation, acute appendicitis, vertigo, headache, rash, pruritus, altered taste.

ADVERSE EFFECTS/ TOXIC REACTIONS

Cholelithiasis, cholecystitis, acute appendicitis, pancreatitis, malignancy occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain diet history, esp. fat/alcohol consumption. Obtain baseline lab results: serum glucose, triglyceride, cholesterol, LFT.

INTERVENTION/EVALUATION

Monitor LDL, VLDL, serum triglycerides, cholesterol lab results for therapeutic response. Monitor daily pattern of bowel activity, stool consistency. Assess for rash, pruritus. Question for headache, dizziness. Monitor LFT, hematology tests. Assess for abdominal pain, esp. right upper quadrant or epigastric pain suggestive of adverse gallbladder effects. Monitor serum glucose in those receiving insulin, oral antihyperglycemics.

PATIENT/FAMILY TEACHING

- Follow special diet (important part of treatment). • Take before meals. • Periodic lab tests are essential part of therapy. • Report pronounced dizziness, blurred vision, abdominal pain, diarrhea, nausea, vomiting.

gemifloxacin

jem-i-**flox**-a-sin
(Factive)

■ **BLACK BOX ALERT** ■ Increased risk of tendonitis, tendon rupture (with corticosteroids, organ transplant recipients, pts greater than 60 yrs of age).

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Fluoroquinolone. **CLINICAL:** Antibiotic.

USES

Treatment of susceptible infections due to *S. pneumoniae, H. influenzae, H. parainfluenzae, M. catarrhalis, M. pneumoniae, C. pneumoniae, K. pneumoniae* including acute bacterial exacerbation of chronic bronchitis, community-acquired pneumonia of mild to moderate severity. **OFF-LABEL:** Acute sinusitis.

PRECAUTIONS

Contraindications: Hypersensitivity to other fluoroquinolones. **Cautions:** Renal impairment, rheumatoid arthritis, history of QT prolongation, hypokalemia, hypomagnesemia, concurrent medications that prolong QT interval, seizure disorder, significant bradycardia, acute myocardial ischemia.

ACTION

Inhibits the enzyme DNA gyrase in susceptible microorganisms, interfering with bacterial cell replication, repair. **Therapeutic Effect:** Bactericidal.

PHARMACOKINETICS

Rapidly, well absorbed from GI tract. Protein binding: 70%. Widely distributed. Penetrates well into lung tissue and fluid. Metabolized in liver. Excreted in feces (61%), urine (36%). Partially removed by hemodialysis. **Half-life:** 4–12 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Has potential for teratogenic effects. Substitute formula feedings for breastfeeding. **Pregnancy Category C. Children:** Safety and efficacy not established in those 18 yrs and younger. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Aluminum-, magnesium-containing antacids, didanosine, iron preparations, sucralfate** may decrease absorption. **Antipsychotics, class IA and class III antiarrhythmics, erythromycin, tricyclic antidepressants** may increase risk of prolonged QT interval, life-threatening arrhythmias. **HERBAL:** **Dong quai, St. John's wort** may increase risk of photosensitization. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, alkaline phosphatase, bilirubin, LDH, creatinine, ALT, AST. May alter platelets, neutrophils, Hgb, Hct, RBCs.

AVAILABILITY (Rx)

Tablets: 320 mg.

ADMINISTRATION/HANDLING

PO

• Give without regard to meals, milk, or calcium supplements. • Do not break, crush, dissolve, or divide tablets. • Take 3 hrs before or 2 hrs after supplements containing iron, zinc, or magnesium.

INDICATIONS/ROUTES/DOSAGE

Acute Bacterial Exacerbation of Chronic Bronchitis

PO: ADULTS, ELDERLY: 320 mg once a day for 5 days.

Community-Acquired Pneumonia

PO: ADULTS, ELDERLY: 320 mg once a day for 5–7 days.

Dosage in Renal Impairment

Dosage and frequency are modified based on creatinine clearance.

Creatinine Clearance	Dosage
Greater than 40 ml/min	320 mg once a day
40 ml/min or less	160 mg once a day

Dosage in Hepatic Impairment

No dose ajdustment.

SIDE EFFECTS

Occasional (4%–2%): Diarrhea, rash, nausea. **Rare (1% or less):** Headache, abdominal pain, dizziness.

ADVERSE EFFECTS/ TOXIC REACTIONS

Antibiotic-associated colitis, other superinfections (abdominal cramps, severe watery diarrhea, fever) may result from altered bacterial balance. Hypersensitivity reaction, including photosensitivity (rash, pruritus, blisters, edema, burning skin) may occur.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of hypersensitivity to fluoroquinolone antibiotics.

INTERVENTION/EVALUATION

Monitor for signs/symptoms of infection. Assess WBC count, renal/hepatic function tests. Encourage adequate fluid intake. Monitor daily pattern of bowel activity, stool consistency. Assess skin for rash. Be alert for superinfection: fever, vomiting,

diarrhea, anal/genital pruritus, oral mucosal changes (ulceration, pain, erythema).

PATIENT/FAMILY TEACHING

• Take with 8 oz of water, without regard to food. • Drink several glasses of water between meals. • Do not chew, crush, dissolve, or divide tablets; swallow whole. • Complete full course of therapy. • Take 3 hrs before or 2 hrs after supplements containing iron, zinc, magnesium, or antacids.

gentamicin

jen-ta-**mye**-sin
(Gentak)

■ **BLACK BOX ALERT** ■ Aminoglycoside antibiotics may cause neurotoxicity, nephrotoxicity. Risk of ototoxicity directly proportional to dosage, duration of treatment; ototoxicity usually is irreversible, precipitated by tinnitus, vertigo. May cause fetal harm if given during pregnancy.

Do not confuse gentamicin with vancomycin.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Aminoglycoside. **CLINICAL:** Antibiotic.

USES

Parenteral: Treatment of infections susceptible to *Pseudomonas, Proteus, Serratia,* and other gram-negative organisms and gram-positive *Staphylococcus* including skin/skin structure, bone, joint, respiratory tract, intra-abdominal, complicated urinary tract, acute pelvic infections; burns; septicemia; meningitis. **Ophthalmic:** Ophthalmic infections caused by susceptible bacteria. **OFF-LABEL:** Surgical (preoperative) prophylaxis.

PRECAUTIONS

Contraindications: Hypersensitivity to other aminoglycosides (cross-sensitivity) or their components. **Cautions:** Elderly, neonates due to renal insufficiency or immaturity; neuromuscular disorders (potential for respiratory depression); vestibular or cochlear impairment; renal impairment, hypocalcemia, myasthenia gravis. Pediatric pts on extracorporeal membrane oxygenation.

ACTION

Irreversibly binds to protein of bacterial ribosomes. **Therapeutic Effect:** Interferes with protein synthesis of susceptible microorganisms. Bactericidal.

PHARMACOKINETICS

Rapid, complete absorption after IM administration. Protein binding: less than 30%. Widely distributed (does not cross blood-brain barrier, low concentrations in CSF). Excreted unchanged in urine. Removed by hemodialysis. **Half-life:** 2–4 hrs (increased in renal impairment, neonates; decreased in cystic fibrosis, burn, or febrile pts).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Readily crosses placenta; unknown if distributed in breast milk. **Pregnancy Category C. Children:** Caution in neonates: Immature renal function increases half-life and toxicity. **Elderly:** Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: Nephrotoxic, ototoxic medications may increase risk of nephrotoxicity, ototoxicity. May increase neuromuscular blockade with concurrent use of **neuromuscular blockers.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum BUN, creatinine, bilirubin, LDH, ALT, AST. May decrease serum calcium, magnesium, potassium, sodium. **Therapeutic serum level:** peak: 4–10 mcg/ml; trough: 0.5–2 mcg/ml. **Toxic serum level:** peak: greater than 10 mcg/ml; trough: greater than 2 mcg/ml.

AVAILABILITY (Rx)

Injection, Infusion: 60 mg/50 ml, 80 mg/50 ml, 80 mg/100 ml, 100 mg/50 ml, 100 mg/100 ml, 120 mg/100 ml. **Injection, Solution:** 10 mg/ml, 40 mg/ml. **Ointment, Ophthalmic:** 0.3%. **Solution, Ophthalmic (Gentak):** 0.3%.

ADMINISTRATION/HANDLING

IV

Reconstitution • Dilute with 50–100 ml D_5W or 0.9% NaCl. Amount of diluent for infants, children depends on individual needs.

Rate of Administration • Infuse over 30–60 min for adults, older children; over 60–120 min for infants, young children.

Storage • Store vials at room temperature. • Solution appears clear or slightly yellow. • Intermittent IV infusion (piggyback) is stable for 48 hrs at room temperature or refrigerated. • Discard if precipitate forms.

IM

• To minimize discomfort, give deep IM slowly. • Less painful if injected into gluteus maximus than lateral aspect of thigh.

Ophthalmic

• Place gloved finger on lower eyelid and pull out until a pocket is formed between eye and lower lid. • Place prescribed number of drops or ¼–½ inch ointment into pocket. Instruct pt to close eye gently for 1–2 min (so medication will not be squeezed out of the sac). • **Solution:** Instruct pt to apply digital pressure to lacrimal sac at inner canthus for 1 min to minimize systemic absorption. • **Ointment:** Instruct pt to roll eyeball to increase contact area of drug to eye. • Remove excess solution or ointment around eye with tissue.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), amphotericin B complex (Abelcet, AmBisome, Amphotec), furosemide (Lasix), heparin, heta-starch (Hespan), idarubicin (Idamycin), indomethacin (Indocin), propofol (Diprivan).

IV COMPATIBILITIES

Amiodarone (Cordarone), dexmedetomidine (Precedex), diltiazem (Cardizem), enalapril (Vasotec), filgrastim (Neupogen), hydromorphone (Dilaudid), insulin, lorazepam (Ativan), magnesium sulfate, midazolam (Versed), morphine, multivitamins.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Space parenteral doses evenly around the clock. Dosage based on ideal body weight. Peak, trough levels are determined periodically to maintain desired serum concentrations and minimize risk of toxicity.

Usual Parenteral Dosage

IM, IV: ADULTS, ELDERLY: (Conventional): 1–2.5 mg/kg/dose q8–12h. **(Once Daily):** 4–7 mg/kg/dose q24h. **CHILDREN 5 YRS AND OLDER:** 2–2.5 mg/kg/dose q8h. **INFANTS, CHILDREN YOUNGER THAN 5 YRS:** 2.5 mg/kg/dose q8h. **NEONATES (GREATER THAN 2 KG) PNA 8–28 days:** 4 mg/kg/dose q12–24h; **PNA 7 days or less:** 4 mg/kg/dose q24h. **(1–2 KG) PNA 8–28 days:** 4–5 mg/kg/dose q24–48h; **PNA 7 days or less:** 5 mg/kg/dose q48h. **(LESS THAN 1 KG) PNA 15–28 days:** 4–5 mg/kg/dose q24–48h; **PNA 14 days or less:** 5 mg/kg/dose q48h.

Hemodialysis (HD)

Note: Administer after HD on dialysis days.

Loading dose: 2–3 mg/kg, then 1 mg/kg q48–72h for mild UTI or synergy (consider redose for pre- or post-HD concentrations less than 1 mg/L); 1–1.5 mg/kg q48–72h for moderate to severe UTI (consider redose for pre-HD concentration less than 1.5–2 mg/L or post-HD concentrations less than 1 mg/L); 1.5–2 mg/kg q48–72h for systemic gram-negative rod infection (consider redose for pre-HD concentration less

than 3–5 mg/L or post-HD concentrations less than 2 mg/L).

Continuous Renal Replacement Therapy (CRRT)

Loading dose: 2–3 mg/kg, then 1 mg/kg q24–36h for mild UTI or synergy (redose when concentration less than 1 mg/L); 1–1.5 mg/kg q24–36h for moderate to severe UTI (redose when concentration less than 1.5–2 mg/L; 1.5–2 mg/kg q24–48h for systemic gram-negative infection (redose when concentration less than 3–5 mg/L).

Usual Ophthalmic Dosage

Ophthalmic Ointment: ADULTS, ELDERLY: Apply ½-inch strip to conjunctival sac 2–4 times/day.

Ophthalmic Solution: ADULTS, ELDERLY, CHILDREN: 1–2 drops q2–4h up to 2 drops/hr.

Dosage in Renal Impairment

Conventional Dosing:

Creatinine Clearance	Dosage
Greater than 60 ml/mil	q8h
41–60 ml/min	q12h
20–40 ml/min	q24h
Less than 20 ml/min	Loading dose, then monitor levels to determine dosage interval

Dosage in Hepatic Impairment

Monitor plasma concentrations.

SIDE EFFECTS

Occasional: IM: Pain, induration at injection site. **IV:** Phlebitis, thrombophlebitis, hypersensitivity reactions (fever, pruritus, rash, urticaria). **Ophthalmic:** Burning, tearing, itching, blurred vision. **Rare:** Alopecia, hypertension, fatigue.

ADVERSE EFFECTS/ TOXIC REACTIONS

Nephrotoxicity (increased serum BUN, creatinine; decreased creatinine clearance) may be reversible if drug is stopped at first sign of symptoms. Irreversible ototoxicity (tinnitus, dizziness, diminished hearing), neurotoxicity (headache, dizziness, lethargy, tremor, visual disturbances) occur occasionally. Risk increases with higher dosages, prolonged therapy, or if solution is applied directly to mucosa. Superinfections, particularly with fungi, may result from bacterial imbalance via any route of administration. Ophthalmic application may cause paresthesia of conjunctiva, mydriasis.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Dehydration must be treated before beginning parenteral therapy. Establish baseline hearing acuity. Question for history of allergies, esp. aminoglycosides, sulfites (parabens for topical/ophthalmic routes).

INTERVENTION/EVALUATION

Monitor I&O (maintain hydration), urinalysis (casts, RBCs, WBCs, decrease in specific gravity). Be alert to ototoxic, neurotoxic symptoms (see Adverse Effects/Toxic Reactions). Check IM injection site for induration. Evaluate IV site for phlebitis (heat, pain, red streaking over vein). Assess for rash (**Ophthalmic:** redness, burning, itching, tearing). Be alert for superinfection (genital/anal pruritus, changes in oral mucosa, diarrhea). When treating pts with neuromuscular disorders, assess respiratory response carefully. **Therapeutic serum level:** peak: 4–10 mcg/ml; peak levels are 2–3 times greater with once-daily dosing trough: 0.5–2 mcg/ml. **Toxic serum level:** peak: greater than 10 mcg/ml; trough: greater than 2 mcg/ml.

PATIENT/FAMILY TEACHING

• Discomfort may occur with IM injection. • Blurred vision, tearing may occur briefly after each ophthalmic dose. • Report any hearing, visual, balance, urinary problems, even after therapy is

completed. • **Ophthalmic:** Report if tearing, redness, irritation continues.

glatiramer

TOP 100

gla-**tir**-a-mer
(Copaxone)
Do not confuse Copaxone with Compazine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Immunosuppressive. **CLINICAL:** Neurologic agent for multiple sclerosis.

USES

Treatment of relapsing, remitting multiple sclerosis.

PRECAUTIONS

Contraindications: Hypersensitivity to glatiramer, mannitol. **Cautions:** Pts exhibiting immediate postinjection reaction (flushing, chest pain, palpitations, anxiety, dyspnea, urticaria).

ACTION

Induces/activates T-lymphocyte suppressor cells specific to myelin antigens. May also interfere with the antigen-presenting function of immune cells. **Therapeutic Effect:** Slows progression of multiple sclerosis.

PHARMACOKINETICS

Substantial fraction of glatiramer is hydrolyzed locally. Some fraction of injected material enters lymphatic circulation, reaching regional lymph nodes; some may enter systemic circulation intact.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established. **Elderly:** Safety and efficacy not established.

INTERACTIONS

DRUG: None significant. **HERBAL: Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Injection Solution: 20 mg/ml in prefilled syringes, 40 mg/ml in prefilled syringes.

ADMINISTRATION/HANDLING

Subcutaneous

• Refrigerate syringes (bring to room temperature before use). • May be stored at room temperature for up to 1 mo. • Avoid heat, intense light. • Inject into deltoid region, abdomen, gluteus maximus, or lateral aspect of thigh. • Prefilled syringe suitable for single use only; discard unused portions.

INDICATIONS/ROUTES/DOSAGE

Multiple Sclerosis

Subcutaneous: ADULTS, ELDERLY: 20 mg once a day or 40 mg 3 times/wk.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Expected (73%–40%): Pain, erythema, inflammation, pruritus at injection site, asthenia. **Frequent (27%–18%):** Arthralgia, vasodilation, anxiety, hypertonia, nausea, transient chest pain, dyspnea, flu-like symptoms, rash, pruritus. **Occasional (17%–10%):** Palpitations, back pain, diaphoresis, rhinitis, diarrhea, urinary urgency. **Rare (less than 9%):** Anorexia, fever, neck pain, peripheral edema, ear pain, facial edema, vertigo, vomiting.

ADVERSE EFFECTS/ TOXIC REACTIONS

Infection occurs commonly. Lymphadenopathy occurs occasionally.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Establish baseline neurologic function.

INTERVENTION/EVALUATION

Observe injection site for reaction. Monitor for fever, chills (evidence of infection). Observe for improvement in neurologic function.

PATIENT/FAMILY TEACHING

• Report difficulty in breathing/swallowing, rash, itching, swelling of lower extremities, fatigue. • Avoid pregnancy.

glimepiride

HIGH ALERT

glye-**mep**-ir-ide
(Amaryl, Apo-Glimepiride, Novo-Glimepiride)
Do not confuse Amaryl with Altace, Amerge, or Reminyl, Avandaryl with Benadryl, or glimepiride with glipizide or glyburide.

FIXED-COMBINATION(S)

Avandaryl: glimepiride/rosiglitazone (an antidiabetic): 1 mg/4 mg, 2 mg/4 mg, 4 mg/4 mg.
Duetact: glimepiride/pioglitazone (an antidiabetic): 2 mg/30 mg, 4 mg/30 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Third-generation sulfonylurea. **CLINICAL:** Antidiabetic agent.

USES

Adjunct to diet, exercise in management of non–insulin-dependent diabetes mellitus (type 2, NIDDM). May use in combination with insulin or metformin in pts whose diabetes is not controlled by diet, exercise in conjunction with a single oral hypoglycemic agent.

PRECAUTIONS

Contraindications: Diabetic complications (diabetic ketoacidosis), Sulfonamide allergy. **Cautions:** Renal/hepatic impairment, stress (fever, trauma, infection), G6PD deficiency, elderly, malnourished.

ACTION

Promotes release of insulin from beta cells of pancreas, decreases glucose output from liver, increases insulin sensitivity at peripheral sites. **Therapeutic Effect:** Lowers serum glucose.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	N/A	2–3 hrs	24 hrs

Completely absorbed from GI tract. Protein binding: greater than 99%. Metabolized in liver. Excreted in urine (60%), feces (40%). **Half-life:** 5–9.2 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Avoid pregnancy. Unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Hypoglycemia may be difficult to recognize. Age-related renal impairment may increase sensitivity to glucose-lowering effect.

INTERACTIONS

DRUG: **Beta-blockers** may increase hypoglycemic effect, mask signs of hypoglycemia. **Cimetidine, ciprofloxacin, fluconazole, ranitidine, large doses of salicylates** may increase effect. **Corticosteroids, thiazide diuretics** may decrease effect. **HERBAL:** **Garlic** may worsen hypoglycemia. **FOOD:** None known. **LAB VALUES:** May increase LDH concentrations, serum alkaline phosphatase, ALT, AST, bilirubin, C-peptide.

AVAILABILITY (Rx)

Tablets: 1 mg, 2 mg, 4 mg.

ADMINISTRATION/HANDLING

PO

• Give with breakfast or first main meal.

INDICATIONS/ROUTES/DOSAGE

Diabetes Mellitus

PO: ADULTS: Initially, 1–2 mg once a day with breakfast or first main meal. May increase by 1–2 mg q1–2wks, based on serum glucose response. **Maximum:** 8 mg/day. **ELDERLY:** Initially, 1 mg/day. Titrate dose to avoid hypoglycemia.

Dosage in Renal Impairment

Creatinine clearance less than 22 ml/min: Initially, 1 mg/day, then titrate dose based on fasting serum glucose levels.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Rare (less than 3%): Altered taste, dizziness, drowsiness, weight gain, constipation, diarrhea, heartburn, nausea, vomiting, stomach fullness, headache, photosensitivity, peeling of skin, pruritus, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose or insufficient food intake may produce hypoglycemia (esp. with increased glucose demands). GI hemorrhage, cholestatic hepatic jaundice, leukopenia, thrombocytopenia, pancytopenia, agranulocytosis, aplastic or hemolytic anemia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check serum glucose level. Discuss lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt or family does not thoroughly understand diabetes management or serum glucose testing technique.

INTERVENTION/EVALUATION

Monitor serum glucose level, food intake. Assess for hypoglycemia (cool/wet skin, tremors, dizziness, anxiety, headache, tachycardia, perioral numbness, hunger, diplopia), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep or rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased activity or stress, trauma, surgical procedure).

PATIENT/ FAMILY TEACHING

• Prescribed diet is principal part of treatment; do not skip or delay meals. • Avoid alcohol. • Carry candy, sugar packets, other quick-acting sugar supplements for immediate response to hypoglycemia. • Wear medical alert identification. • Check with physician when glucose demands are altered (fever, infection, trauma, stress, heavy physical activity). • Avoid direct exposure to sunlight.

G

*glipiZIDE

HIGH ALERT

glip-i-zide
(Glucotrol, Glucotrol XL)
Do not confuse glipizide with glimepiride or glyburide, or Glucotrol with Glucophage or Glucotrol XL.

FIXED-COMBINATION(S)

Metaglip: glipizide/metformin (an antidiabetic): 2.5 mg/250 mg, 2.5 mg/500 mg, 5 mg/500 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation sulfonylurea. **CLINICAL:** Antidiabetic agent.

USES

Adjunct to diet, exercise in management of stable, mild to moderately severe non–insulin-dependent diabetes mellitus (type 2, NIDDM). May be used concomitantly with insulin or metformin to improve glycemic control.

PRECAUTIONS

Contraindications: Diabetic ketoacidosis with or without coma, type 1 diabetes mellitus. **Cautions:** Elderly, malnourished, concomitant use of beta blockers, pts with G6PD deficiency, hepatic/renal impairment.

ACTION

Promotes release of insulin from beta cells of pancreas, decreases glucose output from liver, increases insulin sensitivity at peripheral sites. **Therapeutic Effect:** Lowers serum glucose.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	15–30 min	2–3 hrs	12–24 hrs
Extended-release	2–3 hrs	6–12 hrs	24 hrs

Well absorbed from GI tract. Protein binding: 92%–99%. Metabolized in liver. Excreted in urine. **Half-life:** 2–4 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Insulin is drug of choice during pregnancy; glipizide given within 1 mo of delivery may produce neonatal hypoglycemia. Drug crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established. **Elderly:** Hypoglycemia may be difficult to recognize. Age-related renal impairment may increase sensitivity to glucose-lowering effect.

INTERACTIONS

DRUG: Beta blockers may increase hypoglycemic effect, mask signs of hypoglycemia. **Corticosteroids, thiazide diuretics** may decrease effect. **HERBAL: Garlic** may worsen hypoglycemia. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, LDH, ALT, AST, bilirubin, C-peptide.

AVAILABILITY (Rx)

Tablets (Glucotrol): 5 mg, 10 mg.

Tablets (Extended-Release [Glucotrol XL]): 2.5 mg, 5 mg, 10 mg.

ADMINISTRATION/HANDLING

PO

• Give immediate-release tablets 30 min before meals. Give extended-release tablets with breakfast. • Do not crush extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

Diabetes Mellitus

PO: ADULTS: (Immediate-Release): Initially, 5 mg/day. Adjust dosage in 2.5- to 5-mg increments at intervals of several days. Immediate-release tablet: **Maximum single dose:** 15 mg. **Maximum dose/day:** 40 mg. **(Extended-Release):** Initially, 5 mg/day. May increase dose no more frequently than q7days. **Maximum dose:** 20 mg/day. **ELDERLY: (Immediate-Release):** Initially, 2.5–5 mg/day. May increase by 2.5–5 mg/day q1–2wks. **(Extended-Release):** Dosing should be on lower end of adult dosing.

Dosage in Renal Impairment

For creatinine clearance of 50 ml/min or less, reduce dose by 50%.

Dosage in Hepatic Impairment

(Immediate-Release): Initial dose: 2.5 mg/day.

SIDE EFFECTS

Rare (less than 3%): Altered taste, dizziness, drowsiness, weight gain, constipation, diarrhea, heartburn, nausea, vomiting, headache, photosensitivity, peeling of skin, pruritus, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose or insufficient food intake may produce hypoglycemia (esp. with increased glucose demands). GI hemorrhage, cholestatic hepatic jaundice, leukopenia, thrombocytopenia, pancytopenia, agranulocytosis, aplastic or hemolytic anemia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check serum glucose level. Discuss lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt or family does not thoroughly understand diabetes management or serum glucose testing technique.

INTERVENTION/EVALUATION

Monitor serum glucose level, food intake. Assess for hypoglycemia (cool/wet skin, tremors, dizziness, anxiety, headache, tachycardia, perioral numbness, hunger, diplopia), hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep or rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased activity or stress, trauma, surgical procedure).

PATIENT/ FAMILY TEACHING

• Prescribed diet is principal part of treatment; do not skip or delay meals. • Avoid alcohol. • Carry candy, sugar packets, other quick-acting sugar supplements for immediate response to hypoglycemia. • Wear medical alert identification. • Check with physician when glucose demands are altered (fever, infection, trauma, stress, heavy physical activity). • Avoid direct exposure to sunlight.

glucagon

gloo-ka-gon
(GlucaGen, GlucaGen Diagnostic Kit, Glucagon Emergency Kit)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Glucose elevating agent. **CLINICAL:** Antihypoglycemic, antispasmodic, antidote.

USES

Treatment of severe hypoglycemia in diabetic pts. Diagnostic aid in radiographic examination to temporarily inhibit GI tract movement. **OFF-LABEL:** Hypoglycemia secondary to insulin or oral hypoglycemic therapy. Toxicity associated with beta-blockers, calcium channel blockers.

PRECAUTIONS

Contraindications: Hypersensitivity to glucagon, insulinoma, known pheochromocytoma. **Cautions:** History of insulinoma, pheochromocytoma, prolonged fasting, starvation, adrenal insufficiency, chronic hypoglycemia. Avoid use in pts with hereditary galactose intolerance.

ACTION

Promotes hepatic glycogenolysis, gluconeogenesis. Stimulates cAMP, an enzyme, resulting in increased serum glucose concentration. **Therapeutic Effect:** Increases serum glucose level.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	5–20 min	—	60–90 min
IM	30 min	—	60–90 min
Subcutaneous	30–45 min	—	60–90 min

Metabolized in liver. **Half-life:** 3–10 min.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category B. Children/Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May increase effects of **anticoagulants.** **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May decrease serum potassium.

AVAILABILITY (Rx)

Injection Powder (GlucaGen, GlucaGen Diagnostic Kit, Glucagon Emergency Kit): 1 mg.

ADMINISTRATION/HANDLING

◀ALERT▶ Place pt in side-lying position to prevent aspiration (glucagon, hypoglycemia may produce nausea/vomiting).

IV, IM, Subcutaneous

Reconstitution • Reconstitute with 1 ml sterile diluent to provide concentration of 1 mg/ml.

Rate of Administration • Pt usually awakens in 5–20 min. Although 1–2 additional doses may be administered, concern for effects of continuing cerebral hypoglycemia requires consideration of parenteral glucose. • When pt awakens, give supplemental carbohydrate to restore hepatic glycogen and prevent secondary hypoglycemia. If pt fails to respond to glucagon, IV dextrose is necessary.

Storage • Store vial at room temperature. • After reconstitution, is stable for 48 hrs if refrigerated. If reconstituted with Sterile Water for Injection, use immediately. Do not use glucagon solution unless clear.

IV INCOMPATIBILITIES

Do not mix glucagon with any other medications.

INDICATIONS/ROUTES/DOSAGE

Hypoglycemia

◀ALERT▶ Administer IV dextrose if pt fails to respond to glucagon.

IV, IM, Subcutaneous: ADULTS, ELDERLY, CHILDREN WEIGHING MORE THAN 20 KG: 1 mg. May repeat in 20 min. **CHILDREN WEIGHING 20 KG OR LESS:** 0.5 mg. May repeat in 20 min. **NEONATES:** 0.02–0.2 mg/kg/dose. May repeat in 20 min if needed.

Diagnostic Aid

IV: ADULTS, ELDERLY: 0.25–2 mg 10 min prior to procedure. **IM:** 1–2 mg 10 minutes prior to procedure.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: Nausea, vomiting. **Rare:** Allergic reaction (urticaria, respiratory distress, hypotension).

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce persistent nausea/vomiting, hypokalemia (severe fatigue, decreased appetite, palpitations, muscle cramps).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain immediate assessment, including history, clinical signs/symptoms. If presence of hypoglycemic coma is established, give glucagon promptly.

INTERVENTION/EVALUATION

Monitor serum glucose, B/P, pulse, mental status. Monitor response time carefully. Have IV dextrose readily available in event pt does not respond. Assess for possible allergic reaction (urticaria, respiratory difficulty, hypotension). When pt is conscious, give oral carbohydrate.

PATIENT/FAMILY TEACHING

• Recognize significance of identifying symptoms of hypoglycemia: pale, cool skin, anxiety, difficulty concentrating, headache, hunger, nausea, shakiness, diaphoresis, unusual fatigue, unusual weakness, unconsciousness. • If symptoms of hypoglycemia develop, give sugar form first (orange juice, honey, hard candy, sugar cubes, table sugar dissolved in water or juice) followed by cheese and crackers, half a sandwich, glass of milk.

*glyBURIDE

TOP 100 HIGH ALERT

glye-bue-ride

(Apo-Glyburide, DiaBeta, Euglucon, Glynase Pres-Tab, Novo-Glyburide)

Do not confuse DiaBeta with Zebeta, glyburide with glimepiride, glipizide, or Glucotrol.

FIXED-COMBINATION(S)

Glucovance: glyburide/metformin (an antidiabetic): 1.25 mg/250 mg, 2.5 mg/500 mg, 5 mg/500 mg.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Second-generation sulfonylurea. **CLINICAL:** Antidiabetic agent.

USES

Adjunct to diet, exercise in management of stable, mild to moderately severe non–insulin-dependent diabetes mellitus (type 2, NIDDM). May be used concomitantly with insulin or metformin to improve glycemic control. **OFF-LABEL:** Alternative to insulin in women for treatment of gestational diabetes mellitus.

PRECAUTIONS

Contraindications: Diabetic ketoacidosis with or without coma, type 1 diabetes mellitus, concurrent use with bosentan. **Cautions:** Stress, elderly, debilitated, malnourished, hepatic/renal impairment, G6PD deficiency.

ACTION

Promotes release of insulin from beta cells of pancreas, decreases glucose output from liver, increases insulin sensitivity at peripheral sites. **Therapeutic Effect:** Lowers serum glucose level.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	0.25–1 hr	1–2 hrs	12–24 hrs

Well absorbed from GI tract. Protein binding: 99%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 5–16 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. May produce neonatal hypoglycemia if given within 2 wks of delivery. **Pregnancy Category C.**

Children: Safety and efficacy not established. **Elderly:** Hypoglycemia may be difficult to recognize. Age-related renal impairment may increase sensitivity to glucose-lowering effect.

INTERACTIONS

DRUG: **Beta-blockers** may increase hypoglycemic effect, mask signs of hypoglycemia. **Corticosteroids, thiazide diuretics** may decrease effect. **HERBAL:** **Garlic,** other herbs with hypoglycemic properties may enhance effect. **FOOD:** None known. **LAB VALUES:** May increase serum alkaline phosphatase, LDH, ALT, AST, bilirubin, C-peptide.

AVAILABILITY (Rx)

Tablets (DiaBeta): 1.25 mg, 2.5 mg, 5 mg. **Tablets, Micronized (Glynase Pres-Tab):** 1.5 mg, 3 mg, 6 mg.

ADMINISTRATION/HANDLING

PO

- May give with food at same time each day.

INDICATIONS/ROUTES/DOSAGE

Diabetes Mellitus

PO *(Diabeta):* **ADULTS:** Initially, 1.25–5 mg. May increase by 2.5 mg/day at weekly intervals. **Maintenance:** 1.25–20 mg/day. **Maximum:** 20 mg/day. **ELDERLY:** Initially, 1.25–2.5 mg/day. May increase by 1.25–2.5 mg/day at 1- to 3-wk intervals.

PO *(Glynase)*: **ADULTS, ELDERLY:** Initially 0.75–3 mg/day. May increase by 1.5 mg/day at weekly intervals. **Maintenance:** 0.75–12 mg/day as a single dose or in divided doses.

Dosage in Renal Impairment

Not recommended for pts with creatinine clearance less than 50 ml/min.

Dosage in Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Rare (less than 3%): Altered taste, dizziness, drowsiness, weight gain, constipation, diarrhea, heartburn, nausea, vomiting, headache, photosensitivity, peeling of skin, pruritis, rash.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose or insufficient food intake may produce hypoglycemia (esp. in pts with increased glucose demands). Cholestatic jaundice, leukopenia, thrombocytopenia, pancytopenia, agranulocytosis, aplastic or hemolytic anemia occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Check serum glucose level. Discuss lifestyle to determine extent of learning, emotional needs. Ensure follow-up instruction if pt or family does not thoroughly understand diabetes management or glucose testing technique.

INTERVENTION/EVALUATION

Monitor serum glucose level, food intake. Assess for hypoglycemia (cool/wet skin, tremors, dizziness, anxiety, headache, tachycardia, perioral numbness, hunger, diplopia); hyperglycemia (polyuria, polyphagia, polydipsia, nausea, vomiting, dim vision, fatigue, deep or rapid breathing). Be alert to conditions that alter glucose requirements (fever, increased activity or stress, trauma, surgical procedure).

PATIENT/ FAMILY TEACHING

• Prescribed diet is principal part of treatment; do not skip or delay meals. • Avoid alcohol. • Carry candy, sugar packets, other quick-acting sugar supplements for immediate response to hypoglycemia. • Wear medical alert identification. • Check with physician when glucose demands are altered (fever, infection, trauma, stress, heavy physical activity). • Avoid direct exposure to sunlight.

golimumab

goe-**lim**-ue-mab
(Simponi, Simponi Aria)
Do not confuse Simponi (subcutaneous) with Simponi Aria (intravenous).

■ **BLACK BOX ALERT** ■ Tuberculosis (TB), invasive fungal infections, other opportunistic infections reported. Discontinue treatment if active infection or sepsis occurs. Test for TB prior to and during treatment, regardless of initial result; if positive, start treatment for TB prior to initiating therapy. Lymphoma, other malignancies reported in pts treated with tumor necrosis factor blockers.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Monoclonal antibody. **CLINICAL:** Immune modulator, antirheumatic, tumor necrosis factor (TNF) blocking agent.

USES

Simponi: Used alone or in combination with methotrexate for the treatment of adult pts with active psoriatic arthritis. Used in combination with methotrexate for the treatment of adult pts with moderately to severely active rheumatoid arthritis. Used alone for the treatment of adult pts with active ankylosing spondylitis. Treatment of moderate to severe ulcerative colitis.
Simponi Aria: Used in combination with methotrexate for treatment of adult pts with moderately to severely active rheumatoid arthritis.

PRECAUTIONS

Contraindications: None known. **Cautions:** Elderly, concomitant immunosuppressants, comorbid conditions predisposing to infections (e.g., diabetes). Do not start during an active infection. Residence or travel from areas of endemic mycosis; tuberculosis, underlying hematologic disorders, preexisting or recent-onset demyelinating disorders (e.g., multiple sclerosis, polyneuropathy),

pts with HF or decreased left ventricular function. Avoid concomitant use with live vaccines, abatacept, or anakinra (increased incidence of serious infections).

ACTION

Binds specifically to tumor necrosis factor (TNF) alpha, blocking its interaction with cell surface TNF receptors. **Therapeutic Effect:** Alters biologic activity of TNF alpha, reduces inflammation, may alter pathophysiology of rheumatoid arthritis.

PHARMACOKINETICS

Serum concentration reaches steady state by wk 12. Elimination pathway not specified. **Half-life:** 12–14 days.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. Must either discontinue drug or discontinue breastfeeding. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 18 yrs. **Elderly:** May have increased risk of serious infections, malignancy.

INTERACTIONS

DRUG: **Anakinra, abatacept, rituximab, natalizumab, immunosuppressive therapy** may increase risk of infections. May decrease efficacy of immune response with **live vaccines.** **HERBAL:** **Echinacea** may decrease effects. **FOOD:** None known. **LAB VALUES:** May increase ALT, AST. May decrease Hgb, leukocytes, neutrophils, platelets.

AVAILABILITY (Rx)

Injection Solution (Simponi): 50 mg/0.5 ml, 100 mg/ml in single-dose prefilled autoinjector or prefilled syringe. **Injection Solution (Simponi Aria):** 50 mg/4 ml per single-use vial (12.5 mg/ml).

ADMINISTRATION/HANDLING

Simponi Subcutaneous

• Remove prefilled syringe or autoinjector from refrigerator. Allow to sit at room temperature for 30 min; do not warm in any other way. • Avoid areas where skin is scarred, tender, bruised, red, scaly, hard. Recommended injection site is front of middle thighs, although lower abdomen 2 in below naval or outer, upper arms are acceptable. • Inject within 5 min after cap has been removed.

Autoinjector: • Push open end of autoinjector firmly against skin at 90-degree angle. • Do not pull autoinjector away from skin until a first "click" sound is heard and then a second "click" sound (injection is finished and needle is pulled back). This usually takes 3 to 6 sec but may take up to 15 sec for the second "click" to be heard. If autoinjector is pulled away from skin before injection is completed, full dose may not be administered.

Prefilled Syringe: • Gently pinch skin and hold firmly. Use a quick, dart-like motion to insert needle into pinched skin at a 45-degree angle.

Storage: • Refrigerate; do not freeze. Do not shake. • Solution appears slightly opalescent, colorless to light yellow. Discard if cloudy or contains particulate.

Simponi Aria

◀ALERT▶ Use in-line 0.22 micron filter.

IV

Reconstitution • Calculate dosage and number of vials needed based on pt weight. • Visually inspect for particulate matter. • Dilute in 100 ml 0.9% NaCl. • Prior to mixing, withdraw and discard volume of NaCl equal to the volume of patient-dosed solution. • Slowly inject solution into bag and gently mix. • Do not shake.

Rate of Administration • Infuse over 30 min using an in-line low-protein–binding 0.22-micron filter.

Storage • Refrigerate vials, prefilled syringes • Vial solution should be colorless to light yellow and opalescent. • It is normal for solution to develop

fine translucent particles since drug is a protein. • Do not use if opaque particles, discoloration, or other foreign particles present. • May store diluted solution at room temperature up to 4 hrs.

IV INCOMPATIBILITIES

Do not infuse concomitantly with other drugs.

INDICATIONS/ROUTES/DOSAGE

Active Psoriatic Arthritis

Subcutaneous: ADULTS, ELDERLY: 50 mg once monthly. Use alone or in combination with methotrexate.

Moderate to Severe Active Rheumatoid Arthritis

Subcutaneous: ADULTS, ELDERLY: (Simponi): 50 mg once monthly. Use in combination with methotrexate.

IV Infusion: ADULTS, ELDERLY: (Simponi Aria): 2 mg/kg at wk 0 and wk 4. Then decrease frequency to every 8 wks. (Use in combination with methotrexate.)

Active Ankylosing Spondylitis

Subcutaneous: ADULTS, ELDERLY: 50 mg once monthly.

Ulcerative Colitis

Subcutaneous: ADULTS, ELDERLY: Initially, 200 mg; then 100 mg 2 wks later, and then 100 mg q4wks thereafter.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (13%): Laryngitis, nasopharyngitis, pharyngitis, rhinitis, upper respiratory tract infection. **Occasional (3%–2%):** Bronchitis, hypertension, rash, pyrexia. **Rare (less than 1%):** Dizziness, paresthesia, constipation.

ADVERSE EFFECTS/ TOXIC REACTIONS

Neutropenia, lymphopenia may increase risk of infection. New-onset psoriasis, exacerbation of preexisting psoriasis have been reported. Serious infections including sepsis, pneumonia, cellulitis, TB, invasive fungal infections reported. May increase risk of lymphoma, melanoma, new malignancies. New onset or exacerbation of CNS demyelinating disorders, including multiple sclerosis, or worsening of HF have occurred. Viral reactivation of herpes zoster, HIV, hepatitis B may occur. Pts who receive TNF blockers have risk of autoantibody formation (immunogenicity). Hypersensitivity reactions including anaphylaxis reported. May induce lupus-like symptoms (butterfly rash, new joint pain, peripheral edema, UV sensitivity).

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline LFT, CBC, vital signs, urine pregnancy. Obtain B-type natriuretic peptide (BNP) level and review echocardiogram for pts with history of HF. Do not initiate therapy if active infection suspected. Evaluate for active TB and test for latent infection prior to and during treatment. Induration of 5 mm or greater with tuberculin skin test should be considered a positive result when assessing for latent TB. Antifungal therapy should be considered for those who reside or travel to regions where mycoses are endemic. Question history of anemia, HF, CNS disorders, hepatic impairment, HIV, malignancies. Assess skin for moles, lesions. Receive full medication history including vitamins, herbal products.

INTERVENTION/EVALUATION

Monitor CBC, LFT every 4–8 wks, then periodically. Screen pts for TB (night sweats, hemoptysis, weight loss, fever) regardless of baseline tuberculin skin test result. Monitor hepatitis B carriers during treatment and several mos after treatment. If any viral reactivation occurs, interrupt treatment and consider antiviral therapy. Discontinue treatment if acute infection, opportunistic infection, sepsis occur and initiate appropriate antimicrobial therapy.

Routinely assess skin for new lesions. Peripheral edema, difficulty breathing, course crackles on lung auscultation, elevated BNP may indicate worsening HF. Monitor for hypersensitivity reactions.

PATIENT/FAMILY TEACHING

• Therapy may lower immune system response. Do not receive live vaccines. • Report history of HIV, fungal infections, HF, hepatitis B, multiple sclerosis, TB, or close relatives who have active TB. Report travel plans to possible endemic areas. Blood levels, TB screening will be routinely monitored. • Hives, swelling of face, difficulty breathing may indicate allergic reaction. • Do not breastfeed. • Abdominal pain, yellowing of skin or eyes, dark-amber urine, clay-colored stools, fatigue, loss of appetite may indicate liver problems. • Decreased platelet count may increase risk of bleeding. • Swelling of hands or feet, difficulty breathing may indicate HF.

goserelin HIGH ALERT

goe-se-**rel**-in
(Zoladex, Zoladex LA 🍁)

CLASSIFICATION

PHARMACOTHERAPEUTIC: Gonadotropin-releasing hormone analogue. **CLINICAL:** Antineoplastic.

USES

Treatment of locally confined prostate cancer. Palliative treatment of advanced carcinoma of prostate as alternative when orchiectomy, estrogen therapy is either not indicated or unacceptable. In combination with flutamide before and during radiation therapy for early stages of prostate cancer. Management of endometriosis. Treatment of advanced breast cancer in premenopausal and perimenopausal women. Endometrial thinning before ablation for dysfunctional uterine bleeding.

PRECAUTIONS

Contraindications: Pregnancy (except when used for palliative treatment of advanced breast cancer). **Cautions:** Women of childbearing potential until pregnancy has been excluded. Pts at risk for decreased bone density; diabetes.

ACTION

Stimulates release of luteinizing hormone (LH) and follicle-stimulating hormone (FSH) from anterior pituitary. **Therapeutic Effect:** In females, reduces ovarian, uterine, mammary gland size; regresses hormone-responsive tumors. In males, decreases testosterone level, reduces growth of abnormal prostate tissue.

PHARMACOKINETICS

Protein binding: 27%. Metabolized in liver. Excreted in urine. **Half-life:** 4.2 hrs (male); 2.3 hrs (female).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; unknown if distributed in breast milk. **Pregnancy Category D (advanced breast cancer), X (endometriosis, endometrial thinning). Children:** Safety and efficacy not established. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum prostatic acid phosphatase, testosterone, calcium.

AVAILABILITY (Rx)

Injection, Solution (Zoladex): 3.6 mg, 10.8 mg.

ADMINISTRATION/HANDLING

Subcutaneous

• Clean area of skin on upper abdominal wall with alcohol swab. • Stretch or pinch skin with one hand, and insert needle into subcutaneous tissue. • Direct needle so that it parallels the

abdominal wall. Push needle in until barrel hub touches pt's skin. Withdraw needle 1 cm to create a space to discharge goserelin. Fully depress plunger. • Withdraw needle, bandage site.

INDICATIONS/ROUTES/DOSAGE

Prostatic Carcinoma, Advanced

Subcutaneous: ADULTS OLDER THAN 18 YRS, ELDERLY: 3.6 mg every 28 days or 10.8 mg q12wks subcutaneously into upper abdominal wall.

Prostate Carcinoma, Locally Confined

Subcutaneous: ADULTS, ELDERLY: (in combination with an antiestrogen and radiotherapy, begin 8 wks prior to radiotherapy): 3.6 mg once. Report in 28 days with 10.8 mg or 3.6 mg q28days for 4 doses.

Breast Carcinoma, Endometriosis

Subcutaneous: ADULTS: 3.6 mg every 28 days subcutaneously into upper abdominal wall.

Endometrial Thinning

Subcutaneous: ADULTS: 3.6 mg subcutaneously into upper abdominal wall as a single dose or in 2 doses 4 wks apart.

Endometriosis

Subcutaneous: ADULTS: 3.6 mg every 28 days for 6 mos.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (60%–13%): Headache, hot flashes, depression, diaphoresis, sexual dysfunction, impotence, lower urinary tract symptoms. **Occasional (10%–5%):** Pain, lethargy, dizziness, insomnia, anorexia, nausea, rash, upper respiratory tract infection, hirsutism, abdominal pain. **Rare:** Pruritus.

ADVERSE EFFECTS/ TOXIC REACTIONS

Arrhythmias, HF, hypertension occur rarely. Ureteral obstruction, spinal cord compression observed (immediate orchiectomy may be necessary).

NURSING CONSIDERATIONS

INTERVENTION/EVALUATION

Monitor pt closely for worsening signs/symptoms of prostatic cancer, esp. during first mo of therapy.

PATIENT/FAMILY TEACHING

• Use nonhormonal methods of contraception during therapy. • Report suspected pregnancy or regular menstruation persists. • Breakthrough menstrual bleeding may occur if dose is missed.

granisetron

gra-**nis**-e-tron
(Granisol, Kytril, Sancuso)
Do not confuse granisetron with dolasetron, ondansetron, or palonosetron.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Serotonin receptor antagonist ($5\text{-}HT_3$). **CLINICAL:** Antiemetic.

USES

Prevention of nausea/vomiting associated with emetogenic cancer therapy and cancer radiation therapy. Prevention, treatment of postop nausea, vomiting. **OFF-LABEL: PO:** Breakthrough treatment of chemotherapy-associated nausea/vomiting.

PRECAUTIONS

Contraindications: None known. **Cautions:** Hypersensitivity to other $5\text{-}HT_3$ receptor antagonists, congenital QT prolongation, concomitant administration of medications that prolong QT interval, following abdominal surgery or in chemotherapy-induced nausea, vomiting (may mask progressive ileus or gastric distention), hepatic disease.

ACTION

Selectively blocks serotonin stimulation at receptor sites at chemoreceptor trigger zone, vagal nerve terminals. **Therapeutic Effect:** Prevents nausea/vomiting.

PHARMACOKINETICS

Route	Onset	Peak	Duration
IV	1–3 min	N/A	24 hrs

Rapidly, widely distributed to tissues. Protein binding: 65%. Metabolized in liver. Eliminated in urine (48%), feces (38%). **Half-life:** 10–12 hrs (increased in elderly).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** Safety and efficacy not established in those younger than 2 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** May increase serum ALT, AST.

AVAILABILITY (Rx)

Injection Solution: 0.1 mg/ml, 1 mg/ml. **Oral Solution (Granisol):** 2 mg/10 ml. **Tablets:** 1 mg. **Transdermal Patch (Sancuso):** 52-cm^2 patch containing 34.3 mg granisetron delivering 3.1 mg/24 hrs.

ADMINISTRATION/HANDLING

IV

Reconstitution • May be given undiluted or dilute with 20–50 ml 0.9% NaCl or D_5W. Do not mix with other medications.

Rate of Administration • May give undiluted as IV push over 30 sec. • For IV piggyback, infuse over 5–10 min depending on volume of diluent used.

Storage • Appears as a clear, colorless solution. • Store at room temperature. • After dilution, stable for 3 days at room temperature or 7 days if refrigerated. • Inspect for particulates, discoloration.

PO

• Give 30 min to 1 hr prior to initiating chemotherapy.

Transdermal

• Apply to clean, dry, intact skin on upper outer arm. • Remove immediately from pouch before application. • Do not cut patch.

IV INCOMPATIBILITY

Amphotericin B (Fungizone).

IV COMPATIBILITIES

Allopurinol (Aloprim), bumetanide (Bumex), calcium gluconate, carboplatin (Paraplatin), cisplatin (Platinol), cyclophosphamide (Cytoxan), cytarabine (Ara-C), dacarbazine (DTIC-Dome), dexamethasone (Decadron), dexmedetomidine (Precedex), diphenhydramine (Benadryl), docetaxel (Taxotere), doxorubicin (Adriamycin), etoposide (VePesid), gemcitabine (Gemzar), magnesium, mitoxantrone (Novantrone), paclitaxel (Taxol), potassium.

INDICATIONS/ROUTES/DOSAGE

Prevention of Chemotherapy-Induced Nausea/Vomiting

PO: ADULTS, ELDERLY: 2 mg 1 hr before chemotherapy or 1 mg 1 hr before and 12 hrs after chemotherapy.

IV: ADULTS, ELDERLY, CHILDREN 2 YRS AND OLDER: 10 mcg/kg/dose (**maximum:** 1 mg/dose) within 30 min of chemotherapy. **Maximum:** 1 mg.

Transdermal: ADULTS, ELDERLY: Apply 24–48 hrs prior to chemotherapy. Remove minimum 24 hrs after completion of chemotherapy. May be worn up to 7 days, depending on chemotherapy duration.

Prevention of Radiation-Induced Nausea/Vomiting

PO: ADULTS, ELDERLY: 2 mg once a day, given 1 hr before radiation therapy.

Postop Nausea/Vomiting
IV: ADULTS, ELDERLY: 1 mg as a single postop dose. **CHILDREN OLDER THAN 4 YRS:** 20–40 mcg/kg. **Maximum:** 1 mg.

Dosage in Renal/Hepatic Impairment
No dose adjustment.

SIDE EFFECTS

Frequent (21%–14%): Headache, constipation, asthenia. **Occasional (8%–6%):** Diarrhea, abdominal pain. **Rare (less than 2%):** Altered taste, fever.

ADVERSE EFFECTS/ TOXIC REACTIONS

Hypersensitivity reaction, hypertension, hypotension, arrhythmias (sinus bradycardia, atrial fibrillation, AV block, ventricular ectopy), EKG abnormalities occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess hydration status. Ensure that granisetron is given within 30 min of starting chemotherapy.

INTERVENTION/EVALUATION

Monitor for therapeutic effect. Assess for headache. Monitor for dehydration due to recurrent vomiting. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

- Granisetron is effective shortly following administration; prevents nausea/vomiting.
- Transitory taste disorder may occur.

griseofulvin

gris-e-oh-**ful**-vin
(Grifulvin V, Gris-PEG)

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Antifungal antibiotic. **CLINICAL:** Antifungal.

USES

Treatment of susceptible tinea (ringworm) infections of the skin, hair caused by susceptible species of *Microsporum, Epidermophyton,* or *Trichophyton*.

PRECAUTIONS

Contraindications: Hepatocellular failure, porphyria, pregnancy. **Cautions:** Exposure to sun/ultraviolet light (photosensitivity), hypersensitivity to penicillins.

ACTION

Inhibits fungal cell mitosis by disrupting mitotic spindle structure. **Therapeutic Effect:** Fungistatic.

PHARMACOKINETICS

Ultramicrosize is almost completely absorbed. Absorption is significantly enhanced after a fatty meal. Metabolized in liver. Minimal excretion in urine. **Half-life:** 9–22 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta; unknown if distributed in breast milk. **Pregnancy Category C. Children:** Safety and efficacy not established in those younger than 2 yrs. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: May decrease effects of **oral contraceptives, warfarin.** **HERBAL:** None significant. **FOOD:** **High-fat foods** enhance absorption. **LAB VALUES:** May increase ALT, AST, bilirubin.

AVAILABILITY (Rx)

Oral Suspension (Grifulvin V): 125 mg/5 ml. **Tablets (Microsize Grifulvin V):** 500 mg. **Tablets (Ultramicrosize, Gris-PEG):** 125 mg, 250 mg.

ADMINISTRATION/HANDLING

- Administer with fatty meal to increase absorption.
- Take with food or milk to reduce GI irritation.
- Ultramicrosize

tablets may be crushed and sprinkled on applesauce. • Shake suspension well before use.

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

◀ALERT▶ Duration of therapy depends on site of infection.

PO ***(Microsize Tablets, Oral Suspension):*** **ADULTS:** 500–1,000 mg as a single dose or in divided doses. **CHILDREN 2 YRS AND OLDER:** 10–20 mg/kg/day in single or divided doses.

PO ***(Ultramicrosize Tablets):*** **ADULTS:** 375–750 mg/day as a single dose or in divided doses. **CHILDREN 2 YRS AND OLDER:** 5–15 mg/kg/day in single or divided doses. **Maximum:** 750 mg/day in 2 divided doses.

SIDE EFFECTS

Occasional: Hypersensitivity reaction (pruritus, rash, urticaria), headache, nausea, diarrhea, excessive thirst, flatulence, oral thrush, dizziness, insomnia. **Rare:** Paresthesia of hands/feet, proteinuria, photosensitivity reaction.

ADVERSE EFFECTS/ TOXIC REACTIONS

Granulocytopenia occurs rarely and should necessitate discontinuation of drug.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Question for history of allergies, esp. to griseofulvin, penicillins, or hepatic impairment.

INTERVENTION/EVALUATION

Assess skin for rash, response to therapy. Monitor daily pattern of bowel activity, stool consistency. Question presence of headache: onset, location, type of discomfort. Assess for dizziness.

PATIENT/FAMILY TEACHING

• Prolonged therapy (wks or mos) is usually necessary. • Do not miss a dose; continue therapy as long as ordered. • Avoid alcohol (may produce tachycardia, flushing). • May cause photosensitivity reaction; avoid exposure to sunlight. • Maintain good hygiene (prevents superinfection). • Separate personal items in direct contact with affected areas. • Keep affected areas dry; wear light clothing for ventilation. • Take with foods high in fat such as milk, ice cream (reduces GI upset, assists absorption).

G

guaifenesin

gwye-**fen**-e-sin
(Mucinex, Organidin, Robitussin 🍁)

Do not confuse guaifenesin with guanfacine, or Mucinex with Mucomyst.

FIXED-COMBINATION(S)

Mucinex D: guaifenesin/pseudoephedrine (a sympathomimetic): 600 mg/60 mg, 1,200 mg/120 mg. **Mucinex DM:** guaifenesin/dextromethorphan (a cough suppressant): 600 mg/30 mg, 1,200 mg/60 mg. **Robitussin AC:** guaifenesin/codeine (a narcotic analgesic): 100 mg/10 mg, 75 mg/2.5 mg per 5 ml. **Robitussin DM:** guaifenesin/dextromethorphan (a cough suppressant): 100 mg/10 mg per 5 ml.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Respiratory expectorant. **CLINICAL:** Expectorant.

USES

Helps loosen phlegm and thin bronchial secretions, making cough more productive.

PRECAUTIONS

Contraindications: None known. **Cautions:** Avoid OTC use in children younger than 2 yrs.

ACTION

Stimulates respiratory tract secretions by decreasing adhesiveness, viscosity of mucus. **Therapeutic Effect:** Promotes removal of viscous mucus.

PHARMACOKINETICS

Well absorbed from GI tract. Metabolized in liver. Excreted in urine. **Half-life:** 1 hr.

G

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if drug crosses placenta or is distributed in breast milk. **Pregnancy Category C. Children:** Caution advised in those younger than 2 yrs with persistent cough. **Elderly:** No age-related precautions noted.

INTERACTIONS

DRUG: None significant. **HERBAL:** None significant. **FOOD:** None known. **LAB VALUES:** None significant.

AVAILABILITY (OTC)

Liquid: 100 mg/5 ml. **Syrup:** 100 mg/5 ml. **Tablets:** 200 mg, 400 mg.

Tablets, Extended-Release: (Mucinex): 600 mg, 1,200 mg.

ADMINISTRATION/HANDLING

PO

• Store syrup, liquid, tablets at room temperature. • Give without regard to meals. • Do not break, crush, dissolve, or divide extended-release tablet.

INDICATIONS/ROUTES/DOSAGE

Expectorant

PO: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 200–400 mg q4h. **Maximum:** 2.4 g/day. **CHILDREN 6–12 YRS:** 100–200 mg q4h. **Maximum:** 1.2 g/day. **CHILDREN 2–5 YRS:** 50–100 mg q4h. **Maximum:** 600 mg/day. **CHILDREN 6 MOS–2 YRS:** 25–50 mg q4h. **Maximum:** 300 mg/day.

PO *(Extended-Release)*: ADULTS, ELDERLY, CHILDREN OLDER THAN 12 YRS: 600–1,200 mg q12h. **Maximum:** 2.4 g/day.

SIDE EFFECTS

Rare: Dizziness, headache, rash, diarrhea, nausea, vomiting, abdominal pain.

ADVERSE EFFECTS/ TOXIC REACTIONS

Overdose may produce nausea, vomiting.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess type, severity, frequency of cough. Increase fluid intake, environmental humidity to lower viscosity of lung secretions.

INTERVENTION/EVALUATION

Initiate deep breathing, coughing exercises, particularly in pts with pulmonary impairment. Assess for clinical improvement; record onset of relief of cough.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Do not take for chronic cough. • Report persistent cough if fever, rash, headache, sore throat is present with cough. • Maintain adequate hydration.

guanfacine

gwan-fah-seen
(Intuniv)
Do not confuse guanfacine with guaifenesin or guanidine.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Alpha$_{2A}$-adrenergic agonist. **CLINICAL:** Psychotherapeutic agent.

USES

Treatment of ADHD. **OFF-LABEL:** Tic disorder, aggression, Tourette's syndrome.

PRECAUTIONS

Contraindications: None known. **Cautions:** Renal/hepatic impairment.

ACTION

Not a CNS stimulant. Interacts with alpha$_{2A}$-adrenergic receptors in prefrontal cortex of brain. Behaviors (inattention, hyperactivity, impulsiveness) related to attention-deficit hyperactivity disorder (ADHD) may be controlled in this part of the brain. **Therapeutic Effect:** Improves symptoms of ADHD.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 70%. Metabolized in liver. Excreted in urine. **Half-life:** 14–22 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Unknown if distributed in breast milk. **Pregnancy Category B. Children:** afety and efficacy not established in pts younger than 6 yrs. Efficacy beyond 9 wks and safety beyond 2 yrs of treatment not established for children and adolescents older than 6 yrs. **Elderly:** Safety and efficacy not established. Not used in this pt population.

INTERACTIONS

DRUG: **CYP3A4 inhibitors (e.g., atazanavir, clarithromycin, indinavir, itraconazole, ketoconazole, nefazodone, nelfinavir, ritonavir, saquinavir)** may increase risk of hypotension, bradycardia, sedation. **Rifampin** may decrease concentration. May increase **valproic acid** concentration. Increased risk of cardiovascular effects with **antihypertensives. Alcohol, antipsychotics, barbiturates, benzodiazepines, sedative/hypnotics** may produce additive sedative effects. **HERBAL:** None significant. **FOOD:** **High-fat meals** may increase concentration. **LAB VALUES:** None significant.

AVAILABILITY (Rx)

Tablets: 1 mg, 2 mg. **Tablets, Extended-Release:** 1 mg, 2 mg, 3 mg, 4 mg.

ADMINISTRATION/HANDLING

PO

• Do not give with high-fat meal. • Do not break, crush, dissolve or divide extended-release tablets.

INDICATIONS/ROUTES/DOSAGE

◀ALERT▶ Dosing should be considered on a mg/kg basis.

ADHD

PO: CHILDREN 6 YRS AND OLDER, (IMMEDIATE-RELEASE) GREATER THAN 45 KG: Initially, 1 mg once daily at bedtime. May increase by 1 mg/day q3–4 days. **Maximum:** 4 mg/day. **45 KG OR LESS:** Initially, 0.5 mg once daily at bedtime. May increase by 0.5 mg/day q3–4 days. **Maximum:** 27–40.5 kg: 2 mg/day; 40.6–45 kg: 3 mg/day. **(EXTENDED-RELEASE):** Begin at dose of 1 mg/day and adjust in increments of no more than 1 mg/wk until clinical response and tolerability are observed. Maintain dose within range of 1–4 mg once daily. If switching from immediate-release guanfacine, discontinue that treatment and titrate with extended-release guanfacine. When discontinuing, taper dose in decrements of no more than 1 mg every 3–7 days.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent (38%–10%): Lethargy, headache, fatigue, upper abdominal pain. **Occasional (6%–3%):** Nausea, lethargy, dizziness, irritability, hypotension or decreased B/P, decreased appetite, dry mouth, constipation. **Rare (2%–1%):** Dyspepsia, asthenia increased B/P, increased weight, orthostatic hypotension, increased urinary frequency.

ADVERSE EFFECTS/ TOXIC REACTIONS

Abrupt discontinuation may produce infrequent, transient elevations in B/P above original baseline (taper dose in decrements of no more than 1 mg every 3–7 days). Abrupt withdrawal following

prolonged administration of high dosage may produce extreme fatigue (may last for wks). Prolonged administration to children may produce suppression of weight and/or height patterns. AV block, bradycardia, arrhythmias occur rarely.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Obtain baseline vital signs, serum chemistries. Measure pulse, B/P prior to initiation of therapy, following dose increases, and periodically during therapy.

INTERVENTION/EVALUATION

Assist with ambulation if sedation, dizziness, fatigue, lethargy occur. Be alert to mood changes. Assess for nausea, headache. Monitor B/P, serum chemistries, particularly renal/hepatic function for change from baseline. Monitor daily pattern of bowel activity, stool consistency.

PATIENT/FAMILY TEACHING

• Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Dry mouth may be relieved with sugarless gum, sips of water. • Advise pts to avoid becoming dehydrated, overheated. • Do not substitute for immediate-release guanfacine tablets. • Swallow whole; do not chew, crush, dissolve, or divide. • Do not take with high-fat meal.

Generic Drugs H

haloperidol	hydrocodone	hydroxyurea
heparin	hydrocortisone	hydrOXYzine
hydrALAZINE	hydromorphone	hyoscyamine
hydrochlorothiazide	hydroxychloroquine	

haloperidol

hal-o-**per**-i-dol
(Apo-Haloperidol, Haldol, Haldol Decanoate, Novo-Peridol)

■ **BLACK BOX ALERT** ■ Increased risk of mortality in elderly pts with dementia-related psychosis with use of injections.

Do not confuse Haldol with Halcion or Stadol.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Butyrophenone antipsychotic. **CLINICAL:** Antipsychotic, antiemetic, antidyskinetic.

USES

Treatment of schizophrenia, Tourette's disorder (controls tics and vocal utterances), severe behavioral problems in children. **OFF-LABEL:** Treatment of nonschizophrenic psychosis, alcohol dependence, psychosis/agitation related to Alzheimer's dementia, emergency sedation of severely agitated/psychotic pts.

PRECAUTIONS

Contraindications: Narrow-angle glaucoma, CNS depression, coma, myelosuppression, Parkinson's disease, severe cardiac/hepatic disease. **Cautions:** Renal/hepatic impairment, cardiovascular disease, history of seizures, prolonged QT syndrome, medications that prolong QT interval, hypothyroidism, thyrotoxicosis, electrolyte imbalance (e.g., hypokalemia, hypomagnesemia), EEG abnormalities, elderly, pts at risk for pneumonia, decreased GI motility, urinary retention, BPH, visual disturbances, myasthenia gravis.

ACTION

Competitively blocks postsynaptic dopamine receptors in brain. **Therapeutic Effect:** Produces tranquilizing effect. Strong extrapyramidal, antiemetic effects; weak anticholinergic, sedative effects.

PHARMACOKINETICS

Readily absorbed from GI tract. Protein binding: 92%. Metabolized in liver. Excreted in urine. Not removed by hemodialysis. **Half-life:** 20 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Crosses placenta. Distributed in breast milk. **Pregnancy Category C. Children:** More susceptible to dystonias; not recommended in those younger than 3 yrs. **Elderly:** More susceptible to orthostatic hypotension, anticholinergic effects, sedation; increased risk for extrapyramidal effects. Decreased dosage recommended.

INTERACTIONS

DRUG: Alcohol, other CNS depressants may increase CNS depression. **CYP3A4 inducers (e.g., carbamazepine)** may decrease concentration. **Medications prolonging QT interval** may increase risk of QT prolongation. **Medications producing extrapyramidal symptoms (EPS)** may increase EPS. **HERBAL: Gotu kola, kava kava, St. John's wort, valerian** may increase CNS depression. **FOOD:** None known. **LAB VALUES:** None significant. **Therapeutic serum level:** 0.2–1 mcg/ml; **toxic serum level:** greater than 1 mcg/ml.

AVAILABILITY (Rx)

Injection, Oil (Decanoate [Haldol Decanoate]): 50 mg/ml, 100 mg/ml. **Injection, Solution (Lactate [Haldol]):** 5 mg/ml. **Oral Concentrate:** 2 mg/ml. **Tablets (Haldol):** 0.5 mg, 1 mg, 2 mg, 5 mg, 10 mg, 20 mg.

ADMINISTRATION/HANDLING

IV

◀ALERT▶ Only haloperidol lactate is given IV.

Reconstitution • May give undiluted. • May add to 50–100 ml of D_5W.

Rate of Administration • Give IV push at rate of 5 mg/min. • Infuse IV

piggyback over 30 min. • For IV infusion, up to 25 mg/hr has been used (titrated to pt response).

Storage • Discard if precipitate forms, discoloration occurs. • Store at room temperature; do not freeze. • Protect from light.

IM

Parenteral Administration • Pt should remain recumbent for 30–60 min to minimize hypotensive effect. • Prepare Decanoate IM injection using 21-gauge needle. • Do not exceed maximum volume of 3 ml per IM injection site. • Inject slow, deep IM into upper outer quadrant of gluteus maximus.

PO

• Give without regard to meals. • Scored tablets may be crushed. • Dilute oral concentrate with water or juice. • Avoid skin contact with oral concentrate; may cause contact dermatitis.

IV INCOMPATIBILITIES

Allopurinol (Aloprim), amphotericin B complex (Abelcet, AmBisome, Amphotec), cefepime (Maxipime), fluconazole (Diflucan), foscarnet (Foscavir), heparin, nitroprusside (Nipride), piperacillin/tazobactam (Zosyn).

IV COMPATIBILITIES

Dobutamine (Dobutrex), dopamine (Intropin), fentanyl (Sublimaze), hydromorphone (Dilaudid), lidocaine, lorazepam (Ativan), midazolam (Versed), morphine, nitroglycerin, norepinephrine (Levophed), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Usual Dosage

IM *(Lactate)*: ADULTS, ELDERLY: 2–5 mg q4–8h as needed. **CHILDREN 6–12 YRS:** 1–3 mg/dose q4–8h as needed. **Maximum:** 0.15 mg/kg/day. ***(Decanoate)*: ADULTS, ELDERLY:** 10–20 times stabilized oral dose, given at 4-wk intervals. **PO: ADULTS, ELDERLY:** 0.5–5 mg 2–3 times/day. **Maximum:** 30 mg/day. **CHILDREN 3–12 YRS (15–40 KG):** 0.25–0.5 mg/day. May increase by 0.25–0.5 mg q5–7days. **Maximum:** 0.15 mg/kg/day.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Frequent: Blurred vision, constipation, orthostatic hypotension, dry mouth, swelling or soreness of female breasts, peripheral edema. **Occasional:** Allergic reaction, difficulty urinating, decreased thirst, dizziness, diminished sexual function, drowsiness, nausea, vomiting, photosensitivity, lethargy.

ADVERSE EFFECTS/ TOXIC REACTIONS

Extrapyramidal symptoms (EPS) appear to be dose related and typically occur in first few days of therapy. Marked drowsiness/lethargy, excessive salivation, fixed stare may be mild to severe in intensity. Less frequently noted are severe akathisia (motor restlessness), acute dystonias: torticollis (neck muscle spasm), opisthotonos (rigidity of back muscles), oculogyric crisis (rolling back of eyes). Tardive dyskinesia (tongue protrusion, puffing of cheeks, chewing/puckering of the mouth) may occur during long-term therapy or after drug discontinuance and may be irreversible. Elderly female pts have greater risk of developing this reaction.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Assess behavior, appearance, emotional status, response to environment, speech pattern, thought content.

INTERVENTION/EVALUATION

Monitor B/P, heart rate. Supervise suicidal-risk pt closely during early therapy (as depression lessens, energy level improves, increasing suicide potential). Monitor for rigidity, tremor, mask-like facial expression, fine tongue movement.

Assess for therapeutic response (interest in surroundings, improvement in self-care, increased ability to concentrate, relaxed facial expression). Monitor EKG and QT interval. **Therapeutic serum level:** 0.2–1 mcg/ml; **toxic serum level:** greater than 1 mcg/ml.

PATIENT/FAMILY TEACHING

• Full therapeutic effect may take up to 6 wks. • Do not abruptly withdraw from long-term drug therapy. • Sugarless gum, sips of water may relieve dry mouth. • Drowsiness generally subsides during continued therapy. • Avoid tasks that require alertness, motor skills until response to drug is established. • Avoid alcohol. • Report muscle stiffness. • Avoid exposure to sunlight, overheating, dehydration (increased risk of heatstroke).

heparin

HIGH ALERT

hep-a-rin
(Hepalean, Hepalean Leo, Hep-Lock)
Do not confuse heparin with Hespan.

CLASSIFICATION

PHARMACOTHERAPEUTIC: Sulfated polysaccharide; blood modifier. **CLINICAL:** Anticoagulant.

USES

Prophylaxis and treatment of thromboembolic disorders; anticoagulant for extracorporeal and dialysis procedures; maintain patency of IV devices. **OFF-LABEL:** STEMI, non-STEMI, unstable angina, anticoagulant used during percutaneous coronary intervention.

PRECAUTIONS

Contraindications: Severe thrombocytopenia, uncontrolled active bleeding (unless secondary to DIC). **Cautions:** Allergy to pork. Pts at risk for bleeding (e.g., congenital/acquired bleeding disorders, active GI ulcerative disease, hemophilia, concomitant platelet inhibitors); pts with history of heparin-induced thrombocytopenia.

ACTION

Interferes with blood coagulation by blocking conversion of prothrombin to thrombin and fibrinogen to fibrin. **Therapeutic Effect:** Prevents further extension of existing thrombi or new clot formation. No effect on existing clots.

PHARMACOKINETICS

Well absorbed following subcutaneous administration. Protein binding: Very high. Metabolized in liver. Removed from circulation via uptake by reticuloendothelial system. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 1–6 hrs.

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Use with caution, particularly during last trimester, immediate postpartum period (increased risk of maternal hemorrhage). Does not cross placenta. Not distributed in breast milk. **Pregnancy Category C. Children:** No age-related precautions noted. Benzyl alcohol preservative may cause gasping syndrome in infants. **Elderly:** More susceptible to hemorrhage. Age-related renal impairment may increase risk of bleeding.

INTERACTIONS

DRUG: **Other anticoagulants, platelet aggregation inhibitors, thrombolytics** may increase risk of bleeding. **HERBAL:** **Cat's claw, dong quai, evening primrose, feverfew, garlic, ginkgo, ginseng, horse chestnut, red clover** have additional antiplatelet activity. **FOOD:** None known. **LAB VALUES:** May increase free fatty acids, serum ALT, AST; aPTT. May decrease serum cholesterol.

AVAILABILITY (Rx)

Injection Solution: 10 units/ml (Hep-Lock), 100 units/ml, 1,000 units/ml,

5,000 units/ml, 10,000 units/ml, 20,000 units/ml. **Premix Solution for Infusion:** 25,000 units/250 ml infusion, 25,000 units/500 ml infusion.

ADMINISTRATION/HANDLING

◄ALERT► Do **not** give by IM injection (pain, hematoma, ulceration, erythema).

IV

◄ALERT► Used in full-dose therapy. Intermittent IV dosage produces higher incidence of bleeding abnormalities. Continuous IV route preferred.

Reconstitution • Premix solution requires no reconstitution.

Rate of Administration • Use constant-rate IV infusion pump.

Storage • Store at room temperature.

Subcutaneous

◄ALERT► Used in low-dose therapy. • After withdrawal of heparin from vial, change needle before injection (prevents leakage along needle track). • Inject above iliac crest or in abdominal fat layer. Do not inject within 2 inches of umbilicus or any scar tissue. • Withdraw needle rapidly, apply prolonged pressure at injection site. Do not massage. • Rotate injection sites.

IV INCOMPATIBILITIES

Amiodarone (Cordarone), amphotericin B complex (Abelcet, AmBisome, Amphotec), ciprofloxacin (Cipro), dacarbazine (DTIC), diazepam (Valium), dobutamine (Dobutrex), doxorubicin (Adriamycin), filgrastim (Neupogen), gentamicin (Garamycin), haloperidol (Haldol), idarubicin (Idamycin), labetalol (Trandate), nicardipine (Cardene), phenytoin (Dilantin), quinidine, tobramycin (Nebcin), vancomycin (Vancocin).

IV COMPATIBILITIES

Ampicillin/sulbactam (Unasyn), aztreonam (Azactam), calcium gluconate, cefazolin (Ancef), ceftazidime (Fortaz), ceftriaxone (Rocephin), dexmedetomidine (Precedex), digoxin (Lanoxin), diltiazem (Cardizem), dopamine (Intropin), enalapril (Vasotec), famotidine (Pepcid), fentanyl (Sublimaze), furosemide (Lasix), hydromorphone (Dilaudid), insulin, lidocaine, lorazepam (Ativan), magnesium sulfate, methylprednisolone (Solu-Medrol), midazolam (Versed), milrinone (Primacor), morphine, nitroglycerin, norepinephrine (Levophed), oxytocin (Pitocin), piperacillin/tazobactam (Zosyn), procainamide (Pronestyl), propofol (Diprivan).

INDICATIONS/ROUTES/DOSAGE

Line Flushing

IV: ADULTS, ELDERLY, CHILDREN: 100 units q6–8h. **INFANTS WEIGHING LESS THAN 10 KG:** 10 units q6–8h.

Unstable Angina, NSTEMI, Acute Coronary Syndrome

IV Infusion: ADULTS, ELDERLY: 60 units/kg bolus (**maximum:** 4,000 units), then 12 units/kg/hr (**maximum:** 1,000 units/hr).

Treatment of DVT/PE

IV Infusion: ADULTS, ELDERLY: 80 units/kg bolus (**maximum:** 5,000 units), then 18 units/kg/hr adjusted according to aPTT.

Usual Pediatric/Neonatal Dose

IV Infusion: 75 units/kg bolus over 10 min, then initial maintenance dose of 20 units/kg/hr. Adjust to maintain aPTT of 60–85 sec.

Prevention of Thromboembolic Disorders

Subcutaneous: ADULTS, ELDERLY: 5,000 units q8–12h.

Dosage in Renal/Hepatic Impairment

No dose adjustment.

SIDE EFFECTS

Occasional: Pruritus, burning (particularly on soles of feet) caused by vasospastic reaction. **Rare:** Pain, cyanosis of extremity 6–10 days after initial therapy lasting 4–6 hrs, hypersensitivity reaction

(chills, fever, pruritus, urticaria, asthma, rhinitis, lacrimation, headache).

ADVERSE EFFECTS/ TOXIC REACTIONS

Bleeding complications ranging from local ecchymoses to major hemorrhage occur more frequently in high-dose therapy, intermittent IV infusion, women 60 yrs and older. **Antidote:** Protamine sulfate 1–1.5 mg IV for every 100 units heparin subcutaneous within 30 min of overdose, 0.5–0.75 mg for every 100 units heparin subcutaneous if within 30–60 min of overdose, 0.25–0.375 mg for every 100 units heparin subcutaneous if 2 hrs have elapsed since overdose, 25–50 mg if heparin was given by IV infusion.

NURSING CONSIDERATIONS

BASELINE ASSESSMENT

Cross-check dose with co-worker. Determine aPTT before administration and 24 hrs following initiation of therapy, then q24–48hrs for first wk of therapy or until maintenance dose is established. Follow with aPTT determinations 1–2 times weekly for 3–4 wks. In long-term therapy, monitor 1–2 times a mo.

INTERVENTION/EVALUATION

Monitor aPTT (therapeutic range at 1.5–2.5 times normal) diligently. Assess CBC, platelet count, ALT, AST. Monitor urine and stool for occult blood. Assess for decrease in B/P, increase in pulse rate, complaint of abdominal/back pain, severe headache (may be evidence of hemorrhage). Question for increase in amount of discharge during menses. Assess peripheral pulses; skin for ecchymosis, petechiae. Check for excessive bleeding from minor cuts, scratches. Assess gums for erythema, gingival bleeding. Assess urine output for hematuria. Avoid IM injections due to potential for hematomas. When converting to warfarin (Coumadin) therapy, monitor PT results (will be 10%–20% higher while heparin is given concurrently).

PATIENT/FAMILY TEACHING

• Use electric razor, soft toothbrush to prevent bleeding. • Report any sign of red or dark urine, black or red stool, coffee-ground vomitus, blood-tinged mucus from cough. • Do not use any OTC medication without physician approval (may interfere with platelet aggregation). • Wear or carry identification that notes anticoagulant therapy. • Inform dentist, other physicians of heparin therapy. • Limit alcohol.

H

*hydrALAZINE

hye-**dral**-a-zeen
(Apo-Hydralazine, Apresoline, Novo-Hylazin)
Do not confuse hydralazine with hydroxyzine.

FIXED-COMBINATION(S)

Apresazide: hydralazine/hydrochlorothiazide (a diuretic): 25 mg/25 mg, 50 mg/50 mg, 100 mg/50 mg. **BiDil:** hydralazine/isosorbide (a nitrate): 37.5 mg/20 mg.

◆CLASSIFICATION

PHARMACOTHERAPEUTIC: Vasodilator. **CLINICAL:** Antihypertensive.

USES

Management of moderate to severe hypertension. **OFF-LABEL:** Hypertension secondary to eclampsia, preeclampsia. Treatment of HF with reduced ejection fraction, postoperative hypertension.

PRECAUTIONS

Contraindications: Coronary artery disease, mitral valvular rheumatic heart disease, dissecting aortic aneurysm. **Cautions:** Renal impairment, cerebrovascular disease, positive ANA titer, pulmonary hypertension.

ACTION

Direct vasodilating effects on arterioles. **Therapeutic Effect:** Decreases B/P, systemic vascular resistance.

PHARMACOKINETICS

Route	Onset	Peak	Duration
PO	20–30 min	N/A	Up to 8 hrs
IV	5–20 min	N/A	1–4 hrs

Well absorbed from GI tract. Widely distributed. Protein binding: 85%–90%. Metabolized in liver. Primarily excreted in urine. Not removed by hemodialysis. **Half-life:** 3–7 hrs (increased in renal impairment).

LIFESPAN CONSIDERATIONS

Pregnancy/Lactation: Drug crosses placenta. Unknown if distributed in breast milk. Thrombocytopenia, leukopenia, petechial bleeding, hematomas have occurred in newborns (resolved within 1–3 wks). **Pregnancy Category C. Children:** No age-related precautions noted. **Elderly:** More sensitive to hypotensive effects. Age-related renal impairment may require dosage adjustment.

INTERACTIONS

DRUG: **Diuretics, other antihypertensives** may increase hypotensive effect. **HERBAL:** **Ephedra, ginseng, yohimbe** may worsen hypertension. **Garlic** may increase antihypertensive effect. **FOOD:** Any **foods** may increase absorption. **LAB VALUES:** May produce positive direct Coombs' test.

AVAILABILITY (Rx)

Injection Solution: 20 mg/ml. **Tablets:** 10 mg, 25 mg, 50 mg, 100 mg.

ADMINISTRATION/HANDLING

IV

Rate of Administration • May give undiluted. • Administer slowly: maximum rate 5 mg/min (0.2 mg/kg/min for children).

Storage • Store at room temperature.

PO

• Best given with food at regularly spaced meals. • Tablets may be crushed.

IV INCOMPATIBILITIES

Ampicillin (Polycillin), furosemide (Lasix).

IV COMPATIBILITIES

Dobutamine (Dobutrex), heparin, hydrocortisone (Solu-Cortef), nitroglycerin, potassium chloride.

INDICATIONS/ROUTES/DOSAGE

Hypertension
